Italian mezzo-soprano singer. She was the daughter of the poet Marco Coltellini. In 1781 she made her first appearance at Naples. The Emperor Joseph II engaged her for the Court Opera in Vienna in 1783, and she did not return to Naples until 1790. She married a French-Swiss merchant named Meuricoffre (Morikoff) and retired from the stage in 1795. She excelled in the expression of sentiment. Paisiello wrote his 'Nina' for her, and on one occasion, as she was singing the air "Il mio ben quando verra?", a lady among the audience burst into tears, crying aloud: "Sì, sì, lo rivedrai, il tuo Lindoro". M. C. C.

**Colvin, Ian**. See Bryson ('Leper's Flute', opera).

**COLYNS, Jean-Baptiste** (b. Brussels, 25 Nov. 1834; d. Brussels, 31 Oct. 1902).

Belgian violinist and composer. He was admitted at the age of eight to the Brussels Conservatoire, where he gained prizes for violin playing, harmony, etc. He became solo violinist at the Théâtre de la Monnaie at a very early age and soon afterwards was appointed professor of his instrument at the Conservatoire. In 1888 he was given a similar post at Antwerp. He made many professional tours in Europe with great success, and at various times received advantageous offers to leave his native city. Among others he was in 1876 invited by the King of Saxony to migrate to Dresden as *Konzertmeister* and professor at the Conservatory there. He visited England in 1873 and played at the Crystal Palace on 12 Apr. and at the Philharmonic on 7 July. Colyns occupied himself with composition for

his instrument and also produced an opera in one act, 'Sir William' (1877), and another in three acts, 'Captain Raymond' (1881).

T. P. H.

**COMA, Annibale** (b. Mantua, ?; d. ?).

Italian 16th-century composer. He lived at Mantua c. 1568-87, when he composed 4 books of madrigals. Several madrigals of his are contained in collective volumes.

E. v. d. s.

**COMBARIEU, Jules (Léon Jean)** (b. Cahors, Lot, 5 Feb. 1859; d. Paris, 7 July 1916).

French musical scholar. He was trained in his native town by an old musician, T. Langlane, formerly pupil at the École Niedermeyer. He then followed the courses of Spitta in Berlin (1887), which left a lasting impression on his mind. Having entered the teaching career when quite young, he finally became professor at the Lycées Condorcet and Louis le Grand in Paris and lectured on history of music for six years at the Collège de France from 1904. His lessons were published under the title: 'Éléments de grammaire musicale historique'. Struck by the absence of musical training in the French university education, he strove to develop it and founded the 'Revue d'histoire et de critique musicale', followed by the 'Revue musicale' (1904-12), devoted chiefly to musicological research. As general inspector of choral singing, his influence was also very active.

Among Combarieu's principal works are: 'Les Rapports de la musique et de la poésie considérés au point de vue de l'expression' (1894), 'De Parabases partibus et origine' (1894), 'Théorie du rythme dans la composition musicale moderne' (1897), 'La Musique, ses lois, son évolution' (1907), 'Histoire de la musique des origines à la mort de Beethoven', two volumes (1913), Vol. III, 'De la mort de Beethoven au début du XX<sup>e</sup> siècle' (1919).

M. L. P.

**Combe, William.** See Walton ('Dr. Syntax', overture).

**COMBINATION PEDALS** (Fr. *pédales de combinaison*). An ingenious French invention applied to the organ, which originated with the eminent firm of Cavallé-Coll. Instead of operating upon the draw-stops they act upon the wind supply, in the following manner. A great organ contains, say, twelve stops. The first four (1-4) will be placed on one soundboard; the next four (5-8) on a second; the remaining four (9-12) on a third soundboard. Each soundboard receives its wind supply through its own separate wind-trunk, and in that wind-trunk is a valve which when open allows the wind to reach the soundboard and when closed intercepts it; which valve the organist controls by means of a pedal. The advantages of the valve system are, first, that

instead of the stops coming into use in certain fixed and invariable groups, any special combination can be first prepared on the three soundboards and then brought into use or silenced at the right moment simply by the admission or exclusion of the wind. Moreover their action is absolutely noiseless, as it consists in merely opening or closing a valve, instead of shifting a number of long wooden sliders to and fro. The objection has been raised that in the valve system the stops no longer "register" what is about to be heard, and the extreme case is cited that every stop in the organ may be drawn, and yet no sound respond to the touch if the valves be closed.

Combination pedals are not much used in the organs of English-speaking countries

See also Composition Pedals. Organ Pedal.

**COMBINATION TONES.** See ACOUSTICS.

**COME BACK TO ERIN** (Song). See BARNARD, CHARLOTTE.

**COME PRIMA** (Ital., as at first). A direction indicating that a section of a composition which is repeated, either immediately or after a contrasting section, is to be performed again exactly as before; also that a given passage is to be treated in the same manner as before.

**COME SOPRA** (Ital. = "as above"). An indication written into manuscript music when a passage or section is repeated, to save the trouble of rewriting.

**COMENIUS (or Komenský), Jan Amos** (b. Uherský Brod, Moravia, 28 Mar. 1592; d. Naarden nr. Amsterdam, 15 Nov. 1670).

Czech educational reformer and hymnologist. He was the last bishop of the Bohemian Brethren, compiled and edited the famous 'Kancionál' (Hymnal) (Amsterdam, 1659), a book of Psalms (150 with 25 additional settings) and hymns (430), which completes and concludes the glorious history of songs and hymns of the union inaugurated by the 'Šamotulský kancionál' ('Szamotuly Hymnal') of Jan Blahoslav. There is a valuable preface to this hymnal about singing in general, about Czech spiritual singing in particular and about figured and instrumental music, etc. He paid the greatest attention to the common educational value of singing in all of his pedagogic works. G. Č.

See also Blahoslav, Jan.

**Comer, Miss.** See ASHE.

**COMES, DUX AND.** See FUGUE.

**COMES, Juan Bautista** (b. Valencia, 1568; d. ?).

Spanish composer. His first appointment was as *maestro de capilla* at Lérida (Catalonia) and he was afterwards musical director at the Colegio del Patriarca, Valencia (1605), Valencia Cathedral (1613) and the royal chapel in Madrid (as vice-master of the king's

choir, 1619). In 1628 he returned to Valencia and was once more *maestro de capilla* at the Patriarca, and in 1632 at the Cathedral. A portrait of him, by Ribalta, is to be seen at the Museo Provincial at Valencia.

The works of Comes, who was noted for the grandiose scale on which they were planned, number over 200. Few were printed in his lifetime (e.g. the motet 'Gaude, salve' in Victoria's 'Motecta festorum totius anni', Rome, 1585); his manuscripts are to be found mainly in the musical archives of Valencia Cathedral, the Patriarca at Valencia, the Cathedral at Segorbe and the Biblioteca de la Diputació at Barcelona. A classified list is given by Alcahali ('Diccionario biográfico de músicos valencianos') and a selection was published in 1888 by the Benedictine Juan Bautista Guzmán ('Obras musicales de J. B. Comes, escogidas, puestas en partitura y ilustradas', 2 vols., Madrid, 1888).

An interesting side of Comes's work is shown by the compositions with Spanish instead of Latin words. They are sacred in character, but not liturgical, consisting of *romances*, *villancicos*, *folías*, etc., in which the verse is sung by a few voices, and the chorus by the whole choir in six or more parts — a method of procedure adopted also by his contemporary Ruimonte, whose collection of madrigals and *villancicos* is in the library at Christ Church, Oxford. The melodies of Comes often have a distinctly popular stamp. J. B. T.

**COMETTANT, Jean Pierre Oscar** (b. Bordeaux, 18 Apr. 1819; d. Montvilliers nr. Le Havre, 24 Jan. 1898).

French critic. He entered the Paris Conservatoire in Nov. 1839, where he studied under Elwart and Carafa till the end of 1843. He first became known as a pianist and as the composer of a number of pieces for that instrument, duets for violin and pianoforte, as well as songs and choruses. He lived in the U.S.A. in 1852-55. After his return to Paris he came forward as a writer and soon obtained a reputation as the music critic of the 'Siècle', with which he was connected for many years.

Comettant had an easy, humorous, brilliant style; he was a great traveller and published a large number of books on various subjects which are both instructive and pleasant reading. Of his works on music, the following are among the most important:

- 'Trois Ans aux États-Unis' (Paris, 1858).
- 'La Propriété intellectuelle...' (Paris, 1858).
- 'Histoire d'un inventeur au XIX<sup>e</sup> siècle' (Paris, 1860) — a life of Adolphe Sax, and defence of his claims.
- 'Musique et musiciens' (Paris, 1862) — a collection of articles originally published in the 'Siècle'.
- 'Le Danemark tel qu'il est' (Paris, 1865).
- 'La Musique, les musiciens, et les instruments de musique chez les différents peuples du monde' (Paris, 1869) — an important work, written on the occasion of the Exhibition of 1867.

'Les Musiciens, les philosophes, et les gaités de la musique en chiffres' (Paris, 1870) — a polemical treatise

'François Planté' (1874).

He wrote a considerable amount of music.

G. C.

**COMIC OPERA.** A term used indiscriminately to denote a musico-dramatic work of an amusing nature. It is not the English equivalent to the French *opéra-comique*, for that term includes works into which seriousness and even tragedy may enter; the type is rather the *opéra-bouffe*. It would be as well if comic opera meant only a work in which there is an equal importance attaching to the text as to the music, such as one finds in the Gilbert and Sullivan series, and where, although the aim is to amuse, the technique is high. One could then differentiate between comic opera and musical play or musical comedy. For they have much in common: the dialogue is spoken and is interspersed with songs, duets and the like, and the finales are more or less elaborated. Since the days of the ballad operas the English public have always welcomed the association of light music with plays of a light and amusing character. But unless there is real workmanship and invention in both text and music such works are ephemeral and reflect merely the taste of the moment. A true comic opera, on the other hand, may reasonably be expected to have a longer life. Although in recent years the musical technique of the musical play has tended to improve, there is still great looseness in the writing and construction of the play itself and frequent reliance upon members of the cast to make their own glosses thereon wherewith to hold the public.

Light opera is a term often employed for works in which sentiment counts for more than high spirits, although the latter is not necessarily absent. The text and the music are generally of a more refined quality, but in other respects the form remains the same.

**COMMA.** See INTERVAL.

**COMMA OF DIDYMUS** (Syntonic Comma). See INTERVALS.

**COMMA OF PYTHAGORAS** (Ditonic Comma). See INTERVALS.

**COMMER, Franz** (b. Cologne, 23 Jan. 1813; d. Berlin, 17 Aug. 1887).

German organist, musical editor and composer. He was a pupil of Joseph and Bernhard Klem, and Leibl, became organist in the Carmelite church at Cologne in 1828 and a member of the Cathedral choir. In 1832 he went to Berlin, where he became a pupil of Rungenhagen, A. W. Bach and A. B. Marx, librarian at the Royal Musical Institute, choirmaster at the catholic church of St. Hedwig (1846), member of the Akademie der Kunste from 1845 and joint-founder in 1844 with Theodor

Kullak of the Berlin Tonkünstlerverein. He took a prominent part in the foundation of the Gesellschaft für Musikforschung (1868).

Commer is best known as the editor of the following important works:

'Collectio operum musicorum Batavorum saeculi XVI', 12 vols. (1844-58).

'Musica sacra XVI, XVII saeculorum', 26 vols (the earlier of which were edited by Commer), containing organ pieces, masses and motets for men's voices and full choir.

'Collection de compositions pour l'orgue des XVI<sup>e</sup>, XVII<sup>e</sup>, XVIII<sup>e</sup> siècles', six parts.

'Cantica sacra . . . aus den XVI-XVIII Jahrh.', 2 vols.

Commer composed some church music, songs and dances for pianoforte, as well as incidental music for 'The Frogs' of Aristophanes.

A. M.

**COMMITTEE FOR THE PROMOTION OF NEW MUSIC.** An organization formed in London in 1943 under the auspices of the Arrangers', Composers' and Copyists' Section of the Musicians' Union. Its purpose is to play and discuss works by young or unrecognized composers who would normally find it difficult to hear their works at all. The idea received the support of large numbers of composers, conductors, executants and critics, and Dr. Ralph Vaughan Williams agreed to accept the Presidency.

The Committee's work takes the form of holding regular studio recitals at which the chamber works of new composers are performed and discussed, and of presenting rehearsals at which an established orchestra plays new orchestral works. Since its inception it has performed nearly 500 works and read the scores of more than 1200. Each work receives careful reading before it is accepted for performance. The Committee also publishes a "Recommended List" of the best music selected from the works that have been performed. These are publicized as widely as possible, and some of them have been recorded. The list is sent abroad with the collaboration of the British Council, and every effort is made to achieve performances.

The Committee has received considerable recognition abroad. The Kussevisky Music Foundation of Boston, Mass., gave it 2000 dollars in 1948, the Brussels and Budapest radio stations broadcast accounts of its work, Paris formed a new music society modelled on its example and the Music Association of Ireland was formed as a direct result of its stimulus.

E. B.

**COMMON CHORD.** The familiar term for the major or minor chord of  $\frac{4}{3}$  (see TRIAD).

**COMMON TIME.** See TIME.

**COMMUNION SERVICE.** See SERVICE.

**COMODO** (Ital. = easily, leisurely, at a convenient pace). A direction generally used with *allegro*, as in the rondo of Beethoven's E major pianoforte Sonata, Op. 14 No. 1.

J. A. F.-M.

**COMPAN, Honoré** (b. ? Paris, ?; d. ? Paris, ?).

French 18th-century harpist, violinist and composer. He was professor of the harp and violinist in Paris. There are extant of his works: 10 'Pièces en concerts pour la harpe'; 30 ditto; 'Méthode de harpe', or short and clear principles for learning to play on this instrument. Therein are many little pieces to illustrate these principles, and some choice ariettas with accompaniment (Paris, Thomasin, 1783). Compan was violinist at the Théâtre de la Pantomime Nationale in 1798. A little 'Méthode de musique' (Paris, Frère) was published under his name. He was still alive in 1798.

M. L. P.

**COMPASS.** In its musical sense the word designates the range of notes any voice or instrument can produce, from the lowest to the highest. The compass is thus the scale of notes lying between the extreme limits of sound a given voice or instrument is able to reach, or to "encompass".

The compass of the various instruments which are in modern use, and indeed of many obsolete ones, will be found under their respective headings. It may be said generally that it is strictly limited in the direction of the bass, but often varies in the direction of the treble according to the player's skill, except in instruments of fixed intonation, such as the pianoforte, the harp, the organ, the celesta, etc. In voices the range is not rigidly limited in either direction: they may in certain conditions be capable of slightly exceeding it or fall temporarily short of it.

The compass of the modern orchestral strings is from the lowest note of the double basses, *actually* E a tenth below the bass stave (or exceptionally C a third lower), to about E in altissimo (*i.e.* in Helmholtz pitch notation from E, to  $e''''$ ); the latter can be taken by the violin if properly led up to, and even that is only the highest natural note: harmonics can reach a fourth higher (to about  $a''''$ ). The orchestral wind can reach down to the bottom B $\flat$  on the pianoforte, six ledger lines below the bass stave (B $\flat$ ), on the double bassoon, the contrabass Wagner tuba and the contrabass sarrusophone. But the extreme orchestral notes on either side are of little value, since the ear is hardly capable of perceiving their pitch, and they are thus little more than squeaks and grunts.

The compass for choral voices is from E or F below the bass stave to A above the treble stave or a little higher (*i.e.* from E or F to about  $a'$ ).<sup>2</sup> Solos are rarely written lower

<sup>1</sup> Readers unfamiliar with these symbols should consult the article on PITCH NOTATION.

<sup>2</sup> For table showing compass of each type of voice see SINGING.

than F, though Russian bass voices are frequently able to go at least a fourth below that; and solo sopranos are rarely asked to go beyond C in alt (c'''), except special singers, as in the part of the Queen of Night in 'The Magic Flute', which was written for Mozart's sister-in-law Josepha Hofer and goes up to F in alt (f''')<sup>1</sup>; and Richard Strauss goes some three-quarters of a tone higher than that — we must bear in mind the difference between modern pitch and the pitch in Mozart's time — namely to F# in alt (f#''') in the part of Zerbinetta in 'Ariadne auf Naxos'. C. H. H. P., adds.

**COMPÈRE, Louis** (called **Loyset**) (b. ? Saint-Quentin, c. 1455; d. Saint-Quentin, 16 Aug. 1518).

Flemish composer. He was musically educated as a choir-boy at Saint-Quentin Cathedral, where later he was a pupil of Okeghem and a fellow-student of Josquin des Prés; for in Guillaume Crétin's lament on the death of Okeghem he is thus referred to:

Agricola, Verbonnet, Prioris,  
Josquin des Prés, Gaspard, Brumel, Compère,  
Ne parlez plus de joyeux chants, ne ris,  
Mais composez un ne recorderis,  
Pour lamenter nostre Maistre et bon père.

He may possibly have been in the service of Galeazzo Sforza, Duke of Milan, with Josquin des Prés, in 1474-75, under the name of Aluyseto. In Feb. 1486 he was a singer in the chapel of the French king under Okeghem and in 1509 he received a canonry in the collegiate church of Saint-Quentin, where he was buried. His reputation stood high with the contrapuntists of his own and the succeeding age, and it is amply sustained by the compositions which are known to be his. These are, 2 motets in Petrucci's 'Motetti XXXIII'; 22 compositions in Petrucci's 'Harmonice musices odhecaton'; 2 songs in Petrucci's collection 'Strambotti ode Frottole' (Lib. 4<sup>to</sup>); an 'Asperges' and a 'Credo', both a 4, in Petrucci's 'Fragmenta missarum'; a motet 'O bone Jesu', signed simply Loyset, in Petrucci's 'Motetti della Corona'; some motets in the collection 'Trium vocum cantiones' (Nuremberg, 1541). Among manuscripts belonging to the papal chapel may be mentioned a Magnificat a 4, 6 motets and a curious 5-part motet in which the tenor and second alto sing "Fera pessima devoravit filium meum Joseph", while the treble, first alto and bass are recounting the injuries received by Pope Julius II from Louis XII of France. Other manuscripts of Compère's work are to be found at Trent ('Trienter Codices', see reprints below), Rome, Florence, Brussels, Dijon, Cortona and London (B.M., Add. MS 35,087). Compère has been confused with Piéton, who had the same Chris-

tian name — Loyset, a diminutive of Louis. The confusion arises from the practice of the early masters of signing their compositions with the Christian name alone.

Modern reprints of works by Compère are to be found in the following:

Ambros, 'Trienter Codices' (D.T.O.).  
Blum, F., 'Das Chorwerk: weltliche Lieder zu 3-5 Stimmen' (1890).  
Bordes, Charles, 'Trois Chansons du XV<sup>e</sup> siècle' 'Collection de polyphonie classique' (motet 'O vos omnes').  
Droz, E. & Thibault, G., 'Poètes et musiciens du XV<sup>e</sup> siècle' (Paris, 1924).  
Maldeghem, 'Trésor musical'.

M. G. C., adds.

Bibl.—Droz, E. & THIBAUT, G., 'Bibliographie des recueils de chansons françaises du XV<sup>e</sup> siècle' (Paris, 1925).  
PIRRO, ANDRÉ, 'Musiciens des XV<sup>e</sup> et XVI<sup>e</sup> siècles' (Paris, 1940).

**COMPETITION FESTIVALS.** These festivals are gatherings in many places of Great Britain and the English-speaking countries overseas of musical amateurs for the purpose of competing in performance before judges who not only give decisions and in some cases award prizes, but also give help, criticism and advice to the competitors. Competition festivals, chiefly in choral singing, but also in solo singing and instrumental performance (including, in later years, orchestral and chamber music), have thus become an important factor in the musical education of the people of Great Britain, and the movement has spread widely over the British Empire.

Although now mainly a feature of British musical life, musical competitions did not originate in Britain, though the idea of regarding them as "festivals" seems to have done so. As Percy A. Scholes reminds us<sup>2</sup>, musical contests date back to ancient Greece, where the Pythian games of the 6th century B.C. were essentially musical events; and the same authority points out that 13th-century contests of the Minnesinger in German and the medieval *puy*s in France — particularly that of Évreux — were also in the nature of competition "festivals".

In the British Isles the Welsh Eisteddfod, which goes back to the 7th century at latest, is the oldest competitive musical event, though by no means exclusively devoted to music. In England brass-band contests, particularly in the northern manufacturing districts, began before the modern revival of the festivals devoted mainly to singing; but, still according to Scholes, there were contests for bodies of singers at Brentwood, Essex, in 1773 and at Corsham, Wiltshire, in 1783. In 1860-62 John Curwen organized competitions at the Crystal Palace in London to encourage choirs to use his tonic sol-fa system, and his son, John Spenser Curwen, founded a similar competi-

<sup>1</sup> An even more freakish range in Mozart's experience was noted down by him in his letter from Bologna of 24 Mar. 1700 (see AGUIARI).

<sup>2</sup> 'Oxford Companion to Music', p. 193 ('Competitions in Music').

tion which gave scope also to solo singers and instrumentalists.<sup>1</sup>

Curwen's enterprise, and the Kendal Festival started in 1885 by Mary Wakefield, marked a new era in this class of musical performance. Competitive festivals are now held all over Great Britain and in Ireland (especially the north). These festivals, associated with towns or country areas, are organized locally and occur annually. Practically all these organizations are affiliated under the British Federation of Music Festivals.

Under the impetus of competition an extraordinarily high standard of choral team-work has been reached by choirs of mixed voices and of men's and women's voices separately, not only in those parts of the country, such as Lancashire and Yorkshire, which have always been famous for their vocal performance, but even in many small towns and villages in the south and west of England, where practically no serious effort to cultivate the music of the people had been made before the beginning of the competition festival movement.

A difference in scope is to be noted in these gatherings. Some are content with the competition side only; others, following the lines laid down by Mary Wakefield, make the culminating feature the combined performance of some important work studied by the various sections apart from competition. There is also a divergence of view as to the merits of the two forms of festival. While some musicians who have had considerable experience in judging consider that the best results are obtained by confining the festivals to competitive purposes, others, who take a broader view of the educative function, hold strongly that competition should be used merely as a means to an end, which is the performance of music for its own sake.

The interests of the competition festivals in Great Britain are looked after by the British Federation of Music Festivals, originally formed under the name of British Federation of Musical Competition Festivals. It was incorporated in 1921 and succeeded the association which had been founded chiefly at Mary Wakefield's instigation in 1905. Local organizations all over the Empire, but principally within the British Isles, are affiliated to it and receive assistance in their work in innumerable ways. The Federation has established a current panel of competent judges. It has considerably raised the standard of music used as test pieces and the number of marks required for certificate awards. It holds periodical conferences and gives advice to its members on many questions of method. A Year-book is issued from the central office (106 Gloucester Place, London, W.1) which supplies information

about each festival held within the Federation's membership. The chairman is Mr. Philip Godlee of Manchester; the secretary, Mr. Stanley Harper.

The Federation also organizes summer schools in subjects suitable to its members. Particularly successful have been those for chamber music held at Bangor and later at Downe House School, Newbury. They were first undertaken on the initiative of W. W. Cobbett, who gave a financial guarantee against loss. Amateur musicians make up their own parties (quartets, trios, etc.) and practise selected works under professional guidance. It was from this summer school that Cobbett took the idea of the Chamber Music Association, which he founded under the auspices of the Federation towards the end of his life.

In 1948 H.R.H. Princess Elizabeth honoured the British Federation of Music Festivals with her patronage.

There are now 275 affiliated festivals and those taking part, both children and adults, are estimated at over one million. The movement encourages interest in music, folk dancing and dramatic art. It has been the means of bringing many young and talented people to the notice of those able to advise and help them forward to a professional career. Further it has encouraged amateur performers of moderate attainments to join in music-making for the enjoyment of their leisure hours.

It is a non-profit making body, the income being derived from subscriptions. Many prominent musicians and patrons of the arts have served the festival movement in various ways.

Dr. Ralph Vaughan Williams, O.M., who has long been connected with the movement, became President, following the late Sir Hugh Allen.

N. C. G. & H. C. C., adds.

See also Cobbett (W. W.). Curwen (John & John Spencer). Wakefield (Mary).

**"COMPLIMENT" QUARTET.** A nickname, once current but now almost forgotten, for Beethoven's string Quartet in G major, Op. 18 No. 2.

**COMPLINE** (Lat. *completorium*). The last of the "Hora Diurna" or "Day Hours" of the Roman Catholic ritual.

**COMPONIUM.** See MECHANICAL ORCHESTRA.

**COMPOSITION.** A term which, though meaning literally a "putting together", is now almost exclusively applied to the invention of music — a novelist or a poet being never spoken of as a composer except by way of analogy, but a producer of music being almost invariably designated by that title. "Gedichtet", says Beethoven, "oder wie man sagt, componirt" (Letters, Nohl, No. 200). As

<sup>1</sup> Several earlier ventures are mentioned by Scholes, *loc. cit.*

far as the construction of a whole movement from the original ideas is concerned the word is perhaps not ill adapted, but for the ideas themselves nothing could be more inappropriate. For the mysterious process of originating them the word "invention" seems more suitable, but even that does not at all describe it with certainty. It is the fruit sometimes of concentration and sometimes of accident; it can hardly be forced with success, though very ingenious imitations of other people's ideas to be made to look like new may be arrived at by practice and the habitual study of existing music. Nevertheless, the title of composer, though only half applicable, is an honourable one, and those who do put together other people's ideas in the manner which should best justify the title are generally those who are most seldom called by it. C. H. K. P.

See also Construction. Form.

**COMPOSITION PEDALS.** Metal pedals placed above the pedal keyboard of the organ for the purpose of facilitating changes of stops. They were invented by Bishop early in the 19th century and superseded the "shifting movement" in use in England since the days of Father Smith.

Composition pedals were of two kinds — single-action and double-action; but the latter only are now made. A "single-action" would either throw out or draw in given stops, but would not do both. A "double-action" composition pedal will not only draw out a given number of stops — we will suppose the first four — but will draw in all but the same four. E. J. H., rev.

See also Combination Pedals. Organ. Pedal.

**COMPOUND INTERVALS.** Intervals exceeding the compass of an octave are called compound, as distinct from simple intervals which lie within the octave, because they differ from the latter only in width, not in character. Thus a major tenth (e.g. c'-c'') is essentially the same as a major third (c'-c'), so far as the harmonic character goes, though the effect in sound is different. E. B.

See also Simple Intervals

**COMPOUND TIME.** Any musical metre divisible by the figure 3 is said to be in compound time (or therefore triple time): i.e. any time the signature of which prescribes 3, 6, 9 or 12 beats. Metres divisible by 2 (or 4) are said to be in simple time (if by 4 also in common time). Abnormal metres, such

as 5-8, 7-4, etc., are in fact also compound, though not technically so called. E. B.

See also Time.

**COMPTON ELECTRONE.** See ELECTROPHONIC INSTRUMENTS.

**COMPTON, John Haywood** (b. Newton Burgoland, Leicester, 20 June 1876).

English organ builder. He was educated at the Leicester Commercial High School. Urged by his tutors to become a professional musician and composer, he felt that organ building was his true vocation and served a six years' apprenticeship in the craft. In 1898 he joined the staff of Brindley & Foster of Sheffield and remained with them about three years as a voicer, tuner and finisher. In 1901 he started business on his own account at Nottingham, where he was in partnership with Thomas Musson for two or three years. On 5 Nov. 1906 his premises were fired by a stray rocket, and he moved for a while to Measham in Leicestershire. His assistance was sought in 1912 by James Martin White to restore the Thynne-Hope-Jones organ at Balrudery. Soon afterwards Mr. White became a shareholder and director of John Compton, Ltd., and the factory was again removed to Nottingham.

After the first world war the Compton Company acquired the premises of August Gern at Chiswick and thus became established in London. Later it was associated for a short time with J. W. Walker & Sons, Ltd. In 1930 the Compton Company built a modern factory in Chase Road, Willesden, and in this year built no fewer than forty-two organs, including the famous one at Downside Abbey. John Compton, always ready to give credit to other organ builders (including his keenest competitors), freely acknowledged his indebtedness to the genius of Robert Hope-Jones, whose work he carried forward to much greater artistic heights. He always had faith in electric action, which he employed consistently and successfully at a time few organ builders in England ventured to use it at all.

He developed the extension system on artistic lines and (unlike Hope-Jones) built up, where possible, fully developed chorus work including liberal mutation stops and mixtures. Always an inventor, he made a scientific study of synthetic tone-production, perhaps his most notable contribution in that sphere being a remarkable realistic 32-ft. reed made up of seven ranks of flue pipes. Among other notable inventions are the 32-ft. cube bass and (in collaboration with Clifford Hawtin) the magnificent polyphone bass<sup>1</sup> from which the 32-ft. octave in true pitch down to E,, is obtained from one pipe of special form.

<sup>1</sup> For a description, with diagrams, of the cube bass and polyphone bass see 'The Electric Organ' by Reginald Whitworth.

Compton also vastly improved the Hope-Jones diaphones and invented a special wind-chest for them.

Between the two world wars the firm built a large number of first-class cinema organs. No doubt this helped towards the perfection of the electric action for which the firm is justly famous. Among the very large number of Compton organs, ranging from the tiny 2-rank "Miniatra" extension model to large four-manual instruments, the following notable examples may be mentioned: Downside Abbey, Derby Cathedral, Mullingar Cathedral, St. Luke's Church, Chelsea, London, Holy Trinity Church, Hull, the B.B.C. studios and concert hall, Bournemouth Pavilion, Southampton Town Hall, Wolverhampton Town Hall, etc. During the war the splendidly equipped factory was destroyed by enemy action. By 1948 it was re-erected and in full working order under the direction of the founder, John Compton, and James I. Taylor (himself a very capable organist and a great inventor of organ mechanisms), who has been with Mr. Compton from the early Nottingham days and whose genius and integrity have helped to make the reputation of the firm.

**COMTE ORY, LE** (Opera). *See* ROSSINI.

**COMUS.** A masque, written by John Milton and performed on Michaelmas night 1634, at Ludlow Castle, the residence of the Earl of Bridgewater, with music by Henry Lawes. The masque, under the editorship of Lawes, was published anonymously in 1637, its authorship being declared only in the 1645 edition.

The music remained unpublished in manuscript in the B.M. library until 1904, when the Mermaid Society undertook its publication, and performances of the masque, with the original music, were given in London and the provinces. Hawkins and Burney, in their 'Histories of Music', both give one song, 'Sweet Echo', Burney making severe comment on Lawes's setting of the song.

The three-hundredth anniversary of its first performance with Lawes's music was celebrated by open-air performances, with that music, at Ludlow Castle in 1934.

In 1738, one hundred and four years after the original production, another version of 'Comus' was given to the public. It was in this that T. A. Arne first gave proof of his full talents.

Milton's masque was adapted for stage requirements by Dr. Dalton, and the piece was presented in London, at Drury Lane Theatre, in the year above named, 1738. It was an immediate success and at once established Arne's reputation. Beard, Mrs. Clive and

Mrs. Arne were the singers who took the chief characters. Arne published the masque in folio, in 1740, and marked it as his "Opera prima". The imprint stands:

Printed by William Smith, at the Musick Shop in Middle Row, Holborn, near Holborn Barrs; and sold by the author at his House, No. 17 in Craven Buildings, Drury Lane.

Songs from Arne's 'Comus' enjoyed a long popularity. It was revived at Eton (Dec. 1922) and subsequently given in the Inner Temple Hall, London (Mar. 1923).

Another adaptation of Milton's 'Comus' was made by George Colman and acted at Covent Garden and the Haymarket theatres in London in 1772, it was not a success, although probably Arne's music was employed.

**CON AFFETTO.** *See* AFFETTUOSO.

**CON AGITAZIONE.** *See* AGITATO.

**CON AMORE** (Ital. = with love, lovingly).

A direction suggesting an emotional style of performance, not without some sentimentality. A more usual term for the same thing is *amoroso*. G.

**CON ANIMA.** *See* ANIMATO.

**CON BRIO** (Ital. = with life, with fire).

*Allegro con brio* was a favourite tempo with Beethoven.

**CON OBBLIGO** (Ital., lit. with obligation = under an obligation, under constraint). A term used for difficulties in 17th- and 18th-century counterpoint imposed upon himself by the composer, such as canon, stretto, double counterpoint, augmentation, inversion, cancrizans, etc.

**CON SPIRITO.** *See* SPIRITOSO.

**CONACHER & CO.** English organ builders. They established an organ factory at Huddersfield in 1854, from which a rapidly extending business has been developed. In 1906 their list was described as including upwards of 400 organs built or enlarged by them. The following were quoted as representative: the parish church, Huddersfield; St. Michael's, Hulme near Manchester; Glasgow University; the Roman Catholic Cathedral, St. John's, New Brunswick. In 1921 this firm could claim to have built over 1600 organs in all parts of the world. v. de p.

**CONCENTO.** The sounding together of all the notes in a chord, and thus the exact opposite of arpeggio. J. A. F.-M.

**CONCENTORES SODALES.** An association founded in London in 1798, to some extent on the basis of one formed in 1790 by Callcott, Benjamin Cooke and others<sup>1</sup>, after the dissolution of which the want of such an association was greatly felt, so that in 1798 Horsley proposed to Callcott the formation of the Concentores Sodales. The first meeting was held on 9 June at the Buffalo Tavern,

<sup>1</sup> *See* Mus. T., 1892, p. 713.

Bloomsbury, and was attended by Callcott, R. Cooke, J. Fring, J. Horsfall and S. Webbe, jun. Among the early members were S. Webbe, sen., Linley, Bartleman, Harrison, Greator, Spofforth, etc. Each member who was a composer contributed a new canon on the day of his presidency. In the B.M., Add. MS 27,693, is the programme of Thursday, 18 Nov. 1802. The society began to decline about 1812, and it was decided to dissolve it.

In May 1817, at a meeting at the Freemasons' Tavern, at which Attwood, Elliott, Horsley, Linley and Spofforth were present, it was resolved to re-establish it, with the difference that no one should be a member who was not practising composition and did not, previous to his ballot, produce a work in at least four parts. The original members were soon joined by Evans, W. Hawes, T. F. Walmisley and Smart, and later by Bishop, Goss, Jolly and Attwood. The associates included King, Leete, Terrail and Sale. The members took the chair by turns, and the chairman for the evening usually produced a new canon, which was followed by glees of his own composition and a madrigal or some other vocal work.

The society was finally dissolved in 1847.

**CONCENTUS.** See ACCENTUS & CONCENTUS.

**CONCERT** (Fr. *concert*, Ger. *Konzert*, Ital. *concerto*). While the English use of the word means only the performance before an audience of a prearranged programme of musical works, the French, German and Italian forms of it, besides possessing this meaning, are equally applied to a particular type of composition.<sup>1</sup> The old English form "consort" approximated to this latter meaning, but the Italian form, *concerto*, has been adopted into the English language to mean concerted music, particularly that for one or more solo instruments with orchestra.

Concerts, in the sense of more or less public performances of set programmes to which audiences are admitted by payment, seem to have begun in England (earlier than elsewhere) with those given in London by John Banister between 1672 and 1678. Thomas Britton carried on the practice, and during the 18th century many concert-giving institutions were formed in London, including the Academy of Ancient Music (founded 1710), the Castle Society (1724), the Concert of Ancient Music (1776)<sup>2</sup>, the Professional Concerts (1785), besides occasional concerts of individual artists, among which those of Salomon and Haydn were pre-eminent from 1791 to 1795. Hickford's Room (1713) and the Hanover Square Rooms (1775) were the most important London concert halls of that century.

<sup>1</sup> See CONCERTO.

<sup>2</sup> See ANCIENT CONCERTS.

Concerts began to be propagated in Germany, Switzerland and Sweden by the *collegia musica* about the year 1700, but the first great continental institution of the kind was the Concert Spirituel, founded in Paris by Philidor in 1725. Thus formed the model for others, and from it the history of concert-giving in the 18th century developed. Other landmarks worthy of mention are the foundation in Vienna of the Tonkünstler Societat (1772), in Amsterdam of the Felix Meritis concerts (1777) and at Leipzig of the Gewandhaus concerts (1781).

While the private patronage of music by princes and nobles remained the chief source of livelihood to the musician, the progress of public concert institutions was impeded. The breakdown of the system of patronage and the change of tone and temper which the Napoleonic wars brought to the Europe of the 19th century stimulated the increase of concerts. The Viennese development of symphonic music brought into existence the modern symphony orchestra in every centre of Europe; improved transport by road and sea, particularly by steam power, facilitated the careers of travelling virtuosi, and in the 19th century concert-giving became an international industry.<sup>3</sup>

**CONCERT À LA COUR, LE** (Opera). See AUBER.

**CONCERT FLUTE.** An 18th-century English term applied, like "German Flute", to the transverse flute, as distinct from the recorder.

R. D.

See also Organ Stops.

**CONCERT MASTER** (Ger. *Konzertmeister*). The leader of an orchestra, so called in America by derivation from the German word. More confusingly the conductor is often called "leader" in the U.S.A.

E. B.

**CONCERT OF ANTIENT MUSIC.** See ANCIENT CONCERTS.

**CONCERT PITCH.** See PITCH, STANDARD.

**CONCERT SPIRITUEL.** A musical institution founded in Paris by A. Philidor (5) in 1725 for the production of sacred vocal works. Its scope was, however, enlarged before long, and secular instrumental works, especially symphonies and concertos, were admitted to the programmes. The organization came to an end in 1791, but was afterwards replaced by others of a similar nature. Its example was followed by many other musical centres in Europe, sometimes under the same name, as in London and Vienna.

The name was always in the singular, "Le Concert Spirituel"; the plural "Les Concerts Spirituels" is a widely current mistake.

E. B.

<sup>3</sup> The history of the modern concert may be traced in this Dictionary by consulting articles under the names of prominent musical towns.

**CONCERTANTE** (Ital.). (1) In the 18th century this name was given to a piece of music for orchestra in which there were parts for solo instruments, and also to compositions for several solo instruments without orchestra. The fine Concerto by Handel in C major, for two violins and cello, accompanied by strings and two oboes (published in part 21 of the German Handel Society's edition) is in Arnold's old English edition entitled 'Concertante'.<sup>1</sup>

(2) From the later 18th century onwards (the title 'Sinfonia concertante' occurs both in Haydn and in Mozart) the word is used chiefly as an adjective, prominent solo instrumental parts being spoken of as "concertante parts", and a work being said to be "in the concertante style" when it affords opportunities for the brilliant display of the powers of the performers. For example, those quartets of Spohr in which especial prominence is given to the part of the first violin are sometimes called "concertante quartets". His Op. 48 is a 'Sinfonie concertante, pour deux violons avec orchestre'; his Op. 88 a 'Concertante' for the same. E. P.

**CONCERTGEBOUW.** See AMSTERDAM.

**CONCERTINA.** A portable instrument of the Seraphine family, patented by Sir Charles Wheatstone on 19 June 1829. It is hexagonal, and has a keyboard at each end, with expandable bellows between the two. The sound is produced by the pressure of air from the bellows on free metallic reeds. The compass of the treble concertina is four octaves (g to g'''), through which it has a complete chromatic scale. This instrument is double-action, producing the same note both on drawing and pressing the bellows. Much variety of tone—but highly unpleasant tone—can be obtained by a skilful player, and it has the power of being played with great expression and complete *sostenuto* and staccato. Violin, flute and oboe music can be performed on it without alteration, though the quality of their tone becomes sadly debased; but music written specially for the concertina cannot be played on any other instrument, except the organ or harmonium. Nothing but the last-named instruments can produce at once the extended harmonies, the *sostenuto* and staccato combined, of which the concertina is capable.

There are also tenor, bass and double-bass concertinas, varying in size and shape. These instruments are single-action, producing the sound by pressure only, and are capable of taking tenor, bass and double-bass parts without alteration. The compass of the tenor concertina is from c to c''', that of the bass from C to c''' and that of the double-bass from C, to c'', making the total range of the four instruments 6½ octaves. Regondi was the

first to make the instrument known in England, and he was followed by George Case. Richard Blagrove was subsequently the principal performer and professor.

Among the music written specially for the instrument are two Concertos in G and D for solo concertina and orchestra by Molique; two in D and E♭ by G. Regondi; Sonata for pianoforte and concertina in B♭ by Molique; Quintet for concertina and strings by G. A. Macfarren; Adagio for 8 concertinas in E by E. Silas; Quintet in D for concertina, violin, viola, cello and pianoforte, by the same; 6 Trios for concertina, violin and pianoforte, by the same. Much brilliant *salon* music has also been written for it. The concertina has been occasionally introduced into the modern orchestra for special effects. (PLATE 57, Vol. VII, p. 84, No. 2.) G., adds.

**CONCERTINO** (Ital.=a little concert). (1) A term applied to the little band of solo instruments employed in a *concerto grosso*. The title of Corelli's concertos is 'Concerti grossi con duoi violini e violoncello di concertino obligati, e duoi altri violini, viola e basso di concerto grosso ad arbitrio che si potranno radoppiare'. W. S. R.

(2) A piece for one or more solo instruments with orchestral accompaniment, which differs from the concerto in its much greater conciseness. The concertino was traditionally regarded as freer in form than the concerto; it may be in three short movements, which are usually connected; but it more often consists of one rather long movement, in which the time may be changed or a middle part in slower tempo be introduced episodically. As good examples may be cited Weber's 'Concertino' for clarinet, Op. 26, and Schumann's 'Introduction and Allegro Appassionato', Op. 92, for pianoforte and orchestra. E. P.

**CONCERTO** (Ital.; Fr. *concerti*; Ger. *Konzert*). The name generally given to an instrumental composition designed to show the skill of an executant or a group of solo performers, and one which is normally accompanied by orchestra, though there are numerous exceptions.<sup>2</sup>

The word originally had a different meaning. It came into use in the late 16th century in connection with concerted church music, *concerti ecclesiastici*.<sup>3</sup> In this sense the word was used as equivalent to the Latin *centusius*, and such works were called *concerti da chiesa* (church concertos). Other instruments were added to the organ, and ultimately single instrumental movements in the sacred style were written which also received the name of

<sup>1</sup> Such are Bach's 'Italian Concerto' for harpsichord, Liszt's 'Concert pathétique' for 2 pianos, Schumann's Sonata, op. 14, originally published as 'Concert sans orchestre', and Chausson's Concerto for violin, piano and string quartet. <sup>2</sup> See BANCHIERI & VIADANA.

<sup>3</sup> See CONCERTO GROSSO.

*concerti da chiesa*. The emergence of the concerto as a concert piece is marked by the name of Torelli, who in 1686 published a *concerto da camera* for two violins and bass. The form was developed by Corelli, Geminiani and Vivaldi. From the first it resembled that of the sonata, and as the latter grew out of the suite, the movements becoming larger in form and showing greater internal cohesion, so it was also with the concerto: there is as much difference between a concerto by Bach and one by Beethoven as there is between the 'English Suites' and the "Waldstein" Sonata. In the time of Bach and Handel the word "concerto", though applied almost exclusively to instrumental music,<sup>1</sup> had a less restricted significance than that given to it later.

THE 18TH-CENTURY TYPE.—Many of the specimens of this form in the works of the masters named more nearly resemble symphonies than concertos in the modern meaning of the term.<sup>2</sup> The first of Handel's so-called "oboe concertos" is written for strings, two flutes, two oboes and two bassoons, and excepting in occasional passages these are treated orchestrally rather than as solo instruments; while of Bach we have a Concerto for violino piccolo, three oboes, one bassoon and two horns, with strings, and another for three violins, three violas, three violoncellos and double bass, neither of which possesses the characteristics of a modern concerto. The form, moreover, of the older concerto was very free. With Bach we find a preference for the three-movement form. In the whole of his harpsichord concertos, as well as in those for one or two violins, we find an *allegro*, a slow movement and a finale in quick time—generally 3-8. The two concertos named above are, exceptionally, in four and only two movements respectively. With Handel, on the other hand, the three-movement form is the exception. As examples of the freedom of which he makes use may be quoted the movements of two of his 'Twelve Grand Concertos' for two solo violins and violoncello with accompaniment for stringed orchestra. These works are concertos in the modern sense as regards the treatment of the solo instruments, but their form is as varied as possible. Thus the sixth consists of a *largo*, *allegro ma non troppo*, *Musette* and two *allegro* movements, the second of which (though not so entitled) is a minuet; while the eighth contains an *Allemande, grave, andante, allegro, adagio, Siciliana* and *allegro*. It should be mentioned here that Handel was one of the first, if not the first, to introduce opportunities for extempore performance on the part of the soloist, thus anticipating the *cadenza*, an important feature of the modern concerto, to be mentioned presently. In the second move-

ment of his organ Concerto in D minor (No. 4 of the second set) are to be found no less than six places marked *organo ad libitum*, with a pause over the rests in the accompaniments, indicating that the player (that is to say, he himself) was to improvise.

THE CLASSICAL FORM.—This was finally settled by Mozart, and though several modifications were introduced during the next century, the general lines of construction remained the same as those fixed by him. Nearly fifty concertos of his composition for various instruments are in existence. While presenting slight differences of detail, they closely resemble one another in the more important points. The concerto form was founded upon that of the sonata; several divergences, however, must be noted. In the first place, a concerto consisted of only three movements, the scherzo, for some not very obvious reason, being excluded. Liszt's so-called 'Concerto Symphonie' in E♭ major, for pianoforte and orchestra, has exceptionally a scherzo as the third of four movements, but that composer was so far forgotten that Brahms's introduction of one into his pianoforte Concerto in B♭ major was considered an innovation in 1882.

The first movement in Mozart's concertos always begins with a *tutti* passage for the orchestra, in which the principal subjects are announced, much as in the first part of the first movement of a sonata. Sometimes the second-subject group is omitted in this portion of the piece, sometimes it is introduced wholly or in part. An important difference in form, however, is that this first *tutti* always ends in the original key, and not in the dominant, or the relative major (if the work be in a minor key), as would be the case in a sonata. It is, in fact, a great mistake to regard the orchestral introduction as a kind of deceptive sonata-form exposition, and a still greater one to call it and the real exposition (after the entry of the solo part) a "double exposition". The solo instrument enters either with the principal subject at once, or with a brilliant introductory passage, which in Mozart at any rate is relevant though thematically free. A repetition, with considerable modification, of the first *tutti* mostly follows, so far as first-subject material is concerned, now divided between the principal instrument and the orchestra; the second-subject group is regularly introduced, as in a sonata, and the "first solo" ends with a brilliant passage in the key of the dominant (or relative major, as the case may be). A shorter *tutti* then leads to the "second solo", which corresponds to the development or working-out of a sonata and which, after various modulations, leads back to the original key. The principal subject is then reintroduced by the orchestra, but in a compressed

<sup>1</sup> See BANCHIERI & VIADANA.

<sup>2</sup> See CONCERTO GROSSO.

form, and is continued by the soloist with the "third solo", which corresponds in its form to the latter part of a sonata movement. A short final *tutti* brings the movement to a close. In most older concertos a pause is made, near the end of this last *tutti*, upon the 6-4 chord on the dominant for the introduction of a cadenza by the player. Though very general, this custom was by no means universal; in several of Dussek's concertos no such pause is indicated. The cadenza, when introduced, could be either improvised by the player or previously composed, either by himself or by some other person. In the cadenza the player was expected not merely to show off his execution, but to display his skill in dealing with the subjects of the movement in which it was introduced. A cadenza consisting entirely of extraneous matter would be altogether faulty and out of place, no matter what its technical brilliancy, though one over-elaborating the composer's material, which has already been developed as far as seemed advisable to him, is almost equally reprehensible. It was the almost invariable custom in the 18th century to finish the cadenza with a long shake over the chord of the dominant seventh, after which a coda for the orchestra alone concluded the movement. In older works the soloist was silent during these few bars; but in his Concerto in C minor (K. 491) Mozart for the first time tried the experiment of associating the piano with the orchestra after the cadenza; and his example was followed by Beethoven in his Concertos in C minor, G major and E♭ major.<sup>1</sup>

The second movement, which might be an *andante*, a *larghetto*, an *adagio*, or any other slow tempo, resembled in its form the corresponding portion of a sonata. Sometimes the variation form was used, as in two of Mozart's Concertos in B♭ major (K. 450 and 456); but more frequently the ordinary *andante* or *larghetto* was introduced. A movement entitled 'Romance' is found in Mozart's Concertos in D minor and D major (K. 466) and a similar one occurs in the D major ("Coronation") Concerto (K. 537), though it is not expressly so entitled, but simply bears the inscription *Larghetto*. The solo part in the slow movements is frequently of a florid character, abounding in passages of ornamentation. Sometimes a cadenza is introduced at the close of this movement also — e.g. in Mozart's Concertos in A major (K. 414), C major (K. 415) and G major (K. 453). In such cases, as is evident from the examples written by Mozart

himself for the works mentioned, the cadenza should be much shorter than in the first movement.

The finale of a classical concerto was mostly in rondo form, though examples are to be found in Mozart of the variation form being employed for this movement also; see Concertos in G major (K. 453) and C minor (K. 491). Sometimes the rondo was interrupted by a complete change of tempo, which however meant no more than the introduction of an unusually contrasting episode. Thus the rondo of the Concerto in C major (K. 415), which is in 6-8 time, is twice interrupted by an *adagio* in C minor, 2-4; in the middle of the rondo of the Concerto in E♭ major (K. 482) is introduced an *andantino cantabile*; while the early Concerto in E♭ (K. 271) has a minuet as the middle portion of the final *presto*. Short cadenzas were also frequently introduced in the finales; the Concerto in E♭ just mentioned has no less than three, all of which, instead of being left to the discretion of the player, are exceptionally written out in full. Similar short cadenzas will be found in the rondo of Beethoven's Concerto in C minor, Op. 37, while in the finale of the Concerto in G major, Op. 58, a pause is made with the special direction "la cadenza sia corta" — the cadenza to be short.

The innovations introduced by Beethoven in the form of the concerto were numerous and important. Foremost among these was the greater prominence given to the orchestra. In Mozart's concertos, except in the *tutti*, the orchestra departs from a simple accompaniment of the soloist only by the introduction of sundry exquisite details; with Beethoven, especially in his later concertos, the instrumental parts have really symphonic importance. Beethoven was also the first to connect the second and third movements (see Concertos in G and E♭), an example which was imitated by Mendelssohn, in whose pianoforte Concertos in G minor and D minor all the movements follow continuously, while those of the violin Concerto are almost as closely linked. Beethoven, breaking through the custom of beginning the work with a long *tutti* for the orchestra by letting the pianoforte take a share in the introduction was, however, anticipated by Mozart, as we have just seen: in the G major Concerto it begins alone; in the E♭ major it enters at the second bar. One more innovation of importance remains to be noticed. In his Concerto in E♭, Op. 73, Beethoven, instead of leaving a pause after the 6-4 chord for the customary cadenza, writes his own in full, with the note "Non si fa una cadenza, ma attacca subito il seguente" — "Do not make a cadenza, but go on at once to the following." His cadenza has the further peculiarity of being accompanied from the

<sup>1</sup> This description of first-movement concerto form establishes a norm, text-book fashion, for convenience of reference. In practice it was even in the classical period considerably departed from by composers, as inspiration dictated. One or two exceptions have been noted, including Mozart's use of the solo instrument in a coda; another is his immediate entry of it into the introductory *tutti* in the E♭ major pf Concerto (K. 271).

nineteenth bar by the orchestra. Another curious example of an accompanied cadenza is to be found in that which Beethoven wrote for his pianoforte arrangement of his violin Concerto, Op. 61, through a considerable part of which the piano is accompanied by the drums, which give the chief subject of the movement. A very interesting modern development of the accompanied cadenza is found in Elgar's violin Concerto.

It is evident that the example of Beethoven in his E $\flat$  Concerto led the way to the disuse of the extraneous cadenza in the first movement. Neither Mendelssohn nor Brahms inserted one at all in pianoforte concertos; and where one is intended composers mostly write out in full what they wish played, as, for example, Mendelssohn in his violin Concerto, Op. 64 (where, it may be remarked in passing, the cadenza is in the middle of the first movement, not at the end). Schumann (Concerto in A minor, Op. 54) also wrote cadenzas in full.

Sometimes concertos are written for more than one solo instrument, and are then known as double, triple, etc., concertos as the case may be. The construction of such a work is precisely the same as that of one composed for a single instrument. As examples may be named Bach's Concertos for two violins, and for two, three and four harpsichords, Mozart's Concerto in E $\flat$  major for two pianos, in F major for three pianos, and in C major for flute and harp; Beethoven's triple Concerto, Op. 56, for pianoforte, violin and cello; Brahms's Concerto in A minor for violin and cello, Op. 102, which was later emulated by Delius. Mendelssohn's autograph manuscripts, now in the State Library at Berlin, contain two concertos for two pianos and orchestra, and one for piano and violin, with strings.

E. P., rev.

**THE MODERN CONCERTO.**—While the romantic composers of the 19th century modified the classical form to suit the needs of individual expression, only one produced so radical a change as to indicate a new type.<sup>1</sup> This was Liszt, who, in his two piano Concertos (E $\flat$  major and A major), not only linked the movements, as others had done before him, but welded them together by the use of themes running through the whole structure and changed in rhythm and tempo to suit the emotional content of each movement in turn. Thus the whole became an enlarged single-movement form in which the first *allegro* could be regarded as an exposition, the central movement, or movements, as episodic developments, and the finale as a combination of development with recapitulation. Liszt's example had a widespread influence on later composers and may be traced in Saint-Saens, notably the violin

Concerto in B minor, in d'Albert's violoncello Concerto in C major and particularly in the highly individual style of Delius's several concertos. Tchaikovsky, Dvořák, Grieg and Bruch all followed more or less the classical pattern of contrasted movements based on sonata form, so that it cannot be said to have been superseded by Liszt's innovation. Elgar's violin Concerto clings almost as closely to classical procedure as does that of Brahms, but the violoncello Concerto is very much freer. It, like Delius's works, may trace part of its descent through Liszt. It is of the essence of modern form, whether in concerto writing or anything else, that the composer accepts precedent just in so far as may suit his immediate purpose and no farther. Certain composers have also shown a marked tendency to return to the original conception of the concerto as a work for a group of concertante players with or without accompaniment. Chausson's 'Concert' for piano, violin and string quartet affords an instance from the 19th century; Arthur Bliss's for piano, tenor voice, xylophone and strings is a salient example from the 20th. But such works are sporadic. They have not at present developed a type.

H. C. C.

If no new type of concerto has developed during the first half of the 20th century, there has been a good deal of endeavour to revive procedures belonging to times earlier than those of the established classical form. Composers who impatiently discard that form without having anything equally solid and shapely to set in its place have no claim to be mentioned in an article which discusses the structure of certain types of work written usually for solo instruments and orchestra, not any sort of music for such a medium, in which case it would have to include suites, rondos, variations, fantasies, rhapsodies and all manner of concert pieces so designed, but classifiable under their own categories for the purpose of a musical dictionary. But certain modern works bearing the title of 'Concerto' do so quite legitimately, though so far as form is concerned they look as if they had been written before Mozart. They may, for instance, revert to the *concerto grosso* type, even if they are not so labelled, as is a work by Bloch for pianoforte and strings, the last movement of which is a fugue. Holst's Concerto for two violins and his 'Fugal Concerto' for flute, oboe and strings, for example, have much of the kind of "solo and choral" writing suggesting the *concertino* and *ripieno* antithesis of the early 18th-century "grand concerto". Hindemith's 'Philharmonic Concerto' and Vaughan Williams's 'Concerto academico' for violin also look a long way back in the matter of form. Other works may do so rather in the matter (a) of idiom or (b) of medium, although

<sup>1</sup> But Spohr had already written a violin Concerto (No. 8, Op. 47) "in the form of a vocal scena".

even so they justify their title if they present themselves in a shape which, however unorthodox, is satisfactory as such from the point of view of the composer's purpose.

Stravinsky's piano Concerto, which attempts to take a modern view of Bach, may be mentioned as an example of (a), while Falla's Concerto and Poulenc's 'Concert champêtre', both for harpsichord, represent (b). But these could not have been cited if they were not, in their way, genuine concertos which have enriched, not attempted to undermine, the functions of the concerto as a musical organism. In such works idiom and medium are not, of course, separable from form, strictly speaking; indeed it is only if at least two of these factors present themselves satisfactorily in conjunction that a good work of the new and yet retrospective type can result. In the second work by Holst mentioned the idiom of the fugal texture is as important an element as that of the structure; in Hindemith's a similar formal tendency is not more important than the fact that it revives the purely orchestral concerto, as Bartók's 'Concerto for Orchestra' also does; and in the Passacaglia of Alan Rawsthorne's piano Concerto the new device of raising the ground-bass by a semitone at each recurrence is as much a point of idiom as of form.

**CONCERTO GROSSO.** (1) An orchestral concerto; i.e. a succession of movements, played by two or more solo instruments, accompanied by a full or stringed orchestra. The term belongs more to the late 17th and early 18th centuries than to the present day, though there are modern instances of its use (e.g. Ernest Bloch's 'Concerto grosso' for pianoforte and strings).

Handel's so-called 'Concertante' is a composition of this kind, written for two solo violins and cello, accompanied by oboes and stringed instruments. Eleven out of the twelve well-known 'Concerti grossi' by the same composer are written for a similar assemblage of solo instruments, accompanied by stringed instruments and continuo only; but No. 7 of this set is of an exceptional character and contains no solo passages. Few of these compositions contain any bravura passages for the principal instruments, which are used, for the most part, like the wind instruments in works of later date, for the purpose of producing variety of instrumentation; but sometimes, and especially in the 'Concertante', long passages of great constructional importance are assigned to them.

Handel's six oboe Concertos are *concerti grossi*, written for a concertino consisting of two solo violins, two cellos, two oboes, two flutes and two bassoons, with the addition, in No. 1, of two violas and, in No. 6, of an *obbligato* harpsichord; accompanied throughout the entire set by the stringed orchestra and continuo. In some of these the solo passages are much more brilliant than in the twelve concertos mentioned above.

Corelli's *concerti grossi* are written for the same instruments as Handel's twelve. J. S. Bach, in the six Brandenburg Concertos, uses instrumental combinations of greater variety and more in accordance with his own peculiar views of instrumental contrast.

In form all these works bore a close analogy to the ordinary overture and suite, peculiar to the middle of the 18th century, the movements consisting of a series of *largo*, *allegro* and *andante* movements intermixed occasionally with minuets, gavottes and even jigs. After the rise of sonata form the *concerto grosso* died out as a normal musical vehicle, but it survives to the present day in works which revive its style, either in old-world imitations or in modernized forms.

<sup>1</sup> See CONCERTANTE.

(2) A term, now all but obsolete, applied to the orchestral accompaniments of a "grand concerto", as distinguished from the *concertino*, or assemblage of principal instruments.

See also Concerto Symphony.

**CONCERTSTÜCK** (or **Konzertstück**) (Ger. = concert-piece). A term more particularly associated with works for pianoforte and orchestra not in the full concerto form. Weber's well-known composition in F minor and major (Op. 79) affords a classical instance. Schumann left a 'Concertstück' for four horns and orchestra (Op. 82). Curiously enough, in the later 19th century this German term was employed by many French composers for one-movement solo works with orchestra.

**CONCH-HORN.** See BABYLONIAN MUSIC

**CONCHITA** (Opera). See ZANDONAI.

**CONCITATO** (Ital.). Agitated, excited.

**CONCONE, Giuseppe** (b. Turin, 12 Sept. 1801; d. Turin, 6 June 1861).

Italian singing-master, pianist and composer. He lived for about ten years in Paris, where he gave both pianoforte and vocal lessons, and brought out several compositions for the pianoforte, notably a set of studies published by Grus. Richault was the publisher of his vocal music, which is melodious and well written for the voice. But it is chiefly by his *solfeggi* and *vocalizzi* that Concone made a world-wide reputation for usefulness, to which the republication of these works by Peters of Leipzig greatly contributed. Those that are known consist of a book of 50 *solfeggi* for a medium compass of voice, 15 *vocalizzi* for soprano, 25 for mezzo-soprano and a book of 25 *solfeggi* and 15 *vocalizzi*, 40 in all, for bass or baritone. This coupling together of bass and baritone is as a rule a great mistake, but in the present case the alternative notes given in passages which run low enable baritone voices to make very profitable use of the *vocalizzi*, and as they do not run very high, ordinary bass voices can sing them with sufficient ease. There is also a set of thirty very good florid exercises for soprano.

After the French Revolution of 1848 Concone returned to Turin and became *maestro di cappella* and organist at the royal chapel. H. C. G.

See also Solfeccio.

**CONCORD.** The opposite of discord; the sounding together of notes in harmony that satisfies the ear as being final in itself and requiring no following chord to give the impression of resolution.

See also Counterpoint.

**CONCRETE MUSIC.** See ADDENDA, Vol. IX.

**CONDELL, Henry** (b. ?; 1757; d. London, 24 June 1824).

English composer. He was for a number of years violinist in the orchestras of different London theatres. Six songs by him were published about 1785 and many more in the 19th century; his glee 'Loud blowe the wyndes' was awarded a prize at the Catch Club in 1811. CondeLL wrote the overtures for three operas by Michael Kelly in 1802 and 1803, 'A House to be Sold', 'The Hero of the North' and 'Love Laughs at Locksmiths', and music for the ballet 'The Enchanted Island' (Haymarket, 1804); for J. T. Allingham's farces, 'Who wins, or The Widow's Choice' (Covent Garden, 1808) and 'Transformation, or Love and Law' (Lyceum, 1810), and for Frederic Reynold's 'The Bridal Ring' (Covent Garden, 1810); also, in collaboration with other composers, music for T. J. Dibdin's 'Up to Town' (Covent Garden, 1811), for an anonymous 'Aladdin, or The Wonderful Lamp' (*ibid.*, 1813) and for the younger Charles Dibdin's 'The Farmer's Wife' (*ibid.*, 1814).

A. L.

**CONDUCTING.** The art of directing the simultaneous performance of a number of players or singers by the use of gesture. The conductor's duty is to concentrate the various purposes of individual players into one combined purpose, just as a pianist combines the various mechanisms of his instrument into one organism under his fingers. For this reason a conductor is often said to "play on the orchestra"; indeed the power of a conductor over his players may be even greater than that of a player over his instrument, inasmuch as the mechanical element is entirely absent from the connection between the conductor and his performers.

Wagner divides the duties of an orchestral conductor under two heads—(a) that of giving the true tempo to the orchestra; (b) that of finding where the melody lies.<sup>1</sup> The idea of true tempo covers the technical qualifications necessary to a conductor; the idea of the melody covers the ideal aspects of his art. Very few men possess both these qualifications, but both are necessary to great conducting. Technical accuracy is useless without an imaginative mind, and the most inspired imagination is powerless unless aided by a clear head and a clear beat.

**HISTORY.**—We can trace the history of conducting as far back, at least, as the 15th century, by which time it had become customary to beat time to the Sistine Choir in Rome with a roll of paper called a *sol-fa*.

<sup>1</sup> "The whole duty of a conductor is comprised in his ability to indicate the right tempo. . . . The orchestra had learnt to look for Beethoven's *melody* in every bar . . . and the orchestra *sung* that melody. Thus was the secret."—Richard Wagner, 'Über das Dirigieren', translated by Dannreuther.

Ornithoparcus, writing in 1516, describes "Tact" as "a certain motion made by the hand of the chief singer, according to the nature of the marks, which motion directs a song according to measure".<sup>1</sup> This proves that by the beginning of the 16th century the practice was universal, as also does a passage from Gahler's 'Dialogo' (1583), where he mentions that the ancient Greeks did not beat time "as is customary now". In Morley's 'Introduction' (1597) we find the following dialogue:

*Philomathes.* What is a stroke?

*Magister.* It is a successive motion of the hand, directing the quality of every note and rest in the song, with equal measure, according to the variety of signs and proportions.

With the decline of polyphonic music and of its rhythmic subtlety the office of time-beater gradually became less necessary, and as the idea of the conductor as interpreter was not yet born, the practice of directing music with the conducting-stick fell into disuse. How and when the change came about is doubtful<sup>2</sup>, but by 1738 it was customary to direct opera performances sitting at the harpsichord. This was at all events the case in Italy, and probably wherever else Italian opera was cultivated, though at the Paris Opéra Rousseau expressly says it was habitual to beat time audibly by striking the baton against the desk.<sup>3</sup> As regards Germany we have Gesner's famous description of Bach<sup>4</sup> to prove that he, at all events, was in the habit of directing music, while he himself played the organ.

According to Carl Junker's pamphlet of 1782 the harpsichord (*Flügel*) was still an integral part of the orchestra, though in one passage he certainly refers to the musical director as a "time-beater" (*Taktschläger*). However, by the beginning of the 19th century the practice of beating time seems to have been firmly established in Germany, and from that time the art of conducting grew in importance.<sup>5</sup> Mendelssohn, during his conductorship of the Gewandhaus concerts (1835-43) exercised a great influence over orchestral renderings, and founded the "Mendelssohn tradition" or the "elegant school" of conductors, as its enemies called it.<sup>6</sup> This was, in its turn, superseded by the modern school of conductors, which may be said to have been founded by Wagner. The pioneers of the new school were Hans von Bülow, Hans Richter and Hermann Levi.

<sup>1</sup> This quotation is from John Dowland's translation (1609); see also Hawkins's 'History of Music'.

<sup>2</sup> Lully's misuse of the baton in 1687 is reported to have been the immediate cause of his death (see LULLY). Colasse, Lully's pupil, held an appointment as "battreur de mesure" (see COLASSE).

<sup>3</sup> See Rousseau, 'Dictionnaire de la musique', s.v. 'Bâton', 'Battre la mesure' and 'Maître de Musique'.

<sup>4</sup> See Spitta, 'J. S. Bach' (Eng. trans., II, 259); also for a very good translation of Gesner's remarks see 'John Sebastian Bach' by Sedley Taylor.

<sup>5</sup> See BATON.

<sup>6</sup> See Wagner, 'Über das Dirigieren'.

Among their immediate successors were Artur Nikisch, Fritz Steinbach, Felix Mottl and Felix Weingartner.

The 20th century has witnessed the growth of the "virtuoso" conducting which has been already described and of specialization in conducting, one conductor making a special study of the classical masters, another of Brahms or Tchaikovsky. About 1880 Bulow made a tour round Germany with the famous Meiningen court orchestra, which had a great effect on orchestral playing all over the Continent. These journeys were carried on by his successor, Steinbach.

In France, as we have seen, the practice of conducting, once established, never entirely dropped out again; but orchestral playing was evidently at a very low ebb in the lifetime of Berlioz, as his memoirs testify. However, the conductor Habeneck achieved the distinction of being the subject of great praise from Wagner.<sup>7</sup> Berlioz's famous 'Chef d'orchestre' was published in 1848. In 1874 Colonne instituted the Concerts du Château and in 1881 Lamoureux formed his famous orchestra, which after his death was conducted by Chevillard. Lamoureux's conducting was noticeable for an extreme clearness and precision of detail which is almost unique in the history of orchestral playing.

#### HISTORY OF CONDUCTING IN ENGLAND.—

The following instances in the 18th century of conducting with a stick or roll are noteworthy.

In the English translation of Ragueneau, entitled 'A Comparison between the French and Italian Musick and Operas', published in London in 1709, the translator has a footnote (p. 42), which deserves quotation:

Some Years since the Master of the Musick in the Opera at Paris had an Elbow Chair and Desk plac'd on the Stage, where, with the Score in one Hand, and a Stick in the other, he beat Time on a Table put there for that purpose, so loud, that he made a greater Noise than the whole Band, on purpose to be heard by the Performer. By degrees they remov'd this Abuse from the Stage to the Musick Room, where the Composer beats the Time in the same manner, and as loud as ever. The same was observ'd in London six or seven years ago; but since the Italian Masters are come among us, and the Opera's have been introduced, they have put a stop to that ridiculous Custom, which was Founded more upon an ill Habit than any Necessity there was for it, as doing more harm than good, for the Opera's are better Performed now without it than any Piece of Musick was formerly, because the Eye was too much Distracted, being obliged to mind the beating of the Measure, and the Score at the same time; besides, it kept the Singer and the Player in too much Subjection, and Fear of Errors, by which means they were depriv'd of the Liberty so absolutely necessary to Musick, and which gives a Strength and Spirit to the Notes.

Samuel Wesley, in a lecture delivered in London in 1827, said:

I remember that in the time of Dr. Boyce it was customary to mark the measure to the orchestra with a roll of parchment, or paper, in hand, and this usage is yet continued, at St. Paul's Cathedral at the musical performances for the Sons of the Clergy.

<sup>7</sup> *Ibid.*

The general practice of conducting was revived much later in England, however, than on the Continent. As late as 1820 the concerts of the Philharmonic Society were directed by the joint efforts of the first violin and a musician seated at the pianoforte, who struck a few notes if anything went amiss.

In 1855 the Philharmonic Orchestra was conducted for one season by Wagner, but he was not engaged again. Indeed, 'The Times' of 1860 goes out of its way to say that the season during which Wagner conducted was "one of the most disastrous on record".

Mention must be made of two conductors who had a great reputation in England in their lifetime. One was Jullien, who conducted orchestral concerts of the popular kind from 1842 to 1859. Julien was to some extent a charlatan, but he had genuine ability of a kind and in some ways foreshadowed the "virtuoso" conductor of later times; he also deserves commendation for helping to popularize much good orchestral music. Much more famous than Jullien was Michael Costa, who conducted in England from 1833 to 1884. Perhaps the exaggerated respect paid to Costa during his life caused too violent a reaction after his death. There can be no doubt that he was a very fine bandmaster, whatever may have been his shortcomings as an interpreter.

Between 1855 and 1860 two more or less permanent orchestras were founded in England, one by August Manns at the Crystal Palace, the other by Charles Hallé in Manchester. As a conductor Manns belonged to the school of those who seek to sink themselves in the work they are conducting.<sup>1</sup> What he did for the south of England, Hallé did for the north.

The first series of Richter concerts (London, 1879) is an important landmark in the history of conducting in England. Richter revolutionized English ideas of how classical music should be rendered and made Wagner intelligible to English audiences for the first time. The advent of Richter may be said to have killed the "Mendelssohn tradition" in England.

In 1893 a series of orchestral concerts was given, at which Mottl, Levi and others were specially engaged to conduct. The musical public awoke to the fact that a conductor can play on his orchestra just as a pianist can play on his instrument. The cult of the "virtuoso" conductor became as fashionable as that of the prima donna. It is very much to the credit of these conductors who were so "ignorantly worshipped" that they never let this fashionable flattery affect their musical ideals.

Another important event in the history of English conducting was the formation in 1897

of the Queen's Hall Orchestra, under the conductorship of Henry J. Wood. The great reputation of this orchestra, apart from the individual excellence of its members, is due to the training it received from its conductor, and while he taught his orchestra Wood taught himself, and may be reckoned as a first-rate conductor, not of one style alone, but of all.

Wood was the pioneer of a line of English conductors including Hamilton Harty, Adrian Boult, Eugene Goossens, John Barbirolli. Contemporary with Wood but working on different lines were Landon Ronald and Thomas Beecham; also Albert Coates, who formed his experiences in Germany and Russia. Conducting classes became established under Wood at the R.A.M. and Boult, later Malcolm Sargent and others, at the R.C.M. Conducting can, however, be learnt only at the conductor's desk. On the Continent there are many small posts at opera-houses and in concert-rooms through which a young man can gradually rise to the front rank and obtain an important post as *Kapellmeister*. In England such means of learning the art are fewer and appointments to be gained at the end are scarce.

R. V. W., rev.

There are exceptional cases, however, where permanent orchestras and permanent conductors work together to good purpose. The outstanding one is that of the Hallé Orchestra at Manchester, where, after Sir Hamilton Harty's retirement and death concerts were carried on somewhat casually, with the second world war creating additional difficulties, but where the appointment of Sir John Barbirolli in 1943 resulted in a reorganization that brought about a salutary revival of that organization's finest traditions. The Liverpool Philharmonic Orchestra pursued similar aims under Sir Malcolm Sargent and afterwards under Hugo Rignold, with not quite the same results of even quality, but with the advantage of the possession of a very fine modern concert-hall such as Manchester lacked for a time after the destruction of the Free Trade Hall during the war. But it was rebuilt, and reopened in 1951. The City of Birmingham Symphony Orchestra also works under a permanent conductor.

At Bournemouth Sir Dan Godfrey developed a small municipal seaside team into a full orchestra, whose later conductors were Richard Austin, Rudolf Schwarz and Charles Groves, and gradually carrying out improvements in performance and programming, by which indeed Bournemouth long served as a model to holiday places, not only in England but anywhere.

In London permanent conductorships are rarer than they used to be, with the exception of the B.B.C. Symphony Orchestra, which was

<sup>1</sup> The Crystal Palace Orchestra was disbanded in 1901.

for many years in the charge of Sir Adrian Boult, whose term of office expired in 1950, without his ceasing to accept engagements. His successor at the B.B.C. is Sir Malcolm Sargent. Other London orchestras have suffered from divided direction, so much so that in some cases they have adopted a policy of appointing one and the same conductor for at least a whole season at a time. Eduard van Beinum and Victor de Sabata, for instance, have recently appeared in this way with considerable success. Other eminent foreign conductors have visited London repeatedly after the 1939-45 war, including Bruno Walter, Kleiber, Klemperer, Munch, Furtwangler, Karajan, Cantelli, etc.

E. B.

**CONDUCTING IN AMERICA.**—The establishment within the last two generations of numerous first-rate orchestras in the principal towns of the U.S.A. has favoured the position of conductors in America, who at the present time are the most highly considered class and among the most highly paid of musicians in that country. As in England, a great part of the pioneer work was done by foreigners, but the larger opportunities of the States have enabled it to be done on a much larger scale, and the rapid increase in the number of orchestras still makes the importation of both conductors and players a practical necessity. Nevertheless, since the foundation in 1842 of the Philharmonic Society of New York, there has been time for the evolution of a native history in the art of conducting. In this two names stand out with special prominence: Thomas and Damrosch. Neither Theodore Thomas nor the Damrosch family, father and sons, were born in America, the former arrived in that country at the age of ten and Walter Damrosch was still younger when his father, Leopold Damrosch went there as conductor of the Mannergesangverein Arion. Both Thomas and the two younger Damrosches (Frank and Walter), therefore, are to be regarded as American conductors in the sense that their art was developed in the process of building up American institutions which they headed. Thomas founded (1890) the Chicago Symphony Orchestra, which bore his name for many years after his death. Walter Damrosch succeeded his father in conducting the New York Symphony Society which the latter had founded in 1878, and these with the New York Philharmonic, which both were instrumental in establishing, may be considered to be the basis of the wide development that followed.

The Boston Symphony Orchestra, no less important than these as a musical institution, is less significant from the point of view of American conducting, because ever since its establishment under Henschel in 1881 it has always engaged distinguished foreigners to conduct it through a term of years. A younger

man than any of those mentioned above, who may be regarded as a native product in this connection, is Leopold Stokowski. Though Polish by descent and English by upbringing and general musical education, his practical experience as an orchestral conductor was gained in handling American orchestras, and it was he who brought the Philadelphia Orchestra to its present high standing. His art is the outcome of the unique opportunities which the American orchestras offer.<sup>1</sup>

H. C. C.

**TECHNIQUE.**—The technical equipment of the conductor, particularly the actual code of signals authorized by convention and tradition for his use, must now be described.

1. **The Beat.** A century and a half is a short period in the history of any artistic development, and so it is not surprising that the technique of silent conducting has not yet crystallized since it emerged from the art of directing from the keyboard, for there is still a wide divergence of method among the greatest conductors of the present day. It may well be thought that, as the object of all technique is achievement with a minimum of effort, so, in conducting, all movement should be as economical as possible; but this is not the practice of some of the leading conductors. There are, further, some who maintain that part of this work must be directed at the eyes of the audience; while others concentrate on the eyes of the players, and the ears only of the audience. Another point of divergence concerns methods of rehearsal, but this will be discussed later.

The actual movements of time-beating have been standardized, and there are few conductors who do not conform to the basic patterns for the simple beating of 2, 3 and 4 in a bar as outlined here:

But though these arrows show the ultimate direction of the stick for each part of the bar, a literal interpretation of the diagrams would mean a lifeless and angular stick, with a dead stop on each beat which would deprive the music of any movement at all. They are accordingly interpreted in some such manner as this:

<sup>1</sup> For later developments in the U.S.A. and names of the outstanding conductors see under the headings of the chief American cities.

In the writer's memory there have been many different ways of carrying out these patterns. Hans Richter grasped a thick cork handle firmly with his whole hand. The wrist was loose and, backed up, if needed, by the elbow, was the joint mainly responsible for the imperious swing of the point of his stick. Arthur Nikisch, on the other hand, carried a lighter, longer and thinner stick, held by the fingers and thumb, with supple finger-joints propelling the stick in the most expressive way possible, only when necessary did wrist and elbow come in to support this movement. It was in both cases the point of the stick that focused our attention; with lesser men the wrist itself, and even the elbow, can sometimes be seen to be the focal point, with the stick aimlessly joining in as partner, or even attendant. It surely follows that conductors who cannot keep the life and soul of the music pouring out from the point of their stick (by means of easy flexibility of the joints behind it) would be well advised to try conducting with no stick at all. It can be claimed that the human hand is more expressive than a piece of wood even though a stick painted with white enamel is a far more arresting object of attention, and small unaccompanied choirs as well as instrumental combinations small enough to need little direction from the ensemble point of view can be conducted with great effect by slight movements of the hand alone. But it is clearly a matter of proportion that if, in a large hall, a beat say one foot wide and one foot high is necessary for a certain result, the conductor's arm will have much harder work covering this space with the hand alone than if a stick is being propelled through the same space by movement of the fingers and wrist. Again, the stick, held between loose and sensitive fingers, can, much more neatly than the hand alone, be made to show sub-divisions of the following kind:

Comparison of this diagram with Nos. III and VI above will show how the other com-

pound times can best be directed, including 5 in a bar, which can be either 2+3 or 3+2, and 7, which should always be based on 3 in a bar: 2+2+3 or 3+2+2.

Those interested in the orchestra will also have noticed how easily a conductor can waste his energy by dispersing it or misdirecting it where it cannot help anyone to do anything in particular. The best example of this is the habit of using both arms to make identical (or, more strictly, opposite) movements, where one hand alone could be directed at the group concerned with far more telling effect. It was said of Nikisch that his left hand was never seen to be reflecting his right. It was either adding a touch of expression above and beyond that shown by the stick or it was resting at his side.

He also had a wonderful power of drawing a *legato* from a choir or orchestra, and the technical aspect of this was a most eloquent use of a horizontal dragging movement of the stick which seemed powerful enough to pull a *sostenuto*, for example, from brass instruments almost to bursting-point. Conductors easily get into the habit of moving the stick up and down for every purpose; horizontal movements can be most usefully added to the vocabulary.

2. The Start. It is in the case of the starting beat, perhaps, that our methods are farthest from being standardized. Text-books vary a good deal, but the simplest and clearest method would appear to be to make the position taken up when calling for silence before the start identical with the point where the first sound is heard. The stick will have moved some way before coming back to this point, perhaps in a loop, or an up and down movement. It may also be helpful to indicate in some subtle way a preliminary upbeat, as it were, the last beat of an imaginary preceding bar, which will thus indicate the coming tempo to all who are playing in the first bar. A slight jerk as the stick starts its preliminary loop will show this well. A strong upbeat will often be helpful anywhere: for example, before a *sforzando*. Players and singers are naturally helped by preliminary warnings of this kind, but it is very easy to give these warnings a shade too late.

3. Interpretation. To turn now from the conductor's hand to his mind, it is sometimes forgotten that the main object of the interpreter of music should be to give his audience the impression, after the performance, that the music, which has been flowing past their perception, is now standing, as it were, congealed before them, so that they can contemplate it at leisure, like a picture or a building. To achieve this it is of great importance that the interpreter should himself gain this impression of every work before he studies it in detail.

He should put firmly in his view its key structure, the balance of its tunes, its emotional sequence, its dynamic shape, the pattern of its colours. This can be done by rapidly reading through the score — far faster than it could be performed — several times, until these pictures are clear. Only then comes the time for slow and detailed study. Many conductors and their work at this point by an elaborate marking of the score. An eminent English conductor has said that he prefers to spend his time learning the score rather than scribbling in it, a view that deserves cordial support; it is not, however, universally held. In any case, no conductor should ever meet his forces at rehearsal without a thorough knowledge, not only of the work in hand, but of exactly how he feels it should be realized in performance.

4. Rehearsal. The actual conduct of rehearsals still shows a wide divergence of method. At one extreme are those who read through the work once or even twice, hardly saying anything at first, just leaving the players "to fish it out for themselves", to use the eloquent phrase of a great Yorkshire choral conductor. In doing this with difficult modern works the present writer has repeatedly been astonished at the enormous improvement achieved by the orchestra through the individual musicianship of each player, and this has caused him to wonder whether conductors do not usually talk far too much at rehearsal. It is interesting to reflect that two of the quietest conductors in history, Weingartner and Nikisch, were both noted for speaking comparatively little at rehearsals. At the other extreme are those who, from the outset, stop every time anything happens that does not come up to the ideal they have set themselves. It is capable of proof that this method demands a great deal more rehearsal time than the other, but at any rate demonstrates to the players and singers that the conductor has a good ear and a very high standard, and it is presumed that this must be necessary in some orchestras in order to secure discipline. It may be that some of those practising this method would feel their position insecure without a constant demonstration of their skill in the detection of errors and their exacting standards of performance.

The conductor's mind has to be working in two directions at once. He has to inspire the players, and by sheer power of concentration he has to establish the mood and colour of the performance; on the other hand he must listen and determine where and how the playing differs from his ideal, and decide how to improve it. If he is using the play-through method he will find it not difficult to carry a list in his head of all the points to be studied

later. These two processes are not unlike the duties of guard and driver of a train. At rehearsal the conductor is mainly playing guard, while at performance he is in the driver's cab and only becomes the guard occasionally, notably if a subsequent performance is expected and further rehearsal possible.

It is usually to be seen that conductors who favour continual stoppages also insist, and keep on insisting, on a maximum of emotional and dynamic tension throughout every rehearsal. Everything is always up to concert pitch. On the other hand it is arguable, especially with forces of Nordic and Anglo-Saxon origin, that the players do not need driving to that extent, that the rehearsals are not concerts, but preparations for concerts, and that it is the conductor's business to see that there is a progressive rise from rehearsal to rehearsal (not unlike what is done in athletic training), and that the final rehearsal should still leave something to be added to achieve the final vitality of the performance.

5. Accompanying. It is perhaps in accompaniments that the conductor's technique is put to the greatest test. His soloist may be playing or singing in a way rather different from his own conception, and a neat stick can easily help to straighten an unsteady moment. It is not always easy to determine where the directing mind should be in work with a soloist. The conductor must obviously have ultimate control in opera or oratorio, though he may be willing to let soloists go their own way in arias, but in concertos it is perhaps reasonable for the conductor, who after all has his own way for the whole of the rest of the programme, to give way to a soloist who has probably given far more time to the study and practice of the work than the conductor has, and it is not without interest for a conductor to be ready to change his performance in detail (*e.g.* in things like the phrasing of a tune) to conform with the soloist.

6. Recitative. If accompanying is a special test of a conductor's technique, recitatives are the most difficult form of accompaniment. The singer is allowed absolute freedom, and it is the conductor's task to be ready with the next chord at the exact moment whether the singer decides to hold on to a tempting high note or not. It is only when the conductor knows every note and every word of the voice-part by heart that he can really enjoy this form of exercise and carry it out properly. There is a convention in Italian opera-houses, where the recitative is perfectly known to everyone concerned, that the conductor simply gives down beats for the chords and makes no effort to show the actual timing of the music. This can be done in Britain in a well-known oratorio, where, in most editions, the singer's part is shown in every orchestral part, but it

would seem wiser, in this land of few rehearsals, to make it easy for any novices in the orchestra and show, at least, each bar-line by a small down beat, without necessarily beating out every bar. The shape of the bar can be indicated and must be shown clearly if, as sometimes happens, a chord comes on the last beat of the bar. These, like most technical problems, solve themselves when the music itself is really known and understood.

A. C. B.

The more ideal aspects of the conductor's art may be classified under the following heads:

1. "Rubato" Conducting. A conductor must have the tempo clearly in his head, and he must be able to keep to it with metronomic accuracy, otherwise he can have no sense of time. But it does not follow that he should always keep rigidly to the initial tempo "Tempo rubato" is as necessary in orchestral music as in any other. This is a comparatively new idea: Mendelssohn, we are told by W. S. Rockstro, "held tempo rubato in abhorrence". It was Wagner who by his practice and his theory contended that "modifications of tempo" are necessary to a living rendering of orchestral music.<sup>1</sup>

The Mendelssohnian and the Wagnerian ideals are diametrically opposed to each other; but it does not follow that one master was right and the other wrong. We may be pretty sure that each went too far in his own direction: that Mendelssohn's conducting was too rigid and Wagner's too loose. Orchestral rubato can easily be overdone; a mechanical slackening and quickening of tempo is almost worse than metronomic rigidity. Perfect orchestral rubato should be like the playing of a single performer, holding back or pressing on almost imperceptibly as his emotional impulse directs. This perfection cannot be achieved except by a permanent orchestra, at one with itself and with its conductor, and then only after long and careful rehearsals.

2. Latitude to Players. Next comes the question of what is known as "drill-sergeant" conducting. Should a conductor absolutely rule his players, or should he allow scope to individual judgment? In passages for full orchestra, or where there are difficult combinations of rhythms, etc., the conductor should probably be quite autocratic. But where one instrument stands out prominently the conductor should usually, for the moment, treat the work as a concerto, and accompany the soloist. For those conductors who esteem a full tone in the orchestra this is essential, even at the expense of clearness in the subordinate

parts. Those who heard the 'Tannhäuser' overture under Mottl will remember the noble sonority of the trombones at the first *fortissimo*. Mottl having once indicated the tempo, allowed the trombones to play as they pleased, and kept the whole orchestra waiting on them. The trombonists, released from cramping obedience to the conductor's stick, were able to give the passage with tremendous force without sacrificing beauty of tone. It was a splendid piece of orchestral impressionism, though not satisfactory to those who value clearness of detail. This licence to individuals must be subordinate to the conductor's conception of the work as a whole. A story of Nikisch rehearsing in London illustrates the proper balance to be maintained. Whenever an instrument had a solo he would sing the passage over to the player, saying, "That is my idea of it, now play it as you like".

3. Efficient Management of a Rehearsal. The conductor's object must be to employ the time for rehearsal as usefully as possible. A conductor must recognize at once what are the difficult parts of a composition, what will require much rehearsal and what little. Orchestral players are very sensitive and naturally resent having their time wasted. The conductor must realize which mistakes may be passed over lightly as mere slips, which are radical and must be corrected. Economy of time is especially important where a conductor has to direct a "scratch" orchestra collected for the purpose with only one rehearsal to prepare for a long programme. In such cases the conductor must be ready to seize on the essential points and let the rest take care of itself.

4. Correcting and Annotating Orchestral Parts. It is a conductor's duty to see that the parts are correct and that any cuts or other special marks are duly indicated. Some conductors add special bowing and breathing marks to the orchestral parts to produce a more perfect unanimity of rendering, while others prefer to give their players more freedom. Together with this duty goes the responsibility of making certain alterations in the score of well-known works, such as Wagner's famous emendations in the choral Symphony, Richter's alteration of two trumpet passages in the Eroica Symphony, the changing of  to  in the bassoon part near the beginning of the 'Tannhäuser' overture, or the almost universal substitution of a bass clarinet for a bassoon in a certain passage in Tchaikovsky's sixth Symphony.

It would be out of place to discuss here how far such alterations are justifiable; they are mentioned only because it is a conductor's duty to know of them and to settle whether he will adhere to the original score or not.

<sup>1</sup> Wagner invented this "new style" of conducting during his conductorship at Dresden, 1843-49, and codified his ideas in the famous 'Über das Dirigieren' (1869).

5. General Conception. The more ideal qualities of a conductor include the power of grasping a composer's true meaning, that of impressing himself on the members of the orchestra and that indefinable power of giving life to music which belongs to all great players and conductors. The powers of interpretation in conductors have increased much in modern times; this is doubtless very largely due to the increased virtuosity of orchestral players, but it is chiefly because modern conductors have usually made a special study of the art of "playing on the orchestra". There were exceptionally fine conductors in the 18th century here and there (e.g. Stamitz at the head of his famous Mannheim orchestra and no doubt Haydn at Esterházy), but in general it is not unfair to say that up to the middle of the 19th century a fairly correct performance was all that a conductor expected of his players. Now correctness is the minimum from which he starts.

The modern art of orchestral interpretation exhibits itself in two main lines. There are those conductors whose aim is faithfully to represent the composer's intention, and those who mirror themselves in the work they are conducting. A conductor of the first type would wish his audience to say, not "this is wonderful", but "this is right". Most of his work is done at rehearsal; during the performance he is merely on the watch to see that his directions are carried out. The other type makes his mark by some new and personal light thrown on an old work. To watch such a conductor is like watching a great actor — every action is expressive and every nuance is guided by the inspiration of the moment. This "personal" method of conducting is liable to great abuses in the hands of an incompetent artist. Every pettifogging bandmaster must now have his "reading" of the great masterpieces. This "reading" usually consists of a strict disregard for the composer's intentions coupled with a gross exaggeration of nuance and a distortion of the true rhythm, which has the same relation to real rubato playing that barn-storming has to good tragic acting. Such a conductor as this last had much better confine himself to merely beating time; then, at all events, the audience will hear the notes and will be able to draw their own conclusions.

It is a moot point how far a conductor is really necessary to an orchestra. A string quartet never dreams of having a conductor, and even such a work as Schubert's Octet is usually played without one. Certainly a well-organized orchestra could perfectly well dispense with a mere time-beater in works which it knew well, and it would give a much better performance without the supererogatory gestures of an ignorant or inexperienced

conductor who knows much less about the work which is being played than the players themselves. An interesting experiment was made in the 1920s in Moscow of orchestral playing without a conductor; it is said with very good results. To achieve this it is necessary that every player should be a real artist, that the members of the orchestra should have played together long enough to have become one organism, that each player should have a knowledge of the work as a whole (not his own part only) and that rehearsals should be unlimited. The Moscow experiment seems to have come to an end, not because of any unsatisfactory results, but because its performances took far too long to prepare.

**CONDUCTOR'S PART.** A substitute for a full score, in which the parts are condensed into two staves, and the names of the various instruments are inscribed as they enter (Spohr's D minor Symphony was published in this shape only); or, which is more usual, a leading part such as the first violin, on a single staff, fully cued for the other instruments. Such parts are usually supplied with pieces or arrangements for very small orchestras in which the conductor plays either the first violin or a pianoforte part.

J. A. F.-M., adds.

**CONDUCTUS.** A medieval form of composition current in the later 12th, 13th and 14th centuries, clearly distinct from the Motet in being homophonic, not polyphonic, in style. Despite this difference the individual voice parts (two, three or very occasionally four in number) follow their own melodic progressions very often at the expense, as we should now think, of the choral harmony. The lowest voice, unlike that of the organum, motet and other medieval forms, was composed *ad hoc* instead of being borrowed from plainchant or from some popular song. "Qui vult facere conductum", says Franco (Goussemaker, 'Scriptores', I, 132), "primum cantum invenire debet pulchriorem quam potest, deinde uti debet illo ut de tenore faciendo discantum".

The conductus is described by contemporary theorists as falling into two classes, those with interludes and those without. The interludes are styled *caudas*, a word lineally connected with the modern coda. From this fact we deduce that instrumental accompaniment was envisaged, though there is also evidence to show that the interludes were vocalized on occasion. The large majority of conducti have these interludes, which often sound as if they were snatches of dance music introduced from the fiddlers' own stock.

The choral structure of the conductus makes it especially useful for examining the harmonic ideas of the period, and analysis reveals that while the third is the most popular interval the sixth is barely allowed at all.

The word "conductus" is occasionally found as a fourth declension noun, but far more often as second declension: the better plural is thus "conducti". Its origin is probably connected in some way with processions or ceremonies, and one of the finest early conducti on record—'Orientis partibus'—belongs to the Carnival of the Ass at Beauvais and Sens. This is quoted below, together with a very short excerpt from a *conductus cum cauda*, showing how the vocal passages lead on to the interludes:

'Conductus cum cauda'  
(extract from 'Trinac vocis tripudio') c. 1250

**CONFALONIERI, Giulio** (b. Milan, 23 May 1896).

Italian pianist, critic and composer. He studied under Pozzoli at Milan and took a diploma at the Bologna Conservatory in 1921, having the year before taken the B Litt. and B.Ph. at Milan University. He lived for a long time in London as pianist and teacher. Among his compositions the most important are the dramatic legend 'Rosaspina' in 3 acts, produced at the Teatro Donizetti, Bergamo, in 1939; the incidental music for Fletcher's 'The Faithful Shepherdess', written at the request of Sir Thomas Beecham, the musical comedy 'L'Habit neuf du régent', produced at the Théâtre du Casino, Cannes, in 1931; vocal and instrumental chamber music. He also produced editions of works by Cimarosa and Cherubini.

Confalonieri's recent activity has been exercised mainly in the direction of musical criticism and scholarship. Apart from numerous articles published in the Milan daily 'Il Tempo' and in various reviews, he published a substantial biography in 2 volumes of Cherubini (1948), in whose work he specializes as an expert and propagandist, 'Guida alla

musica', Vol. I (1950), a guide to Rossini's 'Cenerentola' and collections of various essays such as 'Bruciar le ali alla musica' (1946) and 'L'umana avventura della musica' (1950).

**CONFIDENCES, LES** (Opera). See ISOUARD.

**CONFORTI, Giovanni Luca** (b. Miletto, c. 1560?, d. ?).

Italian singer. He was admitted into the papal choir on 4 Nov. 1591. His chief title to notice seems to have been the publication of a volume ('Passaggi sopra tutti i salmi') containing a series of vocal ornamentations of all kinds wherewith to overlay the Psalms in ordinary use in the church on Sundays and holidays throughout the year. Baini ascribes to him what he considers the restoration of the *trillo*.<sup>1</sup>

His 'Breve et facile maniera d' essercitarsi a far passaggi', published in Rome (1593 or 1603), have been republished in facsimile with translation by Johannes Wolf (Berlin, 1922).<sup>2</sup>

E. H. F., adds.

**CONFORTO, Niccolò** (b. Naples, 1727; d. ? Madrid, 1765).

Italian composer. He made his début at the Teatro dei Fiorentini, Naples, in the Carnival of 1746, with a comic opera, 'La finta vedova', and, after two similar works written for Naples and Rome in the following year, he set Metastasio's 'Antigono' for the San Carlo theatre, Naples, in 1750. This opera gained him a certain reputation; it procured him his appointment as court composer in Madrid and was given some years later (8 Mar. 1757) at the King's Theatre, London, where it ran for 11 nights. Conforto went to Madrid in 1751 and produced his setting of Metastasio's 'Festa cinese' (revised version) at Aranjuez on 30 May of that year, followed by 'Siroe' in 1752. He returned to Italy for a short time, as may be gathered from three new operas of his which appeared at Naples, Reggio and Rome in 1754-55, but in 1756 he settled in Spain for good and continued to provide the Spanish court with Italian serenatas and operas until 1765, mostly to librettos by Metastasio, among them the first setting of 'Nitteti' (Buen Retiro, 23 Sept. 1756).

More than his predecessors in Madrid (Antonio Duni, Corradini, Corselli, Mele, etc.) Conforto contributed to establishing firmly the taste for Italian opera in Spain, in collaboration with Farinelli, the famous *castrato* singer of former days, who was then the manager of the court theatres at Aranjuez and Buen Retiro. Many of his operas are still preserved at Naples, Vienna, Paris, Dresden and probably also in Madrid. Some favourite songs

<sup>1</sup> See BOVICELLI.

<sup>2</sup> See Z.M.W., Apr. 1923, p. 391.

<sup>3</sup> This was also set by Gluck three years later, under the title of 'Le cinesi'.

from 'Antigono' were published in London. In the B.M. there is a solo cantata, 'Il nido degli amori', while the R.C.M. has an otherwise unrecorded one-act opera, 'La forza del genio, ossia Il pastor guerriero' (performed at Aranjuez on 30 May 1758).

**CONINCK, Servaas de.** See KONING.

**Conrad, Joseph.** See Arundell ('Romance', broad-cast m.).

**CONRAD VON ZABERN** (b. Zabern, Alsace, ?; d. ?)

Alsatian 15th-century theologian and musical scholar. He was Mag. Theol., preacher at Heidelberg about 1470 and professor at the University, where he lectured on music. He wrote an essay on the use of the monochord, 'Incipit opusculum valde singulare', printed with the Bible types of Johannes Fust and Peter Schoffer (Mainz, c. 1473); and one, 'De modo bene cantandi choralem cantum . . .' printed by Schoffer (1474); another edition of this by Diel appeared in 1509.

E v d s.

**CONRADI, August** (b. Berlin, 27 June 1821; d. Berlin, 26 May 1873).

German organist and composer. He studied harmony and composition under Rungenhagen. In 1843 he was appointed organist of the Invalidenhaus at Berlin and produced a Symphony. In 1846 an opera, 'Rubezahl', was given in Berlin by amateurs, and it was produced in public at Stettin in 1847. In 1849 he was *Kapellmeister* at Stettin and conductor successively at the Konigstadt Theatre in Berlin (1851), at Dusseldorf, Cologne, and from 1856 again in Berlin at various theatres, such as Kroll's, the Wallner-theater and Victoriatheater. He composed three other operas and a ballet, five symphonies, overtures, string quartets, dance music for pianoforte and orchestra, and a quantity of songs. Liszt arranged his 'Zigeunerpolka' for pianoforte.

M c. c.

**CONRADI, Johann Georg** (b. ?; d. ?).

German 17th-century composer. He was conductor at Ansbach in 1683-86 and at the little Thuringian court of Römheld from 1687 to 1690 before he went to Hamburg to succeed Förtsch as composer to the opera-

house, in actual fact, if not formally by title. The Hamburg repertory of the years 1691-93 consisted almost entirely of nine operas by Conradi which are lost apart from some airs from 'Die schöne und getreue Ariadne' (1691), 'Die Verstorhung Jerusalems' (1692) and 'Der wunderbar vergnügte Pygmalion' (1693 or 1694). Two of his operas, 'Ariadne' and 'Gensericus', were revived at Hamburg in 1722, recast, the one by Keiser and the other by Telemann, and in this form the scores are extant. Of the lost ones 'Der königliche Prinz aus Polen, oder Das menschliche Leben wie ein Traum' (1693) deserves mention as one of the earliest operatic adaptations from Calderón, although the librettist, C. H. Postel, claims that his subject is derived from a Dutch source. Some motets and sacred cantatas by Conradi, two of them dating from his Ansbach period, have also been preserved. In 1694 he seems to have left Hamburg or to have died. Mattheson, it is true, speaks of him in 1740 as conductor at Oettingen, thereby starting confusion in most subsequent books of reference; for the Oettingen conductor is, on all title-pages and manuscripts, called Johann Melchior Conradi (or Counradi). Autograph scores of 3 serenatas and 4 cantatas by him, dating from 1713-1730, are in the Wolfenbüttel library.

A. L.

**CONRADIN, Hans** (b. Chur, 19 Apr. 1913).

Swiss musicologist. He studied at the University of Zurich and graduated Ph.D. with the dissertation 'Ist Musik heteronom oder autonom?' (Zurich, 1940). In 1946 he was appointed lecturer in musical aesthetics and musical psychology at Zurich University, his exercise being a work on the subject of 'Die Tonreihe als Bewusstseinserscheinung' (Zurich, 1948). Conradin's chief interest as a scholar is the nature of music regarded from a phenomenological standpoint as an expression of human consciousness.

K. v. F.

**CONRADUS, Cornelius** (b. Amersfoort, Holland, 1557; d. Lemgo, Lippe-Deimold, 1603)

Dutch organist, singer and composer. As a boy he was a chorister in the domestic chapel of the Count of Friesland at Emden, and a few years later he removed to Amsterdam, where in all probability he came under the influence of Sweelinck, though there is no evidence that he was ever a pupil of that master. In 1583, apparently, he was appointed organist at Emden, and in 1597 as court musician at Lemgo, in Lippe-Deimold, of Count Simon of Lippe. Here he won considerable favour as a teacher, many organists who later became prominent being his pupils. His principal duty was that of playing the organ in the ancient Gothic church of St. Nicholas at Lemgo every morning and evening. He was

also a composer of a number of four-part sacred songs written for use in that church.

**Conrat, H.** See Brahms ('Zigeunerlieder' & other voc. 4lets).

**Cons, Emma.** See Baylis (niece).

**Cons, Liebe.** See Baylis (daughter).

**CONSECRATION OF THE HOUSE, THE.** Beethoven's Op. 124. In 1822 Carl Friedrich Hensler, who had come into possession of the Josephstadt Theatre in Vienna, set about arranging a ceremony for the reopening in Oct. One of the stage pieces to be presented was a paraphrase by Meisl of Kotzebue's 'Die Ruinen von Athen' under the name of 'Die Weihe des Hauses' ('The Consecration of the House'). Besides the adaptation of Beethoven's existing music for 'The Ruins of Athens', this involved the writing of a new overture and a new chorus, which formed Op. 124.

W. M.

**CONSECUTIVE.** The term applied to intervals which recur between the same parts or voices, but more especially to consecutive fifths and octaves, for long condemned by theorists on aesthetic grounds. Parry explained the objection to consecutive octaves, when employed in music the part-writing of which is clearly defined, by saying that the effect of number in the parts variously moving is pointlessly and artistically reduced. This is due to the sense of identity which appears to us when the upper notes reinforce the most prominent harmonics of the lower. Consecutive fifths are in a somewhat different category. There is no identity here of reinforced harmonics; whatever reinforcement there is, is of the third harmonic of the lower notes but sounded an octave lower, and the similar motion of the progression only serves to make more pronounced the peculiar effect of bareness in quality, penetrative power and suggestion of definite tonality which the simultaneous sounding of two notes at the interval of a fifth creates. This effect was felt to be out of place in music of the classical type; it was too obtrusive and was apt to destroy the characteristic clarity and subtlety of part-writing and tonal scrupulousness. It was therefore a common practice to avoid such consecutives altogether. That the effect was directly due to the similar progression of parts rather than of sounds is shown by the following example where "consecutives" are avoided by the parts being made to cross:

Modern practice has definitely sought to make use of the effect produced by consecutive fifths and in various ways. At the opening of the third act of 'La Bohème' Puccini writes:

## CONSERVATOIRE DE MUSIQUE

ingeniously and aptly creating a cold, grey atmosphere. This is analogous to the "colouring" of a melody by accompanying it by itself at an interval of a fifth or fourth as Elgar has done in 'The Apostles':

Another device much used by Debussy and other French writers is to support harmonies, whether closely related or not, by the fundamental bass with the fifth added. Ravel's Sonata for pianoforte contains many delicate effects of this kind.

It is interesting to quote two much earlier uses of consecutive fifths. Wagner writes in 'Tristan und Isolde':

and Verdi in his Requiem:

In musical training the avoidance of consecutive fifths and octaves in part-writing still remains essential if a sure command over chord manipulation and contrapuntal freedom is to be obtained.

**CONSEQUENT.** See ANTECEDENT AND CONSEQUENT.

**CONSERVATOIRE DE MUSIQUE.** A free school of music established in Paris by the Convention Nationale of 3 Aug. 1795. Its first suggestion was due to a horn player named Rodolphe, and the plan which he submitted to the minister Amelot in 1775 was carried into

effect on 3 Jan. 1784 by Baron Breteuil, of Louis XVI's household, acting on the advice of Gossec. This *École Royale de Chant*, under Gossec's direction, was opened on 1 Apr. 1784, in the *Hôtel des Menus-Plaisirs du Roi*, then used by the *Académie* for its rehearsals. It remained there as *Conservatoire* until the end of 1910; at the beginning of 1911 it was moved to 14 Rue de Madrid, formerly occupied by Jesuits as a College.

The first public concert was given on 18 Apr. 1786, and on the addition of a class for dramatic declamation in the following June it adopted the name of *École Royale de Chant et de Déclamation Lyrique*. The municipality engaged a band under Bernard Sarrette in 1790 and instituted on 9 June 1792 the *École Gratuite de Musique de la Garde Nationale Parisienne*, which did good service under Sarrette's skilful direction and finally took the name of *Institut National de Musique* on 8 Nov. 1793. But the independent existence of both these schools came to an end on the formation, by government, of the *Conservatoire de Musique* on 3 Aug. 1795, in which they were incorporated. Sarrette was shortly afterwards appointed president of the institution, and in 1797 his charge extended to 125 professors and 600 pupils of both sexes, as well as to the printing-office and warehouse established at 15 Faubourg Poissonnière, where the '*Méthodes du Conservatoire*', prepared under the supervision of Catel, Méhul, Rode, Kreutzer and other eminent professors, were published.

The organization of the *Conservatoire* was modified by Bonaparte in Mar. 1800, after which the staff stood as follows:

Director: Sarrette. Five Inspectors of Tuition: Gossec, Méhul, Lesueur, Cherubini and Monsigny. Thirty first-class Professors. Louis Adam, Berton, Blasius, Catel, Devienne, Dugazon, Duvernoy, Garat, Gaviniès, Hugot, Kreutzer, Persus, Plantade, Rode, Rodolphe, Sallentin, etc. Forty second-class Professors: Adrien, Baillot, Boieldieu, Dornich, Eler, Jadin, etc.

The *Conservatoire* was again reorganized on 15 Oct. 1812 by the famous *Décret de Moscou*, under which eighteen pupils, nine of each sex, destined for the *Théâtre Français*, received an annual allowance of 1100 francs, on the same footing with the pensionnaires—eighteen vocal students, twelve male and six female. This *pensionnat* had been established in 1806, but the men alone lived at the *Conservatoire*. It was abolished in 1870.

On 28 Dec. 1814 Sarrette was abruptly dismissed from the post he had filled with so much zeal and talent, and though reinstated on 26 May 1815, he was compelled to retire finally on 17 Nov. following. The studies were interrupted for the time, and the school remained closed until Apr. 1816, when it reopened under its former title of *École Royale de Musique*, with Perne as Inspector-General. Cherubini succeeded him on 1 Apr. 1822 and remained

until 8 Feb. 1842, when he was replaced by Auber, who directed the *Conservatoire* until his death (12 May 1871). He was followed by Ambroise Thomas (1871-96); Théodore Dubois (1896-1905); Gabriel Fauré (1905-20); Henri Rabaud (1920-41); Claude Delvincourt (1941-54) and Marcel Dupré, the present director.

The budget originally amounted to 240,000 francs, but this in 1802 was reduced to 100,000, a fact indicative of the grave money difficulties with which Sarrette had to contend through all his years of office, in addition to the systematic opposition of both artists and authorities. By the publication of the '*Méthode du Conservatoire*', however, to which each professor gave his adherence, he succeeded in uniting the various parties of the educational department on a common basis. Among the scholars of the institution who assisted in this work were Ginguené, Lacépède and Prony. Under Sarrette the pupils were stimulated by public rehearsals; to him is also due the building of the old library, begun in 1801, and the inauguration of the theatre in the Rue Bergère, opened in 1812. In the same year he obtained an increase of 26,800 francs for the expenses of the *pensionnat*. The institution of the *Prix de Rome* in 1803, which secured to the holders the advantage of residing in Italy at the expense of Government, was his doing.

Under Perne's administration an *École Primaire de Chant* was formed on 23 Apr. 1817, in connection with the *Conservatoire*, and directed by Choron. The inspectorship of the *École de Musique* at Lille was given to Plantade. In 1810 it adopted the title of *Conservatoire Secondaire de Paris*, in which it was followed by the *École* at Douai, no longer in existence. The formation of special classes for lyrical declamation and the study of opera parts was also due to Perne.

Cherubini's strictness of rule and his profound knowledge made his direction very favourable to the progress of the *Conservatoire*. The men's *pensionnat* was reorganized under him, and the number of public practices, which all prize-holders were forced to attend, increased in 1823 from six to twelve. The *École de Musique* founded at Toulouse in 1820 was attached to the *Conservatoire* (1826), as that of Lille had previously been. He opened new instrumental classes, and gave much encouragement to the productions of the *Société des Concerts du Conservatoire*. By his means the library acquired the right to one of the two copies of every piece of music or book upon music which authors and composers are compelled to deposit with the Ministry of the Interior (29 Mar. 1834). In short, during his long administration he neglected no means of raising the tone of the studies of the Central *Conservatoire*, and extending its influence.

The following were among his principal coadjutors:

Habeneck and Paer, inspectors of tuition; Lesueur, Berton, Reicha, Fétis, Halévy, Carafa (composition); Lamé, Lays, Garat, Plantade, Ponchard, Banderah, Bordogni, Faneçon, Laure Cinti-Damoreau (singing); instrumental classes—Benost (organ); Louis Adam and Zimmermann (pianoforte); Baillet, Kreutzer, Habeneck (violin); Baudiot, Norblin, Vasilin (cello); Guillou, Tulou (flute); Vegt (oboe); Lefèvre, Klosé (clarinet); Delcambre, Gebauer (bassoon); Dauprat, Méfied (horn); Dauverné (trumpet); Dieppo (trombone); Naderman, Prunier (harp); Adolphe Nourrit (opera); Michelot, Samson, Provost and Beauvallet (tragedy and comedy).

Among the professors appointed by Auber we may mention:

Adolphe Adam, Ambroise Thomas, Réber (composition); Elwart, Bazin (harmony); Battaille, Duprez Faure, Garcia, Réval, Masset (singing); Louise Farrenc, Henri Herz, Marmontel, Le Couppey (pianoforte); Alard, Girard, Massart, G. Dancla (violin); Franchomme and Chevillard (cello); Mlle Brohan, Regnier, Monrose, Bressant (comedy).

Classes for wind instruments:

Tulou, Dorus (flute); Verrout (oboe); Willent, Cokken (bassoon); Gallay, Méfied (horn); Forestier, Arban (cornet).

The beginnings under Auber's management were most brilliant, and he drew public attention to the Conservatoire by reviving the public rehearsals. The façade of the establishment in the Faubourg Poissonnière was rebuilt in 1845, and in 1864 the building was considerably enlarged, while those in the Rue du Conservatoire were inaugurated, including the hall and offices of the theatre, the museum and library.

But notwithstanding the growing importance of the Conservatoire under Auber's strict and impartial direction, the last years of his life were embittered by the revival of the office of Administrateur in the person of Lassabathie, a former Chef du Bureau des Théâtres, and the appointment of a commission in 1870 to reorganize the studies—a step in which some members foresaw the ruin of the school. Lassabathie published his 'Histoire du Conservatoire Impérial de Musique et de Déclamation' (Paris, 1860), a hasty selection of documents, but containing ample details as to the professional staff.

During the régime of Ambroise Thomas the office of Administrateur was suppressed; lectures on the general history of music were instituted; an orchestral class directed by Deldevez and compulsory vocal classes for reading at sight were founded, and the *solfège* teaching was completely reformed. Thomas endeavoured to improve the tuition in all its branches, to raise the salaries of the professors and increase the general budget. Among the musical professors under the directorship of Théodore Dubois may be mentioned:

Leneveu, Widor, Fauré (composition, counterpoint and fugue); Bourgault-Ducoudray (musical history); Rose Caron, Jean Lassalle, Warot, Dubulle (singing); G. Marty (vocal ensemble); Guilmant (organ and improvisation); Diémer, Philipp, Delaborde, Duvernoy, Marmontel (pianoforte), Lefort, Bertheier (violin); Taffanel (flute).

Under G. Fauré's leadership:

Widor, P. Vidal, Gédalge, Caussade (composition, counterpoint and fugue); M. Emmanuel (musical history); H. Büsser (vocal ensemble); E. Gigout (organ and improvisation); Paul Dukas, replaced by Vincent d'Indy (orchestral and conducting class); Diémer, Philipp, A. Cortot (pianoforte); Lefort, Remy, Nadaud (violin); Loeb (cello);

and under H. Rabaud's:

Dukas, Roger-Ducasse (composition); Philippe Gaubert (orchestration and conducting); Laloy (musical history); Croiza (singing); Capet (violin), Vieux (viola), Moÿse (flute).

There are about 90 teachers in all. A yearly 'Annuaire officiel du Conservatoire National de Musique et de Déclamation' gives the names of all the teachers and the general regulations of the establishment, as well as the list of branch schools of the Conservatoire and of the Écoles Nationales de Musique.

The Chief Council of Instruction is formed of the Minister of Public Instruction and Fine Arts, the Director of Fine Arts, the Director of the Conservatoire, the Chef du Bureau des Théâtres, the Secretary of the Conservatoire. They are assisted (for the musical section) by a body of 18 members, 10 of whom do not belong to the Conservatoire and 8 of whom are professors there; a similar arrangement exists for dramatic studies with, however, only 2 professors belonging to the school.

Under Delvincourt's directorship several new classes were opened (musical analysis, aesthetics) and the Orchestre des Cadets du Conservatoire was formed. Milhaud's appointment as a professor of composition undoubtedly meant that the academic spirit of the Conservatoire is somewhat softening. A pupils' committee is encouraged in organizing meetings (Cercle Culture du Conservatoire), where modern music of every description is performed and discussed. A monthly 'Bulletin' is edited by junior editors under the director's supervision and responsibility. Contacts and exchanges with foreign countries, especially Great Britain and the U.S.A., are increasing.

The Conservatoire provides free musical and dramatic instruction for upwards of 600 pupils and *auditeurs*, who, besides their regular studies, have the advantage of an extensive library and a museum of musical instruments.

The library has been moved into a building specially built for the purpose. It dates from the foundation of the school itself and is open to the public daily from 10 to 4. The first librarian, Eler, was followed by Langlé (1796-1807), the Abbé Roze (1807-20), Perne (1820-1822), Fétis (1827-31), Bottée de Toulmon (1831-50), Berlioz (as conservateur 1839-50, and as librarian 1852-69), Félicien David (1869-76), Weckerlin (1876-1909), J. Tiersot (1909-20), H. Expert (1920-33), J.-G. Prod'homme (from 1933).

The library contains over 22,000 scores, 850 instrumental "methods", 550 treatises on harmony, composition, fugue, etc. The *sofège*, plainsong and singing methods number 5000 volumes, there are over 3000 volumes of musical literature. The number of works is increased constantly by means of a special grant. It also possesses a considerable number of manuscripts and autographs, to which those of the Prix de Rome were added in 1871. This collection contains the autographs of all the prize cantatas since the foundation of the Prix de Rome in 1803. Among the other important collections are those of Eler, composed of works of the 16th and 17th centuries put into score; of Botté de Toulmon, comprising 85 volumes of manuscript copies of the masterpieces of the 14th, 15th and 16th centuries from Munich, Vienna and Rome, including all Palestrina's masses. In 1872 the library was further enriched by Schœlcher's collection, containing every edition of Handel's works and a vast array of Handel literature. Among the extremely rare works are:

'El Melopeo' by Cerone; treatises by Agricola, Luscinius, Praetorius, Mersenne; several editions of Gafur, 'Il Transilvano' by Diruta; original editions of most of the old clavichists; 'L'Orchésographie' of Thomot Arbeau; the 'Ballet Comique de la Reine', the 'Flores musice' of 1488; old missals and treatises on plainsong.<sup>1</sup>

The museum, inaugurated 1861, now in the same building as the library, is open to the public on Mondays and Thursdays from 1.30 to 4. At first it merely contained the 230 articles which the government had purchased from Clapisson (the first Conservateur) in 1861, and 123 musical instruments transferred from the Garde Meuble and other state institutions, or presented by private donors. On the appointment of Gustave Chouquet on 30 Sept. 1871 the number of objects did not exceed 380, but it now possesses about 2300 instruments and objects of art of the greatest interest. He was succeeded as Conservateur du Musée by Léon Pilhaut (d. 1 Jan. 1904), René Brancour and (1949) Georges Migot. A full historical catalogue was published by G. Chouquet (see Bibl.). The Museum was reorganized and reopened on 1 Oct. 1939, from which date it was open to the public on Thursdays only.

There are affiliated schools of music (Écoles succursales) at Dijon, Lille, Lyons, Nancy, etc. In 1871 Henri Réber succeeded Ambroise Thomas as inspector of these provincial schools; then came E. Reyer, with Lenepveu, Joncières, H. Maréchal, Canoby and Fauré as assistant inspectors. A later (1926) Inspector-General was Alfred Bruneau; others were the composers P. V. de La Nux and Paul Dukas. After them came Raoul Laparra, Max d'Ollone, André Bloch and Raymond Loucheur.

**CONSERVATORIO** (Ital., lit. Conservatory). In modern Italian terminology a school of music, the *conservatorio* was originally a charitable institution where illegitimate, deserted and orphaned children were kept (*conservati*) until they were old enough to fend for themselves. The notion that *conservatori* were schools at which the art and science of music was preserved from corruption<sup>2</sup> is erroneous. They were sometimes attached to hospitals or hostels (*ospedali*), as for instance in Venice to the Hospital for Incurables and the Beggars' Hostel. But these homes in some Italian towns made a point of teaching the children music in such a way that it could serve those with sufficient talent for a profession later on.

Of the Italian *conservatori* the most ancient were the four Neapolitan schools, Santa Maria di Loreto, Sant' Onofrio, De' Poveri di Gesù Cristo and Della Pietà de' Turchini.<sup>3</sup>

The *conservatori* of Venice were also four in number: L' Ospedale della Pietà, L' Ospedale dei Mendicanti, L' Ospedale degli Incurabili, L' Ospedaleto de' SS. Giovanni e Paolo

E. B.

**CONSERVATORY** (Fr. *Conservatoire*, Ital. *Conservatorio*, Ger. *Conservatorium* or *Konservatorium*). A special kind of institution offering musical education in all its branches, of which the Conservatoire de Paris may be regarded as the prototype.

Up to the end of the 18th century the study of music was reserved, on the one hand, for the rich who were able to afford private tuition and, on the other, to the talented poor who were trained in the choirs and chapels of the churches or princely courts. It was not until the middle classes in turn discovered a need for music and musical education on reaching social independence that special schools established themselves. The Paris Conservatoire was founded in 1793. Its name, however, was not new, but derived from the Italian *conservatorio* or *ospedale* (hospital), a type of orphanage or foundling-hospital whose musically gifted young inmates were literally "conserved" for the art of music and trained for musical service at church or court, including the court operas. The first of these *conservatori* was founded at Naples in the 16th century, and this example was soon followed by other Italian towns, such as Venice, Palermo, etc. But in Paris an entirely new spirit made itself felt. The intention was that

<sup>2</sup> C. M. Phillimore in previous editions of this Dictionary

<sup>3</sup> So called because of their blue uniform.

the Conservatoire should provide free or almost free tuition in music for all gifted pupils, without distinction of rank or social position. It was founded at the height of the "Terror" for the main purpose of educating artists for the concerts, military bands and theatres of the French Republic. Later this programme was found to be too narrow, and the policy of dictating the pupils' future artistic activities was abandoned.

Such was the position at the Paris Conservatoire when the democratic idea of musical education began to take root all over Europe. The Paris model was followed everywhere, though adapted to local conditions. In 1807 a Conservatory was founded at Milan by the French governor, Eugène de Beauharnais; in 1808 Naples followed this example. Next came Prague in 1811, Brussels in 1813, Florence in 1814, Vienna in 1817, London in 1822, The Hague in 1826, Liège in 1827, Ghent in 1833, Geneva in 1835, Leipzig in 1843, etc.

The German *Musikhochschulen*, founded about 1870 by Kretzschmar, may be regarded as a deviation from the Conservatory principle, dictated by the need of the higher and more scientific instruction characteristic of the second half of the 19th century. A. L. C.

**CONSOLE.** The manuals, drawstops, pedals, and accessories of the organ, taken as a whole, and as distinct from the actual pipes and bellows.

**CONSONANCE.** See ACOUSTICS.

**CONSONANCE, STUMPF'S THEORY OF.** See ACOUSTICS.

**CONSORT.** An English 16th- and 17th-century term for a group of instruments playing concerted music, as well as for the music and for the performance. In a "whole" consort all the instruments (most commonly viols) belong to the same family. A "broken" consort consists of instruments of different kinds using different methods of producing sound. Morley, Rosseter and Leighton were three of the composers who wrote music between 1599 and 1614 for a broken consort of lute, pandora, cittern, treble and bass viols, and bass recorder—a curious combination which seems to have had a special vogue at this period. Praetorius speaks admiringly of its lovely tone-quality. Matthew Locke is one of the last to use the term. R. T. D.

BIBL.—DART, THURSTON, 'Morley's Consort Lessons of 1599' (Proc. Roy. Mus. Ass., 1947-48).

See also Chest of viols.

**CONSORT OF VIOLS.** The whole or unmixed consort of viols, like its nearest counterpart the string quartet of violins, is

one of the great media of chamber music. The viols were in use some hundreds of years before the violins, but they did not assume their classical form, nor were they developed as a complete chamber family, until the 16th century, by which time their younger collaterals the violins were already evolving from a distinct lineage in which the *lira da braccio* and the rebec were chiefly prominent.

During the 16th century the viols remained supreme as chamber strings, and mingled on equal terms with the violins in the fluctuating but picturesque "occasional" orchestras increasingly in evidence at banquets, festivities and theatrical entertainments. A large literature of serious chamber music for the consort of viols survives from this period, particularly of Italian, Spanish and English origin. Though derived from vocal counterpoint, and especially from the custom of transferring vocal works to the viols as an alternative method of performance, this chamber music began to acquire an instrumental character, less rapidly than the contemporary music for the lute, which imposes its own idiom, but nevertheless steadily. The English consorts of the early Tudor court are beautiful but not characteristically instrumental, resembling the melodious partongs of their period; while the subsequent English *In Nomines*, which only very exceptionally show instrumental traits, are based on a more ambitious vocal model (namely the polyphonic motet), suffer noticeably from the lack of words and tend to heaviness and monotony until the end of the century, when their style merged with that of the fantasy into one of the most successful instrumental idioms of the baroque age. Many of the Italian *ricercari* and fantasies of the 16th century have a livelier and more instrumental character; but the most striking examples are the Spanish ornamental variations, for the consort of viols, upon vocal madrigals and other works. These are illustrated, with instructions for improvising others of their kind, in Diego Ortiz's 'Tratado de glosas sobre cláusulas . . .' (Rome, 1553) and other publications, and the best of them are of the highest craftsmanship and inspiration.

During the 17th century the violins, hitherto generally regarded as more suited to dance music than to abstract chamber music, encroached steadily on territory once exclusive to the consort of viols. Much music of uneven merit and no great pretensions continued to be composed for viols in Germany, chiefly as suites of dance pieces in simple part-writing. But in England the first half of the 17th century produced by far the most important chamber works in the entire literature of the instrument: conservative and contrapuntal in

construction, but progressive and emotional in harmony.<sup>1</sup> These works cannot be played satisfactorily on violins, because their intricate polyphony and thick scoring requires the peculiar sharp clarity of the viols in order to achieve the proper effect.<sup>2</sup> There are also, however, still larger numbers of light dance movements, ayres and tuneful pieces of every kind, composed in the same school, which were played either on viols or on violins and, being transitional in idiom, succeed equally on either. It is important not to confuse these two branches of Stuart chamber music, either with each other or with a third branch composed for violins in an idiom specifically suited to that instrument.

The decline of the consort of viols from the early 17th century elsewhere and from the late 17th century in England resulted from the profound changes in musical style and purpose which characterized that revolutionary epoch. In broad terms, massive, dramatic and tempestuous effects are all more typical of the violins than of the viols; light, pellucid and transparent effects are more typical of the viols than of the violins. The viols cannot play so loudly or so emphatically; the violins cannot make a rich contrapuntal texture so clear. In expressiveness, finesse and tonal beauty the two families compare very closely. The choice is therefore dependent on the musical purpose in hand. The replacement of the consort of viols by the consort of violins during the 17th century was a musically correct decision. The return of the viols at the present day as the vehicle of their own magnificent chamber music, and it is to be hoped of new music yet to be composed, is equally necessary and correct.

During the early part of the 18th century the complete consort of viols fell into universal abeyance. Only in the French court school did the treble viol (together with the momentarily fashionable *pardessus* a fourth higher) hold its own. But the bass viol (*viola da gamba* generally so called, though the name applies strictly to all sizes) remained of importance in two functions. It was frequently preferred to the cello (particularly so in France, where the cello was strenuously opposed) as the string bass even with violins in chamber music, on account of its golden clarity of tone, which blends more evenly with the harpsichord and with one or two violins or wind instruments. And it continued to be valued as a solo instrument, for example by J. S. Bach, who also employed it as an *obbligato* part in his Passions and cantatas. It did not, however, survive the end of the 18th century.

The best contemporary description both for

the substance and the spirit of the consort of viols in its highest development is to be found in Mace's 'Musick's Monument' (1676, pp. 234 ff.) :

We had for our Grave Musick, Fancies of 3, 4, 5, and 6 Parts to the Organ; Interpos'd (now and then) with some Pavns, Allmaines, Solemn, and Sweet Delightful Ayres, all which were (as it were) so many Pathetical Stories, Rhetorical, and Sublime Discourses, Subtil, and Accute Argumentations; so Suitable, and Agreeing to the Inward, Secret, and Intellectual Faculties of the Soul and Mind, that to set Them forth according to their True Praise, there are no Words Sufficient in Language, yet what I can best speak of Them, shall be only to say, That They have been to my self, (and many others) as Divine Raptures, Powerfully Captivating all our unruly Faculties, and Affections, (for the Time) and disposing us to Solidity, Gravity, and a Good Temper; making us capable of Heavenly, and Divine Influences. . . .

And These Things were Performed, upon so many Equal, and Truly-Sciz'd Viols, and so Exactly Strung, Tun'd, and Play'd upon, as no one Part was any Impediment to the Other [p. 237 "For we would never allow Any Performer to Over-top, or Out-cry another by Loud Play; but our Great Care was, to have All the Parts Equally Heard"], but still (as the Composition required) by Intervals, each Part Amplified, and Heightned the Other; The [chamber] Organ Evenly, Softly and Sweetly According to All.

Whereas now the Fashion has Cry'd These Things Down, and set up others in their Room; which I confess make a Greater Noise; but which of the Two is the Better Fashion, I leave to be Judg'd by the Judicious.

Constable, Henry. See Benjamin (song). Moeran (song). Stanford (partsong).

Constant, Benjamin. See Montemezzi ('Heller', opera).

CONSTANTIN, Louis (b. ? , c. 1585; d. Paris, Oct. 1657).

French violinist and composer. He was "Roy des violons" and one of the best of the virtuosi of the early French school. Merseune mentions him with praise.<sup>3</sup> He was a composer and performer, and took part, while still a youth, in the music of Louis XIII. He succeeded his friend Richomme on 12 Dec. 1624 in the post of "Roy des violons", which gave him authority over the whole body of minstrels and players. He held this post until his death, after which it passed to Guillaume Dumanoir. One of his sons, Jean Constantin, was violinist-in-ordinary to the court of Louis XIV. Another Constantin, possibly his grandson, was an oboe player at the court in 1708.

**CONSTRUCTION.** The writing of a piece of music according to an appreciable plan. The element of construction is most important in instrumental music, where there is no accessory interest to keep the mind engaged and no shape imposed on the music from the outside, by a poem or other kind of text. In all music connected with words the definiteness of construction must yield to the order of the language, and be dependent on what it expresses for the chief part of its effect; but in instrumental music it would be impossible for the mind to receive a satisfactory impression from a work which was purely continuous and had no such connection between its parts as should enable the hearer to refer from one part to another and thereby assist his attention. The only manner in which the sense of proportion and plan, so important in works of art, can be introduced into music is by repetition of parts which shall be distinctly recognized by the rhythm and order of succession of their notes, and are called the subjects. And the construction of a fine movement is like that of a grand building in which the main subjects are the great pillars upon which the whole edifice rests, and all the smaller details of ornamentation are not just an irregular medley of ill-assorted beauties, but being reintroduced here and there, either simply or disguised with graceful devices, give that unity and completeness to the general effect which the absence of plan can never produce.

As instrumental music grows older new plans of construction are frequently invented, especially in small lyrical pieces, which imitate more or less the character of songs or represent some fixed and definite idea or emotion, according to the supposed order or progress of which the piece is constructed. In small pieces for single instruments originality of plan is generally an advantage; but in large forms of instrumental composition it is desirable for the general plan to be to a certain extent familiar, though it is on the other hand undesirable that it should be very obvious. The former strains the attention too heavily, the latter engages it too slightly. An account of the plans most generally used for such large instrumental works as symphonies, concertos, overtures, sonatas, etc., will be found under their own headings, and from a more generalized point of view in a special article.<sup>1</sup>

**CONTESSINA, LA** (Opera). See GOLDONI.

**CONTI, Carlo** (b. Arpino, 9 Oct. 1796; d. Arpino, 10 July 1868).

Italian composer. He studied at Naples with Tritto, Zingarelli and Mayr, and had his first opera performed when still a pupil of the Collegio di San Sebastiano (1819). Ten more operas followed up to 1829, the most successful of which was 'L' Olimpia' (Naples, 1826), but Conti gave up writing for the stage at an early age and devoted himself to teaching. He became professor of counterpoint at the Naples Conservatory in 1846 and deputized for the blind Mercadante (who retained the title of director and outlived Conti) from 1862 until his death. Conti also wrote masses and other music for the church, cantatas and instrumental music.

A. L.

**CONTI, Francesco Bartolomeo** (b. Florence, 20 Jan. 1681; d. Vienna, 20 July 1731).

Italian theorbist and composer. He was court theorbist in Vienna, 1701-5, when he resigned; but he was reappointed theorbist in 1708, with the additional post in 1713 of court composer. From this time he devoted himself with marked success to the composition of operas, especially the higher kind of comic opera. His best work was the tragi-comic opera 'Don Chisciotte in Sierra Morena', based on Cervantes, which is a model of its kind for the clear delineation of each separate character. It was performed first at the Carnival of 1719 in Vienna and afterwards (1722) at Hamburg, in German (as were several others of his operas). His 'Clotilda' (Vienna, 1706) was produced in London

<sup>2</sup> The theatre was destroyed by fire during the second performance

(1709), and the songs were published by Walsh. Conti's cantatas and oratorios are solid and thoughtful.

Altogether he wrote about 40 works for the stage (operas, serenatas, intermezzi, etc.) and 9 oratorios, the scores of nearly all of which are still preserved in the Vienna libraries. The opera 'Ormida' produced by Handel in London 1730 is not by him but probably by Bartolommeo Cordans. C F. P., rev. A. L.

**CONTI, Gioacchino.** See GIZZIELLO.

**CONTI, Ignazio Maria** (b. ? Florence, 1699; d. Vienna, 28 Mar. 1759).

Italian composer, son of F. B. Conti. He presumably studied with his father and held an appointment as court theorist in Vienna from 1720 until his death. Between 1727 and 1739 8 operas and serenatas, and 7 oratorios of his were performed at the Austrian court; in addition he wrote many masses and other music for the church. Most of the scores are still extant, but unlike those of his father, his works never became known outside Vienna.

A. L.

**CONTINENTAL FINGERING.** The fingering of keyboard music with figures 1 to 5 for each hand, 1 standing for the thumb, a system that is no longer "continental" only, but has become universal. The term was used in Britain in the 19th century to differentiate this kind of fingering from the so-called "English fingering" (by no means English throughout the history of keyboard music, however), which provided for four fingers (marked 1-4) and a thumb (marked +). Much confusion was caused in English pianoforte teaching in the 19th century once continental editions of the standard classics had begun to capture the British market, and the temporary vogue of "English fingering" had to yield to the wider currency as well as to the obviously more practical and logical nature of the system used in all other countries.

**CONTRABASSOON.** See DOUBLE BASSOON.

**CONTRABASSOPHON.** See DOUBLE BASSOON

**CONTRAFACITUM.** See PARODY MASS.

**CONTRALTO or ALTO**<sup>1</sup> (*contra*, or counter to the alto part in choral writing). The term used to denote the lowest of the three principal varieties of women's voices, the others being soprano and mezzo-soprano. Although the compass of the contralto voice may sometimes have a range of two and a half octaves from e upwards, it is the peculiarly rich and weighty quality of the lower register which gives it its character.

Florio (1598) defines the term as applying to "a counter treble in musicke", i.e. a second voice set against (*contra*) a high (*alto*) one. The original meaning is thus a second high voice rather than, as now, a low woman's voice. But since second parts were usually given to either a high-pitched man's voice (formerly contralto or countertenor, now male alto) or a woman's low voice, the term "contralto" became current for the latter. This happened at least as early as the first half of the 18th century: Owen Swiney wrote in 1730 that "Mr. Handel desires to have a woman contralt". G., rev.

See also Mezzo-Soprano. Singing. Soprano.

**CONTRALTO BUGLE.** The soprano Saxhorn in B $\flat$ .

**CONTRAPUNTAL.** Strictly speaking, music which is written according to the rules of counterpoint is called "contrapuntal", but the term is generally used indiscriminately as interchangeable with "polyphonic".

E. B.

See also Counterpoint. Polyphony.

**CONTRARY MOTION.** The progression of parts in opposite directions, one or more ascending while the other or others descend, e.g.:

In contrapuntal music it was considered preferable to similar or oblique motion, and it always has a stronger and more vigorous character than either of these. Many conspicuous examples of its use in later music may be found, as for instance in the slow movement of Beethoven's Symphony in C minor:

<sup>1</sup> In English usage the female voice of the alto range is now generally called contralto and the corresponding male voice alto, but the qualification "male alto" is still very frequently made.

Passing-notes are allowed to progress continuously by contrary motion until they arrive at notes which form a part of some definite harmony (\*), e.g.:

from the first movement of Beethoven's Sonata in B $\flat$  major, Op. 106. C. H. H. P.

**CONTRATENOR.** See COUNTERTENOR.

**CONTREBASSE-À-ANCHE.** See DOUBLE BASSOON.

**CONTREBASSE GUERRIÈRE.** See CLARINET.

**CONTREDANSE** (Engl. *country dance*; Ger. *Contretanz*). A dance of English origin, the French name being clearly a corruption of the English one. It replaced in popular favour the branle, which was in great vogue in France during the 18th century until the reign of the quadrille. The 'Suites de danses de bals du roi' (Ballard, 1699) contain 17 "contredanses anglaises". It was also introduced into French stage music, e.g. in Dauvergne's 'Les Troqueurs' (1753) in the final ballet.

The music to the contredanse is of a lively character, it is written either in 2-4 or in 6-8 time, and consists uniformly of eight-bar phrases, each of which is usually repeated. The name is a corruption of the English "country dance", one of several French words of English origin (e.g. *redingote*, *bouledogue*, *boulevardin*, *molesquine*, etc.). Beethoven wrote 12 contredanses for orchestra, from one of which he developed the finale of his "Eroica" Symphony. Mozart also wrote a number. A series of 5 or 6 contredanses forms a Quadrille.

E. P. & M. L. P.

Raoul Auger Feuillet, a dancing-master of Paris, was the author of an ingenious system by which dance steps could be noted down in diagrams showing the position and movement of the feet corresponding to each bar of the music. Something of the sort had been previously attempted by Charles Lous Beauchamp (1696-1705), but Feuillet carries out the idea with a degree of elaboration which tends to defeat itself owing to the bewildering complexity of the diagrams which result. His book was first published in 1701 and is entitled 'Chorégraphie, ou L'Art de décrire la danse par caractères, figures et signes démonstratifs'. It was translated into English by John Weaver in 1706 with the title 'Orchesography, or The Art of dancing by characters and demonstrations' (published by J. Walsh). Gallini, who

wrote on the art of dancing in 1772, speaks of *chorégraphie* as "an inextricable puzzle or maze of lines and characters, hardly possible for the imagination to seize or for the memory to retain", and concludes that diagrams such as those of Feuillet can be intelligible only to dancing-masters, who are just the persons who have no need of them.

Feuillet published several collections of dances in this curious notation, and notably a 'Recueil de contredanses mises en chorégraphie' (1706), which is of the highest value as establishing the English origin of the French *contredanse*. Such well-known English tunes as 'Greensleeves' and 'Christchurch Bells' appear here as 'Les Manches vertes' and 'Le Carillon d'Oxford' (see Mus. T., Feb. 1901).

J. F. R. S.

See also Country Dance. Quadrille.

**CONTRERAS, Salvador** (b. Cuernavaca, 10 Nov. 1912).

Mexican violinist and composer. He studied composition with Chávez and violin with Revueltas; he is a member of the violin section of the Orquesta Sinfónica de México. In 1935, with Ayala, Moncayo and Galindo, he formed a "Grupo de los Cuatro", dedicated to propaganda for new Mexican music. Contreras has written several works for chamber music in a neo-classical vein, using material of native inspiration. His choral work 'Corridos' was performed by the Orquesta Sinfónica de México on 16 Aug. 1940. N. S.

**CONTUMACCI.** See COTUMACCI.

**CONUS.** See KONIUS.

**CONVERSE, Frederick (Shepherd)** (b. Newton, Mass., 5 Jan. 1871; d. Westwood, Mass., 8 June 1940).

American composer. He was educated in the public schools of his native town and began to study the pianoforte under local teachers. His father intended him to make a commercial career, but his musical inclinations prevailed. He entered Harvard University in 1889 and took the musical courses under John Knowles Paine. He graduated in 1893 with highest honours in music, and at this time his first work, a Sonata for violin and pianoforte, was performed.

Converse, after graduation, endeavoured to carry out his father's ideas, but a few months in an office proved that this was not his province. Having determined to become a professional musician, he pursued his studies under Carl Baermann, an eminent Boston pianist, and in composition with George Chadwick. Subsequently he went to Europe and studied in the Royal School of Music in Munich, from which he graduated in 1898 with honours in composition. His first Symphony was produced at that time.

On returning to America Converse settled

again at Boston, where he taught harmony in the New England Conservatory, 1899-1901. Then, till 1904, he was instructor in composition in Harvard University and in 1904-7 assistant professor of music there. In 1907 he resigned in order to devote himself entirely to composition. Converse's earliest works showed the influence of his orthodox Munich training, but with his 'Festival of Pan' he made his departure toward the modern romantic style. Walt Whitman's poetry liberated him from formal traditions, and his 'Mystic Trumpeter', regarded by most American commentators as his best composition, disclosed his eager search for imaginative delineation and dramatic expression. Converse was a composer of independent methods and large technical skill.

On 18 Mar. 1910 the Metropolitan Opera in New York produced 'The Pipe of Desire', which had already appeared at Boston, but was the first American work to be performed in the New York opera-house. In 1933 Converse became an honorary Doc. Mus. of Boston University and in 1936 he was elected a member of the National Institute of Arts and Letters.

The following is a list of his principal works<sup>1</sup>.

## OPERAS

- 'The Pipe of Desire' (libretto by George Edward Barton), prod. Boston, 31 Jan 1906
- 'The Sacrifice' (lib. by composer & John Albert Macy), prod. Boston, 3 Mar 1911.
- 'Beauty and the Beast' (lib. by Percy Mackaye)
- 'The Immigrants' (lib. by Mackaye).

## INCIDENTAL MUSIC

- Music for Percy Mackaye's play 'Jeanne d'Arc' (1906)

## FILM MUSIC

- 'Puritan Passions' (after Percy Mackaye's 'The Scarecrow') (c 1923-24).

## CHORAL WORKS

- Psalm for male voices, brass & orch. (1906).<sup>2</sup>
- 'Job', dramatic poem for solo voices, chorus & orch (1907).<sup>3</sup>
- 'Masque of St. Louis' (1914).
- 'The Peace Pipe', cantata (Longfellow).
- 'The Flight of the Eagle', cantata.
- 'The Answer of the Stars', song for soprano, chorus & orch

Several other cantatas, ballads, &c., for mixed, men's or women's chorus.

## ORCHESTRAL WORKS

- Overture 'Youth' (1897).
- Symphony No. 1, D mi. (1898).
- Festival March (1900).
- 'The Festival of Pan' (1900).
- 'Endymion's Narrative', tone-poem after Keats (1903)
- 'Euphrosyne', overture (1903).
- 'The Mystic Trumpeter', orch. fantasy after Walt Whitman (1905).
- 'Ormazd', symph. poem (1912).
- 'Ave atque vale', tone-poem (1917).
- Symphony No. 2, G mi. (1920).
- Symphony No. 3, E mi (1922).

<sup>1</sup> There are a vast number of smaller compositions (many in MS) not listed here.

<sup>2</sup> Written for the dedication of the new buildings of Harvard Medical School.

<sup>3</sup> Written for the 50th anniversary of the Worcester (Mass.) Festival.

- 'Song of the Sea', tone-poem (1924).
- 'Flüvier Ten Million', 'a joyous epic' (c 1927).
- 'Elegiac Poem' (1928).
- Suite 'California' (1928).
- Suite 'American Sketches' (1934-35).
- Symphony No. 4, F ma.
- Symphony No. 5, F mi (1941).

## SOLO INSTRUMENTS AND ORCHESTRA

- 'Night' and 'Day', 2 poems for pf after Whitman (1905).
- Vn. Concerto, Op. 13.
- Fantasy for pf. (1922).
- Concertino for pf (1932).
- Rhapsody for clar., Op. 105.

## VOICE AND ORCHESTRA

- 'La Belle Dame sans merci' (Keats) for baritone (1903).
- 'Hagar in the Waste', for mezzo-soprano.
- 'Prophecy' for soprano (1932).

## CHAMBER MUSIC

- String Quartet No. 1, E mi, Op. 17 (1902).
- String Quartet No. 2, A mi, Op. 18 (1904).
- Trio for vn., cello & pf, E mi.
- Septet for vn., viola, cello, clar., bassoon, horn & pf.
- Prelude and Intermezzo for brass sextet.
- 2 Lyric Pieces for brass quintet.
- Also sonatas for vn. & pf., cello & pf., pf. solo, pf. pieces, songs, &c.

W. J. H., adds.

**CONVERSI, Girolamo** (b. Correggio, ?; d. ?).

Italian 16th-century composer. He was in the service of Cardinal Granvella, Viceroy of Naples, about 1584, and is known as the author of the following works: 'Canzoni a 5 voci', Venice, G. Scotto, 1572; reprinted by the same publisher in 1573, 1575, 1578, 1580, 1585 and 1589; 'Madrigali, a 6 voci, lib. 1', Venice, 1584; *ibid.* in 4to. Converse is familiar to English amateurs through his fine madrigal, 'When all alone my pretty love was playing', published in 'Musica Transalpina' in 1588.

**CONVITATO DI PIETRA, IL** (Opera).

See RIGHINI.

**CONVITO, IL** (Opera). See CIMAROSA.

Convò, Giulio. See Scarlatti (5, 2 libs.).

**COOGAN, Philip**. See COGAN.

**COOK, Edgar (Tom)** (b. Worcester, 18 Mar. 1880; d. Chipstead, Surrey, 5 Mar. 1953).

English organist, teacher and composer. Educated at the Royal Grammar School of Worcester, his musical training was that of the cathedral organ-loft, which in his case (he was assistant organist of Worcester for many years) meant experience of the Three Choirs Festival as well as of cathedral music proper. In 1908 he was appointed organist of Southwark Cathedral in London in succession to Madeley Richardson. There he utilized this experience in instituting a series of Saturday afternoon performances, with mixed choir and orchestra, of oratorios and kindred works. These have been widely appreciated and in some cases the novelties of the Three Choirs Festival have been given their first London performances in Southwark Cathedral.

Cook was a member of the teaching-staff of the R.C.M., where for many years he has had charge of the choir-training-class. His valuable little book, 'The Use of Plainsong', is published by the Plainsong and Mediaeval Music Society. He composed some church music and was active in all movements for the furtherance of church music. In 1934 he was created Mus. Doc. Cantuar in acknowledgment of these services.

H. C. G.

**COOK, Thomas Aynsley** (b. London, July 1831 or 1836; d. Liverpool, 16 Feb. 1894).

English bass singer. His father was an engraver in London, living in Cornhill. As a boy he had a fine soprano voice, which was trained by Edward Hopkins of the Temple. Developing into a powerful bass, he went to Germany and studied under Staudigl and other good teachers for five years, and sang at several Bavarian theatres. He made his début in England at the Theatre Royal, Manchester, in 1856, and was successful in leading bass parts of operas by Meyerbeer, Weber, Benedict, Balfe and Wallace, which he sang with the National English Opera headed by Lucy Escott. For three years he then toured with that prima donna in the U.S.A., and on his return he sang with the Pyne and Harrison company, besides appearing once with Grisi at Liverpool as Oroveso in 'Norma'.

In the 1870s Cook made a name for himself in London in the *opéras-bouffes* of Offenbach ('Grande Duchesse' and 'Barbe-Bleue'), besides supporting Santley at the Gaiety in Herold's 'Zampa', Auber's 'Fra Diavolo' and Lortzing's 'Peter the Shipwright'. His Devilshoof in 'The Bohemian Girl' was by that time famous, and he made the part his own.

Cook's connection with the Carl Rosa Opera began in Sept. 1874, at the Liverpool Amphitheatre, after a tour in America with the Parepa-Rosa Company; and, except for one short break, it lasted twenty years. During that period he sang an extensive round of parts and earned remarkable popularity in most of them. On the occasion of a "command" performance (1892) at Balmoral Castle (at which he sang as the Sergeant in 'The Daughter of the Regiment') he was reminded by Queen Victoria that she had heard him sing in Balfe's 'Satanella' at Covent Garden in the 1850s. He last appeared in public at Liverpool in Feb. 1894, only a few days before his death. He had a powerful voice of agreeable quality, his singing and acting being marked by abundant energy and spirit, coupled with a keen sense of humour.

Cook's daughter, Annie, who sang for some years with the Carl Rosa Company, became the wife of the conductor Eugène Goossens (second of that name) and the mother of Eugene

Goossens, jun., the composer and conductor, the oboist Leon Goossens and the harpists Marie and Sidonie Goossens.

H. K.

**COOKE, Arnold (Atkinson)** (b. Gomersal nr. Leeds, 4 Nov. 1906)

English composer. He was educated at Repton, Cambridge (1925-29), where he took the B.A., and under Hindemith at the High School for Music in Berlin (1929-32). After finishing his studies he became Director of Music at the Festival Theatre, Cambridge, and was appointed professor of harmony and composition at the Royal Manchester College of Music in 1933, remaining there for five years. In 1934 his Concert Overture No. 1 won third prize in the 'Daily Telegraph' competition. During the second world war (1941-45) he served in the Royal Navy, and in 1947 he was made professor of harmony and composition at the T.C.M. in London. He took his Mus.D. degree at Cambridge in 1948. In the following year his Symphony No. 1, in B♭ major (composed in 1947), was broadcast, and his pianoforte Quartet was performed at the Cambridge Festival, for which it was commissioned. A Concerto for string orchestra was broadcast on 5 June 1951. His oboe Quartet was given at a concert of the London Contemporary Music Centre. At present (1954) he is working on an opera, 'Mary Barton', based on a novel by Mrs. Gaskell.

Cooke's studies with Hindemith and in Germany generally had a marked influence on his style in composition, but national traits are by no means completely submerged. The following works have been published: string Quartet No. 1 (1933), Sonata for violin and pianoforte (1938), Sonata for viola and pianoforte (1937), Sonata for two pianofortes (1937), 'Alla Marcia' for clarinet and pianoforte (1947), Rondo in B♭ major for horn and pianoforte (1950), 'Bedtime', songs (1939).

Unpublished works not mentioned above include a cantata, 'Holderneth' (1934), Concert Overture No. 2 (1946), 'Passacaglia, Scherzo and Finale' for string orchestra (1931), Concerto in D major for strings (1948), pianoforte Concerto (1940), string Quartet No. 2 (1947), Quartet for flute and strings (1936), string Trio (1950), violin Sonata No. 2 (1950), cello Sonata (1941), pianoforte Sonata (1938) and various other vocal and chamber works.

C. M. (iii).

BIBL.—CLAPHAM, JOHN, 'Arnold Cooke's Symphony' (M. Rev., Vol. XI, 1950, p. 118).

**COOKE, Benjamin (i)** (b. ?; d. ?).

English 18th-century music seller and publisher. He was at "the Golden Harp", New Street, Covent Garden, London, in 1726-43. He was the father of Benjamin Cooke, the composer, who was born at New Street in

1734. Cooke senior published a considerable number of vocal and instrumental works, some obviously unofficial editions pirated from the works of other publishers, in keeping with the practice of the time, others under licence as authoritative first editions. His publications were mostly in a heavy bold style, but some were engraved in a lighter style by Thomas Cross. After Cooke's death or retirement some of his plates were acquired by John Johnson, who reissued copies from them. Cooke's publications included: Thomas Roseingrave's 'XII Solos for a German Flute, with a Through Base for the Harpsichord' (1727); Corelli's 'Sonatas', Opp. 1-5 (1728, etc.), and 'Concertos', Op. 6 (1732); Handel's 'VI Sonates', Op. 2 (c. 1733); 'Favourite Songs in the Opera of Operas, or Tom Thumb' (1733); Charles Avison's 'Six Celebrated Sonata's in Three Parts' (1736), and 'Six Concertos' (1740); John Humphries's 'XII Concertos', Op. 2 (1737) and Op. 3 (1741), J. F. Ramsh's 'Eight Solos for a German Flute with a thorough Bass' (1737); 'Twenty-four Country Dances for the year 1738'; 'Caledonian Country Dances' (c. 1738); 'The Complete Country Dancing Master', 3 vols. (c. 1738); A. Scarlatti's 'VI Concertos in Seven Parts' (1740); D. Scarlatti's 'XLII Suites', 2 vols. (1740); overtures to operas by Handel and others, songs from various operas and works by F. Barsanti, S. Lanzetti, W. Defesch, etc. w. c. s

**COOKE, Benjamin** (ii) (b. London, 1734; d. London, 14 Sept. 1793).

English organist and composer, son of the preceding. In his ninth year he was placed under the instruction of Pepusch and made such rapid progress that in three years' time he was able to act as deputy for John Robinson, organist of Westminster Abbey. In 1752 he was appointed successor to Pepusch as conductor at the Academy of Ancient Music. In Sept. 1757, on the resignation of Bernard Gates, he obtained the appointment of master of the choristers of Westminster Abbey, and on 27 Jan. 1758 that of lay vicar there. On 1 July 1762, on the death of Robinson, Cooke was appointed organist of the Abbey. In 1775 he took the degree of Doctor of Music at Cambridge and in 1782 was admitted to the same degree at Oxford. In the latter year he was elected organist of St. Martin's-in-the-Fields. He was an assistant director at the Handel Commemoration in 1784. In 1789 he resigned the conductorship of the Academy of Ancient Music to Arnold. He is buried in the west cloister of Westminster Abbey, where a mural tablet, with a fine canon by double augmentation<sup>1</sup> records his skill and worth.

Cooke's compositions, which are voluminous, are for the church, concert-room and chamber. For the theatre he produced nothing except an ode for Dr. Delap's tragedy 'The Captives' (1786). His church music comprises the fine Service in G major written for the reopening of the Abbey organ after the addition by Avery of the pedal organ, and one composed in 1787 at the request of Lord Heathfield for the use of the garrison at Gibraltar; two anthems composed in 1748 and 1749 for the Founder's Day at the Charter House; an anthem with orchestral accompaniment for the funeral of William, Duke of Cumberland, 1764; another of the same description, for the installation of the Bishop of Osnaburg, afterwards Duke of York, as Knight of the Bath, 1772; and fourteen others, besides several chants and psalms and hymn tunes.

For the Academy of Ancient Music Cooke added choruses and accompaniments to Pergolesi's 'Stabat Mater' (1759) and to Galliard's 'Morning Hymn' (printed 1772), and composed an Ode for Christmas Day (1763), 'The Syrens' Song to Ulysses', Collins's 'Ode on the Passions' (printed 1784), an Ode on Handel (1785), Ode on the Genius of Chatterton (1786) and Ode on the King's Recovery (1789). But the compositions by which he is best known are his numerous and beautiful glees, canons, etc. For seven of these (five glees, a canon and a catch) the Catch Club awarded him prizes. Cooke published in his lifetime a collection of his glees, and a second collection appeared in 1795 under the care of his son Robert. Twenty-nine glees and eleven rounds, catches and canons by Cooke are printed in Warren's collections. His instrumental compositions consist of organ pieces, concertos for orchestra, marches and harpsichord lessons.

W. H. H.

His setting of Collins's 'Ode on the Passions' is unusual among compositions of the period, both for its setting and for its orchestration. When William Hayes set the same poem he treated it as most composers of the time would have done and turned out a string of recitatives and arias. This was not Cooke's procedure; he was more concerned with the total impression, and there are only two solo numbers that contemporaries would recognize as arias, most of the writing being of the style then described as *arioso*. Moreover, one of the more extended solo pieces, the song for Hope, requires a second soloist to echo the first on the repeat, and the bass singers of the chorus sing as though "at a distance". Beside the usual orchestra this song calls for a solo violin, harpsichord and cello. For the song of Melancholy Cooke mutes the violins, divides the violas and adds parts for an organ

<sup>1</sup> Quoted in music type in the article on AUGMENTATION.

and a solo cello. The greatest display of orchestral virtuosity comes in the song for Joy, which besides the normal orchestra of strings and oboes calls for harp, triangle (surely its earliest appearance in a score), carillons and *tubae pæres*; these last were supposedly the double flutes of classical Greece and, according to Burney, had been remade by a Mr. Sharpe. R. G.

*See also* Augmentation (canon).

**COOKE, Henry** (b. ? Lichfield, c. 1616; d. Hampton Court, 13 July 1672).

English bass singer, choir trainer and composer. He was probably a son of "John Cooke, a basse from Lichfield", who was sworn "pisteler" of the Chapel Royal in London in 1623 and died in 1625. He was brought up as a boy chorister in the Chapel Royal and took up arms for his royal master at the outbreak of the Civil War. We find him as a lieutenant in Colonel George Goring's regiment, which formed part of the Duke of Northumberland's army on the retreat from Newcastle into Yorkshire. Before the end of the war he was promoted to a captaincy, and he was afterwards generally known as "Captain Cooke". During the Commonwealth he is said to have made a living by teaching music, and it seems probable that he went to Italy and studied the language and voice production. At the Restoration he was appointed bass in the Chapel Royal and Master of the Children. It was not a cheerful prospect for a musician, for there were only five old members, no books, no surplices to wear, and the order of service so entirely forgotten that no two organists played it alike. Cooke set to work with the utmost energy: he strengthened the boys' voices with cornets and then reinstated the old pressgang warrant, which enabled him to take from any cathedral or country choir any boy he considered suitable. He had an unerring judgment, for among the earliest batches of children he chose Turner, Wise, Blow, Tudway and Humfrey. Purcell was not chosen by him but joined the choir because his father and uncle already belonged to it.

Cooke's military discipline was soon apparent. The gentlemen were told that they must be "properly surpliced, punctual and diligent, and must quit all interest in other quires". The instrumentalists were bid "to wait in their turnes", and rehearsals were held regularly on Saturdays. Cooke's boys became famous. They had "extraordinary skill", they could read "anything at sight" (Pepys), could sing well in Italian, and six of them composed anthems regularly, so that, as Tudway tells us, "every month they produced something fresh". They were taught Latin and to play the violin, organ, lute and harpsichord. All this was accomplished in less than three years and stamps Cooke as a great choir

trainer. With the consent of the king, who perhaps suggested the idea from his French experiences, Cooke introduced instrumental music into the church service and "double sackbuts and courtals" into choir processions, so that all might distinctly hear and keep together in time and tune. He frequently sang the solos in the anthems himself, and Pepys and Evelyn — no mean judges — both bear testimony to his extraordinary abilities as a vocalist.

Cooke joined Davenant in the 'Siege of Rhodes', composed music for some of the acts, took the part of Solymán and made such an impression on Mrs. Edward Coleman (who acted with him) that nine years later she was able to give an excellent representation of Cooke's performance to Pepys. In addition to this dramatic work Cooke wrote a hymn for the Installation of Knights of the Garter, coronation music, some 30 anthems, songs and part songs. He had, Pepys says, a "strange mastery in making extraordinary surprising closes", though his part-writing is ungrammatical. His anthems were effective and pleasing, as we see by many entries in Pepys's diary. In 1662 he became assistant to the Corporation of Musicians, afterwards Deputy-Marshal, and finally Marshal in succession to Lanier in 1670, but in 1672 he resigned office "by reason of sickness". He left London in 1669 for Hampton Court, where he died, and was buried in the east cloister of Westminster Abbey on 17 July 1672.

As Cooke was in excellent voice in 1664 he is not likely then to have been more than from forty-five to fifty years of age, and therefore about fifty-six when he died. At the time of his death the Crown owed him more than £500 for wages, etc., and about half this sum was paid to his widow. A summary of his will is in Lafontaine's 'The King's Musick', with a list of his compositions. J. A. F.-M.

**COOKE, Nathaniel** (b. Bosham nr. Chichester, 6 Apr. 1773; d. Bosham, 5 Apr. 1827).

English organist and composer. He was a nephew of Matthew Cooke, organist of the London church of St. George, Bloomsbury, from whom he received the chief part of his musical education. He became organist of the parish church of Brighton, for the use of the choir of which he published a collection of psalm and hymn tunes, including some of his own composition, which long continued in favour. He also published some small pieces for the pianoforte. W. H. H.

**COOKE, Robert** (b. London [Westminster], 1768; d. London, 13 Aug. 1814).

English organist and composer. He was the

son and pupil of Benjamin Cooke and succeeded his father, on his death in 1793, as organist of the London church of St Martin's-in-the-Fields. On the death of Arnold, in 1802, he was appointed organist and master of the choristers of Westminster Abbey. While of unsound mind he ended his life by drowning himself in the Thames. He was buried in the west cloister of Westminster Abbey.

Robert Cooke composed an Evening Service in C major, an anthem, 'An Ode to Friendship' and several songs and glees. Three of the glees obtained prizes at the Catch Club. A collection of eight of them was published by the author in 1805.

W. H. H.

**COOKE, Thomas Simpson (Tom Cooke)** (b. Dublin, 1782: d. London, 26 Feb. 1848).

Irish singer, instrumentalist and composer. He studied under his father, Bartlett Cooke, a famous oboe player at the Smock Alley theatre in Dublin, and made such rapid progress as to perform a violin concerto in public at the age of only seven. He received instruction in composition from Giordani. At the early age of fifteen he was appointed leader of the orchestra at the Crow Street theatre, Dublin, in which situation he continued for several years. For this theatre he composed an overture to Dimond's 'The Hunter of the Alps' in 1805 and two comic operas, 'The Five Lovers' (1806) and 'The First Attempt, or The Whim of the Moment' (1807). At the same time he kept a music shop from 1806 to 1812. On one of his benefit nights he announced himself to sing the tenor part of the Seraskier in Storace's opera 'The Siege of Belgrade', an experiment which proved quite successful.

This led to Cooke's removal to London, where he made his first appearance, in the same character, at the English Opera House (Lyceum) on 13 July 1813. On 14 Sept. 1815 he appeared as Don Carlos in 'The Duenna' at Drury Lane Theatre, where he continued as a principal tenor singer for nearly twenty years. During this period, on one of his benefit nights, he exhibited the versatility of his talents by performing in succession on the violin, flute, oboe, clarinet, bassoon, horn, cello, double bass and pianoforte. In 1821 he was called "director of the music at Drury Lane Theatre". About 1823 he undertook, alternately with his duty as tenor singer, the duty of leader of the band.

In 1828-30 Cooke was one of the musical managers of Vauxhall Gardens. Some years later he was engaged, at Drury Lane and Covent Garden, as director of the music and conductor. He was a member of the Philharmonic Society, and occasionally led the orchestra or conducted the concerts. For several years he held the post of principal

tenor singer at the chapel of the Bavarian Embassy, a post he relinquished in 1838. In 1846 he succeeded John Loder as leader at the Concert of Antient Music. He died at his house in Great Portland Street, and was buried in Kensal Green cemetery.

As a singing-master Cooke had a deserved reputation, and several of his pupils achieved distinction; among them Miss M. Tree, Mrs. Austin, Miss Povey, Miss Rainforth, the Misses A. and M. Williams, and Sims Reeves. He wrote a treatise on singing, which was much esteemed.

Cooke's principal dramatic pieces were:

- 'Frederick the Great' (1814)
- 'The King's Proxy' (1815).
- 'The Count of Anjou' (1816)
- 'A Tale of Other Times' (with Bochsa) (1822).
- 'The Wager, or The Midnight Hour' (1825).
- 'Oberon, or The Charmed Horn' (1826).
- 'Malvina' (1826).
- 'The Boy of Santillane' (1827).
- 'Isidore de Menda' (from Storace) (1828).
- 'The Brigand' (1829)
- 'Peter the Great' (1829)
- 'The Dragon's Gift' (1830)
- 'The Ice Witch' (1831)
- 'Hyder Ali' (1831)
- 'St. Patrick's Eve' (1832)
- 'King Arthur and the Knights of the Round Table' (1834)

'Oberon', produced the same year as Weber's opera came out at Covent Garden, was clearly an attempt either to rival or to parody that work. 'The Brigand' contained a song, "Gentle Zitella", which became extremely popular.

To the list of Cooke's original stage pieces, which as shown above is by no means complete, must be added his musical additions to some of the Shakespeare revivals of the period ('A Midsummer Night's Dream', 1816; 'Coriolanus', 1821; 'The Tempest', 1821; 'The Taming of the Shrew', 1828) and his adaptations of foreign opera, which conformed to the fashion in vogue in his time: he omitted much of what the composer wrote and supplied in its place compositions of his own. In this way he treated Weber's 'Abu Hassan', Boieldieu's 'Dame blanche', Auber's 'Muette de Portici', 'Gustave III' and 'Lestocq', Hérold's 'Pré aux clercs', Rossini's 'Maometto', Marliani's 'Bravo' and Halévy's 'Juive'. For the revival of Handel's 'Acis and Galatea' in 1842 he added a prologue. His last work for the stage was, in the same year, music for Planché's comedy 'The Follies of a Night'.

Cooke published 'Six Glees for three and four voices' in 1844, besides many singly. Among his glees which gained prizes were: 'Hail! bounteous Nature' (1829); 'Come, spirits of air' (1830); 'Let us drain the nectared bowl' (1830); 'Thou beauteous spark of heavenly birth' (1832); 'O fair are thy flowerets' (1836); 'Strike the lyre' (Manchester, 1832). He likewise obtained a

prize for his catch 'Let's have a catch and not a glee' in 1832.

His eldest son, Henry Angelo Michael (commonly known as Grattan) Cooke (*b.* Dublin, 1809; *d.* Harting, Sussex, 12 Sept. 1889), was educated in London at the R.A.M. in 1822-28 and for many years held the post of principal oboe in all the best orchestras. He was also bandmaster of the second regiment of Life Guards in 1849-56.

**COOLIDGE, Elizabeth Sprague** (born **Sprague**) (*b.* Chicago, 20 Oct. 1864; *d.* Cambridge, Mass., 4 Nov. 1953).

American patroness of music. She was married at Chicago on 12 Nov. 1891 to Frederic Shurtleff Coolidge. In 1925 she created the Elizabeth Sprague Coolidge Foundation in the Library of Congress by placing in trust a large sum, the income of which is paid to the Library of Congress, Washington, D.C. The trust is intended, among other things, to enable the Music Division of the Library: (1) to conduct periodic music festivals; (2) to give concerts; (3) to offer and award a prize or prizes for any original composition or compositions performed in public for the first time at any festival or concert given under the auspices of the Library; (4) to further the purposes of musicology through the music division of the Library.

Mrs. Coolidge presented the Library with an auditorium at a cost of over \$90,000, exclusive of the organ, which is also her gift. The Berkshire Festivals of Chamber Music, held under her patronage at Pittsfield, Mass., were begun in the autumn of 1918 and transplanted from the Berkshire Hills to Washington. Mrs. Coolidge's numerous benefactions also included contributions towards the gift of a music building to Yale University — primarily the gift of her mother, Nancy Ann Sprague — and the establishment of a tuberculosis hospital and a school for crippled children at Pittsfield, etc. In 1932 she instituted the Elizabeth Sprague Coolidge Medal "for eminent services to chamber music", which is awarded annually to one or more recipients. She was herself "a sensitive and competent pianist, an experienced ensemble player. She has tried her hand at musical composition. Her judgment is sharp. Her inherited talents and her acquired culture account for the artist in her."

For her contributions to education Mrs. Coolidge received the hon. degree of M.A. from Yale University, Smith College and Mills College, and the degrees of Doctor of Letters from Mt. Holyoke College, Doctor of Music from Pomona College and Doctor of Laws

from the University of California. She brought to America many European composers and performers, and contributed towards cultural activity in Europe also, in recognition of which fact she received decorations from several foreign governments as well as the Medal of Citizenship from the city of Frankfurt o/M. and the Cobbett Medal from the Worshipful Company of Musicians in London.

G. R.

See also Libraries, Washington.

**Coolidge, President.** See Bantock ('America' for chorus).

**COOPER, Emil** (*b.* Kherson, 1877).

Russian conductor, (?) of English descent. He received his first lessons from his father, a musician, later attending the Odessa Conservatory, where he studied violin and composition. Proceeding to Vienna he became a pupil of Joseph Hellmesberger (violin) and Fuchs (composition). On his return to Russia he completed his musical education under the guidance of Taneyev and Nikisch. At the age of twenty he received an engagement to conduct at the Kiev Municipal Opera. At Zimin's theatre in Moscow he conducted the first performance given there of Wagner's 'Meistersinger' and the world première of Rimsky-Korsakov's 'Golden Cockerel'. In 1909 Diaghilev engaged him to take charge of his Russian seasons of opera and ballet in Paris, where he conducted 'Boris Godunov', 'Khovanshchina' and 'Ivan the Terrible'. A year later he was engaged as conductor of the Russian Imperial Opera and gave first Moscow performances of the 'Ring', as well as three operas by Rimsky-Korsakov, and was responsible for a revival of Tchaikovsky's 'Mazeppa' and other of his operatic works, also of 'Boris', 'Khovanshchina' and 'Prince Igor'.

Responding in 1910 to a proposal from the Moscow branch of the Imperial Russian Musical Society, Cooper occupied its rostrum until the 1917 Revolution — introducing the principal works of Scriabin and symphonic examples by Rakhmaninov, Medtner, Miaskovsky and others. At the jubilee celebration of the Moscow Imperial Society he conducted works by Taneyev, Rakhmaninov and Scriabin in the presence of the three composers. In 1914 came the second Drury Lane season in London, at which 'The Golden Cockerel' was performed as a ballet under him. Following the Revolution he was invited by Glazunov to take over the conductorship at the Maryinsky Theatre in Petrograd and the professorship of conducting at the Conservatory, and in 1920 he was in full charge of the Philharmonic Society and the former Imperial Choir, then affiliated thereto.

After a visit to the Berlin Philharmonic Society in 1922 Cooper left Russia to reside

for a time in Paris. In 1924 he embarked on a tour of South America. Returning to Europe in 1925 he was appointed musical director of the Riga Opera, a post he occupied for three years, visiting Paris in 1926 to conduct a concert performance of Rimsky-Korsakov's 'Kitezh'. For the first appearance of Shalapi in Berlin Cooper was engaged to conduct 'Boris', 'Faust' and Massenet's 'Don Quixote'. Then came his appointment at the Chicago Civic Opera, during which period (1929-32) he made extensive tours of the U.S.A. with such operas as 'Pelléas', 'Carmen', 'Samson and Delilah', 'Fidelio' and Wagnerian works. Between 1932 and 1936 he visited Paris, Bordeaux and Milan, and he settled at Monte Carlo until the second world war, when he once again left Europe for the U.S.A., resuming the conductorship of the Chicago Civic Opera and taking part in a New York performance of Mussorgsky's unfinished 'The Fair at Sorochintsy'.

From 1944 to 1950 Cooper conducted numerous works at the New York Metropolitan Opera, including a first performance there of Mussorgsky's 'Khovanshchina' and Britten's 'Peter Grimes'. He holds the post of musical director of the Montreal Opera Guild, where he has given several first performances, including that of Menotti's 'The Consul' and Prokofiev's 'Love of Three Oranges'. He has appeared as guest conductor with the London Symphony Orchestra and in Rome, Barcelona, Warsaw, Helsingfors, Amsterdam and The Hague. He holds the rank of Chevalier of the French Legion of Honour.

M. M.-N.

**COOPER, George** (b. London, 7 July 1820; d. London, 2 Oct. 1876).

English organist. He was born at Lambeth as a son of the assistant organist of St. Paul's Cathedral. From the age of eleven he often took the service there for his father, and at the Festivals of the Sons of the Clergy it was the delight of Attwood — then chief organist — to make him extemporize. On one such occasion Mendelssohn is said to have noticed and praised him. At thirteen and a half he was made organist at St. Benet, Paul's Wharf. On Attwood's death in 1838 he became assistant organist at St. Paul's, his father having resigned, and he had already been since 1836 organist at St. Ann and St. Agnes. On his father's death in 1843 he succeeded him at St. Sepulchre Church, Holborn, and he became organist and singing-master at Christ's Hospital as well. On the death of J. B. Sale in 1856 he was appointed organist of the Chapel Royal.

J. A. F.-M.

**COOPER, Gerald M. (Melbourne)** (b. London, 13 Sept. 1892; d. London, 17 Nov. 1947).

English musicologist, author and editor.

He began his career mainly as an amateur singer and actor, but was well schooled in various branches of music and had a great gift of supplementing his knowledge profitably by assiduous private study. He wrote many articles in musical journals, mainly on old English music, and organized at his own expense interesting if not profitable series of old and modern music, and of classical chamber music in London between the years 1922 and 1930 and again from 1942 onwards. He was honorary Secretary of the Purcell Society and himself edited a popular performing edition of extracts from the collected edition of Purcell's works. In 1929-32 he was also honorary Secretary of the Royal Philharmonic Society. On the death of Edwin Evans he succeeded him as chairman of the London Contemporary Music Section (the British section of the I.S.C.M.). After his own death his valuable music library was left to Edward J. Dent, who however presented the greater part of it to the Central Music Library, housed in the Westminster Public Library in Buckingham Palace Road, London.

E. B.

**COOPER, John.** See COPERARIO.

**COOPER, Martin (Du Pré)** (b. Winchester, 17 Jan. 1910).

English critic and author. He was educated at Winchester College and at Oxford, where he took the B.A. in 1931. In 1932-34 he studied music with Egon Wellesz in Vienna, and on his return he was appointed assistant editor of the 'Royal Geographical Society Journal' (1935-36) and music critic to 'The London Mercury' (1935-38). In 1946 he became critic to 'The Daily Herald', but in addition to daily journalism he has contributed more solid criticism to 'The Spectator' since 1947. In 1950 he left 'The Daily Herald' and joined 'The Daily Telegraph', of which he became chief music critic on the death of Richard Capell in 1954. In 1953 he succeeded William McNaught as editor of 'The Musical Times'.

The first musical books produced by Martin Cooper were 'Gluck' (London, 1935) and 'Bizet' (London, 1938). In 1949 he contributed a book on 'Opéra-Comique' to the 'World of Music' series. His literary work is based on wide musical knowledge and supported by his comprehensive linguistic gifts, which include acquaintance with Russian. Later works include 'French Music since 1870' (London, 1951), on which subject he also lectured to the Royal Musical Association in 1948, 'Profils de musiciens anglais' (Paris, 1950), written for the British Council, and a chapter on Schumann's songs in the 'Schumann' symposium of the 'Music of the Masters' series (London, 1952).

E. B.

**COOPER, Richard** (b. ?; d. ?, 20 Jan. 1764).

Scottish music engraver. He was the first to engrave music in Scotland, his earliest work being the small oblong volume of music which Allan Ramsay issued about 1725 as a companion to his 'Tea-Table Miscellany'. This work is now so scarce that it is doubtful if more than the one perfect copy (now in the B.M.) exists. Its title is:

Music for Allan Ramsay's Collection of Scots Songs, set by Alexander Stuart . . . engraved by R. Cooper

Other early Scottish collections engraved by Cooper are: Adam Craig's, 1730; Oswald's 'Minuets', advertised in 1734; M'Gibbon's 'Six Sonatas', 1740; and his 'Collections of Scots Tunes', three books, 1742, 1746 and 1755. Besides music engraving Cooper did other work, including the fine portrait of Allan Ramsay prefixed to an edition of his 'Poems' in 1728. The 'Scots Magazine' records the death of Cooper.

F. K.

**COOPER (Cowper), Robert** (b. ?; d. ?).

English 15th-16th-century composer. He was Mus.B. of Cambridge and took his degree of Mus.D. in 1502.<sup>1</sup> He is probably identical with the vicar-choral of Lincoln who received his appointment on 15 Aug. 1494 and disappears from the lists in 1506. In 1516 he received 2 benefices from the Archbishop of Canterbury. Some of his songs are preserved in manuscript collections. He was praised by Morley in his 'Plaine and Easie Introduction' (1597). His song 'Alone' was republished by the Plainsong Society.

W. H. H.

**COOPERSMITH, J. M. (Jacob Maurice)**

(b. New York, 20 Nov. 1903).

American musicologist. He took the B.Sc. degree at New York University in 1929 and the M.A. at Columbia University in 1930. In that year he won the Leopold Schepp Foundation Scholarship to Harvard University and a travelling scholarship in 1931-32, when he obtained the Ph.D. and became a Charles Edward Ditson Fellow at Harvard for a year. In 1933 he won the Juilliard Foundation Grant and then spent several years as director of the music libraries of various broadcasting companies in the U.S.A. He was appointed a guest professor at Texas University in 1947, and in 1948-49 became Professor of Music and conductor of the University Symphony Orchestra at the University of Oklahoma. He has been Senior Music Cataloguer at the Library of Congress in Washington since 1949 and was a chairman of the American Musicological Society and the Music Library Association, besides being a member of the editorial board of the 'Journal of the American Society' and a member of the American Musicological Society. The Dominican Republic awarded him the Order of Juan Pablo Duarte in 1944, in recognition of his work on that country's

<sup>1</sup> Brown and Stratton give 1504

music. He has written a number of musical reviews for periodicals both in America and England, besides various programme notes. As a specialist in Handel research he has made a reputation far beyond the U.S.A., but has been rather misleading in one small detail by not accepting the English form of the name which Handel himself adopted after his naturalization.

Coopersmith's articles and editions include the following:

- 'An Iconography of Georg Friedrich Händel' (M. & L., 1932).
- 'Handelian Lacunae: A Project' (M.Q., 1935).
- 'An Unpublished Drawing of Georg Friedrich Händel' (M. & L., 1935).
- 'The Libretto of Handel's "Jupiter in Argos"' (M. & L., 1936).
- 'Some Adventures in Händel Research' (Amer. Mus. Soc., 1938).
- 'Four Unpublished Letters of Georg Friedrich Händel' (New York, 1943).
- 'Concert of Unpublished Music by Georg Friedrich Händel: Programme Notes' (Ibid., 1944).
- 'Music and Musicians of the Dominican Republic. A Survey' (M.Q., 1945).
- 'A Critical Edition of the Vocal Score of "Messiah"' (New York, 1947).
- 'The First Gesamtausgabe: Dr. Arnold's Edition of Handel's Works' (Washington, 1947).
- 'The Messiah as Händel Wrote It' (Mus. Courier, 1947).
- 'Music and Musicians of the Dominican Republic' (Washington, 1949).
- Sonata in D major for two clarinets and corno di caccia, by G. F. Handel, ed. (New York, 1950).

M. K. W.

**COPENHAGEN.** From time immemorial the Danish capital has been the centre of musical life in Denmark. It remains so notwithstanding the marked advance in the musical life of certain Danish provincial towns, such as Aarhus, the largest town in Jutland, which possesses its own City Orchestra. The more important musical institutions of Copenhagen are the following:

**ROYAL OPERA AND OPERA ORCHESTRA.**—From the middle of the 18th century foreign opera companies were invited to perform regularly in Copenhagen. The introduction of Italian (and French) opera in Denmark was the signal for the composition of operas and vaudevilles with Danish librettos, the music being partly by foreign composers, partly purely Danish. The works of J. P. Hartmann (strongly influenced by Gluck), J. P. A. Schulz (influenced by German song) and F. L. E. Kunzen (influenced by Mozart, whose works he was the first to produce in Copenhagen) are typical. The great foreign operas obtained comparatively early productions in Copenhagen.

A legitimate national Danish opera came into existence in the 19th century (C. E. F. Weyse, F. Kuhlau, Niels W. Gade, J. P. E. Hartmann, P. Heise, Lange-Müller) in connection with the popular and romantic movements of the period. Also in this period the foreign works obtained comparatively early productions in Copenhagen (Weber, Rossini

and his school, the French *opéra-comique*, Donizetti, Bellini, Verdi, the Wagnerian school); later on also the chief works of the more modern movements, especially in Italy, France and Germany (Bizet, Gounod, Thomas, Mascagni, Leoncavallo, Puccini, d'Albert, R. Strauss and many others). It can therefore be said that the Copenhagen Opera has always been and still is the pioneer of Danish musical life with regard to European opera.

Det kgl. Kapel (Opera Orchestra), founded in the 16th century, was originally an institution of court musicians, without any association with the Opera. At the operatic performances of that time the court musicians were "on loan" for theatre service. From 1770 relations between the court music and the Opera (under Sarti) were strengthened. The orchestra was reconstructed by J. C. Naumann, and in 1841 it was resolved to combine the orchestra and the theatre into a joint institution. Besides the famous directors already mentioned may be named Claus Schall, Franz Glaser, S. H. Paulli, N. W. Gade, Johan Svendsen, F. Rung, Carl Nielsen, Georg Høeberg.

The most distinctive feature of the Royal Theatre is the fact that it forms one home for drama, opera and ballet. This means that the stage has every requirement for the presentation of even the most complicated works of a musical character. The fact that all three different branches of art are found on one stage has been an impulse to create great national festival plays whose characteristic is an equal participation of all three branches of art in the production, and the fact that a full orchestra is always available has also stimulated the use of incidental music to plays.

**ORCHESTRAS.**—The two principal orchestras of Copenhagen are Det kgl. Kapel (*see above*) which, since the 1890s, has given independent concerts each season (these concerts originally started on the initiative of Johan Svendsen), and the Radio Symphony Orchestra (Statsradiofonien), organized during the season of 1928–29. Each orchestra has its own permanent conductor, but the latter often engages foreign conductors. Fritz Busch and Nikolay Malko have conducted the Radio Orchestra for long periods (Thursday concerts). This orchestra has also performed under various Danish conductors at these concerts (Georg Høeberg, Ebbe Hamerik and others). It appeared at the Edinburgh Festival of 1950 under Fritz Busch and Erik Tuxen. Both orchestras, as well as Københavns Koncertforening (Copenhagen Concert Society, founded 1937; director, Emil Reesen), make a special point of performing the great works of classical and modern symphonic music.

Det unge Tønekunstmærskabs Orkester (Orchestra of the Society of Young Musicians,

founded 1931) devotes itself particularly to modern music and is, moreover, ready to take on all kinds of musical tasks (especially with its chamber orchestra). During the summer season the Tivoli Concert Hall Orchestra (directors, Thomas Jensen and Christian Felumb) is of importance. Among amateur orchestras the Academic Orchestra (founded 1899) deserves mention.

All the orchestras here mentioned assume the functions assigned in earlier times to the various musical societies, Musikforeningen, Dansk Koncertforening, Koncertforeningen og Palækoncerterne (directors, Joachim Andersen and F. Schnedler-Petersen), which are now dissolved.

**CHORAL SOCIETIES.**—The choral societies of Copenhagen during the 18th century and the singers of the court theatre occasionally gave important choral compositions, but the richest period of choral performance came in the 19th century, with the foundation of Musikforeningen (Society of Music, 1896–1936). Its directors, H. Rung, F. J. Glaser, N. W. Gade, Emil Hartmann, F. Neruda, Carl Nielsen, presented choral works, not only by the great romanticists (Mendelssohn and Schumann), but by Danish composers such as Gade and Hartmann, and also of the baroque period (Handel, Bach and Gluck). The Cæciliaforeningen (1851–1934; directors, Henrik Rung, Frederik Rung, P. S. Rung-Keller, Mogens Weldike) devoted itself to more ancient music (Palestrina and his contemporaries), both secular and ecclesiastical. The work done for the extension of the knowledge of European and national choral literature by the two "classical" societies of Copenhagen is continued in our day by Palestrinakoret (Palestrina Choir, 1922–35; director, M. Weldike), by the chorus of the Royal Danish Opera (especially the Easter concerts), Dansk Mensuralkantor (founded 1918, director, Julius Foss), the chorus of the Danish Broadcasting Company, the Madrigal Choir of the Danish Broadcasting Company (1937, M. Weldike), and Københavns Dreng- og Mandskor (Copenhagen Choir of Boys and Men, founded in 1924; director, M. Weldike). The last-mentioned choir is of special interest, being a kind of singing-school where the boys are taught the ordinary school subjects and practise their singing. The school is supported by the municipality of Copenhagen.

Among the male choirs must be mentioned Studentersangforeningen (Students' Choral Union, founded in 1839; directors, J. P. E. Hartmann, P. Heise, O. Malling, S. Levysøhn, Roger Henriksen, Johan Hye-Knudsen), which, from its early years, contributed much to encourage male-voice singing in Denmark; Bel Canto (founded in 1906; directors, Vilhelm Poulsen, Anders Rachlev, Agersnap),

and a number of vocal clubs consisting of workmen and artisans. A number of choirs from other parts of Denmark have combined with some of the above-mentioned choirs into comprehensive associations (Dansk Sangerforbund, Dansk Korforening) which arrange annual choral festivals.

**CHAMBER MUSIC.**—Whereas chamber music had formerly been performed only at private *soirées* and at concerts held by various societies, a more systematic cultivation of chamber music was inaugurated by the foundation of the chamber-music society Kammermusikforeningen (1868; Franz Neruda), which is still in existence. The society arranges weekly chamber-music concerts during the concert season. Numerous well-known Danish musicians there continue the efforts of former colleagues for the extension of knowledge of chamber music. Whereas in older times a national tendency characterized these concerts, the great European masterpieces—Beethoven in particular—gradually found their way into their programmes. Chamber music is performed by various societies of a more private character, and by many Danish chamber-music teams which hold annual public concerts: the Breuning-Bache Quartet, the Louis-Jensen Quartet, the Carlo-Andersen Quartet, the Rafn Quartet, Blæserkvintetten (Wind Instrument Quintet), the Ingerslev Trio and many others. Numerous foreign chamber-music teams visit Copenhagen each winter.

**EDUCATION.**—The Royal Danish Conservatory of Music was founded in 1864 (an earlier conservatory [Siboni] existed in 1827–42) and owes its existence to the endowment of a wealthy Copenhagen citizen, P. W. Moldenhawer. Its first directors were J. P. E. Hartmann, N. W. Gade, the composers, and S. H. Paulli; among the later directors have been Otto Malling, Anton Svendsen and Carl Nielsen; the present director is Rudolf Simonsen. Some of the most eminent musicians of Denmark have been members of the staff. The teaching comprises all the subjects which appertain to an up-to-date public music school. In addition the training for the special profession of music-teaching is attended to by Musikpædagogisk Forening (Society for the Teaching of Music). Since 1924 some teachers of music (singing, pianoforte, theory, history of music) take their degrees at the University of Copenhagen and are then qualified to teach in the secondary schools of Denmark, where the subject of music is carried through all classes to the final Studentexamen (Students' Examination). The Royal Opera supports a special opera school for the training of opera singers. A modern movement, the Popular Music Schools, has developed since 1931, having for its aim to educate and instruct the population at large in

the subject of music. There are, in addition, a few private conservatories and numerous private teachers of music.

**LIBRARIES AND COLLECTIONS.**—See **LIBRARIES & INSTRUMENTS, COLLECTIONS OF.**

**ORGANIZATIONS.**—The active musicians of Copenhagen and their colleagues all over Denmark are combined in a number of organizations: in Dansk Musikerforbund (League of Danish Musicians), founded in 1911, counting about 5000 members, a subdivision of which is now Københavns Musiker- og Orkesterforening (the Copenhagen Association of Musicians and Orchestras), founded in 1874; Dansk Tonekunstnerforening (Association of Danish Musicians), founded in 1903, about 500 members, and Dansk Komponistforening (Association of Danish Composers), founded in 1913, about 50 members.

Danish church musicians have two organizations: Dansk Kirkemusikerforening (Association of Danish Church Musicians), founded in 1885, about 550 members, and Dansk Organist- og Kantorforbund (League of Danish Organists and Cantors), founded in 1905, about 250 members.

The organization which comprises the majority of Danish teachers of music is Musikpædagogisk Forening, founded in 1898, about 280 members. Solo artists have two organizations: Dansk Solistforbund (League of Danish Soloists), founded in 1918, about 300 members, and Solistforeningen (Association of Danish Soloists), founded 1921, about 150 members. From each of these bodies a representative is elected to Musikraadet (Music Council), which is the highest authority of Danish musical life and advisory to the State on all questions concerning music. The director of the Royal Conservatory of Music and the Professor of Music in the University of Copenhagen are also members of the Council. Economic interests (royalties) are in the hands of a special institution named Koda.

**BIBL.**—FRIS, NIELS, 'Det kongelige kapel' (Copenhagen, 1948).

**COPER, Robert.** See **COOPER.**

**COPERARIO (Coprario), John**<sup>1</sup> (real name **Cooper**) (b. ?, c. 1575; d. London, 1626).

English viola da gambist, lutenist and composer.<sup>2</sup> His reputation appears to date from a journey to Italy made before or about 1604. There he italianized not only his surname but his style; and on his return to England he became the leader of that development of the English fantasy for viols which resulted

<sup>1</sup> Although he was anxious to italianize his name, he never appears to have called himself Giovanni.

<sup>2</sup> The list of "Authors whose authorities he either cited or used in this book" given by Morley at the end of his 'Plaine and Easie Introduction' includes a Dr. Cooper not to be mistaken for this composer, Dr. Robert Cowper being probably intended.

in its unchallenged supremacy during the 17th century. Coperario's influence on the English chamber music for viols may be compared with that of Morley on the English madrigal. Its first consequence was a lightness of touch not previously characteristic of the native *In Nomines* and other works for viols. Coperario's own fantasies for viols are masterpieces of counterpoint, conspicuously pure and unimpassioned, whose beauty is polyphonic rather than harmonic, but rises to splendid heights in a few such examples as the five-part fantasy entitled '*Chi puo mirarvi*'. Some of Coperario's part-writing is markedly instrumental, the last-named fantasy being a case in point; some has a comparatively vocal outline. His work is transitional in all these respects. Not until the succeeding generation did the English fantasy for viols achieve its widest range in technique and emotion, to evoke the observation recorded retrospectively as late as 1728 by Roger North in his '*Memoires of Musick*'<sup>1</sup> that "in vocall, the Italians, and in the instrumentall musick, the English excelled".

Christopher Simpson ('*Compendium*', 1665, etc.), Playford (later eds. of '*Introduction*'), Mace ('*Musick's Monument*', 1676) and North himself (1728) are among the witnesses to Coperario's continued reputation throughout the evolution of the fantasy and until its eclipse by later forms. Very numerous manuscript collections of his music will be found catalogued in the B.M., the Bodleian Library, Oxford, and the Library of Christ Church, Oxford. In this last library there are preserved partbooks containing music by Coperario which is especially entitled "for Viols", and is perhaps the earliest English music at present known to be so specified, though these instruments are already mentioned as optional alternatives in Holborne's printed collection of 1599 and in Dowland's '*Lachrymae*' of 1605. The style is, however, no different from that of contemporary dance music of the same date, except in falling a very little higher in pitch.

Coperario was musical tutor to the children of James I, and Charles I is recorded<sup>2</sup> as particularly attached to "those incomparable Phantasies of Mr. Coperario to the Organ". (Most viol fantasies were regarded as suitably accompanied on the chamber organ, and for many by Coperario and his contemporaries and successors *ad libitum* organ parts exist in manuscript.) Coperario was also teacher to the famous brothers Henry and William Lawes, of whom the latter became one of the two or three greatest masters of chamber music for the viols, combining a harmonic boldness unique in his school with a contra-

puntal mastery for which he was clearly indebted to Coperario's teaching. That this was both systematic and highly intelligent may be gathered from a manuscript treatise preserved in the Huntington Library, California, under the title: '*Giovanni Coprario. Rules how to Compose*', an exceptionally clear and practical exposition of its subject as understood by a progressive composer, less interested in the past than his great contemporary Morley.

Coperario appears (as lutenist and composer) to have been a member of the King's music for a few years before 1626, when he was succeeded by Alphonso Ferrabosco the younger as Composer of Music to the King; a fitting succession, since it was this Ferrabosco who took up the development of the English fantasy for viols where Coperario left it.

In 1606 Coperario published:

*Funeral Teares for the Death of the Right Honorable the Earle of Devonshire*: figured in seven songes, whereof sixe are so set forth that the wordes may be exprest by a treble voice alone to the Lute and Base Violl, or else that the meane part may be added, if any shall affect more fullnesse of parts. The seventh is made in forme of a Dialogue and cannot be sung without two voyces.

He composed the music to 'The Masque of the Inner Temple and Graye's Inn', performed at Whitehall on 20 Feb. 1613. The same year he published '*Songs of Mourning bewailing the untimely death of Prince Henry*'.<sup>3</sup> He contributed three of the songs to the masque performed at Whitehall on St. Stephen's Night 1613, and supplied much of the music in 'The Masque of Flowers' presented in the same place on Twelfth Night in the following year, both masques being given in honour of the marriage of the Earl of Somerset and Lady Frances Howard. A song, 'Come ashore, come merry mates', is included in J. Stafford Smith's '*Musica Antiqua*' (1812). Two galliards for lute are among the Harleian MSS 7578, and some masque-tunes of his (including one for the Gray's Inn Masque referred to above) are in Add. MSS 10,444. Works by Coperario are included in the Amsterdam collection of 1648: '*XX Koninklijke Fantasien op 3 Violen*'. Coperario also wrote some church music and contributed two anthems ('I'll lay me down' [a 4] and 'O Lord, how do my woes increase') to Sir William Leighton's '*Tears or Lamentacions of a Sorrowfull Soule*' (1614). The second of these was also included in the '*Tristitia Remedium*' of Thomas Myriell, 1616 (B.M. Add. MSS 29,372-7).

**COPLAND, Aaron** (b. Brooklyn, N.Y., 14 Nov. 1900).

American composer. His musical education began at an early age with pianoforte lessons from his sister. He then studied the instrument with V. Wittgenstein and Clarence Adler, and after his graduation from high school in 1918 he studied harmony and counterpoint with Rubin Goldmark for four years. He then spent three months at the Fontainebleau School of Music and worked for three years with Nadia Boulanger in Paris. He was awarded a Guggenheim Memorial Fellowship in 1925-27 and in 1930 won the R.C.A. Victor Company's award of \$5000 for his 'Dance Symphony'. Of recent years he has been recognized as the leading spirit in contemporary American music, and has worked energetically to get the music of his contemporaries and colleagues widely performed. The series of concerts he organized between 1928 and 1931 jointly with Roger Sessions was his first effort in this direction; since then he has become Executive Secretary of the American Composers' Alliance, first director of the American Festival of Contemporary Music at Yaddo, N.Y., and an active member of the League of Composers and of the American section of the I.S.C.M. He has also been lecturer in music at the New School for Social Research in New York, and at Harvard, and has lectured extensively in Latin America. He has written articles, mostly on contemporary music, for 'Modern Music', 'The Musical Quarterly', 'The American Mercury', 'The American Scholar', 'The New Republic' and other papers. A series of lectures has been published in book form under the title of 'What to Listen for in Music'; he has also written a book on 'Our New Music'.

In his own creative work Copland may be said to use two styles, which are however intimately related. One is highly concentrated and epigrammatic; the other — that which he employs mainly in "functional" music for ballet, cinema or radio — is more relaxed and expansive, and can thus appeal to a wider audience. But there is no fundamental disparity between the two styles; the same sensibility adapts the technique to the purpose in hand.

Copland's early music, such as the pianoforte Concerto and 'Dance Symphony', is perhaps the most convincing attempt by any serious composer to adapt the techniques of jazz to his own use. But the direct influence of jazz did not survive for long in his work. It was useful to him mainly because it suggested means of achieving a characteristic jauntiness and agility of rhythm, subtly related to the inflections of American speech (cf. his school opera, 'The Second Hurricane'). Thus in

his mature work the rhythmic complexities are inseparably related to his development of a highly individual type of melodic line, which makes a conspicuous use of ascending fourths, sevenths and ninths and of certain pentatonic figurations; and to a bare and austere harmony based largely on dissonant relations between diatonic triads (especially an ambiguity between the major and minor). Formally, Copland usually works not by a process of lyrical growth, but by the "objective" organization of lyrical motives and rhythmic patterns. The texture of his music is tenuous and its sonority always transparently clear; from this point of view there is some resemblance between his work and the late music of Stravinsky, though his idiom is very personal and has exerted a considerable influence on many younger American composers.

In his more popular works for ballet, radio and film, or in such a piece as 'El Salón México', Copland uses the same technique of lyrical and rhythmic pattern-making, but adopts a rather more continuous melodic style and a less dissonant and elliptical type of harmony. In these works he makes some use of the idioms of rural American regional or folk music; the end of the ballet 'Appalachian Spring', for instance, has a Puritan nobility that almost reminds one of the later work of Vaughan Williams. Nonetheless, Copland's music does not cease to be primarily the music of an industrial society; it is no accident that his music for the films 'Of Mice and Men' and 'Our Town' is not only perhaps the most distinguished music that has been written to accompany a film, but a highly intelligent answer to a functional problem.

In Copland's most recent "absolute" works there are indications that the human tenderness of the ballets and film music is being absorbed into the incisive metallic precision of the earlier manner, from this point of view it is instructive to compare the piano Sonata and the violin and piano Sonata with the piano Variations of 1928. The most remarkable and developed example of this tendency is to be found in the third Symphony of 1946.

## CATALOGUE OF WORKS

### BALLETS

'Grogh' (1925).  
'Hear Ye! Hear Ye!' (1934).  
'Billy the Kid' (1938). Produced New York, 24 May 1939.  
'Rodeo' (1942). Produced New York, 16 Oct. 1942.  
'Appalachian Spring' (1944). Produced Washington, D.C., 30 Oct. 1944.

INCIDENTAL MUSIC

- 'Miracle at Verdun', by Hans Chlumberg (1931).
- 'Quiet City', by Irwin Shaw (1939).
- 'The Five Kings', by Orson Welles, after Shakespeare (1939).

OTHER STAGE WORKS

- 'The Second Hurricane', School Opera (1937).
- 'From Sorcery to Science', Puppet Show (1939).

FILM MUSIC

- 'The City', documentary (1939).
- 'Of Mice and Men' (1939).
- 'Our Town' (1940).
- 'North Star' (1943).
- 'The Cunningham Story', documentary (1945).
- 'The Red Pony' (1948).
- 'The Heiress', after Henry James (1949).

CHORAL WORKS

- 4 Motets for mixed chorus unaccomp. (1921).
- 2 Chorus for women's voices (1925).
- 'What do we plant?', junior high chorus (1935).
- 'Lark' for baritone and mixed chorus unaccomp (1938).
- 'Las Agachadas' ('Shake-Down Song') for mixed chorus unaccomp (1942).
- 'In the Beginning' for mixed chorus unaccomp. (1947)

ORCHESTRAL WORKS

- 'Music for the Theatre' for small orch (1925).
- 'Dance Symphony' (1925).
- Symphony No. 1 (1928).
- 'Symphonic Ode' (1929).
- 'Short Symphony' (No. 2) (1933).
- 'Statements' (1934).
- 'El Salón México' (1936).
- 'Music for Radio', 'Saga of the Prairie' (1937).
- 'An Outdoor Overture' (1938).
- 'John Henry' for small orch. (1940).
- 'Music for Movies' for small orch (1942).
- 'Fanfare for the Common Man' for brass & perc. (1942).
- 'Letter from Home' (1944).
- 'Jubilee Variation' (on a theme by Goossens), contributed to a collective work (1944).
- Symphony No. 3 (1946)

SOLO INSTRUMENTS AND ORCHESTRA

- Symphony for organ (1924).
- Concerto for pf. (1926).
- 'Quiet City' for trumpet, English horn & stgs (1940).
- Clar. Concerto with stgs & harp (1948).

SPEAKER AND ORCHESTRA

- 'Lincoln Portrait' (1942).
- 'Preamble' (U.N. Charter) (1949).

CHAMBER MUSIC

- 'As it fell upon a day' for soprano, flute & clar. (1923)
- 2 Pieces for stg. 4tet (1928).
- 'Vitebsk' for vn., cello & pf. (1929).
- 'Elegies' for vn. & viola (1932).
- Sextet for clar., stg. 4tet & pf. (1937).
- Quartet for vn., viola, cello & pf. (1930)

VIOLIN AND PIANOFORTE

- 2 Pieces (1926).
- Sonata (1943).

PIANOFORTE SOLO

- 'Scherzo humoristique: The Cat and the Mouse' (1920).
- Passacaglia (1922).
- 'Two Blues' (1926).
- Variations (1930).
- 2 Children's Pieces (1936).
- Sonata (1941).
- 'Four Piano Blues' (1948)

TWO PIANOFORTES

- 'Danzon Cubano' (1942).

ORGAN MUSIC

- 'Episode' (1941).

SONGS

- 'Old Poem' (Chinese, trans. Arthur Waley) (1920).
- 'Pastorale' (Arabic, trans. Powys) (1921).
- 'Song' (E. E. Cummings) (1927).
- 'Vocalise' (wordless) (1928).
- 12 Poems by Emily Dickinson (1950).
- See also Film Music. Thomson (V., mus. portrait of C).

Coppard, A. E. (Alfred Edgar). See Swann (13 songs).

Coppée, François. See Bourgaud-Ducoudray (French trans. of Breton songs). Delibes ('Oiseaux', choruses). Duparc (H., 'Vague et la cloche', song). Gounod (3 songs). Hubay ('Cremonai hegedus', opera). Maclean ('Liebesgeige', opera). Moody (F., 'Crescent and Cross', opera by M. Alpin). Paladilhe ('Passant', lib.). Pierné (song). Svendsen (J., 'Passant', incid. m.). Widor ('Korrigan', scen., 'Maître Ambros', lib.; 'Jacobites', incid. m.).

COPPOLA, Pier Antonio (b. Castrogiovanni, Sicily, 11 Dec 1793; d. Catania, 13 Nov. 1877).

Italian composer. He was the son of a musician and studied at the Real Collegio di Musica at Naples. His first opera, 'Il figlio del bandito' (1816), was well received and his 'La pazzia per amore' (Rome, 14 Feb. 1835) was performed in many European towns, and, as an *opéra-comique* with the title of 'Eva', in Paris (9 Dec. 1839) and also in London. In 1835 he composed 'Gli Illinesi', one of his best works, given at Turin on 26 Dec. This was followed by 'Enrichetta di Baienfeld' (Vienna, 29 June 1836) and 'La bella Celeste degli Spadari' (Milan, 1837). At the Royal Theatre in Lisbon he produced 'Giovanna Ima' (11 Oct. 1840) and 'Inês de Castro' (1841). In 1843 he returned to Italy, and composed four more operas, which were less successful than his earlier works, and he finally returned to his post at Lisbon. Coppola might have taken a higher place had he not come into competition with Rossini and more especially with Donizetti. Some masses, litanies and other church compositions are to be found in the libraries at Naples.

M. C. G.

BIBL.—CAVELLARO, ROSARIO, 'Elogio storico-biografico di Pier Antonio Coppola' (Palermo, 1857). COPPOLA, U. P., 'Pier Antonio Coppola' (1899).

COPPOLA, Piero (b. Milan, 11 Oct. 1888).

Italian conductor and composer. He was a son of two well-known Italian singers, studied pianoforte and composition at the Milan Conservatory, and concluded his studies in 1909. He then devoted himself to conducting and composition. He appeared as conductor in Paris and Christiania. At Florence and Brussels he directed the first productions of Puccini's 'Fanciulla del West'. His compositions include, besides short pieces for pianoforte and violin, two operas, 'Sirmione' and 'Nitritia', the last of which obtained a prize at the McCormick competition of 1914.

F. B.

COPRARIO. See COPERARIO.

<sup>1</sup> Not the same libretto as that of Paisiello's 'Nina' (1789), but founded on it.

**COPTIC CHURCH MUSIC.** See EASTERN CHURCH MUSIC.

**COPULA.** A species of descant, generally employed at the close of *organum purum* on the penultimate note of the unmeasured plainsong tenor. Franco defines it as "velox discantus ad invicem copulatus" (Coussemaker, 'Scriptores', I, 133a), to which, at a later date (1351), the author of the 'Quatuor Principalia' adds: "Sicuti est brevis partita sive fracta in semibrevis, et semibrevis in minimis, quae copulari sive computari debent ad unam perfectionem" (*ibid.*, IV, 295b). The following example is given by Franco:

and this, in three parts, by Walter of Odington (*ibid.*, I, 248a):

The term was not confined to this practice of embellishing the *finis punctorum*, but was applied to any sort of flowery descant on one or more notes: "Copula, id est floritura" (*ibid.*, IV, 278a), "Copula est id ubicumque sit multitudine punctorum", "quae multum valet ad discantum, quia discantus nunquam perfecte scitur nisi mediante copula" (*ibid.*, I, 114a).

Theodoric de Campo (*ibid.*, III, 189a) uses *copula* as a synonym for *ligatura*, i.e. a group of notes bound together in one figure; and Johannes de Garlandia in one passage (*ibid.*, I, 116b) tells us that the hocket was sometimes called *copula*; but no other writer supports either of these usages of the word.

J. F. R. S.

**COPYRIGHT (BRITISH).<sup>1</sup>** The law of copyright throughout the British Empire is now regulated by the Copyright Act, 1911, or, in the self-governing Dominions, by local Acts of an identical or similar nature. This Act deals with literary, dramatic and artistic as well as musical copyright and provides a uniform code for the protection of invention in the domain of art as distinct from that of science.

One of the special features of modern British copyright law, in contradistinction to English law before 1911 and to the present law in the U.S.A., is that no formality is required to secure copyright protection. There is no necessity to print a "copyright reserved" or

similar notice upon published works and no form of registration is required. It is true that a copy of every book, including every sheet of music separately published, must be sent to the British Museum and, if demanded, to the Libraries of Oxford, Cambridge, Edinburgh and Aberystwyth, but the sanction for failure to comply with these provisions is a fine, not loss of copyright protection.

**THE WORK PROTECTED.**—Protection is given to every original musical work. There is no definition of "musical work" in the Act of 1911, though in the Musical (Summary Proceedings) Copyright Act, 1902, an Act which still remains in force for the purpose of imposing penalties for the street hawking of infringing copies of music, "musical work" is defined as meaning "any combination of melody and harmony, or either of them, printed, reduced to writing, or otherwise graphically produced or reproduced". There is, however, no reason to suppose that, for the purpose of the Act of 1911, the work must be graphically produced in order to secure copyright protection; for example, if a composer had a performance of his composition recorded it is thought that the work would certainly be protected although no graphic representation were made. On the other hand, it is thought that some form of permanent record must be necessary for copyright protection and that, if a composer played over an air which he had just thought of, he would have no cause of action if some listener wrote it down and published it; this point, however, has never been decided.

The requirement of "originality" means only that independent skill and labour shall be employed in the preparation of the work in which copyright is claimed; it does not mean that the work shall be of artistic originality. There can be copyright therefore in the selection and arrangement of existing works and a separate copyright may subsist in the pianoforte score of an opera as distinct from the full score and in a work made up by the use of old airs and tunes, themselves out of copyright.

**OWNERSHIP.**—With the exceptions mentioned below, the composer is the first owner of the copyright in a musical work. The author or composer is the person who puts the work into the permanent form in which it is capable of being protected. Thus a person who suggests an idea without working it out into practical form is not an author; neither, of course, is a mere amanuensis. Between these extremes arise cases in which two or more persons have each contributed to the final form to a substantial extent; in these circumstances a case of joint authorship arises. It must be appreciated, however, that joint authorship arises only where the contribution of each is not

<sup>1</sup> It would go too far to deal with foreign copyright laws in an English publication; but it may be said in a general way that they do not greatly differ in their essentials from the British law. In the U.S.A. and certain South American countries, however, registration or other formalities are required.

distinct from the contribution of the other. Where the contributions are distinct, there are separate copyright works with separate owners. Difficult considerations of this kind arise in the case of songs or musical plays; usually the lyrics and the music are separate works, the copyright in which is vested in separate authors; but cases happen where the author and composer respectively make suggestions resulting in alterations of the other's contribution, and it may be that in such cases a combined work of joint authorship arises; it will be seen that this may be of importance in relation to the term of copyright in the work.

The only exception to the initial vesting of copyright in the composer is where he has made the work in the course of his employment under a contract of service; in that case the copyright vests at once in the employer in the absence of agreement to the contrary. It is apprehended however that music can rarely be composed under a contract of service, since such a contract involves such immediate control over the labours of the servant by the employer that it is not readily applicable to the preparation of a work of art. Probably such vesting in an employer only takes place therefore in the case of routine work such as selections or arrangements. Attempts are frequently made to secure such vesting of composers' music by a form of contract purporting to treat the composer as under a contract of service, but it is doubted whether these are effective.

**ASSIGNMENT AND LICENCE.**—An assignment of copyright must be in writing signed by the owner or his agent and must purport to vest in the grantee the whole or some distinct part (either as to area or extent) of the copyright in the work; such an assignment vests the right assigned fully in the assignee, enabling him to deal with such right as he pleases and to protect such right against infringement.

An assignment may be limited as to area, *i.e.* the right to perform in some parts only of the copyright area, as to time, *i.e.* for a term of years or for a term determinable upon the happening of some event or the failure of some condition, or as to the nature of the right, *i.e.* the performing right can be assigned without the right to print or vice versa. An assignment, however, cannot effectively be made for a period longer than the expiration of twenty-five years from the death of the author; on the expiration of this period the copyright will revert in the author's personal representatives for the residue of the term of copyright notwithstanding any agreement by the author to the contrary.

A licence confers a more limited interest than does an assignment. A licensee cannot, in general, enforce the copyright against third parties, or exercise the right given to him

except strictly in accordance with the terms of the licence. Such terms may frequently prevent him from performing the work with alterations or additions, from passing over his right to others, or, in the case of a licence to print, from printing more than a limited number of editions. But questions often arise whether a particular form of words constitutes an assignment or a licence. Clearly, unless the sole and exclusive right to publish or perform is granted, the grant is by way of licence only, but if the right granted is expressed to be "by way of licence only" or if the right is expressed to determine in certain conditions and no express words of grant occur, even an exclusive right may be construed as by way of licence only. It is generally more beneficial to authors or composers that in any arrangement with publishers it is made clear that a licence only is intended.

Apart from a licence in writing such as is referred to above, a licence may take the form of a mere consent to publish or perform and such a consent may be verbal or may be implied from conduct. For example, if work is sent to a newspaper or periodical, a licence to publish would be implied on the terms of payment of the usual fee, and no intervening communication with the author would be considered necessary.

There is a provision in the Copyright Act 1911 under which any work which has once been published may be republished by anyone after the expiration of twenty-five years from the death of the author on payment of a royalty at the rate of ten per cent. on the price of publication. Regulations exist as to the form of notices to be given before this compulsory licence is exercised and for securing payment of royalties by means of adhesive labels to be attached to published copies.

There is also a provision entitling the Judicial Committee of the Privy Council in the public interest to grant a licence to publish or perform a work after the death of the author.

**TERM OF COPYRIGHT.**—The normal term of copyright in a musical work is the life of the author and fifty years after his death. If, however, the work has not been published or performed in public during the life of the composer, copyright endures until publication or performance in public and for fifty years thereafter. It should be observed, however, that if words associated with music do not constitute a dramatic work, the term of fifty years in the case of the words does not begin to run until publication, and the singing of the words in public would not constitute publication.

In the case of a work of joint authorship the copyright subsists until fifty years after the death of the author who dies first or

until the death of the author who dies last (whichever of these events last happens).

The copyright in Government publications, *i.e.* works prepared or published by or under the direction or control of a Government Department, lasts for fifty years from publication, but the copyright in Government publications is not generally enforced unless a notice of reservation of copyright is printed on the publication.

The copyright in gramophone records and in similar contrivances, which vests in the owner of the plate from which the contrivance was directly or indirectly derived, subsists for fifty years from the making of the original plate.

**INFRINGEMENT.**—Musical copyright may be infringed by reproduction in material form, *i.e.* copying of printed or manuscript music, by performance in public and by the making of records or other contrivances whereby the music may be mechanically reproduced.

In relation to all modes of infringement difficult questions arise where the alleged infringement is not an exact reproduction and in reference to the amount which has to be taken to constitute an infringement. There is no doubt that an infringer cannot escape liability merely by making minor variations. On the other hand, particularly in a case where the claimant's work is itself derived from old sources, the existence of variations may throw doubt in whether there has been copying at all. If two composers independently make use of old tunes and produce a similar result neither can be held liable to the other. But it has been said that musical infringement should be judged by the ear. If the second work sounds to the ear substantially similar to the former, there will be a presumption of infringement though the actual notes as written down may differ.

As to what is "substantial", it has been held that this should not be judged by length but by importance; the taking of even eight bars of music may constitute an infringement if they embody the essential part of a melody.

In connection with published music it should be noted that the importing, sale or other distribution of infringing copies does not constitute an infringement unless the person so dealing with the work can be proved to have known that he was dealing with infringing copies. In this respect he is in a better position than a direct copier who will be liable, however innocent; thus a printer of infringing material cannot escape liability by pleading ignorance. A person who deals innocently with infringing material may, however, be made liable on the ground that such material, if made or imported in infringement of copyright, is deemed the property of the copyright owner; consequently the sale of the material

may render him liable, not for infringement, but on the ground of an unlawful dealing with the goods of the copyright owner.

**PERFORMANCE IN PUBLIC.**—There have been a number of legal decisions in recent years upon the question of what constitutes infringement by public performance. No very clear principle emerges from these decisions, but it is clear that no performance which is not confined to a small and domestic circle will escape liability. Thus performances at clubs and associations even, though confined to members, will be deemed in public if any member of the public or of a class of the public can be admitted to membership. The fact that the performers are not paid is immaterial, and if the performance is in a public place such as an hotel lounge, it will be treated as a public performance though few members of the public are in fact present. A performance confined to workers in a factory has been held a public performance, also a performance at a women's institute. Where the music is actually played in a private room but is intended to be heard on adjoining public premises it seems fairly clear that this is a public performance.

There is, curiously, no conclusive legal decision in England that broadcasting constitutes an infringement by performance in public, though it has long been assumed that this is the case. It has, however, been held that anyone who switches on a receiving set in a public place commits a separate infringement which is not excused by any licence granted to the B.B.C.

**MECHANICAL RIGHTS.**—The making of any record or other contrivance, which includes, of course, the sound-track of a talking film, whereby music can be mechanically reproduced constitutes an infringement unless licensed. This right is, of course, of great value to composers and though comprised in the generic term "copyright" is quite distinct from the "graphic" right, or right to print and publish, and the performing right, and is usually separately dealt with.

There are, however, limits on the free enjoyment of mechanical rights in that, once a licence to record has been given, any other person can record the work on the payment of prescribed royalties. This licence, however, does not authorize alterations in or omissions from the work save such as have been previously authorized and, since it only provides for a licence on payment of royalties upon copies sold to the public, it is not applicable to persons desiring to record for purposes of films or otherwise not involving the sale of copies. The prescribed royalty is at the rate of 6½ per cent. on the ordinary retail selling price of the record, with a minimum of three farthings for each separate musical work recorded and,

in default of agreement, payment is secured by the purchase from the copyright owner of adhesive stamps to be affixed to every record sold. There are provisions for previous notice to the copyright owner and for advertisement in cases in which the copyright owner cannot be found.

A separate copyright subsists in every recorded work and such copyright can be infringed by a public performance of the record notwithstanding that the performer may have a licence from the copyright owner. Persons playing gramophone records in public places thus have to obtain licences from two separate sources.

**ENFORCEMENT OF THE RIGHT.**—Infringement of copyright is a civil wrong which entitles the copyright owner to recover damages from the infringer. Such damages are calculated on the basis of the loss caused to the copyright owner. If the infringement consists in the reproduction and sale of copies of sheet music, the loss will be measured by the loss suffered by the copyright owner in not being able to make equivalent sales. If the infringement consists of public performance, the loss will be measured by the fees which the copyright owner will have lost; this, however, does not necessarily mean the amount usually charged by way of licence, since a licence would not necessarily have been granted to the infringer.

An alternative remedy to damages is an account of profits, namely the amount actually made by the infringer as the result of his infringement. This may be either more or less than what would be recoverable on the basis of damage, but the remedies are alternative and not cumulative.

In the case of infringements by reproduction and sale of copies of sheet music or of gramophone records damages may be recoverable on the basis of conversion. As has been seen, an infringing copy is treated as the property of the copyright owner, and any dealing with such a copy is an actionable wrong. Damages in this case are based on the value of the work, not on profit, so that the amount recoverable may be substantially higher than on an account.

In addition to damages the copyright owner who succeeds in an action for infringement is, in general, entitled to an injunction, that is to say, an order prohibiting the repetition of the infringement, the breach of which is punishable by imprisonment. An injunction can be obtained before any actual infringement has occurred on clear evidence of an intention to infringe. In a case in which the threatened infringement or a repetition of it is likely to cause serious damage, the copyright owner may obtain an interlocutory injunction before trial of the action.

In addition to the above remedies an order

can be obtained for the delivery up of infringing copies and of plates or other material used in their production.

**SUMMARY REMEDIES.**—Apart from the civil offence, the manufacture, sale, distribution and importation of infringing copies of a work is an offence, if done knowingly, punishable by fine or, in the case of repeated offences, by imprisonment. It is also an offence for any person knowingly to have in his possession any plate for the purpose of making infringing copies and knowingly and for his private profit to cause any work to be performed in public without the consent of the copyright owner. It seems fairly clear, though it has never been decided, that an infringing gramophone record is an infringing copy for the purposes of the above provisions.

There are also provisions under which a constable is authorized to take into custody without warrant any person who in any street or public place sells or has in his possession for sale pirated copies of any musical work specified in a general authority addressed to the Chief of Police by the copyright owner. Furthermore a Court of Summary Jurisdiction may grant a search warrant to search for and seize pirated copies. In this set of provisions it has been held that pirated copies refer only to sheet music and do not include records.

A further recourse open to the copyright owner in the case of the importation of infringing copies is by giving notice to the Commissioners of Customs. Such notice has to be in a specific form and accompanied by a statutory declaration; if accepted, the Customs authorities will seize imported copies and forfeit them.

**PERFORMERS.**—Though it is not directly related to copyright, it may be observed that performers of musical works are protected from having records made of their performances without their consent. It is an offence punishable by fine knowingly to make any record of a musical performance without the consent in writing of the performer and to sell any record so made. The Court may order the destruction of records or contrivances which infringe this provision.

**OLD WORKS.**—The Copyright Act 1911 came into operation in the United Kingdom on 1 July 1912. In the case of works which were in existence before that date it is necessary to ascertain whether they enjoyed, at that date, copyright protection under the pre-existing law. If they did, then they became entitled to copyright under the Act of 1911 and the term of copyright subsists as above stated, but if they had fallen into the public domain on that date, they do not enjoy copyright under the Act of 1911 even though, under the provisions of that Act, copyright would have subsisted for a longer period. The term of copyright in a

published musical work before 1911 was the life of the author and seven years from his death or forty-two years from publication, whichever was the longer. It is still possible, therefore, in the case of an author who died in 1903 or a few years earlier, for a work to have been long out of copyright, although, if the life and fifty years' term had applied, copyright would still subsist; in such cases the date of first publication may be of great importance. The position with regard to unpublished music would seem to have been that copyright was preserved until publication even after the author's death, so that such works will enjoy copyright under the 1911 Act in all cases.

Where copyright was assigned before 1911, the copyright under the 1911 Act vested in the assignee, including therein the new rights created by the Act, *i.e.* the right to prevent the work from being recorded. But, at the end of the term of copyright under the old law, the copyright reverts to the author or his representatives. In such a case the assignee has two options. He can call upon the author or his representatives to make a fresh assignment for the remainder of the term for a consideration to be settled by arbitration in default of agreement. Alternatively he can continue without assignment to reproduce or perform the work in like manner as theretofore subject to payment of royalties if demanded by the author within three years after the date of reversion.

A further point about the copyright in older works is that under the Copyright Act 1882 performing rights in a musical work were lost unless expressly reserved on the title-page of every published copy. Rights thus lost are not revived by the Act of 1911. On the other hand, though registration was needed before 1911 to protect the copyright in published music, lack of registration does not invalidate the acquisition in respect of such works of copyright under the Act of 1911.

**DOMINION WORKS.**—Copyright is conferred in the United Kingdom upon works first published in any part of the British Empire (including protectorates and mandated territories such as Cyprus and various African and other protectorates). It is also conferred upon the unpublished works of authors who, at the date of the making of the work, were subjects of or resident in these areas. Conversely copyright protection in these countries is conferred in respect of works first published in England or being the unpublished works of British subjects or residents. It is to be observed, however, that copyright as now subsisting is conferred in certain of the self-governing Dominions by Acts which came into force later than 1911 (South Africa, 1916, and Canada, 1921) so that what has been said above with regard to the copyright in pre-Act

works takes effect at different dates in different Dominions.

**FOREIGN WORKS.**—Works first published outside the British Empire and unpublished works whose authors are not British subjects or residents do not enjoy copyright within the Empire except as now to be mentioned. It is first, however, desirable to point out what is meant by "publication" and "residence". A work is published when copies are issued to the public; it is not necessary that the work shall be printed, edited or dealt with in Great Britain otherwise than by being made available to meet such demand as may exist. Performance in public is not publication. A work is first published in Britain if it is published there not more than fourteen days after publication in any other part of the world. (There has been an extension of this period in the case of works published in the U.S.A. during the second world war.) A person who is domiciled in Britain is deemed to be resident there, and if a person has taken a considerable period to complete a work it is sufficient that he shall have been a British subject or resident during a substantial part of that period.

Copyright protection in Britain has been extended to works first published in countries which are members of the Berne (or Rome) Convention and to the unpublished works of subjects or residents in such countries. The countries in question are substantially, all European countries (other than the U.S.S.R.) and their colonies and dependencies, Brazil, Japan and Siam. They thus do not include the U.S.S.R., the U.S.A., China and most of South America, and works first published in these areas are in the public domain in the British Empire. In the case of unpublished works, however, copyright is conferred upon those whose authors are citizens of or residents in the U.S.A., reciprocal protection being given in the U.S.A. to the unpublished works of British authors and composers. No copyright is conferred in the British Empire upon works of authors who are subjects or citizens of other non-Convention countries and were not resident in the British Empire or a Convention country during a substantial part of the time during which the works were being written or composed.

**COQUARD, Arthur** (*b.* Paris, 26 May 1846; *d.* Noirmoutier, 20 Aug. 1910).

French critic and composer. He came of a family of Burgundian origin. Simultaneously

with his legal studies in Paris he began in 1865 to work at harmony with César Franck, but in the following year and for five years afterwards circumstances obliged him to discontinue his musical studies. Having taken the degree of D jur. in 1870 he accepted the post of secretary to a member of the Senate; but, supported by the encouragement of Franck, he devoted himself once more to composition and in 1876 produced a ballad for baritone and orchestra, 'Le Chant des épées'. After a second interval of musical inactivity, lasting till 1881, numerous works were written, most of which were lyric or dramatic scenes for voice and orchestra, such as 'Cassandra', 'Héro et Léandre' (1881), 'Christophe Colomb', 'Andromaque'; symphonic works on Ossian, etc., a sacred trilogy, 'Jeanne d'Arc', and choruses to Racine's 'Esther', H. de Bornier's 'Agamemnon' and Longhaye's 'Helvetia'. His works for the stage include:

- 'L'Épée du roi' (2 acts, Angers, 1884).
- 'Le Mari d'un jour' (3 acts, Opéra-Comique, 1886).
- 'La Jacquerie' (4 acts, Monte Carlo, 1895), completed from a fragment left by Edouard Lalo.
- 'Jahel' (4 acts, Lyons, 1900).
- 'La Troupe Jolicoeur' (3 acts and prologue, Opéra-Comique, 30 May 1902).

Coquard, as music critic to 'Le Monde', published there an excellent sketch of Franck. He received from the Académie des Beaux-Arts the Prix Bordin for his book 'De la musique en France depuis Rameau'. In 1892 he was appointed lecturer at the national institution for the blind. Coquard's music is distinguished by clearness, charm and dramatic aptness. G. F.

**CORBET, August (Louis Marcel)** (b. Antwerp, 7 Mar. 1907).

Belgian critic and musicologist. He took a doctor's degree in the history of the arts and archaeology at Ghent University and began his career as a critic on the staff of more than one Antwerp newspaper and in Paul Gilson's 'Revue Musicale Belge'. In 1935 he became assistant secretary and in 1938 secretary to the Royal Flemish Conservatory at Antwerp, where he also lectured on the history of civilization. In 1936 he attended a summer meeting at Cambridge University, at which the Professor of Music, Edward J. Dent, lectured on Tudor music, and consulted several English libraries on the subject of

16th-century English stage music. In 1938 he founded, with the pianist and conductor Jef Alpaerts, the Collegium Musicum Antverpiense, a society for the cultivation of old music, and in 1939 the 'Vlaamsch Jaarboek voor Muziekgeschiedenis', which in 1946 became amalgamated with the 'Revue Belge de Musicologie — Belgisch Tijdschrift voor Muziekwetenschap', the official organ of the Société Belge de Musicologie — Belgische Vereniging voor Muziekwetenschap, of the Flemish section of which Corbet has been the secretary since its inception. In the same year (1946) he was appointed adviser to the Antwerp Mozart Vereniging. In 1947 he joined the staff of the general secretariat of the Belgian Ministry of Education in Brussels, where he worked for the newly organized service of artistic propaganda; in 1951 he was promoted to the post of Scientific Attaché in that Ministry's Department of Fine Arts; in 1953 he resumed the post of secretary to the Antwerp Conservatory.

Corbet's publications are the following:

- 'Het Muziekdrama in de XVIe en XVIIe eeuw in Italië' (Antwerp, 1936)
- 'De Hervorming van het Muziekonderwijs' (Leuven, 1940).
- 'Flor Alpaerts' (Antwerp, 1941).
- 'Het Koninklijk Vlaamsch Conservatorium' (Antwerp, 1941)
- 'Peter Benoit' (Antwerp, 1944).<sup>1</sup>
- Articles in M & L, 'Vlaamsch Jaarboek voor Muziekgeschiedenis', 'Revue Belge de Musicologie', 'Nieuw Vlaams Tijdschrift', &c
- Translations into Dutch of the operas 'Le Chemineau' (Leroux-Richépin) and 'Romeo und Julia' (Sutermeister-Shakespeare); Bach's Cantatas 49, 51 and 189, 2 secular cantatas, 'Trauer-Ode', 'Easter Oratorio, &c.; J. C. F. Bach's 'Die Amerikanerin' and Reichardt's 'Johanna Sebus' (Goethe).

E. B.

**CORBETT, Francisque** (real name **Francesco Corbetti** or **Corbetta**) (b. Pavia, c. 1620; d. Paris, Mar. 1681).

Italian (anglicized) guitar player. After travelling in Italy, Spain and Germany, he settled for a time at the court of the Duke of Mantua, who sent him in 1656 to Louis XIV. He stayed for a few years in the French court, and then went to England, where Charles II appointed him to an office in the queen's household, with a large salary, and provided him with a wife. He was in Paris again in 1669, and once more in London in 1674, when he was heard by Evelyn.<sup>2</sup> He was the outstanding guitarist of his time and his best pupils were de Vabray, de Visé and Médard, who wrote a curious epitaph on him.

**CORBETT, William** (b. ?; d. ? London, 7 Mar. 1748).

English violinist and composer. He com-

<sup>1</sup> This book was awarded a prize by the Koninklijke Vlaamse Academie (1940) and by the Provinciebestuur van Antwerpen (1947). It was published under the former society's auspices.

<sup>2</sup> See Evelyn's Diary, 2 Dec. 1674.

posed for the Lincoln's Inn Fields Theatre, 1700-3, undertaking its direction in 1705-11. He was also leader of the band at the Opera House in the Haymarket on its first opening in 1705. On the production of Handel's 'Rinaldo' in 1711 a new set of instrumentalists was introduced into the opera orchestra, and Corbett, quitting his position in the queen's band, went to Italy and resided in Rome. He returned to London early in 1713 and gave concerts at Hickford's Room on 8 Mar. of that year and 28 Apr. 1714. He was appointed to the royal band of music, where his name appears from 1716 to 1747. But for some part of this time he travelled in Italy, making occasional visits to Venice, Milan, Florence, Cremona, Bologna, Naples, etc., amassing during the time a large library of music and a most valuable collection of Italian violins, etc. Those acquainted with his circumstances were at a loss to account for his ability to make these purchases except on the supposition that he was a government spy, employed to watch the movements of the Pretender. He returned to England in 1740, and seems to have resumed his position in the royal band. He died at an advanced age.

By his will Corbett bequeathed his collection of instruments to Gresham College, providing also for the stipend of a person to show them and for their care. The college authorities, however, rejected the gift on the ground that there was no room in the college for it, and the instruments were consequently sold by auction "at the Great Room over against Beaufort Buildings, in the Strand, formerly the Hoop Tavern" on 9 Mar. 1751. Corbett's collection of music was also sold by auction at his house in Silver Street, Golden Square.

Before leaving England Corbett published several sets of sonatas for violins, flutes, oboes, etc., and some concertos for orchestra. He wrote music for 'Henry IV' (probably Betterton's adaptation from Shakespeare, 1699; Corbett's music was published as "play'd all the time of the Public Act in Oxford"), for the Earl of Orrery's 'As you find it' and for Burnaby's 'Love Betray'd, or The Agreeable Disappointment', both produced at Lincoln's Inn Fields in 1703. He also wrote the music, or at least the greater part of it<sup>1</sup>, for Lord Lansdowne's dramatic poem 'The British Enchanters, or No Magick like Love', first produced at the Haymarket Theatre on 21 Feb. 1706. About 1729 he published 'Concertos, or Universal Bizzarries composed on all the new Gustos in his travels through Italy', containing 36 concertos in two books, the first in four parts, the second in seven, professing to exhibit the different styles of various countries and cities.

### CORBIAC, Pierre de (b. ?, d. ?).

French 13th-century troubadour. He was the uncle of Belenoi and wrote a song to the Virgin Mary.

Corbière, Tristan. See Baudrier (3 songs). Escher (3 songs)

### CORDANS<sup>2</sup>, Bartolommeo (b. Venice, c. 1700; d. Udine, 14 May 1757).

Italian composer. In his youth he was a member of the Franciscan order, but later he was released by a papal dispensation. His earliest work was an oratorio, 'San Romualdo', performed at Venice in 1727, and five operas of his were given there between 1728-1731. To this number Quadrio adds three intermezzi of 1734. Shortly after this, on 14 June 1735, Cordans became *maestro di cappella* at Udine Cathedral, and he there composed a large amount of church music, including masses, psalms, etc. A selection of 10 pieces was published by Musica Sacra of Milan, among them a much-admired Requiem. Sonatas by Cordans are preserved in the library of the Musikfreunde in Vienna.

Of Cordans's operatic music nothing seems to be extant, unless an anonymous opera, 'Ormusda', produced in London on 4 Apr. 1730, is due wholly or partly to him (as Chrysander suggested). Handel heard this on its original production at Venice in 1728, and it is quite likely that he brought the score back to London. The London version, arranged by Handel for the King's Theatre, is in the B.M. (Add. MS 31,551), and although it bears a note by Schoelcher that it is the work of "Conti", and is catalogued accordingly, Chrysander's assumption seems preferable, since neither Francesco Bartolommeo nor Ignazio Maria Conti is known to have written an opera of that title.

### CORDAT, Natalis. See CAROL, p. 86.

**CORDATURA** (Ital.). The notes to which the strings of the viol, lute or violin family, etc., are tuned, e.g. C, G, d, a of the cello, g, d', a' e'' of the violin, and so on. Any change made temporarily in such a normal tuning is called *scordatura*.

Cordey, Charlotte. See Benoit (opera)

### CORDEIRO DA SILVA, João (b. ?; d. Lisbon, c. 1790).

Portuguese composer. He is said to have studied music at Naples. On 21 Nov. 1756 he became a member of the St. Cecilia brotherhood at Lisbon and from 1763 onwards held the post of organist of the royal chapel at Ajuda and of court composer to King Joseph. He was also music teacher to the king's daughters. Cordeiro da Silva wrote the music for some twelve dramatic works performed in Lisbon between 1764 and 1789, all to Italian words, the first of which was a setting of Goldoni's 'L' Arcadia in Brenta'. Most of his scores

<sup>2</sup> Not Cordanus, as some references have it.

have been preserved at the Lisbon National Library, including that of an oratorio, 'Salome madre de sette martiri Maccabei' (1783).

A. L.

**CORDER, Frederick** (b. London, 26 Jan. 1852, d. London, 21 Aug. 1932).

English conductor, composer, author and teacher. He showed from infancy a strong aptitude for music, which he was, however, not allowed to indulge, being made to go into business at the age of eighteen. From his first situation he was unexpectedly released by the pecuniary embarrassments of his employers, and he then persuaded his parents to let him enter the R.A.M., where his talent for original composition was quickly recognized. He remained there only a year and a half, for, on being elected to the Mendelssohn Scholarship, he was sent to Cologne, where he studied hard for four years under Ferdinand Hiller. Shortly after his return to England he was appointed conductor at the Brighton Aquarium, where by his talents and energy he raised the musical entertainments from the very low level at which he found them and brought the orchestra to a better condition of efficiency.

Corder's gifts and culture were wide and varied. During the years when music proved unremunerative he supported himself mainly by literary work, in much of which he had the co-operation and help of his accomplished wife, Henrietta Louisa (born Walford). To this period belong those translations of the 'Rung' and other works by Wagner (signed H. and F. Corder) which were published in the editions of Schott and thus became accepted as the official English versions. Several of his orchestral works were performed at the Crystal Palace, the Philharmonic concerts and elsewhere. His romantic opera 'Nordisa', written to his own libretto for the Carl Rosa Company, was produced on 26 Jan. 1887 at the Royal Court Theatre, Liverpool, with success. It was afterwards performed in several provincial towns and was brought out in London, at Drury Lane Theatre, on 4 May 1887.

After the death of Carl Rosa the chances of English opera became so faint that Corder found himself forced to devote himself to teaching. He accepted a post in 1888 as professor of composition at the R.A.M., of which he became curator in 1889. He trained many of the English composers of the next generation, such as Bantock, Bax and Holbrooke, and made important literary contributions to musical education, including 'The Orchestra and How to Write for it' (1895) and 'Modern Composition' (1909). He also wrote the words for many of his own vocal compositions and provided librettos for certain of his contemporaries. For the centenary of the R.A.M. (1922) he compiled a short history

of that institution, which he had served devotedly through a long career. Shortly after that event he retired from the curatorship.

Corder's principal published compositions include:

'The Bridal of Triermain', cantata (Wolverhampton Festival, 1886).

'The Sword of Argantyr', cantata (Leeds Festival, 1889).

'Prospero', overture (1885).

Elegy for 24 violins and organ (R.A.M., 1908).

Many songs, part songs both for mixed & women's voices, recitations to music.

F. A. M., adds.

See also Thomas (A. G., 'Golden Web', lib.).

**CORDER, Paul** (b. London, 14 Dec. 1879; d. London, 6 Aug. 1942)

English composer, son of the preceding. He studied composition under his father at the R.A.M. in London and subsequently joined its staff. His Gaelic fantasy, 'Morar', for orchestra was produced by the Patrons Fund in 1908, but it, together with many other orchestral works, has remained unpublished. He was favourably known, however, by his several works for the pianoforte.

F. A. M., adds.

See also Bax (ded.).

**CORDIER, Baude** (b. Rheims, c. 1400; d. ?).

French composer. He was one of the first representatives of the French art song, the outcome of the Italian *ars nova* of the 14th century. He describes his style as showing already that characteristic grace and quaintness of the French combined with the early arts of canon. Some of his songs are preserved in the libraries of Chantilly and Oxford.

E. v. d. s.

**CORDIER, Jacques** (b. Lorraine, c. 1580; d. ?).

French dancer and violinist, known as Bocan, Bocham, Bocquain or Bocquam. He seems to have appeared first as dancing-master and choreographer in England about 1610-11, for the production of court masques. He was considered the wonder of his time, not only for his dancing, but for his playing on the violin. "He was unable to read music" or to note it, but Mersenne admired his talent and "his gift for modulating the tones of the violin". In 1621 he married Radegonde Chefdeville in Paris, being then entitled *Maître à danser de la Reine* and inhabiting the Louvre. The following year he is known to have been dancing-master to "Madame Henriette" (Henrietta Maria). He went with her to England and returned to Paris probably when the Civil War broke out. His name stands on the list of the deceased French queen's officers in 1667, and his son Gabriel became rever-sioner of his charge. "His tomb at Saint-Germain l'Auxerrois was restored in 1843."<sup>1</sup> He was dancing-master to the aforesaid queens and to those of Spain, Poland and Denmark.

<sup>1</sup> Fétis.

Cordier's influence on French instrumental music was considerable. "Chancy's 'Tablature de mandore' contains a graceful branle of his."

**CORELLI, Arcangelo** (b. Fusignano, Imola, 17 Feb. 1653; d. Rome, 8 Jan. 1713).

Italian violinist and composer. The genealogy of his family has been traced back by Piancastelli to the middle of the 15th century and proves him to have been of gentle birth. His grandfather, Ippolito, was *patrizio di Faenza*. His father's name was Arcangelo (1593–1653) and his mother's maiden name had been Santa Raffini. He was a younger son in a family four members of which (beside Arcangelo) are known to us by name. Two brothers, Ippolito and Giacinto, were ennobled, and the descendants of the latter have been traced down to the present day. Arcangelo was himself ennobled posthumously by a German elector.

Crescimbeni, who had seen and known Corelli, and Padre Martini are the chief authorities for the early Bolognese period of Corelli's career. He began his musical education at Faenza and was thirteen years old when he went thence to Bologna to receive his first lessons on the violin. He was there for four years (1666–70) before he entered the Accademia Filarmonica. His two known teachers, Giovanni Benvenuti and Leonardo Bragnoli, had both been pupils of Ercole Gaibara, a famous violinist. Those who too readily accepted the name of Bassani as teacher overlooked the fact that when Corelli entered the Accademia this supposed master of his, who was four years his junior, was only in his fourteenth year.<sup>1</sup>

There are stories of early travels in Germany and to Paris, but they get considerably whittled down by the facts of chronology. Fincherle has no difficulty in disposing of the supposed Paris visit of 1672 and the account of Lully's reputed jealousy of him. Cametti discovered the name of Arcangelo Corelli as third of four violinists serving the Church of St. Louis of France in Rome in 1675. The German journeys, which are said to have included a stay for some time at Munich in the service of the Elector of Bavaria, if they ever took place, must have been subsequent to 1675. Chrysander states that between 1680 and 1685 he spent some time with Farinelli at Hanover. If that is correct, the Farinelli in question must have been Jean Baptiste, the *Kapellmeister*.

Some time in or before 1685 Corelli was certainly settled in Rome again, where he published his first work, a set of twelve sonatas.

<sup>1</sup> Fincherle (see Bibl.)

He soon made a great reputation as performer and composer, and became a favourite in the highest circles of Roman society. Cardinal Pietro Ottoboni, an enthusiastic lover of the arts in general and of music in particular, was his great friend and patron. Corelli lived in the cardinal's palace with certain intermissions (see below) up to the day of his death, conducting the concerts, which took place every Monday and were considered the most important and interesting events in Roman musical life. He also lived on terms of intimate friendship with some of the most eminent painters of the time, Cignani, Maratti and others, with whose assistance he formed a collection of valuable pictures. Of this collection he left one picture to his patron, Cardinal Ottoboni (to be chosen by him) and one, a Brueghel, to Cardinal Colonna. His violins he left to his colleague, Matteo Fornari. His brothers were his residuary legatees.

Corelli appears to have been of the most amiable disposition, unless provoked beyond endurance, and a model of truly artistic modesty. He was very simple and unpretentious in all his habits. Handel, though esteeming him highly, used to say of him: "He likes nothing better than seeing pictures without paying for it, and saving money". He dressed almost shabbily and would on no account hire a carriage, but always went on foot. Hawkins, in his 'History of Music', gives an account of his meeting with Handel in Rome. Handel conducted some of his own cantatas, which were written in a more complicated style than the music with which Corelli and the other Italian musicians of that period were familiar. Handel tried in vain to explain to Corelli, who was leading the band, how a certain passage ought to be played, and at last, losing his temper, snatched the violin from Corelli's hands and played it himself, whereupon Corelli remarked in the politest manner: "Ma, caro Sassone, questa musica è nello stile francese, di ch' io non m' intendo" ("But, my dear Saxon, this music is in the French style, of which I have no experience"). It was the overture to 'Il trionfo del tempo', which Handel, probably with special regard to Corelli, had written in the style of his *concerti grossi* with two solo violins. It is a fiery impetuous piece, truly Handelian in character, and it is not difficult to understand how Corelli in his quiet elegant manner failed to attack with sufficient vigour those thundering passages. That Corelli, who in his own compositions never goes beyond the third position, might have been puzzled by a passage in this overture which involves the notes *e'''* to *a'''* is also possible, though it is hardly likely to have caused the scene described above.

The amiability of Corelli's disposition seems to have been considerably ruffled on one

occasion. The legitimacy or otherwise of a passage involving consecutive fifths in the third Sonata of his Op. 2 (1685), which was being performed at the house of the composer Giovanni Paolo Colonna, had aroused some controversy, and one Matteo Zani wrote to Corelli, with the approval of Colonna, asking for his explanation of the passage, which is as follows :

Corelli's impatient reply (quoted by Pincherle) was below his usual standard of courtesy, and it began a battle of words which pursued the unoffending Colonna till his death in 1695. Corelli's answer had, in fact, stated the justification of the passage according to the rules of the time, which is that the fifths are not direct since the rests in the bass part are implied suspensions. Gaspari's later comment included the following reading of the bass part :

*N.B.*—The semicircle over the  $\frac{1}{2}$  denotes that the 6 is not included.

Corelli's fame was not limited to Rome or even Italy. From all countries young talents came to benefit by his instruction, and his compositions were published in Amsterdam, Antwerp, Paris and London as well as in Italy. Among his numerous pupils the most eminent were Geminiani, Locatelli, Somis, Anet and Castrucci.

Illustrious foreigners visiting Rome hardly ever failed to pay homage to Corelli. When Queen Christina of Sweden went to live there, he conducted in her palace the performances of an orchestra of 150 musicians. The King of Naples repeatedly tried to induce him to settle in his capital and made him most favourable offers, which were, however, all declined by Corelli, who was not willing to give up his happy position in Rome, where he was universally loved and esteemed.

In 1689 and 1690 he was at the court of

Modena. It was not till about 1708 that he visited Naples, which town, with Alessandro Scarlatti as its leading musician and an excellent opera orchestra, was at that period by far the most important musical centre of Italy, except for church music. Corelli was most anxious to ensure complete success at Naples, and, in order to be sure of effective accompaniment, he took with him two violinists and a cello player. But he soon saw that this precaution had been superfluous. At the first rehearsal Scarlatti's band went through the introductory *tutti* of one of Corelli's concertos without a mistake, whereupon Corelli admiringly exclaimed : "Si suona a Napoli !" ("They can play at Naples !"). The king, however, did not appreciate his playing and, pronouncing his *adagio* tedious, left the concert-room before Corelli had finished. But this was not all. Soon afterwards Corelli was leading the performance of a composition by Scarlatti, when, in a passage that probably was not well written for the violin, he made a very conspicuous mistake, while Petrillo, the Neapolitan leader, who was familiar with the passage in question, executed it correctly. Then came a piece in the key of C minor. Corelli, already disconcerted, led it off in C major. "Ricominciamo !" said Scarlatti, with his usual politeness, and poor Corelli started once more in major, so that Scarlatti was at last obliged to point out his mistake. Corelli felt this incident as a great humiliation and left Naples immediately.

Returned to Rome he found that a new violinist, Valentini, had won the general applause and admiration of the public, and considering himself slighted and superseded, took the new situation so much to heart that his health began to fail. In 1712 he published his last work, dedicated to his admirer John William, Prince Palatine of the Rhine, and died in the following year. He was buried in a princely style in the Pantheon, not far from Raphael's tomb, and Cardinal Ottoboni erected a marble monument over his grave, the inscription on which bears testimony of the high esteem and admiration in which Corelli was held. For many years a solemn musical service was held on the anniversary of his death, when some of the great master's compositions were performed, conducted by one of his pupils.<sup>1</sup>

**POSITION IN HISTORY.**—Corelli has a double claim to a prominent place in the history of musical art—as a great violinist who laid a firm foundation for all future development of technique and of a pure style of playing, and as a composer who materially advanced the progress of composition. Still, there can be no doubt that above all he was a great violin player and that all he wrote grew out of the

<sup>1</sup> See VIOLIN PLAYING.

very nature of his instrument; and as the violin is not only a solo instrument but at the same time the leading orchestral one, we owe to Corelli the typical treatment of it in two important branches of composition. In his chamber sonatas and *concerti grossi* (Opp. 1, 2, 3, 4 and 6) he must be considered the founder of the style of orchestral writing on which the future development in this direction is based, while in the sonatas (Op. 5) which have merely an accompanying thorough-bass he gives a model for the solo sonata and thereby for all writing for the violin as a solo instrument.

All his works are characterized by conciseness and lucidity of thought and form, and by a dignified, almost aristocratic bearing. The slow movements show genuine pathos as well as grace, bringing out in a striking manner the singing-power of the violin. The quick movements are not on the whole of equal merit with the slow ones, at least in point of originality of thought and variety of character, but if they appear to our modern feeling somewhat dry, they are so only if played with insufficient understanding of the 17th-century violin style.

Corelli's gavottes, sarabandes and other pieces with the form and rhythm of dances do not materially differ from similar productions of his immediate predecessors and contemporaries, although, like everything that he wrote, they are distinguished by great earnestness and dignity of style, and are especially well adapted to the instrument. He was not so much an innovator as a reformer: he did not introduce new or striking effects; it cannot even be denied that his technique was a limited one — he never goes beyond the third position — but, by rigidly excluding everything that appeared to him contrary to the nature of the instrument, and by adopting and using in the best possible way everything in the existing technique which he considered conformable to the nature of the violin, he not only hindered a threatened development in the wrong direction, but also gave to this branch of the art a sound and solid basis, which his successors could and did build upon successfully.

The following are the titles of the original editions of his works:

- 'XII Suonate a tre, due violini e violoncello, col basso per l'organo', Op. 1 (Rome, 1681).
- 'XII Suonate da camera a tre, due violini, violoncello e violone o cembalo', Op. 2 (Rome, 1685).
- 'XII Suonate a tre, due violini e arciliuto col basso per l'organo', Op. 3 (Modena, 1689).
- 'XII Suonate da camera a tre, due violini e violone o cembalo', Op. 4 (Bologna, 1694).
- 'XII Suonate a violino e violone o cembalo', Op. 5 (Rome, 1700). The same arranged by Geminiani as *concerti grossi*.
- 'Concerti grossi con duoi violini e violoncello di concertino obligati, e duoi altri violini, viola, e basso di concerto grosso ad arbitrio che si potranno radoppiare', Op. 6 (Rome, 1714; posthumous).

A number of spurious works were published under Corelli's name; but it has probably been unjustifiably considered that none is genuine

except the six sets listed above. F. T. Arnold drew attention to a Sonata in the Liceo Musicale at Bologna which he regarded as "almost certainly genuine". The title of the work in which it occurs is as follows:

Sonate a violino e violoncello di vari autori  
Sonata I Arcangelo Corelli, Sonata II Giuseppe Torelli, Sonata III Antonio Montanari, Sonata IV Giacomo Perdiere, Sonata V Carlo Mazolini, Sonata VI Giuseppe Jachini, Sonata VII Clemente Rozzi.

The names of Corelli and Torelli have been a frequent source of confusion, but are here clearly distinguished. The Sonata attributed to Corelli also appears in a manuscript in Vienna. The authenticity of another publication, dated 1692 and described as "opera quarta", but having nothing in common with the Bologna Op. 4 of 1694, was disproved by F. T. Arnold in his Musical Association paper (see Bibl.).

The question of the authenticity of the ornamentations of certain of Corelli's adagios published in the Amsterdam editions and copied by Walsh has been debated. Andreas Moser called them in question (Z.M.W., I, 287), but they were defended by Schering (J.M.G., VII, 366). The case is fully discussed by Pincherle ('Feuilles d'histoire du violon'), who also draws attention to a volume in the possession of Alfred Cortot, described as solos of Corelli "graced" by Dubourg, in which the ornamentation is extended to sonatas 7-11, including quick movements. The question of the customary elaboration of slow movements in the violin playing of the 17th and 18th centuries is dealt with elsewhere.<sup>1</sup>

Many modern editions of Corelli's works exist, but the best and most authoritative is that of Joachim and Chrysander, published originally as one of the 'Denkmäler der Tonkunst' and afterwards issued in Augener's edition in 2 volumes. The Barenreiter Verlag of Cassel published a complete edition of the 'Sonate a tre', Opp. 1-4 P. D. & H. C. C.

**CORELLI PLAYERS, THE.** A chamber-music team founded in London by Wilfrid J. Pook in the autumn of 1951 for the purpose of

<sup>1</sup> See ORNAMENTATION

studying and playing instrumental music of the "baroque" era. While the chief aim is to explore the immense repertory of the period, much attention is devoted to the true stylistic interpretation of this music in performance. Its first public concerts included little-known music by Ricciotti, Steffani, Leclair and Telemann.

E. B.

**CORFE.** English family of organists.

(1) **Joseph Corfe** (b. Salisbury, 25 Dec. 1740; d. Salisbury, 29 July 1820). He was one of the choristers at Salisbury Cathedral under John Stephens, organist and master of the boys. In 1783 he was appointed a Gentleman of the Chapel Royal, and he sang in the Handel Commemoration in the following year. In 1792 he succeeded Robert Parry as organist and master of the choristers of Salisbury Cathedral, which offices he held until 1804.

Corfe composed and published a volume of church music, consisting of a service and eleven anthems, etc.; three sets of glees, of twelve each; a treatise on singing; a treatise on thorough-bass, a work still held in esteem; besides editing a selection of sacred music made by James Harris, and other works.

(2) **Arthur Thomas Corfe** (b. Salisbury, 9 Apr 1773; d. Salisbury, 28 Jan. 1863), son of the preceding. In 1783 he was sent to London as a chorister of Westminster Abbey under Cooke. He subsequently studied the pianoforte under Clementi. In 1804, on the resignation of his father, he was appointed organist and master of the children of Salisbury Cathedral. He organized a successful festival at Salisbury on 19-22 Aug. 1828.

A. T. Corfe produced and published a service and some anthems, several pianoforte pieces and 'The Principles of Harmony and Thorough-Bass'. He was buried in the cloisters of Salisbury Cathedral, where a tablet was erected to him by his thirteen surviving children.

(3) **John Davis Corfe** (b. Salisbury, 1804; d. Bristol, 23 Jan. 1876), son of the preceding. He was organist of Bristol Cathedral from 1825 until his death.

(4) **Charles William Corfe** (b. Salisbury, 13 July 1814; d. Oxford, 16 Dec. 1883), brother of the preceding. He was organist of Christ Church, Oxford, from 1846 and took the D.Mus. there in 1852.

W. H. H.

**CORFINI, Jacopo** (b. ? Padua, ?; d. Lucca, 1591).

Italian organist and composer. He studied under Jacques Brumel and was appointed organist at Lucca Cathedral on 2 Feb. 1557. He composed *concerti da chiesa* for 5-16 voices, 3 books of madrigals, 2 books of motets, etc.

E. v. d. s.

**Corio, Giosèffo Gorino.** See Gluck ('Ippolito', lib.).

**CORIOIAN.** Beethoven's overture, Op. 62, better called 'Coriolanus' in English, on condition that it is not taken to have any connection with Shakespeare's tragedy. 'Coriolan' was a German tragedy by Beethoven's friend Heinrich von Collin, which was first performed in Vienna in 1802 and became an established piece in the theatrical repertory there. In 1807 Beethoven was asked to provide music for performance before the rise of the curtain, and this overture was the result. It is not recorded that the overture was ever played at a performance of the drama. Its regular form places it in the category of the classical overture; but its themes and atmosphere are so much in character with the chief personages and the tone of the tragedy that the work may pass as the first orchestral tone-poem.

W. M.

**CORIOLANO** (Opera). See CAVALLI. NICCOLINI.

**CORKINE, William** (b. ?; d. ?).

English 16th-17th-century composer and (?) lutenist. The nature of his work makes it very probable that he played the lute, an instrument which, on account of its special notation in tablature, would hardly be written for by those unable to play it. He published in 1610:

Ayres to Sing and Play to the Lute and Basse Violl With Pavins, Galliards, Almains and Corantos for the Lyra Violl

And in 1612:

The Second Booke of Ayres, some to sing and play to the Base Violl alone, others to be sung to the Lute and Base Violl, with new Corantos, Pavins, Almains, as also divers new Descants upon old Grounds, set to the Lyra Violl.

In some partbooks at Christ Church, Oxford, there is an anthem for 5 voices, 'Praise the Lord', by him; the bass part is missing.

W. H. H.

**CORMIER, Cyprian (Cipriano)** (b. Venice, 1750; d. Warsaw, 1789).

Italian violinist and composer. He went to Poland in 1771, settling at Gdańsk. Two years later he became a member of the band at the court of Prince Sapieha. Later he moved to Warsaw, where he died. He wrote many concertos for violin.

C. R. H.

**Cormon, Eugène.** See Auber (2 operas). Bizet ('Pêcheurs de perles', lib.) Grisar ('Chien au jardinier', lib.). Maillart (lib.) Pêcheurs de perles (Bizet, lib.).

**CORMORNE.** See ORGAN STOPS.

**CORNACCHIOLI, Giacinto** (b. Ascoli, ?; d. ? Rome, ?).

Italian composer, who is known only by the printed score of an early opera, 'Diana schernita', performed privately at the house of Count Hohenrechberg in Rome during the Carnival of 1629. The score was published later in the same year by Robletti of Rome, in a small edition of which very few copies, one of them in the B.M., are still extant. The words

are by Giovanni Francesco Parisani, also of Ascoli, founded upon a story in Ovid's 'Metamorphoses'. Cornacchioli dedicated the score — which as one of the earliest existing operas should certainly warrant close examination — to Don Taddeo Barberini, nephew of Pope Urban VIII and later Duke of Urbino. A. L.

**CORNAGO, Juan** (b. ?; d. ?).

Spanish or (?) Flemish 16th-century composer. Nothing is known of his life, but compositions by him, both secular and sacred, have been found in early manuscripts. Barbieri printed two *villancicos* ('Cancionero musical de los siglos XV y XVI', Madrid, 1890), both for 3 voices, though one has a fourth part added by a later hand. Other works by him are in the Bibliothèque Nationale, Paris (No. 15,128: Suppl. MSS français), consisting of French chansons; Bibl. Columbina, Seville (MS Cantinelas Vulgares; 3 compositions): Nat. Lib., Vienna (Cod. 88), Gloria and Credo. J. B. T.

**CORNAMUSA.** The Italian name for the bagpipe.

**Corneille de l'Isle.** See Charpentier (M. A., 3 lib.).  
**Corneille, Pierre.** See Assoucy ('Andromède', incid. m.). Bresset (2, 'Andromède', choruses). Charpentier (M. A., 'Polyeucte' & 'Andromède', prologues). Cid, Le (Massenet) Cornelius ('Cid', opera). Donizetti ('Martyrs', ['Poluto'], opera). Dukas ('Polyeucte', overture). Frid (chorus) Funconi ('Teodora', orat.). Gounod ('Polyeucte', opera). Gouvy ('Cid', opera). Handel ('Flavio', opera). Holmes (A., 'Cid', overture). Jolivet ('Horace', incid. m.). Koechlin (song). Lemoine ('Nephé', opera). Lully (entr'actes for 'Edipe'; 'Psyché', part lib.). Lunsens ('Cid', symph. poem). Massenet ('Cid', opera). Milhaud (song). Nottara ('Polyeucte', incid. m.). Pfeiffer ('Cid', overture). Pizzetti ('Cid', projected opera). Rieti ('Illusion', incid. m.). Saint-Saëns ('Gloire de C.', cantata; 'Scène d'Horace', vocal duet with orch.). Schindlmeisser ('Rächer', opera). Tinel ('Polyeucte', incid. m.).

BBL.—ÉCORCHEVILLE, J., 'Corneille et la musique' (Paris, 1907).

**Corneille, Thomas.** See Charpentier (M. A., 'Médée', lib.). Lully (2 lib.).

**CORNELIS, Evert** (b. Amsterdam, 5 Dec. 1884; d. Bilthoven, 23 Nov. 1931).

Dutch conductor and pianist. He studied piano and organ at the Amsterdam Conservatory, taking the *Prix d'excellence* for organ on leaving in 1904. For a short time he was attached to the Flemish Opera at Antwerp, and he made a long concert tour in the Netherlands East Indies and Australia with the Dutch soprano Alida Loman. He was then engaged by the Netherlands Opera of Cort van der Linden in Amsterdam, where after some years he was engaged as second conductor (under Willem Mengelberg) of the Concertgebouw Orchestra. Differences of opinion with his chief led to his resignation in 1919, and in 1922 he was appointed conductor of the Utrecht Municipal Orchestra, which in spite of somewhat inferior material he succeeded in bringing to a high artistic level. Other appointments which followed were those of conductor of the

Utrecht "Toonkunst" choir, choirs of the same organization at Rotterdam and Haarlem and of the Netherlands Bach Society. In all these posts he showed himself a chorus master of rare ability and fine feeling. He did much as propagandist for the music of contemporary Dutch, French and British composers and of the works of Bruckner, and he made a feature of Handel's oratorios in the English language and as far as possible in their original forms. He remained all his life a magnificent accompanist and a fine interpreter of all kinds of pianoforte music. In chamber music, as a member of the Concertgebouw Sextet (of which he was one of the founders), he introduced many works, native and foreign, until then unknown to the Dutch public. For many years he was also organist at the Lutheran Church in Amsterdam.

His comparatively early death was undoubtedly caused by over-work and by the chagrin of a sensitive nature at the failure of his seniors to realize and appreciate his ideals.

Cornelis was decorated by the French Legion of Honour in recognition of his work on behalf of contemporary French music.

H. A.

**CORNELIUS, Peter** (b. Mainz, 24 Dec. 1824; d. Mainz, 26 Oct. 1874).

German composer and author. He was a nephew of the painter of the same name and originally intended to become an actor, a profession for which his shy disposition and a certain lack of showy qualities must have unfitted him. It was not till after his first stage appearance, which seems to have been unsuccessful, that he decided to adopt music as a profession. His musical education had been incomplete, but his dramatic studies had made him acquainted with literature and were of considerable service in developing his poetic faculties. After the death of his father (1844) he pursued music with energy and completeness, studying from 1845 to 1850 with Dehn of Berlin; but his tendencies were forward towards the modern ideal rather than backward to the strict rules of counterpoint, and he was in fact to develop into a prominent representative of what was in the mid-19th century the New German School, though his sympathies were wider than those of most of its other adherents.

In 1852 Cornelius went to Weimar and joined the young artists who, under Liszt's leadership, were striving to carry out the ideas of the "new" music. It was there that he became acquainted with Wagner's works, while with Liszt he formed ties of the closest intimacy. His active and versatile pen was of great service to the enterprise. He strove to elucidate the new principles in the 'Neue Zeitschrift für Musik', the organ of

the party, both by original articles and by translating a series of lectures given in French by Liszt. As a practical embodiment of the new views he composed a comic opera, 'Der Barbier von Bagdad', of which Liszt undertook the production at Weimar, but so strong was the opposition that only one performance was given (15 Dec. 1858), and this failure caused Liszt's retirement from his post. It was given at Hanover (1877), still without success, and Carlsruhe (1884), revised and re-orchestrated by Felix Mottl. Not until its revival at Munich (15 Oct. 1885) was Cornelius's genius fully recognized both in England and America where, though not in the established repertory, 'The Barber of Bagdad' is occasionally performed. In Germany it has ever since enjoyed a high reputation as one of the most elegant and refined comic operas ever composed by a German; but even so—perhaps precisely because of a delicate intimacy not ideally suited to stage music—it is enjoyed in occasional revivals rather than as a repertory piece.

In 1858 Cornelius went to Vienna, where Wagner was then living, and it was there that the two became intimate for a time, though each was the other's superior to the point of incompatibility: Wagner in creative power and Cornelius in breeding. The latter was, indeed, more severely critical of Wagner's character than most other contemporaries. When King Ludwig II invited Wagner to Munich, Cornelius followed him there (1865), first as reader to the king and later as professor of harmony and rhetoric at the Conservatory, after it had been transformed into the Königliche Musikschule with Hans von Bulow as principal.

Cornelius's grand opera, 'Der Cid', produced at Weimar (1865), may be considered as the fruit of his intercourse with Wagner. But it is clear that the influence was unfavourable to the younger and far less robust composer. The heroic subject clearly did not suit his lyrical talent and his graceful invention, and 'Der Cid', though given in several other German towns and in Prague (again in a revised version, this time by Hermann Levi), never established itself. Still less did his third and last stage work, 'Gunlod', make any headway, though this is partly due to its having been left unfinished at his death. It was not produced until seventeen years later, completed by Carl Hoffbauer and Eduard Lassen. A new version by Waldemar von Baussnern, which appeared at Cologne in 1906, was no more successful.<sup>1</sup>

<sup>1</sup> It will be noticed that Cornelius's operas were subjected to as much rehandling as Mussorgsky's works were by Rimsky-Korsakov; but, as in the Russian master's case, the originals were restored later on.

Cornelius's fame, then, rests entirely on 'The Barber of Bagdad' and on his many beautiful songs and choral works, some of which were for long the delight of singers and audiences in Germany, and to a certain extent beyond. They are now undeservedly neglected, and it is perhaps a pity that one song, 'Ein Ton', has remained most widely known merely because it exploits the original idea of keeping the voice part pitched throughout on a single note while the accompaniment sustains all the interest of harmony and texture. Of his song cycles perhaps the 'Christmas Songs', Op. 8, have remained the best-known.

As an author, besides supplying almost all the texts for his works, he published a volume entitled 'Lyrische Poesien' in 1861 and an autobiography in 1874. Some of his compositions were published after his death, including the beautiful 'Vatergruft' for baritone and unaccompanied chorus and the refined and expressive set of six 'Brautlieder'. Three more books of posthumous works, consisting of eleven songs and four duets, were edited by Max Hasse and published in 1898. A complete edition of Cornelius's works in five volumes was undertaken by Brentkopf & Hartel of Leipzig, with the same editor.

#### CATALOGUE OF WORKS

##### OPERAS

- 'Der Barbier von Bagdad' (libretto by composer), 2 acts, prod. Weimar, 15 Dec. 1858.  
 'Der Cid' (lib. by composer, after Corneille), 3 acts, prod. Weimar, 21 May 1865.  
 'Gunlod' (lib. by composer, from the Edda), 3 acts unfinished, prod. Weimar, 6 May 1891.

##### CHORUSES FOR MIXED VOICES

- Op.  
 — 'Requiem' (Hebbel) with stgs  
 10. 'Beethoven-Lied' (composer).  
 11. 3 Choruses (Heine & Ruckert).  
 13. 3 Choruses (composer).  
 14. 'Trost in Tränen' (Goethe).  
 18. 'Liebe', 3 choruses (Johannes Scheffer).  
 19. 'Die Vatergruft' (composer).  
 20. 4 Choruses (composer).

- Op.*  
 — 'Blaue Augen' (composer).  
 — 'Freund Heim' (composer).  
 — 'So weich und warm' (Heyse).

## CHORUSES FOR MEN'S VOICES

9. 5 Choruses  
 1. Ach, wie nützlich (Michael Franck).  
 2. Nicht die Träne kann es sagen (Thomas Moore, trans. composer)  
 3. Mitten im Leben (Luther)  
 4. Grablied (composer).  
 5. Von dem Dorne (Schiller).  
 12. 3 Choruses (Eichendorff & composer).  
 17. 2 Reiterlied' (composer).  
 — Ode 'O Venus' (Horace).  
 — 'Requiem aeternam' (liturgical).  
 — 'Absolve Domine' (liturgical).  
 — 'Sonnenaufgang' (anon.).  
 — 'Es war ein alter König' (Heine).

## SONGS

1. 6 Songs (composer)  
 1. Untreu.  
 2. Veilchen.  
 3. Wiegenlied.  
 4. Schmetterling.  
 5. Nachts.  
 6. Denkst du an mich  
 2. 9 Songs on the Lord's Prayer ("Vater unser").  
 3. Trauer und Trost', 6 songs (composer)  
 4. 3 Songs (composer)  
 1. In Lust und Schmerzen  
 2. Komm, wir wandeln  
 3. Mocht im Walde mit dir geh'n.  
 (5) 1. 'Rheinische Lieder', 4 songs (composer)  
 (5) 2. 6 Songs (Friedrich Hebbel)  
 (5) No. 4. 'Ode' (August von Platen)  
 (5) No. 5. 'Unerhort' (Annette von Droste-Hülshoff).  
 (5) No. 6. 'Auftrag' (Holtz)  
 — 'Brautlieder', 6 songs (composer).  
 8. 'Weihnachtslieder', 6 songs (composer).  
 13. 'An Bertha', 4 songs (composer).  
 — 4 Songs (Ermi Kuh).  
 — 4 Songs (Gottfried August Bürger).  
 — 5 Songs (Paul Heyse) (posthumous).  
 — 'Am See' (composer).  
 — 'Die Heimkehr' (Heine).  
 — 'Preziosas Spruchlein gegen Kopfweh' (Cervantes, trans. Heyse)  
 — 'Sonnenuntergang' (Friedrich Hölderlin).  
 — 'Das Kind' (Droste-Hülshoff).  
 — 'Gegnet' (Droste-Hülshoff).  
 — 'Warum sind denn die Rosen so blass?' (Heine)  
 — 'Im tiefsten Herzen glüht mir eine Wunde' (composer).  
 — 'Vision' (Platen).  
 — 'Die Räuberbrüder' (Joseph von Eichendorff)

## VOCAL DUETS

6. 2 Duets (Hebbel).  
 16. 4 Duets  
 1. Heimatgedanken (August Becker).  
 2. Brennende Liebe (Julius Moser).  
 3. Come away, death (Shakespeare, trans. Schlegel), 4 versions  
 — 'Scheiden und Meiden' (Ludwig Uhland)  
 — 'Veratene Liebe' (Adalbert von Chamisso, from modern Greek).  
 — 'In Sternennacht' (Heyse).  
 — 'So weich und warm' (Heyse).  
 2 Irish Songs  
 1. By Shannon's Stream.  
 2. Kate Kearney.  
 — 'I will not have the mad Clytie' (Thomas Hood, trans. composer).  
 — 'Song of the Scottish Serving-Lassie' (traditional, trans. composer).  
 — 'Ein Wort der Liebe' (Wernher von Tegnersee).  
 — 'Ich und du' (Hebbel).  
 — 'Am Meer' (Eichendorff).  
 — Psalm CXXI paraphrased.

<sup>1</sup> No. 2 is Op. 5 No. 1, the others are posthumous.

<sup>2</sup> Nos. 2 & 3 are Op. 5 Nos. 2 & 3.

## VOCAL TRIO

- Op.*  
 — 'Der Tod des Verräters' (composer), for tenor, baritone & bass, with pf

 Baussner ('Günod' completed). Harris (C. H. G., song arr. as pf study) Lust (No. 87, chorus, Nos 313, 322, songs). MacDowell (words for part-song by M.).

Cornelius, Peter (painter) See Mendelssohn (orch. March for C.).

**CORNELYS, Theresa** (born **Teresa Imer**) (b. Venice, 1723; d. London, 19 Aug. 1797).

Italian singer and adventuress. She was the daughter of the theatrical manager, comedian and librettist Giuseppe Imer, the friend of Goldoni. Her sister Marianna was also a singer and made her début at Venice in 1740 in Galuppi's 'Gustavo primo, re di Svezia'; at this time the seventeen-year-old Teresa already occupied a dubious position in the household of the Senator Malpiero, aged seventy-six. There she first encountered Casanova, whose Memoirs are the chief source of information on Teresa's early life, though not all the details given can be verified.

In 1744-45 she was in Vienna, married to the dancer Angelo Pompeati, who later committed suicide by disembowelling himself. Teresa Pompeati, as she was then, made her first appearance in London, as *seconda donna* in Gluck's 'La caduta de' giganti', on 7 Jan. 1746. After that she appeared in the early months of the same year in Galuppi's 'Il trionfo della continenza' (28 Jan.), Gluck's 'Artamene' (4 Mar.), Lampugnani's 'Alessandro nell'Indie' (15 Apr.) and Galuppi's 'Antigono' (13 May). Her sister Marianna was in England at the same time, singing with her in some of these operas.

In Aug. Teresa was back in Vienna. In 1748 she was singing at Hamburg and the next year in Copenhagen, in Mingotti's company, under the direction of Gluck. Casanova renewed acquaintance with her in Venice in 1753, after which, according to him, she left for Bayreuth, where she became the mistress of the Margrave Friedrich. Dismissed by him, she followed a new lover to Brussels, where she found favour with Prince Charles Alexander of Lorraine, who is said to have put the direction of all the theatres in the Austrian Netherlands into her hands. This enterprise nearly ruined her, and she fled from her creditors to Holland, where Casanova met her again and recognized the younger of her two children as his daughter. She then passed as "Madame Trenti", but in Amsterdam married (?) Cornelius de Rigerbos. When she returned to England in 1760 she was known as Mrs. Cornelys, Cornelles, Cornelius or Corneli, but was not accompanied by any husband.

In 1760 Theresa Cornelys began to give musical entertainments at Carlisle House,

Soho Square, which engaged the attention of London society until 1777. The best musicians of the day, including J. C. Bach and Abel, took part in her concerts, which secured the patronage of the royal family and the court. But they gradually deteriorated and were frequented less and less for the sake of music. Still, though she was indicted before the Grand Jury (24 Feb. 1771) for keeping "a common disorderly house", fashionable patronage of some sort continued for a few years until the newly opened Pantheon offered a counter-attraction not to be resisted. She was bankrupt in Nov. 1772; in 1774 an hotel at Southampton, formerly hers, was put up for auction. She was known at one time as "Mrs Smith". Towards the end of her life she sold asses' milk in Knightsbridge, fitting up a suite of rooms for the reception of visitors to "Breakfast in Public" — perhaps the first milk bar. This enterprise failed, and she died at the age of seventy-four in the Fleet prison.

**CORNEMUSE.** See BAGPIPE (FRANCE).

**CORNET (x)** (Fr. *cornet-à-pistons*; Ger. *Kornett*; Ital. *cornetta*. PLATE 14, overleaf). A valved brass instrument pitched in B $\flat$ , its natural harmonics being in unison with those of the modern B $\flat$  trumpet, as is also its compass, which extends in written notes from f $\sharp$  to c''' and beyond, with diminishing certainty of emission, up to g''', all sounding a tone lower. It is not as a rule required to go above b $\flat$ '. The essence of the cornet is revealed in the words of early tutors for the instrument: "the cornet-à-pistons is a post-horn with valves"; and just as the trumpet and the flugelhorn preserve much of the quality of their respective parents, the natural trumpet and the bugle, so has the cornet inherited the principal features of its own parent, the continental coiled post-horn. These include a gently expanding bore, a singular flexibility in lip technique and a certain jauntiness in musical character. Like the post-horn the cornet is gay and homely, and delivers neither the exciting ring of the trumpet nor the ominous sonority of the bugle.

The mouthpiece is deeper than that of a trumpet, and its cup is more gently shouldered into the throat. It is inserted into a short "shank" which is detachable from the instrument. From the beginning of the shank to the tuning-slide the bore expands from 0.3 to 0.45 ins.; it continues at 0.45 ins. through the tuning-slide and the valves, and thereafter resumes expansion and ends in a bell  $4\frac{1}{4}$  ins. in diameter. Thus it is conical for two-thirds of its length.

Military bands have two cornet parts, but brass bands, in which the cornet is the chief treble voice, have four parts; "solo cornet",

"repiano cornet" (which is shared by the flugelhorn), "2nd" and "3rd cornet". Further, to assist in high passages, the standard British brass band has one E $\flat$  soprano cornet, pitched a fourth above the B $\flat$  cornet and carried up to its a'', which sounds c'''. (The soprano cornet is not used in British military bands, but large continental bands have either this or an E $\flat$  soprano flugelhorn.)

Employment of the cornet in the symphony orchestra falls into three categories: (1) 19th-century French composers from Berlioz onwards included the cornet for the sake of its valves. Valved trumpets were rarely used in Paris orchestras, and so only by adding a pair of cornets could the composer secure chromatic trebles to his brass. French orchestras still generally employ two trumpets and two cornets (and in works scored for three trumpets one of the cornet players changes to trumpet), but recently some have been using trumpets for all four parts, making a very brilliant effect. (2) In many leading orchestras of the second half of the 19th century, especially in England and America, all trumpet parts were played on cornets—a practice which did not display the cornet to its best advantage and is largely responsible for the harsh terms in which the instrument is described in older books on orchestration. (3) Modern orchestration, from Elgar and Stravinsky, introduces the cornet now and then for the sake of its mundane associations. A recent example is Malcolm Arnold's overture 'Beckus the Dandipratt'.

**HISTORY**—Makers of the small circular post-horn of Germany, Belgium and France started to copy horn practice when, about 1800 or possibly earlier, they provided it with a set of crooks, and later with a tuning-slide as well, in order that its calls might be introduced into band music in different keys. When the distinction arose between valved and natural (valveless) brass instruments, this post-horn with crooks came to be known as the *cornet ordinaire* or *cornet simple* (i.e. "natural post-horn"). It was generally built in C and provided with crooks for B $\flat$  and A $\flat$  (PLATE 14). Gevaert, in 1863, mentions that some bands were then still using it.

Who made the first *cornet-à-pistons* is not known; possibly it was the Paris maker Halary, just before 1830. At first the cornet had two valves of the Stölzel pattern and crooks to put it into every key from low D $\flat$  up to C. It made its mark on the Paris public with astonishing speed, and already in 1830 Dufresne, a horn player, was playing cornet solos, principally in quadrilles, at light concerts and balls. A few years later he was doing the same in Musard's orchestra. Most of the early cornet soloists were also horn

players, and included Frédéric Antoine Schlotmann, later first horn at the Opéra, and Joseph Forestier who, though originally a horn player, later played the trumpet at the Opéra. They used a deep conical mouthpiece which favoured production of the "round, velvety tone" Forestier advocates in his tutor for the cornet. A fresh school of cornet playing was instituted by J. J.-Baptiste Arban, a trumpet player, who taught pupils to make a bright, trumpet-like sound. This school eventually triumphed, bringing with it the shallower mouthpiece now in general use. Arban, who was the first professor of the cornet at the Paris Conservatoire, also introduced that spectacular double and triple tonguing which is so prominent a feature of virtuosic cornet playing.

The cornet soon arrived in England, where it was for some time known as the cornopean. Amateur wind bands were quick to adopt it in place of the keyed bugle.<sup>1</sup> It is said to have been introduced to the general public about 1834 by George Macfarlane, the keyed-bugle player, and Thomas Harper, jun., the trumpeter, and two years later Balfé wrote a cornet *obbligato* in 'The Maid of Artois'. Macfarlane added a key—the "clapper key"—close to the bell-mouth, so that whole-tone shakes could be executed in keyed-bugle fashion. More celebrated, however, was Hermann Koenig, who left Paris for London to join Jullien, and whose solos, most of them introduced into quadrilles, were a major attraction at Jullien's Promenade Concerts. After Koenig, Isaac Levy (who later went to the U.S.A.) and Howard Reynolds were the leading soloists.

Cornets of the mid-century were made either with the old Stolzel valves in various forms or with the Périnet valves used to-day. The former type, which was used by Koenig, began to vanish after 1860, though it was still made in France, as the lowest-priced model, in 1915. Innumerable special designs of cornet which appeared during the second half of the 19th century include the closely coiled "pocket cornet", which could "be carried over the shoulder in a neat leather case like an opera glass" (according to an advertisement of about 1875); the circular cornet and "butterfly model", which preserved the shape of the parent post-horn; the "cavalry cornet" with bell pointing upwards; designs in which the bell could be made to point in different chosen directions; Bayley's "acoustic cornet" of 1862, in which the loops and bends were reduced to a minimum; and the "echo cornet" with a muting apparatus fitted instead of or as an alternative to the usual bell.

<sup>1</sup> Instances through the years 1832-33 are noticed in the article BRASS BAND MOVEMENT.

Of the original set of crooks, Caussin in his *solfège* method (Paris, 1846) says that with crookings from low D $\flat$  up to E the tone was "médioacre et sourd"; from F to A $\flat$  "sonore et agréable"; from A to C "dur et éclatant". With the highest crook, which was a short straight shank, the instrument stood in C, and in France cornets can still be obtained pitched thus in C and provided with a rotary change valve or an extra slide for lowering the pitch to B $\flat$ . In England the favourite crookings, as revealed in Koenig's multitude of published arrangements for cornet solo, were B $\flat$ , A (both straight shanks), A $\flat$  and G (both coiled crooks). After 1850 the last two of these were obsolescent, and now even the A shank is uncommon. A "rotary change" to A, however, is not uncommonly used in theatre bands where the cornet has not been replaced by the B $\flat$  trumpet. The present-day cornet shank is simply the B $\flat$  crook of earlier times.

Cornets in pitches other than B $\flat$ , C and E $\flat$  soprano have existed, but are now obsolete. A piccolo cornet in B $\flat$ , an octave higher than the ordinary cornet, was first made by Cervený in 1862, but bandmasters did not adopt it. *Altkornetts* in E $\flat$  were used in many German and Austrian bands until recently, as was also a bass cornet in B $\flat$ . The latter was called *Bassstrompete*, but is to be distinguished from the true bass trumpet of the Wagnerian orchestra and of Italian military bands. These deeper cornets are made in the shape of the ordinary cornet and are held in the same manner. As in all German valved instruments, their valves are rotary.

A. B.

#### CORNET (2). See ORGAN STOPS.

**CORNET, Pierre (Peter, Pietro)** (b. ?; d. ?).

Netherlands 16th-17th-century organist and composer. He was organist in the court chapel at Brussels from 1593 to 1626. In Dec. 1611 he appears in the list of expenses for the funeral of the Queen of Spain and the same year he became a canon of the collegiate church of Saint-Vincent at Soignies; but the post was non-resident and he remained at Brussels. He lost the canonry some years later on marrying a widow named Marie Cuypers. In 1633 he was in receipt of a pension, and must therefore have been advanced in years. He wrote organ works in the style of the English school (Berlin, State Lib., MS 191) <sup>2</sup>:

'Fantasia del 5 tuono sopra ut, re, mi.'

'Toccata del 3 tuono.'

'Salve.'

'Courante "Mandatemi da lui" a di 6 nov. 1624.'

'Courante.'

'Fantasia 8 tuoni, 30 septembre 1625.'

**CORNET, Séverin** (b. Valenciennes, c. 1530; d. ? Antwerp, Mar. or Apr. 1582).

Netherlands composer. He studied at Naples and in 1559 settled at Antwerp. In 1564 he was appointed master of the choir-boys at the collegiate church of Saint-Rombaud at Mechlin; but in 1572 he returned to Antwerp to take up the post of choirmaster at the cathedral. There he married a daughter of the composer Antoine Barbé (1), who however died in 1574. In 1575 he married Marie Schoyte of Breda, a woman of some means. In 1581 the suppression of the Roman service at Antwerp lost him his place and he vainly sought that of chapel master to the Archduke Ferdinand of Austria. He left a large number of madrigals and chansons, also some motets and sacred songs. Cornelius Verdonck was one of his pupils. E. v. d. s., rev.

BIBL.—DOORSLAER, G. VAN, 'Séverin Cornet' (in 'Compas d'or', Antwerp, 1925).

See also Barbé (1) Verdonck (Cornelius)

**CORNETT.** A woodwind instrument sounded by a cup mouthpiece (cf. SERPENT) which rose from comparative obscurity to a position of great importance in the 16th-17th centuries, after which it fell rapidly back into obscurity and became extinct about 1850. It was made in three main sizes — treble, small treble and tenor — of which the treble is of much the greatest consequence and will therefore be described first.

I. TREBLE CORNETT (correct Eng. spelling, *cornet*, but the somewhat rare variant with two *t*'s is now generally adopted to prevent confusion with the modern valved cornet. Fr. *cornet à bouquin*; Ital. *cornetto*; Span. *corneta*; Ger. *Zinke*).

CONSTRUCTION.—There are three designs: (a) Ordinary curved cornett (*cornetto torto*; c. alto'—i.e. "loud"; c. nero; *krumme Zinke*; *schwarze Z.* PLATE 15, No. 5). It is 23 ins. to 24 ins. long and is made of two pieces of wood (plum, pear, maple) which are glued together after the conical bore has been carved out. The exterior is finished off to an octagonal cross-section and covered with thin black leather. Sometimes they are mounted with silver bands and sometimes they are made entirely of ivory. There are six finger-holes and a hole for the thumb of the uppermost hand, this thumb-hole being the nearest to the top end. Into a socket at the top is inserted the mouthpiece, made of ebony, ivory, bone, horn or silver, and resembling a small trumpet mouthpiece but for the sharpness of its rim (which makes it look rather like an acorn cup). Inside the mouthpiece the curvature of the cup varies enormously, but it meets the bore at a sharp angle. This is the commonest design and many specimens have survived. (Good examples at Ch. Ch., Ox-

ford, R.C.M., London, and most continental museums.)

(b) Straight cornett (*cornetto diritto*; c. bianco; *gerade Zinke*; *gelbe Z.*), a conical pipe made of one piece of wood — usually boxwood — bored out in the ordinary way, and turned on the outside to a circular cross-section without ornamentation of any kind. The holes and the mouthpiece are as in the above curved design. This was the least common type and comparatively few have survived.

(c) Mute cornett (*cornetto muto*; *stille Zink*), made like the straight cornett, but instead of the detachable mouthpiece it has its mouthpiece cup actually turned in the wood at the top end of the instrument itself. This cup is shallow and merges into the bore without a sharp break, having the effect of softening and veiling the tone-quality. There are no specimens in Great Britain, but the museum of the Brussels Conservatoire has many fine boxwood specimens, mostly late 16th-century Venetian. Gahlei ('Dialogo', 1581) said that the best cornets were being made at Venice. PLATE 15, No. 3, shows an abnormal variety with a little finger-hole (see III below).

II. TECHNIQUE.—The compass of the treble cornett is the same as that of the violin of its time, namely from g to a'', rising to d''' in the 17th century. But the lowest proper note is a (thumb and 6 fingers), the g being obtained by slackening the lip. The fingering resembles that of the recorder, and Speer's excellent fingering-chart (1687) can be conveniently consulted in A. Carse, 'Musical Wind Instruments', p. 337. Girolamo Dalla Casa (1584) says that like the voice it can be played *piano* or *forte* and in every key (*tuono*). Similarly Mersenne records that it can be sounded as softly as a recorder and can play a scale beginning on any note as *Ut*; the point of these observations being that most other woodwind of the period — shawms, flutes, etc. — were in varying degrees deficient in those respects. The most sympathetic scales on the cornett are G, C and F major, for these introduce the best cross-fingerings.

In its heyday (1550-1650) the treble cornett was the great virtuoso instrument among the wind and gave voice to spectacular divisions (or diminutions) in no measure less extravagant than those indulged in by violin, bass viol or voice. Mersenne went so far as to say that the cornett should *almost always* be played in diminution, and Girolamo gives numerous examples of which the following extract is from 'a diminution of the treble of Lassus's 5-part 'Susanne un jour' (from the 2nd book of Girolamo's 'Il vero modo'; the original composition is printed in Vol. XIV of the Lassus complete edition):

Bar 4

Diminution by Girolamo

Lassus's Original Treble

Very brilliant cornett passages of similar kind occur in Giovanni Gabrieli's works, and sometimes, too, in those of his pupils (e.g. Praetorius's 'Wachet auf!' in the 'Polyhymnia'). For the execution of these divisions the art of articulation with the tongue ("tonguing") reached an unparalleled degree of complexity, instructions for which are set down by Girolamo Dalla Casa (1584) and Mersenne. They embrace two considerations, force and speed, and for the fastest divisions Dalla Casa prescribes the *lingua riversa*, ranging from the softest palate-tonguing, *le-re-le-re*, to the gay though harsher dental *te-re-te-re*, which, he says, is easier to hold back in semiquaver runs. *Te-che-te-che* (the ordinary modern "double-tonguing" on flutes and trumpets) is "crude and terrifying", in addition to being difficult to hold back. *Te-te-te-te* (ordinary single tonguing) is good, he continues, up to quaver speed, but too sluggish for anything faster. Mersenne, writing sixty years later, gives a short account based on the figure *te-te-re-te* and describes the *re* as a *coup de lèvres*. Quantz, a century later still, says that in flute tonguing the *re* syllable is made by trying to utter the letter *r* very sharply and distinctly, and this syllable was still used by some flautists early in the 19th

century. Like other woodwind the cornett can also be played *legato*, i.e. without lingual articulation at all, but in playing divisions notes were normally tongued.

Concerning its tone Mersenne is warmly eloquent: it is "semblable à l'esclat d'un rayon de soleil qui paroît dans l'ombre ou dans les ténèbres, lors qu'on l'entend parmi les voix dans les Églises Cathédrales ou dans les Chapelles". It is difficult to describe except as something between a clarinet and a high saxophone in quality with a touch of the trumpet's resonance. It is not loud by modern standards and its *forte* is about as strong as a clarinet's. The Mute Cornett has an indescribably soft and velvety quality to which a dance musician's trumpet with half-inserted cup mute is possibly the closest likeness. Roger North ('Memoirs') says: "Nothing comes so near or rather imitates so much an excellent voice as a cornett pipe; but the labour of the lips is too great and it is seldom well sounded". It was this strain upon the player that contributed very largely towards its swift fall from eminence as soon as a suitable treble wind instrument was evolved to take its place — the oboe.

III.—Other sizes than the treble are numerous if every small difference is taken

into account. For example trebles, both curved and mute, were sometimes built a tone or more lower, either to suit a lower pitch or to deal with a lower part in the music. The Stuttgart *Hofkapelle* inventory of 1589 mentions both: "6 Cornutae mutae ein wenig niederer, stimmen zu dem Chor; 4 grosse gerade Zinken, 3 Tonos niederer, seindt in der Kappel zu dem Alt zu gebrauchen", etc. Another device was to extend the downwards range one note through the agency of a little finger-hole (PLATE 15, No. 3) or key (Mersenne's *taille des cornets*). The principal variants were, however, two:

(a) CORNETTINO (no special Eng. or Fr. name; Ger. *klein Zinke, Cornettin*), was a fifth higher than the treble in the 16th century, but during the next century was made but a fourth higher (*Quartzinke*). It could be constructed to any of the designs described in § I (above), but the curved, leather-covered one was commonest (PLATE 15, No. 4). It gained considerable favour throughout 17th-century Germany and is often required by Schutz, notably in No. 3 of the third part of the 'Symphoniae sacrae' (1650), in which, above the words, "Wo der Herr nicht die Stadt behutet, so wachet der Wachter umsonst", the cornettino pipes out plaintive, epiphenomenal rhythms on single notes to the composer's instruction *ad imitationem Cornu Vigili*. Walther's Lexicon (1732) gives it a range of d' to d''' or even up to a''' — the same as that of the 18th-century flute.

(b) TENOR CORNETT (Fr. *basse des cornets*; Ital. *corno torto, cornone*; Ger. *grosse Zink, Basszinke*. See also LYZARDEN). Built a fifth below the treble cornett and usually provided with a key for the lower little finger which when closed gives the note c. It was always made in the curved shape, but as a result of its length it has a double curve (PLATE 15, No. 6) with the finger-holes on the inside facet of the lower bend. Thus in playing position the bell points downwards to the front, not outwards to the side as in the treble. Length 37 ins. to 41 ins. Its main period of activity was c. 1550–1650, and in 1622 the celebrated Norwich Waits possessed at least two. Praetorius did not care for it, describing its sound as "most unlovely and bullocky". Actually it sounds somewhat like an alto saxophone. A unique specimen of a real bass or *contrebasse* cornett is in the Paris Conservatoire collection.

IV. HISTORY AND USE.—The principle of the cornett is of unknown antiquity; it is enough to note here that miniatures and sculptures from the 11th to the 13th century show figures playing upon horn bugles pierced with finger-holes for the purpose of playing tunes.<sup>1</sup> It is referred to occasionally in

<sup>1</sup> See LITREUS.

14th-century French poems as *cor à doigts*. (A similar instrument was recently still known in Scandinavia.) Little more is seen of it until the 15th century, when the classic form appears (for example in a Spanish breviary in the B.M., Add. MS 18851) and soon afterwards, in 1503, an Italian is reported playing the cornett in the service of Henry VII.

In a letter of 1541 the famous Nuremberg maker Jorg Neuschel refers to "welsche krumme Zinken", as if the curved form were of French or Italian origin. Certainly the form first associated with Germany is the straight one. Here too the 11th–13th centuries mark its early appearance, as a short straight cornett with the bell carved as an animal's head, leading up eventually to the *Zinck* depicted by Virdung (1511), which is a perfectly normal straight cornett (see above, § I b). It appears in the title-page of Schlick's 'Spiegel der Orgelmacher' of the same year, assisting the organ in the accompaniment of a church choir. In Burgkmair's 'Maximilian's Triumph' of 1516 it is doing the same thing in company with a trombone.

The cornett had thus already become associated with church choral music, and it remained so, in partnership with trombones and organ, for roughly two centuries during the course of which these instruments formed the nucleus of the Venetian orchestra of the Gabrieli. The cornett is allotted a leading part in the earlier works of Schutz. To return to England, Canterbury had "2 cornetters and 2 sackbutters" in 1532, while towards the latter end of the period "His Majesty's cornets and sagbuttes" were still mainly employed in the Chapel Royal, where they stood on the verge of being supplanted on big occasions by a string band and on routine duty by nothing. Matthew Locke's music for them shows that their constitution was the normal one of the time (c. 1660): 2 cornetts and alto, tenor and bass trombones — 5 men in all.

The part played by cornetts in outdoor wind bands is touched upon in SHAWM (II). They were also featured in the big dinner-time concerts of the 16th century, such as those described in Massimo Troiano's invaluable account of the nuptials of William VI of Bavaria in 1568. There, under Lassus's direction, a *battaglia ad 8* by Annibale Padovano and a motet *a 7* by Lassus were played on cornetts and trombones, the second piece employing 5 cornetts and 2 trombones. A further example, illustrating the union of cornetts of three different kinds in a single consort, is mentioned under SHAWM (III a).

As for large-scale professional entertainment Malvezzi's account of the "intermedii et concerti" given at Florence in 1589 includes the actual music of his *sinfonia a 6* from the

first intermedio.<sup>1</sup> It employed a string consort of viols and a wind consort of cornett, flute and 4 trombones, supported by a veritable army of plucked instruments and organs, while Alessandro Striggio himself was let loose on the top part with his *sopranino di viola*. The grand-ducal cornettist, as treble of the wind (the flute usually took the alto part in these consorts) would therefore have been playing opposite Striggio, and no doubt exerted himself to the utmost to contrive divisions to vie with those executed by the great master. Galpin quotes interesting instances of the cornett's part in the English theatre, such as in Marston's 'Sophonisba' of 1606, wherein "the cornets & organs" play for the first act (other acts having organs and recorders; organs, viols and voices; treble viol and bass lute; etc.). It was for such a combination that John Hingston composed the most enchanting piece of chamber music in the instrument's repertory — a 'Fantasia for 2 cornetts and Sackbut to the Organ' (c. 1630; Bodl. Lib. MS).

**LAST APPEARANCES.**—Nothing better demonstrates the swift decline of the cornetts (and the corresponding ascendancy of the oboes) than the published scores of the Leipzig cantors from Schein to Bach. The latter only used them, with the sole exception of Cantata 118, to reinforce the trebles of the choir. Handel wrote for them in 'Tamerlano' and Gluck in 'Orfeo', but in each case as often as not some other instruments had to be found to play their parts.

They lingered on, still in company with trombones, to play tower-music in old-fashioned German towns, and it is in this humble setting that we hear of them for the last time, as Georges Kastner in his 'Danses des morts' (p. 213) records how

en 1840, lorsque j'étais à Stuttgart, j'entendis chaque jour un concert de musique religieuse exécuté par quatre musiciens qui, selon l'usage, montaient sur la plate-forme de la tour pour jouer un choral, dont la première partie était rendue par le zinke, et les autres par les trombones alto, tenor et basse.

A revival was attempted later in the same century when Victor Mahillon caused a straight cornett to be constructed on modern lines (with flute keywork) for a performance of Gluck's 'Orfeo' at Brussels. The experiment was evidently unsuccessful: the instrument has since joined its ancestral prototype on the walls of the museum of the Royal Conservatoire.

The Russian *rozhok* is a cornett of wood bound with bast. For an illustrated description with music examples see N. K. Rorich in Vol. VII of S. T. Platonov, 'Zapisky Otdel'niya Russkoy y Slavianskoy Archeologiy . . . Obshchestva'.

- CORNETT-TON** (Ger.). See PITCH, STANDARD.
- CORNETTE, Victor** (b. Amiens, 27 Sept. 1795; d. Paris, 19 Feb. 1868).
- French instrumentalist and composer. He was the son of Louis Hippolyte Cornette (1760-1832), an organist of the Cathedral of Amiens, and entered the Paris Conservatoire in 1811, studying composition under Lesueur. He served in the band of the Grenadiers Tirailleurs de la Garde Impériale in 1813 and 1814, and was at Waterloo; was professor at the College of Saint-Acheul in 1817-24; member of the orchestra at the Théâtre de l'Odéon (1825), Opéra-Comique (1827); chorus master at the Opéra-Comique (1831-37); director of singing at the Gymnase de Musique Militaire (1839), conductor of the Strasbourg theatre (1842); chorus master to the Paris Opéra (1847); and again chorus master at the Opéra-Comique (1848). He was also trombonist in the band of the Garde Nationale and deputy organist at the church of Saint-Sulpice and the chapel of the Invalides.
- Cornette composed an enormous mass of music for every variety of instrument and published *méthodes* for trombone, ophicleide, cornet, bugle, saxhorn, saxophone, bassoon, oboe, horn, trumpet, harp, cello, viola, organ and harmonium. M. C. C., adds M. L. P.

- Cornford, Frances.** See Bliss ('Nursery Rhymes'). Gippes (song).

**CORNISH, Thomas** (b. ?; d. Wells, 1513).

English divine and musician. He was Bishop of Tine, assistant Bishop of Bath and Wells from 1490 to 1513, Prior and Master of the Hospital of St. John Baptist, Wells, and is said to have composed some motets. He was installed Prebendary of Cudworth on 29 Oct. 1494, with licence to reside in St. John's Hospital, and on 28 July 1497 he was appointed perpetual vicar of St. Cuthbert's Church, Wells. In Apr. 1499 he was installed Chancellor of the Cathedral, and on 4 Sept. 1502 he was installed as Precentor. It is not unlikely that some of the compositions attributed to "Master Cornish" may have been the work of this Thomas Cornish, and not of William Cornish.<sup>1</sup> It is remarkable that during the precentorship of Bishop Cornish, Wells Cathedral could boast of such fine musicians as Robert Wydow, Mus.B., Richard Bramston, John Cole, William Huchins, Richard Hygons, John Clawsy, Mus.B., John Chambers and John Gye.

**Cornish, William.** See Britten ('Ceremony of Carols').

**CORNO.** The Italian word for the horn.

**CORNO BASSETTO.** See CLARINET: BASSET HORN. The proper Italian name is *corno bassetto*, not *corno di bassetto*.

**CORNO DI (sic) BASSETTO.** See ORGAN STOPS.

**CORNO DI CACCIA** (Ital.). The hunting-horn. The name often occurs in J. S. Bach's scores (See HORN.)

**CORNO DOLCE.** See ORGAN STOPS.

**CORNO INGLESE** (Ital.). The English horn or *cor anglais*.

**CORNO TORTO** (Ital., twisted horn). See LYZRADEN.

**CORNOPEAN.** See ORGAN STOPS.

**CORNOPHONE.** A family of valved brass instruments introduced and patented in 1890 by Fontaine Besson of Paris. The tube was of fairly large scale and regularly conical. In this respect the cornophone was similar to the saxhorn, but the mouthpiece of the former was funnel-shaped and not cupped. The object of this was to produce a tone tending towards that of the French horn, and thus the instrument comes into the general group of the various ballad horns, vocal horns, etc., whose names indicate clearly their purpose, and which vary among themselves only in the proportions of the bore. Of these the most successful and permanent has been the rather narrow tenor cor, in America known as the Mellophone. None of these, however, can produce true French-horn tone, for the simple

reason that their natural sounds are the second to eighth harmonics of a regular cone, while the corresponding notes of the older instrument are higher harmonics of a tube twice the length, much

narrower and with an approximately exponential flare. While not unimportant, the shape of the mouthpiece has less influence on characteristic tone than have the conformation of the tube and the expansion of the bell. The tubing of the cornophones was coiled in a rather broad ellipsoid with the bell

tilted forward in the same plane as the mouth-pipe. They do not seem to have been used very widely at any period, and there is no evidence to confirm Kurt Sachs's curious statement in his 'Lexicon' that in England the bass cornophone was used to support the voices in church music. In France cornophones have on occasion been employed as a substitute for the Wagner tubas.

P. B.

**CORNU.** A huge circular horn invented by the Romans and used by them in the army and at assemblies, religious ceremonies and games. The Museo Nazionale at Naples possesses two specimens discovered at Pompeii. From the mouthpiece the cornu curves round in a wide circle, the tube expanding gently, and terminates in a trumpet-like bell beside the player's head (see PLATE 6, Vol. I, p. 1004, No. 2). The tube length of the Pompeian *cornua* is 11 feet (i.e. about that of a French horn crooked in G). The following notes were therefore theoretically be obtainable on them:

G d g b d' (f') g' a' b' c#'' d'' e'' etc.

The notes under the bracket are difficult to produce, the cornu mouthpiece being wide and shallow. The best notes are g, b, d' and g', what notes the Romans used is unknown. The mouthpiece is cast with a 6-in. shank which slides on to the body of the instrument.

Under the name *tuba curva* the cornu was revived in Paris under the Revolution and used initially at Voltaire's funeral, in special music by Grétry.<sup>2</sup>

**CORNYSHE, William**<sup>1</sup> (*b.* East Greenwich, ?; *d.* ? Hylden, Kent, *c.* Oct. 1523).

English composer, poet, playwright and actor.<sup>2</sup> He was possibly the son of John Cornyshe. The first record of him occurs as Master of the Singing-Boys at Westminster Abbey (1480-91). His name is in the Household Book of Henry VII, under the date 12 Nov. 1493, where a payment is entered "to one Cornyshe for a prophecy in rewarde, 13s. 4d." — which in the language of the day meant simply a poem. He probably entered the king's household about 1492, but it is not until 1496 that there is any record of him as a Gentleman of the Chapel Royal.<sup>3</sup> At a court celebration of the marriage of Catherine of Aragon to Arthur, Prince of Wales, the children of the chapel appeared as mermaids, and no doubt Cornyshe had a good deal to do with the production. Various grants conferred on him are mentioned by W. H. Grattan Flood. In 1502 he received 13s. 4d. for the "setting of a carralle upon Christmas day", but two years later he was confined in the Fleet prison because of a satirical writing on Sir Richard Empson.<sup>4</sup> During his incarceration he wrote a poem entitled 'A Treatise between Truth and Information', which is printed in Skelton's 'Pithy, Pleasant and profitable works . . .' published in 1568 (B.M.). Some attribute it to Skelton. William Newark, the Master of the Children of the Chapel Royal, being in ill-health, Cornyshe deputized for him until he formally took over his duties on 29 Sept. 1509. Between 1508 and 1516 Cornyshe, William Crane and a "Mr.

Kite" were the principal performers in the court plays, as appears from a series of payments similar to one of £6:13:4 in 1508, when "Mr. Kite, Cornishe, and other of the Chappell . . . played affore the King at Richmonte". He continued in charge of the music at the pageants, banquets, masques, plays and devices at court. In Sept. 1513 he took the Chapel Royal to France in the retinue of Henry VIII and won great favour with it by the performances at Théroutanne, Lille and Tournai, of which he was in charge; and in June 1520 he was across the Channel again to supervise this Chapel's ceremonies at the Field of the Cloth of Gold and was in charge of the pageants on the Sunday night. He received payment of 103s. 4d. for maintenance of 10 children at 2d. a day from 29 May to 22 July. He regularly supplied St. Margaret's, Westminster, with vestments, etc., on feast-days. Apparently Cornyshe suffered from ill-health about 1521, although on St. Edmund's Day 1522 he received 10s. from the Abbey, while the Master of the Singing-Boys, J. Sylvester, received 2s. and three other singers 20d. each, one of whom is curiously named Empson. On 20 Aug. 1523 he was granted the manor of Hylden, Kent.

Cornyshe was a great favourite with Henry VIII and at one time received a sum of £200 from him "upon a warraunt, in rewarde", but this possibly included gratuities to other workers in the Chapel. The king himself, as is well known, was a composer, and there is a collection of partsongs, chiefly for 3 voices (B.M., Add. MSS 31,922), in which no less than 38 compositions by Henry VIII are bound up with the following works by Cornyshe:

Trio (for strings or voices), 'Adeu, mes amours (with second part 'Pardona moy'), 'Adeu, adeu my hartes lust', 'Ah, the syghs', 'Adeu, Corage', 'Blow thi horne, hunter' (also in Roy. Lib. 58), 'My love she morneth' (duet), 'A Robyn', 'Trolly, lolly lolly losynge', 'While lyve or breth' and 'Thou and I and Amyas'.

Of the 3 partsongs by him in the Fayrfax Collection (B.M., Add. MSS 5465) two were printed by Hawkins. They are particularly interesting, for they show that secular music, even of a humorous and satirical nature, was written and practised at an early date, and that the preponderance of sacred music of the period which remains to us may be explained, in part, by the convenience for their preservation in cathedral and college libraries. Thus, in this group of songs, the first is an excellent setting of a humorous poem in three sections by John Skelton<sup>5</sup>, whose jumbling metres and crude crazy satires are as far removed from the spirit of motet and madrigal as can be imagined; the second, beginning 'Hoyda, hoyda joly rutterkyn', is supposed to be a satire on

<sup>1</sup> Some confusion has been caused by the number of entries in the Chapel Royal records and elsewhere, under the name of Cornyshe. It has been supposed that there were two William Cornyshe, father and son, more particularly as some songs in Add. MSS 5465 are designated as by "W. Cornishe, jun". This is not established, however, with any certainty; but see E. K. Chambers, 'The Elizabethan Stage', II, 29, where all the contemporary documentary evidence concerning the family is assembled. The confusion concerning William Cornyshe may be a little lessened by the fact that in 1474, a "John Cornyshe senior" of St. John Zacharie, London, made a will in which he names three sons and two daughters. One is explicitly called John Cornyshe junior and another William Cornyshe. This latter may have been he who became the first known Master of the Singing-Boys of Westminster, was appointed in 1480 and remained until 1491. He was buried in St. Margaret's, Westminster, between 1500 and 1502. He was one of those who witnessed the Churchwardens' Accounts for 1484-85. Caxton had witnessed those of 1482-84. It seems possible that he was the father of the William Cornyshe who was imprisoned in the Fleet in 1504, was the friend of Skelton and the musician impresario of Henry VIII's court. He used to hire out necessities for feast-days to St. Margaret's. It would seem also that possibly Hawkins was right in assigning 'Hoyda, joly rutterkyn' to John Cornyshe junior and that it may indeed have been William or John who set a carol for the queen in 1493.

<sup>2</sup> Details of Cornyshe's stage activities, which included those of producer of interludes and pageants at the court of Henry VIII, are dealt with by Wallace, 'Evolution of the English Drama up to Shakespeare' (Berlin, 1912).

<sup>3</sup> 1 Sept.: "Item, to Cornyshe of the King's Chapel, 26s. 8d." This is double the sum he received at the Abbey.

<sup>4</sup> Stow's 'Annales' (1615).

<sup>5</sup> See also PEN, ROBERT

the drunken Flemings who came to England with Anne of Cleves on the occasion of her marriage with Henry VIII. The others are 'Manerly Margery Mylk and Ale' and 'Wofully araid'. In Wynkyn de Worde's song-book (1530) there are also the bass parts of four songs by Cornyshe: 'Paternoster', 'Pleasure it is', 'Concord as musical' and 'Fa la sol'. Of his sacred music there are six compositions (not including a lost Magnificat in Eton MS 178), including a 'Stabat Mater', a Magnificat in the library of Caius College, Cambridge, the medius part of a 5-part motet, 'Salve regina mater misericordiae' (B.M., Harl. MSS 1709/51b), an 'Ave Maria' for 5 voices (R.C.M.) and 'Dicant nunc Judaei' (B.M., Add. 5665). 'Altissimi potentia', entered on a fragment of a catalogue in Merton Coll., Oxford, is lost.

J. M. (II), rev., & E. P. (III).

**CORONA** (Ital.) A synonym for *fermata* or Pause. The common Italian word for the sign ^, also called *punto coronato*. A familiar instance of its use is in the "Virgo virginum" of Dvořák's 'Stabat Mater', in which *senza corona* is placed over the last note of the movement in the vocal parts to emphasize the fact that the instruments alone hold out the pause.

J. A. F.-M.

**CORONA, Agostino** (b. Treviso, ?; d. ?).

Italian 16th-century composer and priest. He became *maestro di cappella* at the Abbazia Sanctae Mariae Caritatis at Venice, where he published 'Psalmi vespertini a 6' in 1579. He also contributed a 5-part Psalm, 'Beati omnes', to G. M. Asola's 'Psalmodia' in 1592.

E. B.

**CORONA, LA** (Opera). See METASTASIO.

**CORONACH** (Gaelic). A funeral cry, from *co*, "together" — analogue of the Latin *con* — and *ranach*, "a shrieking or weeping": root *rân*, "a shriek or cry". This was the dirge chanted in former times in Celtic Scotland by the Bard or Seannachie on the death of the chief or other great personage of a clan. In some degree it resembled the song of praise composed and led by special bards: the genealogy, the virtues and the great deeds of the deceased were recounted in pathetic verse to plaintive wild music, the bard giving vent to his own grief, while the sounds of the harp and the wailings of women excited that of the hearers. However rude, it appears to have been rhythmical, and was chanted in recitative. Although the great funeral ceremonial, of which the dirge was only a part, must have been confined to persons of distinction, in all cases the coronach was indispensable, as without it, according to popular belief, the spirit was condemned to wander forlorn, bewailing its miserable fate that this rite had been denied to it. These ceremonies had, however, no

religious significance; the virtues, heroism and achievements of the dead were alone their subject; and the rite continued thus to be observed in Ireland and the Highlands of Scotland long after the conversion of the people to Christianity. Dr. Stewart of Nether Lochaber wrote:

Our oldest Gaelic Laments are to this day to be chanted rather than sung, and I can recollect an old seannachie in the Braes of Lochaber, some thirty-five years ago, chanting MacIntosh's Lament to me, in a style of recitative that impressed me greatly, his version of the well-known and beautiful air being in parts very different from that printed in our books; and if ruder and wilder, all the more striking because of its naturalness.

Scott mentions the coronach as a part of the funeral rite when the body of the chief of clan Quhele was borne to an island in Loch Tay ('Fair Maid of Perth', chap. xxvii); and again in 'The Lady of the Lake' (canto ii) he introduces the coronach in the beautiful verses beginning: "He is gone on the mountain". In a note he also gives a translation of a genuine Gaelic coronach. In ordinary cases of death this dirge was simply the expression of the grief of the women of the clan for the loss of a protector or breadwinner, intensified by the genius of a poetic and highly imaginative people.

These funeral customs must have prevailed in Scotland before the advent of the Romans, and been handed down from prehistoric times, for they were confined to the Gaelic-speaking districts north of the wall of Antoninus, and W. F. Skene proved beyond a doubt that the Picts, the inhabitants of that region, were a Celtic race, their language being Gaelic with traces of Cornish. In Scotland in modern times the rhapsody of the bard and the wail of the women are no longer heard: the name Coronach has been transferred to the Cumhachd or musical lament, a kind of pibroch now played by the pipers who lead the funeral procession. These pibroch laments are in a peculiarly weird, wild style, well suited to the bagpipe, but not capable of being reproduced on any other instrument. They begin with a simple figure, and this is worked up, with ever-increasing intricacy and rapidity of notes, through a number of divisions or variations, till the same simple wild strain reappears as the close. Some of these laments have a high reputation, such as those of MacIntosh, MacLeod, MacCrimmon (*Cha till mi tuille* — I return no more). The last is often played as the emigrant's farewell to his country.

In Ireland these funeral rites would seem to have been celebrated in early times on a grander scale than in Scotland. Professor Sullivan, in his excellent 'Introduction to O'Curry's Lectures on the Manners and Customs of the Ancient Irish', quoting from the Book of Ballinote and other Irish manu-

scripts, shows that in many cases a funeral pyre was erected, the favourite dogs and horses of the deceased slain and burned with the body, and that, in one instance at least, there was an extraordinary addition to the ceremonial. This took place at the funeral of Fiachra, the son of Eochad Muidhneadhán. He had won a great battle in Munster and was returning home to Temar (Tara) with the spoil and hostages taken from the enemy:

When he reached Ferud in Meath, Fiachra died of his wounds there. His *Leacht* (stones set up to protect the urn) was made; his *Fert* (mound of earth) was raised; his *Cluiche Cainteoh* (pyre) was ignited; his Ogham name was written; and the hostages which he had brought from the South were buried alive round the *Fert* of Fiachra, that it might be a reproach to the Thomomans for ever, and that it might be a trophy over them.

The *Cluiche Cainteoh* here used for the pyre was properly the whole funeral rite, and included the burning of the body, the enclosing of the ashes in the urn, the recitation of dirges and the performance of games. When in Christian times burial took the place of cremation, some of these observances survived, in particular the dirge or wail, while the lighted candles are supposed to represent the ignition of the pyre. Much information of the most interesting nature will be found in Professor Sullivan's work, and not altogether confined to matters of antiquity. The Irish *Cumadh* or *Caoinne* was somewhat similar to the *Ochone*, an example of which is in the 'Fitzwilliam Virginal Book' (ed. Fuller-Maitland and Squire, I, 87).

Much interesting matter regarding Celtic customs will be found in O'Curry's 'Lectures', Walker's 'Memorials of the Bards', Logan's 'Gael', edited by Dr. Stewart, and an admirable chapter on the ethnology of the country in W. F. Skene's 'Celtic Scotland'.

J. M. W., adds. W. H. G. F.

See also *Caoinne*.

"CORONATION ANTHEMS." Four anthems by Handel composed for the coronation of George II in 1727 and sung at the ceremony in Westminster Abbey on 11 Oct. The titles (and opening lines) are:

1. Zadok the priest.
2. The king shall rejoice.
3. My heart is inditing.
4. Let Thy hand be strengthened.

"CORONATION" CONCERTO. The name by which Mozart's pianoforte Concerto in D major, K. 537, is generally known, because it was played by him at Frankfurt o/M. during the festivities connected with the coronation of the Emperor Leopold II, which took place on 15 Oct. 1790. But the work had been composed as long ago as Feb. 1788, and since he also played the F major Concerto, K. 459, of 1784, there is the less reason for calling K. 537 alone a "Coronation" Concerto.

E. B.

"CORONATION" MASS. The nickname of a Mass by Haydn and another by Mozart. Haydn's work, the Mass in D minor of 1798, is more often called the "Nelson" Mass. Mozart's, in C major, K. 317, composed in Mar. 1779, is unconnected with any coronation of a potentate, and the origin of its name is uncertain. It has been conjectured, however, that Mozart wrote the work to commemorate the "crowning" of an image of the Virgin Mary at Salzburg in 1751.

CORRADINI (Coradini), Francesco (b. Naples, c. 1700; d. ? Spain, ?).

Italian composer. His earliest known opera is one in Neapolitan dialect, 'Lo 'ngiegno de le femmine', which was performed at the Teatro dei Fiorentini, Naples, in 1724, followed the year after by 'L' oracolo de Dejana' (= 'L' oracolo di Diana') and 'Il premio dell' innocenza' at the Teatro Nuovo there. Shortly afterwards Corradino went to Spain, first to Valencia, where he became *maestro de capilla* to the viceroy, the Prince of Campoflorido, and about 1730 to Madrid. At Valencia he wrote the music for a "folla real" to Italian words, for the birthday of Queen Isabella, performed at the viceroy's palace on 25 Oct. 1728, and probably also a 3-act opera, 'Dorinda'; while his first opera for Madrid was the "melodramma armonico al estilo de Italia" 'Con amor non hay libertad', to Spanish words by José de Cañizares (produced in Jan. 1731). During the following 15 years Corradini's music was in great demand at the Madrid theatres; besides c. 15 Spanish operas and *zarzuelas* he wrote incidental music for numerous plays, and in contrast to his fellow-countrymen in Spain, he does not seem to have cultivated Italian opera there, apart from and before a setting of Rollé's 'Polifemo' libretto (originally produced in London, 1735, with music by Porpora), for which he wrote the music in collaboration with Corselli and Mele; this was given at the court theatre of Buen Retiro in the Carnival of 1748 and is Corradini's last opera on record. He presumably died soon afterwards. Of his numerous works none so far is known to be extant apart from the anonymous 'Dorinda' score (Valencia, c. 1730) in the Biblioteca Nacional, which in all probability is by him; but it is quite possible that some others may exist in unexplored Spanish libraries.

A. L.

**CORREA DE ARAUXO, Francisco**  
(b ? Seville, c. 1576, d ?).

Spanish organist and composer. It is very likely that he came of a Hispano-Portuguese family, as was the case with Diego de Velázquez and Juan de Valdés Leal, his works are as well known in Portugal as in Spain. As Correa himself says in the preface to his 'Facultad orgánica', he received all his musical education at Seville, especially from Jerónimo Peraza and Diego del Castillo, who succeeded each other at Seville Cathedral. In 1598 Correa was appointed organist to the church of San Salvador there, next in importance to the cathedral. In 1626 he published the aforesaid 'Facultad orgánica' at Alcalá de Henares. In the succeeding years he had several quarrels with the chapter of the church, which even ended in lawsuits, so that in 1633 he abandoned his post. After that year he cannot be traced at Seville. It has not yet been possible to ascertain where he took up another post. In any case he did not go to Madrid, as he once said in a letter that he would. We only know that in 1636 he sold some vocal compositions to the chapter of the cathedral at Jaén, though he held no fixed appointment there. After that date nothing further is known of him.

'Facultad', mentioned above, contains 69 compositions for organ, most of them *tientos*, but also some glosses and variations. The theories expressed by him in his book are very revolutionary for his time, breaking with tradition and introducing many new aesthetic and technical points of view. His harmony is often very bold, and he loves to cultivate dissonances. His *tientos* show the irruption of baroque taste in thought and music, and bring into Spanish organ music a new kind of dynamism hitherto unknown. However, the baroque attitude of Correa de Arauxo is typically Hispanic and in many respects differs from that of Frescobaldi.

His 'Facultad orgánica' has been transcribed into modern notation by S. Kastner and published by the Instituto Español de Musicología, Vol. I, 1948, Vol. II, 1951.

**CORREA DE AZEVEDO, Luiz Heitor**  
(b. Rio de Janeiro, 13 Dec. 1905).

Brazilian musicologist and folklorist. He studied music from his earliest childhood but began his serious studies in Rio de Janeiro only in 1923, at the Instituto Nacional de Musica. After trying his hand at composition for a time he definitely took up musicology and musical criticism. In 1932 he was appointed librarian of the Instituto Nacional de Musica and in 1934 he was called upon to found the official 'Revista Brasileira de Musica', which

he edited till 1941. He published his first books on Brazilian music in 1938, but since 1934 he had been publishing manuscripts of old Brazilian music which he had found during his duties as librarian. In 1939 the chair of folk-music studies at the Escola Nacional de Musica fell to him in competition. Since 1937 he had been professor of musical history at the Conservatorio Brasileiro de Musica, and in 1941 he was appointed technical inspector of the same institution. That same year he was invited by Panamerican Union to Washington, D.C., in a consultative capacity to the newly formed Music Division. He spent six months in the U.S.A. lecturing and attending congresses, and was commissioned by the Archives of American Folksong of Washington Congress Library to travel widely in Brazil with recording apparatus, copies of the discs to be deposited both in Washington and Rio de Janeiro. In 1943 he founded the Centro de Pesquisas Folclóricas at the Escola Nacional de Musica. He is a member of the American Musicological Society, of the Sociedad Folclórica de México, Academia Brasileira de Musica, etc. He is now Music Director of UNESCO.

N. F.

**CORREA, Henrique Carlos** (b. Lisbon, 1680, d. ?).

Portuguese composer. He was a brother of the military order of S. Tiago (St. James) and choirmaster at Coimbra. He died after 1747. His works include Responsorios, Lamentations, etc., a list of which is given by Vasconcellos ('Os musicos portugueses', p. 55).

J. B. T.

**CORREA, Manoel** (b. Lisbon, c. 1600; d. Saragossa, 1 Aug. 1653).

Portuguese composer. He was for a time *maestro de capilla* at Sigenza in Spain, and then passed to the Cathedral of La Seo at Saragossa, where he was especially valued for his *villancicos*. Pedrell ('Teatro lirico', III, 39) prints a *bailete*, and a large number of secular works by him for 3 and 4 voices are to be found in the manuscript 'Libro de tonos humanos' collected by Diego Pizarro (Madrid, Bibl. Nac. M. 1262). Four sacred works are in the Bibl. de Coro, Seville Cathedral.

J. B. T.

**CORREGGIO, Claudio da.** See MERULO, CLAUDIO.

**CORREGIDOR, DER** ('The Magistrate'). Opera in 4 acts by Hugo Wolf. Libretto by Rosa Mayreder, based on Pedro Antonio de Alarcón's story 'El sombrero de tres picos'. Produced Mannheim, 7 June 1896. 1st perf. abroad, Prague (in German), 8 Apr. 1899. 1st perf. in London, R.A.M. (trans. by Geoffrey Dunn), 13 July 1934.

**CORREIA, Arminda** (b. Lagos, 26 Dec. 1903).

Portuguese soprano singer. She studied at the Lisbon Conservatory and in 1936 was appointed teacher of singing at the Instituto

de Musica de Coimbra. She has taken part in numerous concerts, in Portugal and abroad, as for example during the "Semana Portuguesa" in London, and was in Paris in 1943 with a State scholarship. She is remarkable for her technique, enunciation and vocal quality, which have made her a qualified song interpreter and a specialist in Portuguese folk-song.

J. J. C.

**CORRENTE** (Ital.). See **COURANTE**.

**CORRETTE, Michel** (b. Saint-Germain, ?; d. ?).

French 18th-century organist and composer. In 1738 he was organist at the Jesuit College in Paris and afterwards to the Duc d'Angoulême. He composed masses, motets, pieces for the harpsichord, organ, violin, hurdy-gurdy, flute, musette, etc. He also wrote valuable tutors for the voice and all the principal instruments, and compiled an important collection of old violin music, 'L'Art de se perfectionner dans le violon'. In the catalogue of his works given on p. 4 of his 'Maître de clavecin' (1753) is mentioned a 'Méthode pour la harpe'.

Corrette contributed airs to several pieces performed at the annual fairs held in the Faubourgs Saint-Germain and Saint-Laurent, such as 'La Fausse Égyptienne' (30 June 1733), 'Le Père rival' (24 Mar. 1734), 'La Fête infernale' (4 Aug. 1737), etc.

E. v. d. s., adds.

See also Milhaud (Suite on themes, transcriptions, list).

**CORRI** Italian, later English family of musicians, some also music publishers.

(1) **Domenico Corri** (b. Rome, 4 Oct. 1746; d. London, 22 May 1825), singing-master, composer and publisher. He studied under Porpora at Naples from 1763 till the latter's death. In 1770 he brought out a comic opera at the small Teatro della Pace in Rome, called 'La raminga fedele', and the year after he was invited to Edinburgh to conduct the concerts of the Musical Society. He settled there and published in 1772 a small oblong quarto, 'Six Canzones dedicated to the Scots Ladies'. He quickly made a reputation as a singing-master and concert promoter, and became the proprietor of some recreation and concert gardens near Edinburgh. He brought out his opera 'Alessandro nell'Indie' in London in 1774 and engaged in theatrical speculations at Edinburgh, taking the Theatre Royal. There he produced on 17 Dec. 1778 Dibdin's 'The Wives Revenged' with music of his own. But the enterprise failed, and in 1779 Corri was "sequestered". The business as music publisher he had started about that time was from 1780 onwards carried on under the name of his son, John Corri, probably on account of his monetary difficulties. He or his son went into partnership with James Sutherland, and they opened a shop at 37 North Bridge in 1783.

Before the death of Sutherland in 1790 Corri removed to London and established himself as a music-seller and publisher at 67 Dean Street, Soho. His daughter Sophia having, in 1792, married Dussek, the latter went into partnership with his father-in-law, and as Corri, Dussek & Co. the firm made great advances, taking additional premises at 28 Haymarket. But in 1800 the firm got into financial difficulties, and Dussek fled to the Continent to avoid his creditors. In 1802 and for a couple of years afterwards D. Corri kept on the Haymarket business alone, until his son Montague took it over. (Its further history is told below.)

In 1802 Corri wrote part of the music for Thomas Dibdin's 'The Cabinet'. His opera 'The Travellers, or Music's Fascination' was produced at Drury Lane Theatre on 22 Jan. 1806. He also wrote music for D. Lawler's 'In and Out of Town' and for revivals of Colman's 'Inkle and Yarico' and Garrick's 'Lilliput', also a large number of songs as well as sonatas and rondos, and four theoretical works: 'A Complete Musical Grammar' (c. 1787), 'A Musical Dictionary' (1798), 'The Art of Fingering' (1799) and 'The Singer's Preceptor' (1810).

See also Kemp (J., collab. in 'Siege of Isca').

(2) **Natale Corri** (b. Rome, 1765; d. Edinburgh, 1822), music publisher, brother of the preceding. It is not known when he left Italy for Britain; probably not with Domenico in 1771, since he then was only six. It is more likely that he was called to Edinburgh by his brother when the latter removed to London in 1790. The Scottish business was carried on as Corri & Co. and a shop was opened at 8 South St. Andrew Street, in addition to that in the North Bridge. The two firms issued quantities of all classes of music, including many Scottish dances and vocal pieces as well as works by Dussek and D. Corri, and some by Haydn. The Edinburgh Corri & Co. came to grief at the same time as the London firm, and Natale Corri set up for himself, his last address (from c. 1805) being at the head of Leith Walk, the business ceasing at his death in 1822. He also wrote some vocal music, e.g. an 'Ave Maria', words by Walter Scott, etc.

(3) **John** (? orig. **Giovanni**) **Corri** (b. Italy, ?; d. ?), music publisher, son of Domenico (1). He was the eldest son, and must have been born in Italy, for his father had been in Scotland no more than nine years when John was called upon to give his name to the firm of Corri in 1780.

(4) **Sophia Giustina Corri** (b. Edinburgh, 1 May 1775; d. ? after 1828), singer, pianist, harpist and composer, sister of the preceding. She was taught by her father, Domenico (1), and at a very early age performed in public on the pianoforte. After the family's removal to

London she appeared as a singer with great success, and in 1792 she married Dussek, under whose instruction she became as able a pianist and harpist as she was a singer. She continued to sing in public, at her husband's concerts until his departure in 1800, and elsewhere. After his death, in 1812, she married the viola player John Alvis Moralt. She composed and published many pianoforte and harp pieces. She taught her own accomplishments to her daughter Olivia.

See also Dussek (J. L.) Dussek (Olivia)

(5) **Montague Corri** (b. Edinburgh, 1784; d. London, 19 Sept. 1849), music publisher, brother of the preceding. He took over his father's business in London in 1804, continuing in the Haymarket under the style of M. P. Corri & Co.; but in 1805 it stood M. P. Corri, Hall & Co. and in 1806 became Corri, Pearce & Co. The name of Corri entirely dropped out in 1808, while Pearce & Co., after having spent some little time at 28 Haymarket, removed to 70 Dean Street and ultimately to 24 Panton Street off the Haymarket.

Montague Corri wrote music for numerous plays, such as 'The Mystic Coffin', 'The Hag of the Lake' and 'The Devil's Bridge' (all 1812), the pantomime 'The Valley of Diamonds' (1814), etc.; also many songs and dances.

(6) **Haydn Corri** (b. Edinburgh, 1785; d. Dublin, 19 [?] Feb. 1860), pianist and organist, brother of the preceding. He was taught by his father, Domenico (1), and settled in Dublin as pianoforte teacher in 1821. From 1827 to 1848 he was organist and choirmaster of the R.C. pro-cathedral there. He wrote a number of songs.

(7) **Philip Anthony Corri** (b. ? Edinburgh, ?; d. America, ?), brother of the preceding. He was a composer of instrumental music and one of the original promoters of the Philharmonic Society in London and finally settled in America. Among his works was a pf. Sonata on the death of his brother-in-law, Dussek.

(8) **Corri-Paltoni, Frances** (b. Edinburgh, 1801, d. ?), mezzo-soprano singer, daughter of (2). In 1815 and 1816 she studied under Angelica Catalani. She sang in London (1820), in Germany, in Italy, where she married Paltoni, a singer, in Madrid (1827) and with Lablache at Milan (1828). In 1830 she returned to Germany. Her voice was of fine quality and she had a brilliant shake.

(9) **Patrick Anthony Corri** (b. Dublin, 1820; d. Bradford, 1 June 1876), singer and conductor, son of Haydn Corri (6).

(10) **Henry Corri** (b. Dublin, 1822; d. Philadelphia, 28 Feb. 1888), singer and conductor, son of Haydn Corri (6).

(11) **Haydn Corri, jun.** (b. ?, 1842; d. ?, 19 Dec. 1877), baritone singer, brother of the preceding.

(12) **Ghita Corri** (b. ?; d. ?), soprano singer, daughter of Henry Corri (9). She was a member of the Carl Rosa Opera Company and married the playwright Richard Neville Lynn in 1899. She also composed songs.

(13) **Charles Corri** (b. London, 22 June 1861, d. London, 8 June 1941), conductor, son of William Charles Montague Corri. He was for many years conductor of the opera at the Old Vic. Theatre in London.

See also Old Vic. Sadler's Wells.

Further members of the family were Fanny Corri (1801-?), mezzo-soprano, daughter of Natale Corri (2), a pupil of Braham and wife of Paltoni, whom she married in 1821; Rosalie Corri (1803-?), soprano, sister of the preceding; Clarence Collingwood Corri, composer of the operettas 'The Dandy Fifth' (1898) and 'In Gay Piccadilly' (1901); and William Corri, sen. and jun., both composers of songs.

**CORSELLI, Francesco** (b. Parma, ?; d. ? Madrid, ?).

Italian composer. He settled in Spain about 1730 and on 4 July 1738 succeeded José Torres as *maestro compositor de cámara* to Charles III. He composed an opera to Spanish words, 'La cautela en la amistad y robo de las Sabinas', performed at Madrid in 1735, and several Italian operas and serenatas for court festivities at the palace of Buen Retiro ('Alessandro nell' Indie', 1738, 'Achille in Sciro', 1744, etc.). The scores of these seem to have been lost — unless they are, unrecorded, in Spanish libraries — but an oratorio, 'Santa Clotilda', is (or was) extant at Leipzig. The B.M. has the libretto of 'L' asilo d' amore' (Buen Retiro, 8 Apr. 1750); it does not contain the composer's name, but according to Cotarelo y Mori<sup>1</sup> the music was by Corselli. A. L.

See also Corradini (collab. in 'Polifemo').

**CORSI, Jacopo** (b. ? Florence, c. 1560; d. Florence, 1604).

Italian musical amateur and patron. He was a nobleman whose Florentine palace is to be regarded as the birthplace of opera. The 'Dafne' of Peri (1597), and Peri's 'Euridice' (1600), were first performed in his house, Corsi himself playing the harpsichord.<sup>2</sup> Corsi had also some part in the composition of 'Dafne', and his setting of some of the songs is the only

<sup>1</sup> 'Orígenes y establecimiento de la ópera en España hasta 1800' (Madrid, 1917). Emilio Cotarelo y Mori was the greatest authority on the history of the theatre in Spain. Unfortunately he died (in 1936) with his standard history of the *zarzuela* left unfinished.

<sup>2</sup> See Vogel, 'Bibliographie der weltlichen Musik Italiens', s.v. Peri.

fragment that has been preserved of that work. They are in the library of the Brussels Conservatoire (MS 8450), and were published by Hortense Panum in the 'Musikalisches Wochenblatt', 1888, p. 347. J. A. F.-M.

See also Caccini (G.). Camerata.

**CORTE, Andrea della.** See DELLA CORTE.

**CORTECCIA, Francesco di Bernardo** (b. Arezzo, July 1504; d. Florence, 7 June 1571).

Italian organist and composer. In 1531 he was organist of the church of San Lorenzo at Florence and in 1539 *maestro di cappella* to Cosimo I de' Medici there; also a canon of San Lorenzo. His compositions include nine pieces for 4, 6 and 8 voices with various instruments, in a rare work called 'Musiche fatte nelle nozze . . .' (Venice, Gardano, 1539), a continuous series, part of a performance in honour of the marriage of his patron; 'Madriali [sic] a quattro voci', lib. 1 and 2 (*ibid.*, 1544 and 1547); 'Primo libro de' madriali a 5 e 6 voci' (*ibid.*, 1547); 'Responsoria et lectiones hebdomadae [s]anctae' (*ibid.*, 1570); 'Residuum cantice Zachariae' a 4 (apparently forming part of the 'Responsoria' (*ibid.*, 1570); and 'Canticorum liber primus' a 5 (*ibid.*, 1571), published a few months after his death.

The library of San Lorenzo also contains 32 hymns in 4-part counterpoint Corteccia, with Striggio, composed music for Cini's intermezzo 'Psiche ed Amore' for the marriage of Francesco de' Medici and Joanna of Austria in 1565. Two four-part madrigals, and an extract from the 'Responsoria' are given in Torchi's 'Arte musicale in Italia', Vol. I.

**CORTELLINI, Camillo** (b. ?; d. ?).

Italian 16th–17th-century composer. He was in the service of the municipality of Bologna from about 1583. From his proficiency on the violin he went by the name of Il Violino.

Vincenti of Venice published several volumes of Cortellini's works, consisting of Psalms (1595, etc.), Litanies (1615), Masses (1609, 1617, 1626) and other sacred pieces, and other printers at Ferrara and Bologna issued three books of madrigals in 1583, 1584 and 1586. The preface to one of these volumes, 'Messe concertate a otto voci' (1626), is interesting because it gives a hint of the manner in which in those times the instrumental and vocal parts were combined in church music:

La Messa in Domino confido ha la Gloria concertata; e dove saranno le lettere grandi, il cantore canterà solo; e dove saranno le linee, i tromboni e altri simili strumenti soneranno soli.

E. H. P.

**CORTESE, Luigi** (b. Genoa, 19 Nov. 1899).

Italian pianist, lecturer and composer. He studied music simultaneously with the classics and science, taking a diploma in pianoforte playing at the Liceo Musicale di Bologna and a laureate in mathematics at the University of Genoa. Later he studied composition under Casella in Rome and Gédalge in Paris. Apart from his activity as composer he follows the careers of a pianist, a music critic, a lecturer and a concert organizer — thus last particularly at Genoa, where he was artistic director of the Società Filarmonica.

Among Cortese's numerous compositions may be mentioned the 3-act opera 'Prometeo' (after Aeschylus), performed at Bergamo on 22 Sept. 1951, from which he extracted a concert suite; the oratorio 'David' for solo voices, chorus and orchestra (1936–38), 'Canto notturno' (1940) and 'Suite d'Entrèves' (1947) for orchestra; 'Deux Odes de Ronsard' for soprano and orchestra (1948); Psalm VIII for voice, flute, cello and pianoforte (1948); Sonatina for violin and pianoforte (1932); pianoforte pieces, numerous songs. He has also written music for documentary films.

As a critic Cortese has contributed articles on modern music and musicians to various periodicals and journals, published a monograph on Alfredo Casella (Genoa, 1935), a guide to Ravel's 'Bolero' and translations of foreign monographs.

**Cortesi, Lodovico.** See Tenaglia ('Clearco', lib.).

**CORTEVIL.** See COURTEVILLE.

**CORTHOL.** One of the old English names for the bassoon, a variant of "curtall" or "curtal".

**CORTI, Mario** (b. Guastalla, Reggio Emilia, 9 Jan. 1882).

Italian violinist. He studied first under his father, Angelo Corti, and afterwards at the Liceo Musicale di Bologna, where Massarenti taught him the violin and Martucci and Bossi composition. He became violin professor at the Parma Conservatory (1906–13); in 1914–15 he taught at the Scharwenka Conservatory in Berlin, and from Oct. 1915 at the Conservatorio di Santa Cecilia in Rome. As a concert artist he appeared both as soloist and as member of the Mugellini Quintet (1906). From 1940 to 1944 he was manager of the Teatro della Fenice at Venice and in 1947 he was appointed technical adviser by the Istituzione dei Concerti dell' Accademia di Santa Cecilia in Rome. He published editions and transcriptions of Italian 17th-century works for violin ('Classici violinistici italiani').

G. M. G.

**CORTOT, Alfred** (b. Nyon, Switzerland, 26 Sept. 1877).

French conductor and pianist. His parents were of French nationality. He was taken to

Paris as a child and received his first pianoforte lessons from his sisters. He was admitted to the Conservatoire and became a pupil successively of Decombes (one of the last of Chopin's disciples) and of Diémer, in whose class he obtained in 1896 a brilliant *premier prix*. He became known immediately at the Colonne and Lamoureux concerts as a remarkable interpreter of Beethoven's concertos and began his triumphal tours through Europe. He then became an assistant conductor at Bayreuth, where he was especially in touch with Felix Mottl and Hans Richter. On his return to Paris in 1902 he founded La Société de Festival Lyrique and made his début at the age of twenty-four as conductor and theatrical director by giving the first performance in Paris of 'Götterdämmerung' and some admirable productions of 'Tristan', unforgettable remembrances for the artists who took part in the performances.

In 1903 Cortot founded a concert society and gave important choral works, being responsible for the first performance in Paris of 'Parsifal', Liszt's 'St. Elizabeth', Brahms's Requiem, Beethoven's Mass in D and unpublished works by Magnard, Roussel, Chausson, Ladmirault, side by side with well-known ones by Chabrier and d'Indy. In the following year Cortot undertook the direction of the orchestral concerts given by La Société Nationale, and introduced a great number of unpublished works by composers of the young French school. He was also engaged by the Société des Concerts Populaires of Lille to conduct their orchestral concerts, which gave to the town four seasons of great artistic activity.

In 1905 Cortot founded, with Jacques Thibaud and Pau Casals, a trio which gained international fame. In 1917 he succeeded Raoul Pugno as professor in the highest pianoforte class at the Paris Conservatoire, where he taught with the greatest success; but he retired in 1920 to fulfil his many engagements in the U.S.A. and in England; Lazare Lévy succeeded him.

Cortot excels in the interpretation of music of the romantic and modern schools; he has amazing gifts as a pianist, and whether he is conducting or sitting at the pianoforte he uses his gifts with an equal mastery. While he commands impetuosity and force, he possesses no less delicacy, accuracy and above all a penetrating sensibility which charms and holds his hearers.

Cortot edited Chopin's Studies, Preludes and Ballades in 4 volumes, with valuable annotations, and wrote several books on musical appreciation and technique, with special reference to the science of pianoforte playing. The most important of these is 'La Musique française de piano' (2 vols., 1930 and 1932), translated into English as 'French

Piano Music' by Hilda Andrews (Oxford, 1932). The first volume is devoted to the pianoforte works of Debussy, Franck, Fauré, Chabrier and Dukas, the second to those of Saint-Saëns, d'Indy, Ravel, Florent Schmitt and Dédot de Séverac. They form an outstanding contribution to the literature of pianoforte playing.

Another important work is Cortot's 'Cours d'interprétation', set down by Jeanne Thieffry, in 2 volumes. This has also been translated into English, by Robert Jacques, as 'Alfred Cortot's Studies in Musical Appreciation' (1937).

Cortot is also the author of 'Principes rationnels de la technique pianistique' (1928), and in 1936 he published the first part of a catalogue of his library under the title 'Bibliothèque Alfred Cortot: Théorie de la musique. Catalogue illustré de traités et autres ouvrages théoriques des XV<sup>e</sup>, XVI<sup>e</sup>, XVII<sup>e</sup> et XVIII<sup>e</sup> siècles'. F. R. (ii).

**COSENS, Benjamin.** See COSYN.

**COSÌ FAN TUTTE, OSSIA LA SCUOLA DEGLI AMANTI** ('Thus do all Women, or The School for Lovers'). Opera in 2 acts by Mozart. Libretto by Lorenzo da Ponte. Produced Vienna, 26 Jan. 1790. 1st perf. abroad, Prague (in Italian), 1791, or Frankfort o/M. (trans. as 'Liebe und Versuchung' by H. G. Schmieder and C. D. Stegmann), 1 May 1791. 1st in England, London, Haymarket Theatre (in Italian), 9 May 1811. 1st in U.S.A., New York, Metropolitan Opera (in Italian), 24 Mar. 1922.

**COSIN, Benjamin and John.** See COSYN.

**Cossa, Pietro.** See Mancinelli (intermezzi for 'Messalina'). Mascagni ('Nerone', opera). Sgambati ('Cola di Rienzi', overture).

**COSSMANN, Bernhard** (b. Dessau, 17 May 1822; d. Frankfort o/M., 7 May 1910).

German violoncellist. He was the son of a Jewish merchant. His first instructors were Espenhahn and Karl Drechsler at Dessau, Theodor Muller at Brunswick and Kummer at Dresden. After completing his studies Cossmann went to Paris in 1840, where he played in the orchestra of the Opéra, and thence to London (1841), in the palmy days of Italian opera. In 1843 he was an acknowledged master of his instrument in Germany. Mendelssohn secured him in 1847 for the Gewandhaus concerts at Leipzig, and he utilized his stay

there by studying under Hauptmann. His appointment as first cello under Liszt at Weimar, in 1850, exercised an important influence on his career. He had a considerable share with Joachim, and also with Bülow and Tausig, in the movement which took place under Liszt's leadership.

In 1866 Cossmann became professor at the Moscow Conservatory, where he worked with Laub and Nicolas Rubinstein until his return to Germany in 1870. He lived without any fixed appointment at Baden-Baden in 1870-78, when he became professor at the Hoch Conservatory of Frankfurt. Cossmann was a great soloist and an excellent chamber musician, above all in quartets.

A. M.

**COSSONI, Carlo Donato** (b. Milan, ? , d. Gravedona, 8 Feb. 1700).

Italian organist and composer. He was a priest and first organist at San Petronio, Bologna, c. 1660-71. In 1689 he was *maestro di cappella* at Milan Cathedral. He composed a large amount of church music of all kinds, as well as a book of secular canzonets. His manuscript compositions he bequeathed to the monastery of Einsiedeln in Switzerland.

E. v. d. s.

**COSTA, Affonso Vaz da** (b. Lisbon, ? , d. Avila, 1610 or 1599).

Portuguese composer. He studied in Rome and afterwards went to Spain, where he held appointments at Badajoz and Avila. His works, which included secular music as well as sacred, have not been preserved.

J. B. T.

**COSTA, André de** (b. ? ; d. ?).

Portuguese 18th-century composer. He wrote chamber cantatas, preserved in Bibl. Nac., Lisbon (Pombal MSS, 82), one of which is dated 1708. He is said to have been a member of the Brotherhood of Santa Cecilia at Lisbon, for which he composed 'Vilhanicos' in 1721-22.

The Costa e Faria mentioned by Vasconcellos in 'Os musicos portugueses' as a composer of pastoral operas ('Fabula de Alfeo y Aretusa', 1712; 'Poder de la harmonia', 1713) is in fact the librettist of these Spanish *zarzuelas* performed at the Portuguese court: Luis Calisto de Acosta y Faria. A copy of the second libretto is in the B.M. and gives the composer's name, Jayme de la Te y Sagau.

J. B. T., adds. A. L.

**COSTA, Andrea** (b. Brescia, ? ; d. ?).

Italian 19th-century singing-master. He settled in London in 1825, where he published a method entitled 'Analytical Considerations on the Art of Singing' in 1898.

M. C. C.

**COSTA, Antonio da (Abade)** (b. prob. Oporto, 1714; d. Vienna, c. 1780).

Portuguese guitarist and composer. Although he took holy orders, he was a singular and romantic personality, and for reasons which still remain a mystery fled his native

country in somewhat picaresque fashion towards the end of 1749. He crossed Spain with some difficulty, lived in Rome and Venice for a few years, visited Paris and ended up in Vienna. It was there that he met Burney, who refers to him<sup>1</sup> in terms of the warmest admiration and friendship, presenting him as "a kind of Rousseau, but still more original".

Costa was a person of austere character, very independent, somewhat misanthropic and extravagant, always poor but honest. Burney makes very appreciative references to his talents as a composer and guitar player, but none of his works has come down to us. His principal interest for posterity lies in his 'Cartas', written from Rome, Venice and Vienna to various personalities residing at Oporto. Only thirteen of these letters are known: they were published for the first time in 1878 and re-edited in 1946 by the author of this article. As well as matter of biographical and psychological interest they contain valuable references to music in Rome, for Costa speaks of instrumental music, of opera and of Italian singers with remarkable critical insight.

F. L. G.

BIBL.—COSTA, ANTONIO DA, 'Cartas do Abade Antonio de Costa', ed. by Fernando Lopes Graça (Lisbon, 1946) LIVERMORE, ANN, 'The Abade Antonio da Costa' (M. & L., XXVI, 1945, p. 162), with translated extracts from the letters.

**COSTA, Michele Andrea Agniello** ([Sir] Michael [Andrew Agnus])<sup>2</sup> (b. Naples, 4 Feb. 1808; d. Hove, 29 Apr. 1884).

English (naturalized) conductor and composer of Italian birth. He was a pupil of his father, Pasquale Costa (a church composer of Spanish descent, and himself a pupil of Leonardo Leo), and of Furno, Tritto (his maternal grandfather) and Zingarelli; he also had singing lessons from Crescentini.

At the age of fifteen he wrote a cantata for the theatre of the Naples Conservatory, entitled 'L' imagine'. In 1826 he composed for the same theatre an opera called 'Il delitto punito' and in 1827 another, 'Il sospetto funesto'. He also composed at this period a

<sup>1</sup> 'The Present State of Music in Germany, the Netherlands and the United Provinces', I, 260, 287, 292, 324, 367.

<sup>2</sup> These names are confirmed by a declaration as to the date of his birth, made in London at the Bow Street Police Court in June 1847 by his brother, Raphael Costa; also in the recommendation paper for admission into the Royal Society of Musicians, in July of the same year. The second document is signed Michael Andrew Agnus Costa, but with evident uncertainty as to the order of the second and third names. In both documents the date of his birth is given as 4 Feb. 1808. Both are quoted in Mus. T. for 1897, p. 306, where the third name is incorrectly given as "Angus". The date 1810 for the year of birth, given in the first edition of this Dictionary, rests upon the testimony of Costa himself and is confirmed by the register of deaths at Somerset House. The earlier date is most probably the correct one as it is confirmed by both the brothers, and occurs in both the official documents mentioned above; and most men would be less likely to err in such a date at the age of thirty-seven or thirty-nine than at the age of sixty-seven or sixty-nine.

Mass for 4 voices, a 'Dixit Dominus', three symphonies and an oratorio, 'La Passione'. In 1828 Costa was engaged by the manager of the Teatro Nuovo to write an *opera semi-seria*, called 'Il carcere d' Ildegonda', and in 1829 he composed 'Malvina', an opera, for Barbaia, the impresario of the Teatro San Carlo. In the autumn of that year Zingarelli sent him to Birmingham to direct a cantata of his composition. On the young Costa's arrival, through some misunderstanding, he was obliged, having a fair tenor voice, to sing in the cantata instead of directing the music.

From that time dates Costa's success in England, where he settled for life. In 1830 he was engaged by Laporte as *maestro al piano* at the King's Theatre in London. The next year he composed the music of the grand ballet 'Kenilworth'. In 1832 Monck Mason, then impresario, engaged him as director of the music; and in that capacity he wrote the ballet 'Une Heure à Naples', and several other pieces for operas and concert-rooms. In 1833, engaged by Laporte as director and conductor, he composed the ballet 'Sir Huon' for Taglioni, and the favourite quartet 'Ecco quel fiero istante'. At the invitation of Severini, the impresario of the Italian Opera in Paris, he wrote the opera 'Malek Adel', incorporating portions of the 'Malvina' of 1829, which was performed there on 14 Jan. 1837.

In 1842 Costa composed the ballet music of 'Alma' for Cerrito and in 1844 the opera 'Don Carlos'. In 1846 he quitted the Opera, and the orchestra, which he had brought to a point of perfection previously unknown in England, passed into other hands. In that year Costa undertook the direction of the Philharmonic orchestra and that of the new Italian Opera, Covent Garden, and in 1848 that of the Sacred Harmonic Society. In 1849 he was engaged for the Birmingham Festival, which he conducted until 1882. With the season of 1854 he gave up the baton of the Philharmonic and was succeeded (for one year) by Wagner. In 1855 he composed his oratorio 'Eli' for the Birmingham Festival. He conducted the Bradford Festival in 1853 and the Leeds Festival in 1874; and as conductor of the Sacred Harmonic Society he directed the Handel Festivals from 1857 to 1880. Besides other occasional compositions his second oratorio, 'Naaman', was also written for Birmingham, in 1864. In 1869 he was knighted and in 1871 he was appointed "director of the music, composer and conductor" at Her Majesty's Opera.

J. M., abr.

See also Additional Accompaniments.

**COSTANTINI, Alessandro.** See below.

**COSTANTINI, Fabio** (b. Rome, c. 1570; d. ?).

Italian composer. He was *maestro di cappella*

to the Confraternity of the Rosary at Ancona, and afterwards at the Cathedral of Orvieto, where he was in 1614; in 1616 he was at the Basilica Santa Maria at Tivoli and in 1618 again at Orvieto.

His compositions include motets for 2, 3 and 4 voices (Rome, 1596). He also published 'Selectae cantiones excellentissimorum auctorum' (Rome, 1614), a collection of 29 8-part motets by Palestrina, the Nanini, the Anerio, Marenzio, Lucatello, Giovannelli and others besides himself; another set of motets by different composers in 1618, a collection of airs and madrigals called 'Ghirlandetta amorosa' (Orvieto, 1612) and another, 'L' Aurata Cuntia', in 1622. All these contain compositions of his own and by his brother, Alessandro, who succeeded Frescobaldi at St Peter's in Rome in 1643.

M. C. G.

**COSTANZA E FORTEZZA** (Opera). See Fux.

**COSTANZI, Giovanni Battista** (b. Rome, 3 Sept. 1704; d. Rome, 5 Mar. 1778).

Italian composer and violoncellist. He was in the service of Cardinal Pietro Ottoboni from 1724 to 1740, and after the death of his protector became chapel master at Loreto and later at various Roman churches. "Giovannini del Violoncello", as he was nicknamed, was one of the favourite church composers in Rome, as Grétry testifies in his 'Mémoires'. He wrote many oratorios (the first of which was 'Santa Cecilia', 1725), masses, psalms, motets and other church music, numerous cantatas for festivals and anniversaries and about a dozen operas, of which 'Carlo Magno' (1729) was notable for its splendour of production.<sup>1</sup> It was staged at the Palazzo Ottoboni in celebration of the birth of the Dauphin Louis, son of Louis XV. Three airs from another opera 'Rosmene' (Rome, Teatro della Pace, 1729) are preserved at the Fitzwilliam Museum, Cambridge. Costanzi also wrote some sonatas for his instrument; one of them was published and some others are extant in manuscript, as are also one cantata (B.M.), one oratorio ('San Pietro Alessandrino', 1746) and various pieces of church music.

A. L.

**COSTE, Gaspard** (b. ?; d. ?).

French 16th-century singer and composer. He was a chorister in the Cathedral of Avignon about 1530 and a composer of songs and madrigals. Some of these are preserved in the following collections:

<sup>1</sup> 'Motetti del fiore' (Lyons, Jacques Moderne, 1532-39).  
<sup>2</sup> 'Trente-cinq Livres de chansons à quatre parties' (Paris, Attaignant, 1539-49).

<sup>3</sup> 'Le Faraggon des chansons' (Lyons, Moderne, 1540-43).  
<sup>4</sup> 'Sdegnoti ardori': musica di diversi autori sopra un istesso soggetto di parole' (Munich, 1575).

<sup>1</sup> The frontispiece of the libretto shows the orchestra pit with two cembalists (one of them, with very distinct features, possibly a portrait of Costanzi) and ten other players.

The madrigals by one Gasparo Costa in the 'Ghirlanda di fioretti musicale' (Rome, 1589) may or may not be attributable to the same person.

M. C. C.

**COSTELEY (Costello), Guillaume** (b. ? Pont-Audemer, Normandy, 1531; d. Évreux, 1 Feb. 1606).

French organist and composer. He was organist to Henri II and to Charles IX. In 1567 Le Roy and Ballard of Paris published songs of his in their 'Chansons à 4 et 5 parties'; also a set of chansons called 'Musique de Guillaume Costeley, Organiste ordinaire et vallet de chambre du . . . Roy'.

Costeley was a member of the society established in 1571 or 1573 in honour of Saint Cecilia, and its first president. The society established a musical contest at Évreux at which, in 1575, Lassus carried off the first prize, a silver organ. Costeley sometimes entertained the members, who came long distances to take part in the *puy*, as the competition was called, in his own house.

The chansons were republished in 1896, edited by Henri Expert. Some pieces by Costeley are in the library at Orleans ('Recueil des plus beaux ouvrages de musique d'Orlande Reynard et Costeley').

Conway, Richard. See Allegretti (portrait)

**COSYN (Cosin, Cosens), Benjamin** (b. ?; d. ?)

English 16th-17th-century organist and composer. He was organist of Dulwich College from 1622 to 1624. In 1626 he was employed at the Charterhouse, but in 1643, "the organs being prohibited", he was discharged by the governors. His "poverty, old age and imperfections of body" being taken into consideration, however, he was allowed a yearly pension of £13:6:8. There is an imperfect copy of a Litany by him at Peterhouse, Cambridge, but he is chiefly remembered as the collector of the pieces in 'Benjamin Cosyn's Virginal Book', which also includes many of his own compositions. This is in the Roy. Lib. B.M. and was edited (1923)

<sup>1</sup> In the first edition, following Fétis, de Costeley, whose name may indeed be English, was described as of Scottish origin. In the fourth Dr. W. H. Grattan Flood asserted that he was of Irish descent, and in Mus. T. (Sept. 1944) Dr. Henry G. Farmer stated that he had found some Scots in the Chapel Royal of Scotland named Costelan, which he thought strengthened the Scottish claim. But it had already been proved conclusively enough by Maurice Cauchie that neither claim rests on a solid foundation.

by J. A. Fuller-Maitland and W. Barclay Squire. From their preface some of the above autobiographical details have been taken.

J. M. (ii).

BIBL.—Mus. T., 1903, pp. 780-81.

See also Virginal Music.

**COSYN (Cosin), John** (b. ?; d. ?).

English 16th-century composer. He published in 1585 'Musike of six and five partes. Made upon the common tunes used in singing of the Psalmes'. This is an arrangement in plain counterpoint of 60 psalm tunes taken chiefly from those already printed in John Day's Psalter (1569).

J. M. (ii).

**COTAPOS, Acario** (b. Valdivia, Chile, 30 Apr. 1889).

Chilean composer. He was self-taught in U.S.A., lived in Europe during the first world war and subsequently produced, in New York in 1918, his first work for solo voice and chamber orchestra. In 1925, also in New York, he produced a work to words by Maurice Barrès for baritone and 28 solo instruments. In 1928 his pianoforte 'Sonata fantasia' was given at the Salle Gaveau in Paris, and in the same city, in 1930, he produced his 'Cuatro preludios sinfónicos'. In 1934 a Suite from his opera 'Voces de Gesta' was produced by Arbós in Spain. On the occasion of the first centenary of the University of Chile his poem for voice and orchestra 'Los invasores' was awarded a prize. Albert Wolff has conducted works of his in Buenos Aires and Paris.

N. F.

**COTILLON** (Fr, lit. petticoat). Originally a simple French dance of the age of Louis XIV which, according to some authors, resembled the branle, but, according to others, was a variety of quadrille. The modern cotillon is simply a species of quick waltz, of great length and elaborate contrivances, but with no special music: for the different varieties of it waltzes, polkas, mazurkas and galops are employed.

E. P.

**COTOGLI, Antonio** (b. Rome, 1 Aug. 1831; d. ? 15 Oct. 1918).

Italian baritone singer. After earning a high reputation in his native country, he visited London in his prime, appearing first at Covent Garden in 1867. He remained faithful to that theatre, and his career lasted so long that on the night of Melba's début in Donizetti's 'Lucia' in 1888 he was the Henry Ashton. His repertory was very wide, embracing nearly all the operas regularly played at Covent Garden. He was in every way a first-rate artist, but his fine voice—very telling and resonant—had not quite the beauty of timbre of Graziani's. When his singing days were over he settled down at Naples as a teacher and enjoyed great popularity. To his endless patience in placing the voice his pupil Dinh Gilly bore testimony.

S. H. P.

**COTREUIL, Édouard** (b. Paris, 1874).

French bass singer. He studied at the Paris Conservatoire and made his début at the Théâtre de la Monnaie, Brussels. On his first London appearance at Covent Garden, in 1904, he sang Vulcan in Gounod's 'Phlémon et Baucis'; in 1919 created there the part of Don Inigo Gomez in Ravel's 'L'Heure espagnole', which he sang and acted with notable point and skill.

Cotreuil was admirable also in Italian opera, in the London repertory of which he regularly took part. His Don Basilio (Rossini) was a first-rate comic character study and excellently sung. H. K., adds.

**COTTA, Johannes** (b. Ruhla, Thuringia, 24 May 1794; d. Willersdorf, 18 Mar. 1868).

German musician. He is worthy of mention as composer of the spirited music for four male voices to Arndt's patriotic song, which electrified Germany at the time of the rising against Napoleon in 1813, beginning 'Was ist des Deutschen Vaterland?' The same song was skilfully set, but with undesirable complexity, by Gustav Reichardt in 1825. R. M.

**COTTAGE PIANO** (Fr. *piano droit*; Ger. and Ital. *pianino*). An upright pianoforte, usually about 4 ft. high, invented early in the 19th century, nearly at the same time as the cabinet piano, but less thought of for some years, until the more convenient height and better action of the lower instrument, combined with cheaper construction, found appreciation and brought about the displacement of the cabinet and the once familiar square.

To Robert Wornum the younger, whose patent (No. 3419) for an upright, with diagonal strings, was taken out in 1811, is due the invention and earliest manufacture of oblique and vertical cottage pianofortes in England. In the year 1815 Ignace Pleyel, founder of the house of Pleyel, Wolff et Cie, in Paris, employed Henri Pape, an ingenious mechanic, to organize the introduction of the construction of these instruments in Paris (Pape, 'Sur les inventions . . .', Paris, 1845), from which beginning arose the important manufacture of French cottage pianos. In Germany and America cottage pianos have not made much way. A. J. H.

**Cottin, Sophie**. See Donizetti ('Esilii in Siberia', opera). Poniatowski ('Malek Adel', opera).

**Cotton, Charles**. See Reizenstein ('Voices of Night', choral work).

**COTTON, John** (b. ?; d. ?).

English 11th-12th-century theorist. He is the author of a treatise on music, dating from the latter part of the 11th or the beginning of the 12th century. There exist six copies in manuscript at Leipzig, Paris, Antwerp, the Vatican Library in Rome and two in Vienna. A seventh copy, used by Gerbert, who pub-

lished the treatise in 1784, was destroyed in the fire at St. Blasien in 1768. In the Paris and Antwerp copies the authorship is ascribed to Cotton or Cottonius, two of the others bearing the title "Joannis Musica". Gerbert quotes an anonymous work ('De script eccles') in which reference is made to a learned English musician known as Joannes; and the dedication of the book, which runs "Domino et patri suo venerabili Anglorum antistiti Fulgentio", bears out the assumption that its author was English. It has been variously proposed to ascribe its authorship to Pope John XXII and to Joannes Scholasticus, a monk of the monastery of St. Matthias at Trier, but the above theory is probably correct. The treatise is valuable as explaining the harmonic system of the period in which it was written.

W. B. S.

BIBL.—HABERL, 'Jahrbuch' (1888).

**Cotton, John**. See Britten ('Serenade' for voice & orch).

**COTUMACCI (Contumacci), Carlo** (b. Naples, ?; d. Naples, 29 July 1785).

Italian organist and composer. He was a pupil of Alessandro Scarlatti at Naples, where he was appointed organist at the Santa Casa dell' Annunziata in 1749 with a salary of 30 ducats per month, and he retained that post in some capacity, by order of the governors, even after the church had been destroyed by fire. He was also a member of the Congregazione dei Musici di Napoli, which he entered in 1737. On the death of Durante in 1755 he succeeded him at the Conservatorio di Sant' Onofrio, where he taught until his own death. Schmidl appears to be justified in saying that he must have been born well after 1698, since he would have been still teaching at the age of eighty-seven, if that had been the date of his birth.

The library at Naples contains the autograph of a Requiem, a 5-8, four sacred songs, toccatas for harpsichord and a set of 'Partimenti'. He wrote 'Regole dell' accompagnamento' and 'Trattato di contrapunto', works which have remained in manuscript excepting some 'Partimenti', published by Choron in his 'Principes de composition des écoles d'Italie' (Paris, 1808). M. C. C.

**COUAC** (Fr. = "quack"). A sudden horrible noise to which any clarinet is liable when the reed is out of order and the wind not quite under control. Called also "the goose". (See a good story in Spohr, 'Selbstbiographie', I, 167.) G.

**COUCHED HARP**. An obsolete name for the Spinnet.

**COUCHET**. Flemish 17th-century family of harpsichord makers, settled at Antwerp.

(x) **Jan Couchet** (b. ?; d. Antwerp, c. 1 Apr. 1655), a nephew of Hans Ruckers, continued the traditions and even rose to the reputation of that famous house. He improved the

instrument considerably. The exact date of his birth is unknown, but his presence in his uncle's workshop at the age of sixteen is recorded. In 1642 he became a member of the St. Lucas Guild, and he is mentioned in the accounts of Antwerp Cathedral in 1646 as repairing and tuning the organs in succession to his uncle. The famous Dutch physicist and natural philosopher Constantijn Huyghens calls him "le célèbre Couchet" in a letter addressed to H. Du Mont, organist in Paris, and mentions his death in the same letter, dated 6 Apr. 1655.<sup>1</sup> He also writes that Chambonnières, "claviciniste de la Chambre du Roi" (Louis XIV), possessed an instrument made by Couchet. This was corroborated by H. Quittard<sup>2</sup>, who stated that the use of this harpsichord had a certain influence on Chambonnières's style. The Antwerp art-patron Gaspar Duarte gives technical details of the improvements made by Jan Couchet in harpsichord-making in a letter addressed to Huyghens preserved in the University of Leyden.<sup>3</sup> Couchet was buried in Antwerp Cathedral on 4 Apr. 1655. Presumably his widow continued the business with the help of her sons. The museum of old musical instruments at the Brussels Conservatoire possesses a harpsichord signed Jan Couchet.

(2) **P. E. Jan Couchet** (b. Antwerp, ?; d. ?), son of the preceding, became master of the St. Lucas Guild in 1655. At the auction of N. Seelhof at The Hague in 1759 two harpsichords by "P. E. Johannes Couchet, Antverpiae" are mentioned, one dated 1662.

(3) **Jozef Couchet** (b. Antwerp, ?; d. ?), brother of the preceding, became master of the St. Lucas Guild in 1666.

(4) **Abraham Couchet** (b. Antwerp, ?; d. ?), brother of the preceding, also became a member of that guild the same year.

**COULADE.** See **GOÛT DU CHANT**.

**COULÉ** (Fr.). See **ORNAMENTS**, A (i), (i) (a-b), (iii).

**COUNTER.** An English term of the 16th and 17th century for improvised variations on a given tune.

**COUNTER SUBJECT.** See **FUGUE**.

**COUNTERPOINT.** Whatever the origins of the term counterpoint may be, it means simply the horizontal aspect of music. More precisely it is used to describe music in which the chief interest lies in the various strands that make up the texture, and particularly

in the combination of these strands and their relationship to each other and to the texture as a whole. It is the antithesis and at the same time the complement of harmony (which concerns itself with the vertical aspect of music), the momentary result of the synthesis of strands at a given point and the relationship of such syntheses with others of a similar kind.

The history of counterpoint might well be studied as the history of the genesis, development and decline of tonality or of harmony founded upon a tonal basis; yet its main concern is with the combination of rhythmic strands out of which harmony and tonality developed. These strands are the result of the fusion of the two fundamental factors of music, rhythm and melodic line, from which grew the whole technical equipment of musical composition.

The art of counterpoint divides itself into two main phases: one, which may be called "linear counterpoint", wherein the horizontal aspect is completely or almost completely predominant; the other, "harmonic counterpoint", in which the vertical or synthetic aspect asserts itself in varying degree, and harmonic as well as melodic progression is involved. The first of these phases is strongly in evidence from the earliest days of polyphony to about the middle of the 16th century; then comes the gradual emergence and development of harmonic thinking and diatonic tonality, leading to the age of harmonic counterpoint typical of the "classical" and "romantic" schools; finally appear the experiments of composers in the first half of the 20th century in their endeavour to free themselves from the trammels of tonality and harmony based on the diatonic system, and a general turning back towards "linear" counterpoint.

The polyphonic era, in which the gradual change from purely linear to incipient harmonic counterpoint took place, is discussed at some length elsewhere<sup>4</sup>, and the theoretical implications of the change are considered there. No more need be said here of the technique of the 16th century and earlier periods, but it is essential that the reader should study the matter in order to appreciate the point of view from which later contrapuntal developments are considered in the present article.

**THE BACH-HANDEL PERIOD.**—Counterpoint of the period which found its fullest expression in the work of Bach and Handel is generally held to be of the harmonic type, firmly founded upon diatonic relationships both of chord and of key. This is a reasonably good generalization with certain reservations particularly in reference to Bach's style: (1) the diatonic scale system, though normally used and accepted, had not as yet entirely

<sup>1</sup> Letter No. 5336, published by J. A. Worp (Haarlem & The Hague, 1916).

by the introduction of chromatic notes, both harmonically and contrapuntally; (2) the linear view of counterpoint still survived in some measure, and it is by no means uncommon to find passages in which the horizontal aspect of the music rides roughshod over the proprieties of diatonic harmony.

The survival of modal influences may be seen in such technical matters as the authentic-plagal relationship of fugue subject and answer, the use of something very much akin to *musica ficta* in the melodic strands, and other traces of modal cadential formulae. It is in these and suchlike details rather than in the conscious use of any particular mode that the influence is apparent; in fact, when Bach is dealing with definitely modal material such as early chorales, he often shows little respect for the system and does his best to fit modal *canti fermi* into a diatonic mould. The extension of the scope of the diatonic scale by the inclusion of chromatic harmony and unessential notes was carried far, especially by Bach. It can be argued that this process arose from an endeavour to recapture some degree of the melodic and harmonic freedom made available by the use of *musica ficta* in the modes, and lost to a great extent in the change-over to the strict diatonic system. The matter is more fully discussed elsewhere.<sup>1</sup>

The linear element in Bach's counterpoint is more clearly discernible. The most obvious example of it is to be seen in his handling of two-part counterpoint, especially in such matters as his treatment of what is from the harmonic point of view the implied  $\frac{6}{4}$  chord. Such passages as the following (Ex. 1 *a*) are common in two-part writing, but implied  $\frac{6}{4}$ s are extremely rare in three or more parts.

<sup>1</sup> See HARMONY & TONALITY.

It seems that Bach, when writing in two parts, often disregards the harmonic implications of his counterpoint and reverts to the interval technique of the polyphonic period, but when writing in more than two parts is fully aware that it is the synthesis of the parts which is the more important factor and therefore usually pays strict attention to the harmonic aspect of the texture.

Other traces of linear influence are to be found in Bach's characteristic use of decorative figures and unessential notes (which will be discussed later in this article) and in his occasional tendency to drive a melodic line or lines through to their logical conclusion with splendid disregard for the harmonic tangles which may result.

Given the essential harmonic basis of the common chords and triads of the diatonic system plus the recognized diatonic dissonances (dominant discords, secondary sevenths and ninths, etc.) and the normally accepted range of chromatic chords, together with the chord and key relationships and possibilities of modulation which diatonic tonality brought with it, the contrapuntal technique of Bach, and in general of the period for which he stands, is in reality an extension in some respects and a curtailment in others of the technique of the polyphonic age. It is the harmonic influence which is responsible for both the extension and curtailment.

Since harmonic thinking had become the dominating factor in music, its influence necessarily extended to every technical process, and its effect on the use of unessential notes is of particular interest in the study of counterpoint. A strong sense of harmonic rhythm and progression gave unessential notes, particularly accented passing-notes and

appoggiaturas, a new harmonic responsibility: they became decorations of a definite *harmony* rather than of a mere *note* of a melodic

between linear counterpoint and harmonic demands, provided that the general harmonic scheme remained clear, harmonic

line. In a less degree the same may be said of unaccented passing-notes.

Bach's treatment of unessential notes is especially important since it forms one of the most characteristic features of his contrapuntal technique. He frequently uses decorative and melodic figures with great freedom from the harmonic aspect, in fact he seems to regard an established figure, that is, one which had already become idiomatic as the *nota cambiata* or some other accepted changing-note figure, as a single harmonic unit, and treats it as though it were a single note from the harmonic point of view. He even extends this process by working a less familiar figure with complete harmonic propriety until the ear has come to accept it as an entity in its own right, and then using it with complete freedom.<sup>1</sup> The examples above (2a-c) will serve to illustrate this process.

Example 2a is a straightforward case of two accepted melodic figures worked together regardless of clashes in detail, within a normal larger harmonic framework.

Example 2b shows a less established melodic pattern treated with complete propriety in harmonic detail. Example 2c employs the same figure, but this time it is treated as a self-sufficing entity and used without regard for the harmonic tangle which it occasions at the point marked \*.

One further example of the same kind of process carried to even greater lengths of disregard for harmonic considerations is worth including. It shows how Bach, in R. O. Morris's admirable phrase, was ready to "honour the claims of the intellect in preference to those of the senses". It is a good example of a perfectly logical compromise

detail could become subservient to the linear requirements:

In example 3a a scale passage is decorated normally with appoggiaturas in a demi-semi-quaver followed by dotted semiquaver rhythm. In 3b the same decoration is used, but the harmonic values of the demi-semi-quaver and dotted quaver fluctuate, causing strong harmonic clashes. In 3c the process is carried to a point where harmonic clarity in detail gives way completely to linear necessity.

One of the most difficult problems which the adoption of a harmonic basis brought to counterpoint was the proper treatment of

<sup>1</sup> The matter of melodic patterns in Bach's counterpoint is more fully dealt with in an article by Peter Platt in M. & L., Vol. XXIX, No. 1.

what may be called the middle-value passing-note. The problem arises when there is simultaneous movement at three different speeds: (1) the harmonic pulse, that is, the harmonic rate of change, (2) a part moving in shorter note-values than the harmonic pulse (middle note-values); (3) a part moving in yet shorter notes (short note-values). While the part employing middle note-values (2) is restricted to harmony notes, the part in short note-values (3) may use unessential notes freely, provided they make good sense with the basic harmony represented by (1) and (2). But when (2) uses passing-notes, these unessentials, being of greater value than the notes of (3), are apt to take upon themselves the potential quality of new harmony notes (especially if they happen to be the second or fourth from the root of the basic harmony), and if sounded against a note of the basic harmony in (3) may clash violently with it, or if against a consonant unessential note in (3) may set up new secondary harmonic values, in both cases destroying the clarity of the basic harmonic progression.

In the 16th century, so far as the problem arose, composers did little towards solving it. Palestrina eschewed it altogether; so far as the present writer knows there is no clear case of a minim passing-note in 4-2 time (semi-breve harmonic pulse) used against crotchet movement in another part. The Englishmen did use minim passing-notes against crotchet movement, but with a gallant disregard for the harmonic jumbles which often resulted, either born of complete innocence of the harmonic implications involved (for example in the Taverner period) or simply from the conviction that the progress of the individual line was of more importance than the momentary synthetic confusion occasioned.

In Bach's work the problem becomes really important, for three-speed movement forms, in short but frequently occurring passages, an integral part of his technique. His solution of the problem was once more a simple compromise between the linear and harmonic demands. The process seems to be this: both the middle-value part and the short-note part (2 and 3), whether using harmony or unessential notes, must each individually make good harmonic sense with the basic harmonic progression; the relationship between the middle-value part (2) and the short note-part (3) is quite free. A very brief example will illustrate this:

The first full bar of Ex. 4 illustrates most of the points mentioned. The harmonic rate of change in this bar is at minim speed, the bass part has the middle note-values (crotchets) (2); the upper part the short note-values (3) (quavers). The two harmonies in the bar are a dominant seventh (last inversion) followed by the tonic triad of G# minor. The B and A# in the bass are unessential notes; the B is sounded with a concordant harmony note in the treble part (3) suggesting the superimposition of a G# minor or B major chord upon the dominant seventh (the basic harmony), the A# (an accented passing note), clashes with the D# in the treble; this makes the quaver D# sound like an unessential note in relationship to the crotchet A# whereas it is really a note of the basic harmony; the result is a momentary harmonic conflict of G# minor and A# minor chords. From a purely harmonic viewpoint the passage is unsatisfactory, but if the horizontal type of analysis (akin to that of 16th-century technique) is employed, everything becomes clear.

Another matter in which the establishment of a harmonic basis influenced counterpoint was the melodic behaviour of the individual lines. Bach's melodic line is vastly more harmonic in itself than the line of the 16th century. This is no doubt mainly due to the rise of instrumental media, but the essential harmonic influence is clearly felt not only in the prevailing arpeggio figuration, but also in the actual shaping of the melodic line in accordance with a definite harmonic basis.

The chief restriction of 16th-century technique brought about by the adoption of a strong harmonic basis was the curtailment of rhythmic freedom and enterprise. By the time of Bach the tyranny of the bar-line, with its expectation of potential harmonic accents recurring at regular intervals, was fairly firmly established. As is pointed out in the article on Polyphony, the summit of rhythmic freedom of individual parts was reached in the English school of the late 16th century, where the feeling for harmonic rhythm was just strong enough to give coherence to the process of combining the varying rhythms of the strands. Once harmonic rhythm had become a dominant factor it worked against cross-rhythmic freedom and was just as much a hindrance to it as had been the entire lack of such a touchstone in the purely linear era. Bach did use cross rhythms to some extent; the "Dorian" organ Fugue has some fine examples of the device; yet he never seems to attain anything like the complete mastery of the English madrigalists in this matter. Possibly the instrumental medium which coloured his whole output was less susceptible to this form of expression than was the vocal medium in which the setting of

verbal rhythms was one of the primary considerations.

Bach seems to have achieved an almost perfect balance between the claims of harmony founded upon diatonic tonality and linear counterpoint. His counterpoint, for all its harmonic basis, is real counterpoint in that it is the combining of the individual strands which creates the texture and the harmony, however much harmonic consciousness may influence the process. His technique, *quâ technique*, may not be so perfectly contrived in itself as the purely contrapuntal medium of Palestrina; it may not have the rhythmic fluidity and subtlety of Byrd or of Morley; yet, as a means for the expression of the widest possible range of emotions, and in its command and combination of the chief elements of music, harmony and counterpoint, it stands unsurpassed.

Handelian counterpoint is, on the whole, much more harmonic than the contrapuntal style of Bach. Handel's style is in general

THE HAYDN-MOZART PERIOD.—The era of music in which Haydn and Mozart are by general consent held to be the outstanding figures is the age of the supremacy of harmonic thinking and diatonic tonality, of clarity of texture and structural balance. The music, taken as a whole, may be described as consisting chiefly of melody supported by a harmonic accompaniment. The melody itself is formalized and versified, that is, built in carefully balanced phrases upon a formal rhythmic pattern, and is dependent upon its harmonic basis.

Counterpoint, despite this generalization, still plays an important part in technique, but in its most characteristic shape it seems to have undergone a change both as regards its function and its form. It tends to become an ancillary part of a formal harmonic and rhythmic structure rather than an essential process in its own right creating a homogeneous musical texture—the linear decoration of a harmonic structure rather than the

Ex. 5

The musical score for Example 5 consists of two systems. The first system is in C major, with a treble staff (melody) and a bass staff (bass). The second system is in G major, with a treble staff (melody) and a bass staff (bass). The score includes various musical notations such as notes, rests, and bar lines.

firmly founded upon diatonic tonality of the clearest kind—upon chord and key progressions which by their fundamental character indicate their allegiance to a definite tonal centre without any doubt at all. The strength of the harmonic implications of the melodic line, and the movement of the basses, normally dictated almost completely by the needs of harmonic progression, may be taken as sufficient evidence of this.

This diatonic and harmonic foundation pervades Handel's counterpoint in general and influences it in detail to a much greater extent than in the case of Bach's work. A greater rigidity of harmonic rhythm and stronger tyranny of the bar-line are also characteristic of Handelian counterpoint.

The actual amount of real counterpoint in Handel's music is very much less than in Bach's; not only are passages of sustained contrapuntal writing fewer, but they are generally much shorter.

creation of such a structure by the process of combining strands.

The difference between this kind of counterpoint and the counterpoint of the 16th century, and, to a less extent, of the Bach style, is more easily realized when R. O. Morris's definition of 16th-century technique is recalled. "The whole of 16th-century counterpoint is essentially the interweaving of independent rhythms, and not, as commonly said, a combination of melodies. . . . Counterpoint is rhythm, and very little else." Herein lies the change which has taken place. Mozart's most characteristic counterpoint is well described as the combination of formalized melodies or melodic fragments, complete in themselves and adaptable to a common harmonic basis. The interest is in the ideas themselves and their harmonic implications, rather than in the texture which results from interweaving them. Furthermore, the lines are no longer the rhythmic strands of the 16th

century, nor are they the free rhapsodic melodic lines of Bach, but, for the most part, versified melodies.

Perhaps the most famous example of counterpoint in this new sense in the whole Haydn-Mozart period is the combination of the five themes in the last movement of Mozart's "Jupiter" Symphony. Each of these melodic fragments is complete in itself and harmonically compatible with the others (Ex. 5).

The five themes are shown above with their original harmony. In their combination the harmony is slightly varied in some cases, but the general scheme remains the same. The five themes together are supported by a harmonic background supplied by the brass (not shown in the next example for reasons of space). The whole passage is an almost incredible *tour de force*; not only is it a supreme display of technique, but it is also a glorious musical sound:

contrapuntal style of one or two generations earlier, particularly in their church music. The idea that "the learned style" was the right one for ecclesiastical music was prevalent in that period, as in many others. Furthermore, Mozart in the later years of his life came under the influence of J. S. Bach's music, and the influence of Bach counterpoint is readily apparent in many of his later works. The organ Fantasy in F minor and the C minor Fugue (K. 546) contain good examples of this influence.

BEETHOVEN AND AFTER.—Beethoven's counterpoint is generally of the Haydn-Mozart type; it is strongly harmonic and mainly a combination of formalized melodic phrases rather than a texture of free rhythmical lines. At times, however, especially in the later works, counterpoint of a much more Bach-like character is found. Examples in which a homogeneous texture appears to be formed by

*Allegro molto* Symphony K 551 MOZART

Ex. 6

It must not be thought that the type of counterpoint described above was the type exclusively used by Haydn and Mozart and their contemporaries. Both Haydn and Mozart showed a strong tendency to revert to the

the combination of free melodic strands and the harmony results from this process of combination are by no means rare. The following passage from the G# minor Quartet (Op. 131) is worth close study from this point of view:

*Adagio* Quartet Op. 134 BEETHOVEN

Ex. 7 Violin I

In speaking of Beethoven's third period, Tovey wrote:

His enormous development of polyphonic interest soon led Beethoven to employ the fugue, not only, as in previous works, by way of episodic contrast to passages and designs in which the form and not the texture is the main object of interest, but as the culminating expression of a condition of art in which the unity of form and texture is so perfect that the mind is free to concentrate itself on the texture alone.

In the counterpoint of the 16th century form and texture were for practical purposes one and the same thing; the three varieties of texture generally employed formed the structural basis of the music.<sup>1</sup> In the Bach period contrapuntal texture together with key-structure, which had been supplied by the adoption of diatonic tonal system, were sufficient for the formal needs of contrapuntal movements. In the Haydn-Mozart era a new conception of form had grown up which was in essence antagonistic to the possibilities of a self-sufficient contrapuntal texture as the main structural basis of a movement; hence came the tendency to relegate anything in the nature

of contrapuntal texture to the position of episodic contrasts. Perhaps Beethoven's greatest contribution to the art of counterpoint was his reconciliation of the classical conception of form and contrapuntal texture.

After Beethoven counterpoint on the whole grew more and more harmonic in character and tended to become little more than the decoration of harmony. Melodies themselves were gradually assuming more essentially harmonic shapes in their frequent use of broken chord patterns, and though this phenomenon was not new, its increasing employment necessarily stressed the harmonic aspect of the contrapuntal combination of these melodies.

These tendencies are strongly apparent in the music of Schubert, the romantic school as a whole, and later of Brahms. "Counterpoint" with them often means little more than the decoration of a harmonic structure in elaborating the actual part-writing. The following short passage from Schubert's C major Quintet is a good example of harmonic decoration:

*Allegro* Quintet in C. SCHUBERT

Ex. 8

<sup>1</sup> See POLYPHONY.

Two more short examples may serve to show the decoration of the part-writing of a simple harmonic structure by means of harmony and unessential notes:

to non-harmonic linear counterpoint. In the case of Wagner chromatic counterpoint seems for the most part to have retained its harmonic basis; how far that basis could be reconciled

Ex 9<sup>a</sup> *Con moto* Organ Fugue C minor. MENDELSSOHN

Ex 9<sup>b</sup> *Presto non troppo* Haydn Variations. BRAHMS

Despite this general drift, counterpoint of the Bach type never quite lost its influence on composers, and the following short passage from Brahms's Fugue in A $\flat$  minor for organ shows how powerfully it could be adapted to the composer's personal idiom:

with diatonic tonality is a matter which belongs rather to the study of harmony than of counterpoint

Two other significant factors in Wagner's counterpoint must be noticed. First, the tendency towards a rhapsodic line as opposed

Ex 10 *Langsam* Organ Fugue in A $\flat$  minor BRAHMS

Wagner's contrapuntal genius found expression partly in the combination and metamorphosis of his highly characterized *Leit-motive* built on a strong yet malleable harmonic basis and partly in an individual chromatic style which brought a new element into counterpoint. Chromaticism, which had been a growing factor in music for some two hundred years, became a primary influence in Wagner's later work, particularly in 'Tristan'. His harmonic style was in any case highly chromatic, and the addition of chromatic unessential notes and decorations meant a further diminution of the strength of diatonic tonality. The frequent use of chromaticism in the melodic line, especially in the case of accented passing notes and appoggiaturas, necessarily weakened its harmonic and tonal implications, giving rise to a chromatic form of procedure which if pursued to its logical conclusions would lead

to a four-square versified melody or melodic phrase. Even the most incisive of the *Leit-motive* have more of the character of a Bach fugue subject than of a Mozartian melody. Their linear aspect, despite their harmonic foundation and implications, is strong enough to allow them to be used as self-sufficient units in much the same way that Bach used accepted figures. Secondly, the texture produced by later Wagnerian counterpoint is often of a homogeneous nature, as opposed to the melody or combination of melodies supported by a harmonic accompaniment of the "classical" period.

Two short examples must suffice to illustrate a few of the characteristics of Wagner's counterpoint. The first, the famous combination of themes in the 'Mastersingers' overture, is akin to the Mozart example already cited from the "Jupiter" Symphony:

Ex. 11 *Sehr massig bewegt* Mastersingers Overture WAGNER

As in the Mozart instance there is a harmonic background (not given in the example for sake of clarity). The chief differences are that in Wagner's case the themes themselves are more rhapsodic and, though they are combined by means of a common harmonic basis, they are, as individual lines, much more independent in their behaviour with regard to the basic harmonic scheme, and to each other; the process may be described, to some extent, as linear counterpoint forced into a harmonic mould.

The second example, from the first act of 'Tristan', shows the typical 'Tristan' chromatic texture: rhythmic lines of the rhapsodic kind, built upon a basis of chromatic harmony:

Ex. 12 *Tristan I, iii* WAGNER

Some consideration must be given to what may be called "modern" tendencies in counterpoint. They fall into two rough categories: (a) those which are in the main logical developments of traditional techniques and retain allegiance to some degree of tonality in the accepted sense; (b) those which break with tradition by dispensing deliberately with the accepted ideas of tonality and set up a completely new conception of tonal relationships and values.

The weakening of the force of the old diatonic tonality, brought about by overburdening it with chromaticism, though in Wagner's case it never effected a complete break with

the traditional tonal system, was nevertheless the starting point from which the disintegration of accepted tonal relationships and values was to come. The immediate post-Wagnerian trend was merely the extension of chromaticism, still within the limits of tonality. Skriabin, the earlier works of Richard Strauss and the very early music of Schoenberg show different aspects of ever-increasing chromaticism, which eventually was bound to reach a point where the old tonal values could no longer maintain themselves.

Of the various reactions to excessive contrapuntal and harmonic chromaticism the most natural perhaps was the return to a basically

non-chromatic linear type of counterpoint loosely bound to a harmonic and tonal conception compatible with traditional practice, and the revival of interest in the modes. The possibilities which lay in these tendencies may be seen in many notable passages in the works of Vaughan Williams and Sibelius; they form at least a characteristic part of the styles of these two composers. In such passages as the following a texture not unlike the linear counterpoint of the 16th century is found; it is, indeed, the combination of rhythmic strands — a return to the old methods of polyphony with a new outlook upon interval values:

Ex. 13<sup>a</sup> *Moderato* (♩ = 120) 5th Symphony Passacaglia VAUGHAN WILLIAMS

Ex. 13<sup>b</sup> *Allegro molto moderato* Symphony No. 6. SIBELIUS

Another feature characteristic of the 16th century which becomes a natural part of this technique is the use of cross-rhythmic devices and the "proportions of inequality" such as sesquialtera. The short extract from Vaughan Williams's sixth symphony quoted below illustrates both these devices used with consummate skill:

BI-TONALITY AND POLYTONALITY.—These are factors which have been much in evidence in contrapuntal experiment during the 20th century; but traces of multiple tonality of a kind are inherent in counterpoint from very early times. The parallel fourths and fifths of

Counterpoint in multiple tonality in modern times is by no means confined to the combination of single strands in different keys. Groups of parts in one key may be set against single parts or groups in other keys.

The possibility of the use of multiple tonality without total break with tradition seems to lie in the degree of compatibility or incompatibility inherent in the opposed tonalities in the harmonic and tonal aspects, and the actual extent of its domination in the music as a whole. It is possible for the linear element in a normally harmonic contrapuntal texture to over-ride the bounds of a single tonality for a short space of time without destroying it, just as J. S. Bach allowed the linear element to over-ride the harmonic detail. Such a process simply amounts to the creation of tension by means of a temporary tonal conflict. If this tension is duly resolved it can be regarded as incidental in a normal tonal scheme. The following examples will show this process.

organum suggest the simultaneous use of two modes; strict canon at any interval other than the unison or octave must necessarily imply lines fundamentally related to different key-centres in the horizontal aspect.

Multiple tonality in the horizontal sense does not inevitably imply departure from a single tonal centre in the vertical aspect; two or more lines horizontally in different keys can be combined by means of a common harmonic basis without tonal ambiguity, a process which can be seen throughout the history of counterpoint even at the time when diatonic tonality was at its most rigid. If, however, the common harmonic basis is absent or weakened in its tonal implications, so that it ceases to reconcile the individual parts which are related to different key centres to a single tonality—that is, if the linear aspect of these parts takes charge—multiple tonality in the vertical as well as in the horizontal aspect results. In this case a strangely anomalous situation arises: it is the very harmonic and tonal strength of the individual parts which causes the conflict and negatives the possibilities of harmonic and tonal unity.

Here the first violin part is definitely in Bb major; the second violin is equally certainly in D major; the viola part fluctuates between D major and minor. The first and last chords of the quotation are plain D minor triads.

The next example shows the combination of a G minor (Dorian) solo violin part with a C minor (also Dorian) part for oboe, over a series of  $\frac{3}{4}$  chords suggesting a vague Eb tonality. The passage begins and ends in G Mixolydian (Ex. 16, p. 474).

It is the use of multiple tonality as a self-sufficing medium—what R. O. Morris describes as an attempt to "balance at more than one point"—that constitutes a direct challenge to tradition. The effect of music written in this way depends upon the degree in which the superimposed tonalities are capable of coalition or how violently they stand apart, for it is the synthetic aspect which is obviously the important one, else the combination of different tonalities defeats its own end. Keys like C minor and Eb major, for instance, coalesce to a degree where little or no bi-tonal feeling exists; C major and F# major, on the other hand, form a combination

where tonal or harmonic unity of any kind is virtually impossible. It may be noted that keys are very like intervals in their capacity for coalition or standing apart.

If the tension set up by simultaneous strands of antagonistic tonalities is left unresolved, that is, if the system is pressed to its logical conclusion, there seems to be little in the way of real aesthetic possibilities, since one of the fundamental aesthetic laws is that tension must eventually be followed by relaxation. Those who have used the process in its more extreme forms seem to have found it expedient to resort to a frequent lowering of the tension by means of combinations of sounds which coalesce to a degree suggesting momentary harmonic and even tonal unity:

This example illustrates another very important factor in connection with multiple tonality. The use of instruments of strongly contrasted tone-colour emphasizes the linear aspect of the combination of strands in different keys and helps to clarify the process. Furthermore, the employment of instruments not completely subject to equal temperament has considerable influence on the combination of different tonalities. The greatest possibilities seem to lie in such combinations where the linear aspect is able to play its full part rather than in some keyboard instruments (for example, the piano) where a single tone-colour and equal temperament necessarily emphasize the vertical aspect.

CHROMATIC SYSTEMS.—Hindemith, in 'The Craft of Musical Composition', has postulated a theory of harmony and tonality which appears to attempt the reconciliation of a twelve-note chromatic scale system with something of the traditional conception of tonal and harmonic practice.

He bases his theory on a scale of semitones, every note being related in varying degrees to a single tonic generator. The twelve notes in the scale, their tuning and their importance

Ex. 17 *Allegretto*

Terzetto HOLST

Flute

Oboe

Viola

*p*

*poco cresc*

*mf*

(that is, their closeness of relationship to the tonic or generator) are arrived at by a rather arbitrary manipulation of derivations from the harmonic series. Out of the relationships of the notes of the scale to the generating note grow similar interval and harmonic relationships and values which are duly assessed and classified.

As any given combination of notes in synthesis has a definite harmonic and tonal value, it appears as if the system takes account of music mainly in the vertical aspect. The only concessions which seem to suggest the horizontal view are the acceptance of certain *non-chord notes* (that is, unessential notes), *part-writings* and the *two-voice framework*. Melody itself is regarded as having essential harmonic quality, and the combination of melodies seems to be governed by harmonic rather than contrapuntal considerations.

It would seem, then, that counterpoint, *quid* counterpoint, has little place, in theory at any rate, in Hindemith's system; yet in practice, in such works as 'Ludus Tonalis', he shows himself to be the master of what from the traditional point of view may be termed non-harmonic linear counterpoint. The following example, taken at random from that work, may help the reader to form his own opinion upon this statement:

rhythmic variations; the vertical, of the varying degrees of synthetic dissonance brought about by the process of combining the lines constructed upon these twelve-note patterns.

The invention of the "tone-row" by Hauer, and its development and perfecting by Schoenberg, is really the logical outcome of the system, for since every note of the chromatic series is of equal value, it follows that every note of the series must be heard, and heard once only, in the progress of the pattern. To repeat any note would be to give it undue prominence; to omit it would be to upset the balance of the series. (By "repetition of a note" is meant using that note a second time after another note of the series; the rhythmic reiteration of a note in the pattern does not constitute repetition in the present sense.)

The "tone-row", then, consists of an arrangement of the twelve notes of the scale in a series or order determined by the composer. It forms a motif upon which the movement is built, and provides the unifying idea which replaces the traditional unifying power of the old harmonic and tonal relationships. The musical texture consists of rhythmically varied presentations of the "tone-row" or its inversions by independent "voices" or parts

**THE TWELVE-NOTE TECHNIQUE.**—Schoenberg and his followers take the chromatic scale of twelve equal semitones as their *materia musca* without questioning the derivation of these notes. Every note in this scale is equal in importance to every other note; there can, therefore, be no tonal centre or tonality, and hence no fixed and organized harmonic relationships in the traditional sense.

The music which is the outcome of this conception is most likely to be contrapuntal in character, in fact, some form of non-harmonic linear counterpoint in a chromatic medium, the twelve semitones replacing the degrees of the diatonic scale or the mode of earlier times. The horizontal aspect will consist of patterns founded upon the twelve notes of the scale with

in combination.

The twelve-note system is a strongly individualistic idiom, fitted for the expression of a particular pessimistic outlook of its creators. Its power of conveying ideas of bitter disillusionment, of a distorted world, of deep-seated pessimism, is perfectly apt to the purpose of the composers who used it, and to the needs of their time. But its essential limitations are obvious. First, the great difficulty in attaining contrast and change of mood in a movement; second, the absence of the architectural possibilities of key schemes and modulation of music founded upon a basis of tonality. It is a system suited to short concise movements rather than to longer structures.

The most perfect examples of the twelve-note system as artistic and technical achievements, by Schoenberg and others, show it in its full maturity of technique, perfectly realizing the composers' particular intentions.

Of the modifications of the twelve-note system, by Schoenberg himself and by his followers, and of the efforts to give it some form of traditional tonal coherence, this is not the place to speak.<sup>1</sup> In the study of the development of counterpoint the chief interest in the twelve-note technique lies in the fact that it is essentially linear counterpoint in a chromatic form.

**SUMMARY.**—This short survey of some of the more important trends of counterpoint in recent years must suffice to complete in rough outline the picture of the development of the art through some five hundred years of its growth. In one aspect almost a complete circle has been traversed. Until the middle of the 16th century polyphony had been mainly of a non-harmonic linear variety based upon the modes; in the later part of that century harmonic thinking and a feeling of tonality made their appearance as a distinct product of counterpoint. The gradual maturing of harmonic thinking in the diatonic key system was the work of the 17th century, till with Bach an almost perfect balance between harmony and counterpoint was achieved. The Haydn-Mozart period witnessed the ascent of the harmonic factor to the dominating position; counterpoint became in the main almost a by-product of harmony; this state of affairs persisted, with the exception of the later counterpoint of Mozart and Beethoven, and work directly influenced by the Bach style, up to and through the romantic period. With Wagner and the growth of excessive chromaticism the power of diatonic harmony and tonality was gradually undermined and weakened till it could no longer maintain full control over the contrapuntal process. Finally the linear element reasserted itself either in a new-found non-chromatic medium or in a non-diatonic and atonal chromatic system.

Another aspect from which the picture as a whole must be regarded is that of the stuff from which the individual lines of counterpoint are made. In the polyphonic age the line was a free rhythmic strand, rhapsodic in character, and the result of the interweaving of such lines was the production of a more or less euphonious and homogeneous texture. In the Bach period the lines remained rhapsodic, but became rhythmically less free: the texture resulting from their combination was harmonic and tonal. In the Haydn-Mozart era it was melodies or melodic phrases, versified and formalized, built upon a strong harmonic basis, which were combined. In the later

<sup>1</sup> See TWELVE-NOTE MUSIC.

Beethoven counterpoint evidences of the return to the rhapsodic line became apparent, and this in chromatic guise was also characteristic of the later Wagnerian style. In the 20th century a return to the free rhythmic strand, producing in combination a homogeneous texture, became prevalent.

It seems that the wheel has turned full circle in the matter of material and texture as in the harmonic and tonal aspect. In this brief survey of the changes which have taken place in counterpoint over a period of some five centuries one fact stands out: it is the combining of strands forged by the fusion of rhythm and melodic line which constitutes counterpoint; texture, harmony, tonality and all the other factors which go to make up music are in reality a product of this combining process, and to however great an extent they may influence or even dominate music, they owe their origin to contrapuntal thought, which must ever remain the corner-stone of the building of musical technique.

**INVERTIBLE COUNTERPOINT** (Double, Triple, etc.).—A contrapuntal device which has proved itself to be an important part of the art of counterpoint from the polyphonic age to the present day.

A short quotation from R. O. Morris ('Contrapuntal Technique') will make clear what invertible counterpoint is:

Double Counterpoint is sometimes called Invertible Counterpoint, and two themes or subjects are said to be in Double Counterpoint when one of them will serve either as a bass to the other's treble or as treble to the other's bass. (If there are three parts all of which may similarly change places with each other, they are said to be in Triple Counterpoint, and so on.)

The intervals of inversion most commonly employed are the octave or fifteenth, the tenth and the twelfth; others are possible, but they give rise to technical difficulties which restrict the purely musical value of the device. In double counterpoint at the octave one part remains stationary while the other moves up or down an octave; at the tenth one part stands while the other moves up or down a tenth, and so forth.

The result of this inversion on the actual intervals between the parts may be seen from the tables given below.

*At the octave:*

Interval in the model	1	2	3	4	5	6	7	8
becomes in inversion	8	7	6	5	4	3	2	1

*At the tenth.*

Interval in the model	10	9	8	7	6	5	4	3	2	1
becomes in inversion	1	2	3	4	5	6	7	8	9	10

*At the twelfth.*

Interval in the model	12	11	10	9	8	7	6	5	4	3	2	1
becomes in inversion	1	2	3	4	5	6	7	8	9	10	11	12

At the octave the only consonant interval in the model which gives any difficulty in inversion is the fifth, which becomes a fourth, a "dissonant" interval from the bass. At the tenth all consonant intervals remain consonant. At the twelfth the useful sixth in the model becomes a discord (seventh) when inverted, and this has to be given the normal dissonance treatment according to the style of the period; for example, in the style of Palestrina the seventh must be treated as a suspension; in the Bach style it may be regarded as a seventh in its own right or an *appoggiatura* and resolved by step.

Subject to restrictions such as those mentioned above, double, triple and even quadruple counterpoint are technically of no great difficulty. The device was "practised assiduously in the sixteenth century but employed sparingly in actual composition" (R. O. Morris, *op. cit.*). Morley and other theorists of the period obviously set much store by this, as by many other contrapuntal devices

free part which does not undergo inversion as a bass is frequently found, and this absolves the invertible parts from the necessity of forming good basses in themselves, making the process of "inversion" rather one of the redistribution of the counterpoint in the upper voices. In the matter of melodic interval reproduction, inversions at intervals other than the octave, etc., are almost always "free as to interval" (in the same sense that canons are free as opposed to strict). Even at the octave a certain amount of licence is generally found in melodic intervals.

In actual composition it will usually be found that short phrases of strong individual character are used as the material for inversion, rather than long-drawn-out strands of melody of a homogeneous kind.

A few illustrations from different periods will show the effectiveness of the device and its aesthetic value. This 16th-century quotation shows a typical procedure of that period:

Iste est Joannes' MARENZIO

Ex 19

of a rather mathematical kind, in student work. In actual composition, both in the 16th century and later, the occasional use of invertible counterpoint can be of great musical effect, especially in writing of a fugal nature. Examples will be quoted later.

In theory invertible counterpoint in the strict sense implies counterpoint in which all the parts involved are interchangeable—in which any part may be used as the real bass or in any other position—and the texture formed by their combination is self-sufficient. It also would entail, if logically followed out, strict reproduction of melodic intervals in the inversions, a natural process in inversion at the octave or fifteenth, but an almost impossible feat at any other interval.

In practice invertible counterpoint is usually treated with great freedom. The addition of a

It is an example of triple counterpoint in which three short phrases are inverted freely and distributed among four voices. Morris quotes it ("Contrapuntal Technique of the Sixteenth Century") as "a really fine specimen of triple counterpoint, handled with the utmost assurance and mastery".

A short portion of an episode in the 17th fugue of the "48" is a fair sample of Bach's use of triple counterpoint. The three inversions, as they appear in the course of the fugue, are shown in Ex. 20 (p. 478).

The combination of the five subjects in the last movement of Mozart's "Jupiter" Symphony already examined (Ex. 6) is a remarkable example of quintuple counterpoint on a harmonic basis. It should be studied from this aspect.

A fragment from an early Beethoven piano-

forte sonata provides an instance of double counterpoint at the tenth and of the common practice of adding an extra part in thirds to this kind of inversion:

and in quadruple and quintuple counterpoint increasingly greater complications.

Triple counterpoint at the twelfth is almost impossible difficult to manage if it persists

Ex 21 *Allegro*

Sonata Op 13 BEETHOVEN

Double counterpoint at the twelfth, generally free as to interval, is one of the most musical forms of inversion. The fourth variation of Brahms's Haydn Variations is a beautiful example:

to any considerable extent, since, if the two added parts are inverted at the twelfth, one upwards and the other downwards, they will produce further inversion at the ninth (the most intractable of all inversion intervals)

Ex 22 *Andante con moto*

Haydn Variations BRAHMS

Inversion at the 12th

Extended multiple (triple, quadruple, etc.) counterpoint is normally found only at the octave. If any other interval of inversion is employed it involves, in the case of triple counterpoint, further simultaneous inversion at a third interval between two of the parts,

between them. Yet this is exactly what happens in the second part of the fourth of the Brahms-Haydn variations quoted below. The smoothness and inevitable sound of the passage more than justifies Tovey in calling it "miraculous":

Ex. 23 *Andante con moto*

The type of invertible counterpoint which has just been described is generally known as "harmonic inversion". This term is by no means ideal, but since it has acquired some measure of general acceptance, and since the other possible terms, such as "interval inversion", are open to almost as much misconstruction, it is probably wise to retain it.

Another type, known as "melodic inversion", must be mentioned. The terminology in this case is certainly more accurate. In this kind of inversion the rising intervals in the melodic line are answered by corresponding

falls, and the falls by rises. The inverted intervals may be strict (exact) or free (occasional variation in the quality of the intervals).

Melodic inversion, *per se*, cannot properly be regarded as invertible counterpoint. It is in essence a purely melodic consideration. Nevertheless it is often found used in combination with the harmonic type of inversion, producing double (etc.) counterpoint inverted in both senses. The following instance from the B $\flat$  minor fugue in Book II of the "48" is a masterly illustration of the device:

STRICT COUNTERPOINT.—What is also known as "Academic", "Scholastic" or "Species" counterpoint was described by the late Sir Walford Davies in the 4th edition of this Dictionary as "a principle in education throughout the history of the art". Scholastic systems in the case of the arts are ever conservative. The practice of the immediate present and recent past is generally and rightly considered unsuitable material for the beginner, whose first task should be the study of methods whose value has been proved by time and which have acquired historical authority. In music, the view that the technical processes of composers of the moment are unsatisfactory as teaching-material is a sound one, since they are generally of a strongly individual character and often experimental.

A less laudable feature of academic teaching, especially in the past, has been the method of approach to the subject. Most arts have attracted to themselves some of the characteristics of the primitive medicine-man. One of these is a tendency to surround the art with an air of mystery and to make initiation into it something of an ordeal, fraught with difficulties, with dry-as-dust rules and prohibitions.

It is not surprising, therefore, to find Morley, for instance, in his truly great book 'A Plaine and Easie Introduction to Practicall Musick', not only surrounding his craft with innumerable symbols, tables and figures, and adopting the form of a dialogue between the humble petitioner for initiation and the master, but also making use of the long-note *canto fermo* as a basis for composition, a method which could only be regarded as belonging to the past even at the time when the book appeared (1597).

Following the example of Artusi, Zacconi and Zarlino, Morley based his teaching upon the long-note *canto fermo* against which parts were written in various *species* or *orders*, such as two notes against one (of the *canto fermo*), four notes against one, suspensions, etc. In the later stages of his instruction he dispenses with the long-note *canto fermo* and sets much store by contrapuntal devices (canon, imitation, invertible counterpoint and so forth), finally bringing the student right up to date in the free composition of madrigals. The greatness of Morley's book lies in the fact that it is no mere theoretical treatise; despite its conservative approach and occasional scholastic pedantry, it is the testament of a real composer of genius.

The study of counterpoint in general, and species counterpoint in particular, achieved its real academic status with the publication in 1725 of the famous 'Gradus ad Parnassum' by Johann Joseph Fux. Fux used the semibreve *canto fermo* and upon it standardized five species or orders of counterpoint. The

"species" may be summarized as follows: (1) Notes of equal value to the *canto fermo* ("note against note"). (2) Notes of half the value in duple time or one-third the value in triple time (minims against semibreves or dotted semibreves). (3) Four notes against one (crotchets). (4) Suspended minims. (5) A mixture of the other four species with the addition of occasional quavers. Fux claimed for the rules and prohibitions which he expounded the authority of Palestrina.

Whatever criticisms have been made against Fux and the school of academic counterpoint which followed him, it must be remembered that his work remained the basis of contrapuntal teaching for some two centuries. The great Martini himself, and other theorists of the age such as Perti and Albrechtsberger, bore testimony to the 'Gradus ad Parnassum' as the *fons et origo* of their teaching. Great composers such as Haydn, Mozart, Beethoven, Mendelssohn and Brahms studied his methods. The 19th-century theorists such as Rockstro and Prout in England, and Fétis and Cherubini abroad, based their work upon Fux. In the 20th century Jeppesen can affirm that the 'Gradus' has "a practical significance which no other work on contrapuntal theory has attained", and Hindemith in his 'Craft of Musical Composition': "Perhaps the craft of musical composition would have fallen into decline if . . . Fux's 'Gradus' had not set up a standard of excellence in writing".

On the other hand it must be admitted that, in so far as "strict" counterpoint lays claim to teach the style of the 16th century, it fails almost completely. The first essential of the polyphonic style is the combination of free rhythmic strands. The very rigidity of the semibreve *canto fermo* and the species is a direct negation of the rhythmic freedom which is the living force of the music of Palestrina and his contemporaries. Moreover, many of the rules of strict counterpoint have no foundation in the technique of Palestrina and other masters.

R. O. Morris in the first chapter of his 'Contrapuntal Technique of the Sixteenth Century' completely disposes of the claims of strict counterpoint to have the authority of the great age of polyphony behind it. "Music that never was on sea or land" is his verdict upon it, and it seems impossible to refute his attack. Yet Morris is no unconstructive iconoclast. While denying the claims of strict counterpoint in respect of the polyphonic art of Palestrina and Byrd, he accepts the species principle as a system of five-finger exercises preliminary to writing counterpoint in the style of Bach and of the Haydn-Mozart period.

The teaching-methods of any age are always an open target for criticism from all quarters.

"Advanced" and "enlightened" critics will raise the cry of "pedantic", while the pedants will take the opposite view. The final justification for any course of instruction is its results. If it gives the student a clearer insight into the technique of the past and a sure foundation upon which to build his own, it achieves its end.

**COUNTERTENOR.<sup>1</sup>** A male voice (or music written for such a voice) whose extreme range, like that of bass and baritone, or mezzo-soprano and soprano, is about two octaves and a fourth. It differs in point of nomenclature from these other voices by reason of the loose but nevertheless correct application of the one word "countertenor" for both the low and the high parts of the voice. The term was derived from *contratenor*, which in medieval music was considered complementary to the descant and tenor parts. Often indeed it was simply called *concordans*, as in B.M. Royal 20 A xvi. The development of four-part texture brought about the division of the voice into *contratenor bassus* and *contratenor altus*, the latter giving rise to the term "alto".

A male alto is not necessarily a countertenor, for the alto voice is more often than not a bass voice singing falsetto, whereas a true countertenor of high range is a naturally produced voice, using head resonance — that

is with a high and free position of the larynx. As the high countertenor must be clearly distinguished from the alto, by reason of its great difference in timbre, so the low countertenor must be distinguished from the tenor, whose tessitura it very nearly approaches. Here again it is largely a question of timbre, the low countertenor possessing a lighter and more melifluous quality than the *tenore robusto* or *Heldentenor*.

The tone-quality of the high countertenor is difficult to describe, but it is an essentially masculine voice, and at its best is clear, flexible and incisive. It may be described as a fistular voice supported by resonance, whereas the falsetto male alto (by contrast a weak and effeminate sound) is not so supported. There is no doubt which of the two voices Coryate (1577-1617) is referring to in his remarkable description of a solemn feast at Venice:

Of the singers there were three or four so excellent that I think few or none in Christendome do excell them, especially one, who had such a pureness and (as I may in a manner say) such a supernaturall voice for sweetness, that I think there was never a better singer in all the world, inasmuch that he did not only give the most pleasant contentment that could be imagined, to all the hearers but also did as it were astonish and amaze them. I alwaies thought that he was an Eunuch, which if he had beene, it had taken away some part of my admiration, because they do most commonly sing passing well, but he was not, therefore it was much the more admirable. Again it was the more worthy of admiration, because he was a middle-aged man as about forty years old. For nature doth more commonly bestow such a singularity of voice upon boyes and strplings, than upon men of such yeares. Besides it was farre the more excellent, because it was nothing forced, strained, or affected, but came from him with the greatest facilitie that ever I heard. Truly I think that had a Nightingale beene in the same roome, and contended with him for the superiority, something perhaps he might excell him, because God hath granted that little burde such a priviledge for the sweetness of his voice, as to none other: but I think he could not much. To conclude, I attribute so much to this rare fellow for his singing, that I thinke the country where he was borne, may be as proud for breeding so singular a person as *Smyrna* was of her *Homer*. . . .

The high countertenor, with its effective range of a twelfth or thirteenth, g-d''(e''), is indeed something of a rarity, as Coryate suggests. In recent years it has been successfully revived in England, notably by Alfred Deller. Occasionally a treble voice, on breaking, may become a high countertenor, but Burney tells us that this is "a circumstance which seldom happens". He adds, succinctly, "if it be cultivated, the possessor is sure of employment". Men like Turner and Howell (the latter called "the high countra tenor" by Purcell, who was also a countertenor himself) were constantly in demand as soloists in occasional and dramatic music. Howell excelled in florid arias extending upwards to d'' or e'', as for example "Who can from joy refrain" from the Duke of Gloucester's Birthday Ode which Purcell wrote in 1693. But this solo treatment of the voice was confined neither to the 17th century nor to England: an early example of the virtuosic high countertenor

<sup>1</sup> The spelling in one word, though not usual, is justified by the derivation from *contratenor*.

part may be seen in the 15th-century song in praise of Italy by Ludbicus de Arimino, preserved in the Trent codices.

The low countertenor is more often called upon to take a large share in the solo sections of verse anthems, where it is occasionally expected to take a low c or d. Elford, a countertenor of the Chapel Royal in the time of Handel, was said to have had a range of two octaves, A-a', but his voice must be regarded as exceptional. The verse anthems of the Jacobean and Restoration composers do not, as a rule, make unfair demands on the voice. In fact the vast repertory of music from Blow and Purcell to Handel and Bach takes on a new significance when it is sung by the voices for which it was written, rather than by mezzo-soprano and contralto. Strangely enough the importance of the countertenor lies not in the unity but in the division of its compass; or as a sixteenth-century poem has it:

The base and treble are extremes,  
The tenor standyth sturdely;  
The cownter rangyth then, me seems.

**COUNTRY DANCE.** An English dance widely popular in the 17th century, at the end of which it spread to France, where its name was turned into French by a rough phonetic process, like some other English words (e.g. riding-coat = *redingote*; bowling-green = *bowlingrin*). It appeared in a publication of 1699 as 'Contredanse anglaise' and was greatly in vogue all through the 18th century as the *contredanse*. From France it penetrated into other countries and suffered further corruptions in German as *Contratanz* and *Kontretanz*. With its rustic name it lost its countrified character on the Continent, where it was used for ballroom dancing and cultivated by a number of composers, including Mozart and Beethoven. E. B.

See also Contredanse. Folk Music: English.

**COUP D'ARCHET** (Fr., stroke of the bow). The bow attack in string playing. It has perhaps retained its French name because of the great importance attached to it by the French violin school, especially in the 18th century at the beginning of a symphony or other orchestral composition, where *le premier coup d'archet* was critically discussed with great seriousness. Mozart made fun of the exaggerated importance attached to it in Paris in his letter to his father of 12 June 1778: "What the devil! I can see no difference—they merely begin together—much as they do elsewhere. It makes me laugh." E. B.

**COUP DE GLOTTE** (Fr., stroke of the glottis). See VOICE PRODUCTION.

**COUP SEC** (Fr.). See ORNAMENTS, C (v) (a).

**COUPART, Antoine (Marie)** (b. Paris, 1780; d. Paris, 1854).

French theatrical and musical editor. He was the originator and editor of the 'Almanach des spectacles' (Paris, 1822–36). For many years he was employed in the Bureau des Journaux et des Théâtres and had special opportunities for gaining his information. He also wrote vaudevilles and comedies, and edited several collections of songs.

**COUPERIN.** French 17th–19th-century family of musicians.

(1) **Louis Couperin** (b. Chaumes-en-Brie, c. 1626; d. Paris, 29 Aug. 1661), violinist, organist and composer. He was the eldest of three brothers, sons of Charles Couperin, merchant and organist of Chaumes in the province of Brie (now the department of Seine-et-Marne) and of Marie Andry Couperin. The three brothers early acquired a comprehensive musical experience through their father's work as organist of the parish church and of the Benedictine abbey. The story of the manner in which the Couperins entered the fashionable musical life of Paris is told by the usually reliable Titon du Tillet; this is worth quoting in translation from his own words:

The three Couperin brothers came from Chaume, a little town in Brie, fairly near the region of Chambonnière. They played the violin, and the elder two were very successful on the organ. These three brothers, with friends who also played the violin, gathered together on a birthday of M. de Chambonnière [*sic*] to go to his mansion and play him an *aubade*. On their arrival they took up their post at the door of a hall where Chambonnière was at table with several friends, people of taste who were fond of music. The music master was agreeably surprised, as was the whole company, by the excellent symphony they heard. Chambonnière invited its performers to enter the room and asked them first of all who was the composer of the airs they had played; one of them said they were by Louis Couperin, whom he then presented. Chambonnière at once complimented Louis Couperin and invited him to be seated at the table with all his companions, he treated him with much friendliness and declared that a man such as he was not made to remain in the provinces, but should at all costs accompany him to Paris, which Louis Couperin agreed to do with pleasure. Chambonnière introduced him to Paris and to the court, where he was much appreciated. He was soon afterwards appointed to the organ of Saint-Gervais in Paris and to one of the organists' posts in the royal chapel.

The year of this musical tribute is not specified, but it was probably about 1650 or earlier.

With Chambonnières's introduction Louis rapidly prospered. He became organist of Saint-Gervais, a church with which the Couperin family was to be associated for

many generations. He also played the viol and the violin in the ballet music of the court; his name appears among the performers in the ballets 'Amour malade', 'Plaisirs troubles' (both 1657) and the 'Ballet de la raillerie' (1659). When Chambonnières incurred the king's displeasure, for a reason of which we are ignorant, Louis was offered the coveted post of *Joueur de l'Épinette de la Chambre du Roi*. He declined it, probably out of a sense of delicacy; but that the offer was made testifies to the esteem in which he must have been held. It is possible that instead he became one of the organists of the royal chapel. In any case he seems to have been affluent and highly successful. He was studying the work of Chambonnières and Gaultier and composing himself when, on the crest of his fortunes, he died. The cause of his death at the early age of thirty-five is unknown.

The Abbé Le Gaullois said that Louis Couperin's clavichord playing was "estimé par les personnes sçavantes à cause qu'elle est pleine d'accords et enrichie de belles dissonances de dessins et d'imitations". His vigorous style of playing reflects the temperament expressed in his compositions, which are at times distinguished by an almost aggressive use of dissonance. A further instance of his "modernity" of outlook, compared with the refined discretion of his master Chambonnières, is to be found in his increasingly mature command of tonal organization. He writes grandly expressive sarabandes which may even be said to suggest Handel, for his control of incidental modulation, within the tonic-dominant-tonic or minor-relative-major-minor framework, gives no impression of the tentative or experimental. Even the pieces which incline to the old methods betray this more vigorously organized quality. The famous 'Tombeau de M. Blanrocher' is in the tradition of the resplendently decorated *tombeaux* of the French lutenists, but it intensifies the conventional improvisatory effects and dissonances to a pitch of dramatic passion that is almost operatic.

At the same time Louis Couperin maintains contact with the old polyphonic techniques and has an especial fondness for the contrapuntal treatment of dance movements. One of the most nobly "architectural" of his sarabandes is written throughout in strict canon, with the canonic entry starting on the last beat of the sarabande rhythm, so that the counterpoint consistently negates the bar-line. The most significant of the allemandes also preserve the linear independence of Chambonnières and the lutenists, while achieving a satisfying tonal order; in this respect they anticipate the finest allemandes of Couperin le Grand and Bach. Less successful is the curious G minor Fantasy, which begins contra-

puntally in the manner of the organ fancy and then develops by widely skipping arpeggio figurations, without any attempt to return to the fugal principles of the opening. The new age of the dance and the theatre has here routed the old world of the church, and in this case one feels there is no organic growth from the one to the other. On the other hand some of Louis Couperin's most modern pieces, such as the 'Duo' with its rhythmic complications and unexpectedly rich harmony, are among his most convincing.

The greatest of Louis Couperin's works are, however, undoubtedly those in the transitional technique of chaconne and passacaglia. These proceed with relentless power and are usually dark in colour and dissonant in texture. Couperin sometimes introduces a bold modification into the traditional chaconne-rondeau technique, since he allows the modulations of the couplets to be continued in the repetitions of the theme, thereby making a compromise between the traditional "static" technique and the new sense of tonal relationships. He often makes a dramatic use of diminished-seventh chords and of free melismatic passages derived from operatic recitative.

The two finest of the 'Passacailles' (No. 27 and No. 99 in the Lyrebird edition) employ dissonant suspensions, more animated movement, flowing scale passages in parallel and contrary motion, and the introduction of chromaticisms to build up an overwhelming sense of climax. In their massive power and nobility they are worthy of comparison with the greatest *passacailles* in the work of Couperin le Grand and in the operas of Lully; they take their place among the greatest French instrumental pieces of the *grand siècle*.

In addition to the clavichord music there has survived a beautiful 'Carillon' for organ by Louis Couperin, formerly attributed to Couperin le Grand, and a certain amount of music for viols. The organ piece was first published by Philidor in 1690. The other works remained unpublished until the appearance of the Oiseau Lyre edition, which includes all the music of Louis Couperin which is extant.

(2) **François Couperin** (called **Sieur de Crouilly**) (b. Chaumes, c. 1631; d. Paris, c. 1701), violinist, organist and (?) composer, brother of the preceding. His principal claim to fame lies in the fact that for many years the two organ Masses of François Couperin le Grand were attributed to him.

Like Louis, François the elder was a pupil of Chambonnières and became an organist and music teacher. He lived in the parish of Saint-Louis-en-Île. It is unlikely that he was ever organist of Saint-Gervais, though he may have helped out occasionally during the period when

the busy and fashionable Lalande was organist. It is certain that he never occupied the organist's house. He was killed in an accident.

On the contemporary engraved title-page of the manuscript copies of the organ masses, they are described as being by "François Couperin, Sieur de Crouilly". The ascription of the works to the first François Couperin depended on two assumptions: one, that he was the Couperin who bore the title of Sieur de Crouilly; the other that he was organist of Saint-Gervais in 1690, when the masses were prepared for publication.

The researches of Bouvet, Pirro, Tessier and Tiersot have proved that the title of Sieur de Crouilly was one to which none of the Couperins had any legitimate right. There is no evidence that the elder François ever used it, and the identification of him with the Couperin of the organ masses dates from no earlier than the 19th century. There is no direct evidence that the younger François ever used it either, though there is a contemporary document referring to "Marie Guérin, veuve de Charles Couperin, Sieur de Crouilly", and it would have been natural enough if François, who early had pretensions to nobility, had taken over the title from his father. Significantly it reappears in the title of one of his last clavecin pieces, 'La Crouilli, ou La Coupriquette', possibly a portrait of his daughter, or an evocation of his childhood, or both.

As for the second assumption, there is again no evidence that the elder François was ever organist of Saint-Gervais. A passage from the contemporary chronicler Titon du Tillet suggests that the second François, young as he was, had the post reserved for him until he was old enough to succeed his father. This is put beyond doubt by a document recently discovered by Paul Brunold, which proves irrefutably that Lalande was appointed deputy organist during the interim period, in addition to his two other Parisian churches. There is reasonably definite evidence that Couperin le Grand took over the duties of Saint-Gervais in his eighteenth year. It is certain that he was organist in 1690, when he took out a royal privilege to publish his organ masses. This document gives his address as "rue de Monceau, proche l'Eglise". The younger François had been living there with his mother, ever since his father's death; and we know that the elder François can never have been the official organist at Saint-Gervais, or have lived in the traditional home of the Saint-Gervais organists, since the document concerning Lalande's temporary appointment leaves no period of tenure unaccounted for.

Thus there is no positive evidence to support the attribution of the masses to the elder François, and such evidence as there is points to the younger François. Nor would one

expect music of such fine quality to come from the pen of an obscure musician who seems to have written nothing else, and never to have been referred to by his contemporaries as a creative artist. Titon du Tillet said of him: "Le second des trois frères Couperin s'appeloit François; il n'avoit pas les memes talents que ses deux frères de jouer de l'orgue et du clavecin, mais il avoit celui de montrer les Pièces de Clavecin de ses deux frères avec une netteté et une facilité très grande. C'étoit un petit homme qui amoit fort le bon vin."

(3) **Charles Couperin** (b. Chaumes, 7 or 8 Apr. 1638; d. Paris, 1679), violinist, organist and (?) composer, brother of the preceding. He followed Louis to Paris after an interval of a few years. He too took lessons from Chambonnières and became one of the king's violinists, associated with the ballet. When Louis Couperin died he succeeded to the organ of Saint-Gervais, married Marie Guérin on 20 Feb. 1662 and installed himself in the ancient organist's house overlooking the graveyard. There, after seven years, a son was born, François (4). Eleven years later Charles, like Louis, died at an early age. None of his compositions has survived, though he seems to have had some reputation as a creative artist as well as for his executive powers.

(4) **François Couperin ("le Grand")** (b. Paris, 10 Nov. 1668; d. Paris, 12 Sept. 1733), organist, harpsichordist, teacher and composer, son of the preceding. The father died when François was only eleven years old. Although still a child, François inherited the post of organist at Saint-Gervais from his father and continued to live with his mother in the traditional organist's house in the Rue de Monceau. The church authorities arranged that Lalande should deputize for the young Couperin until he was old enough to take up his duties. Meanwhile François's musical training, which had been begun by his father, was continued by his uncle, the elder François (2), and by Jacques Thomelin. The latter, an organist and composer of the old polyphonic school, became a second father to François; it was undoubtedly from him that the young musician acquired the solid contrapuntal science which was to serve him so well in later years.

Couperin officially took over the organist's duties at Saint-Gervais in 1685 or early in 1686. He was then in his eighteenth year. Four years later he married Marie-Anne Ansault, about whom little is known. In 1690 were born both his first child and the first fruits of his musical creativity. He obtained a royal privilege to enable him to publish his Masses for organ; but, whether because funds ran out or for some other reason, publication was abandoned. Instead, Couperin had several manuscript copies made, and bound

them with an engraved title-page, bearing a certificate of merit from the great Lalande and informing the reader that the works were composed by "François Couperin de Crouilly, organiste de Saint-Gervais" — an inscription which has led to some unnecessary mystification (see [2] above).

The organ masses were music in an old tradition; as a rising young composer Couperin felt he had to prove his mettle in the fashionable technique of the Italian violin sonata, and two years later, in 1692, he produced his first exercises in this manner. Many years after, when he published these sonatas together with some new ones, Couperin revealed an innocent deception he had practised. The passage from the preface to the sonatas is worth quoting, because it is evidence of a strain of irony typical both of Couperin's character and of much of his music:

La première Sonade de ce Recueil fut aussy la première que je composay et qui ait été composée en France. L'histoire même en est singulière. Charmé de celles de signor Corelli, dont j'ameray les œuvres tant que je vivray, ainsi que les ouvrages françaises de M. de Lully, j'hasarday d'en composer une, que je fis exécuter dans le concert où j'avais entendu celles de Corelli. Et me défant de moi-même, je me rendis, par un petit mensonge officieux, un très bon service. Je feignis qu'un parent que j'ay, effectivement, auprès du Roi de Sardaigne, m'avait envoyé une Sonade d'un nouvel Auteur italien: je rangeay les lettres de mon nom, de façon que cela forma un nom italien que je mis à la place. La Sonade fut dévorée avec empressement; et j'en tarray l'apologie. Cela cependant m'encouragea, j'en fis d'autres. Et mon nom italianisé s'attura, sous le masque, de grands applaudissements. Mes Sonades, heureusement, prirent assez de faveur pour que l'équivoque ne m'ait point fait rougir.

In the next year, 1693, Louis XIV personally chose Couperin to succeed his old master Thomelin as one of the four organists of the royal chapel; the king's official pronouncement described him as being "le plus expérimenté en cet exercice". Couperin's colleagues were Le Bègue, Buterne and Nivers, each man officiating for quarterly periods. Their duties were to provide new music for the chapel and to direct the performance of it, rather than to play the organ; indeed the building of the great organ at Versailles was not started until 1702 and not finished until 1736, after Couperin's death. This may explain why he wrote no solo organ music after his early Saint-Gervais days; in his church music for the royal chapel the organ is an accompanying or continuo instrument. He probably used a small portable, placed near the singers.

Having established this link with the court, Couperin rapidly prospered. In 1694 he was appointed Maître de Clavecin des Enfants de France and taught the Duke of Burgundy and most of the royal children, at the same time as Fénelon. In 1696 Louis paid tribute to his growing fame by ennobling him, while a few years later he was made a chevalier of the

Lateran order. Couperin showed a touching delight in these distinctions and devised a coat of arms for himself, incorporating a golden lyre as a symbol of his muse. He signed himself "Le Chevalier Couperin" at the baptism of his daughter Marguerite-Antoinette in 1705.

During the first decade of the 18th century Couperin was engaged mainly on the production of court music to soothe the king's growing melancholy. The motets and elevations were written for the royal chapel, the 'Leçons des Ténèbres' for a convent and the 'Concerts royaux' for the Concerts du Dimanche. The solo clavecin music and a few slight *airs de cour* were also probably written for court performance; and we know that Couperin composed some secular cantatas, which are lost, for the Concerts du Dimanche. They were possibly intended for Couperin's cousin Marguerite-Louise. One of them was on the theme of the forsaken Ariadne. Some of the church music written for the royal chapel was published by Ballard between 1704 and 1706.

Couperin's official post at court is somewhat obscure, since the accredited Ordinaire de la Musique up to 1717 was d'Anglebert the younger. It is certain, however, that Couperin was in virtual control long before that date, and it seems probable that he officiated at the clavecin from 1701 onwards. D'Anglebert's health and eyesight were poor, which seems an adequate reason for his failure to fulfil the functions of his office. It is typical of the *galant* sense of honour that d'Anglebert should have been permitted to keep a title which he did nothing to justify; in effect Couperin acted as *locum tenens* during the period of d'Anglebert's superannuation. Whatever his position, Couperin had some of the finest musicians of the time in his charge. Forqueray was among the viol players and Rebel among the violinists, while Philidor and Dubois were the most celebrated contemporary virtuosi on the oboe and bassoon.

By 1710 Couperin was a national figure. He was a close friend of the most distinguished musicians of his day, including the organist Gabriel Garnier, to whom he dedicated one of the most beautiful of his early clavecin pieces; and Montéclair, Siret, Dornel and many other colleagues and disciples wrote works in honour of him and paid him the deeper homage of imitation. He was already known to his contemporaries as "le Grand" and seems to have been serenely conscious of his powers. He was, however, well aware of greatness in others, having a profound respect for Lalande. He also held up the publication of one of his works because he shared an engraver with Marais and the production of his work would have interfered with the publication of the latter's.

During the time of his court activities Couperin returned periodically to Paris to teach and to direct the services at Saint-Gervais. He lived in a succession of different Parisian homes after moving from the organist's house in 1697; the dwellings grew more imposing as his fame increased. On 14 May 1713 he took out a royal privilege to publish his work, and this time he was able at least to make a start on the task. He printed his first book of clavecin pieces in 1713, the contents of which had been written intermittently over the past ten or fifteen years. In the next year he began to publish the 'Leçons des Ténèbres', composed for a religious establishment; for some reason this project was never completed, so that only three out of nine survive. In 1716 appeared his theoretical work, 'L'Art de toucher le clavecin', and in the following year the second book of clavecin pieces. It was in this year, 1717, that he at last officially took over the post of Ordinaire de la Musique.

Couperin was forty-seven when, in 1715, Louis XIV died. During the Regency he continued to act as Maître de Clavecin aux Enfants de France, teaching the little princess, the wife-to-be of Louis XV, from 1722 to 1725. In 1717 he published the third volume of his clavecin pieces; and in 1722 a group of the 'Concerts royaux' which he had composed for the Concerts du Dimanche. The success of these encouraged him to publish some of his early Italian violin sonatas, adding a French suite to each to redress the balance and incorporating one completely new work. The whole collection, called 'Les Nations', appeared in 1726.

For two years the Couperins had now been settled in a beautiful new house in the Rue Neuve des Bons Enfants. (Rameau was a near neighbour, though it is unlikely, having regard to the disparity between their ages, that the two men were intimately acquainted.) We know almost nothing about the last ten years of Couperin's life. The publication in 1724 and 1725 of his two big trio sonatas, 'L'Apothéose de Corelli' and 'L'Apothéose de Lulli', symbolized his long-standing desire to reconcile the French and Italian techniques; they were printed along with the rest of the 'Concerts royaux', under the significant title of 'Les Goûts réunis'. In 1728 appeared the Suites for viols, described as being "par M. F. C.". This work was rediscovered in the 20th century by Charles Bouvet; the ascription of it to Couperin le Grand is open to no doubt, since it is supported not only by stylistic considerations but also by the royal privilege which accompanies the publication and by Couperin's own catalogue of 1730. A 'Benedixisti' also appeared in 1728, but this seems to have been a revival of a work dating from 1697. The fourth book of clavecin

pieces, put together with the help of his family, was published in 1730.

Despite the robust impression created by the well-known portrait by André Bouys, Couperin was intermittently ailing from his early forties, the preface to his fourth book of clavecin pieces is valedictory in tone:

Il y a environ trois ans que ces pièces sont achevées, mais comme ma santé diminue de jour en jour, mes amis me conseillent de cesser de travailler et je n'ay pas fait de grands ouvrages depuis. Je remercie le Public de l'aplaudissement qu'il a bien voulu leur donner jusqu'icy, et je crois en mériter une partie par le zèle que j'ai eu à lui plaire. Comme personne n'a guère plus composé que moy, dans plusieurs genres, j'espère que ma Famille trouvera dans mes portefeuilles de quoy me faire regretter, si les regrets nous servent à quelque chose après la vie, mais il faut du moins avoir cette idée pour tâcher de mériter une immortalité chimérique où presque tous les Hommes aspirent

The tinge of irony in this gravely measured prose only makes its cadence the more poignant. Something of this combination of melancholy with a witty precision is to be found in the music of the last two *ordres*, which may stand as Couperin's farewell to civilization and the world. In 1723 his ill-health had obliged him to hand over the Saint-Gervais organ to his cousin Nicolas, a son of François Couperin the elder, in 1730 he relinquished his remaining offices, his daughter Marguerite-Antoinette becoming Ordinaire de la Musique for the interim period until d'Anglebert died.

Couperin wrote no music after the publication of his last volume of clavecin pieces. He died in the big house in the Rue Neuve des Bons Enfants on 12 Sept. 1733. Besides the talented Marguerite-Antoinette, he had two other children. Another daughter, also a musician, entered a convent; she played the organ for the services. A son, Nicolas-Louis, was born in 1707, but presumably died in infancy, for nothing is known of him. Six months before his death Couperin took out a second royal privilege, on the expiration of the period of twenty years covered by the privilege of 1713. It was his intention that his wife and relatives should undertake the publication of the rest of his music; but neither his wife nor his nephew Nicolas, to whom he principally entrusted the task, seem to have had sufficient energy or interest to do so. Thus nearly all Couperin's music, apart from that which he published himself and the church works published quite early in his career by Ballard, is lost. The missing works are unlikely to include any keyboard music that Couperin considered worthy of preservation, but there may well be a quantity of lost occasional compositions for the church or drawing-room. We know on Couperin's own testimony that six of the 'Leçons des Ténèbres', his finest church works, have perished.

It is surprising that so little is known of Couperin's life, considering his renown and

affluence. No correspondence survives — a regrettable fact since we know that Couperin had a long correspondence about musical matters with J. S. Bach (According to Mme Arlette Taskin, who claims that the story was handed down in her family from an ancestor who was a relative of Couperin, the letters disappeared after being used as lids for jam-pots.) We know that Bach admired Couperin's music greatly and copied out some of Couperin's scores for himself and Anna Magdalena. From his prefaces and writings one gathers that Couperin was, as one might expect, habitually courteous and urbane, although capable of an acidulated irony. He suffered fools, but did not suffer them gladly. The beautiful portrait by André Bouys gives him a characteristically compact and neat appearance, it does not surprise us that this man should have written the music he did, or that he should have taken such scrupulous pains over the engraving of his works. The mouth is witty, the eyes are large and rather melancholy.

ORGAN MUSIC.—Couperin's first work of any substance was the 'Pièces d'orgue consistantes en deux Messes', the first "à l'usage ordinaire des paroisses pour les fêtes solennelles", the second "propre pour les couvents de Religieux et Religieuses". The former was presumably written for his own use at Saint-Gervais, as a part of his liturgical duties, the latter probably for some specific community. The form of the masses is simple. Since they were intended for liturgical use, any elaborate musical development would have been unsuitable. The Catholic church in France did not allow the organ the importance which it came to have in Protestant Germany; the organist's task was to fill in any gaps in the service with brief comments or variations on the plainsong motives. Couperin's couplets on the Kyrie, Gloria, Offertory, Benedictus (Elevation), Sanctus and Agnus Dei have mostly lost their connection with the plainsong base; the use of the term "couplet" would seem to imply that these short pieces, headed by a phrase of the Latin text, are episodes in the rondeau of the liturgy. The normally unstated theme is the plainsong melody. The liturgical function of the movements is emphasized by the fact that those in the minor end "on" the dominant.

Although the masses are the end of a long-established tradition, they betray many "modern" features almost without the composer's being aware of them; in this they resemble Purcell's string fantasies, composed at about the same age. The two organ masses thus amalgamate, without any immature experimentalism, the many different tendencies observable in 17th-century French organ music. They are exquisite music which

is also a case-book demonstrating the growth of the classical French tradition.

The basic element in their technique is a firm contrapuntal science which goes back to the plainsong fantasy, represented in its purest and grandest form by the organ works of Titelouze. Couperin's few movements based directly on plainsong themes all occur in the larger of the two works, the "messe à l'usage des paroisses"; but the clarity of his part-writing throughout is evidence of the solid training in the old technique which he had received from his master Thomelin. Couperin tends to treat his themes with a higher degree of harmonic tension than does the mystic Titelouze, this gives his organ music a more secular emotional quality, compared with the divine majesty of Titelouze.

Such passages, preserving a delicate balance between harmonic and contrapuntal elements, represent the basis of Couperin's technique in organ music. Next we may mention ostensibly harmonic effects depending mainly on chromaticisms and dissonant suspensions. These are perhaps best regarded as an intensification of the basic contrapuntal-harmonic technique, since although they are not usually fugal, they are always the product of fluent part-writing. The point of departure is the same; only the harmonic impact of the passage now takes the centre of the stage. These passages often have an almost Purcellian operatic intensity.

What chiefly counteracts the emotional chromaticisms in Couperin's organ work is the third basic element of his technique — the lucid diatonicism of his melodies. These have a simplicity and freshness which seems to be derived, by way of the sophisticated *air de cour* composers and 17th-century lutenists and clavecinists, from French folksong. These tender, lumpy strophic tunes can be most easily examined in the second of the masses, the 'Messe des Couvents'. The diatonic innocence of the melodies combines with the soft voluptuousness of the harmony to create what is perhaps the most distinguishing mark of Couperin's sensibility — the paradox of a sensuous purity.

The strophic melodies introduce also into Couperin's organ music the element of dance rhythm — a secular quality which is remote from the liturgical solemnity of Titelouze. Some couplets, especially the trumpet pieces, are straightforward and symmetrical in their dance rhythm, although their periods are enlivened by contrapuntal treatment. But more subtle pieces (for instance the eighth couplet of the "Gloria" of the 'Messe solennelle') achieve a balance between the calm fluidity of the part-writing, the melancholy of the chromaticisms which the parts create and the regularity of the underlying

metrical pulse. The level flow of the rhythm prevents the chromaticisms from getting out of hand; it "distances" the intensity of the emotion. In other pieces the symmetry of the pulse is counteracted by the unmetrical flow of a highly ornamented solo line, the ornaments playing an integral part in the line's expressiveness.

**CHAMBER MUSIC.**—Although Couperin's organ masses are the last significant word in a convention which was becoming outmoded, we have seen that they contain elements which look to the future as well as the past. When once he had paid his respects to the traditions in which he had been nurtured, Couperin turned to a convention to which, at the end of the 17th century, composers all over Europe felt obliged to render homage. This was the Italian trio sonata for violins and continuo, which owed its importance to the fact that it summarized in microcosm the techniques of classical baroque opera. Its combination of elements derived from the dance and the operatic aria, with elements derived from traditional polyphony, suggested means of developing the contrapuntal-harmonic technique which Couperin had explored in the organ masses. There was much in the Italian sonata which the French could recognize as of native origin. Corelli, the leading exponent of the style, acquired a thorough knowledge of Lully's opera from the francophile Muffat, and cannot have approved of the animus which was later exhibited by the partisans of both the French and the Italian cause.

For Couperin the "Italian" style was associated specifically with the *sonata da chiesa*; the *sonata da camera* or *partita* remained basically French, though it was often difficult to distinguish the constituents, so intimately did the techniques of the Italian *da chiesa* sonata and the French dance suite interpenetrate. In 1692 Couperin composed four sonatas in the church style; in 1695 he added two more. These are deliberate experiments in the Italian manner.

The two sonatas of 1695, 'La Sultane' and 'La Superbe', allow for a freer expression of Couperin's personality within their conscious Italianism. 'La Sultane' in particular is conceived on a grand scale, employing two independent cello parts in addition to the two violins and harpsichord. Its Prelude is a nobly sustained piece of polyphonic writing, rich in harmony and tone-colour; a brief *grave* achieves a characteristically melting effect through the use of hushed suspensions in dotted rhythm. Clearly Couperin's intention is no longer to emulate Corelli, but to absorb the Italian tradition into the French.

After these two works Couperin deserted the sonata for nearly thirty years. When he returned to it he revised the Sonatas of 1692,

rechristened them, and added to each a set of dances in the French manner, thus producing a series of diptychs analogous to the Bach solo violin sonatas and partitas. He also added a new double sonata called 'L'Impériale', the *da chiesa* part of which has tremendous linear energy and is the most Bach-like work Couperin ever wrote.

The two-violin suites — as opposed to the sonatas — thus all date from the last ten years of Couperin's life and may stand with Bach's partitas as examples of an apparently limited convention used with the maximum of imaginative significance. The *allemandes* are, apart from the *chaconnes*, the most musically extended movements, and often have considerable polyphonic complexity. Each suite has two courantes, the first of which carries to an extreme point the traditional rhythmic ambiguity between 3-2 and 6-4. The second courante is usually more airy and flowing.

Couperin writes two types of sarabande. One is derived from the lutenists and from Chambonnières — *tendre* and *cantabile* in character, and fragilely ornamented. The other type is *grave* and powerful. It often uses dissonant *appoggiaturas* and employs a slow but strenuous dotted rhythm, conventionally performed with the dots doubled. Couperin's *gigues* are sometimes of the amiable Italian type in a lilting 6-8; sometimes of a more complicated French type in 6-4, in a dotted rhythm related to the *canaris*. They have a tautness of line which suggests Bach, though they are scherzo movements and on the whole slight and frothy.

The crowning glories of the suites are the *rondeaux* and the *chaconnes*. The *rondeau* of the 'Impériale' suite has a theme of a tender diatonic simplicity which, in conjunction with the level movement, conveys a feeling of light, space and tranquillity. The mood of the *chaconne* is similar, though the piece is on a more massive scale. The broken rhythm and violently contrasted dynamics of the couplet in the minor have great dramatic force, and the introduction of chromatic elements gives the piece a cumulative momentum.

If in 'Les Nations' we see the French and Italian conventions side by side, in the two 'Apothéose' sonatas they merge into one another. The 'Apothéose de Corelli' is an extended, Frenchified *sonata da chiesa*; the 'Apothéose de Lully' is a Lully opera in Italianized, instrumental microcosm. There is no more effective demonstration of the distance Couperin travelled than to compare the prelude of the Corelli 'Apothéose' with the prelude to 'La Steinquerque' of thirty years earlier. In the late work there is no sacrifice of majesty in the proportions; the balance of the movements as wholes is preserved, as is the

lucid sequence of tonalities, but the incidental vitality and subtlety have increased enormously. The lines are more nervously sensitive, so the polyphony is more flexible and the harmony richer. The modulation to A minor towards the close and the heartrending false relation in the penultimate bar are the final mature expression of that paradoxically voluptuous purity which we had first observed in the organ 'Messe des Couvents'.

At the same time as he published the two 'Apothéose' sonatas Couperin began to publish his 'Concerts royaux'. All these works he assembled under the general title of 'Les Goûts réunis', pointing out that "le Goût italien et le Goût français ont partagé depuis longtemps la République de la Musique . . . et les premières sonades italiennes qui parurent à Paris il y a plus de trente années ne firent aucun tort dans mon esprit, ny aux ouvrages de M. de Lully, ny à ceux de mes Ancêtres". The 'Concerts' are not concertos in the Italian sense; they are "French" suites of dances, impregnated with a certain amount of Italian influence in the lyrical structure of their melodies, especially the slower aria-like ones. No instruments are specified; at the Concerts du Dimanche they were originally played by Couperin himself at the harpsichord, with Duval, Philidor, Alarius and Dubois on violin, viol, oboe and bassoon. On some such combination of woodwind and strings they are most effective, though Couperin explains in his preface that they may be played on almost any respectable instruments, even on two clavecins. In this form, in fact, Couperin played them with his friends and pupils; they are printed as it were in short score, on four staves.

Formally the 'Concerts royaux' are identical with the *sonate da camera* or suites of 'Les Nations'. They contain some pieces which are among Couperin's most powerful creations — for instance the C minor Sarabande and the E minor Courante, the latter developed on an unexpectedly spacious scale, with some acrid dissonances in the continuo part. Normally, however, it is not for tragic passion that we go to these pieces; we rather find in them the most civilized occasional music in European history.

The two Suites for viols were the last of Couperin's chamber works, published in 1728. These two Suites, coming at the end of Couperin's life, are also the end of a great tradition. The midsummer of the French solo viol music lasted from about 1660 to Couperin's death; as the viol had been gradually replaced by the violin for everyday use, it began to develop a virtuoso tradition, being used by composer-performers such as Marais and Forqueray both as a solo instrument played with continuo accompaniment

and as a solo instrument performing both melody and harmony. Not even Marais or Forqueray achieved a work of such ripe beauty as Couperin's two Suites, which, like so many aspects of Bach's work, are the last word, and the most profound, in a particular convention.

The Suites are written for two viols, one of them figured. In the original editions there is some confusion between singular and plural on the title-page, for the works are variously described as "pièces de violes" and as "suites de viole". The most probable explanation is that Couperin had in mind two alternatives. The pieces could either be played by two viols unaccompanied; or the first viol part, which is of a highly virtuosic character, could be performed by a soloist while the second part was played as a bass in conjunction with a harpsichord continuo.

VOCAL WORKS.—Couperin's secular vocal music is of little importance; it is interesting, however, in so far as the *brunette* tradition influenced all his most representative work. His contributions to the tradition are few and date from the early part of his career. They include three *airs sérieux* and half a dozen or so songs in the semi-sophisticated, semi-popular vein. The most charming of these pieces is the third and latest of the *airs sérieux*, a *brunette* dated 1711. This is in the usual two sections, with repeats, the first modulating from G to the dominant with some piquant intimations of D minor. The air is followed by five *doubles* or divisions, in which the suavely fluid ornamentation grows increasingly complex. As a whole the song is a beautiful example of musical preciousness; this type of *air de cour* ornamentation is found too in all Couperin's most impressive work. Of the songs in the popular manner the most interesting are the *chansons à boire*, to facetious words, in canon form — sophisticated versions of the tavern catch.

Couperin's vocal church music, on the other hand, is one of the most significant aspects of his work, and one of the least-known. The motets and elevations were composed for the royal chapel in the years following the creation of the violin sonatas; it is not therefore surprising that the basis of their technique is Italian. They are related not to the monumental style of the church music of Lully and Lalande but to the more intimate manner of Carissimi's solo cantatas and sacred histories, and more particularly to those works of Marc-Antoine Charpentier which were modelled on Carissimi. They are mostly scored for solo voices with continuo of organ and string bass; sometimes they employ *obbligato* instruments. The earliest piece, the 'Laudate pueri Dominum' of 1697, illustrates Couperin's expert command of Italian vocal technique, though it is not especially personal. Couperin's

authentic flavour first appears in the 'Quatre Versets d'un motet' of 1702, in which Italian vocal virtuosity is modified by the use of delicate dancing rhythms suggested by the French ballet, and by fluid melismata derived from the *air de cour*. The "adolescensculus sum" section is scored for high soprano, two flutes and continuo played on violins alone. This limpid, ethereal texture, with its caressing passing-notes, irradiates the sensual emotion of Carissimi and the *grand siècle* with a spiritual innocence that almost recalls Josquin or Dufay.

The 'Versets' of the two following years, 1703 and 1704, are conceived in a grander manner; the opening section of the psalm 'Benedixisti Domine' is Bachian in its spacious proportions, linear energy and powerful sense of climax. Chromatically rising figures create a sense of urgency and pleading, though as in Bach the emotion is always controlled by the even rhythmic pulse. But the finest of the early church works is the 'Motet de Sainte Suzanne', a work which is typical of Couperin in its combination of a playful wit with intense emotion. The lyrical technique, both for solo voices (soprano, counter-tenor and bass) and *obligato* violins, is here Italianate and virtuosic.

The motets which we have so far considered are all constructed on a plan similar to that of Bach's cantatas, with arias, recitatives of a lyrical or *arioso* character, instrumental *ritornelli* and *obligato* parts. Unlike Bach and unlike Lully, Couperin makes little use of the chorus. When he does employ it, as in the St. Susanna motet, it is with discretion. The series of elevations that follow the 1706 versets are essentially music for soloists, with organ continuo. With one exception they have no *obligato* parts. Their form, like that of Carissimi's solo cantatas, is closely related to the *sonata da chiesa*.

With the three 'Leçons des Ténèbres' for one or two voices with organ and viol continuo we reach the highest point of Couperin's church music, and one of the peaks of his music as a whole. They were written between 1713 and 1715, and while always preserving a civilized decorum, they attain to an intensity of passion which Couperin attempts but seldom. The Latin words of the prophet Jeremiah are interspersed with ritualistic Hebrew phrases which are used by Couperin as an excuse for vocalises of remarkable elaboration. Here Italian aria technique is reinterpreted in terms of the French tradition; the *port de voix*, *tremblement*, *chute* and other ornamental devices of the *air de cour* lose their fragility and enervating nostalgia, and are transformed into a line which reconciles subtlety with strength. The opening of the first 'Leçon' indicates admirably this breadth

of line and also shows how the ornamentation is both an expressive part of the line's contour and a concomitant of the harmony. If the third 'Leçon' impresses one as being the greatest, it is largely because, being conceived for two soloists instead of one, it offers opportunities for a combination of the vocalise technique with polyphony. Its clear counterpoint, mated with lucid tonal architecture, shows that in his last and greatest church work Couperin is still, like Bach, poised between two worlds, and making the best of them both.

CLAVECIN MUSIC.—Whereas the organ music, the violin sonatas, the *concerts*, the secular vocal music and the church music were all associated with particular periods in Couperin's career, the creation of clavecin music covers the whole of his working life. His first book includes pieces which must have been among his earliest creative efforts; the fourth comprises the last music he wrote. When he started to write clavecin music he had the work of Chambonnières, Louis Couperin, d'Anglebert and Le Roux to work from. Behind them was the school of lutenist composers, and behind these in turn were generations of French musical tradition, from folksong and troubadours to the polyphony and harmonized dance music of the 16th century. Interacting with these traditional French elements were various Italian influences, the implicit presence of the Italian operatic aria and the harmonic intensity of the operatic continuo; the popular culture of the *commedia dell'arte*, linking up with French popular culture; and the influence of Corelli, with his clear conception of tonality in dance movements. In Couperin's first book we are conscious of all these constituent materials, French and Italian, as such; in his fourth book they have been assimilated into a style of classical maturity. We are no longer aware of the richness of detail, but rather of the perfect proportions of the whole.

All Couperin's pieces are based on dance movement, though after the first book he does not often directly employ dance forms, but rather absorbs them into the binary principles of the classical baroque sonata, with first section ending in the dominant or relative major, the complementary second section returning to the tonic. All the pieces which are not basically binary dance movements of this type are *rondeaux* or *chaconne-rondeaux*—an extension of the old technique of dance tune with couplets, whereby the symmetrical tune is stated, followed by a short episode of allied but distinct material possibly involving a simple modulation, followed by a restatement of the tune in its original form without modulation, followed by another episode, and so on, *ad libitum*. Couperin uses this apparently limited technique, as Racine and Pöpe

used the alexandrine and heroic couplet, to convey an intensity of experience such as can be achieved only in the full maturity of a civilization.

In Couperin's clavecin music the compromise between polyphony and homophony which we had first observed in the organ masses assumes a somewhat different form. The pieces are architecturally constructed on the basis of a key-centre; yet at the same time they are polyphonic in so far as they depend on a dialogue between soprano and bass; the latter nearly always has melodic significance. Like Bach, Couperin borrows vitality and subtlety from the polyphonic tradition, and from the homophonic a classical objectivity. The lucid harmonic scheme both moulds and is moulded by the dialogue of the parts.

We may perhaps attempt some catalogue of the various species into which Couperin's clavecin pieces fall. First come the simple homophonic dance pieces, more or less the same as those which were actually danced to in the ballets. These are confined almost entirely to the first book, and although often charming, are not of much musical significance.

Secondly, there are the pieces directly influenced by lute techniques. These may be divided into two classes. One class adapts to the clavecin the "simulated polyphony" of lute arpeggio technique, as in the quietly flowing 'Les Idées heureuses' or the celebrated 'Les Barricades mystérieuses'. The other class derives from the arpeggiated dissonances and baroque ornamentation of the lutenists' *tombeaux*. These pieces—for instance 'La Lugubre', 'La Ténébreuse' and 'L'Unique'—are usually in sarabande rhythm and may attain to considerable power and grandeur.

Thirdly, there are the pieces related to popular music, for the sophisticated society of the time showed a delighted interest in the "simple et naturel". The most extended example is the set of parodistic pieces 'Les Fastes de la Grande et Ancienne Ménestrandise', in which Couperin satirizes the "closed shop" of the musicians' union of his time by depicting the players as exclusively "low" characters, affiliated with strolling players, acrobats, performing bears and monkeys. The plodding drone of the beggars, the rattle of drum and fife and melancholy whine of bagpipes and hurdy-gurdy are here re-created in the witty precision of Couperin's technique. Most of the musette pieces are of the same class. The nasal tones of the harpsichord are very successful at revealing the strange poetry of musette, fife and tabor.

Fourthly, we may mention the voluptuously melancholy pastoral pieces *à la Watteau*. These are often in rondeau form, and are

moving examples of Couperin's reconciliation of diatonic simplicity in melody with hyper-sophistication of ornament and of sequential harmony. The pieces in this group are numerous; we may refer especially to 'Les Roseaux', 'Les Bergeries' and 'Le Bavolet flottant', all three of great melodic beauty. A subsidiary division, as it were, of these movements exploits the sonorities of the harpsichord in an almost impressionistic manner. 'La Garnier' is a fine example from the first book; 'Les Vergers fleuris' and 'Les Guirlandes' from the later pieces. 'Les Vergers fleuris' conveys, by means of continuous suspensions over a pedal, a wonderfully evocative impression of heat and summer haze, without relinquishing its civilized elegance.

Fifthly, we have the pieces "dans le goût burlesque". These movements reflecting the mythology of the Italian comedy include some of Couperin's most audacious harmonic experiments, notably in 'Les Satires' and 'La Pantomime'. The piece from the fourth book called 'L'Harlequin' reveals in its strange sequential harmonies not only the wit but also the pathos of Watteau's harlequins.

Sixthly, there is a group of grave and serious pieces in bipartite form, which use a baroquely ornamented line over a latent metrical pulse. 'Les Langueurs tendres' is an example of this technique used in a mood of caressing quietude; 'La Logivière' and 'La Raphaële' show it in a grand and powerful manner, the continuous *ports de voix* creating great harmonic intensity. This technique is similar to that of Bach in many allemandes and sarabandes; it is perhaps significant that the noble allemande 'La Couperin' is one of the most Bach-like of Couperin's works.

Finally, we should mention the chaconnes or passacailles and chaconnes-rondeaux. These are the biggest pieces in the collections, both in size and in significance. There is only one real chaconne, the piece from the fourth book called 'L'Amphibie', a noble work worthy to stand beside the great chaconnes from the violin suites and from the finales of Lully's operas. Among the chaconne-rondeaux 'La Favorite' is a "chaconne à deux temps" which achieves a monumental grandeur from the very rigidity of the convention; it is also a most impressive example of the way in which Couperin's music depends on a dialogue between soprano and bass. Greatest of all is the B minor 'Passacaille' from Book II. The effect of this tremendous movement is attributable to the tension between the audacious fluidity of the harmonies and the repetition not merely of the bass, but of the whole opening period at the remorselessly regular intervals demanded by the chaconne-rondeau convention.

The other big chaconne, 'Les Folies

françoises', is also in B minor. This is a series of variations on a ground bass, on a principle analogous to Bach's "Goldberg" Variations, without the strict contrapuntal movements. Though the 'Folies' are on a much smaller scale than Bach's work, their emotional range is wide, extending from the melting harmonies of the variation called 'La Langueur' to the powerful internal chromaticism of 'La Jalousie taciturne'; from the simplicity of 'La Fidélité' to the vigorous dotted rhythm of 'L'Ardeur' and the ponderous tread of 'Les Vieux Galans'; from the rhythmic whimsicalities of 'La Coquetterie' to the whirling figuration of 'La Frénésie'. The work is a microcosm of Couperin's art, its tragic passion, its witty urbanity, its sensuous charm.

The clavecin *ordres* (suites) are collections of pieces assembled without any planned unity except that of key. Some of the *ordres* do, however, seem to have a certain consistency of mood. Thus the B minor *ordre* from Book II is almost uniformly serious, even tragic in tone; whereas that in B $\flat$  major tends to the pastoral. This unity of mood is much more marked in the fourth book than in the earlier ones; and although that book contains no piece of the intensity of 'La Passacaille', it must as a whole be regarded as Couperin's supreme achievement in keyboard music. The D major *ordre* contains the subtlest of all Couperin's witty pieces; the F major contains the finest movements "dans le goût burlesque"; while the F $\sharp$  minor includes in 'La Convalescente' and 'L'Épineuse', if not the greatest, then the two most seductively lovely pieces Couperin ever wrote. The technique is of impeccable lucidity, with a kind of transfigured radiance. It is this quality perhaps that gives to the last two *ordres* so touchingly valedictory a feeling.

The enigmatic titles of some of Couperin's pieces are probably so only because they have ceased to be topical. "J'ai toujours eu pour objet, en composant ces pièces, des occasions différentes qui me l'ont fourni", he said; and there is no reason to doubt that he meant it. All the theorists of the classical age insisted on music's expressive purpose, and Couperin is in no way abnormal in regarding his works as stylizations, in musical terms, of various aspects of the life of his time. There are movements, such as 'L'Auguste' or 'La Majestueuse', which reflect the gallant bearing of the king himself, and an easy familiarity with the great ones of society. There is the gracious gallery of portraits of noble ladies, proud, languid, tender or coquettish. There are pieces, such as 'Les Plaisirs de Saint-Germain-en-Laye', which tell of the exquisite pleasures of the *fête champêtre*. Other movements reflect the sights of the Parisian streets which Couperin

observed from his window in the Rue Neuve des Bons Enfants—the martial glitter of soldiers ('La Marche des gris vêtus'), the comic antics of acrobats and strolling players (the burlesque pieces). Other pieces again tell of his love, as urbanely civilized as that of La Fontaine, for the country, with its memories of childhood and youth in the pastoral gentleness of La Crouilly (the piece with that name, 'Les Moissonneurs', 'La Musette de Choisy'). Yet all these things which to Couperin were immediate and actual are transformed into a world of art. If they seem "artificial" it is because the world which he imitated was itself so close to art that it entailed, to a degree which is seldom found in communities, both emotion and discipline, both complexity and order.

THEORY.—Couperin's theoretical work, 'L'Art de toucher le clavecin', was published in 1717. It is not a systematically planned work, but rather a series of random reflections noted down as they occurred to him. Although somewhat ambiguous and confusing in parts, it is one of the most important contemporary treatises dealing with the interpretation of French music of the early 18th century.

Couperin opens with some hints on teaching method, and this leads him to a consideration of the nature and technique of his instrument. He regarded the clavecin as an instrument capable of great emotional sensitivity, and this sensitivity is achieved by means of the rhythmic subtleties, the ornamentation and the technique of fingering which he describes.

Couperin states that expressive subtlety is obtained partly by playing unequally certain notes which are written equally. Unfortunately he does not explain precisely how, and in what circumstances, this was done. In order to have some understanding of the convention of *notes inégales* in French classical music it is thus necessary to supplement Couperin's account by referring to the more detailed discussion of other contemporary theorists, such as Loulié, Boyvin and Saint-Lambert. Couperin's music cannot be adequately interpreted if the problem is ignored, though it is not easy to come to any definite conclusions on the matter.

Concerning ornamentation Couperin is more specific and more helpful. He stresses that the purpose of the ornamentation is to add subtlety and nuance to the line, to make the music more humanly expressive. His terminology is, however, somewhat confused. Thus, as Dolmetsch points out, what Couperin calls the *port de voix simple* is really the *port de voix pincé* (i.e. with a mordent); and in the *port de voix double* it is not the *appoggiatura*, but the mordent, which is doubled. He makes the important points that in all the *ports de voix* the ornamental note must be struck with the

harmony note and that the length of the ornamental notes must be proportionate to the value of the note to which they are attached. He does not, however, tell us what this proportion is; so for this information we have to turn to other authorities.<sup>1</sup>

Employed by "personnes susceptibles de sentiment" ornaments can greatly enhance the music's expressiveness, imparting nuance and sensitivity without harming the architectural proportions. Couperin claims to be the first person to use these ornaments in keyboard music; his purpose is to render the "mechanized lute" which is the clavecin more flexible. His most important pronouncement on the general significance of ornamentation in his music occurs in the preface to his third book of clavecin pieces, when he protests against performers who have not taken his ornaments seriously enough:

I am ever surprised, after the pains I have taken to mark the ornaments which suit my pieces, to listen to people who have learned them without taking due heed of them — an unpardonable neglect, the more so because it is by no means permissible to add whatever embellishments one pleases. I declare that my pieces must be played as they are marked and that they will never make their impression on people of true taste unless all I have noted is observed to the letter, with nothing added and nothing taken away

Here again we have the insistence on the connection between ornamentation and sensibility, and the suggestion that the ultimate judge must always be, in the self-assured phrase of the period, "le goût vrai".

In his *méthode* Couperin gives copious examples of his technique of fingering which, he claims, constitutes a new system. It does not, perhaps, seem very new to us, being closer to the methods of the 16th and 17th centuries than to modern practice. But

though it concentrates on the second, third and fourth fingers and shares the old music's distrust of the thumb, it anticipates the modern method of playing parallel thirds smoothly, and clearly establishes the principle of finger-substitution to secure a *legato*. Moreover we must remember that the fingering and phrasing of the old music were interdependent. It may be more difficult to play Couperin's music with his own than with modern fingering; but the performer who does so can be sure that he will be phrasing the music correctly. Couperin's fingering is a means of revealing as clearly as possible the musical sense of a composition. His copious and accurate phrase markings — slurs, dashes (a more exaggerated effect) and commas may be correlated with his fingering; and the fingering reveals that even apparently unimportant passages of figuration should be phrased according to the same general principles. These principles, like those of Bach's phrasing, are broadly parallel to string bowing.

The rest of Couperin's treatise deals with continuo playing and with his "expressive" aims and intentions. Early in his career he wrote another theoretical work called 'Règles pour l'accompagnement'. It is a straightforward account of the methods of treating discord current in his day, and is interesting mainly because it illustrates his familiarity with the most advanced Italian techniques.

Incorporated in 'L'Art de toucher le clavecin' for illustrative purposes are eight preludes and an allemande. These pieces are in a terse linear style comparable with that of Bach's inventions. Couperin explains that although "measured", the preludes should be interpreted very freely, in conformity with the lutenist tradition.

## CATALOGUE OF WORKS CHURCH MUSIC

Title	Key	Scored for	Composed
'Laudate pueri Dominum. motet de Psaume CXIII.'	A ma.	S S., ? 2 vns & continuo.	1697.

(5) **Marguerite-Louise Couperin** (b. Paris, 1676 or 1679; d. Paris, 1728), soprano singer and harpsichordist, cousin of the preceding, daughter of François Couperin the elder (2). She became a member of the Musique du Roi and sang many of the high soprano parts in the church music of Couperin le Grand with "une grande légèreté de voix et un goût merveilleux" (Titon du Tillet). Couperin le Grand composed some secular cantatas for her, but these are lost. She was also a fine clavecin player.

(6) **Nicolas Couperin** (b. Paris, 20 Dec. 1680; d. Paris, 25 July 1748), organist and (?) composer, brother of the preceding, son of François Couperin the elder (2). He was a musician in the service of the Comte de Toulouse, who had also favoured Couperin le Grand. He was organist of Saint-Gervais from 1733 until his death. None of his compositions has survived, except a motet of very dubious authenticity. He was buried beneath the organ at Saint-Gervais.

(7) **Marguerite-Antoinette Couperin** (b. Paris, 19 Sept. 1705; d. Paris, 1778), harpsichordist, second cousin of the preceding, daughter of François Couperin le Grand (4). She was a brilliant player and during the last three years of her father's life she performed his duties as clavecinist to the king. After François's death she officially became Ordinaire de la Musique, being the first woman to hold the post. When d'Anglebert the younger died she retired in favour of Bernard de Bury; but she kept the title and emoluments, as d'Anglebert had done up to 1717. She taught the daughters of Louis XV. She remained unmarried.

(8) **Armand-Louis Couperin** (b. Paris, 25 Feb. 1725; d. Paris, 2 Feb. 1789), organist, harpsichordist and composer, son of Nicolas Couperin (6). He enjoyed great celebrity in Paris, being organist of Saint-Gervais for forty years (from 1748 until his death), and also organist of the Paris churches of Saint-Barthélemy, Saint-Jean-en-Grève, Saint-Merry, Sainte-Marguerite, the Sainte-Chapelle and Notre-Dame. In 1768 the organ at Saint-Gervais was rebuilt by F. H. Clicquot, and Couperin acquired a brilliant reputation for

his virtuosity on this fine, large instrument. While on his continental travels Burney heard him perform, and wrote thus of the experience:

The organ at St Gervais, which seems to be a very good one, is almost new; it was made by the same builder, M. Clicquot, as that of St Roche. The pedals have three octaves in compass, the tone of the loud organ is rich, full, and pleasing, when the movement is slow, but in quick passages, such is the reverberation in these large buildings, everything is indistinct and confused. Great latitude is allowed to the performer in these interludes, nothing is too light or too grave, all styles are admitted, and though M. Couperin has the true organ touch, smooth and connected, yet he often tried, and not unsuccessfully, mere harpsichord passages, sharply articulated, and the notes detached and separated.

This use of harpsichord technique in organ playing is indicative of the destruction of the classical organ tradition, to which François le Grand's two 'Messés' had been one of the last significant contributions. The technique is of general relevance to Armand-Louis's compositions, which represent the ousting of the linear style of the classical baroque by the tootling scale passages and Alberti basses of the new rococo manner. His works are of historical rather than intrinsic interest, possibly he did not take them very seriously himself, since he made little effort to publish them. They include clavecin pieces (a volume of which was published in 1752), trio sonatas and sonatas for violin and harpsichord, quartets with two harpsichords, "simphonies de clavecins", harpsichord variations and a *cantahille*, 'L'Amour médecin'.

Armand-Louis Couperin married Élisabeth Blanchet, sister-in-law to P. J. Taskin, keeper of the instruments to Louis XV. She was an excellent musician and capable organist who deputized for her husband in some of his numerous posts.

Couperin died as the result of an accident; he was knocked down by a horse while returning from vespers. Paris lamented his death not only with volubility, but with what appears to have been heartfelt emotion. He was buried at Saint-Gervais.

(9) **Pierre-Louis Couperin** (b. Paris, 14 Mar. 1755; d. Paris, 10 Oct. 1789), organist and composer, son of the preceding. He was organist to the king and at Notre-Dame, Saint-Jean and Saint-Merry; he also helped his father at Saint-Gervais. He composed a little, in an insipidly rococo style influenced by the *opéra-comique*. He published variations in 'Le Journal de clavecin', an 'Air de Tibulle et d'Élie' and an Allegro for pianoforte. He died eight months after his father; his unstable constitution may have been finally undermined by the shock.

(10) **Gervais-François Couperin** (b. Paris, 22 May 1759; d. Paris, 11 Mar. 1826), organist and composer, brother of the preceding. He was organist of the Sainte-Chapelle and Sainte-Marguerite, also of Saint-Gervais from 1789 until his death, inheriting most of

Pierre-Louis's appointments. He composed romances, variations, fantasies, sonatas, etc., for pianoforte, and pieces for violin, voice and harp. Gervais-François prepared for any eventuality by composing some variations on 'Ah ça ira!', signed "organiste du Roi". During the latter part of his life "citoyen Couperin, organiste célèbre" seems to have been successful enough in the post-revolutionary period. He officiated at the organ at the reopening of the Opéra in 1793 and was one of the organists who took part in the celebrations in honour of the return of Bonaparte from Egypt, in 1799. None the less, the Revolution meant the end of the world which had made the glory of the Couperins possible. Gervais-François was the last of the Couperins to officiate at Saint-Gervais. He married a pupil, Hélène-Narcisse Frey.

(11) **Céleste Couperin** (b. Paris, 1793 or 1794; d. Belleville, 14 Feb. 1860), organist, daughter of the preceding. She was given the thorough musical education traditionally accorded to members of the family, and seems to have been a competent organist. After moving from Paris she declined to the status of a second-rate teacher of the pianoforte and of singing. In 1848, in indigence, she was forced to sell the family portraits to the state; the Couperins had become a museum piece. She never married and was the last member of the Couperin dynasty.

#### MODERN EDITIONS

- François Couperin, Complete Works, ed. by Maurice Cauchie, Paul Brunold, Amédée Gastoué & André Tessier, 12 vols (Lyrebird Press, 1933)  
 Louis Couperin, Complete Works (Lyrebird Press, 1937).

**Couperus, Louis.** See Voormolen ('Arethusa', symph. myth).

**COUPLER.** All modern organs are provided with mechanical (pneumatic or electrical) appliances called "couplers". They are of two general kinds: "manual couplers" and "pedal couplers".

(1) The manual couplers operate in one of three ways: either by playing on one manual the key corresponding to that played on another, in which case it is a "unison coupler", or by taking down the octave above the note pressed down, when it forms an "octave coupler", sometimes incorrectly called the "super-octave coupler"; or by operating on the octave below, forming a "sub-octave coupler". The octave and sub-octave couplers may act on the manual on which the note is played or on another manual, e.g. Swell Octave to Great.

Manual couplers date back at least as far as 1651, when Geissler's organ at Lucerne was completed; which, according to the account formerly written over the keys, contained "several registers, whereby one may make use of the three manuals together, or of one or two of them separately".

(2) A pedal coupler attaches a particular manual to the pedal clavier and, by bringing the lower  $2\frac{1}{2}$  octaves of the compass of the manual under the control of the feet, produces the effect of a third hand on any manual required.

The ideal would be to have a complete pedal organ to obviate the necessity of frequent coupling to a manual. E. J. H., adds.

See also Organ.

**COUPLET** (Fr.). In literature the French term is used for a verse or stanza of a poem, not, as with the English "couplet", for two rhyming lines of poetry. In music the French term has two different meanings: (1) the older one, for the intermediate and variable episodes in the *rondeau* as cultivated by Couperin and his contemporaries, where the main theme recurs again and again unaltered after each *couplet*; (2) the later one, for the verses of a strophic song, generally of a light and often a humorous character, with the same music for each verse. E. B.

**COUPLEUX ORGAN.** An electrophonic organ producing its notes from the air, first installed at the Paris wireless station and in one of the churches in 1932.

**COUPPEY, Félix le.** See LE COUPPEY.

**COURANTE** (Ital. *corrente*, Eng. *corant*).

(1) A dance of French origin, the name of which is derived from *courir*, to run. It is described by Thoinot Arbeau ('Orchésographie') as a dance of duple rhythm, which remained in this form as long as it was used for dancing only. Its transformation into 3-2 time was gradual. Mersenne ('Harmonie universelle') notes its popularity among all other dances practised in France. Its vogue was

great in the 17th century, and it attained its apogee under Louis XIV. Defined in Brossard's Dictionary of Music, it was considered by d'Alembert as a slow saraband.<sup>1</sup>

It begins with a short note (usually a quaver) at the end of the bar and is distinguished by a predominance of dotted notes, as the following, from Bach's 'English Suites', No. 4:

and requires a staccato rather than a legato style of performance. Like most of the other old dances, it consists of two parts, each of which is repeated. A special peculiarity of the French courante is that the last bar of each part, in contradiction of the time signature, is in 6-4 time. This will be seen clearly by an extract from the movement quoted above:

As a component of the suite, the courante follows the allemande, with which in its character it is strongly contrasted. In losing its connection with the dance it underwent a slight modification: whereas in its earlier shape the 6-4 time was to be found only in the concluding bar of each part, courantes are frequently to be met with in suites wherein the two times are mixed up, and sometimes even where, in spite of the time-signature, the 6-4 predominates throughout. This is especially the case in many examples by Couperin.

The chief points of the French courante may be briefly summed up thus — triple time, prevalence of dotted rhythms, alternations of 3-2 and 6-4 times, and polyphonic treatment.

(2) The Italian courante (*courante italienne*), called also, like the preceding, simply *corrente* or *courante*, is a different form, quite independent of that just mentioned. It answers more nearly to the etymological meaning of its name, since it consists chiefly of running passages. This courante is also in triple time — usually 3-8, but sometimes 3-4 — and of

<sup>1</sup> See J. Écorcheville, 'Vingt Suites d'orchestre du dix-septième siècle français'.

rapid tempo, about *allegro* or *allegro assai*. It is thus, like the French courante, contrasted with the allemande. As an example of this class may be taken the following from Bach's Partita No. 5:

Other specimens of this kind of courante may be found in No. 5 of Handel's 'First Set of Lessons', and in Nos. 5 and 6 of Bach's 'French Suites', these last being in 3-4 time. They are also frequent in Corelli's violin sonatas.

(3) One more species of courante remains to be noticed, which is founded upon and attempts to combine the two preceding ones, but with the peculiarity that the special features of neither — the French change of rhythm and the Italian runs — are introduced. It is in fact a hybrid possessing little in common with the other varieties, except that it is in triple time and consists of two parts, each repeated. Most of Handel's courantes belong to this class. The beginning of one, from his 'Lessons', bk 1, No. 8, will show at once the great difference between this and the French or Italian courante:

Bach, on the other hand, uses chiefly the first kind of courante, his movements more resembling those of Couperin.

E. P., adds. M. L. P.

**Courmont, Louis de.** See Bizet (song)

**COURSES.** The pairs of strings on instruments of the lute family producing the same note on each string, usually in unison, but occasionally in octaves. The two or three strings producing one note in the modern pianoforte are actually "courses", but they are never so called, the word being obsolete in that sense.

#### COURTAULD-SARGENT CONCERTS.

These concerts had their first season in London in the winter of 1928-29, and were started by the late Mrs. Samuel Courtauld, with Sir (then Dr.) Malcolm Sargent as musical director, for the purpose of providing first-rate music for audiences unable to afford the usual prices of symphony concerts. A Concert Club was formed among the employees in banks, business houses, schools, hospitals and other institutions. The members of the Concert Club subscribed in groups for a series of six concerts through the winter season. The concerts were given at Queen's Hall; the London Philharmonic Orchestra was engaged and a number of

eminent conductors took charge of them and gave many memorable performances of important works. So popular was the idea of the Concert Club that it soon became necessary to give the concerts in two series, that is to say, the same programme on Monday and on Tuesday. After the death of Mrs. Courtauld Mr. Samuel Courtauld became chairman of the committee, but eventually, chiefly owing to the second world war, the organization was discontinued. Its useful function is now carried out in much the same way by the New Era Concert Society started in 1947 by Richard Austin.

H. C. C., adds.

**COURTAUT.** An obsolete type of woodwind instrument depicted and described by

Mersenne (1636) as nothing more than "un Fagot ou Basson raccourci qui sert aussi de Basse aux Musettes" (see Fig.). The narrow twin-bore was connected at the foot to form a continuous tube from the exposed double-reed and short crook at the top, down and up the twin-bores, to a lateral outlet near the top. The courtaut had the usual six fingerholes in front, but a curious feature was the presence of two sets of three small projecting lateral tubes (Fr. *tétines*) which communicated with the rear bore. Only three of these were used according to whether the performer played with left hand above right or vice versa. The three *tétines* not in use were stopped with wax. Mersenne tells us courtauts resembled thick walking-sticks, whence some people made of them "grands Bourdons semblables à ceux des Pèlerins de Saint-Jacques". Galpin drew attention to the existence

in the instrumental collection of Henry VIII, inventoried at his death in 1547, of "Pilgrim

Courtaut, as depicted by Mersenne, 'Harmonie universelle', Propos. XXXII (p. 298).

Hole 7 indicates the junction of the two cylindrical bores. Holes 8, 9, 10 and 11 are at the rear of the instrument. The continuous bore terminated at hole 11.

Staves", conceivably courtauts of the type described by Mersenne nearly a century later.

Several unfortunate errors in works of reference must now be noted.

Dr. Stone who wrote the article Bassoon in the first edition of this Dictionary misunderstood the *istines* in Mersenne's Courtaut and made the surprising statement that early bassoon types had plugs for insertion or withdrawal before performance, according to the key of the composition. The real purpose of the *istines*, which were not capable of withdrawal, has been explained above. The error was repeated by U. Daubeney in his 'Orchestral Wind Instruments' (1920) and by many others.

The learned musicologist and acoustician Victor Mahillon, in Vol. II of his Brussels Catalogue, gave a drawing and full description of No. 952 which he termed a "Courtaut" (*sic*), but the instrument is in reality a bass crumhorn, a facsimile of No. 214 in the Kunsthistorisches Museum, Vienna. Mahillon's error is the more remarkable as he minutely describes a set of six crumhorns under Nos. 610-15.

In the Catalogues of the 1872 Exhibition in London and of the Musical Instruments in the South Kensington Museum (London, 1874) Carl Engel made the erroneous statement that a specimen of the French Courtaut, dating from the 15th century, was preserved in the Paris Conservatoire. This was repeated in the Art Handbook issued by the Board of Education in 1908, and by Jeffrey Pulver who, in his 'Dictionary of Old English Music' (1923), makes confusion worse confounded by terming the surviving specimen a Curtal (*sic*) of the 15th century, and proceeds to quote at length from De Félice's 'Encyclopédie' (1772) a description of a true Courtaut. Engel thus cites a pseudo-courtaut said to date from two centuries in advance of its existence and Pulver makes of it a Curtal a century before that type was known. The instrument in the Paris Collection is in fact a late 17th-century Cervelat or Rackett. No specimen of a Courtaut has survived, but Galpin had a facsimile made from Mersenne's drawing, and it appears in Pl. XXXII, No. 7, of his 'Old English Instruments of Music'. Jacquot in his 'Dictionnaire des instruments de musique' (1886) also errs in defining the Courtaut thus: "Petit basson qui se nommait aussi Cervelas, selon la forme qu'il affectait".

Amid so much confusion in nomenclature the student may be excused his inability to distinguish fact from legend. It is greatly to be regretted that as yet no reprint of Mersenne's 'Harmonie universelle' exists, as in the case of Virdung, Agricola and Praetorius.

L. G. L.

**Courtelaine, Georges.** See Sauguet (incidental for 2 plays). Terrasse (do for 3 fantasies)

**COURTEVILLE.** English family of musicians, (?) of French descent.

(1) **Raphael Courteville** (b. ?, d. ? London, 28 Dec. 1675). He was one of the Gentlemen of the Chapel Royal in the reign of Charles I. He lived during the interregnum and resumed his place in the Chapel on its re-establishment in 1660.

J. A. F.-M.

(2) **Ralph (or Raphael) Courteville** (b. ?; d. London, c. 1735), organist and composer, son of the preceding. He was doubtless a pupil of his father and was brought up as a chorister in the Chapel Royal. Queen Mary had presented the organ from the Chapel Royal to the church of St. James's, Westminster, and on 7 Sept. 1691 "Ralph Courteville" was appointed first organist there at a salary of £20 per annum. Many of his songs appear in the collections published in the latter part of the 17th century and the beginning of the 18th. He published 6 Sonatas "composed and purposedly [*sic*] contriv'd for two flutes" about 1690. His best-known composition is the hymn-tune called "St. James's".

J. A. F.-M.

Courteville wrote songs for Southerne's 'Oroonoko' and for the third part of Dufey's 'Don Quixote' (both plays produced in Nov. 1695) and also for revivals of Nahum Tate's 'A Duke and No Duke' and Dryden's 'Aureng-Zebe' about the same time. There also exists a setting by him of a song which occurs in Thomas Wright's 'The Female Virtuoso's' (1693), but it is doubtful whether this was sung on the stage.<sup>2</sup>

A. L.

(3) **Raphael Courteville** (b. London, ?; d. London, June 1772<sup>3</sup>), organist, son of the preceding. He probably succeeded his father as organist of St. James's, Westminster; but in the vestry minutes of the parish, though they are very carefully kept, no record of this appointment or of the death of Courteville (2) can be found, and it has been assumed that one individual held the post of organist for eighty years.<sup>4</sup> The only direct evidence against this assumption is such as can be derived from the fact that there is a tablet in the church, recording the burial of the wife (Elizabeth Abbot) of "Raphael Courteville Junr of this parish, Gent . . ." in May 1735; as he is not called organist, it is likely that Courteville (2) was alive at the time. In Sept. 1735 the widower married Miss Lucy Green, a lady of large fortune.<sup>5</sup> This Courteville devoted himself mainly to political writing. He published 'Memoirs of the Life and Administration of William Cecil, Baron Bur-

<sup>1</sup> Also Cortevil, Courtaville or Courtvill.

leigh', in 1738, signing it only with the initials "R. C.". He was the reputed author of 'The Gazetteer', a paper written in support of Sir Robert Walpole's administration, and it was probably from this that he obtained the nickname of "Court-Evil" from the opposition. A letter appeared over his signature in No. 50 of the 'Westminster Journal', probably as a joke on his own productions; in this he is styled "Organ-blower, Essayist, and Historiographer". He published a pamphlet, 'Arguments respecting Insolvency', in 1761. For some years before this, entries in the minute-books of the church show that he had practically neglected his duties as organist: he is warned in 1753 and 1754; and in 1764 his assistant, one Richardson, was consulted as to the repairs of the organ. In 1771 it was reported that Courteville was giving his assistant only one quarter of his salary and was ordered to share it equally with him.

**COURTLY STYLE.** See GALANT.

Courtney, W. L. See Debussy ('Khamma', scen.) Howells (song).

**COURTOIS, Jean** (b. Cambrai, ?; d. ? Cambrai, ?).

Flemish 16th-century composer. Nothing is known of his life except that he was chapel-master at Cambrai Cathedral when in Jan. 1539 Charles V asked Francis I for free passage for troops going to Ghent. At the festivities held during Charles's stay at Cambrai a motet by Courtois, 'Venite populi terrae', was sung in the cathedral. It is described as follows:

Déclaration des triumpantz honneur et accueil faictz à la Maesté Imperiale à sa joyeuse et première entrée, ensemble aux illustres Princes de France Messieurs le Dauphin et duc Doriéans en la cité et duché de Cambray En lan de grâce mil cinq centz et XXXIX, au mois de janvier, le XX<sup>e</sup> jour dudict moys

Courtois also composed other motets, many published. Masses and motets in manuscript are in the Munich Library, and some at Cambrai and Leyden, also at Bologna in great number<sup>1</sup>, and at Hamburg. Several collections of the 16th century, printed in France, Italy and Germany, contain sacred and secular compositions by Courtois. His French songs include a canon and two songs in five and six parts in 'Chansons à 4, 5, 6 et 8 parties de divers auteurs' (Antwerp, 1543-1550); 'Si par souffrir', in 'Trente Chansons musicales à 4 parties' (Paris, 1539); 'Trente et une Chansons musicales à 4 parties' (1529)<sup>2</sup>; and two songs in 'Trente-cinq Livres de chansons nouvelles' (1533-49).<sup>3</sup>

<sup>3</sup> Collections issued by P. Attaignant, other publishers were Moderne, 1532, Ott, 1537, Gardano, 1539, Salubinger, 1540, Susato, 1546-47, etc.

**COURVOISIER, Walter** (b. Riehen nr. Basel, 7 Feb. 1875; d. Locarno, 27 Dec. 1931).

Swiss composer and teacher. He spent most of his life in Germany, having studied at Munich under Ludwig Thuille and married his daughter. He conducted the Kaim Orchestra there in 1907, became teacher at the Academy of Music in 1910 and professor there in 1919, in succession to Friedrich Klose, another Germanized Swiss composer. A number of younger Swiss musicians went to him for study at Munich, including Burkhard and Sutermeister.

As a composer Courvoisier devoted himself particularly to song-writing ('Geistliche Lieder', 'Altdeutsche Lieder', 'Kinderlieder', etc.), where he based an entirely personal style on the principles of Hugo Wolf. But his six suites for unaccompanied violin are also of interest as a synthesis of Bach's linear manner and modern German harmony. Other works by him are the operas 'Lancelot und Elaine', after Tennyson (Munich, 1917; Basel, 1918), 'Die Krahnen' (Munich, 1921) and 'Der Sunde Zauberei', after Calderón (not produced); 'Totenfeier' (also called 'Auferstehung') for solo voices, chorus and orchestra (1917), symphonic prologue for Carl Spitteler's 'Olympischer Frühling' (1906); numerous choruses, some pianoforte pieces, etc.

**COUSINEAU, Georges** (b. ?; d. ?);

**COUSINEAU, Jacques-Georges** (b. Paris, 13 Jan. 1760; d. Paris, 1824).

French harp makers and harpists. The father appeared as a music publisher in Paris in 1766 and was a member of the guild of instrument makers in 1769. He was one of the first to import pianofortes from England into France (1773). He also became famous as a maker of harps and a virtuoso on that instrument.

His son joined in the business in 1775 and both were given the title of Luthier-in-Ordinary to the Queen. But Jacques, while devoting much of his time to the making of instruments, was best known as a virtuoso player. He was harpist at the Paris Opéra in 1780 and soloist at a Concert Spirituel the following year. In 1780 also he published his first work, a volume of sonatas for his instrument. This was followed by more than twenty further collections and an excellent 'Méthode'. Father and son together did much to improve the harp, and in 1782 the Abbé Roussier presented to the Académie des Sciences a memoir on their new instrument tuned in C<sub>4</sub>, and furnished with a double row of pedals, thus enabling the player to produce the semitones

both diatonic and chromatic (perfected later by Érard in a more practical manner). In 1799 they patented an invention for stretching the strings, and in 1803 one for strengthening the tone-quality.

**COUSSEMAKER, Charles Edmond**

**Henri de** (b. Bailleul, Nord, 19 Apr. 1805; d. Bourbourg, Nord, 12 Jan. 1876).

French musical historian. His family is traced back to the 15th century and had for many generations held magisterial posts in Bailleul. His father, a Juge de Paix, destined him for the law; but his musical aptitude was such that at the age of ten he could play any piece upon the pianoforte at sight. He also learned the violin and cello. He was educated at the Lycée Douai and took lessons in harmony from Moreau, organist of Saint-Pierre. In 1825 he went to Paris, and studied composition, etc., under Reicha and others. The recent researches of Fétis had roused a general interest in the history of music, and Coussemaker's attention was turned in that direction. Having completed his legal studies he was appointed judge successively at Douai, where he continued to study music with Victor Lefebvre, at Bergues, Hazebrouck, Dunkerque and Lille. He was a member of the Institut for twenty years and belonged to several other learned societies, besides being a Chevalier of the Legion of Honour and of the order of Leopold of Belgium. His musical works are:

'Mémoire sur Hucbald . . .' (1841).

'Notices sur les collections musicales de la Bibliothèque de Cambrai . . .' (1843).

'Histoire de l'harmonie au moyen-âge' (1852).

'Trois Chants historiques' (1854).

'Essai sur les instruments de musique au moyen-âge' (1856).

'Chants populaires des Flamands' (1856).

'Chants liturgiques de Thomas à Kempis' (1856).

'Notice sur un manuscrit musical . . . de St. Dié' (1859).

'Dramas liturgiques . . .' (1860).

'La Messe du XIII<sup>e</sup> siècle . . .' (1861).

'Scriptorum de musica mediæ ævi nova series', 4 vols. (1864-76).

'Les Harmonistes du XI<sup>e</sup> et XIII<sup>e</sup> siècles' (1865).

'L'Art harmonique aux XII<sup>e</sup> et XIII<sup>e</sup> siècles' (1865).

'Traité inédit sur la musique du moyen-âge' (1865, 1867, 1869).

He also edited the works of Adam de La Halle (Paris, 1872) and Tinctor's treatise (1875). At the time of his death he was preparing a continuation of his 'L'Art harmonique' to the 14th century. His legal writings are good, especially one on Flemish law. In early life he

composed some masses and other church music and published a volume of songs. In spite of certain errors his works form a most important contribution to the history of music.

F. G.

**COUSSER.** See KUSSER.

**COUSU, Antoine de** (b. Amiens, ?; d. Saint-Quentin, 11 Aug. 1658).

French singer and theorist. He was first a singer at the Sainte-Chapelle in Paris, afterwards choirmaster at Noyon and finally canon at Saint-Quentin. He wrote 'La Musique universelle' (1658), one of the earliest works dealing with hidden fifths and octaves. Riemann thinks that a 4-part fantasy in Kircher's 'Musurgia' by "Jean Cousu" is probably attributable to Antoine. E. v. d. s.

**COVENT GARDEN THEATRE.** What is now the Royal Opera in London and, in spite of the spasmodic cultivation of opera in England, one of the great musical theatres in the world, was opened on 7 Dec. 1732 under the management of John Rich. He moved there with all his company from the theatre he had previously directed in Lincoln's Inn Fields.<sup>2</sup>

Though licensed for the performance of the higher class of dramatic works, to which the name of "legitimate" is given, Covent Garden Theatre has been the scene of all kinds of theatrical productions; and two years after the first opening of the theatre, in 1734, we find the bill for 11 Mar. announcing

a comedy called *The Way of the World*, by the late Mr Congreve, with entertainments of dancing, particularly the Scottish dance, by Mr. Glover and Mrs. Laguerre, Mr. Le Sac and Miss Boston, Mr. de la Garde and Mrs. Ogden; with a new dance called *Pigmalion*, performed by Mr. Malter and Mlle. Sallé

"No servants", it is stated, in a notification at the end of the programme, "will be permitted to keep places on the stage" Mlle Sallé is said on this occasion to have produced the first complete *ballet d'action* ever presented on the stage. She at the same time introduced important reforms in theatrical costume. In the autumn of the same year (1734) Handel opened his first season there with a ballet and 'Il pastor fido', and his subsequent operas with the majority of the oratorios were produced there. Next to him, but at a considerable distance both in time and artistic importance, the chief composer of eminence connected with the theatre was Bishop, who between 1810 and 1824 produced at Covent Garden no less than fifty musical works of various kinds, including 'Guy Mannering',

<sup>2</sup> In continuation of Gerbert's 'Scriptores ecclesiastici', together with which it forms one of the most important collections of early sources of musical scholarship. For contents see SCRIPTORES.

<sup>2</sup> This theatre's subsequent history is as follows: burnt on the night of 19 Sept. 1808; new theatre opened 18 Sept. 1809; converted into an opera-house, 1847; burnt down, 5 Mar. 1856; reconstructed and opened again as an opera-house, 15 May 1858.

'The Miller and his Men', 'The Slave' and 'Clari', besides adaptations of Rossini's 'Barber of Seville', Mozart's 'Marriage of Figaro' and other celebrated operas. Weber's 'Freischütz', soon after its production in Germany, was brought out in an English version both at Covent Garden and at Drury Lane (1824). So great was its success that Weber was requested to compose for Covent Garden an entirely new opera. 'Oberon', the work in question, was brought out 12 Apr. 1826, when, though much admired, it failed to achieve such popularity as 'Der Freischütz' had obtained. It has been said that Weber was much affected by the coolness with which 'Oberon' was received. Scudo, the eminent French critic, writing on this subject in the 'Revue des Deux Mondes', records the fact that 'Oberon' was very successful on its first production at Covent Garden and adds that it was "received with enthusiasm by those who were able to comprehend it".

ITALIAN OPERA.—Between 1826 and 1846 operas and musical dramas were from time to time played at Covent Garden. But it was not until 1846 that the theatre was turned permanently into an opera-house. With the interior reconstructed by Albano, it was opened, in the words of the prospectus, "for a more perfect representation of the lyric drama than has yet been attained in this country". The director was Frederick Beale (of the firm of Cramer, Beale & Co.), with whom was associated Persiani, husband of the eminent prima donna of that name and others. The musical conductor was Costa. In the company were included Grisi and Mario, who with Costa and nearly all the members of his orchestra had suddenly left Her Majesty's Theatre for the new enterprise, in which they were joined by Persiani, Tamburini, Ronconi and Alboni who, on the opening night—6 Apr. 1847—sang (as Arsace in 'Semiramide') for the first time on this side of the Alps.

The management of the Royal Italian Opera, as the new musical theatre was called, passed after a short time into the hands of Delafield, who was aided by Gye; and after Delafield's bankruptcy the establishment was carried on solely by Gye (1851), who, when the theatre was burned down in 1856, rebuilt it at his own expense from the design of Edward Barry, R.A. Adelina Patti made her debut at the Royal Italian Opera in 1861, when she sang for the first time on the boards of a European theatre. Lucca and Albani, Tamberlik and Graziani, may be mentioned among other artists of European fame who appeared at the Royal Italian Opera.

CONCERTS AND ENGLISH OPERA.—For some dozen years (between 1840 and 1855) Jullien directed promenade concerts at this theatre; and from time to time, during the winter

months, performances of English opera were given at Covent Garden. Thus Balfe's 'The Puritan's Daughter', 'Satanella' and 'The Armourer of Nantes', Wallace's 'Lurline' and Benedict's 'Lily of Killarney' were produced there under the management of Louisa Pyne and William Harrison.

INTERNATIONAL OPERA.—The Royal Italian Opera suffered financial collapse soon after the season of 1884, and between that date and the beginning of the prosperous régime of Sir Augustus Harris, a few seasons of opera were managed by an impresario named Lago. In 1888 Harris opened with a very large subscription and with a company which he had formed at Drury Lane in the previous year. From that date until his death in June 1896 success followed all that he undertook, and the Royal Opera (as it was called from 1892 onwards) once more drew all the world to Covent Garden. It was during Harris's management that Wagner's 'Der Ring des Nibelungen' was first given as a whole at Covent Garden (June 1892) under Mahler. After Harris's death the Grand Opera Syndicate became lessees of the theatre, and the traditions established by Harris were maintained until the first world war brought an interruption in 1914. Under this management were given brilliant performances of the 'Ring', conducted first by Mottl (1898), later by Richter (beginning 1903). Both German and French opera took an equal place with Italian works, and the custom was established of performing operas in the languages in which they were composed.

The house was closed from the summer of 1914 till 1919. Sir Thomas Beecham took charge of the two summer seasons of 1919 and 1920, but London was again without its Royal Opera in 1921. The Carl Rosa Opera Company and the British National Opera Company rented the house from the syndicate for short seasons of opera in English between 1921 and 1924. On 5 May 1924 the Grand Opera Syndicate (chairman, H. V. Higgins) resumed operations with a German company, and the London Opera Syndicate, leasing the house from the Grand Opera Syndicate, gave "international" seasons in 1925-27.

H. S. E., adds.

BETWEEN WARS.—The later years of Covent Garden's history as an opera-house were chiefly remarkable for the number of organizations, syndicates and companies which took temporary control. The London Opera Syndicate began the process, as stated above, by leasing the house from the Grand Opera Syndicate through three summer seasons, 1925-27. The London Opera Syndicate was inspired by the late Mrs Samuel Courtauld, managed by Colonel Eustace W. Blois, and the musical direction was in the hands of Bruno Walter. In 1928 a new governing body, the Covent

Garden Opera Syndicate, with Colonel Blois as managing director, superseded the London Opera Syndicate and provided international opera seasons through three years, combined with seasons by Diaghilev's Russian Ballet. It was during this period that the Chancellor of the Exchequer first granted a government subsidy to opera at Covent Garden to be paid by the Postmaster-General through the B.B.C. In 1931 the Covent Garden Touring Company was formed under Blois, which toured the provinces. The next year, 1932, Beecham returned as principal conductor. Blois died on 16 May 1933, and in the same year Beecham became artistic director. At the end of the 1939 season he declared his intention of withdrawing for a time from conducting operas, but announced his scheme for an "international" season in 1940. For three years, 1934-36, Geoffrey Toye was managing director to a syndicate formed under Philip Hill, Chairman of Covent Garden Properties, Ltd. The 1939 season was given under the auspices of the London Philharmonic Concert Society.

Such varying fortunes in management have necessarily meant a considerable variation in types and standards of performance. Seasons have been shortened, and summer seasons of ballet have been added. The opera season of 1939 lasted only from 1 May to 16 June. In the Coronation Year, 1937, a particularly elaborate programme was devised which included the visit of the company of the Paris Opéra to give the first performance in England of Dukas's 'Ariane et Barbe-Bleue'. It also included the first performance, under the composer's direction, of Eugene Goossens's three-act opera 'Don Juan de Mañara'.

Occasional short seasons of opera were given in the winter at Covent Garden. In 1935 Sir Thomas Beecham gave an autumn season with a company which subsequently took the repertory on tour in the provinces. It included the first performance of Delius's 'Koanga'. In 1936 the Dresden Opera visited the House, giving distinguished performances of famous German operas. In the same year a short season, directed by Albert Coates, produced his opera 'Pickwick' and other English works.

H. C. C.

OPERA IN ENGLISH.—An entirely new phase was entered upon in 1946, when at last the great international house became a centre for productions on a large scale of opera in the vernacular. David Webster was appointed managing director and Karl Rankl musical director and chief conductor. Messrs. Boosey & Hawkes took a financial interest in the venture to a considerable extent and a very substantial government subsidy was secured, not involving any direct State control, but to be administered at the discretion of the Arts Council of Great Britain.

Great stress was laid on lavish productions, each opera being newly staged with scenic designs by well-known artists, some of them experienced in stage work, others commissioned experimentally on account of distinguished work done in their own sphere. The results often turned out to be beautiful, and they were never less than interesting. In this respect Covent Garden had, in fact, become as progressive as any continental opera-house, and more so than most, and only on one or two occasions did enterprise turn into freakishness, as in the notorious production of Strauss's 'Salome', with designs by Dali, in 1949. Among the most spectacular and handsome productions were the sets and dresses for Purcell's 'Fairy Queen' by Michael Ayrton, Mozart's 'Magic Flute' by Oliver Messel and Puccini's 'Turandot' by Leslie Hurry; the finest of all was Messel's setting for Tchaikovsky's 'Queen of Spades'.

On the musical side the management was faced with far greater difficulties, in the choice of both conductors and singers. No musical leadership comparable with that of, for example, Mahler, Walter or Beecham was to be secured, though criticism could not complain of any lack of hard and painstaking work. Singers to whom the English language is native and who at the same time had adequate stage experience were simply not to be had in sufficient numbers to fill the casts of a considerable repertory. A good many foreign artists of greater or less distinction had therefore to be resorted to, with the result that all sorts of strange accents have been heard from the Covent Garden stage, with a disturbing and sometimes unfortunately comic effect, and that there were even occasional relapses into the original languages of the operas, not excluding Russian. There was also the drawback that it became only too obvious now and again that the foreign artists were obsessed with a sense of their superiority, justified as a rule in so far as operatic experience was concerned, but by no means always by better voices or greater talent.

What became evident as the seasons went on was that opera in English on the scale it has to be produced at a great house like Covent Garden—a house, moreover, laden with an almost oppressive weight of great traditions—required years of schooling and maturing before it could settle down to a new tradition of its own and produce uniformly great work by sheer experience and routine. Meanwhile it was possible sometimes to welcome a superior all-round performance and more often to find promise and pleasure in ventures that could perhaps not have been looked for at more settled establishments. The revival of 'The Fairy Queen' made a good start in this direction, the performance of

'Boris' in the original, not in Rimsky-Korsakov's edition, was an event, and if 'Salome' was a temporary disaster, it was at least not one due to staleness or timidity.

On the whole the repertory has so far consisted of accepted masterpieces in English translations, sometimes newly made for Covent Garden. Works by English composers, apart from Purcell and Benjamin Britten ('Peter Grimes', 'Billy Budd' and 'Gloriana') have in the nature of things been scarce, but Covent Garden has introduced at any rate two full-scale new operas by English composers, Arthur Bliss's 'The Olympians', the libretto of which is by a distinguished English playwright, J. B. Priestley, and Vaughan Williams's Bunyan opera 'The Pilgrim's Progress'.

THE SITE.—Visitors to London are often heard to express surprise that the Royal Opera-House of the British capital should stand in an unimpressive thoroughfare opposite Bow Street Police Station and be surrounded by narrow streets too often littered with vegetable refuse. But it should be remembered that the venerable theatre was there first, though not in its present state, two houses having been burnt down (1808 and 1856) before the present building was opened on 15 May 1858. That the London flower, fruit and vegetable market should have been opened so near the Opera was unfortunate, the more so because the square on which it stands was once a beautiful open space surrounded by arcaded houses in the Italian style (still standing on the north side), with Inigo Jones's St. Paul's Church forming a centre-piece to the design. This large square, familiarly known as the *piazza*, and probably first so called by the Italian singers at the Opera, must once have been used as a promenade during the intervals of the performances and have made opera-goers feel almost as much in Italy as they were inside the house, which is now old-fashioned and in some ways inconvenient, but retains a beauty, dignity and atmosphere of its own which never fails to delight and impress all but the most unimaginative visitors.

**COVENTRY & HOLLIER.** English firm of music sellers and publishers, established in London. They were at 71 Dean Street, Soho, from about 1833 to 1848. They published a number of important works, many from plates taken over when they succeeded Thomas Preston at 71 Dean Street. Preston and his father had acquired at various times stock and plates of Robert Bremner, Thomas Skillern, H. Wright and others, in-

cluding many of Handel's works originally issued by Walsh, Randall, etc. Some of these plates were acquired by J. Alfred Novello in 1849, after the partnership of Coventry & Hollier was dissolved. From about 1848 to 1851 Charles Coventry continued alone at 71 Dean Street, and at the sale of his stock-in-trade in 1851 Novello purchased another 4780 plates of sacred works, and subsequently reissued from some of them.

W. C. S.

**Coverdale, Myles.** See Vaughan Williams (3 choral hymns).

**COW HORN** (Ger *Sterhorn* = bull horn). A primitive instrument originally made, as its name shows, of the horn of a bull or cow and capable of sounding a single note only, varying according to size. It was the war horn or great bugle horn of antiquity and the early middle ages. Wagner, who calls it *Sterhorn*, requires its sound off-stage in 'Der Ring des Nibelungen', thus: in 'Die Walküre', Act II, written c; in 'Götterdämmerung', Acts II and III, three *Sterhorns* written c', d<sup>b</sup> and d', but played an octave lower. A set of three special instruments is made for this. They are straight tubes of brass (the C horn is 41 ins. long) with an exact conical bore which expands from a socket for a trombone mouth-piece at one end to an orifice 2½ ins. across at the other; there is no bell flare. Their fundamentals are sounded *fortissimo* by three trombonists in the wings. Wagner also uses the cow horn for the Night Watchman in 'Die Meistersinger'.

In the finale of his 'Spring Symphony' (1949) Benjamin Britten requires the rather raucous sound of a cow horn in C, but since he was not content with this single note, a special instrument of brass was made for him by Messrs. Boosey & Hawkes, not greatly different from the *Sterhorn*, but larger and of greater length. Two keys were added to it to produce notes a perfect fourth on either side of the c' which is the instrument's natural note: g and f'.

A. B.

**COWARD, (Sir) Henry** (b. Liverpool, 26 Nov. 1849; d. Sheffield 10 June 1944).

English chorus-master and choral conductor. His father was a Sheffield grinder who had given up this trade and became a banjoist and "nigger minstrel", and later a publican at Liverpool; his mother was a good singer. After the father's death the family moved back to Sheffield where, at the age of nine, the boy was put to learn the trade of cutler. Almost entirely without schooling, even of the most elementary kind, he taught himself to read and write and made good progress at his trade, winning a number of prizes for craftsmanship. He attended tonic sol-fa classes, and at the age of seventeen started one of his own, which later gave several

concerts. At twenty-two he threw up his trade and became a pupil-teacher, advancing with remarkable rapidity to the position of headmaster of an elementary school. Meanwhile he was still working hard as a conductor and in 1876 formed a choral body, the Sheffield Tonic Sol-fa Association, which developed in a few years into a first-rate choral society, the Sheffield Musical Union.

In 1887 the school of which he was the head was merged into another larger one, and he decided to make music his profession. Eighteen months later he had taken the degree of B.Mus. at Oxford, proceeding in due course to that of D.Mus. He was much in demand as a conductor of large bodies of singers connected with outdoor festivals; on the occasion of a visit of Queen Victoria to Sheffield in 1887 he had about 60,000 children under his baton. His greatest opportunity occurred, however, when in 1895 he was appointed chorus-master, with August Manns as conductor, of the then newly formed Sheffield Musical Festival. At one stroke the fame of Sheffield choral singing and of Coward as chorus-master was made.

In 1906 Coward was invited to take a chorus to the Rhine Provinces, and for this purpose he called in the assistance of the Sheffield Musical Union and the Leeds Choral Union, the two principal permanent choral bodies with which he was associated. Concerts were given at Cologne, Dusseldorf and Frankfurt o/M., with the assistance of local orchestras, Elgar's 'The Dream of Gerontius' and Handel's 'Messiah' being the principal works performed. The great success of this tour led to a longer one during the summer of 1910, when Dusseldorf, Aachen, Essen, Leipzig and Dresden were visited. Between these two tours several visits had been made by the Sheffield Choral Union to London, Birmingham and Arundel, with equal success, and in 1908 a long tour in Canada was undertaken by a choir of two hundred drawn chiefly from that society. Eleven days were spent there, sixteen concerts, some with and some without orchestra, being given at Montreal, Quebec, Toronto, Ottawa and other towns.

This tour had been proposed and organized by Dr. C. A. E. Harriss, a well-known Canadian musician and entrepreneur, who at the close of it again suggested a world tour by the same or a similar choir, the places to be visited being in the British Dominions and the U.S.A. This took place in 1911, among the many places visited being Halifax (Nova Scotia), the chief Canadian towns, Chicago, Winnipeg, Vancouver, Victoria (B.C.), Honolulu, Brisbane, Adelaide, Perth, Wellington, Sydney, Auckland, Melbourne, Durban and Capetown. As this lasted six months Coward drew on a wider area than previously for his chorus, with

the result that the success was less complete, some American criticisms being particularly disparaging. Of Coward's own powers, however, there was no question.

Besides his activities centring on Sheffield, Coward was the conductor of large choral bodies at Leeds, Huddersfield, Preston, Derby, Newcastle-on-Tyne, Glasgow and other places. His services as judge at competitive festivals were much in demand, and he had considerable influence as a lecturer and as a humorous and instructive writer in local newspapers, besides composing a number of agreeable if undistinguished cantatas and shorter works. He received knighthood in 1926. He is also the author of a useful treatise on choral singing.

H. A.

BIBL.—RODGERS, J. A., 'Dr Henry Coward, the Pioneer Chorus-Master' (London, 1911)  
'Sir Henry Coward': Obituary Article (Mus. T., July 1944).

**COWARD, James** (b. London, 25 Jan. 1824; d. London, 22 Jan. 1880).

English organist, conductor and composer. He entered the choir of Westminster Abbey in London at an early age. He was given the appointment of organist at the parish church, Lambeth, and at the opening of the Crystal Palace at Sydenham in 1857 he received a similar appointment there, which he retained until his death, which took place at his house in Lupus Street.

He held various church appointments in addition to this, being at one time or another organist of St. George's, Bloomsbury, and St. Magnus the Martyr, London Bridge. He was conductor of the Western Madrigal Society from 1864 to 1872 and directed also the Abbey and City Glee Clubs for some time before his death. He was for some time organist to the Sacred Harmonic Society and the Grand Lodge of Freemasons. Although best known by his brilliant transcriptions for the organ of operatic melodies, etc., his published works show him to have possessed considerable musical knowledge and artistic feeling. They include an anthem, 'O Lord, correct me'; 'Sing unto God', a canon four in two; two other canons; 'Ten Glee's', 1857; 'Ten Glee's and a Madrigal', 1871; besides many pieces for pianoforte, organ, etc. He had a remarkable power of improvisation.

**Coward, Noel.** See ADDINELL ('Sigh no More', revue, 'Blithe Spirit', film).

**COWDEN, John.** See ENGLISH MUSICIANS ABROAD.

**COWELL, Henry (Dixon)** (b. Menlo Park, California, 11 Mar. 1897).

American pianist and composer. He was the son of an Irish Episcopal Dean of Kildare. He started violin study at the age of five and at eight was already composing. He received his first real training in music from Chas.

Seeger at the University of California and after an interlude of service in the Army in the first world war continued his studies with Woodman at the New York Institute of Applied Music. In 1931-32 he received the Guggenheim Fellowship, which enabled him to study comparative musicology at the University of Berlin.

Cowell made several tours of Europe and America in the capacity of concert pianist, and was one of the earliest American composers heard abroad, where he provoked scenes bordering on riots by his extremely experimental pianoforte music. He originated the term "tone cluster", an expression that has become part of the musical vocabulary in the U.S.A. It is a term for large bunches of notes to be played with whole hand, fist or, on occasions, forearm, effects which, together with the specified plucking or stroking of pianoforte strings, were characteristic of one period of his writing.

Henry Cowell has for many years been a champion of American composers and their music; he is the founder of 'New Music Quarterly', New Music Quarterly Recordings and New Music Orchestral Series. He is an active member of many modern music organizations, and has been both editor of and contributor to 'American Composers on American Music', a symposium published by the Stanford University Press.

He has been instructor and lecturer in Music at the New School for Social Research, N.Y.C., at Stanford University, Mills College, Cal., and the University of California. As a composer Cowell has been a stimulating influence for many young composers, especially those on the west coast, where his percussion orchestras and experiments in percussion and rhythmic compositions gained him an enthusiastic following. In 1932 Cowell gave a demonstration in New York of the "Rhythmicon", an instrument he had developed in collaboration with Lev Theremin, designed to produce all kinds of rhythmic combinations.

Cowell's Concerto for pianoforte and orchestra, his 'Reel', 'Synchrony', 'Old American Country Set', 'Tales of our Countryside', 'Schoonthree' and many other works have been heard extensively in the U.S.A., Havana, South America and France, and his chamber works have also been played in both Europe and the U.S.A. Among his commissions have been one for the League of Composers and another for the Cincinnati Symphony Orchestra.

There is a persistent undercurrent of folk material audible in most of Henry Cowell's works, though they vary very much according to their particular function and particular instrumentation. He has written in almost all

the usual musical forms and has invented forms of his own, one of which, "Hymn and Fuguing Tune", has been employed for various different ensembles, including voices. He has been a pioneer also in the field of band music, and was one of the first American composers to turn his attention to this field. His instrumentation is often brilliant and his musical style melodic, whimsical and very free.

Cowell's works, too numerous to be completely listed, number some 500 and include four symphonies, 'Hymn and Fuguing Tune' Nos. 1, 2, 3, 4, 5, 'Rhythmicana' for rhythmicon and orchestra, a Festival Overture 'To America' for chorus and two simultaneous orchestras, many suites for orchestra and chamber orchestra, various sonatas for pianoforte and solo instrument, and two string quartets. There are also two ballets, 'The Building of Banba' for soprano, alto, tenor, two basses, chorus and orchestra of 14, and 'Atlantis' for 3 voices and orchestra.

P. G.-H.

**COWEN, (Sir) Frederic (Hymen)** (originally **Hymen Frederick**) (b Kingston, Jamaica, 29 Jan. 1852, d. London 6 Oct. 1935).

English pianist, conductor and composer. He was brought by his parents to England at the age of four and even in earliest childhood exhibited an extraordinary love of music; he published a waltz at the age of six and in 1860 composed an operetta called 'Garibaldi, or The Rival Patriots', to a libretto by his sister, aged seventeen. In Nov. of the same year he became a pupil of Goss and Benedict, and by 1863 was advanced enough to give a morning concert (or pianoforte recital) in the concert-room of Her Majesty's Theatre, playing a number of pieces from memory. In 1864 he played Mendelssohn's D minor Concerto at Dudley House, at a concert at which Joachim and Santley appeared. In 1865, also at Dudley House (the composer's father was private secretary to the Earl of Dudley), a Trio in A major, composed by Cowen, was played by himself, Joachim and Pezze. In the same year he competed successfully for the Mendelssohn Scholarship, but this was relinquished, as his parents objected to giving up the control of their son.

They took him to Leipzig, where he entered the Conservatory as a pupil of Plaidy, Moscheles, Reinecke, Richter and Hauptmann. A string Quartet was played at the Conservatory in Jan. 1866, but his residence abroad was cut short by the war between Prussia and Austria, and he returned to England, appearing as a composer for the orchestra with an Overture in D minor played at Mallon's promenade concerts at Covent Garden. He appeared elsewhere as a pianist

a few times, and in Oct. 1867 entered the Stern Conservatory in Berlin, where he studied under Kiel and laid the foundation of his remarkable skill as a conductor. He stayed less than a year abroad, returning to London in 1868 and playing at various concerts, such as the Philharmonic, the Monday Popular and elsewhere.

Cowen made his most prominent appearance as a composer on 9 Dec. 1869 at a concert in St. James's Hall, where were produced his Symphony in C minor and pianoforte Concerto in A minor.

From that time Cowen was recognized primarily as a composer, but as, even for a young man so highly gifted as he, composition was not yet a practical means of livelihood, he undertook to act as accompanist to Mapleson's concert-party and assistant accompanist at Her Majesty's Theatre under Costa who got him his first festival commission, as a result of which 'The Corsair' was brought out at Birmingham in 1876. In the same year his first opera, 'Pauline', was produced by the Carl Rosa Company at the Lyceum Theatre in London. It was the production of his 'Scandinavian Symphony' at St. James's Hall on 18 Dec. 1880 that gave Cowen his place among the most prominent of English composers. The Symphony rapidly made its way on the Continent and in America, and as the work of one who never had a lesson in orchestration it is a very remarkable feat. Local colour is used with admirable felicity, and there is little wonder that it soon became popular. In 1881 his 'St Ursula' at Norwich enhanced his fame, and in 1884 he conducted five concerts for the Philharmonic Society. From 1888 to 1892 he was permanent conductor of the society, appointed on the resignation of Sullivan; and in 1888 he went to Melbourne, where he conducted the daily orchestral concerts at the Centennial Exhibition for six months, receiving the unprecedented sum of £5000 for the engagement. He conducted the Hallé Orchestra in Manchester in 1896-99; the Liverpool Philharmonic Society in 1896-1913 and the Bradford Festival Choral Society and Subscription Concerts from the same date. He conducted the Bradford Permanent Orchestra in 1899-1902 and the Scarborough Festival of 1899. In 1900 he was again appointed, in succession to Sir Alexander Mackenzie, as conductor of the Philharmonic Society and conducted its concerts regularly until 1907 and occasionally later. In this capacity some of his best work was done, for he raised the society to a higher position than it had held since the death of Costa. The conductorship of the Scottish Orchestra was added to Cowen's other appointments in 1900, that of the Cardiff Festival in 1902 and that of the Handel Festival in 1903.

In Nov. 1900 the honorary degree of Mus.D. was conferred upon him by the University of Cambridge and in 1910 by Edinburgh. He received the honour of knighthood in 1911. Four Cardiff Festivals were held under his direction (1902-10) and at the last of them the most important composition of his later years, 'The Veil', was produced. Cowen conducted all the triennial Handel Festivals from his appointment until the break caused by the first world war, and two since (1920, 1923).

Cowen's music is marked by a certain fantastic grace that is all his own; for this reason he succeeds best in subjects that deal with fairy tales and the like. Here he is always in his element, and the variety of treatment which he showed in a long succession of choral and orchestral works of this kind is very remarkable. Some of his many songs are genuinely expressive, and in his operas there are things in which the deeper emotions are skilfully handled; but it is in the lighter moods that he is most successful.

The following is a list of Cowen's more important works.

#### OPERAS

- 'Garibaldi, or The Rival Patriots', operetta (1860).
- 'Pauline' (libretto by Henry Hersee, based on Bulwer Lytton's 'The Lady of Lyons'), 4 acts, prod. London, Lyceum Theatre, 22 Nov. 1876.
- 'Thorgim' (lib. by Joseph Benett, based on the Icelandic legend 'Viglund the Fair'), 4 acts, prod. London, Drury Lane Theatre, 22 Apr. 1890.
- 'Signa' (lib. by Gilbert Arthur A'Beckett, H. A. Rudall & Frederick Edward Weatherly, based on Ouida's novel), 3 acts, prod. Milan, Teatro dal Verme (trans. by Giovanni Andrea Mazzucato), 12 Nov. 1894; London, Covent Garden Theatre (reduced to 2 acts), 30 June 1894.
- 'Harold, or The Norman Conquest' (lib. by Sir Edward Malet), 3 acts, prod. London, Covent Garden Theatre, 8 June 1895.

#### BALLETS

- 'Monica's Blue Boy', pantomime.
- 'Cupid's Conspiracy', comedy ballet (1918).

#### INCIDENTAL MUSIC

- 'The Maid of Orleans' (1871).
- 'The Enchanted Cottage' (Finero) (1922).

#### CHORAL WORKS

- 'The Rose Maiden', cantata (1870).
- 'The Corsair', cantata (Birmingham, 1876).
- 'The Deluge', oratorio (Brighton, 1878).
- 'St. Ursula', oratorio (Norwich, 1881).
- 'The Sleeping Beauty', cantata (Birmingham, 1885).
- 'Ruth', oratorio (Worcester, 1887).
- 'Song of Thanksgiving' (Melbourne, 1888).
- 'St. John's Eve', cantata (1889).
- 'The Water Lily', cantata (Norwich, 1893).
- 'The Transfiguration', oratorio (Gloucester, 1895).
- 'All Hail the glorious reign', Jubilee ode (1897).
- 'Ode to the Passions' (Collins) (Leeds, 1898).
- 'Coronation Ode' (Norwich, 1902).
- 'John Gilpin' (Cowper) (Cardiff, 1904).
- 'He giveth His beloved sleep' (Cardiff, 1907).
- 'The Veil' (Robert Buchanan) (Cardiff, 1910).
- Also cantatas for women's voices: 'Summer on the River', 'Christmas Scenes', 'The Rose of Life', 'A Daughter of the Sea', 'Village Scenes', 'The Fairies' Spring'; anthems, part songs, &c.

#### ORCHESTRAL WORKS

- Overture, D mi (1866).
- Symphony No. 1, C mi. (1869).

- Festiva Overture (Norwich, 1872).  
 Symphony No. 2, F m. (1872).  
 Symphony No. 3, 'Scandinavian', C m. (1880).  
 'The Language of Flowers', Suite I (1880).  
 Characteristic Overture 'Niagara' (1881).  
 'Sinfonietta', A m. (1881).  
 'In the Olden Time' for sts (1883).  
 Symphony No. 4, 'Welsh', Bb m. (1884).  
 Symphony No. 5, F m. (1887).  
 'In Fairyland' (1896).  
 Symphony No. 6, 'Idyllic', E m. (1897).  
 'The Butterfly's Ball' (1901).  
 'A Fantasy of Life and Love' (1901).  
 Coronation March (1902).  
 'Indian Rhapsody' (1903).  
 2 Pieces for small orch. (1903)  
   1 Childhood.  
   2 Girlhood.  
 'Four Old English Dances', Set I.  
 'Four Old English Dances', Set II (1905).  
 'The Language of Flowers', Suite II (1914).  
 Also various marches

## SOLO AND ORCHESTRA

- Pf Concerto, A m. (1869).  
 'The Dream of Endymion' for tenor (1897).  
 'Concertstuck' for pf (1900).  
 'Nights of Music', vocal duet (1900).  
 'Réverie' for vn.

## CHAMBER MUSIC

- Trio, A m., for vn, cello & pf. (1865).  
 String Quartet, C m. (1866).

## PIANOFORTE MUSIC

- Sonata.  
 Suite 'Flower Fairies'.  
 Fantasy.  
 'Allegro grazioso'.  
 'Petite Scène de ballet', 4 pieces.  
 Also a number of other pieces

## SONGS

Nearly 300 songs for voice & pf.

J. A. F.-M., adds.

- Cowley, Abraham. See Blow (act-song for Oxford).  
 King (W, songs). Milford ('Drake's Chair', choral work).  
 Purcell (4, sacred song, 7 secular cantatas, 4 vocal duets, 4 songs). Reggio (settings of poems).  
 Schubert (song).  
 Cowley, Hannah. See Arne (4, 'Belle's Stratagem').  
 Carter (C. T., 'Bold Stroke for a Husband', song for).  
 Cowmeadow, J. W. See Haydn ('Alfred', inc. m.).  
 COWPER, Robert<sup>1</sup> (b. ?; c. 1474; d. ?; c. 1530)

English composer. Nothing is known of his life before 16 Nov. 1498, when he was presented by the Crown to "the free Chapel of Snodhill (co. Hereford), in the diocese of Hereford, vacant by the surrender of Robert Fayrefax, one of the Gentlemen of the King's Chapel, resigned".<sup>2</sup> It is thus likely that he had been attached to Henry VII's court. He graduated Mus.B. at Cambridge<sup>3</sup> in 1493 and Mus.D. in 1507. On 4 Nov. 1514 he resigned the Snodhill appointment to Robert Geffrey.<sup>2</sup> On 21 Apr. 1516 he was appointed rector of East Horsley, Surrey, but he resigned this on 13 May for the more lucrative post of rector of Latchington, Essex. On 5 June 1525 his brother, William Cowper, who had been Dean of Bridgenorth since 1515, recommended him to Cromwell for further preferment, as being "well disposed [?] politically] and virtuous,

<sup>1</sup> Also Cooper, Coper or Couper.

<sup>2</sup> Calendar of Patent Rolls of Henry VII.

<sup>3</sup> Venn, 'Alumni Cantabrigienses' (Cambridge, 1922).

and a good *quereman*"; but it is not known with what results, if any. Flood (see Bibl.) suggests that Cowper was a friend of Thomas Ludford's.

Cowper's known works include several motets, 2 madrigals for 3 voices, 'I have been a foster' and 'Farewell, my joy', and a song, 'Petyously constrained am I', all in the B.M. In Wynkyn de Worde's song-book of 1530 are 3 songs for 3 voices, 'In youth, in age', 'So great unkindness' and 'Ut, re, mi'. A catch, 'Alone I live', was published in 1891.<sup>4</sup>

## COWPER, Robert. See COOPER.

Cowper, William. See Cowen ('John Gilpin', cantata). Dunhill (do). Frd (chorus). Latrobe (C, song). Sullivan (hvmn). Waddington ('John Gilpin', cantata).

COX AND BOX. Operetta in 1 act by Sullivan. Libretto by Francis Cowley Burnand based on John Madison Morton's farce 'Box and Cox'. Produced London, Adelphi Theatre, 11 May 1867. 1st perf. abroad, New York, 13 Aug. 1875.

## COX, Arthur. See CARRON.

COX, Harry (b. Amsterdam, 16 Apr. 1923). Belgian pianist and composer of Dutch birth and English origin. He studied at the Royal Flemish Conservatory of Antwerp with Marinus de Jong (pianoforte) and Karel Candael (theory) between 1939 and 1944. Later he went to Geneva as a pupil of Dinu Lipatti for pianoforte and Pierre Wissmer for composition. Since 1950 he has been living in Paris, engaged in further studies with Nadia Boulanger. He has played at several important concerts in Paris, Brussels, Antwerp and Amsterdam, and is a very gifted young musician, extremely severe with himself and serious about his art. His production as a composer is thus still small, but it shows genuine inspiration and an enviable technical skill. His works include the following:

- 'Rondel' for unaccomp chorus.  
 'Pater noster' for unaccomp chorus (1952).  
 'Toccata — Fughetta — Sarabande e rondoletto' for orch. (1949).  
 Suite of Swedish Folksongs for orch (1949).  
 String Quartet, D m. (1951).  
 Quintet, F m., for vn, viola, cello, flute and harp (1952).  
 2 Suites for 2 flutes (1952).  
 Trio for vn, viola and cello, D m. (1953).  
 8 'Pièces enfantines' for pf. (1949).  
 Several Sonatinas for pf.  
 3 Songs (La Fontaine) (1952).  
 3 Inventions for 2 voices & pf. (1951).

A. L. C.

## COX, John (b. ?; d. London, ?).

English 18th-century musical-instrument maker, music seller and publisher. He was at Simpson's music shop, Sweeting's Alley, opposite the east door of the Royal Exchange, London, from 1751 to 1764. Cox married Ann Simpson, the widow of John Simpson, prob-

<sup>4</sup> Plain-Song and Mediaeval Music Society.

ably early in 1751, and continued the business with her as Simpson's Music Shop or John Cox at Simpson's Music Shop until June 1764, when owing to the state of Mrs. Cox's health they gave up business, and Maurice Whittaker, who had been manager for Mrs. Simpson and afterwards for Cox before 1760, advertised that "he carries on the same business in every branch thereof at his Music Shop, the Sign of the Violin, under the North Piazza of the Royal Exchange". Robert Bremner purchased some of the plates at the sale of the stock-in-trade of Simpson's music shop in 1764.

W. G. S.

**Cox, Trenchard.** See Birmingham.

**COXSUN, Robert** (b. ?; d. ?).

English 16th-century organist. He was of the school of John Redford, probably associated with St. Paul's Cathedral in London, since two of his offertories for organ are found in B.M. Add. MS 29,996, which is the main source for early Tudor organ music from this centre.

The offertories are 'Letamini in Domino' (f. 39v), a short composition in three-part harmony, written on a single stave of twelve lines, and 'Veritas mea' (ff. 43-45) which, although a more extended structure than the previous piece, is mostly in two-part harmony, with a third voice entering at important cadences. The more usual twin staves of six or seven lines each are found here.

D. W. S.

**CRAB CANON.** See CANCRIZANS. CANON.

**CRABBE, Armand** (b. Saint-Gilles, Brussels, 23 Apr. 1884; d. Brussels, 24 July 1947).

Belgian baritone singer. He studied at the École de Musique of Saint-Gilles near Brussels, entered the Théâtre de la Monnaie in 1906 and went in 1908 to the U.S.A., where he appeared at the Manhattan Opera House in New York and at the Civic Opera of Chicago until 1914. In the meantime he had appeared during nine successive seasons at the Covent Garden Opera in London. In 1914 he was engaged by the Teatro alla Scala at Milan, where he remained as first baritone until 1916. He then went to Madrid and from there to the Teatro Colón in Buenos Aires. While in South America he also sang in Rio de Janeiro and Montevideo. In 1930 he returned to Europe, where he again appeared at Milan (Scala) and also in Paris (Opéra-Comique) and Antwerp (Flemish Opera). He was appointed professor of singing at the Brussels Conservatoire on 1 Oct. 1937.

Among Crabbé's best parts were Figaro in Rossini's 'Barbiere', Beckmesser in Wagner's 'Mastersingers', the Juggler in Massenet's 'Le Jongleur de Notre-Dame', Marouf in Raubaud's opera of that name (the part specially

arranged for his voice by the composer), Pelléas in Debussy's opera, Prinzeval in Fécier's 'Monna Vanna', etc. He published 'Conseils sur l'art du chant' (Brussels, 1931) and 'L'Art d'Orphée' (Brussels, 1933).

A. L. C.

**Crabbe, George.** See Britten ('Peter Grimes', opera). Peter Grimes (Britten, opera).

**CRACKLE.** A verb used in connection with lute music: to curtail a note or chord. See ORNAMENTS, C (v) (b).

**CRACOVIA CIVITAS.** A Polish hymn in praise of the city of Cracow. The words are by Stanisław Ciołek (b. ?; 1382; d. Poznań, 1437), a priest and poet who became Secretary of State for Foreign Affairs to King Jagiełło and later Bishop of Poznań. He wrote 'Cracovia Civitas' before he left for Poznań. It describes the inhabitants of what was then the capital of Poland. Some authorities have attributed to Ciołek, a man of great abilities, brilliant education and wit, the authorship of the music as well as the words of this hymn. Recent research, however, holds that the music was not written by Ciołek, but by an unknown composer. It is a kind of a monody with an accompaniment in two parts.

C. R. H.

**CRACOVIAK.**

**CRACOVIANNE.** } See KRAKOWIAK.

**Craddock, Charles.** See Fisher (J. A., 'Zobeide', incd. m.).

**CRAIG, Adam** (b. ? Edinburgh, ?; d. Edinburgh, Oct. 1741).

Scottish violinist. He was considered "a good orchestral player" who played principal second violin to McGibbon at the Edinburgh concerts from 1695. He is better known as the compiler of 'A Collection of the Choicest Scots Tunes . . . for the Harpsicord' (Edinburgh, 1730, although there is an undated issue which is probably earlier). At the sale of Lord Colville's music in Nov. 1728 the 'Catalogue of Musick' contained an item marked "Mr. Adam Craig's Works, in one book, folio, MS".

**CRAMER.** German family of musicians, of Silesian origin.

(x) **Wilhelm Cramer** (b. Mannheim, 1745; d. London, 5 Oct. 1799), violinist. He was the son of Jacob Cramer (1705-77), a violinist in the Mannheim orchestra, and a pupil of Johann Stamitz and Christian Cannabich. When still very young he gave evidence

of unusually brilliant abilities, his contemporaries declaring that his playing united the facility of Lulli with the expression of Franz Benda. He entered the Mannheim orchestra in 1757, but left it in 1772 and went to London, where he was well received and soon obtained a creditable position. His first appearance was on 22 Mar. 1773. He was appointed head of the king's band and leader of the Opera and Pantheon, the Antient Concerts (1780-89) and the Professional Concerts. He was famous as the leader of the Handel Festivals at Westminster Abbey in 1784 and 1787. His last appearance was at the Gloucester Festival of 1799, and he died in Charles Street, Marylebone, that year. As a solo player he was for a time considered without a rival in England till superseded by Salomon and Viotti. He published three Concertos in Paris, as well as several solos and trios, but they are of no great value. One string Trio (Op. 3 No. 2) was reprinted in Vol. XVI of D.T.B. (1915).

(2) **Johann (John) Baptist Cramer** (b. Mannheim, 24 Feb. 1771; d. London, 16 Apr. 1858), pianist, composer and publisher, son of the preceding. He was his father's eldest son and but a year old when the latter settled in London. J. B. Cramer lived and worked there for the greatest part of his life. To his father's instruction on the violin and in the elements of the theory of music pianoforte playing was added, and for this the boy manifested the most decided preference and unmistakable talent. His teachers were a certain Benser, Schroeter and, above all, Clementi, under whom he studied for two years. His first appearance in public took place in 1781. His mind and taste were formed on Handel, Bach, Scarlatti, Haydn and Mozart, and by this means he obtained that musical depth and solidity so conspicuous in his numerous works. He had a course of lessons in thorough-bass from C. F. Abel in 1785, but his knowledge was chiefly acquired through his own study of Kirnberger and Marpurg.

From 1788 Cramer undertook professional tours on the Continent, and in the intervals he lived in London, enjoying a world-wide reputation as pianist and teacher. Forty-two studies for the pianoforte were first published by him in 1804 at 6 Coventry Street, Haymarket. In 1824 he established the firm of J. B. Cramer & Co., music publishers, having been first in business in that line, as Cramer & Keys, as early as 1805 and become a partner of Samuel Chappell in 1812. After a residence of some years abroad, at first (from 1835) at Munich and afterwards in Paris, he returned in 1845 to London. He passed the rest of his life in retirement. There are references to him in Beethoven's letters of 1 June 1815 and 5 Mar. 1818. Ries left on record ('Notizen', p. 99) that John Cramer was the only player of his time

of whom Beethoven had any opinion — "all the rest went for nothing".

A. M., adds. A. L.

J. B. Cramer's playing was distinguished by the astonishingly even cultivation of the two hands, which enabled him, while playing legato, to give an entirely distinct character to florid inner parts and thus attain a remarkable perfection. He was noted among his contemporaries for his expressive touch in adagio, and in this, and in facility for playing at sight, he was able when in Paris to hold his own against the younger and more advanced pianists. His improvisations were for the most part in a style too artistic and involved for general appreciation. Cramer's mechanism exhibits the development between Clementi and Hummel, and is distinguished from the period of Moscheles and Kalkbrenner which followed it by the fact that it aimed more at the cultivation of music in general than at the display of the specific qualities of the instrument. All his works are distinguished by a certain musical solidity, and among his many compositions for pianoforte there are several, including the seven Concertos, which undeniably possess musical vitality. But his 105 sonatas, pianoforte Quartet and Quintet, and countless variations, rondos, fantasias, etc., are now forgotten. In one sphere of composition alone Cramer left a conspicuous and abiding memorial of his powers: his representative work, '84 Studies in two parts of 42 each', is of classical value for its intimate combination of significant musical ideas with the most instructive mechanical passages. It forms the fifth part of his 'Grosse praktische Pianoforte-Schule' and has appeared in numerous editions; the last, revised by Cramer himself, i.e. the original English edition of Cramer & Co., contained, as Op. 81, "16 nouvelles études", making 100 in all. This must be distinguished from the 'Schule der Gelaufigkeit' (Op. 100), also containing 100 daily studies and forming the second part of the 'Grosse Pianoforte-Schule'. It should be used as a preparation for the great 'Études'. A copy of the 'Études', with comments by Beethoven, was discovered in 1893 in the Royal (now State) Library of Berlin, by J. S. Shedlock, who published a selection from the book, with a prefatory account and careful annotations.

(3) **Franz (François) Cramer** (b. ? Mannheim or London, 1772; d. London, 1 Aug. 1848), violinist and conductor, brother of the preceding. He was the second son of Wilhelm

Cramer (1) and no doubt his pupil. He was appointed Master of the King's Music to William IV in 1837, succeeding Christopher Kramer, who in spite of the similarity of the names was not related to the Cramer family. Franz Cramer held the post under Queen Victoria until his death, when he was himself succeeded by George Frederick Anderson. No compositions by him are known, either in print or in manuscript, apart from a single violin Capriccio ('Album Leaf') in the B.M.

A. L.

**CRAMER & CO.** This music-publishing house was founded as Cramer, Addison & Beale in 1824 by J. B. Cramer in partnership with Robert Addison and T. Frederick Beale; the two latter had previously carried on a small business at 120 New Bond Street and had moved to 201 Regent Street in June 1824. Cramer's popularity and influence soon drew numerous customers for the pianoforte music published by the firm and the catalogue was increased until, in 1830, the firm bought many of the music plates belonging to the Royal Harmonic Institution, which contained a considerable portion of works by Clementi, Dussek, Haydn, Herz, Hummel, Mozart and Steibelt, besides a few by Beethoven and Moscheles. Italian songs and duets, English operas (Balfe, Barnett, Benedict and Wallace) and more recent pianoforte music was gradually added.

Between 1835 and 1845 Cramer was much abroad, and in 1844 Addison retired from the business and was succeeded by W. Chappell, when the firm became Cramer, Beale & Chappell. After the death of Cramer in 1858 and the retirement of Chappell in 1861 George Wood, one of a family of Edinburgh and Glasgow music publishers, became partner with Beale, trading as Cramer, Beale & Wood. In 1862 the firm took additional premises with a large gallery at 207 and 209 Regent Street, and about the same time devoted much attention to the manufacture of pianofortes. On the death of Beale in 1863 the whole of the business fell into the hands of Wood, who carried it on with great success as Cramer & Co. (later J. B. Cramer & Co.), giving, however, more attention to pianoforte manufacturing than to publishing. On his death in 1893 the business passed to his two nephews, and the premises at 199 and 201 Regent Street were given up.

In 1897 the firm was turned into a limited company (J. B. Cramer & Co., Ltd.), and at the end of 1902 it removed to 126 Oxford Street. Other establishments were opened in Moorgate Street, Kensington High Street and at Notting Hill Gate, and the present headquarters address (1954) is 139 New Bond Street, with the pianoforte factory at 79 Castle Road, N.W.1.

G. H. P., rev. W. C. S.

**CRAMER, Carl Friedrich** (b. Quedlinburg, 7 Mar. 1752; d. Paris, 8 Dec. 1807).

German editor and writer on music. He was professor of philosophy at Kiel University from 1775 until 1794, when he lost his post as a sympathizer with the revolutionaries in France. He went to Paris and became a publisher and bookseller there. Cramer was the editor of an important musical periodical, the 'Magazin der Musik' (4 vols., Hamburg, 1783-86), with a short-lived continuation 'Musik' (Copenhagen, 1789). From 1783 onwards he edited a number of vocal scores of operas and other works, first under the collective title 'Polyhymnia', comprising Salieri's 'Armida' (1783), Naumann's 'Orpheus und Euridice' (1787), J. A. P. Schulz's oratorio 'Mana und Johannes' (1789) and opera 'Aline reine de Golconde' (1790), F. L. A. Kunzen's 'Holger Danske' and 'Hermann und die Fursten' (both 1790). Cramer also provided the German translations where necessary and translated some other operas from Danish and French into German. Furthermore, he edited a volume of Kunzen's 'Oden und Lieder' (1784) and under the title of 'Flora' a collection of songs and pianoforte compositions by Gluck, C. P. E. Bach, Reichardt, Schwanberger, Graven and Adolph and F. L. A. Kunzen (1787). In Paris he compiled and published 'Anecdotes sur W. T. Mozart. Traduites de l'Allemand' (1801), which was the first book on Mozart to appear in the French language.<sup>2</sup>

A. L.

**Crane, Walter.** See Griffes (song) Quilter (Children's Overture).

**CRANE, William** (b. ?; d. London, autumn 1545).

English composer. His first appearance in official records occurs on 3 June 1509, when, being already a Gentleman of the Chapel Royal, he was appointed water-bailiff of Dartmouth by Henry VIII. This was merely a benefice and did not preclude residence in London, where in Nov. 1510 and Feb. 1511 he took part in the court revels, in which the king also performed. He also held a London tenancy and a licence to export wool, and in 1512 received a loan of £1,000, with another following in 1513. He wrote music for Henry Medwall's morality play 'The Finding of Truth', performed after a 'Cornish Mask' on 6 Jan. 1514, and on 21 Feb. of the same year he was appointed Comptroller of the Petty Customs in the Port of London. In June 1520 he was in France in Henry VIII's retinue and took part in the ceremonies of the Field of the Cloth of Gold.

When Cornyshe resigned the post of Master of the Children in the Chapel Royal it was given to Crane (25 Mar. 1523), and his salary

<sup>1</sup> This initial stands for Théophile=Amadeus

<sup>2</sup> Preceded by one or two magazine articles, cf. M. & L., Vol. XXIV, No. 2, 1943, p. 111

was increased to £40 per annum in Jan. 1526 when the number of boys was augmented by the Eltham ordinances. Out of his pay he had to provide not only instruction, but also "vestures, and beds for twelve boys". He continued even after this time to engage in trade, for in Jan. 1527 he obtained a licence to import 500 tuns of Toulouse woad or Gascon wine; and in 1531 he became the owner of Beaumont's Inn in the parish of St. Michael's, Cripplegate, with two other messuages "void by the forfeiture of Francis Lovell, late Lord Lovell". Further favours conferred on Crane are mentioned by Flood (*see* Bibl.), one of which was a grant of ten tenements, as well as a room at St. Helen's, Bishopsgate, for himself and his wife Margaret, by whom he had at least one child, a daughter mentioned in a letter from the Archbishop of York in 1535. The probability is that he was married about 1515.

Crane fell seriously ill in June 1545, and on 30 June Richard Bowyer was appointed his successor. He made his will on 6 July and died very probably in Sept. or Oct., being buried in St. Helen's church, Bishopsgate. Not a single work of his is known to have survived.

E. B.

BIBL.—FLOOD, W. H. GRATTAN, 'Early Tudor Composers' (Oxford, 1925).

#### CRANFORD, William (b. ?; d. ?).

English 17th-century singer and composer. He was a singing-man at St. Paul's Cathedral in London and wrote many rounds and catches as well as church music. He is thus represented in Hilton's 'Catch that catch can' (1652) and other collections, as well as in the Ravenscroft Psalter of 1621. A 'Passion' on the death of Prince Henry (1613), "Weepe, Brittaines, weepe" for 6 voices, and a madrigal 'Woods, rockes and mountaynes' (a 6) are in the library at Christ Church, Oxford (the bass part is wanting). The same library also contains a 5-part 'In Nomine' and a 3-part 'Almane' by him. Below is a list of his sacred compositions:

Evening Service (M. and N.D.). Tenb. O.B./229v.

#### ANTHEMS

- 'My sinfull soul' Ch. Ch 56-60 (Bass part missing).
- 'Heare my prayer, O Lord' Durh. C 16/113 (imperf.).
- 'How long.' R.C.M. 1046/12 (single part only).
- 'I will love thee, O Lord', for two basses Durh., PH.; B.M., Add. MSS 30,478/9 (Tenor Cantoris part only).
- 'My beloved spake' Tenb. O.B./470v.
- 'O Eternal God.' Tenb. O.B./472; Harl. 6346/74 (words only).
- 'O Lord, I have sinned.' Tenb. O.B./474v.
- 'O Lord, make thy servant.' Durh., PH.; B.M., Add.
- 'The King shall rejoice' MSS 17,784/3 (Bass (verse anthem for the part only); Harl. 6346/44 (words only). King's Day).
- 'O most gracious God.' Tenb. O.B./473v.

J. M. (ii).

**CRANG & HANCOCK.** English 18th-century organ builders. John Crang, a

Devonshire 'man, settled in London and became a partner with Hancock, a good voicer of reeds. The latter added new reeds to many of Father Smith's organs. Crang altered the old echoes into swells in many organs, as in London at St. Paul's Cathedral, St. Peter's, Cornhill, etc. There appear to have been two Hancocks: (1) John (d. 1792) and (2) James (living in 1820), probably brothers; both are mentioned in the contract for an organ at Chelmsford in 1772. Crang appears to have given his name, probably as a godfather, to Crang Hancock, a pianoforte maker.

v. de p.

**Cranko, John.** *See* Sadler's Wells (Ballet).

**CRANMER, Arthur (Henry)** (b. Birmingham, 5 May 1885).

English baritone singer. He was educated at King Edward's Grammar School, Birmingham. He sang the part of Dalua in Rutland Boughton's 'Immortal Hour' during its run in London in 1922 some 500 times. Later he joined the British National Opera Company. He took part in the opera festivals organized by Napier Miles at Bristol and excelled as the visitor in Miles's opera, 'Markheim'. His gift for conveying the sense of mystery required by such parts as these also made him particularly successful in Stanford's 'The Travelling Companion', both in its Bristol production and in London at Sadler's Wells. But that comedy is also within his scope was shown in such parts as Dr. Bartolo in 'The Barber of Seville' and Don Alfonso in 'Cosi fan tutte'. His outstanding performance in oratorio is that of the part of Christ in Bach's Passions. As an interpreter of songs Cranmer also earned much praise, and he has been a successful teacher of singing.

H. C. C., adds.

**CRAS, Jean (Émile Paul)** (b. Brest, 22 May 1879; d. Brest, 14 Sept. 1932).

French composer. He was not intended to become a musician; but his gifts for music being great, he devoted his life to it in spite of his naval career, which, unlike Roussel and Mariotte, he did not abandon. He reached the rank of rear-admiral. Coming of a family of musical amateurs, he composed by instinct when only fifteen, and was self-taught until he was befriended by Henri Duparc (Oct. 1901), who gave him musical instruction. He also attended for some time Guilmant's organ class at the Paris Conservatoire. His first songs were written in 1900-5 and followed by a set of 'Élégies' for voice and orchestra (1910; performed 1912). 'L'Offrande lyrique' (text from Tagore; translation by André Gide), written in 1920 and performed on 28 Jan. 1922, was orchestrated and played in that form in Nov. 1924. The songs show their composer in possession of the style peculiar to him. He did not try to give them

an outward Oriental colour, but aimed at rendering the accent and the intensity of the verses, the result of which is very taking. Another collection of songs, 'Fontaines' (1923), was sung for the first time the following year.

For the pianoforte Cras wrote 'Poèmes intimes', 'Danze', 'Paysages' (the last two 1917); for the orchestra suite 'Âmes d'enfants' (1918) and 'Le Songe d'Acis et Galathée' (unpublished). His chamber music consists of a Sonata for cello and pianoforte, a Trio for violin, cello and pianoforte (1907), a string Quartet (1909), a Quintet for strings and pianoforte (1922), these last two works having been first played at the Société Nationale on 5 Mar. 1910 and 13 Jan. 1923; also a string Trio.

Among more recent works are 'Dans la montagne' (male-voice choruses, 1925), 'Deux Impromptus' (harp) and 'Air varié' (vn. and pf., 1926). The composition of 'Polyphème' (poem by A. Samain), a lyrical drama in 4 acts (5 scenes), plays an important part in Cras's life. Begun in 1912 and finished in 1914, it was orchestrated between 1916 and Mar. 1918, during the leisure hours spared from the submarine war in the Adriatic. This dramatic production was crowned at the *concours* of the City of Paris (21 Mar. 1921), and given at the Opéra-Comique as a special performance on 29 Dec. 1922, preceding its first official production on 3 Jan. 1923. There again he clad the poet's verses in a musical garment which reflects their expression and their lyrical colour. His music, free from formulas either old or new, does not affect any particular modern stamp, but its substance is rich and its inspiration wholly and purely musical. Cras's last works are 'Journal de bord' for orchestra (1927); 'La Flûte de Pan' for voice, flute, violin and cello; a Quintet for the same, with harp; songs ('Trois Noël's', 'Trois Chansons bretonnes', etc.; 1929, 1932); Concerto for pianoforte and orchestra (1931).

**CRAWFORD, Robert (Caldwell)** (b. Edinburgh, 18 Apr. 1925).

Scottish composer. He began his studies in composition with Hans Gál in Edinburgh and continued at the G.S.M. in London, with Benjamin Frankel (1946-49). In 1951 he won an Arts Council Festival of Britain Prize (Scotland) with his string Quartet, which was performed at the Frankfurt o/M. Festival of

the I.S.C.M. in the same year. His other compositions include incidental music for 'The Bench Hand', commissioned by the B.B.C., 'Six Bagatelles' (1948), Sonata (1950) and Sonata (1951), all for pianoforte.

c. m. (iii).

**CRAWFORD, Ruth** (b. East Liverpool, Ohio, 3 July 1901; d. Chevy Chase, Md., 18 Nov. 1953).

American composer and author. In her earlier years she studied and taught pianoforte at the School of Musical Art, Jacksonville, Florida, and later she entered the American Conservatory, studying harmony, counterpoint, composition and orchestration with Weidig and pianoforte with Djane Herz. She also taught at the Elmhurst College of Music and at the American Conservatory. She received a Guggenheim Fellowship in 1930, with the aid of which she studied during the years 1930-31 in Paris and Berlin. Her works have been performed in Europe and in North and South America. She represented the U.S.A. at the I.S.C.M. Festival in 1933 with her Three Songs for contralto, oboe, piano and percussion, with orchestral *ostinato*.

Ruth Crawford was the wife of Charles Seeger, Chief of the Music Division of the Pan-American Union, and she lived in Washington, D.C. In addition to her creative work she was active in the collecting and transcribing of folk material from various parts of the country. She was music editor of 'Our Singing Country', by John A. and Alan Lomax, a work that involved transcribing from gramophone recordings 200 songs recorded in field research. She was the author of 'American Folksongs for Children' and co-editor with Charles Seeger of 'Folksong: U.S.A.' by John and Alan Lomax. The following are her chief compositions:

Chants for unaccompanied women's chorus (1930).

2 Movements for chamber orch. (1926).

'Risolyt Rosolyt' for 10 wind insts., drums & sts. (1941).

3 Songs for contralto & 17 insts. (1932).

Suite for stg. 4tet & pf. (1927).

3 Movements for wind insts. & pf. (1928).

4 Diaphonic Suites for flute, oboe, 2 clars. & 2 cellos (1931).

String Quartet (1931).

Sonata for vn. & pf. (1927).

9 Preludes for pf. (1926).

P. G.-H.

**Crawford.** See Clarke (J. [1], 'Love at First Sight', song for). Croft ('Courtship à la mode', incid. m.).

**CRAXTON, (Thomas) Harold (Hunt)** (b. London, 30 Apr. 1885).

English pianist, accompanist and teacher. He was a pupil of Tobias Matthay and became a professor in his master's Pianoforte School in London in 1914. In 1919 he joined the staff of the R.A.M., and he was given the distinction Hon. R.A.M. in 1921. He became widely known as one of the most able of pianoforte accompanists in the concert-rooms of London. His recitals of early English keyboard music

and his transcriptions of old music, both English and foreign, for the pianoforte have made a distinctive contribution to the revival of such music everywhere prevalent to-day. He collaborated with Sir Donald Tovey in editing Beethoven's pianoforte sonatas for the Associated Board of the Royal Schools of Music (1931). As teacher and editor he has taken an important part in musical education.

H. C. C.

"CREATION" MASS. See HAYDN (J.), p. 168.

**CREATION, THE.** Haydn's oratorio, written at a suggestion made to him in London by Salomon. The words were selected—originally for Handel—from Genesis and Milton's 'Paradise Lost' by Lidley or Liddell, and translated into German, as 'Die Schöpfung', with modifications, by Baron Gottfried van Swieten. The work was produced by a body of dilettanti at the Schwarzenberg Palace, Vienna, on 29 Apr. 1798; in London at Covent Garden Theatre, under Ashley, on 28 Mar. 1800; in Paris on 24 Dec. 1800.

**CRÉCHILLON, Thomas.** See CRECQUILLON.

**CRECQUILLON<sup>1</sup>, Thomas** (b. ?; d. Béthune, 1557).

Flemish composer. Ambros says that he succeeded Canis as choirmaster of the imperial chapel of Charles V in the Netherlands, but from the dates and other particulars given by E. van der Straeten in his 'La Musique aux Pays-Bas' it would almost appear that it was Canis who succeeded Crecquillon, for already in 1544 Susato describes Crecquillon as choirmaster, while in 1550 Canis is described as *praefectus sacelli*, and Crecquillon as being "singer and composer to the chapel" (*cantor et cantionum conditor, quem vulgo componistam vocant*). He was a priest and became a canon at Namur, in 1552 at Termonde and in 1555 at Béthune.

Apart from two volumes of motets of his composition published separately by Phalèse in 1559 and 1576, his very numerous works consisting of chansons and motets, lamentations and masses, are contained in the great collections of the time. Ambros has much to say in commendation of Crecquillon's music. Beauty of harmony, great constructive power and a simple grandeur of expression characterize his works and entitle him to be reckoned among the great masters of the polyphonic style between Josquin des Prés and Lassus. He shows a certain kinship to the Spaniard Morales and approaches the pure ideal style of Palestrina. Two of his motets appear in Commer, Coll. Op. Mus. Bat., and three very attractive chansons in Eitner's reprint of Ott's 'Liederbuch' of 1544. In the Q.-L. Eitner lists 275

works published in various collections of the 16th century. The largest was Phalèse's 'Opus sacrarum cantionum . . .' (Louvain, 1576), containing 111 motets.<sup>2</sup> J. R. M., adds.

See also La Hèle (Mass on motet by C.). Paix (parody mass on motet).

**CREDO.** The first word of the Nicene Creed in Latin. It is the name by which that creed is known to musicians by reason of the magnificent music to which it has been set by the greatest composers of the Mass. The traditional figure to which the first sentence or "intonation" is given out by the priest is

Cre-do in u-num De-um.

and upon this Bach developed the stupendous contrapuntal chorus to those words in his B minor Mass.

The Nicene Creed is distinguished in the English Church by an extensive musical treatment.<sup>3</sup> Marbeck's setting of it in 'The Book of Common Prayer Noted' of 1550 for the use of the English Church follows plainsong originals less closely than most of the other parts of his setting of the service. The Apostles' Creed and that known as the Creed of St. Athanasius (*Quicumque vult*) have never been given the elaborate musical treatment devoted to the Nicene Creed.

W. H. F.

**Crémieux, Hector.** See Offenbach (13 lbs.). *Orphée aux enfers* (Offenbach, lib.).

**CREMONA.** See ORGAN STOPS.

**CRÉOLE, LA** (Opera). See OFFENBACH.

**CRÉQUILLON, Thomas.** See CRECQUILLON.

**CRESCENDO** (Ital. = growing, increasing, i.e. in loudness). One of the most important effects in music. It is expressed by *cresc.* or by the sign  $\llcorner$ . Sometimes the word is expanded—*cres . . . cen . . . do*—to cover the whole space affected.

G.

See also Expression (5). Mayr (S., introd. into opera)

**CRESCENDO PEDAL** (Ger. *Rollschweller* or *Walze*). A term sometimes used for the ordinary swell pedal of the organ, but more appropriately applied, in the form of "Crescendo and Decrescendo Pedal", to a contrivance which throws out and takes in the stops in their proper order as to pitch and power. The device has limited artistic use, but is popular in Germany where Max Reger's organ music is played.

T. E., adds.

**CRESCENTINI, Girolamo** (b. Urbania nr. Urbino, 2 Feb. 1762; d. Naples, 24 Apr. 1846).

Italian male mezzo-soprano singer. At the age of ten he began to study music and was afterwards placed with Gibelli, to learn singing. Possessed of a beautiful mezzo-soprano voice and a perfect method of vocalization, he made his début in Rome in 1783. He

<sup>1</sup> Also Créchillon, Créquillon, Crecquillon, Cinquillon, Gréquillon.

<sup>2</sup> Copy in B.M.

<sup>3</sup> See SERVICE.

then obtained an engagement as *primo uomo* at Leghorn, where he appeared in Cherubini's 'Artaserse'. He next went to London, making his debut in a pasticcio on 8 Jan. 1785, but was thought so moderate a performer that, before the season was half over, he was superseded by Tenducci, an old singer who had never been first-rate and had scarcely any voice left. Crescentini sang only two more parts, in Anfossi's 'Nitteti' on 26 Feb. and in the pasticcio 'Artaserse' on 16 Apr. Lord Mount-Edgcumbe wrote:

It is but justice to add that, when he was here, Crescentini was very young, and had not attained that excellence which has since gained him the reputation of a first-rate singer. He never returned to this country.

In the spring of 1785 he sang at Padua in the 'Didone' of Sarti<sup>1</sup>, and was engaged for Venice. In the following summer he was at Turin. In 1787 he was engaged for the Carnival at Milan, and in 1788-89 he sang at the San Carlo Theatre at Naples. In 1791 and 1793 he appeared at the Argentina in Rome and in 1794 at Venice and Milan. In 1796 Cimarosa composed expressly for him 'Gli Orazi ed i Curiazi' at Venice. After singing in Vienna he returned to Milan for the Carnival of 1797 and at the end of that season went to Lisbon, where he sang for the next four years. He reappeared at Milan in 1803, sang at Piacenza, at the opening of the new theatre, and went to Vienna in 1805 with the appointment of professor of singing to the imperial family. Napoleon having heard him there was so charmed that he determined to engage him permanently and secured him a handsome salary.

Crescentini sang in Paris from 1806 to 1812, when his voice showed signs of suffering from an uncongenial climate, and he with difficulty obtained permission to retire. He went to Bologna, and then to Rome, where he remained till 1816, when he settled at Naples as professor at the Real Collegio di Musica. He was, with Velluti, one of the last great singers of his school. Crescentini was also a composer and published at Vienna in 1797 several collections of *arlette* and some admirable exercises for the voice, with a treatise on vocalization in French and Italian, in Paris. J. M., rev.

**CRESTON, Paul** (b. New York, 10 Oct. 1906).

American composer. He comes of a poor family named Guttovoggio and was obliged to work for his living at an early age. His parents, seeing that he was passionately devoted to music, contrived to have pianoforte lessons given to him, but by the time he was fourteen he realized that they were thoroughly unsatisfactory. He then met a pupil of Randegger, who undertook to teach him to

prepare for lessons under that master himself. Another teacher was Dethier, and he also learnt the organ under Pietro Yon. But he could not afford lessons indefinitely and continued by teaching himself. He also began to compose and to write poetry, and for a time he was undecided whether to devote himself to music or to literature. However, at the age of twenty-six he decided for the former and for the first time gave an opus number to one of his works, a set of five Dances for pianoforte. He continued to study the work of a great variety of composers and acquired some pupils, so that by degrees he mastered composition and made some kind of a living by music. His later career has been made easier by performance of works of his at concerts and on the radio, and he has gained various prizes, such as the Guggenheim Fellowship in 1938 and 1939, the \$1000 grant of the American Academy of Arts and Letters in 1943 and the Ditson Fund Award in 1945. E. B.

## CATALOGUE OF WORKS

### BALLET

- Op.  
23. 'A Tale about the Land' (1940).

### CHORAL WORKS

11. 'Three Chorales from Tagore' for unaccompanied chorus (1936).  
22. 'Dirge' for chorus & pf. or stg. orch. (1940).

### ORCHESTRAL WORKS

5. 'Out of the Cradle' for chamber orch. (1934).  
16. 'Threnody' (1938).  
17a. 'Two Choric Dances' for chamber orch. (1938).  
17b. 'Two Choric Dances' for full orch. (1938).  
20. Symphony No. 1 (1940).  
25. Prelude and Dance (1941).  
27. 'A Rumour' (1941).  
28. 'Pastorale and Tarantella' (1941).  
33. 'Chant of 1942' (1943).  
34. 'Frontiers' (1943).  
35. Symphony No. 2 (1944).  
36. 'Dawn Mood' (1944).

### SOLO INSTRUMENTS AND ORCHESTRA

12. Partita for flute, vn. & stgs. (1937).  
21. Concertino for marimba (1940).  
26. Concerto for saxophone (1941).  
32. Fantasy for pf (1942).  
39. Poem for harp (1943).  
42. Fantasy for trombone (1947).

### VOICE AND ORCHESTRA

30. Dance Variations for soprano (1942).  
37. Psalm XXIII (1945).

### BAND MUSIC

31. 'Legend' (1942).  
40. 'Zanoni' (1946).

### CHAMBER MUSIC

8. String Quartet (1936).

### ONE INSTRUMENT AND PIANOFORTE

6. Suite for saxophone (1935).  
13. Suite for viola (1937).  
18. Suite for vn. (1939).  
19. Sonata for saxophone (1939).  
41. 'Homage' for viola (1947).

<sup>1</sup> Apparently a revival: the work had been first given there in 1782.

## MUSIC WITH ORGAN

- Op*  
 15. 'Missa pro defunctis' for tenor & baritone (1938).  
 37. Psalm XXIII for one voice (1945).  
 41. 'Homage' for viola with organ & harp (1947).

## PIANOFORTE MUSIC

1. 5 Dances (1932)  
 3. 'Seven Themes' (1933).  
 9. Sonata (1936)

Creswell, Peter. See Arundell ('Matinée', broadcast m.).

**CREYGHTON, Robert** (b. Cambridge, c. 1639, d. Wells, 17 Feb. 1734).

English divine and composer. He was the son of the Rev. Dr. Robert Creyghton, professor of Greek at Cambridge, afterwards Dean of Wells and in 1670 Bishop of Bath and Wells. Like his father, the younger Robert, who had taken the D.D. degree, held the Greek professorship at Cambridge, in 1662. In 1674 he was appointed canon residentiary and precentor of Wells Cathedral.

Creyghton composed several services and anthems still extant in the library of Wells Cathedral. Two services, in E♭ major and B♭ major, are now printed. Tudway's manuscript (B.M., Add. MSS 7338-39) contains a third, in C major, and an anthem, 'Praise the Lord'. He is widely known by his anthem 'I will arise'.

**CRISPATIO** (Lat. = trill). See ORNAMENTS, B (iii).

**CRISPI, Pietro Maria** (b. Rome, 1737; d. Rome, 16 June 1797).

Italian composer. He joined the Accademia di Santa Cecilia, Rome, on 8 June 1762 — the entry in the register calls him *abbate* and *maestro di cappella*. From 1772 until his death he was organist of the church of San Luigi de' Francesi. Burney visited him on 23 Sept. 1770 to hear the weekly *accademia* at his house and again on 16 Nov., when six new quartets of Crispi's were performed, which he thought of "great merit and . . . superior to any of his

other productions".<sup>1</sup> From 1762 onwards Crispi wrote several cantatas and oratorios for various colleges and churches in Rome ('Isacco', 1762, 'La morte di Abele', 1763, 'La caduta de Gerico', 1766, 'La passione del Redentore', 1778, etc.) and from 1763 to 1777 half a dozen comic operas and intermezzi of which the last, 'Il marchese a forza', is still extant. Of Crispi's instrumental works, symphonies, trio sonatas and works for harpsichord have been preserved in various libraries. Two of his harpsichord sonatas appeared in Crotch's 'Specimens of Various Styles of Music' (Vol. III, 1809) and one rondo was published by Cametti in 'Musica d'oggi' to illustrate the article quoted below. A L.

BIBL.—CAMETTI, ALBERTO, 'Pietro Crispi, cembalista e compositore' ('Musica d'oggi', Vol. II, No. 8/9-10, Aug./Sept.-Oct. 1920).

**CRIST, Bainbridge** (b. Lawrenceburg, Ind., 13 Feb. 1883).

American composer. He began his musical studies at the age of five. He received the degree of LL.B. from George Washington University at Washington and practised law at Boston for six years, composing in his spare time. He then abandoned his practice and went to Europe, where he studied theory and orchestration in Berlin and London, with Paul Juon and Claude Landi, and singing with William Shakespeare, Charles W. Clark and Franz Emerich. From 1915 he taught singing at Boston, Washington, Florence, Paris, Lucerne and Berlin. In 1939 he went to live at South Yarmouth, Mass., devoting himself to composition and teaching. Nearly 200 of his works have been published, including 29 for orchestra (mostly with voice), 3 stage works, 13 for chorus and many songs. Among the larger works may be mentioned 'The Parting' for voice and orchestra (1916), the choreographic drama 'Le Pied de la momie' (Bournemouth, 1925) and two symphonic poems, 'La Nuit revêcue' (New York, 1936) and 'Hymn to Nefertiti' (1937). An 'American Epic' for orchestra was first performed in New York on 28 Feb. 1943. His songs are frequently broadcast and sung at concerts. The best of them are noteworthy for the skilful handling of the voice, the sensitiveness of the melodic line and the aptness and variety of the harmony.  
 N. B.

**CRISTOFORI<sup>2</sup>, Bartolommeo di Francesco** (b. Padua, 4 May 1655<sup>3</sup>; d. Florence, 27 Jan. 1731).

Italian harpsichord maker and inventor of the pianoforte. Other claims to this discovery have great interest and are noticed elsewhere<sup>4</sup>,

<sup>1</sup> There are four different references to Crispi in Burney's 'Present State', not one only as indicated in the inadequate index.

<sup>2</sup> Written Cristofali by Maffei.

<sup>3</sup> Fétis and Pietrucci in their respective memoirs erroneously state 1683 as the date of his birth.

<sup>4</sup> See PIANOFORTE and SCHROTER.

but the priority and importance of Cristofori's invention have been so searchingly investigated and clearly proved by Cavalieri Leto Puliti<sup>1</sup>, that the Italian origin of the instrument, which its name would indicate, can be no longer disputed.

It may be surmised that Cristofori was the best harpsichord maker at Padua, since Prince Ferdinand, son of the Grand Duke Cosmo III, a skilled harpsichord player, who visited Padua in 1687, induced him then or very soon after to transfer himself from that city to Florence. We have evidence that in 1693 Cristofori wrote from Florence to engage a singer — the only time he appears in the prince's voluminous correspondence. In 1709 Maffei visited Florence to seek the patronage of Prince Ferdinand for his 'Giornale dei letterati d'Italia' and in Vol. V of that work, published in 1711, Maffei states that Cristofori had made four "gravicembali col piano e forte", three distinctly specified as of the large or usual harpsichord form, the fourth differing in construction and most likely in the clavi-chord or spinet form: there was among the prince's musical instruments a "cimbalo in forma quadra", an Italian spinet which when altered to a pianoforte would be termed a square. In 1719, in his 'Rime e prose', published at Venice, Maffei reproduced his description of Cristofori's invention without reference to the previous publication. As these pianofortes were in existence in 1711, it is just possible that Handel may have tried them, since he was called to Florence in 1708 by Prince Ferdinand to compose the music for a melodrama, remained there a year and brought out his first opera, 'Rodrigo'.

The prince died in 1713, and Cristofori, continuing in the service of the grand duke, in 1716 received the charge of the eighty-four musical instruments left by the prince. Of these nearly half were harpsichords and spinets — seven bearing the name of Cristofori himself. It is curious, however, that not one of them is described as "col piano e forte", and also interesting that in the receipt of this inventory we have Cristofori's own handwriting as authority for the spelling of his name now adopted.

The search for Cristofori's workshop proving unsuccessful, Puliti infers that the prince had given him a room in the Uffizi, probably near the old theatre, in the vicinity of the foundry and workshops of the cabinet makers. He imagines the prince suggesting the idea of the pianoforte, and taking great interest in the gradual embodiment of the idea thus carried out under his own eyes. René Savoye of Paris had, however, in his collection an instrument

of 1610 which, if accepted as a pianoforte, would antedate Cristofori's invention by a hundred years. It has small hammers but no dampers and is shaped like a dulcimer. This may be the Dulce Melos<sup>2</sup> (*Doucemelle*), really a keyed dulcimer according to a 15th-century manuscript unearthed by Bottée de Toulmon<sup>3</sup> (1840), who described the illustration given as that of a pianoforte of four octaves.

Maffei gives an engraving of Cristofori's action or hammer mechanism of 1711. It shows the key with intermediate lever and the hopper, the thrust of which against a notch in the butt of the hammer jerks the latter upwards to the string. The instant return of the hopper to its perpendicular position is secured by a spring; thus the escapement or controlled rebound of the hammer is without doubt the invention of Cristofori. The fall of the intermediate lever governs an under-damper, but there is no check to graduate the fall of the hammer in relation to the force exercised to raise it. For this, however, we have only to wait a very few years. There was in the possession of the Signora Ernesta Mocenni Martelli at Florence (now, by gift of Mrs. J. Crosby Brown, in the Metropolitan Museum, New York) a grand pianoforte made by Cristofori in 1720, the namepiece "Bartholomaeus de Christoforis Patavinus Inventor faciebat Florentiae mdcxxx" being the guarantee for its origin and age. Puliti had two exact drawings made of the action, one with the key at rest and the other when pressed down, and has described each detail with the greatest care. The hammer is heavier than that represented in 1711, the intermediate lever is differently poised and the damper raised by the key when in movement now acts above instead of under the strings. Finally there is the check completing the machine.

What doubts have not found their solution by the discovery of this interesting instrument, which was exhibited at the Cristofori Festival at Florence in May 1876? The story of it begins earlier in the 19th century, Signor Fabio Mocenni, the father of the late owner, having obtained it from a pianoforte tuner at Siena in exchange for wine. Its anterior history is not known, but Puliti offers suggestive information in the fact of Violante Beatrice di Baviera — the widow of Cristofori's master and protector Prince Ferdinand — having lived at Siena at different times, particularly when her nephew was studying at the Siennese University in 1721.

But if it were only a harpsichord turned by the substitution of hammers into a pianoforte? The careful examination of Puliti is the authority that all its parts were constructed at one time, and the word "Inventor" appended to

<sup>1</sup> 'Cenni storici della vita del serenissimo Ferdinando dei Medici, Estratto dagli Atti dell' Accademia del R. Istituto Musicale di Firenze' (1874).

<sup>2</sup> Hipkins, 'History of the Pianoforte', p. 55.

<sup>3</sup> Bibliothèque Nationale, Paris.

Cristofori's name would not have been applied to a simple harpsichord or spinet. It is a bichord instrument, compass from D to F, exceeding four octaves. Another grand pianoforte by Cristofori, a few years later in date, 1726, was in the famous museum at Florence belonging to Baron Kraus and his son the Commendatore Alessandro Kraus figlio. This instrument was shown by them in the Paris Exhibition of 1878 and was, at that time, in satisfactory playing order: the touch light and agreeable. The pianoforte is now in the Heyer Museum of old instruments at Leipzig. Yet another instrument existing accredited to Cristofori is a harpsichord with three keyboards, dated A.D. 1702 and bearing the arms of Ferdinando de' Medici. It now belongs to the University of Michigan.

Cristofori's reputation had extended during his lifetime into Germany, for Mattheson had published the translation by König of Maffei's article in the second volume of his 'Critica musica' (Hamburg, 1722-25, reproduced in Adlung's 'Musica mechanica organoedi', 1767) and Walther, in his 'Musikalisches Lexikon' (Leipzig, 1732), article "Pianoforte", treating of the invention, attributed it exclusively to Cristofori.

On 7 May 1876 a stone in the device of a tuning-hammer was placed in the cloisters of Santa Croce at Florence bearing the following inscription:

A BARTOLOMEO CRISTOFORI | Cembalaro da Padova  
| che in Firenze nel MDCCXI | INVENTÒ IL CLAVI-  
CEMBALO COL PIANO E FORTE.

A. J. H., adds.

**CRITIC, THE** (Opera). See STANFORD.

**CRITICISM.** I. HISTORY.—The history of musical criticism has never been examined in full. This is a large gap in musicological studies, but hardly a surprising one. Endless research into the files of old newspapers and periodicals would be required before the task could have a hope of success. For the public memory in this matter, dependent as it is on the whim of biographers, is highly selective. Ernest Newman in his edition of Chorley has put the question from the critic's point of view: "If he talks sense, his views become the commonplaces of later musical opinion, and no one thinks of crediting him in particular with them. If he talks nonsense, this is regarded as peculiarly his own." This is partly inevitable, since popular history likes to recall the eccentrics while forgetting the circle. But it has often been the interest of posterity deliberately to misrepresent the critics of the past. Romanticism thrives on exaggeration, and a popular and picturesque exaggeration is very difficult to disperse. We are told when a great composer has been damned, even if it is for an early or feeble work, but seldom when a mediocre one has

been overpraised—a far commoner occurrence. One of the legends of critical history, exploded by Newman in 'A Musical Critic's Holiday' but habitually resurrected, is that many of the greatest composers were so far ahead of their age that they were more or less regularly misunderstood and blackguarded by critics and public alike. There is no single instance of a great composer whose works had an adequate hearing having suffered such a fate. The argument, invented by the Wagnerians and evidently directed at a nostalgic hankering after the pathetic fallacy that was one of the legacies of romanticism to modern man, has been appropriated by the outriders of certain modern composers whom contemporary audiences have shown reluctance to place next to their bosoms.

Another deterrent to the historian is a certain slipperiness about the subject itself. Criticism was a haphazard growth, carried on for long periods either by musical amateurs interested in literature, aesthetics or social science, or by musicians who were amateurs in all else, including the processes of thought and verbal expression. How much of all this musico-literary activity, ranging from press notices and reviews to the elaborate productions of scholarship and the remotest speculations of aesthetic theory, deserves the title of criticism? If the distinction is drawn too narrowly, there is an obvious danger of falling into an all too familiar pattern of academic logic-chopping; if too widely, philosophical definitions would have to be laid down that would carry the enquiry too far afield. It seems best therefore to confine the term "criticism" for the most part to current discussion, in the daily and periodical press, of contemporary musical trends, while taking care not to block the irrigation channels that carry the fertile silt of scholarship and aesthetics. Much of the best criticism occurs in books; much daily "criticism" is little more than the reporting of events and the advertisement of executants, lacking even the justification for such activities in the other arts, since when the notice appears the performance is over and the reader is no longer in a position to benefit from the one or the other. For so flexible a subject a flexible treatment is essential.

*Origins.*—Since the daily and periodical press did not make its first irregular appearances till the late 17th century, everything that preceded that period is in a sense beyond our terms of reference. But it is notable that, whereas unorganized criticism of a sort must always have been virtually co-existent with art itself, ever since records began the criticism of music has lagged behind that of the other arts. The probable reasons for this are discussed below; here it is sufficient to note that the elusiveness of musical material and the

elements of sound and time in which it operates make it difficult to record accurately even now, almost impossible to describe in words, and therefore highly unamenable to criticism.

Ancient Greek myth, symbolizing the rivalry between the lyre of Apollo and the flute of Cybele in the story of Marsyas, gave musical criticism its first martyr, whose grisly fate has been constantly wished upon his successors (it is not quite clear whether or no he antedated Midas). But although the Greeks and Romans, and the musicians of the middle ages, wrote technical treatises on the art and discussed its philosophical implications, their rigidly preconceived methods of linking these two aspects seem now to fall altogether outside the sphere of art criticism. There is however a perennial ring of familiarity about the terms in which Joannes de Muris in the early 14th century criticized the innovators of his time. The Renaissance released a flood of discussion, carried on in a casual war of prefaces and pamphlets, in which music and especially the monodic revolution associated with the Florentine invention of opera about the year 1600 came in for their share of attention; but its main import was academic or social, and largely concerned with the attempt to graft the newly apprehended (or misapprehended) theories of the ancient classical writers on the surviving fabric of medieval society. Music was still regarded almost as a department of manners, and even the critical systems propounded in the France of Louis XIV approached it first through ethics and then through literature. Criticism of individual composers and compositions, except as illustrations for a thesis, and the formulation of a critical attitude to contemporary music as a whole had to wait for the press.

*The 18th Century.*—We are accustomed to regard the early 18th century as a great age of criticism, and rightly so; but its treatment of music was circumscribed by considerations not easily appreciated to-day. All the musical writers of the period (there were no regular critics in the modern sense for another hundred years) were preoccupied with the idea, derived from Plato and Aristotle through the Renaissance, that art was an imitation of nature (human or external). In music this doctrine found expression in the rationalistic theory of the passions known as *Affektenlehre*, developed in Germany during the 17th century and connected both with Descartes and with the Renaissance "humours", themselves partly derived from Theophrastus. According to this theory every passion and psychological state was supposed to have its musical corollary. Its basis was a questionable analogy between music and speech. It was essentially a literary device designed to

establish communication between composer and audience by means of a short cut; it assumed that the composer either worked through a literary text or wished to say something that could in part at least be communicated in words. Later these limitations began to be recognized, and expressiveness (sometimes descending to a sensibility parallel with that of Sterne and other writers) became the critical ideal: Avison attacked Handel for carrying imitation to an absurd length, not without reason, but the prominence of the mannerism seems to have blinded him to Handel's other qualities. Avison's ideal of "expression" in fact meant something like an imitation of the ancients instead of nature (This generalized "expression" must of course be distinguished from the romantic idea of self-expression, the overflow of powerful individual emotions. The attempts of modern scholars to read a personal symbolism into Bach's use of conventional forms of expression are liable to romantic extravagance.)

Among the earliest pieces of musical journalism were Addison's reflections on Italian opera in 'The Spectator' of 1711. Addison was a critic of manners rather than art, and although he had written an opera libretto, he was no musician; but his articles are important for their influence on the Hamburg theorist Johann Mattheson, who has claims to rank as the first modern music critic. He not only translated and imitated Addison and Steele in 'Der Vernünftler' (1713), but went on to found the first periodical devoted wholly to music, 'Critica Musica' (1722-25). This contained original and translated matter of historical and aesthetic interest, but was largely devoted to current problems of musical taste, in particular the controversy between the old polyphony, then reaching its climax in J. S. Bach, and the new melodic style, represented by Telemann, Handel's Italian operas and cantatas and Mattheson's own tastes. His example was followed by other German theorists, and although their periodicals were irregular in appearance and duration they exerted a strong influence on the musical temper of the time and focused attention on current activities, including books and concerts. Among the most prominent of these periodicals were 'Der getreue Musikmeister' (Telemann, 1728—the first to publish compositions), 'Neu eröffnete musikalische Bibliothek' (L. C. Mizler, at intervals between 1736 and 1754), 'Der kritische Musikus' (J. A. Scheibe, 1737-40) and three successive papers edited by F. W. Marburg, beginning in 1749. Many of their contents were still learned or theoretical, as befitted the age of the important treatises of Rameau, Fux, Mattheson, C. P. E. Bach and others; but the growing importance

of the middle classes throughout northern Europe introduced a less specialized, more popular element. Regular concert series had begun at Hamburg (1722) and Paris (1725); amateur music-making spread widely beyond aristocratic and court circles. Here was a new public eager for critical instruction in music, and J. A. Hiller's 'Wöchentliche Nachrichten und Anmerkungen, die Musik betreffend' (1766) seems to have been the first periodical designed to cater for them.

But if Germany was first in the field with periodicals, the intellectual fuel that fed them was largely French. The monument of 18th-century rationalism was the great 'Encyclopédie' of d'Alembert and Diderot (1751-77), which was preceded and accompanied by a series of pamphlet wars on musical subjects. It is significant that the most prominent of these struggles—between the successors of Lully and Quinault and the supporters of Italian opera early in the century, between the followers of Rameau and the newly introduced *opera buffa* in the 1750s, and between the Gluck and Piccinni factions twenty years later—were all concerned with opera, that meeting-point of all the arts, including the dance, scene-painting, architecture and even the art of polite society. The opponents were often men of letters and philosophers, such as Rousseau. But if music was not yet treated as an adult and independent art, there was a good deal of genuine musical criticism in the periodicals 'Mercure de France' and 'Correspondance littéraire', both edited by the German Grimm, who had studied with Scheibe's master Gottsched at Leipzig. There were also a number of short-lived musical magazines, the earliest in 1756. Furthermore the critics were ahead of rather than behind the composers, their destructive attacks on the extravagances of baroque opera, the arch-enemy of rationalism, prepared the way for Gluck and no doubt influenced his operative reforms. Gluck's much publicized endeavour to forget that he was a musician was a tribute to the scientific criticism of his age.

England had no musical periodicals till much later, but there was a crop of treatises and pamphlets, mostly the work of dilettante philosophers and men of letters. Among the exceptions were Burney, who combined the industry of an academic historian and a sound musician with a limited historical sense, and Charles Avison, an able composer and organist who tried to reconcile theory with practice in his 'Essay on Musical Expression' (1752). Burney's short 'Essay on Musical Criticism', prefixed to the third book of his 'General History', shows him more aware than most of his contemporaries of the problems implicit in his title. Observing that

musicians even more than other people were apt to reason without principles, he sought to offer guidance to those who would learn "how to listen, or to judge for themselves". To Burney the critic meant not a professional musician, still less a journalist, but a judicious listener. That this was the usual view is clear from Johnson's division of critics into three classes: "those that know no rules but pronounce entirely from their natural taste and feelings . . . those that know and judge by rules . . . [and] those who know but are above the rules". The first class would not now rank as critics at all. Avison's limitations seem to-day more conspicuous than his virtues. He drew elaborate parallels between music and the other arts, especially painting, and considered that in the 16th century music was far more backward than painting. "The Works of Palestrina in that Infant-State of Music, may be considered as the first lights of Harmony." The baroque contrapuntists of the 17th century he called "the Ancients"; the moderns were the French and Italian opera composers. True musical expression he defined as "such a Concurrence of Air and Harmony, as affects us most strongly with the Passions or Affections which the Poet intends to raise". His ideal composers were Marcello in vocal music, Geminiani in instrumental; and he assumed that "the finest instrumental Music may be considered as an Imitation of the vocal". On the other hand he urged the need for historical research into the life and work of the greatest composers of the past.

It is in historical sense and disproportionate emphasis on extra-musical values that 18th-century criticism seems to us to be deficient. Scheibe's famous criticism of Bach was not the outcome of a narrow malevolence, as romantic writers have never ceased to assert, but an attempt to judge one technical method in terms of another—a mistake repeated *ad nauseam* by the critics of every succeeding period. Nevertheless the age saw the first systematic attempt at musical criticism, even if it began on the wrong foot by claiming music as either the handmaid of a philosophy of manners or a secondary and less efficient literary language, instead of accepting it as an art expressed in terms of sound. The social aspect also is important. The concentration on criticism typical of the period was partly aimed at demolishing the extravagance of baroque art and society; but the middle-class rationalism which it fostered exerted in its turn a decisive influence on artistic developments and underlying critical theories, especially in countries where music-making was not dominated by courts and ecclesiastical establishments. The decay of patronage opened the way to journalism.

*The Romantic Period.*—In the closing years of the century musical periodicals multiplied, especially in Germany. C. F. Cramer brought out periodicals at Hamburg (1783–87) and Copenhagen (1789), the Abbé Vogler at Mannheim (1778–81), J. N. Forkel at Gotha (1778–79); in 1798 J. F. Rochlitz founded at Leipzig the influential 'Allgemeine musikalische Zeitung', which he edited till 1818. (The Berlin paper of the same name was founded by A. B. Marx in 1824.) It was in periodicals of this kind that the new works of Mozart, Haydn and Beethoven were first criticized, often more favourably than their more sentimental biographers would have us suppose. Mozart, though condemned for excessive emotionalism, was on the whole treated better by the press than by his patrons; and it was the publishers, not the reviewers, who treated Schubert with contumely. Beethoven while still a young man was recognized as a force to be reckoned with, though the critics often found fault with the qualities that have since been most admired—a tribute, if by inversion, to their musical susceptibility. The tone of the critic was lowered as his audience expanded: he began to approach the reader as a colleague rather than a moral pedagogue. But analogies with the other arts were still prominent: Mozart was compared to Klopstock, Haydn at various times to Sterne, Gellert, Wieland, Jean Paul Richter and Tintoretto.

With the dawn of romanticism in the first quarter of the 19th century the reaction against rationalism went rapidly to extremes. Beethoven found a passionate admirer in E. T. A. Hoffmann, who began to write musical criticism for the Leipzig 'Allgemeine musikalische Zeitung' in 1809. Beethoven was the first composer to be acclaimed among the spiritual leaders of mankind (not entirely for musical reasons), an apotheosis completed by Wagner when in 1870 he called the choral Symphony "the new religion, the world-redeeming redemption". The romantic critics tended to regard art as a sacrament instead of a rational or enjoyable experience. Many of them, such as Hoffmann, Rochlitz and the two Rellstabs, were men of letters, often inspired by idealistic notions linking all the arts with sociology and politics. This literary movement in its turn influenced Wagner. There was a strong element of propaganda as well as amateurishness and pure ignorance; while criticism broke the bonds of 18th-century rationalism it is doubtful if it came much nearer to music. Nature and manners were replaced by the vapours of individual emotionalism and subjective irrelevance. An exception among men of letters was Heine, who for some years criticized music in Paris for the Augsburg 'All-

gemeine Zeitung'. He steered a course between pedantry and the cloudy raptures of German romanticism, and his incisive wit often half-concealed a real imaginative perception. In these respects he anticipated Bernard Shaw.

A new element in musical criticism appeared in the use of the daily press for concert notices and articles. This practice seems to have been begun by J. K. F. Rellstab in the Berlin 'Vossische Zeitung' during the earliest years of the century. He was succeeded by his son, who in a characteristically romantic manner combined the criticism of music with that of politics and military affairs, and who was imprisoned for ridiculing public worship of the prima donna Henriette Sontag, thus early calling attention to the invidious position of the critic in relation to the laws of libel. In France and England daily musical journalism began a little later. 'The Times' is said to have been the first English daily paper to appoint a regular music critic. Among the earliest musical journalists in England were Edward Holmes, author of the first English life of Mozart and critic of 'The Atlas' from 1826, and George Hogarth, Dickens's father-in-law. In Paris the 'Journal des Débats' had a regular music critic in Castil-Blaze; under him and his successors Berlioz and d'Ortigue the French literary essay or *feuilleton* was applied to music with happy results. The establishment of the cheap daily papers 'La Presse' and 'Le Siècle' in 1836 increased the scope; but with certain exceptions French music critics during the next fifty years were more remarkable for quantity than quality. The first French musical periodicals of importance were Fétis's 'La Revue musicale' (1827) and the publisher Heugel's 'Le Ménestrel' (1833). Fétis has been denounced by contemporaries and successors as a reactionary pedant, but he was one of the first to give public lectures on musical history and aesthetics; it is hardly surprising that he came into conflict with the extreme romantics who surrounded Liszt. A more original journalistic enterprise was 'La Gazette musicale de Paris', founded by Schlesinger in 1834 to provide a platform for composers themselves. In its first number Liszt attacked the critics as shallow and ignorant, and suggested that they should be subjected to knowledge and ability tests. Later numbers of this paper included further articles by Liszt, and others by Berlioz, Wagner and the German critics Marx and Rellstab.

Liszt in the article mentioned above urged that composers should themselves take up criticism; and the romantic age was full of composer-critics. Among the first was Weber, whose press experience began at the age of fourteen, when he engaged in violent contro-

versy with an elderly organist who had criticized his opera 'Das Waldmadchen'. From 1809 to 1813 he wrote on current musical affairs for a number of German papers, including the Leipzig 'Allgemeine musikalische Zeitung', and after 1815 mainly on opera for the 'Prager Zeitung' and Dresden 'Abendzeitung'. His criticism is often penetrating and of considerable historical interest, but casual and unsystematic, a too obvious side-line. Schumann, who in his first article (Leipzig 'Allgemeine musikalische Zeitung', 1831) hailed Chopin as a genius, was a more sensitive critic. In 1834 he founded his own 'Neue Zeitschrift für Musik', an important venture in which for ten years he pursued a policy nicely poised between encouragement of young composers and the cultivation of the historical sense. At this period the rediscovery of J. S. Bach and Mendelssohn's revival of the St. Matthew Passion gave a healthy impetus to interest in the past and therefore to a balanced musical criticism. Schumann acclaimed Bach, Handel, Scarlatti, Couperin and Gluck on the one hand, and Beethoven, Schubert, Berlioz and Weber on the other. In his last article (1853) he added the twenty-year-old Brahms. His interest was aesthetic rather than technical, and he had a high conception of his calling. His chief failing was a tendency to identify too many ill-fledged geese as potential swans. In Germany he has been highly esteemed as a writer, but the preciosity and awkward fantasy, of his earlier writing especially, will not endear him to every taste.

A more stimulating writer, though perhaps a more erratic critic, was Berlioz, who for many years contributed a regular musical *feuilleton* to the 'Journal des Débats'. He had not only a fine musical perception but a literary style of remarkable precision and flexibility. His blind spots were large (he called Handel "a barrel of pork and beer" and detected "no spark of genius" in Palestrina), but he wrote with acute penetration on composers such as Beethoven, Gluck and Weber, who stirred him deeply. He is probably the only great composer who might have reached equal stature in literature, and one of the very few music critics who can still be read with pleasure for their style alone.

The middle of the century saw a reaction against the extravagances of romantic criticism, an attempt to reformulate the tasks of the critic and map the proper spheres of technique and aesthetics. The leading figure in this neo-rationalism was Eduard Hanslick, who for fifty years (1855-1904) dominated the world of Viennese musical journalism in the 'Presse' and 'Neue freie Presse'. He is remembered to-day chiefly as the enemy of Wagner, who pilloried him (very clumsily) as

Beckmesser in 'Die Meistersinger'. Certainly it was the principles of the Liszt-Wagner school that Hanslick most roundly condemned; but it is too easily forgotten that many of his strictures on Wagner, especially in early years, were perfectly justified. Wagner displayed his ineptitude in literature, aesthetics and dramatic theory before his genius in music, and a contemporary critic can hardly be blamed for expecting him to practise what he preached. Hanslick's fatal limitations lay elsewhere, in the narrow limits he set to his view of musical aesthetics. By denying anything more than a fortuitous connection between art and emotion, he not only disqualified those romantic composers whom he disliked, but cut away the ground beneath the Viennese classics whom he worshipped. It was then very necessary to reassert the claims of music as sound against music as propaganda, but Hanslick seemed to include emotion under the heading of propaganda. He all but denied music the attributes of an art. Like many reactions, his went much too far.

Another country where musical criticism during the 19th century drifted into a backwater was England. The musical periodicals founded early in the century, R. M. Bacon's 'Quarterly Musical Magazine and Review' (1818-28), William Ayrton's 'Harmonicon' (1823-33) and 'The Musical World' (from 1836), had set out with high ambitions and wide terms of reference, comprising journalistic and critical comment on all branches of musical knowledge. Ayrton was also a critic of literature and a friend of Lamb and Hazlitt. But the first two of these ventures failed, and English criticism followed the rest of English society into respectability. England had been early in its acceptance of Beethoven—much earlier than France—and the less inflammatory romantics, Rossini, Weber, Spohr and especially Mendelssohn, had a fairly easy passage. Even Berlioz enjoyed a moderate if not a lasting success. But English musical life was stunted by the absence of a creative tradition. For a generation musical criticism in London was dominated by H. F. Chorley ('The Athenaeum', 1830-68) and J. W. Davison ('The Times', 1846-79) in much the same way as Vienna's was by Hanslick. Their gods among the moderns were Rossini in opera and Beethoven (except the last quartets) and Mendelssohn in instrumental music. They were certainly narrow and conservative in their tastes; but the particular case against them is not that they damned the early works of Wagner or overrated Rossini, but that they set themselves blindly against a composer in their own special subject, Verdi, and for social rather than musical reasons. Verdi was attacked for the vulgarity of his

tunes and his bad taste in bringing passionate emotions and contemporary subjects on to the stage. Chorley even wrote that he was never fully aware of the value of Auber's 'Gustave III' till he heard "the assault made by Signor Verdi on the same story" ('Un ballo in maschera'). He was for ever lamenting the decay of "those great principles which are unchanging", when he meant simply the technical methods of the age of Rossini, and he denied the possibility of dramatic irony in opera—the quality in which it is supremely rich. Non-musical elements have always been strong in English musical criticism, owing perhaps to the deep hold obtained by the Puritan and evangelical movements of the 17th and 18th centuries, which were basically hostile to art unless adulterated by ethical instruction. Even to-day it is not uncommon to find such irrelevances introduced, especially in criticism of works for the stage.

In the 1880-90s, when the great works of Wagner's mature genius had more than justified his pretensions, the dams of hostile criticism gave way all over the western world. In his numerous writings Wagner had been a propagandist for his own work rather than a critic of other people's (in 1848 he wrote that "the immoral profession of musical criticism must be abolished"). His followers, without his excuse, filled their criticism with wholesale propaganda and drew imaginary distinctions between a commercial world of vested interests bent on denying Wagner a hearing and the small clan who alone held the standard of music aloft. In fact, as Ernest Newman has shown, even Wagner's early operas were popular both with the public and the impresarios, and when he came into conflict with the latter it was generally his own fault. They were sometimes attacked by critics (often with reason), but the resulting controversies in a sense benefited both Wagner and musical criticism by establishing the news-value of each. Indeed Wagner unwittingly increased both the numbers and the status of the tribe he wished to abolish. The Wagner publicity movement, led for some years by the philosopher Nietzsche, was naturally strongest in Germany, but it changed the critical landscape all over Europe. In France, where except for the work of a few men like Reyher the standard since Berlioz's day had been very low, Wagnerism was for a time overwhelming. Hanslick's stronghold of Vienna was invaded by the young Hugo Wolf, who in the 'Wiener Salonblatt' in 1884-87 trained his guns on the weight of Brahms and the levity of Johann Strauss. Wolf was a one-sided critic, but his work had a pungent wit: Brahms's supporters, he wrote, "despite their fat bellies attach themselves to a much-

talked-of man and hold on like noughts after a figure one". The countries where musical nationalism was in spate, Bohemia and Russia for instance, were disturbed by cross-currents of their own: the critical pen was more often than not the servant of a cause, sometimes of several causes. Smetana, who became critic of a Prague daily paper in 1864, campaigned continually for Czech national opera and the Liszt-Wagner movement. In Russia Cui and Stasov raised the standard of the St. Petersburg nationalists. Cui, whose criticism has a stronger savour than his music, attacked not only Wagner, Italian opera, Rubinstein and Tchaikovsky, but the backslidings of Mussorgsky (for using *Leitmotive*) and Rimsky-Korsakov (for studying counterpoint). Serov, a fanatical Wagnerian, attacked the entire nationalist school in three languages at once. Tchaikovsky acted as critic of the Moscow 'Gazette' for some years in the 1870s; his criticism, as we should expect, was subjective, and he has never been forgiven by German writers for comparing Bayreuth to a prison and preferring Delibes's 'Sylvia' to 'The Ring'. Russian musical criticism has been compared for its violence with religious disputation on dogma. To-day, with the dogma inverted, the two things have become inextricably entangled, and true criticism has long ceased to exist. Even Italy, for generations so fertile in the production of operas according to a well-worn tradition that criticism on a more than rudimentary scale appeared a superfluous luxury, felt the Wagnerian blast. In England the effect was curious. Some of the most active supporters of the English musical renaissance, including Parry and Hadow, combined a worship of the German classics (especially J. S. Bach) and an acceptance of Wagner as their heir with the hereditary prejudice against the stage, and turned to rend the still fashionable Italian opera; this they could do only, however, by pretending that Wagner was a great moral teacher. The latter delusion, though on other grounds and without the prejudice against the stage, was nourished by Bernard Shaw, an active London music critic for six years (1888-94) and by far the ablest of the Wagnerians who wrote in English. Shaw later confessed that he deliberately overstated his case in order to obtain performances of Wagner's works; he also asserted, probably with truth, that the public never took him seriously since he refused to write musical criticism in the dry non-committal style to which they were accustomed. His power of expressing clear thought in memorable language, combined with a real knowledge and love of music, raised him far above the critical level of his contemporaries. He underrated Brahms and overrated Goetz, but on the whole made

extraordinarily few mistakes of this kind. In an age that tended to despise Mozart and Verdi, and all too often confused clarity with childishness and flatulence with profundity, he was ahead of all but a few of his professional colleagues in judgment and let fall an astonishing number of illuminating asides of lasting validity.

*The 20th Century.*—Critics at the turn of the century were beset by many difficulties. The expansion of the popular press, while enlarging their platform, had disturbed its foundations. Their words, for good or ill, were diffused as by a gigantic megaphone over a much wider area. The competitive demand for publicity promoted a new outlook not only in the public but in managers and impresarios, who looked to the press for advertisement and occasionally for something more. Political and national affairs made more and more incursions into the realm of art. In some countries the law of libel became a potentially grave stumbling-block: if the critic can be sued for depreciating the market value of an artist's services, he may be reduced to criticizing with one hand behind his back. Above all, the language of music itself, after gradually expanding for three hundred years, showed signs of sudden collapse, and it became difficult to distinguish between those two ingredients of every revolution—fertile innovation and simple brick-heaving. Hence chasms occurred on the lines of communication between critic and public. The serious critic, closely following the composer, parted company with the journalist and retired to his former sanctuary of the learned magazine; the journalist, keeping one hand in that of the public, risked loss of touch with modern music. All through the 19th century the gap between art and life, between producer and consumer, had been widening; now it began to present an aspect of permanent unbridgeability, and in this desert place there sprang up new forms of so-called popular music that had no more connection with art than the clangour of a blast factory or the ululations of a parrot-house. The true folk music was saved just in time, largely at the expense of being uprooted from its native soil. Some musicians have condemned the critics for siding with the public against the composer, but this is to bring only one of several defendants to justice. There were critics on the other side to urge the composers into backwaters and then churn up the mud in the face of those members of the public inquisitive enough to leave the main stream and peer round the corner. Nor can blame be withheld from society as a whole: artists are not troglodytes, and when the community begins to lose its faith in spiritual values the disintegration is felt everywhere. Inevitably criticism tended to take refuge in

that attitude of preciosity summed up by the slogan "art for art's sake". When not the vehicle for propaganda, it became a form of entertainment, sometimes very amusing, but often at the expense of the art it purported to serve. This was more conspicuous in Vienna and Paris than in Germany, where entertainment, like everything else, was taken very seriously. Max Graf has compared the status of German music critics with that of town councillors or policemen; and they have been known to use their considerable scope for making bye-laws and holding up the traffic.

Germany had now lost her musical hegemony of a century and a half, but one important benefit continued to accrue. The researches of the great German musicologists, begun about the middle of the century and published in technical periodicals and complete editions of the great classical composers, supplied for the first time in convenient form the material for a thorough critical appraisal of musical history. But it was some time before this salutary influence was felt throughout the body of criticism. Faction remained strong. The non-Latin countries were for long divided in allegiance between Brahms and Wagner. These two composers perhaps represent the two poles of the German spirit (or at least of its response to romanticism), the repressed conservative and the heated, egocentric revolutionary; but it was some time before criticism could bring them into focus. Richard Strauss was presently acclaimed as sole heir to the empire of German music; the cult of the colossal and the grotesque, and of a sensuous hedonism dressed in a mystic veil (popularized by 'Parsifal'), characteristic both of the German temperament and of romantic decadence in general, led to a grave overbalance of critical values. For a time vastness was all; Strauss was overvalued, and many pretenders rose to a brief eminence. In Austria, where the line of great symphonists had fallen into abeyance, composers like Bruckner and Mahler enjoyed inflated reputations, largely manufactured after their death.

In France, on the other hand, there was a sharp division of opinion. D'Indy and the Schola Cantorum group, developing two qualities hitherto more characteristic of German than French musicians—antiquarian research and an almost ethical reverence for the sublime—endeavoured by word and deed to found a Franck movement after the manner of Germany's Wagner movement. The more characteristic French temperament on the other hand, intelligent, sensuous, yet unburdened by non-musical aspirations, reasserted itself in Debussy, who three times (1901, 1903, 1912-14) held the post of music

critic on a paper. Debussy, as we should expect, was a subjective and impressionistic critic. Indeed he declared himself "much more interested in sincere and honestly felt impressions than in criticism", which he compared to a child pulling a toy to pieces—a common attitude in creative artists. He abjured system and regarded all technical analysis as doomed to futility. His criticism is pointed, often precious, sometimes penetrating; he likened Mussorgsky's music to "the art of an enquiring savage, discovering music step by step through his emotions", and Strauss's 'Heldenleben' to "a book of pictures or even a cinematograph"; but it is a hit-or-miss affair and tells us more about Debussy himself than about the music he heard. His scepticism over critical standards was not unique. Anatole France denied their validity altogether and defined criticism as talking about oneself with some great artist as an excuse. But Debussy's dislike of sectarian controversy did not save him from a set of journalistic Debussysts, who annoyed their patron saint quite as much as his opponents. France, like Germany and Austria, was soon filled with critical sects, fighting furiously round the figures of the leading composers, especially Stravinsky and Schoenberg. The best French critics were not those whose energies were consumed in this daily warfare, but the scholars who carried a thorough familiarity with the past into their dealings with the present. Men like Tiersot, Combarieu and Prunières (founder in 1920 of the periodical 'La Revue musicale') set a high standard that was not always followed; and mention must be made of the novelist and dramatist Romain Rolland, who turned the imagination of a creative artist, an acute analytical intelligence and a graceful style on the music of past and present.

In England the standard of musical criticism rose in the first half of the 20th century, together with a definite if uneven extension of musical culture and the establishment of a genuinely fruitful creative tradition. The wider diffusion of music has been enormously stimulated by the gramophone and later the radio—a phenomenon of course universal, but much more radical in a country whose musical life had hitherto been underdeveloped. Their full effect on criticism is not yet clear, though the opportunities created are enormous. The tendency, already noticed in connection with the rise of the middle classes in the 18th century and of popular journalism in the 19th, for the critic to be drawn down to the level of his expanding audience (when not hoisted out of its sight) seems to have been held partly in check. On the other hand a temporary paper shortage, showing every sign of perpetuity, has established a thrombosis of the

artery connecting critic and public, although the broadcasting of musical criticism by the B.B.C.—a field not fully explored as yet—indicates a possible correction of the balance. Most of the daily and weekly newspapers continue to maintain one or more music critics, even if in some cases the appointment seems designed for ornament or an expression of hope for better times. The periodicals have been able to render fuller service, and the publishing-houses now issue more critical works on music than at any earlier period. Here, however, the standard is sometimes grievously low, and there have not been wanting unworthy attempts to "cash in" on the new public appetite for musical enlightenment. 'The Musical Times' and 'The Monthly Musical Record' remain as distinguished survivors of the periodicals founded in the 19th century (1844 and 1871 respectively). The first half of this century has seen the birth of several more, of which the quarterly 'Music & Letters', founded by A. H. Fox Strangways in 1920, at once assumed a position of eminence it has never since lost.

Musical criticism in the U.S.A. is of comparatively recent growth and may be said to have begun in 1852 with the foundation at Boston of 'Dwight's Journal of Music'. The tone of this periodical, which rejected both Brahms and Wagner, was dogmatic, ethical and conservative, reminiscent of the Chorley-Davison period in England. The opposite ideal of complete subjectivity was preached by W. F. Apthorp (1848-1913), critic of the 'Boston Evening Transcript', who wrote from a standpoint very near that of Debussy. He made fun of the "aesthetic Rhadamantus" so dear to the Germans and declared that "criticism should be nothing but an expression of enlightened opinion". This of course begs the question how enlightened opinion is to be defined and cultivated. Apthorp's most prominent successors in Boston and New York were Philip Hale, Henry Theophilus Finck, J. G. Huneker and Lawrence Gilman. Since the 1930s the U.S.A. have served as a sanctuary for many leading European musicians uprooted by political convulsions. This infusion has widened the range and sympathy of American criticism, if in some cases it has debased the style and even transferred to new soil the sectarian controversies of central Europe. Another result is that America has replaced Germany as the centre of musicological research. This scholarly aspect, carried almost to extremes in the pages of the leading New York periodical, 'The Musical Quarterly', is perhaps more suited to the American genius than the aesthetic or literary sides of criticism.

The present century has seen considerable

debate on the nature and aims of musical criticism itself. This of course is nothing new, and it is obviously important that every age (and every individual critic) should consider the matter afresh; but the lack of agreement about the premises on which so much activity is based is symptomatic. A good deal of critical irresponsibility doubtless occurs in every age; some of the reasons for its prevalence to-day have already been mentioned. While scholarship has aided criticism on one side, unsettled values and extraneous interference have clogged it on the other. In Germany during the Hitler rule and in Russia since the revolution of 1917 considerations of state policy inhibited criticism and reduced it to a bogus and inverted pedantry. In Russia especially the spectacle of critical somersaults and retractions at the bidding of persons innocent of artistic experience has become ludicrous. It is of course true that art criticism cannot flourish without reference to the rest of life, as was sometimes evident at the beginning of the 20th century; but when it is forced into the uniform of a preordained system it automatically ceases to exist. Even in so-called democratic countries the position is not satisfactory. There is always the danger that state patronage of the arts will trespass on the critic's prerogative. The cult of the common man, while perhaps widening the critic's opportunity, proportionately multiplies the hazards of his task. Whether consciously or not, it may encourage him, by writing down to his audience, to prove himself the lowest common man; and the sanction it holds over him is the fear of making himself unpopular or ridiculous through an appearance of exclusiveness. There is no such thing as democracy in art, nor can there be in criticism; it would be more true to say that "from him that hath not shall be taken away even that which he hath". The modern critic must hold all the closer to his responsibilities, and he should be a propagandist only in the cause of music itself.

There are equal dangers in turning away from contemporary life into arbours of esoteric delight. No age until the present has spent so much time discussing the future. This has advantages for the critic who dislikes being beholden to evidence, but the present and the past are his proper tenses. The future will be determined by the creative gift of the composer of genius, a commodity for which the critic legislates at his peril. New music of lasting value is always rooted in tradition; the point from which it stems can be discerned by the critic, and then only after the new shoot has shown signs of independent growth. Even this is not easy to observe in an age of transition, which throws out so many suckers destined never to mature. The so-called ugly-

ness of much modern music is really a side-issue. The standard of ugliness—the borderline of what the trained ear can tolerate—is always changing (This was amusingly pointed out by C K Salaman in a paper on musical criticism in 1875: "Whether in music or in personal appearance, ugliness is, no doubt, an acquired taste, like the taste for tobacco, and similar nauseous appetites".) There is ground for supposing that the average musical listener responds quickly to genius, however discordantly expressed, but is suspicious of extraneous originality. Ernest Newman wrote in 1925:

We may then take it for granted, I think, that none of the new works of to-day that fail to justify themselves at once, *aesthetically*, to the average musical sense of the period will be of much significance for the future, no matter how fertile they may be in suggestions of new technical resources.

This is probably true, provided the average musical mind is given a real chance to decide—and that means more than one hearing and assistance rather than molestation from the critics. Certainly it will have the final say; neither propagandists nor critics can in the long run force indigestible matter down the public throat and compel its retention.

A more practical difficulty is the method under which modern newspaper criticism is written and published. A critic whose notice of a concert, containing perhaps an important new work of which the score is not available, has to appear in the following morning's newspaper is unlikely to say anything of value about the music and only too likely to say something hasty, unjust or inaccurate, which he will have opportunity to repent at leisure. He is naturally tempted to play for safety and concentrate on the executive rather than the creative artist, leaving a discussion of the music to his weekly or monthly colleague (perhaps himself in another capacity). The result is bad all round: the wider public is not enlightened, the performer is given an exaggerated idea of his importance, the weekly paper has insufficient space for the discussion of a week's music, and the monthly or quarterly reaches only a fractional audience.

II. THEORY AND PRACTICE.—Criticism is in no sense a science and only in a limited sense an art. It may be roughly defined as the translation and grading of an aesthetic experience by means of intellectual analysis and imaginative enquiry. The important point is that this is a composite process. Whereas the work of art is primarily concerned with one set of standards only, the aesthetic, criticism has to communicate something of this quality together with the result of its impact on the critic's mind and experience. He is thus concerned with two sorts of problem instead of one, and generally with two mediums instead of one: in musical criticism

with music as the artist's material and with words as his own. On the other hand neither he nor the artist is concerned with establishing an absolute philosophic truth.

Owing to this dual nature of criticism no single set of principles can be found to govern both its expository and recreative aspects. The former is subject to principles of logic and method; the latter depends on intuition, which itself is conditioned by the character and experience of the individual critic. And both are affected by the nature of music's primary material, sound. It is possible to lay down ideal standards for the critic's training, procedure and approach to his audience, and to define the opportunities and restrictions imposed by the nature of music as sound. It is not possible to legislate for the intuitive, recreative response, without which criticism remains an external gesticulation. Here criticism comes closest to creative art; it is the translation of this intuitive experience that can raise the critic to the rank of an artist. Our enquiry therefore will be largely concerned with disentangling the various considerations to which different aspects of criticism are subject, and not permitting those that inhabit one field to stray into the next.

*The Critic's Function.*—The general function of all art criticism is to establish a line of communication between the creative artist and the public. In a primitive, compact or narrowly restricted society (African tribe, Greek city-state, medieval or baroque court) there is no need for this cultural middleman, but with the growth of less homogeneous, more self-conscious societies the critic, if not regarded as an essential link, became a tolerated and in time a useful citizen, his importance increasing as interest in the arts percolated through different classes. The word "critic" means literally a judge, but the functions to-day comprise in addition those of interpreter, wine-taster and public relations officer, not to mention the more questionable ones of propagandist and entertainer. Since art itself is a form of communication, the critic may be said to give it an extra digestion before passing it on; and his increasing prominence is perhaps symptomatic in an age that prefers to live on processed foods. The great critic is an artist as well. He tells us what he thinks is good, he tells us why he thinks so, and he performs both functions in such a way that we are excited by his manner while convinced by his argument. We appreciate the work he is criticizing all the more for his interpretation of it; but we appreciate him as well for what he brings to the discussion.

Gibbon summed up this infectious type of criticism when he wrote of Longinus: "He tells me his own feelings, and tells them with

so much energy that he communicates them". He distinguished two further types, the explanatory and the analytical, both familiar in musical criticism, where the former is apt to degenerate into more or less inept literary paraphrase and the latter into the dry pedantry so deftly parodied in Bernard Shaw's "analysis" of Hamlet's famous soliloquy:

Shakespeare, dispensing with the customary exordium, announces his subject at once in the infinitive, in which mood it is presently repeated after a short connecting passage in which, brief as it is, we recognize the alternative and negative forms on which so much of the significance of repetition depends. Here we reach a colon; and a pointed pository phrase, in which the accent falls decisively on the relative pronoun, brings us to the first full stop.

The subject can of course be divided and sub-divided in various ways. For instance, Professor Theodore Meyer Greene, who has subjected art criticism to a detached and systematic study (*see* Bibl.), finds three main aspects, the recreative, the historical and the judicial, each of course essential to the whole. Here we need only note the distinctions implied in modern practice, which as elsewhere in life tends to split up production among a number of departments. The philosopher, the scholar and the historian work through books, lectures and learned periodicals. The task of the press critic is ephemeral and doubtless lower, but in some ways more difficult and responsible, and frequently more controversial, since he is concerned with the day-to-day discussion of new music. Although the same persons are often found in each camp, there are obvious dangers about a system in which a scholar may never review a concert or a press critic rarely grapple with a subject on a scale to fill a book. All are concerned with criticism in the wider sense, and none can afford to ignore, even temporarily, the work of the others.

*The Limitations of Music.*—Music is probably the most difficult of the arts to criticize, owing to certain innate characteristics that gravely complicate the task at the outset. It is an art expressed in terms of time and sound. It has to be recreated anew at every performance; criticism from the score is an unsafe method, if sometimes an unavoidable substitute, since it ignores both the physical impact of sound and the inexactitude of musical notation, factors which also ensure that no two performances are exactly alike. Secondly its primary material, sound, unlike the primary materials of all the other arts, has not in its pure form been developed for non-artistic use. Whereas music is in no sense concerned with space or sight or tangible materials, like painting, sculpture and architecture, there is a link with literature, and particularly with drama and poetry, which do involve time and sound. But the resemblance is misleading and has led to endless confusion. For the

aesthetic appeal of music, although it may be allied with words, is not verbal, is in fact antiverbal. It has to evolve its own concepts, which cannot carry the connotations of everyday life associated with a verbal language. To talk of the "language" of music is to employ a dangerous metaphor; we have grown so used to the association of words and music that the daring nature of this compromise between opposites is forgotten. The music critic cannot communicate with his readers through notes and staves; he must use words. He is thus translating—and translating in the dark, for there can be no dictionary to help him. The word "love" is common coin in life as well as literature; the note C has nothing to do with breakfast or railway journeys or marital harmony. The difficulty of course occurs with the other arts, but not to the same extent, for all of them either use a verbal language or are partly representational. Even an abstract painting can be described to some extent in terms of design or colour. The critic of music can only appeal from his own experience to that of his readers.

The time factor also imposes its pattern. We cannot hear a piece of music all at once. The faculty of memory is therefore called into play and is continually operative from the first bar to the last. It is this that determines the peculiar nature of musical forms. An art that moves in time and is not expressed in words requires much more repetition of material, or at least allusion to material already heard. This fact in turn poses its own problems of balance, contrast, expectation and fulfilment, which are far more central to music than to the other arts, supported as these are by their verbal or representational content. A painter can place a small cloud in one corner of a landscape, and that cloud remains before the eye and may dominate the picture (witness the cloud over the lock in one of van Gogh's Provençal landscapes); but if a composer wishes a musical phrase to dominate a work of more than the slightest proportions he must allude to it more than once. Hence the remarkable complexity of musical forms, and, since it is very difficult to invent a form that is both new and coherent, their slow evolution and long period of use. Here we pass a conspicuous side-turning to critical error. Whereas the need for balance, contrast, etc., remains constant, the methods of satisfying it alter from age to age, sometimes almost as imperceptibly as the flow of a glacier. The historian will detect the change in time, but the critic may be led into mistaking the temporary canons of musical science for the permanent laws of the art—to take sonata form as equivalent to form, or the major-minor system for tonality itself.

*The Aesthetic Problem.*—These special properties of music, when taken in conjunction with the very extensive general requirements of art criticism, are quite enough to account for the rarity of front-rank music critics in proportion to those of the other arts. But there is another basic difficulty. The critic has never been supported by a thoroughly worked-out musical aesthetic. The philosophers in whose province the promulgation of such matters lay have seldom had a working knowledge or a real understanding of music; failing to appreciate its inner nature, they have saddled it with "principles" borrowed from the other arts, and even from farther afield. The Greeks, and Plato in particular, viewed aesthetics across the territory of ethics and politics. Western philosophy has managed to disentangle the political thread and considerably loosened the ethical (for centuries the bane not only of English musical criticism, but of English musical life in all its forms, though music with its non-verbal and non-representational centre of gravity must be the least ethical of the arts); but it has still not firmly established the independent position of music. There remains a chasm between the aestheticians on the one hand and the practical music critics on the other, a chasm that can be bridged only by hard thought. Since the philosophers were not fitted to build a bridge, the critics—those who saw its necessity, and without it they could only work in darkness—have tried to throw one from the other side. Their repeated failure is the inner history of musical criticism, at which it is now necessary to glance.

The 18th-century critics not only ignored the absence of a bridge, but saw no need for one. They applied their general aesthetic theories to music without regard to whether they made sense. Thus we find Mattheson, the leading critic of his day and a man of wide culture, not only attempting to legislate for all music on terms applicable only to the *galant* melodic style of which he constituted himself the prophet, but regulating the proper content of musical forms ("A Concerto should convey hopefulness... the Sarabande has to express no other feeling than awe... voluptuousness reigns supreme in the Concerto Grosso", while the chaconne should express satiety and the overture magnanimity) and even the musical reactions of the animal kingdom: he tells us that crabs follow the pipe, hares the transverse flute, camels a small bell, trout and carp a large bell, bees the cymbals and spiders the lute, while "pigs will go anywhere after a zither". Needless to say, watertight systems of this kind rejected *a priori* not only the early contrapuntal schools but the climax of baroque counterpoint in J. S. Bach, and their absurd rigidity may have encouraged

the irresponsible element in the romantic reaction. The early 19th-century critics threw off the shackles of rationalist pedantry, only to impose new ones of their own. By glorifying the spirit of revolt represented by Beethoven, who became a sort of musical Byron, and later by Liszt and Wagner, they set up an inverted ethical standard that brought them no closer to music itself. It was in reaction to what he regarded as a chaotic and decadent empiricism that Hanslick wrote his book on musical aesthetics. His bridge broke down not because he was a bad musician but because he was a bad philosopher. He made it too rigid, not sufficiently tensile; his prejudices were opposed to the emotionalism of Wagner and Liszt, so he elevated them into general principles by denying the relevance of emotion to musical experience. It is only when elongated into a principle that prejudice becomes dangerous. Hanslick set the fashion for a spate of aesthetic bridge-building, especially in Germany; but the structures invariably collapsed either at the same point or on a misunderstanding of the scope of musical "language". One example only need be taken, that of Hadow in the first chapter of his *'Essays in Modern Music'* (1892). He put forward four "principles of musical judgment": the principles of vitality (comprising both technical inventiveness and imaginative power), labour (the best possible workmanship), proportion and fitness. With his elucidation of the first and third there can be no dispute; but the interpretation placed upon the second and fourth led him into a wholesale condemnation of Italian opera on ethical grounds and a totally false antithesis between sacred and secular music. He failed to distinguish between ends and means; his suspicion of the theatre, shared by most of his English contemporaries, led him into a series of equivocations, for instance over *'Parsifal'*, to whose Grail scenes he denied theatrical power, solely, it would appear, because Wagner "was too great an artist to confuse sacred music with secular".

It was the seeming inevitability of such failures that led some critics at the turn of the century to conclude that the establishment of principles was not only impossible but undesirable; that the critic's job was not to judge or theorize, but merely to reflect his own impressions and leave the reader to take them or leave them. Hence the criteria adopted by Debussy: "To render one's impressions is better than to criticize, and all technical analysis is doomed to futility. . . . Remember the word 'impressions', for I insist on keeping my emotion free from all parasitic aesthetics."

*Objective and Subjective Criticism.*—These two approaches have supplied the great bone of

critical contention in the first half of the 20th century. They have been endlessly contrasted, disputed and combined. Ernest Newman in *'A Musical Critic's Holiday'* (1925) made a sustained attempt to lay down objective standards, especially for criticism of contemporary music. The book supplied a first-class intellectual stimulant and a healthy counterblast to much sloppy thought, but carried the seeds of its own failure: for in testing the validity of a 19th-century German critic's attempt to lay down watertight objective standards, J. C. Lobe's *'Musikalische Briefe eines Wohlbekannten'* (1852), and demonstrating its failure in practice, Newman returned the inevitable verdict on all such enterprises, including his own. For aesthetic appreciation, depending on the sensory reactions of the individual, can be no more subject to predetermined laws than the proportions of a cathedral or the colour of a picture—than, in fact, the work of art itself. The critic may attempt to rationalize his responses, but the result will be valid for himself alone, and if he comes to give it the force of a principle he will find his receptiveness attacked by a sort of spiritual pneumoconiosis, a hardening of the tissue into stone, which will ultimately be fatal to an efficient performance of his duties. It is as dangerous for him as for the artist to hold his subconscious mind on too tight a rein. Thence springs the mentality unable to distinguish the mechanical from the organic, a sonata movement by Czerny from one by Beethoven. No listener can be exclusively objective where his own emotions are concerned; and if they are not concerned, he cannot be said to have experienced the work he has heard.

This, however, is no argument for wholesale surrender to the other side. Subjective criticism as advocated by Debussy and Anatole France opens the door to all manner of absurdity and irrelevance, and in fact points straight to chaos. For there is no counter-check outside the critic's own personality. He becomes a circus turn, amusing the reader for as long as he can remain balanced on his tight-rope. However finely attuned his sensibility, it may be thrown out by the most trivial circumstance. Where his objective colleague may apply an obsolete and irrelevant yardstick, the subjective critic may unwittingly judge by what he has eaten for dinner or the proximity of his enemy in the row in front smoking a noxious cigar.

It follows that, if a subjective critic too often degenerates into a nuisance, an unprejudiced critic is a contradiction in terms—and if there were such a person he would be an insufferable bore, since when fully trained and in efficient working order he would always be right. This aspect of criticism has never

been more trenchantly expressed than by Bernard Shaw:

Never in my life have I penned an impartial criticism; and I hope I never may. . . . To be just to individuals—even if it were possible—would be to sacrifice the end to the means, which would be profoundly immoral. One must, of course, know the facts, and that is where the critic's skill comes in, but a moral has to be drawn from the facts, and that is where his bias comes out.

Shaw declared that "there is no more dishonest and insufferable affectation" than the "infernal, abstract, judicially authoritative air" of *ex cathedra* criticism, and pleaded instead for

sincerity of expression, not only of the critic's opinion, but of the mood in which that opinion was formed. We cannot get away from the critic's tempers, his impatience, his sorenesses, his friendships, his spite, his enthusiasms (amatory and other), nay, his very politics and religion.

How then is the objective-subjective dilemma to be resolved? It does not really help to take refuge in metaphysics and assert (with A. J. Sheldon) that objective criteria exist, but we can only comprehend them subjectively, or (with Calvocoressi) that, while recognizing that they do not exist, the critic is entitled to proceed as if they did. The only answer is to divide the problem, separating those aspects where an objective standard can operate (the basic laws and limitations of music, the critic's responsibilities, his training and intellectual armament) from the personal and intuitive factors. The critic needs to cultivate a kind of double vision. His mind must be open and susceptible while retaining its hold on accumulated experience and thought; it must be cool and logical without losing the capacity to be moved; it must in a real sense be objective and subjective at the same time, like the mind of Keats when he watched the sparrows out of his window and projected himself into their existence as they picked about the gravel.

*The Critic's Responsibilities.*—The critic owes responsibility in different degrees to (i) the art of music itself, (ii) the audience, and through it to society as a whole, (iii) the composer as an individual, (iv) the performer. This, it may be suggested, is the correct order of precedence. The critic owes no responsibility—except those of every citizen to do his best and keep within the law—either to the impresario or to the editor of his paper. In a matter where the governing factor is an aesthetic judgment any attempt to impose a policy or a party line is an infringement of the critic's prerogative. And since the value of a criticism depends in part on the reader's knowledge of the critic's standpoint, the unsigned article must be condemned as improper, especially when the paper employs more than one critic.

Responsibility to the art should be distinguished from responsibility to the composer,

who like the critic is a servant of the art. The critic is not the composer's personal advocate; he should not, except in the compelling interests of music itself, lapse into the propagandist. He is the magistrate, even if his tenure of the bench is insecure and his judgment liable at any time to be upset on appeal. It follows that he must be absolutely fearless. If there is one thing more distasteful than a critic who will not speak his mind but, like Shakespeare's equivocator, "swears in both the scales against either scale", it is a critic grovelling before the composer of his fancy, like a small boy begging for the autograph of a popular sportsman. Schumann well said that "the critic who does not attack what is bad is but a half-hearted supporter of what is good".

At this point the horns of a familiar dilemma begin to obtrude. How is a composer of genius to be safely and satisfactorily handled by a critic who cannot make pretension to such an endowment? Bernard Shaw maintained in 'The Quintessence of Ibsenism' that no author can create a character greater than himself; how can a critic judge an artist greater than himself, especially when he meets him for the first time? In the words of Greene, "If great art is the product of a great soul, only a critic of spiritual stature can hope to recognize and appreciate artistic greatness when he sees it. To the trivial all things are trivial." The answer, as so often, is to look the dilemma straight between the horns and pass it by. The critic's pronouncements are generally valuable not so much for their conclusion as for the process of thought by which the conclusion is reached, and for the reactions they set up in the reader's mind. Many a smaller man than Beethoven has thrown light on Beethoven's music and on the nature and creative processes of art itself. But the critic cannot refuse his task; he must attempt to reach a conclusion or confess defeat. It is often better to judge wrongly than to mark time. Nor is he precluded from changing his mind. His verdict need not be final for himself, let alone for his contemporaries and successors; it is sure to be counter-checked by others. The verdict of posterity is after all no more than a majority vote; as Crotch put it early in the 19th century: "the opinions of acknowledged critics accumulate in time, and are compacted into a mass that inevitably bears down before it all the opposition of false taste and ignorance". Of course the man who expects the critic of a complex new work to return the considered verdict of posterity is demanding a miracle. Yet those critics who instinctively detected Beethoven's genius and attacked it according to their lights were doing music more service than the partisan writers of to-day or yesterday

who proclaim half a dozen masterpieces every year in the hope of getting one shot on the target. There is a false as well as a true humility in criticism. Johnson put the pettifogging critic in his place: "A fly, sir, may sting a stately horse and make him wince; but the one is but an insect, the other is a horse still". Ernest Newman has emphasized the critic's high calling: "The business of criticism is, in the case of the first-rate artist, to see him steadily and see him whole, and in the case of the second- or third-rate artist, to see him steadily and see him damned".

While the critic who thinks that his utterances can alter the course of musical history is suffering from professional inflation, the composer who to-day ignores all criticism runs the risk of severing his strongest link with the public. The lordly contempt for critics exhibited by a few composers must be rebutted, not merely from a sense of the dignity of criticism but because it is a sign of weakness. D'Indy wrote in 1899: "I consider criticism absolutely useless; indeed, I should even say, injurious. . . . Criticism as a rule is the opinion some gentleman or other has of a work. How should such an opinion be of any use to art?" The answer is that without the opinion of "some gentleman or other" art would be wingless, since it cannot bombinate in a vacuum, and under present conditions it must pass the Cerberus of criticism before it can hope to enjoy public favour. Cerberus may bark out of turn or up the wrong tree, but it is no use the composer peevishly pretending that he is inaudible. Liszt went to the other extreme when he wrote that "criticism should become more and more an activity of productive artists". This would work only if all had the open-hearted and responsible attitude of Liszt himself. It is interesting to compare the opinion of a modern creative artist, E. M. Forster, who regards criticism of a work of art and surrender to it as antithetical: "Think before you speak is criticism's motto; speak before you think creation's". But the critic both hears and feels before he speaks. It is this dualism — the taking part and the standing aside — that lies at the centre of criticism.

The responsibility to society also has its dilemma. Every work of art is a Janus, looking inwardly to its own laws and outwardly towards life, and it may touch life at any point, in its moral values and its commonplace incidents; indeed it often acts as a lightning-conductor between the two, interpreting the former in terms of the latter, illustrating the general by the particular. In music this connection is obscure and elusive, even when words are attached, but its existence cannot be doubted. Jeremy Collier's complaint that music in the theatre "throws a Man off his Guard, makes way for an ill

Impression, and is most Commodiously planted to do Mischief" is a back-handed tribute to the art he wished to banish. The critic has to tread warily here. If he restricts himself exclusively to artistic laws he runs the risk of cutting himself off from life and falling into the preciosity of art for art's sake. But there is an even greater danger of importing alien (especially ethical) values into musical criticism. Dramatic composers who do not take sides for or against their characters, for instance Purcell and Mozart, are sometimes attacked for "weaknesses of artistic judgment and failures of artistic probity". This has been a common failing in England and Germany — German philosophers (e.g. Kant) have generally been hostile to aesthetic beauty, except when accompanied by moral ideas; and it has resulted in considerable injustice being done to French and Italian music, which is generally without such moral pre-occupations. Music has continually to defend its territory against the incursion of moralists (Shelley in his 'Defence of Poetry' saw the same danger in literature), and here the critic should take the lead. This does not mean that moral questions are never to be asked. In the words of an American critic, Edgar Wind, the critic should not be confined to asking "Has the artist achieved the effect at which he aimed? . . . He should also ask the forbidden question: Should this kind of effect be aimed at, and what should be its place in our experience?" To this he can only return a subjective answer, but the ventilation of such matters is often healthy. This is the proper sphere for discussing the aversion many people feel for the exaltation of negative human values in works like 'Tristan und Isolde' and 'A Village Romeo and Juliet', and the vexed question of artistic decadence in general. The critic is not a moral guide, nor is he "the secretary of the public" (Sainte-Beuve); but close communication with the public and the level of public taste are very much his concern.

*The Critic's Qualifications.*—The qualities required of the ideal music critic to-day are so multifarious as almost to place him among the mythical beasts. Nevertheless, if the great critic is perhaps born, not made, much can be done by training, and it is worth attempting to sum up these qualities:

(i) A knowledge of the technical and theoretical principles of music. History shows that the critic who knows no art but music is of very little use, but the dilettante who does not understand music is of no use at all.

(ii) A knowledge of musical history and scholarship. Without this, in Greene's words, "no critic, however artistically sensitive, can escape critical 'sentimentality', that is, an illegitimate intrusion into a work of art of what does not exist in it and a failure to

apprehend certain of its essential ingredients". He can learn too from the history of his own department. Criticism, like art itself, swings between the poles of classicism and romanticism, and old problems continually recur in new guises. Stainer in 1881 found musical criticism "oscillating dangerously between the two extremes of dogmatic conventionalism and unblushing nihilism". Perhaps it always does.

(iii) A wide general education, covering as many as possible of the subjects with which music can be shown to have a point of direct contact. At the narrowest, this includes aesthetics, social history and some at least of the other arts, but it can be extended to many other activities, for instance to the new science of psychology, which may one day be regarded as an essential. To give an obvious example of this interdependence, no one can criticize liturgical music without an understanding of the church liturgy or opera without some specialized knowledge of the theatre.

(iv) The ability to think straight and to write in a clear and stimulating manner. Nearly everybody to-day has been taught to write in childhood and thinks—after a fashion—because he cannot help it. It is too often forgotten that both functions need rigorous training before they are fit for infliction on the public. Also they are connected. The critic has to engage the substance of the reader's mind, not merely its surface; he must therefore first know his own. Criticism by catchphrase is a form of laziness, designed to evade the necessity for thought. Badly expressed criticism, if not wholly useless, is largely wasted: Homer's antithesis between winged words, which find their mark, and wingless words, which might as well not have been uttered, is worth the critic's consideration. He thus has two reasons for studying literature—the large area over which it touches music and the fact that in putting pen to paper he is himself practising it. Too many music critics are found in the innocent condition of Molière's Monsieur Jourdain, who was astonished to learn he had all his life been speaking prose.

(v) An insight into the workings of the creative imagination. This presupposes a touch of the same quality in the critic. If this is present, it can be trained to a high level of perceptiveness. Without it there is always the danger of a super-academic irrelevance.

(vi) An integrated philosophy of life of his own. Greene again puts the point well. The critic must be able "to share imaginatively in many different types of experience and to comprehend diverse interpretations and evaluations of these experiences. . . . Unless he believes in some scale of values, he must remain blind to the nature and significance of

scales of value to which he himself cannot subscribe." The match must have a box to strike on.

(vii) An enduring inquisitiveness and willingness to learn. The man who has lost this has begun to lose his power to criticize, since neither the current stream of art nor its view of its own past is ever static. The critic who is no longer interested in music or in what other people are thinking about it soon grows pompous and repetitive. He should retire and take up some harmless pastime.

(viii) An acceptance of his own limitations, both individual and generic. These are variable quantities, temporary currents of prejudice abound in every age, and any honest critic will admit that there are moments when he loathes and spurns a work that he knows to rank among the masterpieces. If from previous experience or his own admission his readers can locate his weaknesses, the harm done by an ill-considered judgment—and all critics make more of these than they like to suppose—will be minimized. If he sets himself up as an oracle, he has all the farther to fall.

This formidable catalogue of qualifications is likely to rule out large sections of the community, not least in the musical profession itself. Many executive musicians, whose training has been for the most part practical, are too closely bound up in their art to criticize it. Only in comparatively recent years has the study of history received adequate emphasis in musical colleges and universities, and a special course in criticism is an even later growth, which has hardly had time to bear a full crop of fruit. The composer of strong creative personality is never an ideal critic, though he may be a stimulating one; apart from the fact that his best energies are diverted elsewhere, he is likely to be narrow in his sympathies. A more promising candidate is the composer content to abandon or subordinate his own creative activity, or even the active practitioner of another art—provided he knows enough of music. It is not altogether an accident that one of the few really outstanding music critics, at least in English, was a man who had trained himself as a novelist and social thinker and was to reach eminence as a dramatist—Bernard Shaw. All his musical criticism—apart from a piece of special and mostly non-musical pleading in 'The Perfect Wagnerite'—was confined to the columns of a weekly newspaper—in it, it is true, a more spacious age. Nor is its stimulating quality, even when he is discussing music since forgotten and singers long dead, dependent on his inimitable wit. With the possible exception of the second, he possessed in abundant measure all the eight qualifications listed above.

The first attempt in this Dictionary to grapple with the subject of criticism cannot be ended more fitly than with another quotation from Shaw.

A criticism written without personal feeling is not worth reading. It is the capacity for making good or bad art a personal matter that makes a man a critic . . . When my critical mood is at its height, personal feeling is not the word. It is passion—the passion for artistic perfection—for the noblest beauty of sound, sight, and action—that rages in me.

Perhaps a ninth qualification may be added. criticism should not be a profession casually chosen or embraced with a view to easy subsistence, but a vocation. W. D.

**CRIVELLATI, Cesare** (b. Viterbo, ? , d. ?).

Italian 16th-17th-century amateur musician. He was a doctor of medicine at Viterbo and as a musician probably a pupil of Frescobaldi. He is known by his 'Discorsi musicali' (Viterbo, 1624), based largely upon the opinions and teaching of earlier writers on music. N. F. (II).

**CRIVELLATI, Domenico** (b. Viterbo, ? , d. ?).

Italian 16th-17th-century amateur musician, probably brother of the preceding. He lived at Viterbo as a gentleman-amateur and in 1628 published a book of 'Cantate diverse' for 1-3 voices; but, apart from one or two strophic-bass arias, they do not justify the use of the then modern-sounding title. The work employs various melodic and fundamental instruments. Crivellati is also represented by one song in 'Le risonanti sfere', a collection of songs issued by Robletti of Rome in 1629. N. F. (II).

**CRIVELLI, Domenico** (b. Brescia, 2 Apr. 1794; d. London, 11 Feb. 1857).

Italian singer, teacher and composer. He was taught by his father, the tenor Gaetano Crivelli, and was for some years teacher at the Real Collegio di Naples. Called to London by his father, he brought with him an *opera buffa*, 'La fiera di Salerno', which, however, was never produced. He settled in London as a singing-master and published 'The Art of Singing'. J. M.

**CRIVELLI, Gaetano** (b. Bergamo, 1774; d. Brescia, 10 July 1836).

Italian tenor singer, father of the preceding. He made his first appearance when very young and married at the age of nineteen. In 1793 he was at Brescia, where he was admired for his fine voice and large manner of phrasing. He was engaged to sing at Naples in 1795, where he remained several years. Thence he went to Rome, Venice, and at last to Milan, where he sang at the Teatro alla Scala in the Carnival of 1805. In 1811 he succeeded Garcia at the Italian Opera in Paris and produced a great effect in the 'Pirro' of Paisiello, in which he first appeared.

Crivelli's superb voice, excellent method and nobly expressive style of acting combined

to make him a most valuable acquisition to the stage. He remained in Paris until Feb. 1817, when he went to London. He had, according to Lord Mount-Edgumbe,

a sonorous mellow voice, and a really good method of singing, but he was reckoned dull, met with no applause, and staid only one year.

In 1819 and 1820 he sang at the Scala in Milan again; but in the latter year signs of decay were apparent in his voice, and these became more evident when he appeared in that town in Lent 1823. In Dec. 1830 he sang at Venice in Generali's opera 'I baccanali di Roma'. He published some canzonets and songs in London and Milan. J. M.

**CROCE, Giovanni (Joanne a Cruce Clodiensis)** (b. Chioggia nr. Venice, c. 1557; d. Venice, 15 May 1609).

Italian composer. He was known as the Chiozzotto because of his birthplace. A pupil of Zarlino, he entered the choir of St. Mark's at Venice as a contralto. At some period before 1585 he became a priest and was attached to the church of Santa Maria Formosa at the time of his death. He is entitled "vice maestro di cappella" of St. Mark's in 1592, the duties of this post including teaching at the Seminario. On the death of Donato in 1603, despite one of the Procurators who wished to search outside Venice for a *maestro di cappella*, Croce was elected to this post, owing the promotion to the insistence of Doge Marino Grimani when the usual competition was held. Croce's Requiem Mass was performed at the funeral of the doge in 1605. He suffered from gout in 1607 and was provided with a deputy to assist him. When he died in 1609 he had attained sufficient fame for many of his works to be published posthumously.

The only known portrait of Croce is contained in the coat of arms of a chemist's shop at Venice dating from about the year 1790. This has been republished in G. Dian's 'Cenni storici sulla farmacia veneta' (Venice, 1905).

Croce is important as a composer of both secular and liturgical music. He was one of the principal members of the conservative Venetian school of madrigal composers and excels in the lighter style of madrigal and the canzonet. He was probably the chief composer of music for the festival plays of Venice which reached their height of popularity during the governance of Doge Grimani, and he left two examples of madrigal comedy, 'Mascharate [sic] piacevole' (1590) and the 'Triaca musicale' (1596), both using the Venetian dialect and making allusions to places and characters at Venice. The latter is the successor of Striggio's 'Il cicalamento delle donne al bucato', but is more advanced in individualizing the part of each voice and

developing a type of unaccompanied recitative. The madrigals also introduce popular songs and onomatopoeic sounds.

Croce's church music is also in the Venetian tradition, being written mainly for double choirs used antiphonally. The tendency towards the monodic style is clear from the homophonic texture which is foreign to the rhythmic complexity of the works of other members of the Venetian school, and his first volume of motets for 8 voices is the first printed volume to be provided with a bass part for the organ, with which most of his later works were also provided. In his 'Sacrae cantilene concertato' (published posthumously) he is one of the earliest composers of the *stilo concertato*, contrasting solo voices accompanied by the organ with the *ripieno* choir, which repeats a refrain between the solo episodes, the whole using a homophonic texture and appearing in a rondo form. His 'Laude pueri' (published in a collection of Simonetti's, 1630) is worthy of note for using three choirs, one of soloists, *ripieni* and a *choro grave* of three trombones accompanying a solo tenor.

Of importance also is Croce's influence on the English madrigal composers. Morley mentions him several times in the 'Plaine and Easie Introduction'; several works appeared in 'Musica Transalpina' and Morley's collection of Italian canzonets (1597); his madrigal 'Ovi tra l' herbe' was the only foreign work in 'The Triumphes of Oriana'; and his 'Septem Psalmi poenitentiales' were provided with an English text and published as 'Musica sacra' by T. East in 1608. The similarity between his canzonet and light, conservative madrigal styles and the styles of Morley and other early composers of the English madrigal school is remarkable.

## CATALOGUE OF WORKS

### CHURCH MUSIC

1. 'Compietta a 8 voci' (1591).
2. 'Motetti a 8, libro primo' (1594, reprinted 1599, 1603, 1607, 1615).
3. 'Messe a 5 voci' (1596).
4. 'Messe a 8 voci' (1596).
5. 'Salmi che si cantano a terza' (1596).
6. 'Vespertina omnium Solemnitatum Psalmidia octonis vocibus' (1597).
7. 'Motetti a quattro voci' (1597, rep. 1599, 1605, 1611).
8. 'Messe a 5 and 6 voci' (1599).
9. 'Septem Psalmi poenitentiales' (Nuremberg, 1599; as 'Li sette sonetti penitentiali', Venice, 1603; as 'Musica sacra', London, 1608, rep. 1611).
10. 'Sacrae cantiones a 5 voci' (1601, rep. 1603).
11. 'Devotissime lamentationi' (1603).
12. 'Motetti a 8 voci, libro secondo' (1605, rep. 1609).
13. 'Magnificat omnium tonorum' (1605).
14. 'Sacrae cantilene concertate' (1610, rep. 1612, 1613).
15. 'Nove lamentationi' (1610).
16. 'Cantiones sacrae a 8 voci' (1622).

## SECULAR MUSIC

- 17 'Il primo libro de madrigali a 5 voci' (1585, rep. 1596, 1607, 1615).

- 19 'Il primo libro de madrigali a 6 voci' (1590, rep. 1618).
20. 'Mascharate piacevole et ridicolose' (1590, rep. 1604).
21. 'Il secondo libro de madrigali a 5 voci' (1592).
22. 'Nove pensieri musicali a 5 voci' (Book III of madrigals), (1594, rep. 1598).
23. 'Triaca musicale' (1595, rep. 1596, 1607).
24. 'Canzonette a 3 voci' (1601).
25. 'Il quarto libro de madrigali a 5 et 6' (1607).

For separate works in collections *see* the article in *Riv. Mus. It.*, Vol. XVI, p. 550.

For manuscripts *see* Eitner, Q.-L., to which must be added a 'Messa da Requiem', 'Benedictus', 'Improperii' and 4 Masses (Cod. It., IV, 1151); and a Mass (Cod. It., IV, 1104), all in the Marciana Library at Venice.

The 3 masses for 5 voices were reprinted by Haberl (1886-91); several motets for 4 voices in Proske's 'Musica Divina', in Hullah's 'Part Musica' and the publications of the Motet Society, a 'Stabat Mater' in A. Galli's 'Estetica della musica' (1900), the 'Triaca musicale', ed. Schnell, Edizioni De Santis (1942), 'Cinthus il tuo' (and book of Madrigals) by B. Squire; 'Hard by a crystal fountain' (from 'The Triumphs of Oriana') by L. Benson.

Two motets from the second book of motets for 8 voices are in Vol. II of Torchi's 'L'arte musicale', as is also the 'Giucoco dell'oca' from the 'Triaca musicale'.

**CROES, Henri de** (*b* Antwerp, [bapt. 19 Sept.] 1705, *d* Brussels, 16 Aug. 1786).

Netherlands violinist and composer. He became first violin at the church of Saint-Jacques, Antwerp, in 1723, but left in 1729 for Frankfort o/M., where he entered the services of the Prince of Thurn and Taxis. He was still there ten years later, but returned to the Netherlands and became first violin in the royal chapel at Brussels in 1744, advancing to the post of master of the music in 1749. In 1779, being financially embarrassed, he offered the governor-general 36 masses, 69 motets, 28 symphonies and 32 sonatas of his composition, receiving 300 florins. He also wrote concertos for flute or violin and divertimenti, but no trace is to be found of an opera said by E. van der Straeten to have been performed in 1756.

**CROFT**<sup>1</sup>, William<sup>2</sup> (*b*. Nether Ettington, Warwickshire, [bapt. 30 Dec.] 1678; *d*. Bath, 14 Aug. 1727).

English organist and composer. He was sent to London as one of the children of the Chapel Royal under Blow. On the erection of an organ in the church of St. Anne's, Soho, in 1700 Croft was appointed organist. Earlier in the same year he had joined Blow, Piggott,

Jeremiah Clarke and John Barrett in publishing a 'Choice Collection of Ayres for the Harpsichord or Spinnet', and further similar pieces appeared in the second and third books of 'The Harpsichord Master' (1700, 1701). Three sonatas by him for violin and bass (together with three flute sonatas by an anonymous "Italian master") were announced in the 'Post Boy', 30 Sept.-3 Oct. 1699. These are of interest as being among the very first English sonatas for solo violin. The slow movements reach great dignity, but others seem to betray the apprentice hand. The date of these just precludes influence from Corelli's Op. 5, which otherwise would probably have been suspected.

In Jan. 1704 Croft published 'Six Sonatas of two Parts' for two flutes (*i.e.* recorders). Several other instrumental pieces of his were published about this time, but copies do not seem to have survived.<sup>3</sup> A selection of the early harpsichord pieces has been reprinted by Chester's, but they are of only moderate interest, and are quite eclipsed by his solo songs, which show considerable charm and ably carry on the Purcellian tradition.<sup>4</sup>

On 7 July 1700 Croft was sworn in a Gentleman Extraordinary of the Chapel Royal, with the reversion, jointly with Jeremiah Clarke, of the first vacant organist's place. On 25 May 1704, on the death of Francis Piggott, Croft and Clarke were sworn in as joint organists, and on Clarke's death in 1707 Croft was sworn in to the whole place. On 7 Feb. 1705 he had married Mary George at the Chapel Royal; there seems to have been no issue of the marriage. On the death of Blow in 1708 Croft was appointed his successor as organist of Westminster Abbey and master of the children and composer to the Chapel Royal. It was in the discharge of the duties of the latter office that Croft produced, for the frequent public thanksgivings for victories, etc., many of those noble anthems which have gained him so distinguished a place among English church composers. He had before written "occasional" anthems, as, for example, after the victory of Blenheim in 1704 and 1705. In Jan. 1712 he resigned his appointment at St. Anne's in favour of John Isham, who had been his deputy for some years. It has been generally supposed that in 1712 he edited for his friend (afterwards Sir John) Dolben, subdean of the Chapel Royal, the collection of the words of anthems called 'Divine Harmony', but this is wrong.<sup>5</sup> At

<sup>3</sup> For these *see* W. C. Smith, 'A Bibliography of . . . John Walsh' (1948).

<sup>4</sup> For the songs down to 1702 *see* Day and Murrie, 'English Song Books' (1940). The later songs are to be found in Walsh's periodical 'The Monthly Mask of Vocal Music' (1705 onwards).

<sup>5</sup> On this matter *see* CHURCH, (1) John.

<sup>1</sup> He sometimes signed Crofts.

<sup>2</sup> The records of St. Anne's, Soho, give his name as Philip

some time before 1712 he had undertaken, at his own expense, the restoration of the monument in Norwich Cathedral to William Inglott, the Jacobean organist and virginalist. On 9 July 1713 he took the degree of Doctor of Music in the University of Oxford, his exercise (performed on 13 July) being two odes, one in English, the other in Latin, on the Peace of Utrecht; these were afterwards engraved and published under the title of 'Musicus apparatus academicus'. In 1715 Croft received an addition of £80 per annum to his salary as Master of the Children of the Chapel Royal for teaching the children reading, writing and arithmetic as well as playing on the organ and composition.

In 1724 Croft published in two folio volumes, with a portrait of himself, finely engraved by Vertue, prefixed:

*Musica Sacra, or Select Anthems in Score*, consisting of 2, 3, 4, 5, 6, 7 and 8 parts, to which is added the Burial Service as it is now occasionally performed in Westminster Abbey

A copy of the original "Proposals" for printing the work by subscription, dated 25 Mar., is in New York Public Library. In the preface he states it to be the first essay in printing church music in that way, i.e. engraven in score on plates. He was one of the original members of the Academy of Vocal Musick founded 1725. He is buried in the north aisle of Westminster Abbey, where a monument is erected to his memory.

In the earlier part of his career Croft composed for the theatre and produced overtures and act-tunes for 'Courtship à la mode' (D. Crawford) 1700, 'The Funeral' (Steele) 1701, 'The Twin Rivals' (Farquhar) 1702 and 'The Lying Lover' (Steele), 1703. Other sets of act-tunes, for unidentified plays, are to be found at Christ Church, Oxford, and in the Bodleian. A large number of anthems remains in manuscript at Tenbury, the B.M., the R.C.M. and elsewhere, and these still await investigation. Two psalm tunes attributed to him, 'St. Anne' and 'St. Matthew', will long live in the Anglican Church, even after his fine anthems have become obsolete.

At least three portraits of Croft are extant: (1) the National Portrait Gallery has an anonymous work showing him as one of the Children of the Chapel Royal; (2) T. Murray's portrait is in the Music School collection, Oxford (both these are reproduced in an article in *Mus. T.*, 1900, p. 577); (3) T.C.M. also has a contemporary portrait.

W. H. H., rev R. N. (ii).

The Burial Service in 'Musica sacra' has become the classic setting of the Anglican ritual, and it is used in part at least (especially the opening sentences) at practically all public funerals sung in cathedrals and similar establishments.

It consists of the three opening sentences, intended, according to the rubric, to be sung in procession, the sentences at the graveside beginning "Man that is born of a woman" and the anthem 'I heard a voice from Heaven'. The whole is set in a severe style of four-part harmony, and its simple expression of the feeling of the words makes it one of the masterpieces of English church music. In his preface Croft acknowledges a double indebtedness to Purcell. He says:

In that service there is one Verse composed by my predecessor, the famous Mr Henry Purcell, to which, in justice to his memory, his name is applied. The reason why I did not compose that Verse anew (so as to render the whole service entirely of my own composition) is obvious to every Artist, in the rest of that service composed by me, I have endeavoured as near as I could, to imitate that great master and celebrated Composer, whose name will for ever stand high in the Rank of those who have laboured to improve the English style in his so happily adapting his Compositions to English words in that elegant and judicious manner as was unknown to many of his predecessors, but in this respect both *His* and *My* worthy and honoured Master, Dr Blow was known likewise to excel.

The verse of Purcell's composition is the last of the graveside sentences, beginning "Thou knowest, Lord". H. C. C.

**CROIZA, Claire (Conelly)** (b. Paris, 14 Sept. 1882; d. Paris, May 1946).

French mezzo-soprano singer. She was attached to the Opéra-Comique of Paris and the Théâtre de la Monnaie of Brussels. From 1934 she was responsible for a singing-class at the Paris Conservatoire. A singer of rare sensibility backed by a wide general culture, she created the part of Penelope in Fauré's opera of that name at the Opéra-Comique. While continuing to sing in a few selected operas—Massenet's 'Werther', Gluck's 'Orphée', Berlioz's 'Les Troyens'—she gave most of her later time to concert singing, where she was recognized as the perfect exponent of songs by Fauré, Debussy, Ravel, Roussel and others. She made many recordings. F. R.

**CRONER DE VASCONCELOS, Jorge** (b. Lisbon, 1910).

Portuguese composer. He had his first lessons at the Lisbon Conservatory and later studied with a scholarship in Paris under Dukas, Roger-Ducasse, Stravinsky and Nadia Boulanger. The 'Poemeto sinfonico' and two ballets, 'A lenda das amendoceiras' and 'A faina do mar', and various songs stand

out among his principal works, which also include instrumental music. J. J. C.

**CRONHAMN, Johan (Jöns) Peter** (b. Östra Karup, Halland, 7 May 1803, d. Stockholm, 15 June 1875).

Swedish musician. During his boyhood he taught himself to play the flute and guitar, took lessons in organ playing, was for a time flautist in a Swedish infantry regiment and then became a school-teacher (1821-25). He studied at the Stockholm Academy of Music in 1825-29 and at Uppsala in 1832-33, and was organist of Skeppsholm Church, Stockholm, in 1827-37. He was employed in the government service from 1829-70, but his official duties did not prevent him from leading a very active musical life, during the course of which he was superintendent of an institute of singing, founder and director of a choral society, music critic to several newspapers, including 'Post- och inrikes tidningen', and teacher of elementary solo and choral singing at the Academy of Music, 1842-60, with professor's title from 1859. He was elected a member of the Academy in 1843 and appointed acting secretary in 1860 and permanent secretary in 1870. During his period of office he secured increased state support for the Academy.

In 1851 Cronhamn visited London to study musical instruments at the Great Exhibition, and in 1853 he went to Germany to collect information about church music and music schools. He edited the Proceedings of the Academy from 1865-73 and published his own 'Musikforeningar i Sverige och Norge' in 1866-68 and 'Kongliga Musikalska Akademien åren 1771-1871' in 1871, the latter being his most important work.

Cronhamn's compositions, which comprised solo songs and men's vocal quartets, were frequently performed. He also arranged for men's choir sixty of Bellman's songs (1832), arranged folksongs discovered by R. Dybeck for the latter's journal 'Runa' and edited 'Musica sacra' for mixed voices (1854-67) and books of songs for schools. K. D.

**CRONVALL, Erik (Johan).** See SIBELIUS QUARTET.

**CROOK** (Fr. *corps de rechange*; Ger. *Tonbogen*). The name given to certain accessory pieces of tubing applied to the mouthpiece of brass instruments for the purpose of altering the length of the tube and thus raising or lowering their pitch. Since natural horns and trumpets, without valves or slides, can play only the notes of the harmonic series, the sole method of enabling them to play this series at another pitch is to transpose the fundamental note, and this is done by the

crooks. The invention of valves, however, greatly reduced the necessity for changing the crook.

The term is also applied to the S-shaped metal tube connecting the body of the bassoon with the reed (Fr. *bocale*), and generally to any such removable bent tube at the mouthpiece end of any instrument, as in the saxophone and the alto and bass clarinets. W. H. S.

**CROOKS, (Alexander) Richard** (b. Trenton, N.J., 26 June 1900).

American tenor singer. At Trenton, where he sang in a church choir and studied music with Sydney H. Bourne, he made his first public appearance at the age of eleven, singing with Ernestine Schumann-Heink in Mendelssohn's 'Elijah'. After Army aviation service in the first world war he went to New York, where he was a church soloist and also worked for an insurance firm. He made his New York concert début in Nov. 1922, with the New York Symphony Society under Walter Damrosch; other engagements with this orchestra were followed by an extensive concert tour. During the next few years orchestral and festival engagements and recitals made him well known in the U.S.A. as a concert singer. He made his opera début in Germany in May 1927, singing Cavaradossi in 'Tosca' at Hamburg and Berlin, and made four European tours during the next five years, singing in Germany, Austria and the Scandinavian countries. Cavaradossi was also the part of his American opera début with the Philadelphia Grand Opera Company on 27 Nov. 1930; his début with the Metropolitan Opera in New York, as Des Grieux in Massenet's 'Manon', followed on 25 Feb. 1933. For the next ten years he was one of the Metropolitan's leading tenors in Italian and French lyric parts. He toured Australia and Africa in 1936 and 1939 and, until his retirement in 1946, continued his concert activities in the U.S.A.

Crooks's singing was marked by musician-ship and a consistently high standard of tone and vocal production, and he was an expressively sympathetic interpreter both in opera and concert. F. D. P.

**Cros, Charles.** See Gramophone (invention).

**Cros, Jean.** See Chausson ('Chanson perpétuelle').

**CROSDILL, John** (b. London, 1751; d. Eskrick, Yorkshire, Oct. 1825<sup>1</sup>).

English violoncellist. He is said to have been at Westminster School, but no trace of his name is to be found in the school registers, which, however, begin only in 1763; he received his early musical education in the choir of Westminster Abbey under John Robinson and Benjamin Cooke. In 1768 he became a member of the Royal Society

<sup>1</sup> 'The Harmonicon', III, 235, says that he died at his house in Berners Street, London.

of Musicians, and in the following year he appeared at Gloucester, as principal cellist at the meeting of the Three Choirs, a position which he continued to occupy until his retirement from his profession, with the exception of the year 1778, when the younger Cervetto filled his place at Gloucester.

In 1776, on the establishment of the Concert of Ancient Music, Crosdill was appointed principal cellist. On 10 Mar. 1778 he succeeded Nares as violist of the Chapel Royal, an appointment which soon became a sinecure, but which he continued to hold until his death. He also became a member of the king's band of music. In 1782 he was appointed chamber musician to Queen Charlotte and about the same time taught the Prince of Wales, afterwards George IV, to play the cello. In 1783 he was appointed composer of the state music in Ireland. In 1784 he filled the post of principal cellist at the Handel Commemoration.

In 1788 or later, having married a lady of considerable fortune, Crosdill retired from the public exercise of his profession, though he played as a member of the king's band at the coronation of George IV (1821). Fétis's account of his activities in Paris appears inaccurate as to dates. He certainly visited Paris, and the year 1784 is suggested. Crosdill left all his property to his only son, Lieutenant-Colonel Crosdill, C.B., of the East India Company's service, who, by his father's desire, presented to the Royal Society of Musicians a donation of £1000.

W. H. H., adds.

**CROSS FINGERING.** See FINGERING  
**CROSS, Joan** (b. London, Sept. 1900).

English soprano singer. She was educated at St. Paul's Girls' School in London and in 1924 was engaged by Lilian Baylis of the Old Vic Theatre as lyric soprano. She sang leading parts in a large number of works there and established a great reputation, both as a singer capable of doing justice to a wide range of music and as an uncommonly versatile and intelligent actress. When the operatic section of the Old Vic. went over to the Sadler's Wells Theatre, Joan Cross remained attached to it as leading lady, and by that time she had long added dramatic to lyric parts. She appeared at Sadler's Wells until 1945, and was one of the theatre's directors in 1941-45, when the company for the first time toured in the provinces, at first with a reduced cast and a very small orchestra, working often under very trying or dangerous war-time conditions. In 1943 she made a new translation of Smetana's 'Bartered Bride' for the Sadler's Wells production. In 1946 she joined the English Opera Group, in which she was one of the moving spirits and gave an astonishing demonstration of her range in singing by turns such utterly different

parts in two of Britten's operas as the static and very serious one of the Female Chorus in 'The Rape of Lucretia' and the extremely lively and comic one of Lady Billows in 'Albert Herring'. In 1948 she founded an Opera Studio for the purpose of all-round operatic teaching.

Joan Cross made her success by artistic integrity, devoted application to any task that came her way and an irresistible combination of sincerity, technical skill and intelligence rather than by any exceptional power or beauty of voice. In a country where opera is patronized by millions to whom it would never occur to listen to any other serious music she would not have found a great following among those who are impressed by singers possessed of any amount of voice and next to no brains; but in England she gradually built up a large and devoted following for herself, consisting of admirers who learnt to trust her never to leave them unsatisfied, whatever the part assigned to her. As a singer of Mozart (Countess, Donna Anna, Fiordiligi, Pamina) she was particularly favoured and she made excellent studies of several Verdi parts, including the less familiar ones of Leonora in 'Forza del destino' and Amelia in 'Ballo in maschera'. For the current repertory of Gounod, Bizet, Puccini, etc., she could always be safely resorted to as a versatile artist capable of doing justice to dramatic, lyric and florid parts. Before the second world war she gave a particularly moving performance of the Princess in Strauss's 'Rosenkavalier' and one of her last important parts before she left Sadler's Wells was Ellen Orford in the original production there of Britten's 'Peter Grimes'. In 1953 she was Queen Elizabeth I in the Coronation production of Britten's 'Gloriana'.

E. B.

**CROSS RELATIONS** (Amer.). See FALSE RELATIONS.

**CROSS RHYTHM.** An effect of rhythmic complexity or ambiguity obtained in composition by some kind of conflict between what is written on paper in opposition to the metrical motion prescribed by the time-signature and what is intended to be perceived by the hearer who does not see the notation. The ear may either be deceived into grasping a metrical scheme different from that suggested by the signature, as in Ex. 1 below (treble staff), or it may be deliberately made to lose all sense of rhythmic direction, as in Ex. 2, which begins by sounding like an upbeat followed by 2 bars of 4-4 time, only to shift its accentuation in such a way that any regular beat disappears. These examples may thus be taken to illustrate the two different cross-rhythm effects referred to above, Ex. 1 being complex and Ex. 2 ambiguous. But they show another difference: the opening of Chopin's A♭ major Waltz, Op. 42:

makes use of three groups of notes in rhythms cutting against each other, while this theme from the finale of Elgar's violin Concerto:

bewilders the ear by groups of notes conflicting with the regular beat marked by the bar-lines.

Two further examples may be quoted to show that cross rhythm may be either a conflict between groups of notes or a contradiction of the natural accent of phrases against the metrical periods determined by the bar-lines. The following, from Mozart's B $\flat$  major piano-forte Sonata, K. 333, produces in the right hand (bars 2-4) a distinct effect of 6-8 time against the prescribed 3-4, which is maintained by the left:

In the first movement of the third Brahms Symphony, just after the change back from 9-4 time to 6-8 in the second-subject group, there is a long stretch of music where the phrases are displaced across the bar-lines, everything being shifted back by one beat, so that the main rhythmic accents, which should normally fall on the first beat, become upbeats on the sixth beat of each preceding bar, as thus:

But this is only what is seen on paper, for the ear receives no impression of anacrusis; if it

did, this would not be a case of cross-rhythm such as Brahms here obtains by this very conflict of metrical pulse and rhythmic accent.

Cross rhythm, of the ambiguous rather than the complex kind, began to be a normal feature of modern dance music with ragtime early in the 20th century, and its cultivation became intensified in jazz and swing; but it was then new to that kind of music alone, for more learned composers had practised it ever since the turn of the 15th century at the latest, when polyrhythmic songs of the most elaborate kind were cultivated. "Polyrhythm", by the way, is a term some scholars, especially Germans settled in the U.S.A., would like to become established for all kinds of cross rhythm, old and modern, classical and popular

E. B.

### CROSS, Thomas (b. ?; d. ?).

English 17th-18th-century music engraver, printer, publisher and music seller. He was practically the inventor of sheet music, of which he issued a considerable amount. Nearly all vocal music before this period had to be purchased in collections, chiefly printed from type, and only a small quantity of instrumental music had been engraved. By error he was treated in the first edition of this work as two persons — Cross senior and Cross junior, but evidence is conclusive enough that he merely signed himself as "junior" sometimes in the very earliest part of his career (i.e. about 1683 to about 1708-1710). He is assumed to have been the son of Thomas Cross who engraved portraits, about 1644-85 (see Walpole's 'Anecdotes of Painting'). There is nothing to connect Cross "senior" with music engraving, although it is quite possible that if he had such connection he might have cut some of the music of the few delicately engraved books of instrumental works which were issued near the middle of the 17th century by the elder John Playford.

The name of Thomas Cross the music engraver appears in 1683 on Purcell's 'Sonata's of III. Parts'; it is there given as 'Tho: Cross Junior Sculpt.'. One of his latest dated works is T. Arne's 'The Most Celebrated Ares in the Opera of Tom Thumb', issued in 1733.

Cross seems to have had, certainly at first, nearly the whole of London's music-engraving trade in his hands, working for composers as well as for publishers. Before the 17th century had closed he had engraved several important collections, such as Purcell's and Eccles's songs, c. 1696; 'Military Musick or the Art of playing the Haut-bois', 1697, etc. Cross's early work was particularly neat, clearly cut on copper. It was about this time that he began the engraving and issue of single songs.

Copper was expensive for ephemeral productions sold at a cheap rate, but examination will show that Cross had soon found a cheaper

material, probably pewter. The single songs were printed on a half-sheet of thin paper and must have come forth in enormous numbers. At the foot of most the engraver's name appears frequently as "Exactly engraved by T. Cross".

The single song had, before 1700, become so popular that Blow's 'Amphion Anghicus' (1700) contains a tirade against it:

Music of many parts hath now no force,  
Whole reams of single songs become our curse.

While at the shops we daily dangle view  
False concords by Tom Cross engraven true.

There is another allusion to "honest Cross" in Purcell's 'Orpheus Britannicus'.

Cross had one serious rival in the publication of engraved sheet songs. John Walsh began to issue them in similar form before the end of the 17th century, and later on from plates produced by the notes and lettering being punched on the pewter, as at the present day. This caused Cross to engrave on one of his sheets "Beware of ye nonsensical puncht ones—Cross Sculp.". Cross engraved boldly and freely, his lettering being very flowing. Hawkins states that he "stamped the plates of Geminiani's solos and a few other publications, but in a very homely and illegible character, of which he was so little conscious that he set his name to everything he did, even to single songs". Hawkins is frequently inaccurate in details; it is doubtful whether Cross ever did any stamped or punched work. His later engraving is not so fine and minute as his earlier, but it is quite clear and legible.

Cross kept a music shop. His address about 1692-93 was "in Three Horse Shoe Court" in Pye Corner; then he removed to "Katherine Wheel Court on Snow Hill near Holbourn Conduit", where he remained from 1693 to 1699; later on he was at "Compton Street, Clerkenwell, near the Pound" until 1720, his other addresses not being known.

F. K., rev. W. C. S.

**CROSSE, John** (*b.* Hull, 7 July 1786; *d.* York, 20 Oct. 1833).

English musical chronicler. He published in 1825 a large quarto volume entitled

An Account of the Grand Musical Festival held in September 1823, in the Cathedral Church of York, . . . to which is prefixed a Sketch of the rise and progress of Musical Festivals in Great Britain, with biographical and historical notes,

an admirably executed work, replete with valuable information. Crosse was buried at St. James's, Sutton near Hull. w. h. h.

**CROSSLEY, Ada** (*b.* Tarraville, Gippsland, Australia, 3 Mar. 1874; *d.* London, 17 Oct. 1929).

Australian contralto singer. She studied with Fanny Simonsen of Melbourne and learnt the pianoforte while carrying on her vocal studies. She sang in Australia for about two years and won such appreciation in oratorio

and concert singing that on her departure to continue her studies in Europe municipal functions of a valedictory kind were held in her honour at Melbourne, Sydney and Adelaide.

After studying with Santley in London and Mathilde Marchesi in Paris she gave a concert at the Queen's Hall in London on 18 May 1895, when she sang an air from Ambroise Thomas's 'Psyché' with such success as to make her future career a matter of certainty. She very soon attained a foremost rank among the concert contraltos of the time, she sang regularly at the English festivals up to and including the Gloucester Festival of 1913. She toured in South Africa and in America as well as in her native Australia, where she was received with much enthusiasm. In oratorio (especially 'Elijah' and Elgar's 'Apostles'), in recitals of classical song and in ballad programmes she appealed to every type of audience. It would be impossible to enumerate even the most prominent of her public appearances, but her performance of the "Agnus Dei" in Bach's B minor Mass and of the solo part in Brahms's 'Rhapsody' were among her highest achievements. She married Francis Muecke, F.R.C.S., on 11 Apr. 1905.

J. A. F.-M., adds.

**CROSSLEY-HOLLAND, Peter (Charles)** (*b.* London, 26 Jan. 1916).

English musicologist, writer and composer. He was educated at Abbotsholme School, Derbyshire, and at St. John's College, Oxford (1933-36), where he graduated B.A. (1936), M.A. (1940) and B.Mus. (1943), having studied musical theory under Sir Hugh Allen and Dr. H. K. Andrews. Meanwhile he studied composition in London under John Ireland, at first privately and then at the R.C.M., where he gained the Foli Composition Scholarship (1938-39), also studying the pianoforte under Angus Morrison and conducting. During the second world war, being medically unfit for military service, he joined the Ministry of Food as lecturer on the staff course and became assistant conductor of its choral and orchestral society at Colwyn Bay.

Crossley-Holland's first appointment was that of Musical Director of the Arts Council in the N.W. region of England (1943-45). For the next two years (1946-48) he was the principal drafter of the Arts Enquiry Report 'Music' sponsored by the Dartington Hall Trustees. He then joined the music staff of the B.B.C. in London, where he was successively programme builder to the B.B.C. Symphony Orchestra (1948-50) and supervisor of the Home Service Music (from 1950). His published writings are the outcome of a specialized scholarship in Celtic and Oriental music, and in musical history generally. He has also written a biography of John Ireland, and in 1943 the University of Wales (Council of

Music) awarded him a research grant for work in mediæval Welsh music. He learned to play the mediæval minstrel's harp, with which he has broadcast and given lectures, and he has also given lecture-recitals at the pianoforte.

The following are Crossley-Holland's principal works :

#### COMPOSITIONS

- Incidental music for the mediæval Welsh saga-cycle 'The Tales of the Seven Sages of Rome' for horn & harp  
 'A Song of St. Columba' for baritone, chorus & orch. (1942-43)  
 'The Sacred Dance', cantata for baritone, chorus & small orch (1951-52)  
 'Six Carols for Sundry Seasons' for unaccomp. S.A.T.B. (1951-52)  
 Ballet suite 'The Faery Rite' for small orch. (1939).  
 2 Suites for strg orch. (1938 & 1944).  
 'Maguire's Lamentation', old Irish air arr. for stgs. (1944).  
 2 Mystical Songs for baritone & orch. (1945)  
 1. In the Twilight (W. B. Yeats).  
 2. The Cliff (Eric Ericson)  
 Quintet for 2 vns., viola, cello & pf (1934)  
 Trio for 2 vns & viola (1939).  
 Trio for flute, oboe & viola (1940).  
 Sonata, E mi, for vn. & pf. (1938).  
 'Romance' for cello & pf (1937)  
 'The Distant Isle' for pf. (1945-46).  
 Prelude for organ (1952).  
 Numerous songs to words by English and Irish poets.

#### WRITINGS

- 'Secular Homophonic Music in Wales in the Middle Ages' (M & L., Vol XXIII, No. 2, Apr. 1942)  
 'Secular Mediæval Music in Wales' (rev. reprint of above, University of Wales, 1942).  
 'The Music of Inglis Gundry' (Hinrichsen Year Book, 1947-48)  
 'Music in Wales', editor and contributor (London, 1948).  
 'History of Music' (Chambers' Encyclopedia, 1950), article covering East, West, primitive, ancient and modern world

E. B.

**CROTCH.** See CRWTH.

**CROTCH, William** (b. Norwich, 5 July 1775; d. Taunton, 29 Dec. 1847).

English organist, pianist, composer and teacher. His father, a master carpenter who combined a taste for music with a gift for mechanics, had constructed a small organ. When little more than two years old the child evinced a strong desire to get to this instrument, and being placed before it, contrived shortly to play something like the tune of 'God save the King', which he was soon able to play with its bass. His ear was remarkably sensitive and readily distinguished any note when struck, or detected faulty intonation, "even in the half notes, never mistaken", said Burney. The Hon. Daines Barrington, a well-known amateur, published an interesting account of him, and Burney communicated to the Royal Society an account which was printed in the 'Philosophical Transactions', Vol. LXIX, Pt. i. But Crotch showed phenomenal gifts even earlier. In his own manuscript memoirs<sup>1</sup> he notes :

In Jan. 1776 [!] I would leave any diversion or even my food to listen to my father . . . before I was able to name the tunes I wished to hear I could touch the 2 or 3 notes with which they commenced.

<sup>1</sup> "Extracted by himself, for himself, from old letters", etc., etc.

According to the same document he played to a large company at Norwich in Feb. 1778, and according to 'The London Magazine' (Apr. 1779) he was little more than three years of age when

at the beginning of Nov. [1778] he was carried by his mother to Cambridge, where he played on all the College and Church organs to the astonishment of the gentlemen of the University. About the middle of Dec. last he arrived at London, but no public exhibition was made of his performances till they had been heard by their Majesties

Crotch himself says they went to London on 2 Dec. 1778. He was introduced to Lady Dartmouth and J. C. Bach, among others, and says :

From the accounts he gave of me I was sent for with my Mother to Buckingham House, Jan. 1st, 7 P.M., to an Evening Concert, where I performed on ye organ. The tunes I performed were God save the King [and nine others]

The visit was evidently a prolonged one, for we hear of his playing to the royal princesses on 5 June at Lady Charlotte Finch's in St. James's Palace. Some time after that he was taken back to Norwich, but a second visit to London began on 4 Oct. 1779, when lodgings were found at Mrs. Hart's, a milliner in Piccadilly, "2 doors to west of St. James's Street". There he gave daily recitals (as they would now be called), and he also frequently performed on the organ in public. He then toured the British Isles as an infant prodigy. There are several accounts of his appearances in Scotland, and he played at a concert of the Royal Artillery band at Woolwich

Crotch's precocity is almost unparalleled in music, even Mozart and Mendelssohn hardly equalled him in that respect, and like the latter he displayed considerable skill in drawing and painting, to which arts he remained attached through life, attaining much eminence in them. But unlike these two masters he also proved later on that an abnormally early development of musical genius does not necessarily lead to the highest eminence, at any rate in creative ability. Crotch was to become an extremely skilled composer, but not one whose work outlasted its own time.

He had only just passed his tenth birthday when, on 12 July 1785, the Rev. A. G. Schomberg of Magdalen College, Oxford, wrote :

Thank you for your treat at the Foundling Hospital; it was charming to see how old Stanley enjoyed your concert and, patting you on the head, said he hoped you would live to conduct the band at some future commemoration of Handel.

Perhaps there was even then some idea of inducing Crotch to go to Oxford. It was to Cambridge, however, that he was drawn first of all in 1786, and he had a benefit concert there, at King's College Hall, on 19 May, the programme including a sonata by G. P. E. Bach. He remained about two years as assistant to the Professor of Music, Dr. Randall, and as organist of Trinity and King's Colleges as well as Great St. Mary's Church. At the age of fourteen he composed an oratorio, 'The

Captivity of Judah', which was performed at Trinity Hall on 4 June 1789.

By that time, however, he had removed to Oxford (some time in 1788), where he studied, under Schomburg's patronage, with a view to entering the church. But his patron's health having broken down, he resumed the profession of music, and in Sept. 1790 he was appointed, on the death of Thomas Norris, organist of Christ Church. On 5 June 1794 he graduated as Bachelor of Music. In Mar. 1797 he succeeded Dr. Philip Hayes, deceased, as organist of St. John's College and Professor of Music in the University. About the same time he was organist of St. Mary's. On 21 Nov. 1799 he proceeded Doctor of Music, composing as his exercise Joseph Warton's 'Ode to Fancy', the score of which he afterwards published. In 1800-4 he delivered lectures in the Music School, and in 1804, 1805 and 1807 lectured at the Royal Institution; in 1810 he composed an Installation Ode for Lord Grenville; in 1812 he produced his oratorio 'Palestine', which was received with great favour. One number from this work survives in the still popular Epiphany anthem, 'Lo, star-led chiefs'.

Crotch also published in this year a treatise on the 'Elements of Musical Composition'; in 1813 he became an associate of the Philharmonic Society, and he was a member in 1814-19. From 1820 onwards he lectured at the Royal Institution, and on the establishment of the R.A.M. in 1822 he was placed at its head as principal. He resigned the post in June 1832.

On 10 June 1834 he produced at Oxford, on the installation of the Duke of Wellington as Chancellor, an oratorio, 'The Captivity of Judah', wholly different from his juvenile work bearing the same title.<sup>1</sup> On 28 June in the same year he made his last public appearance as a performer, by acting as organist for part of the third day's performance at the Royal Musical Festival in Westminster Abbey.

Crotch died at Taunton while seated at dinner at the house of his son, the Rev. William Robert Crotch, then headmaster of the Grammar School there; he was interred in the churchyard of Bishop's Hull near Taunton, where a monumental inscription is placed to his memory.

Besides the works above specified Crotch produced:

'Ten Anthems', some chants; a motet, 'Methinks I hear'; several glees; some fugues and concertos for the organ; several pianoforte pieces; an ode on the accession of George IV, performed at Oxford, 1820; Funeral Anthem for the Duke of York, 1827; 'The Lord is King', anthem for voices and orchestra, 1843.

A delightful glee for 4 voices (Sept. 1807) and arranged for 5 voices (Feb. 1808) in manuscript is in the Euing Collection, Glasgow University. He also published some literary

works on thorough-bass and harmony, as well as 'Specimens of various styles of Music referred to in a course of Lectures on Music read at Oxford and London', and in 1831 'The Substance of several courses of Lectures on Music read at Oxford and in the Metropolis'. This collection, containing besides classical excerpts a large number of folk tunes of many countries, formed the illustrations to a series of lectures delivered at Oxford 1800-4 and 1820. The lectures themselves were published separately. The full contents of the 'Specimens' was printed under that heading in the first edition of this Dictionary.

As a teacher he enjoyed a high and deserved reputation. A complete list of his compositions, compiled by John S. Bumpus, appeared in 'Musical News', 17 and 24 Apr. 1897.

W. H. H., adds.

See also Chant (Ex. 5, *recte et retro*) Malchaïr (friendship & collab.). *Recte et retro* (double chant, ex.).

**CROTCHET** (Fr. *noire*; Ger. *Viertel*, a quarter — i.e. of a semibreve; Ital. *semiminima*). A note which is half the value of a minim and twice that of a quaver, and is represented thus  $\text{f}$ . The German *Viertel* is adopted by American musicians, the word anglicized as "quarter-note".<sup>2</sup> Its rest is  $\text{f}$  (obsolescent) or  $\text{z}$ . S. T. W.

**CROUCH** (born Phillips), *Anna Maria* (b. London, 20 Apr. 1763; d. Brighton, 2 Oct. 1805).

English soprano singer. She was a daughter of Peregrine Phillips, a solicitor. Being gifted with a remarkably sweet voice, she was at an early age placed under the instruction of a music master named Wafer, and some time afterwards she was articled to Thomas Linley, under whose auspices she made her appearance on 11 Nov. 1780, at Drury Lane Theatre, as Mandane in Arne's 'Artaxerxes'.

Her success was great, and for upwards of twenty years she held a high place in public esteem, both as actress and singer. Early in 1785 she married Crouch, a lieutenant in the Navy, but after a union of about seven years they separated by mutual consent. She sang at Drury Lane in oratorios in 1787; later on she lived with Michael Kelly and appeared for the last time at his benefit on 14 May 1801 as Celia in 'As You Like It'. After this her health became impaired and she withdrew from public life. Two volumes of 'Memoirs' by M. Young were published in 1806, with a portrait. A sketch by Cosway belonged to Lord Tweedmouth, and a miniature by the same artist was in the possession of Baroness Burdett-Coutts.

W. H. H.

<sup>2</sup> The objections to this are (a) that, as in German, the word indicates a quarter of a half (semibreve), not of a whole (breve), and (b) that it is liable to confusion with "quarter-tone". In any case, since an English term exists, there is no good reason for not using it in English parlance. E. S.

<sup>1</sup> The MS is now at St. Michael's College, Tenbury.

**CROUCH, Frederick (Nicholls)** (b. London, 31 July 1808; d. Portland, Maine, U.S.A., 18 Aug. 1896).

English violoncellist and composer. He studied music with his father, Frederick William Crouch (c. 1783–1844), an eminent cellist, and his grandfather, William Crouch, organist of St. Luke's, London, E.C. He played in the orchestra of the Royal Coburg Theatre at the age of nine. After travelling in Yorkshire and Scotland he was for two years a common seaman on coasting smacks between London and Leith. He next entered the orchestra of Drury Lane Theatre and the choirs of Westminster Abbey and St. Paul's Cathedral. From about 1822 he studied at the R.A.M. under Crotch, Attwood, Lindley and Crivelli, and played in the principal orchestras. He was in Queen Adelaide's private band until 1832 and taught singing at Plymouth. He is said to have invented the engraving process called zincography. About 1838 he gave lectures on the songs and legends of Ireland, and his famous song 'Kathleen Mavourneen' was published (1839–40) as one of a series, 'Echoes of the Lakes'.

In 1849 Crouch went to the U.S.A. and was first engaged as cellist at the Astor Place Opera House, New York; afterwards he went to Boston, to Portland (from 1850), to Philadelphia (1856) as conductor of a series of Saturday Concerts and to Washington, where he founded an unsuccessful school of music. His next move was to Richmond, where he sang in a church choir; he joined the Confederate army and served through the civil war. He settled at Baltimore as a singing-teacher. Besides the song that made his name famous, and many others, Crouch wrote two operas, 'Sir Roger de Coverley' and 'The Fish of November'. J. A. F.-M.

**CRUCE, Petrus de.** See PETRUS DE CRUCE.

**CRUFT, Adrian (Francis)** (b. London [Mitcham], 10 Feb. 1921).

English double-bass player, conductor and composer. He was a pupil at Westminster Abbey Choir School in 1930–35 and of Westminster School in 1935–37, and studied music at the R.C.M. in London, his father, the distinguished double-bass player Eugene Cruft, teaching him his instrument, and his masters for composition being Gordon Jacob and

Edmund Rubbra. There he held the Boulton Conducting Scholarship in 1938–40. After war service in the Army from 1940 to 1946 he obtained the Sullivan Composition Prize at the R.C.M. in 1947. He became a double-bass player in the B.B.C. Orchestra (1948–49) and from 1949 in the orchestra of the Royal Opera, Covent Garden. In 1951 he was one of the founders of the London Classical Orchestra, of which he became assistant conductor, and in the same year he won the first composition prize in the Royal Philharmonic Society's open competition.

Cruft's compositions include the following:

- Introit 'How shall I find Him' for unaccomp. chorus (1950).
- Overture 'Actaeon' for orch. (1951).
- Partita for small orch. (1951).
- Interlude for stgs. (1951).
- Fantasy for oboe, vn, viola & cello (1947).
- 2 Short Pieces for clar., cello & pf. (1950).
- 'Homage to J. S. Bach', little suite for unaccomp. cello (1939; freely arr. for unaccomp. double bass, 1950).

E. B.

**CRÜGER, Johann** (b. Gross-Breese nr. Guben, Prussia, 9 Apr. 1598; d. Berlin, 23 Feb. 1662).

German composer. He is known to have studied theology in the University of Wittenberg. In 1622 he was appointed cantor at the church of St. Nicolaus in Berlin, a post he retained till his death.

His reputation in his own day both as author and composer was great, but he is now chiefly known as the composer of a number of the chorale melodies which have attained immortality in J. S. Bach's treatment of them. Among them are 'Nun danket alle Gott', 'Jesu meine Zuversicht', 'Jesu meine Freude' and 'Schmücke dich, o liebe Seele'. They were published under the title of 'Praxis pietatis melica', the melodies with bass, in 1644. No copy is known to exist either of the first or second edition (1647), but the work ran through innumerable editions, the fortieth of which appeared in Berlin in 1724. His 'Geistliche Kirchen-Melodien über die von Herrn D. Luthero . . . aufgesetzte Gesänge und Psalmen', in which the tunes are for four voices and two instruments, appeared at Leipzig in 1649. He also composed many concertos and motets which no longer exist. Other works have been preserved; they are:

- (1) 'Meditationum musicarum Paradisus primus, oder Erstes musikalisches Lust Gärden' in 3 and 4 parts (Frankfurt, 1622).
- (2) 'Meditationum musicarum Paradisus secundus' (Berlin, 1626), a collection of new Magnificats in German, in 2- and 8-part harmony, arranged in all the eight tones.
- (3) 'Recreationes musicae, das ist neue poetische Amorsen' (Leipzig, 1651), containing 33 pieces.

Among his theoretical works may be mentioned:

- (1) 'Synopsis musicae', a method for thorough-bass (Berlin, 1624) — the third edition (Berlin, 1634) has a different title.

- (2) 'Perceptae musicae practicae figuralis' (1625), also published in a German form as 'Rechter Weg zur Singekunst' (Berlin, 1660).  
 (3) 'Quaestiones musicae practicae' (Berlin, 1650)

**CRUMHORN.** A woodwind instrument sounded by an enclosed double reed, well known in the 16th and 17th centuries. The name is derived from the old English "crump" (crooked); also Flemish *crumhoorn*, Ger. *Krumhorn*, *Krummhorn*. Analogously, Ital. *corno torto* (or *cornamuto* or *piva*), or simply *storto*. Fr. *tournebout*; *crumorne* (met with after 1650).

I. CONSTRUCTION AND TECHNIQUE.—Information in Virdung (drawings), Agricola

(also fingering-chart, incorporated in the recorder chart), Praetorius (full details and scale-drawings) and Mersenne (sparse particulars and rough sketch). The body of a crumhorn is a slender tube, almost invariably of boxwood, with the lower end bent up in a hook-like curve (PLATE 15, Vol. II, p. 447, No. 13). Its bore is cylindrical and very narrow (see table below) but is opened out for the last 2 ins. or so. There are 7 finger-holes, including duplicated hole for the lower little finger as in the shawm; also a hole at the rear for the uppermost thumb as in the recorder; finally a vent-hole in the curved tail. Into the top end is placed a brass tube (staple) of internal diameter equal to the bore of the instrument, and on this is placed the reed.

Upper end of tenor crumhorn, in section.

Showing:

- 1, cap, 2, reed; 3, staple;  
 4, housing, 5, body of instrument.

An original reed for tenor crumhorn is preserved at the Vienna Kunsthistorisches Museum; it resembles a big bassoon reed. The reed of the treble was but little smaller, while that of the bass was even larger than some contrabassoon reeds. Both staple and reed are completely hidden inside a long wooden cap which fits onto a housing at the top end of the body of the instrument. In the top of this cap is a hole into which the player blows just as if the

instrument were a recorder, but in bass crumhorns, on account of their size, one blows into a slot cut in the upper rim of the cap. The crumhorn is fingered like a recorder and cross-fingerings are quite good. Although the reed is out of direct control of the lips, the extent to which the notes can be articulated by the tongue and moderated by the breath is greater than might be expected. The compass is limited to its 9 fundamental notes, for like most enclosed-reed instruments it will not overblow (except accidentally, when it produces a "couak" at the 12th owing to its cylindrical bore). The tone is a deep, very characteristic droning, somewhere between a low clarinet and a bagpipe chanter in quality.

Crumhorns were nearly always purchased as a set of differently sized members, out of which various consorts could be made up. The only set known to be preserved in its original condition is in the possession of the Museum of the Brussels Conservatoire. This was originally the property of Duke Alfonso II d'Este (d. 1597). It is a flat wooden case containing 6 boxwood crumhorns which are so typical of the instrument at the height of its favour that their dimensions may be taken as representative (in inches):

Crumhorns	Compass <sup>1</sup>	Maximum Sounding Length from Tip of Reed	Bore (approx)
1 treble	g to a'	18.5	0.15
3 tenors	c to d'	27.5	0.20
1 ordinary bass	F to g	39.0	0.27
1 extended bass	C to g	46.0	0.30

corresponding to Praetorius's sizes 4, 3 and 2 in his table on p. 24 of the 'Organographia'. Their standing-heights from top of cap to base of the curve range from 2 ins. in the treble to 6 ins. in the bass less than the sounding-lengths given above. The ordinary bass has a brass key (for F) instead of the duplicated hole in the smaller members. The other bass differs in having an extension down to C actuated in a very peculiar manner. A second little finger key gives E or D or C according to the setting of two small slider valves situated on the bend of the instrument. If both are set open the key gives E only; if the upper one is closed, the key gives D only; and if both are closed, C only. Though this may seem an absurd arrangement at first sight, it makes possible the embellishment of the consort by deep final tonics or penultimate dominants without encumbering and disfiguring the bass instrument with long thumb keys round the edge of its curved tail (which would be the

<sup>1</sup> When their reeds are very dry, crumhorns are prone to drop to a grunting falsetto about a 4th below their intended pitch. This is mentioned since it has apparently misled the contributor to the Ency. Brit., 11th ed., into setting down their compass a 4th too low. It is possible, however, that the two bass crumhorns should sound a tone higher than the notes given above.

result of normal 16th-century woodwind practice) Curiously enough a different procedure appears to have been adopted when a crumhorn choir of higher tessitura was desired, with the bass played on an instrument of tenor pitch. The performer of this "basset" part had recourse to a special auxiliary instrument which appears in the Cassel *Hofkapelle* inventory of 1613<sup>1</sup>:

A case of 8 *Krumbhörner* of different sizes, one less its cap (*Capsel*).

With the above a long straight instrument (*lang Strack*), basset to the *Krumbhörner*, but not contained in the above case.

Praetorius illustrates it alongside the crumhorns ('Sciagraphia', XIII, 1) — a tenor crumhorn with its curved tail replaced by a straight bell fitted with three extension keys in the ordinary way (see SHAWM, I d). Two further sizes of crumhorn are given by Praetorius: small treble (*exilent c'-d'*) and great bass (variable).

II. HISTORY.—The hooked shape can be traced back to the medieval bladderpipe, while the enclosed reed principle is no less ancient (see SHAWM, III). But the union of these two features, in the crumhorn, has not been traced back before 1500, although the name appears as an organ stop at Dresden in 1489. Virdung (1511) shows a consort of four sizes, while an early record of its participation in concerted music is provided by the band of 2 bombards, 2 crumhorns and trombone in Burgkmair's 'Maximilian's Triumph' of 1516.

From then onwards it is continually mentioned in inventories and accounts, Flemish and German especially, until it begins to vanish late in the 17th century. It was used as an alternative wind colour in every setting, sacred (Thos. Stölzer set the 37th Psalm for crumhorns in 1526) as well as profane (such as Striggio's music to 'Psyche et Amor', Florence, 1565; intermedio 3<sup>o</sup> for 5 *storti*, 1 *cornetto muto* (probably playing treble) and 8 voices doubling the treble and bass parts). The Munich *Kapelle* under Lassus possessed a set of twelve crumhorns, of which two are depicted in Hans Wagner's account of the 1568 wedding celebrations in a band of "good instrumentalists" composed of shawm, 2 cornetts, 2 (? tenor) crumhorns and curtal (the early bassoon); one can imagine the crumhorns humming away on the tenor parts. In Troiano's account of the same celebrations the word *cornamusa* seems to be used to denote a crumhorn.

What may be the only preserved piece of music set specifically for crumhorns is Schein's 'Paduana a 4 Krumhorn', Leipzig, 1617 (Prüfer, Vol. I). To perform it the two upper parts must be read an octave lower and moreover one must obey Praetorius's instruction to

transpose the whole one tone up ('Syntagma', III, Chap. 7). None of the parts exceeds the 9-note range, and the piece can be comfortably played on the treble, 2 tenors and the ordinary bass of the Brussels outfit described above. Stölzer similarly took their small range into account in the psalm setting mentioned above, for in a letter he recommends that it be played on the *Krumphorner*, "since it suits them throughout, which is not the case with every composition, especially those in many parts". As a possible identification of this piece Otto Kade (M.M.G., 1876, 67) has drawn attention to a six-part 'Noli aemulari' (Ps. XXXVII) by Stölzer in which none of the parts exceeds a ninth in range except the bass, which embraces an eleventh; but this is provided for by the additional keywork of the bass crumhorn. On the other hand Praetorius, in the preface to 'Terpsichore', says that No. 283 of that collection (Passamezzo and Galliard a 5 by Francisco Caroubel) "can be played on *Krumbhörner* or other instruments". The three middle parts each exceed the 9-note limit by one or two notes, so that its performance would demand of the crumhornists some judicious alteration — an accomplishment, however, at which reed players in general must then have been very skilful.

Outside Germany the career of the crumhorn is difficult to trace. Henry VIII owned several consorts of them, and a century later Mersenne wrote that the best were made in England. In France, apart from the solitary mention of *tournebouts* by Mersenne, there is nothing until about 1650, when "les cromornes et les trompettes marines" appear as a five-piece outfit in the music of the Grande Écurie du Roy. There is an example of their music in Vol. I of the Philidor Collection — a suite *pour les cromornes* by Degrenis, 1660, opening with the following *petit bransle*:

<sup>1</sup> E. Zulauf, 'Beiträge zur Geschichte der Hofkapelle zu Cassel' (1902).

The bass of this piece lies beyond the compass of any crumhorn, though the other parts could be played by them an octave lower. But more likely the melody was played by one or two of the trumpets *marine*, while the bass would have been allotted to the bassoon, an instrument specifically referred to in Brossard and elsewhere as the "basse de chromorne ou chromhorne".

Another late appearance of the crumhorn is reported from Breslau in 1668 (A.M.M., I, 223) where in an old-fashioned festival 'Jubilate' for 4 choirs the third choir consisted of 5 viols and 4 recorders "with *ein kleiner Stort* in place of the bass recorder". Here perhaps is a practical suggestion for our modern recorder players; a glance at the dimensions given above will show how a small and handy crumhorn would reproduce the lower register of the feeble and capricious bass recorder, and this without being any more difficult to blow.

A. B.

BIBL.—See SHAWM, esp Praetorius and Kinsky

**CRUSELL, Bernhard Henrik** (b. Nystad [Uusikaupunki], 15 Oct. 1775; d. Stockholm, 28 July 1838).

Finnish clarinetist, conductor and composer. He was taught the clarinet when still a child at Nurmijärvi near Helsingfors and soon attracted the attention of the military authorities at the Sveaborg fortress. It was there that he met Major Wallenstjerna, who became his patron, and in 1791 they both moved to Stockholm, where Crussell studied under Vogler. He became one of the greatest clarinet virtuosos of his time and obtained a post as a member of the royal orchestra, also becoming a conductor of military music. Later on he studied with Tausch in Berlin and with Lefèvre and Gossec in Paris, but for the main part of his life he worked in Sweden. After his move there he only once returned to Finland, to give a concert in 1801.

Crussell's compositions include clarinet concertos, quartets for clarinet or oboe and strings, solo and choral songs, and an opera, 'Lilla Slafvinna', produced at Stockholm in 1824 and repeatedly performed in Sweden and Finland. His 12 songs taken from Tegnér's 'Frithjofs Saga' also became very popular and were translated into Danish and German.

For the Stockholm opera Crussell adapted ten translations of various operas, including Mozart's 'Figaro', Beethoven's 'Fidelio', Rossini's 'Barbiere' and Auber's 'Muette de Portici'. His compositions show a fresh and melodious style and sound technical ability; his contemporaries also praised his smooth tone on the clarinet.

T. H. (ii), adds.

**CRÜVELL, Friederike Marie.** See below.

**CRUVELLI (Crüwell), Jeanne Sophie Charlotte** (b. Bielefeld, Westphalia, 12 Mar. 1826, d. Monte Carlo, 6 Nov. 1907).

German soprano singer. She had a voice of admirable quality, compass and truth, but did not receive the instruction which should have developed its advantages and enabled her to avoid those faults and imperfections which are inevitable without it. She made her début at Venice in 1847, and the beauty of her voice ensured her a brilliant success, which was confirmed when she sang in Verdi's 'Attila' at the theatre of Udine on 24 July, and in his 'I due Foscari'. Going to London in 1848, she Italianized her name, and became known as Cruvelli. She first appeared there as the Countess in Mozart's 'Nozze di Figaro'. In 1851 she went to Paris, where she had sung at concerts before her first appearance in Italy. She appeared with immense success in 'Ernani' at the Théâtre-Italien, for Verdi's music seemed made for her. She sang again in London that year, her performance in 'Fidelio' being especially admired. In Jan. 1854 she was engaged at the Opéra in Paris and appeared as Valentine in 'Les Huguenots', and later in Verdi's 'Vèpres siciliennes'. She sang in Dublin in Sept. and Oct. 1854.

Besides her splendid voice Crüvelli had a very fine face and figure, and an enormous energy of accent and dramatic force which led her to exaggeration of effect. In 1856 she married Vicomte Le Vigier and retired. Her eldest sister, Friederike Marie Cruvelli (b. Bielefeld, 29 Aug. 1824; d. Bielefeld, 26 July 1868), appeared in London in 1851, taking her sister's place without great success.

**CRUZ, Agostinho da** (b. Braga, c. 1590; d. Coimbra, ? 19 June 1633).

Portuguese instrumentalist and composer. He was a regular canon of the community of Santa Cruz at Coimbra, having received his habit on 12 Sept. 1609. In later years he was choirmaster in the royal monastery of St. Vincent de Fora at Lisbon. He is said to have been a very skilled performer on the viol and the organ, the obituary index of

Santa Cruz mentions him as "Insignis pulsator organorum". He compiled 'Prado musical para órgão' and 'Duas artes, huma de cantochão por estylo novo, outra de órgão com figuras muito curiosas, compostas no anno 1692', both dedicated to John IV of Portugal, and 'Lira de arco, ou arte de tanger rabeça', inscribed to João Mascarenhas, Count of Santa Cruz. These three treatises were never printed and all the manuscripts have been lost. This is particularly regrettable in the case of the 'Lira de arco', for this certainly represented one of the earliest specimens of treatises on violin playing.

A small number of Cruz's organ compositions have been found in the course of the 1930-40s. Two 'Versets', the second incomplete, were kindly communicated to the author of this article by Manuel Joaquim of Viseu, who claims to possess the copy of another piece, but cannot decide to mention his source. However, the most extensive composition by Cruz so far known is contained in MS 1607, coloc. G. 7 ('Liuro de obras de órgão juntas pella curiosidade de P.P.Fr. Roque da Conceição, Anno 1695'), owned by the Biblioteca Municipal of Oporto. It is a 'Tento de 4º tom', showing a keyboard style closely related to that of M. Rodrigues Coelho, Pedro de Araújo and Correa de Arauxo. Cruz is entirely absorbed in the dignified Hispanic organ style of his time.

**CRUZ, Ivo** (b. Cidade de Corumba, Brazil, 19 May 1901).

Portuguese conductor and composer. His first musical studies were made in Lisbon with T. da Silveira (pianoforte) and T. Borba (harmony). At the same time he studied law at Lisbon University. In 1923 he founded the Renascimento Musical, which was to become a very important factor in the revival of ancient Portuguese music. In 1924 he obtained his degree as doctor of law and in the same year he went to Munich for five years, where he completed his musical studies under Richard Mors and August Reuss. He also studied musicology at the University there. He founded the choral society Duarte Lobo in Lisbon in 1930, in 1933 a chamber orchestra and in 1937 the Philharmonic Orchestra. With both the choir and orchestra he gave many concerts and made known a considerable number of works. He has also conducted concerts in Austria, Germany, Spain and Switzerland. Cruz occupies several high positions in Portuguese musical and intellectual life. In 1938 he was appointed director of the Lisbon Conservatory, and he

is one of the most ardent nationalists among Portuguese musicians.

Cruz's compositions include the ballet 'Pastoral', the choreographic symphony 'Amadis', 'Motivos lusitanos' for orchestra; 2 concertos called 'Lisbon' and 'Coimbra'; 'Vexilla Regis' and 'Soneto de amor' for solo voice and orchestra; Sonata for violin and pianoforte, 'Aguarelas' for pianoforte and 3 song cycles: 'Os amores e as dores de poeta', 'Baladas lunáticas' and 'Canções perdidas'. He has also written several articles on Portuguese music for musical journals.

S. K.

**CRWTH (Crowd).** A stringed instrument, the latter word representing the Anglicized form of the Welsh name, which is in turn derived from the old Irish "crot" or "cruith".<sup>1</sup> The oldest illustrations (11th cent.) depict the instrument as oblong in shape, with both ends slightly rounded: there are four or six strings passing over a bridge (or attached to a holder) placed upon a small sound-box, and it is played with a short bow. There was at that time no fingerboard, and in this respect it corresponded with the Finnish "fir-tree harp"<sup>2</sup>, now on the verge of extinction, in which the strings are stopped by the pressure of the finger nails against their sides. In the 13th century a rudimentary fingerboard appears and the instrument possesses a "waist" like the bowed *rotte* (or *rote*) used on the Continent. It should be remembered that this "waist", so conspicuous and so convenient in the violin, was not primarily adopted to accommodate the use of the bow; for it appears on a form of guitar figured in a bas-relief, dating from before the year 1000 B.C. and discovered in the old Hittite palace of Uruk in Asia Minor.<sup>3</sup>

In Wales the bowed *crwth* was highly esteemed, but there is no evidence that it was bowed there as early as the close of the 12th century, when Giraldus Cambrensis mentions as the three favourite instruments of the Welsh the *cithara*, *tibia* and *chorus* (? *chorus* = *crwth*; the *cithara* being more likely identifiable with the *clairseach*). The form shown on PLATE 66, Vol. VIII, p. 146 (i), No. 4, is that adopted at a later date: four strings lie over the fingerboard and two are placed at the side, as is frequently found in the 16th-century *lyra-viols*; these two strings were bowed or plucked by the left-hand thumb at will, and the arrangement suggests that the instrument was primarily designed for accompaniment: an old Welsh treatise (B.M. Add. MSS 14,939) informs us that on it were played "the four principal chords" and "the twenty-four musical measures", i.e. set successions of tonic and

<sup>1</sup> See CHORUS and ROTTE.<sup>2</sup> See KANTELE.<sup>3</sup> Cf. Penot and Chipiez, 'Histoire de l'art de l'antiquité', Vol. IV.

dominant chords. For the easier fingering of these chords the bridge is set aslant as on the orpharion and, no doubt, the neck was "fretted" with gut as in the lutes and viols. There is no soundpost, but the left foot of the bridge passes through the circular soundhole and rests on the flat back of the instrument, as still to be seen in the rustic Greek lyra, a form of rebec.

Edward Jones<sup>1</sup> gives the tuning as at (a); Bingley<sup>2</sup> as at (b):

Bingley's tunings of the strings on the finger-board should certainly be an octave lower, as the length of string is that of the viola, and a writer in the middle of the 18th century calls the crwth "a sort of tenor fiddle".

Genuine specimens of this instrument are now very rare: one is in the Victoria and Albert Museum in London and another in the Corporation Museum at Warrington — both 18th-century instruments. There is also one at Aberystwyth. Aged performers on the crwth certainly lingered on in Wales till almost the middle of the 19th century, but the name is now given to the violin by the country folk, as crowd is in England.

The crwth trithant or 3-stringed crwth is no doubt identical with the rebec, which in the 16th century was called a crowd.

F. W. G., rev.

**CRYPTOGRAPHY, MUSICAL.** A special use of musical notation in which each symbol is arbitrarily given a second, extra-musical meaning; the symbols are then so arranged that they convey some hidden message.

Musical notation has always been to a certain extent a secret art, intelligible only to the initiated<sup>3</sup>, and it is no more than a short step from this attitude to the deliberate use of musical notation for cryptographic purposes. The earliest instance of this in European music seems to be in 'Les Bizareries du Seygneur des Accors' (Rouen, 1584), though certain kinds of "eye music" come very close to true cryptography<sup>4</sup>; for instance Josquin's 'Hercules dux Ferrarie' Mass is built on an artificial *canto fermo* consisting of a row of notes whose solmization syllables (re ut re ut re fa mi re) correspond to the vowels contained in the title of the Mass. During the course of the 17th century a rather large number of schemes for musical cryptography

were devised. Thus Kircher, in his 'Murgia' (Rome, 1650), suggests the following scheme for the transmission of code messages by embedding them in the texture of a piece of orchestral music:

Number of notes to be played in succession:

	1	2	3	4
1st instrument	a	b	c	d
2nd "	e	f	g	h
3rd "	i	k	l	m
4th "	n	o	p	q
5th "	r	s	t	v
6th "	w	x	y	z

P. G. Schott, in his 'Schola steganographia' (Nuremberg, 1665), and H. a Sunde, in his 'Steganologia' (Nuremberg, n.d.), suggest some similar schemes. Schott, for instance, assigns each letter to a note in the diatonic scale a'-e', the second half of the alphabet corresponding to notes of twice the length of those used in the first half. A scheme of this kind is found in actual use in a manuscript by J. C. Faber (1729) in the Wolfenbützel Library; the very bizarre melodic line to be played by the viola in an otherwise normal musical texture turns out to be a cypher version of a moralizing couplet. Further schemes of the same kind may be found in the books mentioned earlier and in J. B. Friderici's 'Cryptographia' (Hamburg, 1685). An elaborate cypher due to Michael Haydn is printed in 'Biographische Skizze von Michael Haydn' (Salzburg, 1808), p. 52. This even extends to the use of rests to denote various kinds of punctuation; thus  stands for a query.

Perhaps the most fantastic of all schemes is the 'Langue musicale universelle' (Paris, 1866), devised by François Sudre. This is no mere code. It is an attempt at an international language of pure sound, conveyed to the ear by musical notes and to the eye by musical notation. Sudre's first experiments were made in 1817 and the first announcement of his project appeared in the 'Moniteur' for 29 Oct. 1823. In 1825 Sudre made a seven-month concert tour with two of his pupils in order to bring his ideas to the notice of the public, and three years later he read a paper before a meeting of the French Academy, conversing with an eleven-year-old pupil who "spoke" to his master by playing on the violin. A special commission was appointed by the Academy to examine Sudre's claims, the commission including Cherubini, Boieldieu and Lesueur; as a result of their favourable report elaborate experiments were carried out in the application of his system to cryptography, military commands and normal conversation. A number of learned societies of various kinds added their commendation to that of the Academy, and contemporary accounts of the considerable stir created by Sudre's proposals may be found

<sup>1</sup> 'Musical Relics of the Welsh Bards' (1794).

<sup>2</sup> 'Musical Bibliography' (1814).

<sup>3</sup> See NOTATION. <sup>4</sup> See EYE MUSIC.

in Fétis's 'Revue musicale', Vols. IV, V and IX. Sudre's scheme was devised from a philosophical point of view, transcending the mere alphabetic games of most other musical cryptographies. Each note or musical phrase represented an idea, not a letter or combination of letters; thus all linguistic barriers could be broken down, at least in the view of the inventor. Thus  = nega-

tion (not, no, un-, dis-, etc.);  =

conjunction (and, plus);  = God,

 = the devil; and so on. It is sad

to record that nothing ever came of this ingenious and public-spirited scheme, despite the interest it aroused at the time.

A more recent use of musical cryptography can be found in such detective fiction as George A. Birmingham's 'Hymn-Tune Mystery' and Dorothy Sayers's 'The Nine Tailors', and also in some films dealing with espionage. *Jeu d'esprit* of the pleasantly fanciful kind represented by the 'Sphinxes' in Schumann's 'Carnaval', Ravel's minuet on Haydn's name<sup>1</sup> or the well-known German rebus on Bach's name:

should also perhaps be included under this heading.

**CRYSTAL PALACE.** An enormous structure of iron girders and glass, a kind of apotheosis of the Victorian conservatory, designed by Sir Joseph Paxton to house the great London Exhibition of 1851. It occupied some 20 acres of Hyde Park in the space between Rotten Row and Knightsbridge. The Exhibition was opened by Queen Victoria on 1 May of that year and remained open until 15 Oct., when the prince consort attended the closing ceremony. Among the exhibits, which exemplified every form of modern industry and invention, were several

organs by different makers<sup>2</sup>, French, German, Italian and English. Performances were given periodically on these instruments in order that their qualities might be tested and compared.

In the following year the building was removed, to be re-erected at Sydenham, in South-East London, where in a commanding position on the hill it could be seen from many distant parts of London, and was surrounded with spacious grounds.

George Grove was appointed Secretary to the Crystal Palace Company and the subsequent use of the palace for the advancement of music was largely due to his initiative. At first, however, concert-giving was in a rudimentary state, though the wind band well known as the Crystal Palace Band was a first-rate military-band combination and comprised the best wind players available in London. It held its own against the famous bands which visited the Palace on special occasions and included the French Garde Impériale, the Royal Artillery Band and the several Guards Bands. It was conducted by Henry Schallehn (1815-93), a German bandmaster who had previously been in charge of the band of the 17th Lancers. August Manns, also a bandmaster from Germany, as so many were in those days, was his sub-conductor. They quarrelled in 1854, and Manns resigned; but he returned in 1855 and took Schallehn's place, his engagement dating from 14 Oct.

From this moment an important concert-giving institution developed. The band was for the moment still a wind band, and the open centre transept was the only place for its performances. Under the efforts of the new conductor, however, things soon began to mend. Manns conducted a "Saturday Concert" in the "Bohemian Glass Court" the week after his arrival; through the enlightened liberality of the directors the band was changed to a full orchestra, a better spot was found for the music, adjoining the Queen's rooms (afterwards burnt) at the north-east end, and at length, through the exertions of Robert Bowley, then general manager, the concert-room was enclosed and roofed in, and the famous Saturday Concerts began, to be continued with a constant advance, both in the value and variety of the selections and the delicacy and spirit of the performances, until 1901.

<sup>2</sup> Fuller descriptions of four of these organs with tabulated specifications of two of them will be found in E. J. Hopkins's article, ORGAN, published in the first and second editions of this Dictionary. A fifth exhibition organ built by Gray & Davison, to be distinguished from that which the same firm subsequently built for the Handel Festival at Sydenham, was fully described with specification in the 'Illustrated Exhibitor' (Nov. 1851). It was a three-manual instrument with pedal board C<sub>1</sub> to E<sub>1</sub>. It gained a Council Medal, and after the Exhibition it was sold to St. Anne's Church, Limehouse.

<sup>1</sup> The spelling of names in musical letters is possible in English only up to and including letter G; in German H (H<sub>h</sub>) and S (S<sub>h</sub>=E<sub>s</sub>) can be added; French composers have devised a way of using the whole alphabet by the simple if arbitrary system of renaming the notes in rising octaves where they use the English and German nomenclature, also sometimes by using the musical syllables of their own: *ré, mi, fa*, etc.

THE FIRST HANDEL FESTIVAL, CRYSTAL PALACE, LONDON, 1857

The concerts, which began with the first Saturday in Oct., lasted, with an interval at Christmas, till the end of Apr. The orchestra consisted of 16 first and 14 second violins, 11 violas, 10 cellos and 10 double basses, with full wind, etc. The programmes usually contained two overtures, a symphony, a concerto or some minor piece of orchestral music, and four songs. The distinguishing feature of the concerts was their choice and performance of orchestral music. Not to mention the great works of all the time-honoured classics, the audience were familiar with Schumann's symphonies and overtures, and with Schubert's symphonies and 'Rosamunde' music, at a time when those works were all but unknown in the London concert-rooms. Mendelssohn's 'Reformation Symphony' was first played there, so was his overture to 'Camacho'; Brahms's symphonies, piano-forte concertos, Variations on a theme by Haydn and 'Song of Destiny', Raff's various symphonies, Liszt's 'Ideale', Rubinstein's symphonies, Goetz's Symphony, Concerto and overtures, Smetana's 'Vltava', Wagner's 'Faust' overture, Sullivan's 'Tempest' music and Symphony in E major, Benedict's Symphony in G minor and many other works were obtained (often in manuscript) and performed before they were heard in any other place in the metropolis. A very great influence was exercised on the renaissance of English music by the frequent performance of new works of importance by Mackenzie, Parry, Stanford, Cowen and others.

A disposition was apparent in the managers, particularly Grove himself, of the concerts to present the audience with pieces of special interest, such as the manuscript works of Schubert and of Mendelssohn, Beethoven's arrangement of his violin Concerto for piano-forte and his overture 'Leonora' No. 2, the alternative *andante* written by Mozart for his 'Paris' Symphony, the first version of Mendelssohn's 'Hebrides' overture and other rare treasures of the same nature. Owing to the wind and a portion of the strings of the orchestra being the permanent band of the Crystal Palace, Manns had opportunities for rehearsal which were at that time enjoyed by no other conductor in London. As the one permanent institution for the performance of symphonic music and, therefore, as the one place in which the rising composer could hope to gain a performance of his new works, these concerts held a unique place in the musical life of London and its environs through the latter half of the 19th century. A catalogue of the repertory during 40 years was published in 1895. The concert-room was carved out of the north-east corner of the central transept. The transept itself provided a vast auditorium

with organ<sup>1</sup> and orchestra seats at the south end for musical performances on a larger scale. Most important among these was the triennial Handel Festival.<sup>2</sup> The 1926 Festival proved to be the last, though the project of giving one in 1929 was considered.

The Crystal Palace had been secured for the nation in 1913 by a fund raised partly through the instrumentality of 'The Times' and placed in the hands of trustees. During the war of 1914-18 it was used as a training-centre for the Royal Naval Division, and as such officially described as "H.M.S. Crystal Palace". Afterwards, with the revival of its older musical activities, came various new ones, especially competitions on a large scale, Sunday School singing, Free Church gatherings and brass band contests.<sup>3</sup> The School of English Church Music held two festivals there in 1933 and 1936, for which members of church choirs from all over the country were brought together and conducted by (Sir) Sydney H. Nicholson in services at which addresses were given by the Archbishop of Canterbury. It was intended that these triennial services, though devoted to a very different end, should in some way take the place of the old Handel Festivals by appealing to a similar public. An impressive feature was the sight and sound of the processions which, approaching from the east and west ends of the nave simultaneously and singing unaccompanied hymns in alternate verses, met in the transept and were then joined by organ accompaniment, supporting the massed choirs. Both the ceremonial organization and the musical execution (timing and intonation) were excellently managed.

On the night of 30 Nov. 1936 the Crystal Palace was totally destroyed by fire, an enormous conflagration seen for many miles round and bringing to an end a long series of musical activities which had made it important in the popular musical life of greater London and in a sense of Great Britain for over eighty years. Nowhere else could certain festivities and competitions be adequately presented on the same scale.

See also Handel Festival.

CSAKAN. See CZAKAN.

CSÁRDÁS (non-Hungarian spelling usually *Czardas*). A Hungarian dance. The name is an adjectival form of the noun *csárda*, meaning an inn, especially a country inn. Extremely popular in Hungary as well as abroad—

<sup>1</sup> The organ built in 1854 by Gray & Davison for the Handel Festival remained the property of the builders until during the first world war, when it was sold to the Palace authorities for a nominal price. It was subsequently restored and fitted with pneumatic action by Walker.

<sup>2</sup> See HANDEL FESTIVAL and PLATE 16, Vol. II, p. 552.

<sup>3</sup> See BRASS BAND.

<sup>4</sup> Incorporating most of Sir George Grove's original article entitled 'Crystal Palace Saturday Concerts'.

where Hungarian dancing is invariably associated with it — it is an interesting product of the conscious national revival of the 19th century which aimed at emphasizing the Hungarian character in various manifestations of life. It is a stylized dance, composed of folk elements and believed by its aristocratic promoters to be "identical with that danced by the daughters of rustics in any country inn on Sunday afternoons". But the word was unknown among the "rustics" at first; it is said to have been coined by Count Béla Wenckheim.

The dance itself was introduced to the fashionable balls of the capital during the early 1840s. There is a description of the event in the memoirs of Baron Frigyes Podmaniczky, the later intendant of the opera-house, giving 1839 as its earliest date and associating its initiation with Count István Széchenyi. Another source mentions Nagyvárad (now Oradea Mare, Rumania) as the place of its origin and 1834 as the date. The first documentary reference to the csárdás occurs on a piece of manuscript music among the papers of the Borbály de Roff family, now in the Archives of the Hungarian National Museum, dated 1835. Liszt first utilized these dances in his 'Magyar Dallok' (1840-47), No. 2, and in their later version entitled 'Hungarian Rhapsodies', No. 12. The most interesting of his relevant compositions are the three Csárdáses (*i.e.* 'Macabre', 'Allegro' and 'Obstiné'). Hubay's transcriptions, entitled 'Scènes de la csárda', acquired international popularity. Among more recent works Sándor Veress's 'Six Csárdáses' for pianoforte deserve mention. Their treatment is much like Bach's stylized use of dance movements.

Musically the dance shows hardly any difference from the *verbunkos*, whence it originated. Characterized by simple duple (2-4) time, frequent syncopations and typical cadential formulae, it is retraced to the quick (*fris*) part of the mature, late-period *verbunkos*, retaining its binary pattern at first, but becoming multipartite and enlarged with a slow introduction of its own later on. During the 1850s its pace was considerably quickened, giving rise to "speedy" and "slow" (*sebes* and *lassu*) variants of the dance. The slow opening part of the *verbunkos*, on the other hand, constituted the source of the so-called "Hungarian round dance" (*körmagyar*), a stylized dance of numerous figures, devised by Lajos Szabó de Szöllös, a reputed dancing-master, *maitre de ballet* of the National Theatre, Pest, to the music of Márk Rózsavölgyi.<sup>1</sup> The first extant csárdás is by Gáspár Bernát, the biographer of János Lavotta, believed to have

been published in 1834. Apart from Rózsavölgyi, the names of Kornél Ábrányi, Károly Boka, István Dankó, Ignác Frank-Szabadi, János Palotássy-Pecsenyánszki, Ferkó Patikárus, József Riszner, Ferenc Sárközi, János N. Svastits stand out as those of csárdás composers. The popularity of the dance culminated between the 1850s and 1880s.

**CSATKAI, Endre** (*i.e.* Andrew) (b. Darufalva, Hungary [now Drassburg, Austria], 13 Aug. 1896).

Hungarian art historian and writer on music. After attending secondary schools at Sopron he studied at the Universities of Vienna and Budapest, graduating at the latter in 1925. He was appointed custodian of the Wolff Museum at Kismarton (Eisenstadt) in 1926, serving until 1938. During his tenure of office he organized the music department of the museum and compiled its catalogue in two volumes. In 1945 he was appointed director of the Municipal Museum at Sopron.

Csatkai's essays on various aspects of musical culture at Sopron, including Liszt's relations to Hungary, etc., dealing with a number of not generally known facts, are valuable contributions to the history of music in Hungary. Besides several monographs, etc., on antiquarian and art subjects, he wrote music criticism for various periodicals. His publications on musical subjects include:

- 'A Soproni muzsika története' ('History of Music at Sopron') (Sopron, 1925).  
 'A Soproni Zenecszelet száz éves történetének rövid vázlata' ('A Short Sketch of the Hundred Years' History of the Musical Association at Sopron') (Sopron, 1929).

**CSERMÁK, Antal György** (i.e. Anthony George) (b. ? 1774 [or ? 1771]; d. Veszprém, 25 Oct. 1822).

Hungarian violinist and composer. His early life is shrouded in mystery; he is variously supposed to have been a natural son of count Illésházy, a prominent aristocrat and lieutenant of county Trencsén in Hungary, of Bohemian origin (see his patronymic, which may originally have been Čermák), and he sometimes signed his name as "Noble of d'Luuk and Rouhans (or Luid and Rohan)". He appeared in Vienna as a renowned violinist and teacher of his instrument. His accomplished interpretation of Haydn, Mozart and the Italian masters won him esteem, and it is related that the French ambassador tried to persuade him to go to France. Csermák, however, went to Hungary; on his way to Pest he stayed at Pozsony (Pressburg, now Bratislava, Czechoslovakia) for a short time.

In Pest he became leader of the orchestra belonging to the Hungarian theatrical company, there is reason to believe that he acted also as their conductor and composed incidental music for at least one of the plays. In 1795 he gave a concert in the theatre, of which however no programme remains.

As a brilliant violinist he was welcome at every country seat; himself a nobleman by descent, he was treated as a social equal by his hosts. At Prince Grassalkowich's residence at Godóllő he met János Bihary, whose playing filled him with enthusiasm and drew his attention to the Hungarian national style. In consequence of an unhappy love-affair—also, according to rumours, Bihary's "professional jealousy"—he took to drink, and gradually signs of insanity manifested themselves; he roved the countryside, turning up at different places and residences of his aristocratic friends and patrons. Of the last period of his life few reliable facts remain.

Csermák was one of the three great figures usually associated with that characteristically Hungarian instrumental style of music, the *verbunkos*, which flourished from about 1785 to 1835. The three musicians credited with its development are Bihary, Csermák and János Lavotta: Bihary enriched it with ancient melodies and popular elements picked up in the country, also with his virtuoso style; Lavotta strove to give formal coherence to the style; and Csermák tried to reconcile it with the "western" manner of performance. Thus, writing his compositions for different, often astonishing combinations such as violins, viola,

double bass, clarinets, bassoons and horns, he not only expressed the "national" content in a European form, but was also a pioneer of the chamber-music style in Hungary. Of his violin playing Count Dessewffy and Count Fáy, both great patrons of music, the latter an accomplished pianist, had a very high opinion and stated that Csermák would hold his own against many of the famous violinists of "cultured Europe". Some of his compositions were published in collections and transcriptions, others remained in manuscripts to be found in various libraries.

In the summer of 1948 a number of Csermák's works, among them a string Quartet, all in manuscript, were discovered in the Helikon Library founded at Keszthely by Count György Festetics in the first decade of the 19th century.

**CTESIBIUS OF ALEXANDRIA** (b. ?, d. ?).

One of the founders of the science of pneumatics, who flourished between 246 and 221 B.C. His date is of importance, not only for the above claim, but in the history of the hydraulis, and in determining the period of two other savants—Hero and Vitruvius, whose *floruit* has been so much discussed. Athenaeus (*fl.* A.D. 200) says ('Deipnos', IV, 75) that Ctesibius lived under Ptolemy Euergetes II (146–116 B.C.), but Paul Tannery has shown ('Revue des études grecques', IX, p. 24) that this is incorrect, and that it was under Euergetes I (246–221 B.C.), although the former date had been accepted by many writers, including Fabricius ('Bibl. graec.', 1790, IV, 222), Clinton ('Fasti hellenici', 1824 *et seq.*, III, 535) and Woodcroft ('Hero of Alexandria', 1851, p. 10). Of his biography we know nothing, but from a hint given by Vitruvius ('De arch.', IX, 9) Ctesibius appears to have begun his researches at an early age. He is usually considered to have been the inventor of the hydraulis, and writers make this claim on statements made by Philo, Athenaeus, Pliny and others, though these sources do not actually furnish this proof. Philo simply refers to Ctesibius in respect of what he taught concerning the "nature of air". Athenaeus only says that Ctesibius constructed a rhyton, not a hydraulis. Pliny merely speaks of Ctesibius in reference to hydraulic machines in general. In spite of this there are good reasons for believing that the first hydraulis was by him. This suggestion is based on an Arabic manuscript on the hydraulis attributed to a certain Múristus, Míristus or Múrtus, but Farmer has demonstrated ('The Organ of the Ancients', p. 19) by both graphical and documentary evidence that this name Múristus or Míristus may be a scribal distortion of the name Ctesibius. This Arabic work, which was known probably in the 9th century has come down to us in several manuscripts, one of which is entitled 'San'at al-urghin al-búqí' ('Construction of the Flue-pipe Organ') and it gives a specification of a hydraulis, which is also delineated, of a type that belongs to a period long anterior to the instrument described by Vitruvius and Hero; and on this account alone the treatise may be either that of Ctesibius or one based on his plans.

**CUBILES, José** (b. Cadiz, 15 May 1894).

Spanish pianist and conductor. He entered the Madrid Conservatory in 1906 and at the age of fifteen won the "Premio Extraordinario" given by the Círculo de Bellas Artes and several other special prizes. In 1911 he won the first prize of the Conservatory and continued his studies at the Paris Conservatoire under Diémer, obtaining in 1914 the "Premier Prix" and the added distinctions of the Gold Medal and a Pleyel grand pianoforte. In 1916 he was appointed professor at the Madrid Conservatory and founded a trio with the cellist Ruiz Casaux and the violinist Fernández Ortiz. In the same year Falla, as a tribute to Cubiles's exceptional qualities as virtuoso and musician, confided to him the first performance of his pianoforte and orchestral work 'Noches en los jardines de España'.

At the end of the first world war Cubiles began to undertake long tours abroad, and in 1920 he played with great success in France, Belgium, Italy, Great Britain and Germany, giving solo recitals and playing with the principal European orchestras. He was heard in Germany as conductor and played and conducted simultaneously the Berlin Philharmonic Orchestra. In Spain, in addition to his pianistic activities, he has conducted the principal Spanish orchestras. In 1935 he gave a series of concerts in Madrid at which he performed all the Beethoven pianoforte concertos. Ever since 1926 he has been the professor of advanced classes in the Madrid Conservatory, and in 1943 he was appointed to be the professor of the special virtuoso class. After the death of Arbós, Cubiles was elected to fill the vacant seat in the Royal Academy of Fine Arts of Saint Ferdinand. He was also elected a member of the Academies of Santa Isabel de Hungría at Seville and of Hispano Americano at Cadiz.

Cubiles as virtuoso and musician is to-day the most important link between the past and present generation of Spanish artists. In his youth he appeared before the public as the brilliant exponent of the pianoforte music of Granados, Albéniz and Falla at the moment

when they were building up the fame of the Spanish style in music. His first public success as virtuoso occurred in the very year of the death of Granados in 1916. His peculiar qualities of technique and his rhythmic power admirably qualified him to perform the pianistic works of Albéniz, and it was his subtle inflections in addition to his virtuosity that made him so effective a performer of Falla's 'Nights in the Gardens of Spain'. Throughout his career he has maintained his close contact with the successors of Falla and Albéniz, but mention of his skill as an interpreter of César Franck, Debussy and Ravel must not be omitted, nor his constant endeavours to create in Spain a sound school of classical pianoforte playing.

W. S.

**CUCKOO** (Instrument). See TOY SYMPHONY.

**CUCLIN, Demetre** (b. Galatz, 1885).

Rumanian composer. He studied at the Bucharest Conservatory and later with Widor at the Paris Conservatoire and with d'Indy at the Schola Cantorum there. In 1922-30 he taught in New York, but he returned to Rumania to become professor at the Bucharest Conservatory. His works include the operas 'Soria', 'Agamemnon' (after Aeschylus), 'Trajan' and 'Bellerophon'; an overture for chorus and orchestra, sacred and secular choruses; a Symphony, a 'Symphonic Scherzo', a Trio for violin, cello and pianoforte, sonatas and suites for violin and pianoforte and for cello and pianoforte; pianoforte pieces; songs, etc.

E. B.

**CUCUEL, Georges** (b. Dijon, 14 Dec. 1884; d. Grenoble, 28 Oct. 1918).

French musicologist. He was the son of a lecturer at the University of Dijon. A pupil of the Lycée Louis le Grand in Paris, he obtained his doctorate (1913) with 2 theses, 'La Poupinière et la musique de chambre au XVIII<sup>e</sup> siècle' and 'Études sur un orchestre au XVIII<sup>e</sup> siècle', both valuable contributions to the history of symphony in France and of its orchestra. He was a specialist in all musical matters concerning the 18th century, and his book on 'Les Créateurs de l'opéra-comique français' (Paris, 1914) contains interesting ideas on the subject.

Among Cucuel's remarkable articles issued in different periodicals are: 'Le Baron de Bagge et son temps'; 'La Critique musicale dans les revues du XVIII<sup>e</sup> siècle' ('Année musicale', 1911, 1912); 'Quelques Documents sur la librairie musicale au XVIII<sup>e</sup> siècle' (S I M. G., 1912), etc. He contributed to the 'Revue du XVIII<sup>e</sup> siècle', to the 'Bulletin de la Société Française de Musicologie' (1918): 'Les Aventures d'un organiste dauphinois'. He published a study, 'Le Pays de Montbéliard vu par les voyageurs du

XVIII<sup>e</sup> siècle' (1917), and left a collection of documents which were to appear as 'Feste musicali italiane del 700'. A posthumous article on Gluck's operas was brought out by the 'Revue musicale' (1922). He died of influenza at the military hospital of Grenoble. He was a zealous worker, with an erudite and precise mind, and his judgment, always based on serious documentation, was of a solid and penetrating quality.

**CUDMORE, Richard** (b. Chichester, 1787; d. Manchester, 29 Dec. 1840).

English instrumentalist and composer. He received his first instruction in music from James Targett, an organist of Chichester. At a very early age he became a proficient on the violin, being placed under Reinagle in 1797, and at the age of eleven was placed under Salomon. In 1799 he led the orchestra at the Chichester theatre and was engaged in the orchestra at the Italian Opera, London. He next resided for nine years at Chichester, and then removed to London for the purpose of studying the pianoforte under Woelfl, becoming a member of the Philharmonic Society's orchestra. He settled at Manchester as leader of the Gentlemen's Concerts. On one occasion, at Liverpool, he played a violin concerto, a pianoforte concerto and a cello concerto.

Cudmore composed several concertos for the violin and others for the pianoforte, as also an oratorio, 'The Martyr of Antioch' (published), portions of which were performed at Birmingham, Manchester and Liverpool. Of his opera, 'Jeanie Graham, or The Year Forty-Five', of which no performance can be traced, six songs were published about 1830.

W. H. H., adds.

**CUE** (Fr. *queue*) (1) The "tail" of a preceding passage played or sung in a performance by some other instrument(s) or voice(s). Where a player or singer is reading from a separate part, and not from the score, some help is advisable to aid him in coming in correctly after long pauses. A few notes of some other part immediately preceding the entrance of his own are therefore printed small in the stave as a guide, and this is called a cue:

(2) Derived from the above, but distinct in its object, is the practice of "cuing" orchestral parts, so that what is written for a larger band may be played by a smaller one. For this purpose solo parts for wind instruments are frequently cued into the string parts.

G., rev.

**CUELLAR, Ramón** (b. Saragossa, 1777; d. Santiago de Compostela, 1833).

Spanish composer. He held appointments as *maestro de capilla* at Saragossa (1814) and Oviedo (1817) from which, owing to differences with the Chapter, he was transferred in 1828 to Santiago. Manuscripts of his works are found in many Spanish cathedrals, especially La Seo at Saragossa. Eslava prints a motet for 8 voices. J. B. T.

**CUENOD, Hugues** (b. Vevey, 1902).

Swiss tenor singer. Having studied at the Institut Ribaupierre at Lausanne, the Basel Conservatory and in Vienna, he taught for the short time at the Geneva Conservatory, an activity he abandoned for a career as concert and opera singer. Concert tours in many European countries have made him well known as an interpreter of modern works, and also of old music. He is a remarkable exponent of the Evangelists' parts in Bach's Passions. K. v. F.

**CUI, César Antonovich** (b. Wilno, 18 Jan. 1835; d. St. Petersburg, 24 Mar. 1918).

Russian composer of French descent. He was the son of a French officer who, unable to follow the retreat from Moscow in 1812, remained in Poland, where he subsequently married a Lithuanian lady and settled as professor of French at the High School of Wilno. In this establishment César Cui received his early education. He showed a precocious talent for music and was taught the pianoforte at an early age. During his school days he also received some irregular instruction in theory from Moniuszko. In 1850 Cui entered the School of Military Engineering in St. Petersburg and, on passing out in 1857, he was appointed to a sub-professorship. He was afterwards recognized as an authority on fortification and lectured on this subject in the Artillery School and the Staff College. Among his pupils he reckoned the Emperor Nicholas II.

Cui held the rank of Lieut.-General of Engineers, and was also president of the Imperial Russian Musical Society. While working for his examinations, he was compelled to lay aside his musical tastes; but when in 1857, being a full-fledged officer, he came in contact with Balakirev, his enthusiasm was at once rekindled. He was greatly attracted by the new and progressive ideas which the latter discussed with him. Although Cui owed something to Balakirev's guidance and criticism, he must be regarded, on the whole, as a self-taught musician. He married in 1858 Miss Bamberg, a gifted pupil of Dargomizhsky's, and his first opus number was a Scherzo for pianoforte (4 hands) on her name and his own: B. A. B. E. G. and C. G. An operetta, 'The Mandarin's Son', written for private performance in 1859, was quite in the style of

Auber and showed little individuality. But 'The Captive in the Caucasus', an opera on the subject of Pushkin's romantic poem, written in 1857, is a work of more substance, to which he added a middle act in 1881-82.

Cui's reputation as an operatic composer became more firmly established with his third dramatic work: an opera in three acts, based on Heine's romantic tragedy 'William Ratcliff' (St. Petersburg, 1869). 'Angelo', on a libretto from the play by Victor Hugo, was first performed at St. Petersburg in 1876. This work is usually regarded as the finest fruit of Cui's maturity; but it never enjoyed anything like popular success. Cui had a natural predilection for French texts, and his opera 'Le Flibustier' (1889) was composed to a French libretto taken from a play by Jean Richepin. It was first performed in 1894 at the Opéra-Comique in Paris and attracted considerable attention at the time; but it did not keep its place either in the French or Russian repertoires. 'The Saracen', an opera in 4 acts, from an historical novel by the elder Dumas, was first heard in St. Petersburg in 1899 and again in Moscow in 1902. A short opera, or rather a dramatic scene, in one act, to Pushkin's 'A Feast in Time of Plague', appeared in 1901; while an eighth dramatic work, from Maupassant's novel, 'Mam'zelle Fifi', was successfully produced at Moscow in 1903. There were two later works, 'Matteo Falcone' (Moscow, 1907) and 'The Captain's Daughter' (St. Petersburg, 1911). The vocal score of another opera, 'Puss in Boots', was published.

After 1864 Cui was an industrious contributor to many leading Russian papers, while his articles in French and Belgian publications were some of the first to call attention to the remarkable activity of the New Russian school. Most of the leading characteristics of Cui's style are apparent in 'Ratcliff', and it seems surprising that this opera, with all its poetic charm and pathos, should have been so coldly received by the public and critics in Russia. It is possible that the crude sensationalism of the libretto did not help to commend the opera to a nation whose dramatic traditions are derived from the realistic plays of Gogol and Ostrovsky rather than from the romanticism of Schiller's 'Robbers' and kindred dramas. 'William Ratcliff' tends more to lyrical than to declamatory opera. Cui's melody is refined and exhales an almost feminine tenderness; but it is not strikingly original. It does not flow in a broad stream of *cantilena*, but takes the form of continuous *arioso*, a method which is often ineffective, because it blurs the clear edges of melody and recitative. In 'Angelo', which is constructed on altogether broader lines than any other of his operas, Cui shows considerable power of

expressive declamation. His harmony is interesting and original, in spite of certain recurrent tricks, such as the excessive use of pedal points, tonic and dominant, and the over-elaboration of the inner parts at the expense of effective melody. Cui was not so great a master of orchestration as some of his compatriots, nor was he in his element when dealing with massive choral effects. He was a miniaturist who worked most effectively on a small scale. In solo and above all in love duets we find him at his best. His lyrical vein was more tender than virile, consequently his heroines were more lifelike than his heroes. Mary in 'Ratcliff', Thisbe and Catharine in 'Angelo', are sympathetic and convincing creations. After 'Angelo' Cui's work took a new tendency — that exclusive preoccupation with small forms and polished technique which is best exemplified in such exquisite trifles as his little suites and pieces for pianoforte.

Summed up, Cui's position as a composer appears in some respects paradoxical. Although he was the first disciple of Balakirev, and one of the chief upholders of the national school, the Russian element is exceedingly attenuated in his own music. His natural gift was vocal rather than symphonic, if we may judge from the preponderance of vocal works in the list of his compositions. "He needs a text to bring out his power of delicate psychological analysis." But, while drawn to opera and song, Cui reflected most frequently the influence of such instrumental composers as Chopin, Liszt and Schumann, none of whom is a suitable model for the formation of a broad and effective opera style. Again, Cui's music has passion, grace, a delicate and refined lyricism, but not that note of tragic intensity which the subjects of his operas seem to demand. When dealing with such ultra-romantic librettos as those of 'William Ratcliff' and 'Angelo' he gives the impression of a Herrick posing as a John Webster.

As a critic Cui united an elegant literary style with a keen satirical wit. He did good service in the cause of music at a time when Russia stood in need of enlightenment and was almost entirely given up to idolatry of all things Italian; but, as regards Russian music, his views cannot be accepted as comprehensive.

BIBL.—CALVOCORESSI, M. D. & ABRAHAM, GERALD, 'Cui', in 'Masters of Russian Music' (London, 1936), pp. 147-34.

## CATALOGUE OF WORKS

### OPERAS

- 'The Captive in the Caucasus' (libretto by Victor Alexandrovich Krilov, based on Pushkin's poem), 3 acts, comp., Acts I & III 1857, Act II 1881-82, prod. St. Petersburg, 1889.
- 'The Mandarin's Son', operetta, comp. 1859, privately perf. St. Petersburg, 1859.
- 'William Ratcliff' (lib. by Alexey Nikolayevich Pleshcheyev, based on Heine's drama), 3 acts, prod. St. Petersburg, 26 Feb. 1869.

- 'Angelo' (lib. by Victor Petrovich Burenin [Count Alexey Zhaminov], based on Victor Hugo's drama), 4 acts, prod. St. Petersburg, 13 Feb. 1876.
- 'Le Flibustier' (lib. [in French] by ?, based on Jean Richépin's play), comp. 1888-89, prod. Paris, Opéra-Comique, 1894.
- 'The Saracen' (lib. by ?, based on the play 'Charles VII chez ses grands vassaux' by Alexandre Dumas, sen.), 4 acts, prod. St. Petersburg, 1899.
- 'A Feast in Time of Plague' (lib. Pushkin's dramatic scene), 1 act, prod. St. Petersburg, 1901.
- 'Mam'zelle Fifi' (lib. by ? composer, based on Guy de Maupassant's story), 1 act, prod. Moscow, 15 Dec. 1903.
- 'Matteo Falcone', prod. Moscow, 1907.
- 'The Captain's Daughter', prod. St. Petersburg, 1911.
- 'Puss in Boots' (not performed)

### CHORAL WORKS

- Op. 4. 2 Choruses with orch. (Prize Imp. Russ. Mus. Soc.) (1860).
- 28. 'Mystic Chorus' for unaccomp. women's voices (1885).
- 34. 'Ave Maria' for 1 or 2 solo & choral women's voices.
- 46. 5 Choruses (words by Rimsky-Korsakov), unaccomp.
- 53. 6 Choruses, unaccomp.
- 58. 2 Choruses for unaccomp. male voices.
- 59. 7 Vocal Quartets or Choruses, unaccomp. (1902).
- 'Les Oiseaux d'Argenteau' for children's voices.

### ORCHESTRAL WORKS

- 1. Scherzo No. 1 (1857).
- 2. Scherzo No. 2 (1857).
- 12. 'Tarantella' (1859).
- 18. 'Marche solennelle' (1881).
- 20. Suite No. 1 ('Suite miniature') (see also Pianoforte Solo).
- 38. Suite No. 2 (1887).
- 40. Suite No. 3, 'A Argenteau' (1887).
- 43. Suite No. 4, 'In modo popolare'.

### SOLO INSTRUMENTS AND ORCHESTRA

- 24. 12 Miniatures (see also Violin and Pianoforte).
- 25. 'Suite concertante' for vn. (1883).
- 36. 2 Pieces for cello.

### CHAMBER MUSIC

- 45. String Quartet, C ml.
- 56. 5 Little Duets for flute & vn.

### VIOLIN AND PIANOFORTE

- 14. 'Petite Suite'.
- 24. 12 Miniatures (see also Solo Instruments and Orchestra).
- 39. 7 Miniatures (see also Pianoforte Solo).
- 50. 'Kaleidoscope', 24 pieces.
- 51. 6 Bagatelles.
- 'Tarantella'.

### PIANOFORTE SOLO

- 8. 3 Pieces (1877).
- 20. 12 Miniatures (see also Orchestral Works).
- 21. Suite (ded. to Liszt).
- 22. 4 Pieces.
- 26. 'Valse-Caprice'.
- 29. 'Deux Bluettes'.
- 30. 2 Polonaises.
- 31. 3 Waltzes.
- 35. 3 Impromptus.
- 39. 7 Miniatures (see also Violin and Pianoforte).
- 40. 'A Argenteau', 9 pieces (1887).
- 41. 3 Waltz Movements.
- 52. 5 Pieces.
- 60. 4 Pieces.
- 61. Theme and Variations.
- 83. 3 Pieces.
- 6 numbers for the 'Chopsticks' Variations (with Borodin, Liadov and Rimsky-Korsakov).

<sup>1</sup> No. 5 is entitled 'Réverie d'un faune après la lecture de son journal' and uses the whole-tone scale; it is clearly a satire on Debussy.

## Op. TWO PIANOFORTES

— 3 Pieces.

## SONGS AND VOCAL DUETS

- 3. 3 Songs.
- 5. 6 Songs.
- 7. 6 Songs.
- 9. 6 Songs.
- 10. 6 Songs.
- 11. 6 Songs.
- 13. 6 Songs.
- 15. 13 'Vignettes musicales'.
- 16. 6 Songs.
- 17. 'Bolero.'
- 19. 7 Songs and Duets.
- 23. 'Six Mélodies' (French words) (1885).
- 27. 6 Songs.
- 32. 7 Songs.
- 33. 7 Songs (Pushkin and Lermontov) (1886).
- 37. 3 German Songs.
- 42. 'Les Deux Ménétriers.'
- 44. 'Vingt Poèmes' (Jean Richepin) (1890).
- 48. 4 Sonnets by Mickiewicz (Polish words).
- 49. 7 Songs.
- 54. 5 Songs.
- 55. 8 Songs.
- 57. 25 Songs (Pushkin) (1899).

See also Borodin (collab. in 'Chopsticks' & 'Mlada'). Criticism, p. 526. Granados (ded. of Spanish Dance for pf.). Minkus (collab. in 'Mlada'). Rimsky-Korsakov (collab. in 'Chopsticks'). Stone Guest (Dargomizhsky, overture for).

**GUIVRÉ** (Fr., lit. coppered). The French term indicating the peculiar "brassy" sound that can be produced with stopped notes on the horn. The word is generally used in scores by other than French composers.

**Cullen, Countee.** See Schuman (chorus). Whit-horne (2 voc. chamber works).

**CULLEN, John** (b. ?; d. ?).

English 18th-century music publisher. He flourished in London from about 1702 to 1713. His first address was "at the Roe-buck [or Buck] between the two Temple Gates", Fleet Street, where he remained until about Apr. 1710, when his address was given as "At the Buck without [or just without] Temple Bar". He continued there until 1713.

On Keller's 'Thorough Bass' (1707), which he published, he advertises many of the Playford publications, which he doubtless acquired when Henry Playford retired from business in 1707. His own publications include an edition of Simpson's 'Compendium of Practical Music' (1706), the opera 'Camilla' (1707), Daniel Purcell's 'Six Cantatas' (1713) and other works.

F. K., rev. W. C. S.

**CULP, Julia (Bertha)** (b. Groningen, 6 Oct. 1880).

Dutch contralto singer. The exceptional character of her voice was discovered in her early youth, and after some local experience she entered the Conservatory of Amsterdam as a pupil of Cornelie van Zanten, later proceeding to Berlin and studying under Etelka Gerster. In 1905 and the years immediately following she toured Germany and Holland

a number of times, winning high opinions principally for her interpretation of the songs of Schubert, Schumann, Brahms, Wolf and some modern composers. In her recitals she was associated with Erich J. Wolff and after his death in 1913 with Coenraad V. Bos. From 1905 to 1919 she paid regular visits to England and America, and created an excellent impression not only with her *Lieder* singing, but also her performance of the contralto parts in Elgar's 'Dream of Gerontius', Bach's St. Matthew Passion and other important oratorios. The rich evenness of her tone-quality was in itself a great attraction, but still more so were her musical intelligence and expressive powers.

On her marriage in 1919 to the Austrian business man Wilhelm G. Ginzkey, Julia Culp gave up her profession and settled in Czechoslovakia. After his death in 1934 she resumed her Dutch nationality and in 1938 returned to Amsterdam to live with her younger sister, Bessie, who was a pianist and from time to time acted as her accompanist. In Oct. 1950, on attaining the age of seventy, she was made the object of considerable festivities, although she had not appeared in public for many years.

**Cumberland, Richard.** See Arne (1, 'Summer's Tale'). Arnold (S, lib.). Busby ('Joanna of Montfaucon', incid. m.). Butler ('Calyppo' & 'Widow of Delphi', do.). Dibdin (1, lib.).

**Cummings, E. E.** See Blitzstein (5 songs). Copland (song).

**CUMMINGS, W. H. (William Hayman)** (b. Sidbury, Devonshire, 22 Aug. 1831; d. London, 6 June 1915).

English organist, tenor singer, musical scholar and composer. He was placed at an early age in the choir of St. Paul's Cathedral in London and afterwards in that of the Temple Church. He sang as an alto in the London performance of Mendelssohn's 'Elijah' in 1847. On leaving the Temple choir that year he was appointed organist of Waltham Abbey, where he was the first to adapt Mendelssohn's theme from a secular cantata to 'Hark! the herald angels sing'. After a time he was admitted as tenor singer in the Temple, Westminster Abbey and the Chapel Royal, appointments which he subsequently resigned when his success as a leading concert tenor was assured. His first important oratorio engagement was as a substitute for Sims Reeves, under G. W. Martin in Handel's 'Judas Maccabaeus'. At the Birmingham Festival of 1864 he sang the tenor part in Sullivan's 'Kenilworth' instead of Mario, for whom it was written. He sang in the U.S.A. in 1871 and subsequently.

Cummings was for years identified with the important tenor parts in Bach's Passions and other works where an accomplished musician

is as necessary as a good singer. He was a professor of singing at the R.A.M. in 1879-96 and belonged to the committee of management. In 1882 he was appointed chorus master of the Sacred Harmonic Society, of which he subsequently became conductor. He was precentor of St. Anne's, Soho, in 1886-1888, and in 1896 was elected to succeed Barnby as Principal of the G.S.M. He retired in 1911.

Cummings was chiefly instrumental in founding the Purcell Society, and he edited three volumes of its publications. He also wrote a life of that master in the 'Great Musicians' series; later research, however, has proved it unreliable on several matters of fact. In addition to all his other avocations he filled important official posts in connection with the Philharmonic Society, the Musical Association and the Incorporated Society of Musicians, and devoted much time to the affairs of the Royal Society of Musicians. In 1900 he received the degree of Mus.D. from Dublin University. He was the possessor of a splendid musical library, sold by auction after his death. His compositions include several prize glees, a Morning Service, an anthem, various songs, a cantata, 'The Fairy Ring'; he also wrote a biographical dictionary and a 'Primer of the Rudiments of Music'. J. A. F.-M.

**CUNDELL, Edric** (b. London, 29 Jan. 1893).

English conductor and composer. He was educated at Haberdashers' Aske's School and the T.C.L. in London, where he studied the horn with Adolph Borsdorf. In 1920 he joined the teaching-staff of the same college, and during the following years he conducted widely with the leading national orchestras as well as with his own chamber orchestra and amateur groups. He joined the staff of Glyndebourne in 1937, but in the following year became principal of the G.S.M. in London, in succession to Sir Landon Ronald, where his operatic productions are an important feature of his activity. He devoted special attention for several years to Mozart's operas and in 1952 gave an outstandingly good performance of Verdi's 'Falstaff', with a double cast and an orchestra consisting entirely of G.S.M. students. He is a fellow of both the T.C.L. and the G.S.M., and Hon. R.A.M. In 1949 he was awarded the C.B.E. He became chairman of the music panel of the Arts Council of Great Britain in 1951.

Cundell's compositions are not widely known, though he won the 'Daily Telegraph' prize with his second string Quartet, in C major, in 1934. His other compositions include a Mass for unaccompanied voices, 'Hymn to Providence' for chorus and orchestra, Symphony in G minor, symphonic poem 'Serbia', string Quartet in G minor and other chamber works. c. m. (iii).

**GUNHA, João Itiberê da** (b. Rio de Janeiro, 1870).

Brazilian composer, poet and critic. He studied in Brussels and is a founder-member of the Brazilian Academy of Music. He is well known as music critic of 'O Correio da Manhã'. His compositions include a Brazilian Suite for orchestra besides smaller works in many genres.

N. F.  
**Cunningham, Allan.** See Davies (H. W., 'Hame', song). Dyson ('A wet sheet' for chorus). Jensen (3, 4, songs). Parry (H., song). Scott (F. G., song). Warlock (partsongs).

**CUNNINGHAM, G. D. (George Dorrington)** (b. London, 2 Oct. 1878; d. Birmingham, 4 Aug. 1948).

English organist and conductor. He was educated at the R.A.M. in London, took the F.R.C.O. at the age of eighteen and in 1901 was appointed organist of the Alexandra Palace, then a popular resort in the north of London, which provided entertainment comparable to that of the Crystal Palace in the south. Seventeen years there gave Cunningham a wide experience of every type of organ music likely to be popular. His excellent musicianship and refined taste saved him from any ill-effects of such an experience, and made it only valuable to him. He became a brilliant technician and did his utmost to train the public taste by the choice of programmes that relied as little as possible on arrangements. For five years (1919-24) he devoted himself to church music as organist of St. Alban's, Holborn. In his later years he was frequently heard in London (Queen's Hall and later Albert Hall Promenade Concerts, etc.) and was one of the most admired organ recitalists of the B.B.C. In 1929 he made a successful recital tour in U.S.A. and Canada.

For the last twenty-four years of his life Cunningham's chief sphere of activity was Birmingham, where he was appointed City and University Organist in 1924. He was active in this post until a month or so before his death, and he not only appeared at all the Birmingham Symphony Orchestra's concerts at which the organ was required, but gave weekly recitals at the Town Hall almost all the year round. His six hundredth recital was celebrated on 10 June 1941 with a presentation made to him by the Lord Mayor of Birmingham. On 1 July 1944 Birmingham University conferred the degree of Doctor of Music on him. He also conducted the City of Birmingham Choir and inspired fine performances of a wide repertory ranging from the Masses of Bach and Beethoven to such modern works as Vaughan Williams's 'Five Tudor Portraits', Bliss's 'Morning Heroes' or Bloch's 'Sacred Service'.

A purist where his own instrument was concerned — for he would play nothing meretricious and few transcriptions — he was

profoundly interested in great music of other classes than those in which he was immediately concerned. An admirable pianist, he brought to his instrument the rhythmic vitality and the phrasing of the best pianoforte playing, while exploiting its own technique with the utmost virtuosity, resourcefulness and assurance. He was also a brilliant teacher and examiner at the R.A.M.

**Cunningham, Merce.** See Ballet (America).

**CUPID AND DEATH** (Masque). See GIBBONS (6). LOCKE.

**CUPIS, François** (called *de Camargo*) (b. Brussels, 10 Mar. 1719; d. Paris, c. 1764).

Netherlands violinist and composer. He was a brother of the famous dancer Camargo, after whom he called himself. In 1741 he was a violinist at the Paris Opéra. He was an excellent performer as well as a composer and published three books of violin sonatas.

E. v. d. s.

**CUPIS, Jean-Baptiste** (called *de Camargo*) (b. Brussels, [bapt. 23 Nov.] 1711; d. Montreuil, 30 Apr. 1788).

Netherlands violinist and composer, brother of the preceding and of the dancer Camargo, after whom he also called himself. In 1729 he was in Paris, where he married Constance Dufour on 22 Sept., and in 1737 he obtained a privilege for nine years to publish violin sonatas and other instrumental pieces, the first book of which he dedicated to the Duc d'Antin in 1738, and the same year he appeared at the Concert Spirituel. On 26 Apr. 1745 he played at the Prince d'Ardore's on the occasion of the Dauphin's marriage. Later in life he became first an army officer and then a horticulturist at Bagnolet near Montreuil. The minuet at the end of the first violin Sonata in his Op. 2 became very famous, and Rameau gave one of his harpsichord pieces the title of 'La Cupis'. Apart from two books of violin sonatas he wrote three "symphonies" in 4 parts, and he published a book of arrangements for the cello.

E. B.

**CUPIS, Jean-Baptiste** (b. Paris, c. 1741, d. ?).

French cellist and composer of Flemish descent, son of one of the preceding. He was a pupil of Berteau, joined the orchestra of the Paris Opéra and was an excellent virtuoso and teacher. He toured in 1771 and was at Milan in 1794. He wrote a tutor for the cello, another for the viola, two books of cello sonatas and several books of solo pieces.

E. v. d. s.

**CURIONI, Alberico** (b. Milan, 1785; d. Torno, Lake Como, Mar. 1875).

Italian tenor singer. He made his début at the early age of fifteen, in 1800, sang at the San Carlo at Naples and other Italian theatres, and then went to Barcelona, where he had a great success. In 1821 he made his first

appearance in London with Camporese in Mozart's 'Clemenza di Tito'. He then seemed the best tenor that had belonged to the theatre for some time, but even so hardly gave the full promise of his future excellence. He was re-engaged in 1822, appearing in Rossini's 'Otello' with great effect; and again in 1823, when he reappeared as Titus and was heard in Rossini's 'Donna del lago' and 'Ricciardo e Zoraide'. He reappeared regularly each season until 1828 and was still heard by Lord Mount-Edgumbe at the King's Theatre in 1834, singing with undiminished powers. Among his parts in London was Ferrando in Mozart's 'Così fan tutte', and new operas in which he appeared were Meyerbeer's 'Crocato in Egitto' and Pacini's 'Schuava in Bagdad'. His salary in 1827 was increased to £1450, and in the preceding year his portrait was drawn by Hayter in the character of Jason; there is a good lithograph of it. He was an honorary member of the R.A.M.

J. M.

**CURIONI, Rosa** (b. ?, d. ?).

Italian 18th-century singer. She was believed to have been the mother of the preceding, but the dates dispose of that supposition, for she made her début at the King's Theatre in London, as *seconda donna* in the 'Ipermestra' by Hasse and Lampugnani, on 9 Nov. 1754, when she must have been at least twenty, since no Italian singers were then engaged in England unless they had made some reputation in their own country before. She sang four more parts in London until 12 Apr. 1755 and was heard at Venice in 1757.

J. M., add.

**CURIOSO INDISCRETO, IL** (Opera).

See ANFOSSI.

**Currie, (Sir) Mordaunt.** See Gibbs (C. A., 'Joan of Arc', song cycle).

**CURSCHMANN, Karl Friedrich** (b. Berlin, 21 June 1804; d. Langfuhr nr. Danzig, 24 Aug. 1841).

German composer. He studied for four years under Spohr and Hauptmann at Cassel, and in 1824 settled in Berlin, making occasional concert tours in Germany, France and Italy. Curschmann's fame rests on his songs. He was the favourite song-writer before Schubert's songs were generally known and when Schumann had scarcely attempted vocal composition. His songs are full of real melody and generally deserved their wide popularity. Curschmann's collected 'Lieder' (2 vols., Berlin, 1871) comprise 83 solos and 9 songs in 2 and 3 parts. A few of them have Italian words. Among his other works may be mentioned a one-act opera, 'Abdul und Erinnich', written and performed at Cassel in 1828. In England he was best known by his song 'In every opening flower' and his trios 'Ti prego' and 'Addio'.

A. M.

**CURTAILED NOTE.** See ORNAMENTS, C (v) (a); S (u) (6).

**CURTAIN TUNE.** An old English term, now obsolete, sometimes used in place of "act tune" for a piece of incidental music played before the opening of a play or between the acts — in fact before the rise of the curtain.

See also Act Tune.

**CURTALL.** The English name for the bassoon from the late 16th to the mid-18th century. The cognate foreign terms (Fr.) *Courtaut* and (Ger.) *Kortholt* denoted double-reed instruments with cylindrical bore, not conical bore as in the case of the Curtall. L. G. L.

Bibl. as for RACKETT.

See also Bassoon. Courtaut. Kortholt.

**CURTIS INSTITUTE.** A music school at Philadelphia, one of the outstanding conservatories of America, was founded in 1924 by Mrs. Mary Curtis Zimbalist (then Mrs. Curtis Bok), who has remained president of the Institute, which she endowed with \$12,500,000 in 1927. Organized along familiar conservatory lines, it provides complete musical training, gratis, to about 200 students carefully selected from all parts of the United States and from other countries. From 1927 to 1938 the Institute was directed by the celebrated pianist Josef Hofmann. In 1939 he was succeeded by the distinguished American composer Randall Thompson. Among the eminent heads of departments at the Institute have been: Rosario Scälero, composition; Josef Hofmann, Rudolf Serkin, pianoforte, Carl Flesch, Leopold Auer, Efrem Zimbalist, violin; Felix Salmond, cello; Marcella Sembrich, Emilio de Gogorza, voice; Carlos Salzedo, harp; Wilhelm von Wymetal senior and junior, Ernst Lert, opera; Leopold Stokowski, Artur Rodzinski, Fritz Reiner, conducting. Efrem Zimbalist has been director since 1941. Well-known graduates of the Institute include the composers Samuel Barber and Gian-Carlo Menotti and the singer Rose Bampton. Recitals by faculty members, students and distinguished guest artists and weekly radio broadcasts are sponsored by the Institute.

c. w., rev.

**CURWEN.** English family of musical educationists.

(x) **John Curwen** (b. Heckmondwike, Yorkshire, 14 Nov. 1816; d. Manchester, 26 May 1880), founder of the Tonic Sol-fa method of music teaching. He came of an old Cumberland family and was educated (at Wymondley College and University College, London) for his father's profession, that of a nonconformist minister. In 1838 he was appointed assistant minister at Basingstoke, and he held similar appointments elsewhere until 1864. He displayed quite unusual gifts as a teacher — a power of lucid and illuminating exposition and astonishing penetration into the mental pro-

cesses of his pupils, coupled with a high degree of charm and sympathy. Early interested in the teaching of reading and arithmetic, he revealed in both the germs of his later approach to the teaching of music: first, in reading, a concentration on sounds rather than names or shapes of letters (his "Look and Say" method of teaching to read); second, in number, his stress that the mental concept must be grasped before the conventional symbols can be interpreted with understanding. In these ways, as well as in his insistence on the value of the pictorial image as a means of teaching, he was a pioneer practitioner of what have since become commonplaces.

It was at a conference of Sunday-school teachers held at Hull in 1841 that he was commissioned to make inquiry into the best and simplest way of teaching to sing by note, and this led to the practical adoption of Sarah Anna Glover's system. The investigations thus begun led him to make the spreading of music among the people the great object of his life. His motives were religious and social, not artistic; and his approach was that of the learner, methodizer and teacher rather than of the musician. He himself remarked that had he been more gifted, he would not have been able to bring those without special aptitude to such a degree of musical understanding. After early experiments his 'Singing for Schools and Congregations: a Grammar of Vocal Music' appeared in 1843. In 1853 he founded the Tonic Sol-fa Association (now the English Schools Music Association), and in 1879 the Tonic Sol-fa College (incorporated 1875) was opened (now Curwen Memorial College). In 1864 he gave up professional ministerial work to devote his whole time to the movement he had originated. In 1844 he had become a printer and publisher on his own account, and he sustained losses which involved considerable domestic hardship until the business (now J. Curwen & Sons, Ltd.) first made a small profit in 1866. In that year he became first Euing Lecturer at Anderson's College, Glasgow.

Curwen's work enabled many thousands who would not otherwise have done so to become amateur practitioners of vocal music. In addition, his teaching has fertilized many branches of musical instruction even among those who would reject his method as a whole. Most of all, his enduring contribution to musical education, beyond the controversies that have raged about his name, was his pioneer insistence on careful ear-training as fundamental to the true apprehension and appreciation of music.

A biography was published in 1882 by his son, J. S. Curwen, entitled 'Memorials of John Curwen'.

The following list of his chief writings is arranged chronologically, to reveal the development of his teaching (dates of reprints, or revisions, are shown in brackets) :

- 'Singing for Schools and Congregations', 1843 (1848, 1852).
- 'The Pupil's Manual of the Tonic Sol-fa Method of Teaching to Sing', 1852
- 'The Tonic Sol-fa Reporter', 1853, &c. (a periodical work).
- 'An Account of the Tonic Sol-fa Method of Teaching to Sing', 1854 (1857, 1860).
- 'The Established Notation Course of Lessons on the Tonic Sol-fa Method of Teaching to Sing', 1857.
- 'The Standard Course', 1861.
- 'How to Observe Harmony', 1861.
- 'Musical Statics', 1874.
- 'The Art of Teaching', 1875 (1876).
- 'Tonic Sol-fa' (in Novello's Primers), 1877
- 'Musical Theory', 1879.
- 'How to Read Music and Understand It', 1881.

H. W. S.

BIBL.—SHAW, H. WATKINS, 'The Musical Teaching of John Curwen' (Proc. Roy. Mus. Ass., Vol. LXXVII, 1950).

See also Glover (Sarah Anna). Modulator Tonic Sol-fa.

(2) **John Spencer Curwen** (b. London [Plaistow], 30 Sept. 1847; d. London, 6 Aug. 1916), son of the preceding. He carried on his father's interests and developed them. Originally intended for the ministry, he took up the printing side of his father's business and, in order to qualify himself as a musician, studied at the R.A.M. under Macfarren, Sullivan and Prout. He visited schools in France, Germany, Canada and U.S.A., and examined the methods of teaching sight-singing to children. He started the competitive festival movement in England with the foundation of the Stratford (East London) Festival (1882), importing the idea from Wales where he had judged at Eisteddfodau. His 'Studies in Worship Music' was the result of study of all kinds of religious services, from those of Westminster Abbey and Brompton Oratory to meetings of Moody and Sankey and the Salvation Army. His sympathetic interest in what people were doing always formed the basis of improvements he desired to stimulate. He became principal of the Tonic Sol-fa College in 1880, and as director of the firm of J. Curwen & Sons and editor of 'The Musical Herald' exerted a wide influence.

See also Competition Festivals.

(3) **Annie (Jessy) Curwen** (born Gregg) (b. Dublin, 1 Sept. 1845; d. Matlock, 22 Apr. 1932), wife of the preceding. She married in 1877. After study at the Royal Irish Academy of Music, she began her career as a teacher first in Dublin, then in Scotland. There she came across the work of John Curwen, and she proceeded to apply his principles to the problems of elementary piano teaching. The result was 'Mrs. Curwen's Method', which has had a very wide and beneficent influence. The 'Teacher's Guide', the handbook to the method, grew out of her experience in teaching

her own children. The following is a list of the chief publications concerned with the system :

- 'Teacher's Guide', containing instructions to the teacher for the use of the work
- Pupil's books: Exercises and Illustrative Duets, by John Kinross, 1st four Steps
- The same exercises with Duets, by Felix Swinstead
- Steps V and VI Exercises for Reading and Transposition. Duets by John Kinross.
- Interval Exercises of Steps I to IV, with some from Step V, for 1st Grade Certificate.
- C clef exercise book, for practice in reading (of use to cello and viola learners).
- Illustrative Tunes for the Time Lessons
- Music Slates, specially ruled. Keyboard Diagram, for class-work.
- Staff Cards, graded, for home work in Preliminary Course.
- Certificate Cards for Step Exams.

H. C. C.

**CURWEN & SONS, LTD., J.** This firm was founded by John Curwen in 1863. Its first publications were mainly works for popular singing-classes, and as time went on, music for schools, mainly at that time in the Tonic Sol-fa notation, was added. In 1885 the grant for sight-singing in schools and the recognition by the Education Department of the Tonic Sol-fa method opened the way for an increased output of school music, of which the firm immediately availed itself and in so doing attained a prominence in that line which it still retains.

The foundation by John Spencer Curwen of the Stratford Musical Festival in 1882 brought a demand for better choral music, and the firm's catalogue gradually improved and now contains choral music of the highest class by foremost contemporary composers. Mrs. J. S. Curwen's Pianoforte Method (*see above*) was another valuable asset.

In 1917 the firm began to publish a series of songs, mostly by the younger contemporary composers. Amalgamation in 1923 with Messrs. F. & B. Goodwin, Ltd. added to the Curwen catalogue a considerable amount of chamber and orchestral music by modern composers.

The punches used by the firm for engraving its music were specially designed by Paul Woodruffe to combine beauty of form with clearness of notation. 'The Musical News and Herald', a weekly newspaper, and 'The Sack-but', a monthly review, were published for a number of years by the Musical News Syndicate, Ltd. In recent years, while continuing the issue of much educational music, Messrs. Curwen have also done valuable service to modern British composers by publishing chamber music, pianoforte works, songs, part-songs, etc.

H. C. C., adds.

**CURZON, Clifford** (b. London, 18 May 1907).

English pianist. In 1919 he entered the R.A.M. in London, where he won two scholarships as well as the Macfarren Gold Medal for pianoforte. He made his first public appear-

ance in London at the age of sixteen at a Queen's Hall Promenade Concert in Bach's triple Concerto. A year later he gave the first performance in England of Germaine Tailleferre's 'Ballade' at the same concerts, at which he appeared during every subsequent season. He was appointed a professor at the Academy in 1926 and later was elected as Associate. In 1928 he went to Berlin to study with Artur Schnabel for two years, and subsequently he studied with Wanda Landowska and Nadia Boulanger in Paris.

Besides giving numerous recitals in London Curzon has made concert tours on the Continent and in the U.S.A. since 1930, and in 1932 he resigned his professorship at the R.A.M. in order to devote himself to concert work. He was chosen to accompany Lionel Tertis on the first continental tour of British musicians organized by the British Council, and in 1937 he went to Paris with the B.B.C. Orchestra to play in a performance of Constant Lambert's 'Rio Grande'. Curzon's musical tastes are catholic and his repertory ranges from the classics, among whom he has paid special attention to Schubert, to the music of his contemporaries. His playing is distinguished by a well-balanced combination of intellectual musicianship with technical virtuosity, and by a passionate intensity of expression coupled with a thorough attention to detail.

In 1931 he married Lucile Wallace, the American harpsichordist, with whom he has given recitals. D. H. (ii).

**CURZON, (Emmanuel) Henri (Parent) de** (b. Le Havre, 6 July 1861; d. Paris, 25 Feb. 1942).

French musicologist and critic. He took the degree of "Docteur ès Lettres" and became archivist of the Archives Nationales in Paris, a post from which he retired in 1926. He is the author of the catalogue of all the documents concerning music kept there. He became librarian of the Opéra-Comique in 1926.

As a music critic Henri de Curzon began in 1889 to write for the 'Gazette de France', the 'Guide musical', 'Le Théâtre Musical' and other periodicals; from 1920 he was a regular contributor to 'Le Ménestrel', and on 1 Jan. 1928 he succeeded Adolphe Jullien as music critic to the 'Journal des Débats'. He made two translations of Mozart's letters, one in 1888, followed by 'Nouvelles Lettres des dernières années de la vie de Mozart' in 1898, and another in 1928. He also translated Schumann's writings on music (1894 and 1898) and E. T. A. Hoffmann's 'Fantasiestücke in Callots Manier' (1891).

Among Curzon's important musical writings the following books may be mentioned:

Essay on the Sigurd legend in the Edda, apropos of Reyser's opera (1890).

- 'Grétry.'
- 'Meyerbeer.'
- 'Musiciens du temps passé.'
- 'Croquis d'artistes.'
- 'Les Lieder de F. Schubert.'
- 'Les Lieder et airs détachés de Beethoven.'
- 'Documents inédits sur le "Faust" de Gounod' (with A. Soubies & others).
- 'Rossini' (1920).
- 'Ernest Reyer' sa vie, ses œuvres' (1924).
- 'Delibes' (1926).
- 'Mozart' (1930).

G. F. & M. L. P.

**CUSANINO.** See CARESTINI, GIOVANNI.

**CUSHING, Charles** (b. Oakland, California, 1905).

American composer. He is a B.A. and M.A. of the University of California. On winning the Prix de Paris Fellowship in 1929 he went to France, where he attended the École Normale de Musique, studying composition with Nadia Boulanger at the same time. He studied the violin, the viola, the clarinet and the pianoforte, and his compositions are mainly chamber music.

Cushing is conductor of the University of California Concert Band, also an Associate Professor of Music at the University of California. His compositions are best known on the west coast of the U.S.A., where many of them have been performed. Notable among them is 'Carmen saeculare' (on the Horatian ode), a work for chorus and orchestra commissioned for the Greek Theatre at Berkeley, and given under the composer's direction.

Cushing is also known as a writer on musical subjects, having contributed articles to 'Modern Music' and other publications.

## CATALOGUE OF WORKS

### INCIDENTAL MUSIC

- 'The Thesmophoriazousae' (Aristophanes), 15 numbers for orch. with women's voices (1933).

### CHORAL WORKS

- 'Carmen saeculare' (Horace) for chorus & orch. (1935).
- Psalm XCIV for chorus & band (1939).
- 'Wine from China' (trans. from Chinese), six songs, men's voices & pf. duet (1945).

### CHAMBER MUSIC

- String Quartet No. 1 (1929).
- String Quartet No. 2 (1936).
- 'Three Eclogues' for 2 clars. & bassoon (1938).
- 'Lyric Set' for soprano, flute & viola.

### VIOLIN AND PIANOFORTE

- Sonata No. 1 (1929).
- Sonata No. 2 (1932).
- Also a Suite for pf., 2 song cycles, &c.

P. G.-H.

**CUSHION DANCE.** An old English action dance, also bearing the title 'Joan Sanderson'. The dance was common among all classes in the 16th and 17th centuries, even at court. At the present day a survival of it exists among children in the game of 'The Shy Widow'. The cushion dance is alluded to in many 17th-century books; a very full reference to these, and complete description

of the dance, are given in Wm Chappell's 'Popular Music of the Olden Time'.

Briefly, the dance or game is performed thus: a single person, male or female, dances about the room with a cushion, which, after some dialogue, is laid before a favoured one of the opposite sex, who, kneeling on it, kisses the one who has so placed it. The one who has knelt and kissed now takes up the cushion and continues the dance in the same manner. The dialogue begins:

"This dance it will no further go."

"I pray you, good sir, why say you so?"

"Because Joan (or John) Sanderson will not come to", etc.

In Wilson's 'Companion to the Ball Room' (c. 1818) the dance is mentioned as being then danced, but the author, a fashionable dancing-master, makes an indignant protest against it. The original air and quant directions are to be found in Playford's 'Dancing Master' (1686, and later editions). F. K.

**CUSINS, (Sir) William (George)** (b. London, 14 Oct. 1833; d. Remonchamps, Ardennes, 31 Aug. 1893).

English pianist, organist, violinist, conductor and composer. In his tenth year he entered the Chapel Royal and in 1844 he was sent to the Brussels Conservatoire, then under Fétis, for the study of the pianoforte, violin and harmony. In 1847 he gained the King's Scholarship at the R.A.M. of London, where his professors were Potter, Sterndale Bennett, Lucas and Sainton. In 1849 his scholarship was prolonged for two years, and he made his first appearance in public as a pianist in Mendelssohn's D minor Concerto and as composer with a manuscript overture. In the same year he was appointed organist to the Queen's private chapel and entered the orchestras of the Royal Italian Opera and of the principal concerts of London, in which he played the violin for about five years.

In 1851 Cusins was appointed assistant professor at the R.A.M. and afterwards professor; from 1867 to 1883 he was conductor of the Philharmonic Society *vice* Sir W. Sterndale Bennett, resigned; in 1867 he conducted Bennett's 'Woman of Samaria' at the Birmingham Festival; in 1870 he was appointed Master of the Music to the Queen; in 1875 he succeeded Bennett as examining professor at Queen's College; and in 1876 he became joint examiner, with Hullah and Otto Goldschmidt, of scholarships for the National Training-School of Music.

Besides holding these posts Cusins came often before the public as a player and concert-giver, having among other places performed at the Gewandhaus, Leipzig, and in Berlin, as well as the Philharmonic and Crystal Palace in London. In 1885 he became a professor in the G.S.M. and conductor of the London

Select Choir. He received the honour of knighthood on 5 Aug. 1892 and the cross of Isabella the Catholic in 1893. He died of influenza and was buried in Kensal Green Cemetery. His works, if not numerous, are often on a large scale: 'Royal Wedding Serenata' (1863); 'Gideon', an oratorio (Gloucester, 1871); two concert overtures, 'Les Travailleurs de la mer' (1869) and for Shakespeare's 'Love's Labour's Lost' (1875); pianoforte Concerto in A minor, marches, songs, etc. W. H. H.

**Cussy, Ferdinand de.** See Weber (12, song).

**CUTELL, Richard** (b. ?; d. ?).

English 15th-century theorist. He is the author of a treatise on counterpoint, a fragment of which is preserved among the manuscripts in the Bodleian Library at Oxford. W. H. H.

**CUTLER, William Henry** (b. London, 14 Jan. 1792; d. ?).

English singer, organist and composer. He was a prodigy on the violin (owning an Amati which had belonged to Crotch), playing a concerto by Giomovich at the age of five. He was then taught the pianoforte by J. H. Little and G. E. Griffin, singing by Samuel Arnold and thorough-bass by W. Russell and Busby. He made his début at a Haymarket Theatre concert in 1800, when he played a pianoforte concerto by Viotti. In 1803 he became a chorister at St. Paul's Cathedral and he sang at the leading concerts, notably the Vocal Concerts, Concerts of Ancient Music and the Glee Club. Leaving St. Paul's he took his Mus.B (Oxon) in 1812. In 1818 he was appointed organist of St. Helen's, Bishopsgate, but he changed to the Quebec Chapel, Portman Square, in 1823. The date of his death is unknown; his last public appearance was at a grand concert at the Opera House on 5 July 1824, after which date he seems to have disappeared completely. Of his compositions a printed list was issued in 1823. It contains some 33 items published by Clementi, Preston, Chappell, Paine & Hopkins and Betts, to which may be added a string Quartet and some church music. "None of it", says W. Barclay Squire (D.N.B.), "is at all remarkable." H. G. F.

'London Magazine' (July, 1824).

'The Harmonicon' (July, 1824).

**CUTTING, Francis or Thomas** (b. ?; d. ?).

English 16th-17th-century lutenist and composer(s). It is not clear whether there were two men of this name active in the early 17th century; the available information may be summed up as follows. In 1596 some music by "Francis Cutting" for lute, bandora and orpharion was printed in Barley's 'A New Booke of Tabliture'. A lute piece by "Fr.

Cutting" is in Cambridge University Library (MS Dd.3.18), and others by "F. C." or "Cutting" are in C.U.L. (MSS Dd 2 11, Dd.5.78.3 and Dd.9 33, which may be dated as c. 1600). More lute music by "Frauncis Cuttinge" (and similar spellings) is in the B.M. (Add. MS 31392, of about the same date, and Egerton 2046 [the Pickering lute-book], 1616). In 1607 a Thomas Cutting, lutenist, was in the employ of Lady Arabella Stuart; at the request of Queen Anne of Denmark (a request supported by James I's brilliant son, Prince Henry) he left England to enter the service of Christian IV in Copenhagen (Apr. 1608–Oct. 1610), at a salary of 300 daler p a. He was back in England by June 1611, probably in the service of Prince Henry, since at the prince's death in 1612 he was one of the musicians listed as receiving mourning livery.

One of the more prolific composers for the lute, Cutting deserves closer study. His music is of good quality and may not unfairly be compared with Dowland's

R. T. D.

See also English Musicians Abroad.

**CUVELIER, Jean** (b. ? Tournai; d. ?)

French 14th–15th-century composer. In 1380 he was a minstrel to Charles V of France. The author of the 'Règles de la seconde rhétorique', a treatise written in the 15th century, mentions him as a composer. Three ballads of his in three parts are preserved in a manuscript at Chantilly (Musée Condé 1047). One is published by Wolf (see Bibl.), the beginning of another one by Besseler (see Bibl.).

**CUYLER, Louise (Elvira)** (b. Omaha, 14 Mar. 1908).

American music teacher and musicologist. She took the B.M. at the Eastman School of Music in 1929 and the Ph.D. there in 1948. She also studied at the University of Michigan, where she took the M.Mus. in 1931. From 1929 to 1935 she was an instructor in theory at the University of Michigan and from 1935 to 1943 an assistant professor in theory. She was appointed Associate Professor of Musicology in 1946. During the war she was for two years a club director for the American Red Cross in the South Pacific area. She is a member of the Council of the American Musicological Society and national chairman of musicology for the Music Teachers' National Association. In 1951 she was awarded the Horace H. Rackham Research Grant which included travel in Europe, Africa and Asia Minor. Louise Cuyler has written

three books on music: 'Elementary Theory' (1935), 'Dictation Manual' (1936) and 'Choralis Constantinus, Book III' (1950).

M. K. W.

**CUYPERS (Kuypers, Kuyppers).** Dutch 18th–19th-century family of violin makers originating from the neighbourhood of Emmerich on the Dutch-German frontier.

(1) **Johannes (Joannes), Theodosius Cuypers** (b. Dornik, Rhineland, 14/15 Oct. 1724, d. The Hague, 9 Sept. 1808). He is the best-known member of the family. There are stories of his being in Rome as a pupil of Tecchler and in Paris with Guersan, but there is no definite evidence of this, and Balfoort asserts that his instruments "in no respect recall those" of these two masters. Certain it is that he was a pupil of his father (Hermanus Kuyppers) and that he settled at The Hague not later than the early 1750s. On 24 Jan. 1752 he was officially enrolled there as a citizen.

Cuypers produced a very large number of instruments, continuing his work until he was over 80 years of age. These instruments, many of which are now in England, are famous for their clear but somewhat hard tone. They are built on the Stradivari model except for the *f* holes, which are nearly straight with the curves very small, and the scroll, which is pushed forward somewhat. The general build is of rather thick wood with broad overhanging edges. The varnish is usually yellow, at times being almost golden in colour, but occasionally red. Cuypers had nine children (3 sons and 6 daughters).

(2) **Jean François (Johannes Franciscus) Cuypers** (b. The Hague, 12 Jan. 1766; d. The Hague, 16 July 1828), son of the preceding, and

(3) **Johannes Bernardus Cuypers** (b. The Hague, 3 May 1781; d. The Hague, 15 Sept. 1840), brother of the preceding. Both were in their father's trade. The few instruments by Johannes Bernardus which remain compare favourably with his father's and are even more elegant in appearance.

H. A.

BIBL.—BALFOORT, D. J., 'De Hollandsche Vioolmakers' (Amsterdam, 1931).

**CUYPERS, Hubert** (b. Baexem, Holland, 26 Dec. 1873)

Dutch organist, conductor and composer. He was a pupil of Franz Neker, organist at the Cathedral at Aachen and later of Bernard Zweers. After completing his studies he was appointed organist and choir director of St. Alphonse, Amsterdam, and made a name by writing an 'Alphonsus Cantata', a Mass of the Holy Trinity and an 8-part Te Deum. After this masses and other church music flowed constantly from his pen, in a somewhat conservative style but well-written, popular and in accordance with the rules of his church

regarding sacred music. Later he wrote incidental music to poems for declamation, and at the request of Willem Royaards, then the leading actor and producer in Holland, for Vondel's 'Adam in Ballingschap' and 'Lucifer'. Apart from his church music he is best known as a conductor, particularly of boys' choirs and as a trainer of boys' voices. His "Minnebreelen" of boys has travelled all over Holland and to some extent abroad, and he has been conductor of the Christian (Protestant) Oratorio Society in Amsterdam, and was founder and conductor of the "Haghesingers" at The Hague, "Schola Cantorum" at Amsterdam and "Sursum corda" at Leyden. He is also a member of the Commission (R.C.) for approving church music. H. A.

**CUZZONI, Francesca** (b. Parma<sup>1</sup>, c. 1700<sup>2</sup>; d. Bologna, 1770).

Italian soprano singer. She received her first instruction from Lanzi, a noted master, and made her début at Venice in the autumn of 1718 as Dalinda in Pollarolo's 'Ariodante', described as "Parmigiana, virtuosa della Ser. Gr. Pr. Violante di Toscana", and she appeared with Faustina Bordoni and Bernacchi in a number of other works. After singing on most of the principal stages of Italy she went to England.

On her first arrival in London Cuzzoni married Sandoni, a harpsichord master and composer of some eminence.<sup>3</sup> Her first appearance was on 12 Jan. 1723, as Teofane in Handel's 'Ottone'. Her singing of her first air, a slow one, "Falsa immagine", fixed her reputation. A story is told about this song which illustrates her character as well as Handel's. At rehearsal she took a dislike to the air and refused to sing it; whereupon Handel seized her by the waist and swore he would throw her out of the window if she persisted. She gave way and in that very song achieved one of her greatest triumphs. Success followed her in 'Coriolano', in 'Flavio' and in 'Farnace', and she became a popular favourite.

In the following year she sang in 'Vespasiano', 'California', and 'Giulio Cesare'. Meanwhile her popularity had diminished that of Durastanti, who left England, and had eclipsed that of Anastasia Robinson, who soon after retired. Cuzzoni continued her triumphal career in 'Tamerlano' and 'Artaserse'; and in 'Rodelinda' (1725) she created one of her most successful parts, gaining great reputation by her tender singing of the song "Ho perduto il caro sposo". Fresh applause met her in 'Dario', 'Elpidia', 'Elisa', 'Scipione' and finally in 'Alessandro' (Handel), when she first encountered, on the English stage, the

redoubtable Faustina Bordoni. In this opera her style and that of her rival were skillfully contrasted by the composer, but the contest was the first of a series which did Italian opera much harm.

In 1727 she created a great effect in the song "Sen vola" ('Admeto'), which displayed her warbling style, and an enthusiast in the gallery was so far carried away by the charm that he exclaimed, "D— her! she has a nest of nightingales in her belly!" Her next part was in 'Astianatte'. The violence of party feeling had now become so great that, when Cuzzoni's admirers applauded, Bordoni's hissed and *vice versa*. This culminated during the performance of 'Astianatte', when shrill and discordant noises were added to the uproar, in spite of the presence of the Princess Caroline. Lady Pembroke headed the Cuzzonists and was lampooned in the following epigram<sup>4</sup>:

UPON LADY PEMBROKE'S PROMOTING THE  
CAT-CALLS OF FAUSTINA

Old poets sing that beasts did dance  
Whenever Orpheus play'd,  
So to Faustina's charming voice  
Wise Pembroke's asses bray'd.

Cuzzoni's chief supporters, among the men, are commemorated in the following<sup>4</sup>:

EPIGRAM ON THE MIRACLES WROUGHT  
BY CUZZONI

Boast not how Orpheus charm'd the rocks,  
And set a-dancing stones and stocks,  
And tigers rage appeas'd;  
All this Cuzzoni has surpass'd,  
Sir Wilfred<sup>5</sup> seems to have a taste,  
And Smith<sup>6</sup> and Gage<sup>7</sup> are pleas'd

In 1728 Cuzzoni appeared in 'Siroe' and 'Tolomeo' with unabated success, in spite of 'The Beggar's Opera', in which her and Bordoni's rivalry was transparently satirized in the quarrels of Polly and Lucy. At the close of the season, however<sup>8</sup>, the directors, troubled by the endless disputes of the rivals, decided to offer Bordoni one guinea a year more than Cuzzoni's salary. The latter had been persuaded to take a solemn oath that she would not accept less than her enemy, and so found herself unengaged. About this time<sup>9</sup> she yielded to the invitation of Count Kinsky and went to Vienna. She sang at court there with great *éclat*; but her arrogant demands prevented her from getting an engagement at the theatre.

At Venice she next sang at one theatre, while Bordoni performed at another. She appeared in Champi's 'Onorio' (1729), Broschi's 'Idaspe', Hasse's 'Artaserse' and Gai's 'Mitridate' (all 1730), and finally in Hasse's 'Euristeo' (1732).

In London again in 1734, she appeared in Porpora's 'Enea nel Lazio' on 11 May and,

<sup>1</sup> Hawkins says Modena, but her description as "Parmigiana" (see above) is conclusive enough.

with Farinelli, Senesino and Montagnana, in 'Artaserse' as Mandane; also, during the season of 1734-35, in 'Polifemo', her husband's 'Issipile' and 'Ifigenia in Aulide', in that of 1735-36 in 'Adriano', 'Mitridate', 'Orfeo' and 'Onorio'.

Hawkins says that she returned again in 1748, and sang in 'Mitridate'; but this is not recorded by Burney<sup>1</sup>, who puts her third visit in 1750, when she had a benefit concert (23 May). She was now old for a singer of those days, poor and almost voiceless. The concert was a failure, and she disappeared again. She then passed some time in Holland, where she soon fell into debt and was thrown into prison. Gradually she paid her debts by occasional performances given by the permission of the prison governor and returned to Bologna, where she was obliged to support herself by making buttons. She died there in extreme poverty and squalor.<sup>2</sup>

Her power of conducting, sustaining, increasing and diminishing her notes by minute degrees acquired for her, among professors, the credit of being a complete mistress of her art. Her shake was perfect, she had a creative fancy and a command of *tempo rubato*. Her high notes were unrivalled in clearness and sweetness, and her intonation was so absolutely true that she seemed incapable of singing out of tune.<sup>3</sup> She had a compass of two octaves, c' to c''.

Her face was "doughy and cross, but her complexion fine".<sup>4</sup> There are no good portraits of her, but she figures in several of the caricatures of the time, and notably in Hogarth's 'Masquerades and Operas', where she is the singer to whom the Earl of Peterborough is presenting £1000. Her portrait in Hawkins's 'History' is taken from a print by Van der Gucht after Seeman.

**CYBULSKI, Jan Józef** (b. ?, d. ?).

Polish 18th-19th-century composer. He published at his own expense '8 Variations pour le clavecin' in Warsaw. The Dresden Library (formerly Königl. Musiksammlung) possesses the original of this work and a copy of his Polonaise in B $\flat$  major, written in 1810.

C. R. H.

**CYCLIC FORM.** The form of a musical work in several movements, usually a symphony or a chamber work in sonata form, in which one or more themes appear in more than one movement, often only in the first and the last. The cyclic form was much favoured, if not actually invented, by César Franck and is particularly associated with the

composers of his school. The German equivalent of the term is often used much more loosely for any sonata-type work in several movements.

**CYMBALS** (Fr *cymbales*; Ger usually *Becken*, sometimes *Schallbecken*, Ital. *piatti* or *anelli*). Instruments of percussion normally of indefinite pitch. The modern cymbals are a pair of large round plates of a metal the exact constituents of which are the makers' secret. For the only cymbals which are satisfactory are those originating from Turkey, made by a family of specialists who have been in the business for generations. More recently a branch of the family has set up business in the U.S.A. Each cymbal, which is beaten by hand, has a small hole in the exact centre, where there is a shallow saucer-like recess; a double strap is passed through this hole and knotted with a special knot on the inside of the cymbal, where the recess is concave. On the outside of the cymbal where the strap passes through the hole, a round piece of soft leather or felt should be placed on the strap, to save the player's knuckles. For standard full orchestral use cymbals should be not less than 14 ins. in diameter, though 15 ins. are better, or even slightly larger if the notes to be played allow a heavier pair to be used. But very large, heavy cymbals are tiring to the player. Cymbals are made in all sizes, and care should be taken not to allow any of the thin type, as used in jazz bands, for their tone is utterly out of place in normal music. Some players are of the opinion that it is better to have one fairly high-sounding cymbal and one fairly low-sounding one. Of course, as each cymbal is hand-made, no two are exactly alike in texture. One has only to try even a portion of a percussion dealer's stock to realize this. Good Turkish cymbals are of great value.

Cymbals are of very ancient origin indeed. There is constant reference to them in the Bible.<sup>5</sup> Originally there appear to have been both small cymbals and large ones. We find in the last of the Psalms reference to the "well-tuned cymbals" and to the "loud cymbals". While small cymbals were used for dancing, where the dancers held them in the hands, it may well be that the well-tuned cymbals referred to in the Psalm were the forerunners of those to which Berlioz refers in his book on orchestration, which he uses in the 'Queen Mab' movement of the 'Romeo & Juliet' symphony, and which Debussy also used at the close of his 'Prélude à l'après-midi d'un faune'. These small cymbals were made to play actual notes, of very high pitch. The parts of these works are now played on the

<sup>1</sup> Hawkins probably assigned the wrong date to the 'Mitridate' of 1736.

<sup>2</sup> Mancini, 'Pensieri', 1774.

<sup>3</sup> Fétis.

<sup>4</sup> Walpole.

<sup>5</sup> This statement is made on the assumption that the translation represents the original correctly, as it obviously does not in the case of some musical instruments.

glockenspiel, for the small tuned cymbals are never met with. The writer possesses a pair of small cymbals 3 ins. in diameter. They are of good metal like the true Turkish cymbal and do not give any actual note, but their tone is a very true cymbal tone in miniature. The loud cymbals of the Psalm must have been much as our own ordinary cymbals are to-day.

Cymbals appeared in the orchestra at much the same time as the bass drum and triangle, under the name of "Turkish Music"<sup>1</sup>, and so frequently have they been given the function of duplicating that of the bass drum that the two instruments have been assumed by some people to be inseparable, especially as one player may be seen handling both, one cymbal being attached to the bass drum, the player using the other cymbal in his left hand while he uses the bass drum stick in his right. This method is nothing less than an abomination; it is used largely in military bands for their concert use, but on the march they do use two players. In the orchestra such a method is found only where there are insufficient percussion players. No proper control can be achieved, since a single player cannot damp both the cymbals and bass drum at once correctly. This has led certain military band players to "shut down" the loose cymbal on the fixed one on short quickly damped strokes. The resulting noise vulgarizes the cymbals' tone entirely. In the orchestra it is far better to omit the bass drum and play the cymbals only, should one player be faced with both. Rossini in his "William Tell" Overture is careful to have entirely separate parts for his cymbal player and his bass drum player, although from the point where the cymbals first enter (the final march section only) both instruments have identical parts. Yet in some of the older operatic works, and some overtures, it was not altogether clear whether the cymbals were intended to play with the bass drum entirely or not at all.

Cymbals are used so frequently nowadays that examples are scarcely necessary. The ordinary stroke of the two cymbals together, with a brushing motion, is the normal way of playing them, and this brushing motion must be used, for if the two cymbals are struck directly together there is great liability of their cracking, while the air is caught between them. We find Wagner using the cymbals alone far more frequently than with the bass drum. The two instruments appear in the 'Rienzi' overture and in the 'Tannhauser' march, but elsewhere the cymbals only, and there is a truly noble effect of two loud strokes at the climax of the 'Lohengrin' prelude and of two strokes at the end of that to 'Die Meistersinger'. All through the 'Ring' he uses

<sup>1</sup> See DRUMS (BASS DRUM) & TAMBOURINE.

cymbals alone. The roll which can be made either with a pair of kettledrum sticks, or with wood sticks, is also used by Wagner. The length of vibration of a cymbal stroke is important, and a composer should always mark the duration by means of tied notes, at the end of which the player will stop the vibration by touching the cymbals against his body. An examination of the third movement of Tchaikovsky's Sixth Symphony will show this. There are only some half-dozen strokes for cymbals, but they are most happily placed and their length of vibration is carefully marked. Although written on the same part as the bass drum, each instrument has an entirely separate part to play. The single stroke in the last movement of Dvořák's 'New World' Symphony, with its well calculated vibration period, is a most clever little point in a favourite work.

CYRBES, Władysław (b ? , 1851; d. ? , 1917).

Polish pianist and composer. He studied music at Cracow and then under Rheinberger at Munich. After his return he began a pedagogic career at Tarnopol, Rzeszów and Przemyśl. At the last-named town he founded a Music School and a Musical Society, being appointed director of both these musical institutions, posts he held until his death. His compositions include a Mass, two male-voice quartets, songs with pianoforte accompaniment and many pieces for pianoforte solo.

C. R. H.

CYTHÈRE ASSIÉGÉE, LA (Opera). See GLUCK.

CZAAR UND ZIMMERMANN (Lortzing). See ZAR UND ZIMMERMANN.

CZAKAN (Hung., properly *csákány*; Ger. *Stockflöte*). A Hungarian instrument, probably of Bohemian origin. It is a variant of the recorder family and usually stands in A<sub>4</sub>, though it is also made in other pitches. Although it is said to have been first made in Bohemia at the beginning of the 19th century, its origin is uncertain. It migrated to Austria, where it is first mentioned in the 'Wiener Zeitung' for 1 Oct. 1808: "Heberle: 'Fantaisie pour le Csakan ou Flûte Douce'". It reached Hungary through Austria and enjoyed great popularity in both countries about 1830, receiving many additions and improvements. It consisted of a large flageolet mouthpiece, with a long slender body, bored with an inverted conical tube like that of the old flute, at right angles to the mouthpiece. It thus resembled an ordinary handled walking-stick, and

indeed was commonly put to that use. It had the octave scale of the old concert flute, with fingering intermediate between that and the oboe. There was also a small vent-hole for the thumb at the back, as in the flageolet. It had a compass of about two octaves, starting from *b* below the treble stave.

A concert programme of the city of Veszprém in Hungary, dated 28 May 1816, mentions Heberle as the inventor of the czakan:

Variationen für den ungarischen Csákány mit Begleitung des ganzen Orchesters gesetzt, und gespielt von dem hier anwesenden Tonkünstler Herr Anton Heberle, Erfinder dieses Instruments

Ernst Krahmer, a Viennese oboist (1795-1857), was the only known czakan virtuoso. He wrote a method for the instrument, 'Neue theoretisch-praktische Csakan-Schule' (1855), where he distinguishes a Viennese and a better type, the Pressburger (Schollnast) instrument. There are methods also by Wilhelm Klingensbrunner (1819), Karl Kreith and G. Matejka. They and the Hungarian composer János Keresztély Hunyady wrote a great number of original compositions and transcriptions for it (cf. early volumes of Whistling's catalogue).

**CZARDAS.** See CSÁRDÁS.

**CZARTORYSKA, Marcelline, Princess** (born Princess Radziwiłł) (b. Vienna, 18 May 1817; d. nr. Cracow, 8 June 1894).

Polish amateur pianist. She studied the pianoforte with Czerny in Vienna and later with Chopin in Paris. In 1848 she settled there, but returned to Poland towards the end of her life. She was one of the most intimate friends of Chopin, whose music, in the estimation of many critics, she was among the very few pianists to interpret with fidelity to his own conception, and the tradition of whose playing she perpetuated.

Together with Chopin's sister Louise and Solange Clésinger Princess Czartoryska was with the composer when he died at dawn on 17 Oct 1849. Her letter about Chopin's death has been quoted by many of the master's biographers.

**CZECH MADRIGAL SINGERS (Čeští madrigalisté).** A vocal team founded by Bohumil Špidra in 1929 in Prague, where the first concert of this body took place on 29 Nov. of the same year. Influenced by the example of the famous English Singers, Špidra organized a small group of carefully selected singers, both male and female, to cultivate the field of a *cappella* chamber music, up to then altogether neglected in Bohemia. In the twenty years of its activity a great number of compositions rarely heard or entirely unknown were performed by this team at numerous Prague concerts and in other Czechoslovak towns. In addition to such names as Palestrina, Vecchi, Torelli, Lassus, Le Jeune,

Hassler, Bateson, Dowland, Gibbons and Wilbye, Czech masters (Harant z Polžic, Campanus, Michna, Trajan Turnovský, Tra-noscus, etc.), as well as many modern composers who have written for the group, are represented in an unusually wide repertory. For its merits in reviving early Czech music the ensemble has been honoured with the title Literati cantores Carolinae Universitatis Pragensis.

G. Č.

**CZECH NONET (Český nonet).** A chamber-music ensemble of international reputation. It was founded in 1923, when nine young artists, after finishing their studies at the Prague Conservatory, formed a group of performers on four stringed and five wind instruments. After initial successes in their own country they extended their activity to Lithuania, where they attained in 1924 professorships at the Conservatory in Klaipėda (Memel). In 1928, however, they returned to Prague, finding employments partly with the Czech Philharmonic Orchestra, partly with the Broadcast Orchestra. Prague has ever since remained the centre of their artistic activity at home, and it is from there that they set out on their tours to the countries of Europe in order to propagate new works by Czech composers, inspired for the most part by the outstanding abilities of the Nonet. In 1950 the members were relieved of all orchestral duties and enabled to concentrate exclusively on their activity in the team.

The team has gone through some changes, its present (1954) members being Emil Leichner (violin), Vilém Kostěčka (viola), Jaroslav Blažek (cello), Miroslav Novotný (double bass), Hynek Kašík (flute), František Hanták (oboe), Oldřich Pergl (clarinet), Antonín Hotový (bassoon) and Josef Hobík (horn). By its performances at the I.S.C.M. Festivals in Paris (1937) and in London (1938) the ensemble gained a world-wide reputation. Among the works especially written by Czech composers for the Nonet are several significant compositions by P. Bořkovec, E. F. Burian, J. B. Foerster, A. Hába, O. Jeremiáš, I. Krejčí, M. Krejčí, J. Maštálík, V. Petřelka, J. Řídík, etc. Several foreign composers have also written for it. The compositions especially written for the Nonet have by now (1954) exceeded eighty.

G. Č.

**CZECH STRING QUARTET.** See BOHEMIAN STRING QUARTET.

**CZECZOT, Witold** (b. Warsaw, 1846; d. ? 1929).

Polish composer. He was a pupil of Żeleński at Warsaw and of Liszt at Weimar. He continued his studies under Taneyev in Moscow. Later he pursued an academic course in philosophy at Heidelberg. After his return to Poland he joined the ecclesiastical

Seminary in Warsaw, finally becoming professor of theology at the Seminary in St. Petersburg.

Czeczot published many essays and articles both literary and theological. His compositions include a Suite, 3 Barcarolles, 'Thème varié' and polonaises for pianoforte as well as a string Quartet and many songs

C. R. H.

**CZERNOHORSKY.** See ČERNOHORSKÝ.

**CZERNY, Karl** (b. Vienna, 20 Feb. 1791; d. Vienna, 15 July 1857).

Austrian pianist, teacher and composer. His father, a cultivated musician, taught him the pianoforte when he was a small child, and at the age of ten he could play by heart the principal compositions of all the best masters. He gained much from his intercourse with Wenzel Krumpholz, the violinist, a great friend of his parents and a passionate admirer of Beethoven. Having inspired him with his own sentiments, Krumpholz took his small friend to see Beethoven, who heard him play and at once offered to teach him. From 1800 to 1803 Czerny made rapid progress and devoted himself especially to the study of the works of his master, whose friendship for him became quite paternal. Czerny also profited much by his acquaintance with Prince Lichnowsky, Beethoven's patron, with Hummel, whose playing opened a new world to him, and with Clementi, whose method of teaching he studied. He was soon besieged by pupils, to whom he communicated the instruction he himself eagerly imbibed.

In the meantime Czerny studied composition with equal ardour. He was always reluctant to perform in public and early in life resolved never to appear again, at the same time withdrawing entirely from society. In 1804 he had made preparations for a professional tour, for which Beethoven wrote him a flattering testimonial, but the troubled state of the Continent obliged him to give up the idea. Three times only did he allow himself to travel for pleasure, to Leipzig in 1836, to Paris and London in Apr. 1837 and to Lombardy in 1846. He took no pupils but those who showed special talent; the rest of his time he devoted to self-culture and to composition and the arrangement of classical works.

His first published work, '20 Variations concertantes' for pianoforte and violin, on a theme by Krumpholz, appeared in 1805. It was not till after his acquaintance with the publishers Cappi and Diabelli that his second work, a 'Rondo brillante' for four hands, followed (1818). From that time he had difficulty in keeping pace with the demands of the publishers and was often compelled to write at night after giving ten or twelve lessons in the day. From 1816 to 1823 Czerny had

musical performances by his best pupils at his parents' house every Sunday. At these entertainments Beethoven was often present, and he was so charmed with the peaceful family life he witnessed as to propose living there entirely; the project, however, fell through owing to the illness of the parents. One of Czerny's most brilliant pupils was Ninette von Belleville, then eight years old, who in 1816 lived in the house and afterwards spread the fame of her master through the many countries in which she performed. She married Oury, the violinist, and settled in London. She was followed by Liszt, then ten years old, whose father placed him in Czerny's hands. The boy's extraordinary talent astonished his master, who says of him in his autobiography: "It was evident at once that nature had intended him for a pianist", Theodor Dohler and a host of other distinguished pupils belong to a later period.

About 1850 Czerny's strength visibly declined; his health gave way under his never-ceasing activity, and he was compelled to lay aside his indefatigable pen. His active life closed shortly after he had, with the help of his friend Dr. Leopold von Sonnleithner, disposed of his considerable fortune in a princely manner. He was never married and had neither brothers, sisters nor other near relations.

Czerny's industry was truly astounding. Besides his numerous printed works, which embrace compositions of every species for pianoforte, he left an enormous mass of manuscripts, now in the archives of the Gesellschaft der Musikfreunde in Vienna. These compositions comprise 24 masses, 4 Requiems, 300 graduals and offertories, symphonies, overtures, concertos, string trios and quartets, choruses, songs for one or more voices, and even pieces for the stage. His book 'Umriss der ganzen Musikgeschichte' was published (1851) by Schott of Mainz, and in Italian by Ricordi of Milan. His arrangements of operas, oratorios, symphonies and overtures for two and four hands, and for eight hands on two pianofortes, are innumerable. As a special commission he arranged the overtures to Rossini's 'Semiramide' and 'Guillaume Tell' for eight pianofortes, four hands each. An arrangement for pianoforte of one of Beethoven's 'Leonora' overtures which he made in 1805 was of great service in training Czerny for this kind of work. He says in his autobiography: "It is to Beethoven's remarks on this work that I owe the facility in arranging which has been so useful to me in later life". His printed compositions amount to nearly 1000, of which many consist of 50 numbers or even more. A catalogue containing Opp. 1-798, with the arrangements and the manuscript works, is given in his 'School of Practical

Composition' (Op 600, 3 vols.) Czerny's pianoforte compositions may be divided into three classes, scholastic, solid and brilliant. The best of all, especially if we include the earlier works, are undoubtedly the scholastic (studies), Opp. 299, 300, 335, 355, 399, 400 and 500, published under the title 'Complete Theoretical and Practical Pianoforte School' (3 vols.). However worthy of admiration Czerny's industry may be, there is no doubt that he weakened his creative powers by over-production, and the effect has been that the host of lesser works have involved the really good ones in undeserved oblivion.

See also Beethoven (*passim*). Napoleão (and pf for studies). Rnsager ('Étude', ballet).

**CZERNY - STEFAŃSKA, Halina.** See STEFAŃSKA.

**CZERWENKA (Červenka), Joseph** (b. Benádek, Bohemia, 1759; d. Vienna, 1835).

Bohemian oboist. He became one of the finest players of his time. In 1789 he entered the private band of Count Schafgotsch at Johannsberg in Silesia. In the following year he played in Prince Esterházy's band, under Haydn, where his uncle played the bassoon. In 1794 he settled in Vienna as solo oboist in the imperial band and the court theatre, and professor at the Conservatory. He retired in 1820.

M. C. C.

**CZERWIŃSKI, Wilhelm** (b. Lwów, 1837; d. Lwów, 1893).

Polish pianist and composer. He was a pupil of Nettebohm in Vienna and Jaell in

Paris. His works, now forgotten, include two operas. 'Słowiczek' ('The Nightingale') in 1 act, produced at Lwów in 1875, and 'Rusalka' ('The Naiad') to a libretto by A. Urbański, 1875; a folk oratorio, 'Jascełka' (libretto by Father L. Solecki); a cantata, 'Oda do młodości' ('An Ode to Youth') for solo voices, chorus and orchestra; a pianoforte Concerto; a cello Sonata; many pianoforte pieces and songs, of which 'Marsz Sokółów' ('March of the Sokols') to words by Jan Lam, enjoyed great popularity.

G. R. H.

**CZIAK.** See ŽÁK.

**CZIBULKA, Alphons** (b. Szepes-Várallya, 14 May 1842; d. Vienna, 27 Oct. 1894).

Hungarian bandmaster and composer. He held an important post as military bandmaster in Vienna and was a prolific composer of dance music and other light, entertaining pieces long favoured by small orchestras in Continental pleasure gardens, health resorts, etc. His compositions include six operettas.

J. S. W.

**CZUBSKI, Jan** (b. ?, 1841, d. ?, 1902).

Polish composer. He was a pupil of Guniwicz and Karol Mikul at Lwów. He afterwards pursued a pedagogic career, teaching violin and singing at the Seminary at Rzeszów. He wrote a 'School of Violin Studies' for general use at the schools of music and several books of songs, also church music (masses and cantatas) and songs for chorus and for solo voice.

G. R. H.

# D

**D.** The name of the second degree of the natural scale of C. It represents the note in English and German which in French is called *Ré* and in Italian *Re*.

The further nomenclature is as follows:

	English	French
D♭:	D flat	Ré bémol.
D♭♭:	D double flat	Ré double bémol.
D♯:	D sharp	Ré dièse.
Dx:	D double sharp	Ré double dièse.

	German	Italian
D♭:	Des.	Re bemolle.
D♭♭:	Deses.	Re doppio bemolle.
D♯:	Dis	Re diesis.
Dx:	Disis.	Re doppio diesis.

D is the tonic of the keys of D major and D minor, and the note bounding the scales of these two keys. In the modal system D is the final of the 1st and 2nd modes (Dorian and Hypodorian) and the dominant of mode VII (Mixolydian). G., rev.

**D.C.** See **DA CAPO**.

**D.MUS.** See **DEGREES**.

**DA ANNUNCIAÇÃO.** See **ANNUNCIAÇÃO**.

**DA CAPO** (Ital. = from the beginning, often abbr. as D.C.). This direction is placed at the end of the second part of a piece of music where the composer requires the first part to be played or sung over again as a conclusion. The direction is often *dal segno* — "from the sign" — the sign being a 'S' at or near the beginning of the first portion. In scherzos or minuets, with trinos, the direction at the end of the trio is generally "scherzo" or "minuetto *da capo* [or D.C.] *senza ripetizione*". Among the earliest instances of its use are those in Cavalli's opera 'Giasone' (1655) and in Tenaglia's opera 'Clearco' (1661). G.

**DA CAPO ARIA.** From the time of Cavalli, as stated in the article above, to the early years of Mozart, the conventional type of vocal air, especially in opera, but also in oratorios, cantatas and vocal chamber music, was the tripartite aria with a contrasting middle section after which the first section was repeated *da capo*. The different types of such vocal pieces are described elsewhere.<sup>1</sup>

**DAFNI** (Opera). See **ASTORGA**.

**DAGINCOUR(T)** (d'Agincour), **François** (b. Rouen, ? 1684; d. Paris, 18 June 1758).

French composer. The conjecture of Fétis that there were two organist-composers of this name is not supported by more recent research. "Jacques André" may therefore be allowed to return to the limbo from which Fétis brought him.

François Dagincourt was appointed organist to the royal chapel on 13 Jan. 1714. His was only a minor contribution to the great school of clavecinists which the Couperin family represent, but he gained a considerable personal reputation. What is apparently his only published work is preserved in the library of the Paris Conservatoire. The title-page is inscribed 'Pièces de clavecin, dédiées à la Reine, composées par M. D'Agincour . . . le S. Boivin; Rouen, 1733, chez l'auteur'.

Some organ pieces by François Dagincourt have been published recently (1934), edited by L. Panel under the title 'Pièces pour orgue de François d'Agincour, organiste du roy' (Paris).

M. L. F.

**DAHL, Ingolf** (b. Hamburg, 9 June 1912).

American pianist, conductor and composer of German birth and Swedish parentage. He studied composition and pianoforte in Sweden and Switzerland. He has also been a pupil of Stravinsky. At one time Dahl was a conductor of the Zurich Opera, and when he went to the U.S.A. in 1935 he settled at Hollywood, where he worked as arranger for film studios. He was also active in the organization of modern music on the west coast, and appeared as pianist and as conductor in con-

<sup>1</sup> See **ARIA**.

nection with "Evenings on the Roof" for the Hollywood Theatre Alliance. He has also directed the orchestra and lectured at the University of Southern California.

Dahl's works, mostly in chamber-music form, include 'Variations on a Swedish Folk Tune' for flute solo; 'Music for 5 Brass Instruments'; 'Allegro and Arioso' for flute, oboe, clarinet, horn and bassoon; Concertino in one movement for clarinet, violin and cello. There is also a Duo for cello and pianoforte.

**DAHLMAN, Berta.** See SjöGREN.

**DAHMEN (or Damen).** Dutch family of German descent, which did much for the development of technique of the flute and other wind instruments. The founder of the family was

(1) **Wilhelm Dahmen** (b. Duisburg, 1731; d. Harlingen (Holland), 11 Nov. 1780). He was a versatile musician who devoted most of his energies to teaching, first at Sneek and later at Harlingen. Of his large family of sons

(2) **Hermanus Dahmen** (b. Sneek, 26 Sept. 1755; d. Rotterdam, 1830) became a famous horn player. After playing in local bands he was engaged as first hornist at the Municipal Theatre in Amsterdam. In 1787 he visited London and Dublin, playing in various orchestras until 1790, when he removed to Steinfurt, where he was connected with the grand-ducal orchestra. The last years of his life he spent at Rotterdam.

(3) **Peter Dahmen** (b. Deventer, c. 1757; d. Sneek, 1835) was a composer of chamber music which met with success both in England (where it was published) and on the Continent.

(4) **Johan Arnold Dahmen** (b. The Hague, c. 1760; d. London, 1794). Violoncellist. He is now known chiefly for 'Trois Quatours pour 2 violons, alto et basse' and 'Trois Trios pour violons et basse', published in Paris, as well as a number of sonatas and duets for his own instrument.

(5) **Arnoldus Dahmen** (b. Harlingen, 2 May 1767; d. Amsterdam, 17 Dec. 1829). A famous flautist and teacher of the flute, among his pupils being Louis P. F. Drouet.

(6) **Wilhelm Dahmen, jun.** (b. Harlingen, 1769; d. Spain, ?). He was a horn player and had considerable success in Amsterdam, Rotterdam and London, in which latter city he joined the army against Napoleon. He died as a British soldier.

(7) **Wilhelm Hendrik Dahmen** (b. Amsterdam, 27 Mar. 1791; d. Nijmegen, 15 Dec. 1847), the eldest son of Hermanus, was a well-known violinist. At seventeen years of age he was solo violinist with a ballet troupe and at twenty-one became its conductor. He won a great reputation as a chamber-music player,

being leader of a string quartet, and was court violinist to William I of the Netherlands. As a teacher he was much in demand.

(8) **Jacob Dahmen** (b. Den Helder, 4 May 1798; d. ?). He settled as a teacher in England and probably died there.

(9) **Johan Cornelis Dahmen** (b. Rotterdam, 9 Jan. 1801; d. Rotterdam, 16 Feb. 1842) was a talented flautist and also played violin, cello and guitar. He had many pupils who later won good reputations.

(10) **Johan Arnold Dahmen**, the second (b. Rotterdam, 1807; d. The Hague, 5 Aug. 1853), was a member of the royal band and a teacher at the Rotterdam School of Music.

(11) **Herman Johan Dahmen** (b. Rotterdam, 1807; d. Utrecht, 1881), twin brother of the preceding, was also a violinist who developed early, becoming leader of the Utrecht orchestra at the age of eighteen. He retained the post for fifty years and on his retirement received the Order of the Crown of Oak. Many of his pupils held leading positions.

(12) **Johan Arnold Dahmen**, the third (b. Amsterdam, 3 Jan. 1805; d. Amsterdam, 28 Oct. 1834), eldest son of Arnoldus, appeared as a flute soloist at a Felix Meritis Concert, in the presence of the Tsar Alexander of Russia, before he was ten years old. He was later flautist at the French Opera in Amsterdam and The Hague.

(13) **Peter Wilhelm Dahmen** (b. Amsterdam, 5 Aug. 1808; d. Amsterdam, 20 June 1886), his younger brother, was for many years solo flautist at the Park Concerts in Amsterdam.

(14) **Hubert Dahmen** (b. Amsterdam, 1813; d. Amsterdam, 21 Dec. 1836). He studied first the flute, later taking up the cello and playing this latter instrument in the orchestra of the French Opera. He won considerable popularity as a composer, among his works being an opera, 'Azalais', four concert overtures and solo works for violin, cello, horn, clarinet and bassoon.

(15) **Johan Francis Arnold Theodore Dahmen** (b. Amsterdam, 2 Aug. 1837; d. Sloten, 1912), a son of Peter Wilhelm, was probably the most famous of this family of flautists, and besides playing the flute well was an excellent pianist. At the age of fifteen he appeared as flute soloist at a Felix Meritis Concert. Later he became first flautist in the Park Orchestra and on the formation of the Concertgebouw Orchestra transferred to that body. He retired into private life at the age of seventy.

Later members of the family who have gained distinction are

(16) **Jacob Arnold Wilhelm Dahmen** (b. Amsterdam, 9 Feb. 1871), a pupil of Frans Coenen for violin and Willem Kes for

orchestral playing. For some years he was a leader (second *concert-meester*) in the Concertgebouw Orchestra, but later devoted himself chiefly to teaching, being on the staff of the "Toonkunst" School of Music (later Conservatory).

(17) **Jan Dahmen** (b. Breda, 30 June 1898), a pupil of André Spoor at the Royal Conservatory at The Hague, where on leaving he won the gold medal for excellence. Later he studied under Carl Flesch and became leader of the Berlin Philharmonic. In 1924 he was appointed leader of the State Opera at Dresden, and he has travelled all over Europe as a soloist. His most recent appointments have been those of leader of the Goteborg and (1948) Amsterdam Concertgebouw Orchestras.

(18) **Mona Dahmen** (born **Scholte**) (b. Haarlem, 24 Nov. 1894), wife of the preceding, won the Nicolai Prize for composition at the Royal Conservatory at The Hague and then studied pianoforte playing at the Hochschule für Musik in Berlin under Leonid Kreutzer. She has taken part as accompanist and duettist with her husband in most of his concert tours.

H. A.

**Dahn, Felix.** See Hofmann (H, 'Wilhelm von Oranien', lib.), Reger (3 songs) Ritter (A., 'Faule Hans', opera), Scharwenka (X, 'Mataswintha', opera) Schmidt (F., 'Fredegundis', opera), Strauss (R., 9 songs).

**DAL GAUDIO, Antonio** (b. Rome, ?, d. ?).

Italian 17th-century composer. He is known only by two operas produced at Venice, 'Almerico in Cipro' (1675) and 'Ulisse in Feaccia' (1681). The score of the former is extant at the library of St. Mark's there. The latter, the libretto of which is by Filippo Acciaiuoli, was performed by waxen puppets, with singers behind the scenes. Of Dal Gaudio's life nothing seems to be known beyond the fact that he hailed from Rome and was a *Cavaliere*; in the libretto of 'Almerico' he is called chapel master to Prince Gonzaga, Duke of Sabioneta, and it is there stated that "le sue note . . . saranno tante stelle, che gli tesserano al suo merito una corona immortale".

A. L.

**DAL SEGNO** . . . (Ital. = from the sign . . .). See DA CAPO.

**DALAYRAC, Nicolas** (b. Muret, Languedoc, 13 June 1753; d. Paris, 27 Nov. 1809).

French composer. His father occupied a high civil appointment in his province, and in spite of his son's early passion for music destined him for the law. He was sent in 1774 to Versailles, where a commission in the guards of the Comte d'Artois, as sub-lieutenant, had been obtained for him. But the love of his art was proof against the attraction of a military career. He used to walk from Versailles to Paris to hear the works of Philidor, Monsigny,

Grétry, and to take harmony lessons with Langlé. In 1781 he published some 'Quatuors concertants'—the earliest French string quartets after those of Vachon—and in the same year made his début as an operatic composer with 'Le Petit Souper' and 'Le Chevalier à la mode', performed at the house of Baron de Bésenal. Through the protection of Marie Antoinette 'L'Éclipse totale', a *comédie mêlée d'arrestes*, was performed at the Comédie-Italienne on 7 Mar. 1782. This work opens the long series of his *opéras-comiques* (see *ist below*) which secured Dalayrac's position among the most fertile composers of his time. With a few exceptions, they remained in the repertory for a good number of years, several of them were revived occasionally late in the 19th and early in the 20th century, and at least one, 'Maison à vendre' (1800), was frequently heard in Paris and elsewhere in our own time. 'Nina' (1786, later imitated by Paisiello), 'Les Deux Petits Savoyards' (1789), 'Camille' (1791, later imitated by Paër, as was his 'Sargines'), 'Adolphe et Clara' (1799) and 'Maison à vendre', mentioned above, were his most conspicuous successes.

His reputation did not diminish during the Revolution, and he had his full share in the topical pieces and "rescue operas" characteristic of the period, greatly assisted by skilled librettists, such as Monvel and Marsollier. His Shakespearean opera 'Tout pour l'amour, ou Roméo et Juliette' (1792; score at the Paris Conservatoire) was less successful than Steibelt's opera on the same subject, produced at the rival theatre, the Théâtre Feydeau, a year later.

Dalayrac's works were very popular in other countries too, especially in Germany, Scandinavia and Russia, a few were adapted in England. Many of them were published in full score. He was highly esteemed by his contemporaries; Grétry says of him that he was born with wit and grace.

Dalayrac's life was uneventful; he never left France. In 1808 he became a Chevalier of the Legion of Honour.

The following is a list of Dalayrac's works for the stage (all performed in Paris where no other town is indicated):

- 'Le Petit Souper' (? librettist), privately performed, 1781.
- 'Le Chevalier à la mode' (?), privately performed, 1781.
- 'L'Éclipse totale' (Lachabeaussière, after La Fontaine), Comédie-Italienne, 7 Mar. 1782.
- 'Le Corsaire' (Lachabeaussière), Versailles, 7 Mar. 1783; Comédie-Italienne, 17 Mar. 1783.
- 'Matthieu, ou Les Deux Tuteurs' (Fallet), Fontainebleau, 12 Oct. 1783; Comédie-Italienne, 8 May 1784.
- 'L'Amant Statue' (Desfontaines), Comédie-Italienne, 4 Aug. 1785.
- 'La Dot' (Desfontaines), Fontainebleau, 8 Nov. 1785; Comédie-Italienne, 21 Nov. 1785.
- 'Nina, ou La Folle par amour' (Marsollier), Comédie-Italienne, 15 May 1786.

- 'Azémia, ou Le Nouveau Robinson' (Lachabeaussière), Fontainebleau, 17 Oct 1786; Comédie-Italienne, 3 May 1787 (as 'Azémia, ou Les Sauvages').
- 'Renaud d'As' (Radet & Barré, after La Fontaine), Comédie-Italienne, 19 July 1787.
- 'Les Deux Sérénades' (Goulard), Comédie-Italienne, 23 Jan. 1788.
- 'Sargines, ou L'Élève de l'amour', Comédie-Italienne, 14 May 1788.
- 'Fanchette, ou L'Heureuse Épreuve' (Desfontaines), Comédie-Italienne, 13 Oct 1788.
- 'Les Deux Petits Savoyards' (Marsollier), Comédie-Italienne, 14 Jan 1789.
- 'Raoul sire de Créqui' (Monvel), Comédie-Italienne, 31 Oct 1789.
- 'La Sourée orageuse' (Radet), Comédie-Italienne, 29 May 1790.
- 'La Chêne patriotique, ou La Matinée du 14 juillet' (Monvel), Comédie-Italienne, 14 July 1790.
- 'Vert Vert' (Desfontaines), Comédie-Italienne, 11 Oct. 1790.
- 'Camille, ou Le Souterrain' (Marsollier), Comédie-Italienne, 19 Mar 1791.
- 'Agnes et Olivier' (Monvel), Comédie-Italienne, 10 Oct 1791.
- 'Philippe et Georgette' (Monvel), Comédie-Italienne, 28 Dec 1791.
- 'Tout pour l'amour, ou Roméo et Juliette' (Monvel, after Shakespeare), 'Opéra-Comique national de la Rue Favart' or 'Théâtre Favart' (formerly Comédie-Italienne), 7 July 1792.
- 'Ambrose, ou Voilà ma journée' (Monvel), Théâtre Favart, 12 Jan 1793.
- 'Argill, ou Le Prisonnier de guerre' (Marsollier), Théâtre Favart, 2 May 1793.
- 'Urgande et Merlin' (Monvel), Théâtre Favart, 14 Oct 1793.
- 'La Prise de Toulon' (Picard), Théâtre Feydeau, 1 Feb. 1794.
- 'Le Congrès des rois' (Ève Maillot), Théâtre Favart, 26 Feb 1794 (with 11 other composers).
- 'L'Enfance de Jean-Jacques Rousseau' (Andrieux), Théâtre Favart, 23 May 1794.
- 'Rose et Picard, ou Suite de l'Optimiste' (incidental music for comedy by Colin d'Harleville), Comédie-Française, 16 June 1794.
- 'Les Détenues, ou Cange, commissionnaire de Lazare' (Marsollier), Théâtre Favart, 18 Nov. 1794.
- 'La Pauvre Femme' (Marsollier), Théâtre Favart, 8 Apr 1795.
- 'Adèle et Dorsan' (Marsollier), Théâtre Favart, 27 Apr. 1795.
- 'La Famille américaine' (Bouilly), Théâtre Favart, 20 Feb. 1796.
- 'Marianne' (Marsollier), Théâtre Favart, 7 July 1796.
- 'La Maison isolée, ou Le Vieillard des Vosges' (Marsollier), Théâtre Favart, 11 May 1797.
- 'La Leçon, ou La Tasse de glaces' (Marsollier), Théâtre Feydeau, 24 May 1797.
- 'Gulnare, ou L'Esclave persanne' (Marsollier), Théâtre Favart, 9 Jan 1798.
- 'Alexis, ou L'Erreur d'un bon père' (Marsollier), Théâtre Feydeau, 24 Jan. 1798.
- 'Primerose' (Faviers & Morel de Vindé), Théâtre Favart, 7 Mar 1798.
- 'Léon, ou Le Château de Montenero' (Hoffman), Théâtre Favart, 15 Oct. 1798.
- 'Adolphe et Clara, ou Les Deux Prisonniers' (Marsollier), Théâtre Favart, 10 Feb 1799.
- 'L'Actrice chez elle' (mostly quoted as 'Laure', Marsollier), Théâtre Favart, 27 Sept. 1799.
- 'Le Rocher de Leucade' (Marsollier), Théâtre Favart, 14 Feb. 1800.
- 'Une Matinée de Catnat, ou Le Tableau' (Marsollier), Théâtre Feydeau, 29 Sept. 1800.
- 'Maison à vendre' (Duval), Théâtre Favart, 23 Oct. 1800.
- 'Zozo, ou Le Mal avisé' (arranged from play by Pixérécourt, for Théâtre Feydeau, 1800, not performed).
- 'Léhéman, ou La Tour de Newstadt' (Marsollier), Opéra-Comique (Théâtre Favart and Feydeau united), 12 Dec. 1801.
- 'L'Antichambre, ou Les Valets entre eux' (later 'Pícaros et Diégo') (Dupaty), Opéra-Comique, 26 Feb. 1802.
- 'La Boucle de cheveux' (Hoffman), Opéra-Comique, 29 Oct. 1802.
- 'La Jeune Prude, ou Les Femmes entre elles' (Dupaty), Opéra-Comique, 14 Jan. 1804.

- 'Une Heure de mariage' (Étienne), Opéra-Comique, 20 Mar 1804.
- 'Le Pavillon du Calippe, ou Almanzor et Zobéide' (Morel de Chefdéville, Després & Deschamps), Opéra, 20 Apr 1804, revived as 'Le Pavillon des fleurs, ou Les Pêcheurs de Grenade' (new lib. by Pixérécourt), Opéra-Comique, 13 May 1822.
- 'Gulstan, ou Le Hulla de Samarcande' (Étienne & Lachabeaussière), Opéra-Comique, 30 Sept 1805.
- 'Le Héros en voyage' (Dieulafoy), written for Toulouse 1805, not performed.
- 'Deux Mots, ou Une Nuit dans la forêt' (Marsollier), Opéra-Comique, 9 June 1806.
- 'Koulout, ou Les Chinois' (Pixérécourt), Opéra-Comique, 18 Dec 1806.
- 'Luna, ou Le Mystère' (Saint-Cyr), Opéra-Comique, 8 Oct. 1807.
- 'Élise-Hortense, ou Les Souvenirs de l'enfance' (Marsollier), Opéra-Comique, 26 Sept 1809.
- 'Le Poète et le musicien, ou Je cherche un sujet' (Marsollier), Opéra-Comique, 30 May 1811 (posthumous work).

**DALBERG, Johann Friedrich Hugo, Baron von** (b. Herrnsheim nr. Worms, 17 May 1760; d. Herrnsheim, 26 July 1812).

German amateur composer, writer on music and pianist. He was a canon of Trier and Worms Cathedrals and also held various secular court appointments, but took lessons in music from Holzbauer. His compositions comprise pianoforte sonatas, a Quartet (Op. 25) for pianoforte and wind, many single and various collections of songs, and oratorios such as 'Jesus auf Golgatha', 'Evas Klagen' (words from Klopstock's 'Messias', 1785), 'Der sterbende Christ an seine Seele' (Pope, 1787; appeared also in an English edition as Op. 14)<sup>1</sup> and others. Two of his songs have sometimes wrongly been attributed to Mozart (K. Supp. 250 and 251).<sup>2</sup>

Dalberg's books are 'Blikke eines Tonkünstlers in die Musik der Geister' (anonymous, 1787); 'Vom Erfinden und Bilden' (1791); 'Untersuchungen über den Ursprung der Harmonie' (1800); 'Die Aeolsharfe, ein allegorischer Traum' (1801); 'Über griechische Instrumentalmusik und ihre Wirkung' (1806); 'Phantasien aus dem Reich der Töne' (1806). In 1802 he translated Sir William Jones's 'On the Musical Modes of the Hindus' (1799) into German ('Über die Musik der Indier').

A. L.

**D'ALBERT, Eugen.** See ALBERT, EUGEN D'.

<sup>1</sup> This and the fact that the following Op. 15, a collection of English songs, and an Italian cantata, 'Beatrice' (after Dante), were published in London "for the author" suggests that he spent some time there (? c. 1796).

<sup>2</sup> The reference in the index to Köchel, 3rd ed., is (incorrectly) to Herbert von Dalberg (1750-1806), the Mannheim intendant and playwright whose connection with Mozart is of a different nature.

**DALCROZE.** See JAKUES-DALCROZE.

**DALE.** English family of music publishers, music sellers and musical-instrument dealers.

(1) **Joseph Dale** (b. ?; 1750; d. London, 1821). He founded a business in London which existed from 1783 to nearly the middle of the 19th century. He was first established at a private house, 19 Chancery Lane, whence he issued many musical publications, including a number of operas, such as 'Rosina', 'The Flitch of Bacon', 'The Maid of the Mill' and others, the copyright of which he had purchased from William Napier about 1785. In Jan. 1786 he moved to 132 Oxford Street, premises previously occupied by Samuel Babb, whose stock-in-trade and musical circulating library Dale purchased. There he remained until about 1817, this address being also sometimes given, from 1791 onwards, as the corner of (or 29) Holles Street. He also had additional premises at 19 Cornhill in about 1791-1805, and at 151 New Bond Street in about 1802-5, when he took his son William (2) into partnership at these three addresses, as Joseph Dale & Son (or Joseph & William Dale). The partnership was dissolved in 1809, when William set up in business for himself at 8 Poultry, and Joseph continued alone at 19 Cornhill and the corner of Holles Street until about 1817; from then at 25 Cornhill until about 1819 and afterwards at 10 Cornhill until his death in 1821.

Joseph Dale was also a musician and organist of St. Anthony and St. John Baptist, Watling Street, in 1805. He composed sonatas and arranged vocal airs with variations for the harpsichord or pianoforte, and took out letters patent for his improvements on the tambourine, an instrument in which J. Dale, jun., presumably a son of Joseph, was interested.

(2) **William Dale** (b. London, ?; d. London, ? 1827), son of the preceding, was in business with his father from 1805 to 1809, when he set up on his own account as publisher, music and musical-instrument seller at 8 Poultry, where he remained until about 1823, when the address was changed to 19 Poultry, where he was succeeded in 1827 by

(3) **Elspeth Dale** (b. ?; d. ?), presumably his widow, who was followed at the same address, about 1832, by

(4) **Dale Cockerill & Co.** They remained at 19 Poultry until 1837, when they were followed by G. Gange & Co., pianoforte manufacturers and music sellers, until 1843.

(5) **James Dale** (b. ?; d. ?), perhaps a brother of Joseph (1), was a composer of pianoforte sonatas, etc., which were printed and published by him at 16 Bowling Green Place, Kennington, about 1800 and a little later.

The Dale firm in its best days issued so many and such various publications as to defy classification. The standard operas of the day, collections of English and Scottish songs, country-dance music and sheet music of all kinds bear their imprint.

W. C. S.

**DALE, Benjamin (James)** (b. London, 17 July 1885; d. London, 30 July 1943)

English composer. He was the son of C. J. Dale, a talented amateur musician who was at one time the conductor of the Finsbury Choral Association. He studied at the R.A.M. under Frederick Corder and made his début with an overture inspired by Macaulay's 'Horatius', which was performed on 10 May 1900, in his fifteenth year. Other early works since discarded comprise an overture to Shakespeare's 'Tempest' (1902), a 'Fantasia' for organ and orchestra (1903) and a concert overture in G minor (1904). His first published and still best-known work is the pianoforte Sonata in D minor<sup>1</sup> which was composed in 1902 when Dale was still a student, and performed for the first time in 1905. It was followed in 1907 by a Suite for viola and pianoforte; the two last movements (Romance and Finale) were afterwards orchestrated, in which form they were first played at a Philharmonic concert in 1911. The Romance in particular became one of the most popular pieces in the repertory of Lionel Tertis. The Phantasy for viola and pianoforte (1911), like so many others, owes its existence to the initiative of W. W. Cobbett, while the Introduction and Andante for six violas (1911) was written for Tertis's pupils.

The outbreak of war caught Dale in Germany. He was interned at Ruhleben until Mar. 1918, when he was exchanged and removed to Holland, returning home just before the Armistice with his health impaired by his experiences. While interned he wrote 'Prunella' as incidental music to a performance of that play, which, however, did not take place. After his return he wrote little, but a journey round the world in 1919-20, occasioned by an examining visit to Australia and New Zealand, seems to have had a stimulating effect, for in 1921-22 he composed a violin Sonata which was first played by Rowsby Woof and York Bowen at the Wigmore Hall in Oct. 1922. A pianoforte Quartet sketched soon after the 1914-18 war, however, remained unfinished. In 1921 the cantata 'Before the paling of the stars', first performed at Queen's Hall in Feb. 1913, was included in the Hereford Festival. The most important of his later works is a 'Song of Praise' for chorus and orchestra.

In later years Dale was much occupied with educational work, particularly in connection

<sup>1</sup> A detailed analysis of it was contributed by F. Corder to the Mus. T., Apr. 1918.

with the R.A.M. and the Associated Board of the Royal Schools of Music. In 1936 he became a member of the Board after much experience of its examinations both at home and in the Dominions, and was also elected Warden of the R.A.M. on Stanley Marchant's appointment as Principal. He died suddenly after a rehearsal of his last work for a Promenade Concert at the Albert Hall.

Dale's style is romantic, characterized by vigour in the pianoforte Sonata, by suavity and polish in that for violin and pianoforte. A certain fastidiousness prevented his output from becoming considerable, but also ensured the maintenance of a high standard, which caused Corder once to claim that Dale had then written "fewer and better works than any English composer of his generation".

E. E. & H. C. C., rev.

The main reason why Dale's music is treasured by musicians rather than appealing to the wider public is that it looks inwards and is attentive more to art than to musical effect. He never sought to make energy or richness the chief aim of his music; such richness as it contains is incidental, or rather accidental, to the purpose of conveying a particular musical meaning.

In his last work, a tone-poem, however, he allowed himself an increased range of dynamics, colour and intensity of feeling, and with this greater freedom he planned a large design in orchestral expression. 'The Flowing Tide' takes twenty-eight minutes to perform and is scored for a large modern orchestra (3 each woodwind, 4 horns, 3 trumpets, 3 trombones, tuba, timpani, percussion [2 players], celesta, 2 harps and full strings). The meaning of the title is twofold. As far as the work is pictorial its subject is the sea and what it means to an impressionable traveller, such as Dale was himself. Mingled with this vision of a natural element is a thought of humanity expressed in the Shakespearean quotation written at the head of the score:

There is a tide in the affairs of men  
Which, taken at the flood, leads on to fortune

The work is planned in five episodes forming a continuous piece, often without any definition of the moment of change. These episodes are, briefly, music of a flowing character, steadily growing in power, a broadly expressive section, which is the longest and most descriptive part of the work; an episode of rhapsody and fantasy; a brief retrospect of the second section; and a finale incorporating gradually all the main ideas, bringing the work to a wonderful climax. The score, which bears the inscription "dedicated, with great respect, to Sir Henry J. Wood", was copied in photo-facsimile for a memorial edition subscribed for by Dale's colleagues at the R.A.M.

## CATALOGUE OF WORKS

### INCIDENTAL MUSIC

*Op.*

- 'The Knight of the Burning Pestle' by Beaumont and Fletcher, prod. at Ruhleben Camp (1917)<sup>1</sup>

### CHORAL WORKS

- 6 3 Carols for unaccomp. chorus (1906-12)  
7 Christmas Hymn 'Before the pining of the stars' (Christina Rossetti), for chorus & orch. (1912).  
8 3 Partsongs.  
12 Festival Anthem 'A Song of Praise' (words from the Psalms and a hymn by Bishop Heber), for solo voices, chorus, semi-chorus & orch. (1923).  
— 'Cradle Song' (anon.), carol or soprano & chorus (1925).  
— 'Rosa mystica' (anon.), carol for tenor & chorus (1925).  
— Carol for Christmas, 'In the bleak mid-winter' (Christina Rossetti) for unaccomp. chorus (1938).

### ORCHESTRAL WORKS

- Overture (inspired by Macaulay's 'Horatius') (1900).  
— Overture to Shakespeare's 'Tempest' (1902).  
— Concert Overture, G m. (1904).  
— 'English Dance' (see also Incidental Music & Violin and Pianoforte) (1919).  
— 'Prunella' (see also Violin and Pianoforte & Pianoforte Music) (1924).  
— 'A Holiday Tune' (see also Violin and Pianoforte & Pianoforte Music) (1925).  
— 'The Flowing Tide' (1943)<sup>2</sup>

### SOLO INSTRUMENTS AND ORCHESTRA

- 'Fantasia' for organ (1902).  
2. 'Romance and Allegro' (see also Viola and Pianoforte [Suite]) (1911).

### CHAMBER MUSIC

- 5 'Introduction and Andante' for 6 violas (1911, rev. 1913).

### VIOLIN AND PIANOFORTE

10. 3 Pieces (see also Orchestral Works) (1916-20)  
1. English Dance.  
2. Prunella.  
3. A Holiday Tune.  
11. Sonata, E m. (1921-22).  
15. 'Ballade', G m. (1927).

### VIOLA AND PIANOFORTE

2. Suite, D m. (see also Solo Instruments and Orchestra) (1906)  
1. Maestoso.  
2. Romance.  
3. Finale (Allegro).  
4. 'Phantasy', D m. (1911).

### PIANOFORTE MUSIC

1. Sonata, D m. (1902).  
3. Impromptu 'Night Fancies' (1907).  
— 'A Holiday Tune' (see also Orchestral Works & Violin and Pianoforte).  
— 'Prunella' (see also Orchestral Works & Violin and Pianoforte).  
— Sight-Reading Pieces for Associated Board Examinations (with Herbert Howells) (1924, rev. 1937).

### SONGS

9. Songs from Shakespeare's 'Twelfth Night' (1918)  
1. O mistress mine.  
2. Come away, death (with viola).  
— 'I heard a linnnet' (Robert Bridges) (1939).

<sup>1</sup> Dale composed an 'English Dance' (see also Orchestral Works & Violin and Pianoforte), while Frederick Keel set the songs; there may have been other numbers but, if so, they have not survived.

<sup>2</sup> Preliminary sketches for this work were made in 1924.

## THEORETICAL WORKS

Supplementary Exercises to S. Macpherson's 'Melody and Harmony', Vol. I (1922).  
 'Harmony' (Part I of 'Harmony, Counterpoint and Improvisation', Parts I & II by Gordon Jacob and H. V. Anson) (1940-42).

W. H. S. (II).

BIBL.—CORBETT, W. W., 'Cyclopedic Survey of Chamber Music' (Oxford, 1929), article on Opp. 2, 4, 6 & 11.

EVANS, EDWIN, article in *Mus. T.* (1919, pp. 201-5).  
*Mus. T.*, article on pf Sonata (1918, pp. 164-67).

**DALE, Kathleen** (born **Richards**) (b. London, 29 June 1895).

English pianist, musicologist and composer. She was educated at St. Felix School, Southwold (1909-13), and studied music privately: pianoforte with York Bowen (1914-1916 and 1919-20) and Fanny Davies (1924-1926) and composition with B. J. Dale (1914 and 1919-21). In 1926-28 she studied Swedish at University College in London, and in the latter year she took the A.R.C.M. as accompanist. She taught harmony and theory at the Tobias Matthay Pianoforte School from 1925 to 1931 and was tutor (1945-47) and lecturer (1946-50) in musical appreciation for the Workers' Educational Association.

Kathleen Dale's compositions, dated 1919-1951 and all published under her maiden name of Kathleen Richards, include partsongs for 2 voices with accompaniment, pianoforte and violin and pianoforte pieces, as well as educational music for pianoforte solo and duet, violin and pianoforte and 2 violins unaccompanied. She also edited songs by Schubert in 'Star Songs' (1931) and the E minor pianoforte Sonata (first complete edition, 1948). She has played in public as soloist and accompanist in London and elsewhere, also broadcast repeatedly in the same capacities between 1927 and 1931. In 1920-1925 and again in 1946-49 she served on the Council of the Society of Women Musicians. In 1944 she was appointed musical executor for the late Dame Ethel Smyth and became responsible for the presentation of that composer's autographs of all her principal works and juvenilia to the B.M. in 1945-49.

As an author Kathleen Dale published her first complete book, 'Nineteenth-Century Piano Music', in 1954. Her contributions to symposia and periodicals are also of considerable importance and show a rare combination of painstaking scholarship and keen artistic sensibility. Perhaps her most valuable work has been done in the field of keyboard music, many phases of which she has studied with equal perspicacity from the historical, critical, aesthetic and bibliographical aspects. But her knowledge of Swedish also amounts to something of a speciality, and she has written and translated articles on Swedish music in *M. & L.*, *M. Rev.* and *M.M.R.* between 1940 and

1950 and also contributed articles to 'The Listener' from 1944. Other essays, on pianoforte music and on Ethel Smyth, appeared in these journals. Of outstanding importance are her contributions of substantial chapters to the 'Music of the Masters' series edited by Gerald Abraham, on the pianoforte works of Handel, Haydn, Schubert, Schumann and Grieg. Her lecture, 'The Unique Contribution of Domenico Scarlatti to the Keyboard', delivered before the Royal Musical Association in 1949 (publ. in *Proc. Roy. Mus. Ass.*) was exceptionally valuable and admirably illustrated by her at the pianoforte. In 1951 she completed her translation of Hans Redlich's 'Claudio Monteverdi: Life and Works' (Oxford, 1952).

E. B.

**Dale, Knud.** See Halvorsen (fiddle tunes taken from).

**D'ALEMBERT.** See ALEMBERT.

**DALEN, Hugo van** (b. Dordrecht, 16 Apr. 1888).

Dutch pianist and writer. He studied at the Amsterdam Conservatory under Johan Wijsman and Julius Toentgen, in Vienna under August Stradal, a pupil of Liszt, and in Berlin under Busoni. In 1914 he was appointed teacher at the Klindworth-Scharwenka Conservatory in Berlin, where he remained until 1918, when he was appointed to the Royal Conservatory at The Hague, where he is still professor. From his early days he took a keen interest in Russian music, and besides writing and lecturing much on the subject, he gave recitals and concerts in Holland as well as in Berlin, Paris (Colonne concert under Pierné), Vienna, Budapest, Antwerp, etc. To make his knowledge of the subject as complete as possible he made study tours all over Russia and Siberia.

Besides many pianoforte works he has written symphonic poems, 'Jobeide', 'Niobe', and 'Poseidon', a 'Slavonic Fantasy' and other works for orchestra. He made in addition extensive studies of the music of England, France, Belgium, Poland, Hungary, Norway, Sweden, Finland, Spain, Italy, America and Holland. After winning the first prize at a Concours de Virtuose in Paris in 1920 he was made an Officier d'Académie and has the Order of King Leopold of Belgium. H. A.

**DALIBOR** (Opera). See SMETANA.

**DALL' ABACO, Evaristo** (**Felice**) (b. Verona, 12 July 1675; d. Munich, 12 July 1742).

Italian violinist and composer. After a sojourn at the court of Modena from 1696 to about 1701, he went to Munich and entered the orchestra of the Elector Max Emanuel as chamber musician in Apr. 1704. After the battle of Blenheim he accompanied the court

to Brussels, where he married Marie Clémence Bultinck on 28 May 1708. On the restoration of the government in 1715 and the court's return to Munich Dall' Abaco was appointed *Konzertmeister*. His published works are as follows:

- Op. 1. 12 'Sonate da camera' for vn, cello & cont.  
 Op. 2. 12 'Concerti a quattro da chiesa'  
 Op. 3. 12 'Sonate da chiesa a tre'  
 Op. 4. 12 'Sonate da camera a violino e violoncello'.  
 Opp. 5 & 6 'Concerti a più instrumenti'

A selection of 20 compositions by Dall' Abaco, from Op. 1 to Op. 4, edited by Adolf Sandberger, forms the first volume of D.T.B. (1900). A second volume (IX, i) contains further works J. A. F.-M., adds.

Bibl. — Memoir prefixed to D.T.B., Vol. I

**DALL' ABACO, Joseph** ([Giuseppe] Marie Clément) (b. Brussels, 1710<sup>1</sup>; d. Arbizzano di Valpolicella nr. Verona, 31 Aug. 1805).

Netherlands cellist and composer of Italian descent, son of the preceding. He was taught by his father and at the early age of nineteen went to Bonn, where on 29 Mar. 1729 he was enrolled as cellist at the chapel of the Elector of Cologne. He became one of the foremost players of his time and on 26 Aug. 1738 he was appointed director of the chamber music and aulic councillor at a salary of 1000 florins. In 1740 he was in London, where he was heard by Burney, who mentions him in laudatory terms. He visited other English towns. He must also have visited Vienna, for Pohl mentions him as playing there in a concert piece for five cellos of his own composition. In 1753 he left the Bonn court and went to live near his family at Verona with his wife (born Thérèse Cosman). He there acquired the property of Arbizzano di Valpolicella, and on 22 Sept. 1766 Prince Maximilian of Bavaria conferred the title of Baron on him.

Thirty of his cello sonatas, mostly autograph, are in the B.M.: Opp. 1-12, 'XII Sonate di Giuseppe Baron Dall' Abaco'; Opp. 13-29, 17 Sonatas for cello and continuo; Op. 30, 'Largo sostenuto a modo di organo'. In the same library are also a dramatic cantata and three manuscript cello sonatas attributed to him. A cello piece is in Vienna (Bibl. Ges. d. Musikfreunde) and 3 manuscript sonatas are in Berlin (State Lib.). E. v. d. s., rev.

**DALLA CASA, Girolamo** (b. Udine, ?; d. ?).

Italian 16th-century instrumentalist. He was musician in the town band of Venice in 1574 and ten years later had advanced to the post of director of the Signory's wind band. Like nearly every other Venetian musician, it seems, he composed madrigals (3 books), but his most important work is 'Il vero modo di

diminuir' (1584). This gives a curious sidelight on how contemporary music was performed; it consists of two books of brilliant and very difficult divisions by Dalla Casa on the individual voice parts of various popular madrigals and chansons by the most eminent composers of his time.

R. T. D.

See also Cornett (diminution on a tune by Lassus, *mus. ex.*)

**DALLA CASA, Nicolo** (b. ?; d. ?).

Italian 16th-century musician, probably brother of the preceding. He was another of the Venetian Signory's musicians. He wrote at least 2 books of 'Canzoni e madrigali' a 4 (the second was published in 1591), as well as 2 motets a 5 and a dialogue a 10 in a collective volume of 1586, and a madrigal in Amadino's 'Florindo' (1593).

R. T. D.

**DALLAM.**<sup>2</sup> English 17th-century family of organ builders. The eldest was employed in 1605-6 to build an organ for King's College, Cambridge, for which purpose he closed his workshop in London and removed his whole establishment to Cambridge. He and his men were lodged in the town, but boarded in the College Hall. Rimbault ('History of the Organ') gives a very curious account of every item paid for building this organ. This Dallam's Christian name does not appear in the college books, but he is most probably identical with

(1) **Thomas Dallam** (b. ?, d. ?), who built an organ for Worcester Cathedral in 1613. He went to London from Dallam in Lancashire and was apprenticed to a member of the Blacksmiths' Company, of which he afterwards became a liveryman. The organs he built for King's College, Cambridge, and for Worcester Cathedral were taken down at the time of the Civil War; parts of the former are said to be contained in the existing instrument. He was in all probability the same Dallam who in 1615, 1632 and 1637 was employed to repair the organ of Magdalen College, Oxford. In 1599-1600 he made a journey to Constantinople with a mechanical clock-organ for the Grand Turk. His diary was printed by the Hakluyt Society in 1893.<sup>3</sup> The three following were probably his sons:

(2) **Robert Dallam** (b. Lancaster, 1602; d. Oxford, 31 May 1665). He is buried in the cloisters of New College, Oxford, for which college he built the organ; but his principal work was that of York Minster, since destroyed by fire. He also built a similar organ for St. Paul's Cathedral in London. He was, like his father, a member of the Blacksmith's Company. Between 1624 and 1627 he built the organ of Durham Cathedral, which remained till 1687, when Father Smith, after putting in four new

<sup>2</sup> Also Dalham, Dallans or Dallum.

<sup>3</sup> For a facsimile from the same see *Mus. T.*, 1905, pp. 649, 737.

<sup>1</sup> Baptized at the church of Sainte-Gudule on 27 Mar. 1710.

stops, sold the chair-organ for £100 to St. Michael's-le-Belfry, York. It remained there until 1885, when it was sold for £4 to an organ builder of York. It is said that Dallam received £1000 for the original organ.<sup>1</sup> In 1634 he built an organ for Jesus College, Cambridge, in the agreement for which he is called "Robert Dallam of Westminster". He added pedals in 1635. The organ, after being taken down at the time of the Civil War, was replaced at the Restoration. In 1635 he built an organ for Canterbury Cathedral. The Calendar of State Papers for the same year contains a bill of Robert Dallam's, dated 12 Nov., for work done to Laud's organ at Lambeth. An organ which he built for St. Mary Woolnoth's was so much injured in the fire of London that it was replaced by a new instrument built by Father Smith, who, however, used some of Dallam's stops.

(3) **Ralph Dallam** (*b. ?; d. Greenwich, 1673*). He built the organ for St. George's Chapel, Windsor, at the Restoration, as well as those at Rugby, Hackney and Lynn Regis. The Windsor organ is still preserved at St. Peter's-in-the-East, St. Albans. He died while making the organ at Greenwich Church, begun by him in Feb. 1672. His will, dated 2 Aug. 1673, proved 19 Sept. 1673, gives evidence of his death between those dates and shows that he had two brothers, George and Thomas, and two sisters, May and Katherine (the wife of Thomas Harrison of London, organ maker). James White, his partner, finished the Greenwich organ in 1673.

(4) **George Dallam** (*b. ?; d. ?*). He lived in Purple Lane in 1672 and in 1686 added a "chaire organ" to Harris's instrument in Hereford Cathedral. v. *de p.*, add. w. B. S.

**DALLAPICCOLA, Luigi** (*b. Pissino, Istria, 3 Feb. 1904*).

Italian pianist and composer. His native town was part of the Austro-Hungarian empire at the time of his birth. In 1917, owing to the first world war, he was interned at Graz, where he began his musical education by making thorough acquaintance with the German symphonic and operatic music of the 19th century. He finished his theoretical studies at Trieste and later went to Florence as a student at the Conservatorio L. Cherubini, where he attended the classes of Ernesto Consolo for the pianoforte and those of Vito Frazzi for composition. Having obtained a diploma, he was appointed supernumerary professor of the pianoforte there, a post he has continued to occupy. In 1930 he joined the violinist Materassi to give performances of modern works for violin and pianoforte. It was this work on behalf of modern music which awakened in him his keen interest in the

activity of the I.S.C.M., whose Italian delegate he became.

Even during his years of apprenticeship Dallapiccola developed considerably as a composer. To his early years belong a fair number of symphonic and choral works still worthy of attention, although as yet revealing tastes very different from those shown in his full artistic maturity, which may be said to date approximately from 1930, the first work, in fact, which shows distinct traces of his individuality is the 'Partita' for orchestra, whose performance in Jan. 1933 made the name of its composer known beyond the confines of Florentine musical life.

Of great importance to Dallapiccola's artistic development was his acquaintance with Alban Berg and the study of that composer's works to which it led, as well as those of others of the same Viennese group, though Webern was given preference over Schoenberg. The first results of these new influences may be discerned in the 'Divertimento in quattro esercizi', which begins to show the twelve-note element for the cultivation of which Dallapiccola is to-day considered a follower and apologist of the Schoenbergian theory. But it must be said at once that the Italian composer's work is very far from the moral and aesthetic precepts that gave rise to the "twelve-note" idiom, for he studied the new possibilities offered by it without sacrificing his native temperament, which abhors decadent romanticism and turns rather towards a Mediterranean neo-classicism in the sense in which it was conceived by Busoni. In Dallapiccola's hands the twelve-note technique is a means to an end he has learnt to master fully and disregards deliberately and knowingly on occasion. There are long stretches in his works where strict observance of "note-rows" is forgotten in the interests of expression and variety: it is sufficient to instance the ballet 'Marsia', one of his most brilliant successes.

As a composer for the stage Dallapiccola has shown remarkable dramatic gifts, particularly in the creation of atmospheres of anxiety and nightmare by quite simple means and with a remarkable ability to contrive suggestive qualities of sound (as in 'Volo di notte', whose only defect is its all too static action, and more especially in 'Il prigioniero', which offered the composer a dramatic development of greater variety and full of suspense). Combined with such felicities in the contrivance of colouristic effect Dallapiccola's writing for voices is remarkable for its balance and its aptness, attained without any sacrifice of true vocal expression. This is true both of his monodic vocal writing, as in the opening bars of 'Sex Carmina Alcaei', and of his polyphonic manner, as in the 'Canti di prigionia', perhaps his most substantial work so far.

<sup>1</sup> See Pearce, 'Evolution of the Pedal Organ' (1927), p. 18

## CATALOGUE OF WORKS

## OPERAS

- 'Volo di notte', 1 act (libretto based on 'Vol de nuit' by A. de Saint-Exupéry), prod. Florence, Teatro della Pergola, 18 May 1940.
- 'Il prigioniero', prologue and 1 act (lib. based on 'La Torture par l'espérance' by Villiers de l'Isle-Adam and 'La Légende d'Ulenspiegel' by Charles de Coster), comp. 1944-48; prod. Florence, Teatro Comunale, 20 May 1950.

## BALLET

- 'Marsia', 1 act (scenario by A. M. Milloss) (1942-43), prod. Venice, Teatro Fénice, 3 Sept. 1948.

## CHORAL WORKS

- 'Due canzoni di Grado' (poems by B. Marin) for mezzo-soprano, small women's chorus & small orch. (1927)
1. La gno fantulina
  2. Co vampa la to cavelada.
- 'Dalla mia terra' (folk-poems of Istria), for mezzo-soprano, chorus & orch. (1928)
1. Per la notte di San Giovanni.
  2. Per un bambino
  3. Per la sera della Befana.
  4. Per il mattino della Risurrezione
- 'Due laudi di Fra Jacopone da Todi' for soprano, baritone, chorus & orch (1929)
1. O signor, per cortesia, mandame la malsania.
  2. Ballata del Paradiso.
- 'Due liriche dal "Kalewala"', for tenor, baritone, chamber chorus, 4 insts & perc (1930)
- 'La canzone del Quarnaro' (Gabriele d'Annunzio), for tenor, men's chorus & orch. (1930)
- 'Estate' (Alcaeus), for unaccomp. men's chorus (1932)
- 'Cori di Michelangelo Buonarroti il Giovine'
- Set I, for unaccomp. mixed chorus (1933)
1. Il coro delle malmaritate
  2. Il coro dei malmammogliati.
- Set II, for chamber chorus of 12 voices and 17 insts. (1934-35)
1. I balconi della rosa (Invenzione)
  2. Il papavero (Capriccio).
- Set III, for mixed chorus & orch. (1935-36)
1. Il coro degli zitti (Ciaccona).
  2. Il coro dei lanzu ubriachi (Gagliarda)
- 'Canti di prigionia' (1938-41)
1. Preghiera di Maria Suarda, for mixed chorus & insts.
  2. Invocazione di Boezio, for women's voices & insts
  3. Congedo di Girolamo Savonarola, for mixed chorus & insts

## ORCHESTRAL WORKS

- 'Partita' (1930-32)
1. Passacaglia.
  2. Burlesca
  3. Recitativo e fanfara
  4. Naenia B.M.V. (with soprano solo).
- 'Frammenti sinfonici del balletto "Marsia"' (1942-1943).

## SOLO INSTRUMENT AND ORCHESTRA

- 'Piccolo concerto per Muriel Couvreur' for pf & chamber orch. (1939-41)
1. Pastorale, girotondo e cadenza.
  2. Cadenza, notturno e finale
- 'Due studi' for vn. (1946-47) (see also Violin and Pianoforte).

## VOICE AND CHAMBER ORCHESTRA

- 'Tre studi dal "Kalewala"' for soprano (1932)
1. Sarabanda.
  2. Giga.
  3. Canzone.
- 'Rapsodia (studio per "La morte del conte Orlando")' (1934).
- 'Tre laudi' for soprano (1936-37)
1. Altissima luce cum grande splendore.
  2. Ciascun s' allegri.
  3. Madonna Sancta Maria.

## VOCAL CHAMBER MUSIC

- 'Divertimento in quattro esercizi' for soprano, flute, oboe, clar., viola & cello (1934)
1. Introduzione
  2. Arietta
  3. Bourree
  4. Siciliana.
- 'Liriche greche' (trans. by S. Quasimodo) (1932-45)
1. Cinque frammenti di Saffo, for soprano & 15 insts
  2. Due liriche di Anacreonte for soprano and 4 insts.
  3. Sex Carmina Alcaei (una voce canenda, nonnullis comitantibus musicis) for soprano and 15 insts

## VIOLIN AND PIANOFORTE

- 'Due studi' (1946-47) (see also Solo Instrument and Orchestra)
1. Sarabanda
  2. Fanfara e fuga.

## SOLO VIOLONCELLO

- 'Ciaccona, intermezzo e adagio' (1945)

## PIANOFORTE MUSIC

- 'Musica per tre pianoforti (Inni)' (1935)
- 'Sonata canonica sul "Capricci" di Paganini', B♭ ma.

## SONGS

- 'Fiori di Tapo' (B. Marin) (1925)
1. Nadal.
  2. Luna.
  3. Ordole.
- 'Calligo' (Marin) (1926).
- 'Roncesvals', 3 fragments (1946).
- 'Quattro liriche' (A. Machado) for soprano (1948).

## TRANSCRIPTION

- 'Il ritorno di Ulisse in patria' by Monteverdi, transcription for modern performance (1941-42).

G. M. G.

## DALL' AQUILA, Marco (b. ?; d. ?).

Italian 15th-16th-century lutenist and composer. He was probably a native of Aquila in the kingdom of Naples. He settled at Venice, where in 1505 he was granted a privilege for printing lute pieces, which he seems never to have exercised. In Francesco Milano's 'Intabolatura' (Vinegia, 1536) he is mentioned as an eminent lutenist. The Munich Library has in a manuscript lute-book of 1568 (MS 266), 25 lute pieces signed simply "Maestro Marco". Three dances signed "Marx von Aquila" are in Gerle 1552b, and one movement is in Castelfiono's 'Intabolatura' (1536) and also in Phalèse's 'Hortus musicus' (1552). In the Pierpoint Morgan Library in New York is a lute manuscript with music by Dall' Aquila. E. v. d. s., adds.

**DALLA VIOLA, Alfonso.** See DELLA VIOLA.

**DALLA VIOLA (or Della Viola), Francesco** (b. Ferrara, ?, d. ?).

Italian 16th-century composer. He may have been related to Alfonso Della Viola. He was a pupil of Willaert, a collection of whose motets and madrigals he edited and published at Ferrara in 1558 under the title 'Musica nova'. Zarlinò<sup>2</sup> says that Francesco was

<sup>1</sup> The orchestral version is amplified and modified.

<sup>2</sup> 'Dimostrazioni armoniche', p. 1.

*maestro di cappella* to Alfonso d' Este, Duke of Ferrara, who was his great admirer, and whom he accompanied to Venice in Apr. 1562. This may also account for Cyprien de Rore's retirement from the court of Ferrara after the death of Ercole II

Francesco Dalla Viola composed madrigals for 4 voices, lib 1 (1567); madrigals, 4 and 5 v. (1575, 2nd ed. 1599). Three masses and some motets in manuscript are in the Estense Library at Modena; also a number of songs in collective volumes. E. v. d. s.

**DALLERY.** French 18th–19th-century family of organ builders

(1) **Charles Dallery** (b. Amiens, 1702; d. ? 1779), the eldest of them, was originally a cooper. The organ of the abbey of Auchin, transported later to Saint-Pierre, Douai, was his work.

(2) **Pierre Dallery** (b. Buire-le-Sec nr. Montreuil-sur-Mer, 6 June 1735; d. ?), nephew and pupil of the preceding. After working with his uncle he was, until c. 1780, in partnership with François Henri Clicquot. To the union of these two clever men are due the organs of Saint-Nicholas-des-Champs, Sainte-Chapelle and Saint-Merry in Paris, and many others now destroyed or mutilated by ignorant workmen.

(3) **Thomas Charles Auguste Dallery** (b. Amiens, 4 Sept. 1754; d. Jouy-en-Josas, Seine-et-Oise, 1 June 1835), son of Charles (1). He showed a great aptitude for mechanics and perfected the harp, the organ and the harpsichord. His best title to fame rests on his practical application of the screw to steam navigation.

(4) **Pierre-François Dallery** (b. Paris, 1764; d. Paris, 1833), son of Pierre (2). He worked with Clicquot and his father from 1801 to 1807, when the latter retired from business and Pierre-François remained alone. He never had an opportunity of undertaking large work, but was entirely occupied in repairing instruments. He was clever in certain points, but had not studied his art profoundly and, being a needy man, often used inferior materials. He left nothing but his name to his successors.

(5) **Louis Paul Dallery** (b. Paris, 24 Feb 1797; d. ?), son of the preceding. He worked with his father until 1826 and then alone. He repaired various organs (Saint-Ouen, Rouen, Saint-Germain l'Auxerrois, Saint-Nicolas-des-Champs, Paris).

RAUGEL, FÉLIX, 'Les Grandes Orgues des églises de Paris' (Paris, 1927).

See also Clicquot.

**DALLEY-SCARLETT, Robert** (b. Manchester, 16 Apr 1890.)

English organist, conductor and composer. He went to Australia at an early age and after a period as organist and choirmaster at Grafton Cathedral, interrupted by service during the first world war, he went to St. Andrew's church at Brisbane in 1919 and thence to All Saints in the same town in 1933, leaving it in 1941. He took the Mus B. at Adelaide University in 1926 and the Mus D in 1934. Having held various directorships (Grafton Musical Society, 1912–19), South Brisbane City Choir, 1919–25, Brisbane University Musical Society, 1920–30 and 1938–41, Brisbane Bach Soc., 1930, Brisbane Handel Soc., from 1933), he became president of the Queensland branch of the Guild of Australian composers. He is on the staff of the A.B.C., whose official chorus he conducts and with which he performed the whole of Handel's oratorios, following on with the operas from June 1947. The Handel medal was awarded him just before the outbreak of war by the municipality of Halle. His compositions (of which very few are published) include a Symphony and other orchestral works, music for chorus with and without orchestra, masses and other church music, a pianoforte Concerto, 3 violin Sonatas, organ and pianoforte works, songs, etc. E. B.

**DALLIER, Henri** (b. Rheims, 20 Mar. 1849; d. Paris, 23 Dec. 1934).

French organist and composer. He was choir organist of Rheims Cathedral from 1865. In 1872, without ever having been a pupil at a music school, he competed for the Concours de Rome. He became afterwards, at the Paris Conservatoire, the pupil of François Bazin for composition and of César Franck for the organ. In 1878 he obtained two first prizes for fugue and the organ, followed by an honorary mention at the Concours de Rome. The following year he became the organist-in-chief of the great organ of the Paris church of Saint-Eustache, which had been reconstructed and enlarged by Mercklin. He took part in the opening of this magnificent instrument on 21 Mar. 1879, in company with César Franck, Théodore Dubois, Alexander Guilmant and Eugène Gigout.

Dallier passed twenty-six happy years as organist of Saint-Eustache and left it in 1905 to go to La Madeleine in succession to Gabriel Fauré, when the latter became director of the Conservatoire. He was a virtuoso both of the organ and the pianoforte. As an improviser on the organ he was very interesting; he possessed in a high degree the gift of imagination and a sense of the picturesque. Dallier wrote numerous pieces for the organ. Among others must be mentioned a 'Messe nuptiale',

'6 Préludes pour la Toussaint', '5 Offertoires à la Vierge'. Among the last-named is one entitled 'O Clemens! O Pia!' which is full of mystic feeling. He was also the author of a great number of pianoforte pieces and songs. Chamber music is represented in his work by a Trio in C minor, a string Quartet in G minor and a Quintet for strings and pianoforte. Mention must also be made of four pieces for the Concours du Conservatoire for different instruments, and of a Symphony in F major (Op. 50), played at the Colonne concerts. From 1908 till his death Dallier was professor of harmony at the Conservatoire. F. R. (ii).

**DALLIS BOOK.** See VIRGINAL MUSIC.

**DALL' OGLIO, Domenico** (b. Padua, c. 1700; d. Narva, summer 1764).

Italian violinist and composer. He was possibly a pupil of Tartini. In 1735 he went to St. Petersburg and spent the greater part of his life in the service of the Russian court. He died on his return journey to Italy. His works include sonatas and other pieces for his instrument, some of them published at Amsterdam, Paris and Venice. He also wrote the music of the prologue 'La Russia afflitta e riconsolata' (words by Jakob von Stahlin), some airs and perhaps also the ballet music for Hasse's 'La clemenza di Tito' when produced at Moscow in 1742, at the coronation of the Tsaritsa Elizabeth. A. L.

'D dall' Oghio' (Riv Mus. It, 1946).

See also Stahlin.

**DALL' OGLIO, Giuseppe** (b. Venice or Padua, ?; d. ?, after 1794).

Italian violoncellist, brother of the preceding. According to contemporaries he was one of the best performers on his instrument of the period. He stayed with his brother in Russia from 1735 to 1764 and afterwards lived in Berlin (where he met Casanova, who mentions him in his Memoirs), Warsaw and Venice. No compositions by him are known. In 1778 he published at Venice 12 posthumous violin sonatas by his brother. A. L.

**D'ALMAINE & CO.** See GOULDING & CO.

**DALMORES, Charles** (b. Nancy, Jan. 1871; d. Hollywood, 6 Dec. 1939).

French tenor singer and horn player. He studied at the Conservatories of Nancy, Lyons and Paris; also opera under Emerich in Berlin. During his vocal training he became an excellent horn player, and he was at first refused admission to the Paris Conservatoire on the ground that he was "too good a musician to waste his time in becoming a mediocre singer". In 1894 he was appointed horn professor at the Lyons Conservatory.

His voice, however, gradually developed into a powerful organ of fine quality, and his operatic début at Rouen in 1899 was highly successful. After several seasons at the Brussels Théâtre de la Monnaie, he made his first appearance in London, at Covent Garden, in 1904, creating an excellent impression in 'Faust' and as Jean in Massenet's 'Salomé'. His later parts in London included Julien in 'Louise', Don José in 'Carmen' and Pedro in Laparra's 'La Habanera', but he found scope for an even larger repertory in America, where he made his début at the Manhattan Opera House, New York, in 1908, and subsequently joined the Chicago Opera Company. He was a good singer, a capable actor and a thoroughly reliable artist. R. M. P.

**D'ALQUEN.** See ALQUEN, D'.

**Dalton, Dr.** See COMUS (adapt.).

**DALVIMARE** (or **d'Alvimare**), **Martin Pierre** (b. Dreux, Eure-et-Loire, 18 Sept. 1772; d. Paris, 13 June 1839).

French harpist. In 1800 he was in the Paris Opéra orchestra and in 1807 harp teacher of the Empress Joséphine. He retired to Dreux on 12 Mar. 1812. He composed 'Le Mariage par imprudence', a 1-act opera, sonatas and solos for harp and songs. E. V. d. s.

**DAMA BOBA, LA** (Opera). See WOLFF-FERRARI.

**DAMAN<sup>1</sup>, William** (b. Liège, c. 1540; d. London, 1591).

Walloon composer. He was taken to England in 1562 by Thomas Sackville, Lord Buckhurst, and remained there all his life, thus belonging virtually to the English school. He seems to have been at first attached to the household of Lord Buckhurst, who throughout his life entertained musicians "the most curious which anywhere he could have".<sup>2</sup> In 1579 he became one of Queen Elizabeth's musicians, and he remained attached to the court all his life.

He harmonized for the use of a friend the psalm tunes then in common use, to the number of 79. His friend, in 1579, published them, with a preface by Edward Hake, under the following title:

¶ The Psalmes of David in English Meter with Notes of foure partes set unto them by Guillelmo Damon, for John Bull, to the use of the godly Christians for recreating themselves in stede of fond and unseemly Ballades At London, Printed by John Daye. Cum privilegio.

John Bull is called in the preface "Citizen and Goldsmith of London". This work seems to have been ill received, and Damon set himself to work to reharmonize the tunes. The new work was published in 1591 with the title of

<sup>1</sup> Arkwright (see footnote 2) is inclined to think that the name was originally (<sup>2</sup> Guillaume) de Man.

<sup>2</sup> See certain extracts from the Huguenot Society's publications, and notes thereon by G. E. P. Arkwright, printed in 'The Musical Antiquary', Jan. 1912, July 1912, Jan. 1913.

The second Booke of the Musicke of M. William Damon, late one of her maiesties Mustions, containing all the tunes of David's Psalmes, as they are ordinarily sung in the Church, most excellently by him composed into 4 partes. In which sett the Tenor singeth the Church tune. Published for the recreation of such as delight in Musicke. By W. Swayne Gent. Printed by T. Este, the assigné of W. Byrd, 1591.

The work is in two parts, the second being entitled:

¶ The second Booke of the Musicke of M. William Damon, late one of her maiesties Mustions, containing all the Tunes of David's Psalmes, as they are ordinarily sung in the Church, most excellently by him composed into four parts. In which Sett the highest part singeth the Church tune. Published for the recreation of such as delight in Musicke. By W. Swayne Gent. Printed by T. Este, the assigné of W. Byrd. 1591.

Daman died in the first half of 1591 at his house in Broad Street Ward, in the Parish of St. Peter-le-Poore, and an inventory of his goods was made on 2 June in the presence of his widow, Anna Damon, and five children. In the British Museum there is an arrangement of a motet, 'Spem in alium' (Add. MSS 31,992/55b) and also another of a 3-part madrigal, 'Ut re mi fa sol la' (Add. MSS 29,246/31), each with a lute accompaniment by him. The following anthem and motets by Daman are also preserved:

'Confitebor tibi Domine' Ch. Ch 979-83  
'Miserere nostri Domine' (a 5) (printed in Arkwright's 'Old English Edition'). Add. MSS 29,372-77, Add. MSS 5954/25b (score).  
'O Heavenly God.' Add. MSS 29,372-77.  
'Omnis caro gramen sit.' Ch. Ch 979-83

In the Christ Church partbooks there are two other motets by a certain W. Demande, who is possibly the same man. There is also an incomplete copy of a 6-part motet, 'Beati omnes' (B.M., Add. MSS 32,377/40v), which bears this name.

W. H. H., adds. G. E. P. A. & J. M. (ii).

**Damard, L.** See Séverac ('Mirage', incid. m.).

**DAMASCENE, Alexander** (b. France, ?; d. London, 14 July 1719).

Anglo-French alto singer and composer. He was probably of Italian extraction but French birth. On 22 July 1682 he obtained letters of denization in England (see Pat. Roll, 34 Chas. II. pt. 6, No. 4), where he is described as a French Protestant. On 18 July 1689 he was sworn Composer of the Private Music to King William III and on 6 Dec. 1690, as a Gentleman Extraordinary of the Chapel Royal. On the death of Henry Purcell in 1695 he was advanced to a full place.

Damascene was a prolific song writer, and many of his compositions may be found in the following collections: 'Choice Ayres and Songs' (1676-84); 'The Theatre of Musick' (1685-87); 'Vinculum societatis' (1687-91); 'The Banquet of Musick' (1688-1892); 'Comes Amoris' (1687-94); 'The Gentleman's Journal' (1692-94).

W. H. H.

**DAMASE, Jean-Michel** (b. Bordeaux, 27 Jan. 1928).

French pianist and composer. His mother is the well-known harpist Micheline Kahn. He first studied music at the École Normale de Musique in Paris and later at the Conservatoire, where he gained the "premier prix de piano" (1943), "premier prix de composition" and "premier grand Prix de Rome" (1947), the last for his cantata 'Et la belle se réveille . . .'. He studied the pianoforte privately with Alfred Cortot and has appeared as a soloist with the Concerts Colonne, Concerts du Conservatoire and the Orchestre National. His 'La Croqueuse de diamants', *ballet avec chansons*, was first performed at the Théâtre Marigny in Paris on 25 Sept. 1950 by Renée Jeanmaire, Roland Petit, Gordon Hamilton and Les Ballets de Paris de Roland Petit. As 'The Diamond Cruncher' it enjoyed a considerable success in America before the disintegration of this company.

The following is a list of Damase's principal works:

Ballet 'La Croqueuse de diamants', Op. 18.  
Cantata 'Et la belle se réveille . . .', Op. 3  
'Badinage', choreographic suite for orch., Op. 5.  
3 Interludes for orch., Op. 9.  
Suite 'Cortège' for orch., Op. 13.  
'Trois Chorals' for stg. orch., Op. 23.  
Rhapsody for oboe & stgs. (or pf), Op. 6.  
Pf. Concerto, Op. 11  
'Concertino' for harp & stgs., Op. 20.  
Trio for flute, harp & cello, Op. 1  
Quintet for flute, vn, viola, cello & harp, Op. 2  
'Sonate en concert' for flute, cello & pf., Op. 17.  
'Dix-sept Variations' for wind stet, Op. 22.  
'Sarabande' for vn & pf., Op. 12.  
'Aria' for cello & pf., Op. 7.  
Sonata for cello & pf., Op. 15  
'Concertstück' for saxophone & pf., Op. 16.  
'Berceuse' for horn & pf., Op. 19  
'Mouvement perpétuel' for pf., Op. 10.  
'Sarabande' for harp, Op. 8.  
'Étude de concert' for harp, Op. 14.  
Song 'La Perle égarée' (Colette), Op. 4.  
'Trois Chansons' (Charles d'Orléans), Op. 21.  
F. E. G.

**D'AMBLEVILLE.** See AMBLEVILLE.

**D'AMBREVILLE, Leonora.** See BORO-SINI.

**D'AMBROSIO.** See AMBROSIO.

**DAME BLANCHE, LA** ('The White Lady'). Opera in 3 acts by Boieldieu. Libretto by Eugène Scribe, based on Walter Scott's 'The Monastery' and 'Guy Mannering'. Produced Paris, Opéra-Comique, 10 Dec. 1825. 1st perf. abroad, Liège (in French), 13 Mar. 1826. 1st in England, London, Drury Lane Theatre (trans. by S. Beazley), 9 Oct. 1826. 1st in U.S.A., New York (in French), 24 Aug. 1827. Scots tunes are used in the work, but with considerable loss of their national character.

**DAME INVISIBLE, LA** (Opera). See BOIELDIEU.

**DAMEN, Johann.** See DAHMEN.

**DAMENIZATION.** An 18th-century variant of solmization, now superseded by Tonic

Sol-fa, in which the syllables given to the notes were Da, Me, Ni, etc

**DAMERINI, Adelmo** (b. Carmignano, Florence, 11 Dec. 1880).

Italian musicologist. He became professor of musical history and director of the music section of the Biblioteca Palatina at Parma (1926-32) and later director of the Library of the Conservatorio Musicale at Florence, where he remained until 1950. He wrote numerous essays in musical history and criticism for various papers and periodicals, and published, among other works, a monograph on Lorenzo Perosi, the books 'Origine e svolgimento della sinfonia' (1919) and 'Classicismo e romanticismo nella musica' (1942), and edited a selection of the 'Pensieri sulla musica' of Boetius (1949). He is also the composer of sacred choral, orchestral and chamber-music works. C. M. G.

**DAMIAN, ?** (b. ?, c. 1665, d. Ghelm, 18 Apr. 1729).

Polish composer. He was a Piarist monk. Of his works, written mainly for chorus and instrumental ensembles, the following remain:

- 'Assumpta est Maria' for 4 voices (alto part lost).
- 'Ave Virgo mundi spes' for soprano, 2 vns & cont.
- 'Beatus vir qui timet' for soprano, 2 vns & cont.
- 'Confitebor tibi Domine' for 4 voices, 2 vns & cont.
- 'Confitebor tibi Domine' for 2 sopranos, A.T.B., 2 vns, 2 clarini & cont (comp. 1697).
- 'Duxit Dominus' for 2 sopranos, A.T.B., 2 vns, 2 clarini & cont.
- 'Laudate pueri' for 2 sopranos, A.T.B., 2 vns, 2 clarini & cont.
- 'Veni consolator' (concerto) for soprano, clarino & cont. C. R. H.

**DAMIAN.** See ACCORDION.

**DAMMEN, Johann.** See DAHMEN.

**DAMNATION DE FAUST, LA.** A secular oratorio or dramatic cantata (*légende dramatique*) on a large scale by Berlioz, based on Gérard de Nerval's French version of Goethe's 'Faust', but altered by the composer and Almore Gandonnière to conclude with a 'Ride to the Abyss' — Faust being consigned to hell according to his pact with Mephistopheles instead of being redeemed, as at the end of the second part of Goethe's dramatic poem. The work was completed in 1846, but incorporated the much earlier 'Huit Scènes de Faust' written by Berlioz in 1828. The first performance was given under the composer's direction at the Paris Opéra-Comique on 6 Dec. 1846, in the concert form intended by him. But it is not altogether unsuccessful in the form of an opera, and it was thus produced for the first time at Monte Carlo on 18 Feb. 1893. In England the work first appeared on the stage at Liverpool on 3 Feb. 1894, translated by T. H. Friend, and in the U.S.A., at New Orleans the same year, in French. E. B.

**DAMON** (b. ?; d. ?).

Greek 5th century (B.C.) musical theorist. He may be identical with a friend of Pericles

who was ostracized for his political activities. It was from him that Plato derived his views of the ethical importance of music: "No change can be made in styles of music without affecting the most important conventions of society. So Damon declares and I agree" ('Republic', 424 c). He may also be the ultimate source of much in Aristides Quintilianus, who quotes from his school.

R. P. W. - I.

**DAMPER** (Engl.).

**DÄMPFER** (Ger.). } See MUTE.

**DAMROSCH.** German-American family of musicians.

(1) **Leopold Damrosch** (b. Posen, 22 Oct. 1832; d. New York, 15 Feb. 1885), violinist, conductor and composer. He was educated at the preparatory school (*Gymnasium*) of his native town and at Berlin University, where he took a doctor's degree in medicine in 1854. Having shown marked musical taste in early life, he then decided, against his parents' wishes, to abandon medicine and devote himself to the study of music. He became a pupil of Ries, S. W. Dehn and Bohmer, and made such progress that he appeared the next year as solo violinist at Magdeburg. After giving concerts in the principal German cities he was appointed leading violinist in the court orchestra at Weimar by Liszt in 1857. While there he married the singer Helene von Heimbürg. In 1850-60 he was conductor of the Breslau Philharmonic Society, where his programmes included works by Wagner, Liszt and Berlioz. In 1860 he made concert tours with Bulow and Tausig. In 1862 he organized the Orchesterverein of Breslau, of which he remained director till 1871.

In that year Damrosch was called to New York to become conductor of a German male-voice choir, the Mannergesangverein Arion. His energy, strong musical temperament and organizing ability soon made themselves influential in the musical life of New York, where he founded in 1874 the Oratorio Society, a choir devoted to the performance of oratorios and other works. In 1878 a further result of Damrosch's labours was seen in the foundation of the Symphony Society, for the giving of orchestral concerts. Of both of these Damrosch was elected conductor, a place he occupied until his death. In the season of 1876-77 he officiated as conductor of the Philharmonic Society's concerts.

In 1880 Columbia College conferred upon Damrosch the degree of Mus.D. In 1881 he conducted the first great musical festival held in New York, with an orchestra of 250 and a chorus of 1200. In 1883 he made a successful tour through the western States with his

orchestra His compositions, published partly in Germany, partly in the United States, were numerous but unimportant. A list was published in the second edition of this Dictionary.

Damrosch was also mainly instrumental in the establishment of German opera at the Metropolitan Opera in New York, which had opened with an Italian season that was a disastrous failure financially. He presented a plan for German opera, gathered a company of German singers and opened the season on 17 Nov. 1884, ending on 11 Feb. 1885. Damrosch conducted all the performances but the last, on the eve of which he had caught a cold. Five days later, while all the city was rejoicing at his achievement, he died.

BIBL.—RICE, E. T., 'Personal Recollections of Leopold Damrosch' (M.Q., July 1942).

(2) **Frank (Heino) Damrosch** (b. Breslau, 22 June 1859; d. New York, 22 Oct. 1937), conductor and teacher, son of the preceding. He went to New York with his family in 1871, having already as a young child begun the study of composition and the pianoforte. He first went into business at Denver, Colorado, but soon devoted himself to music, becoming conductor of the Denver Chorus Club and supervisor of music in schools. After his father's death he was chorus-master at the Metropolitan Opera in New York till 1891. In 1892 he organized the People's Singing Classes in New York for the instruction of wage-earners in sight-reading and choral singing, from which he developed the People's Choral Union, with a membership of 1200, chiefly wage-earners. He was also instrumental in founding the Musical Art Society in New York, a small chorus of professional singers devoted to the performance of a *cappella* choral works and the higher class of modern choral music, of which he was conductor until its discontinuance in 1920. In 1897 he was made supervisor of music in the New York schools and in 1898 succeeded his brother Walter as conductor of the Oratorio Society, founded by their father, continuing in that post until 1912. At various times he conducted choral societies in towns near New York. He resigned most of these posts in 1904 to become director of the Institute of Musical Art in New York.

Frank Damrosch received the degree of Mus.D. from Yale University in 1904. He wrote 'Some Essentials in the Teaching of Music' (1916) and 'A Popular Method of Sight Singing' (1894).

BIBL.—STEBBINS, L. P. & R. P., 'Frank Damrosch: Let the People Sing' (New York, 1945).

(3) **Walter (Johannes) Damrosch** (b. Breslau, 30 Jan. 1862; d. New York, 22 Dec. 1950), conductor, educationist and composer, brother of the preceding. He was devoted to music from his childhood and studied

composition and the pianoforte in Germany and in New York, whither he was brought by his family in 1871. When his father began his season of German opera at the Metropolitan Opera in 1884, Walter became assistant conductor, and after his father's death he continued in that post under Anton Seidl. He succeeded his father as conductor of the Oratorio and New York Symphony Societies. He was active in the former until he resigned in 1898, and in the latter, with a brief interval owing to its temporary discontinuance, until his retirement from all musical activities. In 1894 he organized the Damrosch Opera Company with German singers, which gave performances in New York and many cities throughout the country for five years. In 1899 he became conductor of the German operas at the Metropolitan Opera for two years. In the season of 1902-3 he was conductor of the New York Philharmonic Society. The following year the New York Symphony Society was reorganized and continued under his direction. With this organization he made a tour in Europe in the summer of 1920.

Damrosch received the degree of Mus.D. from Columbia University in 1914. During the first world war he organized a bandmasters' training-school in France for the American Expeditionary Force; and later he was largely concerned in founding the music school for Americans at Fontainebleau.

In his later years Walter Damrosch came to the fore as director of broadcast symphonic music. He was the first to conduct an orchestral concert relayed across America from the Pacific to the Atlantic. In 1927 he was appointed Musical Adviser to the N.B.C., and among other activities he organized a regular "music appreciation hour" for school children throughout the U.S.A. and Canada, which may be described as an application to broadcasting of his lifelong work as director of children's concerts in New York.

Despite his untiring efforts for musical education in America Damrosch never completely abandoned composition; his principal works are:

#### OPERAS

- 'The Scarlet Letter' (libretto by George Parsons Latrop, based on Nathaniel Hawthorne's novel), prod. Boston, 11 Feb. 1896
- 'Cyrano de Bergerac' (lib. by W. J. Henderson, based on Rostand's play), prod. New York, Metropolitan Opera, 27 Feb. 1913
- 'The Dove of Peace', comic opera (lib. by Wallace Irwin), prod. Philadelphia, 15 Oct. 1918
- 'The Man without a Country' (lib. by Arthur Guterman, based on a story by Edward Everett Hale), prod. New York, Metropolitan Opera, 12 May 1937

#### OTHER WORKS

- Incidental music for Euripides' 'Iphigenia in Aulis', 'Medea' and 'Electra'
- 'Mannia Te Deum' (1898)
- 'Abraham Lincoln's Song' for baritone, chorus & orch. (1935)

'Dunkirk' (R. Nathan) for baritone, men's chorus & chamber orch. (1943)  
Sona for vn. & pf  
Songs, &c.

BIBL.—DAMROSCH, WALTER, 'My Musical Life' (New York & London, 1923).

**DAMSE, Józef** (b. Sokółow, 23 Jan. 1788, d. Rudno nr. Warsaw, 15 Dec. 1852).

Polish clarinet and trombone player, actor and composer. He produced nearly 40 operatic pasticcios into which, almost at random, he put fragments from works by Weber, Rossini and Mozart, linked together and embellished by inventions of his own. Although his work is now of interest solely on historical grounds, his pieces were performed even at the Warsaw Opera and in lesser operatic houses in Poland with great success.

G. R. H.

**DANAIDES, LES** (Opera). See SALIERI.

**DANBY, John** (b. London, 1757; d. London, 16 May 1798).

English organist and composer. Between 1781 and 1794 he obtained ten prizes from the Catch Club for eight glees and two canons. He wrote music for two plays and published three books of his compositions; a fourth was issued after his death. In 1787 he published an elementary work entitled 'La guda alla musica vocale'. He held the appointment of organist at the chapel of the Spanish Embassy, near Manchester Square, for the service of which he composed some masses and motets. He died during the performance of a concert which his friends had got up for his benefit, he having long lost the use of his limbs by sleeping in a damp bed at an inn.

W. H. H.

See also NIXON (H. G., son-in-law).

**DANCE, William** (b. London, 1755, d. London, 5 June 1840).

English pianist and violinist. He was the grandson of George Dance (1700-68), the famous architect, and other family connections of his were either painters or playwrights. He was a violinist at Drury Lane Theatre in 1771-74, in the orchestra of the Opera from 1775 to 1793 and led the orchestra at the Handel Commemoration of 1790 in the absence of Cramer. W. T. Parke<sup>1</sup>, speaking of him as a pianist, says that he "displayed great taste and power of execution".

The circular proposing the meeting which led to the formation of the Philharmonic Society was issued by "Messrs. Cramer, Corri and Dance" from Dance's house, 17 Manchester Street, on Sunday, 17 Jan. 1813. He was afterwards one of the directors, and treasurer. Mendelssohn was entertained at his house, and it was for his daughter Sophia Louisa that the famous composer wrote one of the earliest 'Lieder ohne Worte' (No. 4), the

manuscript of which, dated 14 Sept. 1829 — the same day as he wrote *finis* to the E♭ Quartet — is still preserved in the family, together with a letter from Mendelssohn asking permission to use it for inclusion in 'Melodies for the Pianoforte' (1830).

Henry Dance, William's son, was secretary to the Philharmonic Society for the first year (1813).

Nellie Curzon Smith, a great-granddaughter of William Dance, who married Henry J. Watt and died young, was a brilliant pianist. She was a pupil of John Farmer and later a *protégée* of Joachim at the Berlin High School for Music.

H. G. F.

**DANCHET, Antoine**. See CAMBRA (20 libs.). Desmarests ('Iphigénie', lib.) Idomeneo (Mozart, opera) Mozart ('Idomeneo', opera).

**DANCKERT, Werner** (b. Erfurt, 22 June 1900).

German pianist, harpsichordist, teacher and musicologist. He studied at the Leipzig Conservatory in 1919-21 and at the Universities of Jena, Leipzig and Erlangen in 1918-23, taking a Ph.D. degree. He was lecturer successively at Jena (1926) and Berlin Universities (1937), professor of musicology at Graz in 1943-45, and now works privately as pianist, teacher and writer on music. He had also taught cembalo playing at the Music High School of Weimar in 1930-31, having specialized in that subject, and he was music critic at Erfurt in 1932-37. He has edited keyboard and chamber music by Handel, Telemann and C. P. E. Bach (unfamiliar works), Pasquini, Legrenzi, Maurizio Cazzati and Giovanni Gabrieli. His literary works include:

#### BOOKS

E. B.

**DANCKERTS (Dankers, Dankerts), Ghiselin** (b. Tholen, Zeeland<sup>2</sup>, ?; d. ?).

Netherlands 16th-century singer, composer and theorist. Nothing is known of his youth and musical upbringing, but according to the Roman document to be mentioned presently

<sup>1</sup> 'Musical Memoirs', I, III.

<sup>2</sup> Then part of the principality of Liège.

he was a clerk at Liège at some time before he left for Italy. According to Baini he was at Naples before he joined the Papal Chapel in Rome about 1535, though he was not officially enrolled there until 21 Mar. 1538. In 1556 he advanced to the post of chamberlain. Having served the chapel under Paul III, Julius III, Marcellus II, Paul IV and Pius IV for nearly thirty years he retired with a pension in 1565, having previously been engaged to instruct the members of the Council of Trent in musical matters, probably in 1563, when church music came most prominently into the discussions.

Among Danckerts's works are a 6-part canon, 'Da pacem Domine', one for 5 voices dedicated to Paul III and printed at Naples in 1538, and one for 4 voices known as the "Chessboard Canon" owing to its alternating black and white notes. A motet of his composition, 'Lactamini in Domino', is included in Ulhard's 'Concentus octo . . . vocum' (Augsburg, 1545) and a 6-part motet, 'Tua est potentia', in the 'Selectissimae cantiones ultra centum' (Augsburg, 1540). Also two books of madrigals for 4, 5, and 6 voices are said to have been published by Gardano (Venice, 1559), and two madrigals, 'Fedel qual sempre fui' and 'Scarpello si vedra', are contained in the collection first published in 1555 by Barré of Rome.

Danckerts was one of those who adhered strictly to the old Netherland school and remained uninfluenced by the new art that had grown up around them. He gained great celebrity as judge in the dispute between two ecclesiastical musicians, Vicentino and Lusitano, upon the nature of the scales on which the music of their time was constructed. Danckerts was obliged to defend his verdict against Vicentino in a learned and exhaustive treatise on the matter in dispute, the original manuscript of which is preserved in the Vatican library in Rome. A full account of this controversy is given by Hawkins.

J. R. S. B., adds.

See also Artusi. Lusitano (dispute with Vicentino).

**DANCLA, Jean Charles** (b. Bagnères-de-Bigorre, 19 Dec. 1818; d. Tunis, 9 Nov. 1907).

French violinist, teacher and composer. He received instruction from Baillot at the Paris Conservatoire (1828) and ultimately himself became a professor at that institution (1857). He was the last representative of the old French school of violin playing.

Dancla was successful as a soloist in the Société des Concerts and elsewhere, and his quartet *soirées*, in which he was assisted by his younger brothers, Jean Pierre Léopold (1823-1895), violinist, and Arnaud-Philippe (1820-1862), cellist, enjoyed considerable vogue. As a composer he was equally successful, gaining many prizes, among them the Prix Chartier,

shared with Louise Farrenc, given for the composition of a piece of chamber music which should be the "nearest approach to classic masterpieces". Yet it cannot be said that the more ambitious among some 200 works he published are of enduring value. His gift was rather that of writing bright and graceful music and of writing it well for his instrument, his minor compositions for violin being very popular. His studies were of considerable value to teachers, especially those bearing the title 'Accentuation et ponctuation de l'archet'.

Dancla was the author of the following literary works: 'Les Compositeurs chefs d'orchestre' (1873); 'Miscellanées musicales' (1876); 'Notes et souvenirs' (1893, 1898, with catalogue of his works)

W. W. C. & M. L. P.

**DANCO, Suzanne** (b. Brussels, 22 Jan. 1911).

Belgian soprano singer. She received the whole of her musical education at the Brussels Conservatoire, where she carried off prizes and diplomas, not only for singing, but for pianoforte and the history of music. The exceptional breadth of her musical culture is shown by her command of many different styles: she is indeed one of the most accomplished and versatile of present-day singers. In opera she is best known for her Mozartian impersonations, notably of Fiordiligi and Donna Elvira; these have won applause throughout Italy as well as at the Festivals of Edinburgh, Glyndebourne and Aix-en-Provence. She has sung the part of Mimi at Covent Garden and the very different part of Marie in B.B.C. concert performances of Alban Berg's 'Wozzeck'; listeners to the B.B.C. will also remember her touching and musical *Mélanide*, a part which she sustains in the complete Decca recording of Debussy's opera.

Suzanne Danco is much in demand in London by the Third Programme for unusual music of all periods and schools, German and Italian as well as French. As a concert singer she excels in Debussy, Ravel and Berlioz; to German *Lieder* she brings clarity and intelligence rather than spontaneous warmth. Her versatility is all the more remarkable because her voice — a clear, cool, somewhat pale soprano — is not capable of any great variety of colour; but it has been admirably trained and is able to manage the roudles of Mozart as skilfully as the difficult intervals of Alban Berg.

D. S.-T.

**Dancourt, L. H.** See Gilher ('Foire de Bezons', incid. m). Gluck ('Rencontre imprévue', lib). Haydn ('Incontro improvviso', opera).

**DANDELOT, Georges (Édouard)** (b. Paris, 2 Dec. 1895).

French composer. At the Paris Conservatoire he obtained the prize for harmony in

1920 and for fugue in 1922, studying composition with Widor and later with Dukas and Roussel. On the foundation of the École Normale de Musique in Paris in 1919 he became a professor there, and in 1942 he joined the teaching-staff of the Conservatoire. He is also on the staff of the Lycée Lakanal and the Collège Féminin de Bouffémont, and professor at the Centre Universitaire Méditerranéen at Nice. He fought in the war of 1914-18 and received the Croix de Guerre in 1916.

Among Dandelot's compositions the oratorio 'Pax' for solo voices, chorus and orchestra gained him the first prize at the Exposition Internationale de Paris of 1937. He has also composed a 3-act opera, 'L'Ennemi', a 3-act *opéra-bouffe*, 'Midas', 17 songs from Pierre Louys's 'Bilitis', of which six have an orchestral accompaniment (1924-30), a 'Trio en forme de suite' (1930), 3 waltzes for two pianofortes (1931), a Symphony in D major, a Concerto for pianoforte and orchestra (1934), a Concerto for violin and orchestra, a string Quartet (1933), a Suite for pianoforte (1933), 3 duets for women's voices (1933) and a Sonatina for flute and pianoforte (1934).

Dandelot has also edited a number of works by Mouret, Clérambault, Destouches, Campra and Vivaldi for violin (or cello) and pianoforte, and he is the author of several educational works, including two sets of simple piano duets called 'En vacances' and 'Six Chants populaires bretons'.

A. H. (ii), rev. R. H. M.

**DANDO, Joseph** (Haydon Bourne) (*b.* London, 11 May 1806; *d.* Godalming, Surrey, 9 May 1894).

English violinist. He studied the violin under his uncle, Gaetano Brandi. In 1819 he became a pupil of Mori, with whom he continued about seven years. In 1831 he was admitted a member of the Philharmonic orchestra. For many years he filled the post of leader of the orchestras of the Classical Harmonists' and Choral Harmonists' Societies.

Dando was the first to introduce public performances of instrumental quartets. It is true that in the earlier days of the Philharmonic Society a quartet occasionally formed part of the programme, but no concerts consisting exclusively of quartets had before been given in London. The occasion on which the experiment was first tried was a benefit concert got up by Dando at the Horns Tavern, Doctors' Commons, on 23 Sept. 1835. Dando then formed a party consisting of Henry Blagrove, Henry Gattie, Charles Lucas and himself, to give regular series of quartet concerts, and they began their enterprise on 17 Mar. 1836, at the Hanover Square Rooms. They continued their performances annually until 1842, when Blagrove seceded from the party, upon which Dando

assumed the first violin, the viola being placed in the hands of John Loder. Thus constituted they removed to Crosby Hall, where they continued until the deaths of Gattie and Loder in 1853 broke up the party. Dando occupied a prominent position in all the best orchestras until 1875. He held the post of music master to the Charterhouse School from 1875 until within a short time of his death. W. H. H.

**DANDRIEU (d'Andrieu), Jean François** (*b.* Paris, 1682, *d.* Paris, 17 Jan. 1738).

French organist, harpsichordist and composer. He succeeded his uncle, Pierre Dandrieu, author of a book of Noels (*c.* 1720), as organist of the Paris church of Saint-Barthélemy. He was appointed organist of Saint-Merry on 28 Jan. 1704, and a member of the French chapel royal in 1721, replacing Buteigne. His successor in this post was Daquin.

Dandrieu composed three books of harpsichord pieces (1724-34), one of organ pieces, one of violin sonatas, one of trios for 2 violins and bass; 'Les Caractères de la guerre, ou Suite de symphonies . . .', also a book of instructions for harpsichord accompaniment ('Principes de l'accompagnement du clavecin'), which appeared in three editions. Many of his harpsichord pieces have been reprinted. E. V. d. S., rev.

**DANIEL, Hermann Adalbert** (*b.* Cothen nr. Dessau, 1812, *d.* ?).

German theologian. He was professor in the University of Halle. His 'Thesaurus Hymnologicus' (5 vols., Leipzig) is a valuable work on the history of early church music and collection of hymns. M. C. C.

**DANIEL, Jean** (called *Maître Mitou*, *Miltou* or *Mihtou*) (*b.* Angers, ?; *d.* ?).

French 15th-16th-century organist and composer. In 1518 he was organist at the church of Notre-Dame at Nantes; in 1520-30 vicar and organist at Saint-Maurice, Angers. He was famous for his *noels*, of which he wrote both words and music. They are still sung by the people of Brittany. One of the two books of *noëls* which he wrote was republished in 1874. He also wrote a book of sacred songs, and some sacred songs in 4 parts are contained in French collective volumes. E. V. d. S.

**DANIEL (Danyel), John** (*b.* ? Somerset, *c.* 1565; *d.* ?; *c.* 1630).

English lutenist and composer. He was brother of Samuel Daniel the poet and son

of John Daniel, a music master who, according to Fuller, lived near Taunton and was "a man of harmonious mind". Samuel (*b.* 1562) was apparently the elder of the two brothers. John succeeded Samuel as inspector of the children of the queen's revels, and in Dec. 1625 he was a member of the royal company of musicians for the lutes. He was sole executor of the poet's will (P.C.C., 12, Soame) in 1619, and brought out an edition of his poetical works in 1623, dedicating them to Prince Charles.

Daniel took the B.Mus. degree at Christ Church, Oxford, on 14 July 1604. In 1606 he published a set of 20 songs under the title of 'Songs for the Lute Viol and Voice: Composed by I. Danyel, Batchelar in Musicke'.<sup>1</sup> They were dedicated "to M<sup>rs</sup> Anne Grene . . . daughter of S<sup>r</sup> William Grene of Milton, Knight". The first 18 are for solo voice with accompaniment of lute and bass viol, the next 2 are for 4 voices and treble and bass lutes, and the final number is a lute piece entitled 'Mrs Anne Grene her leaves bee greene'. Some of the songs are of greater length than was usual at the period, and in some instances two or three consecutive numbers form a single composition, as in the case of Dowland's 'Time's eldest son' 'Can doleful notes', Nos. 13 and 14 of the set, is treated with chromatic harmonies of an interesting character, but by this date several composers were treading the new paths which had first been explored some years earlier by Weelkes, Dowland and Farnaby.

**DANKERTS, Ghiselin.** See DANKERTS.

**DANKOWSKI, Wojciech (Adalbert)** (real name **Danek**) (*b.* ?, *c.* 1765; *d.* ?).

Polish violist and composer. He wrote many compositions for the church, mainly for mixed choirs, with an accompaniment of an instrumental ensemble and organ. His masses, vespers and motets were written for 5 to 12 voices, and his orchestra usually consists of 2 violins, viola, 2 clarini or sometimes 2 oboes, 2 horns, 2 flutes (rarely) and timpani.

C. R. H.

**DANKWART, Baltazar** (*b.* ?; *d.* ?).

Polish 16th–17th-century violin maker. He made many instruments on the model of the Brescian school. It is still uncertain whether his workshop was at Wilno, Cracow or Warsaw. The Warsaw Conservatory was in

possession of a violin made by Dankwart with a label in Polish which reads as follows: "Baltazar Dankwart we Wilnie 1603, Jego Król. Mości sluga" (Baltazar Dankwart at Wilno, 1603, His Majesty's servant). This violin, one of the very few specimens remaining in Poland, was destroyed during the second world war.

C. R. H.

**DANKWART, Jan** (*b.* ?; *d.* ?).

Polish 17th-century violin maker, probably son of the preceding. He was a pupil in violin making of Groblich, senior. One of the violins made by him and bearing the date 1633 has been in possession of the leader of the Poznań Philharmonic Orchestra.

C. R. H.

**DANNELEY, John (Feltham)** (*b.* Wokingham, Berkshire, 9 Mar. 1786; *d.* London, 1836).

English organist, teacher and theorist. He was the second son of a lay-clerk of St George's Chapel, Windsor. He studied under Samuel Webbe, Charles Knyvett, Woelfl and Charles Neate. He established himself at Ipswich as a teacher of music and became organist of the church of St. Mary of the Tower in that town. In 1816 he visited Paris and studied under Antoine Reicha. Danneley published in 1820 'Elementary Principles of Thorough-bass . . .'; in 1825 'An Encyclopaedia or Dictionary of Music'; in 1826 'A Musical Grammar'.

W. H. H.

**DANNING, Sophus Christian** (*b.* Copenhagen, 16 June 1867; *d.* Odense, 7 Nov. 1925).

Danish conductor and composer. He studied in Copenhagen and later at Sondershausen and Leipzig. After travelling in Italy, France and Germany, he lived for a time in Finland, afterwards taught in Copenhagen and in 1899 went to Norway with an appointment as conductor of the Bergen theatre. In 1907 he removed to Christiania, where he was conductor until 1911. He then returned to Denmark, where he spent his remaining years.

Danning's works include the operas 'Gustav Adolf', 'Elleskudt' and 'Kynthia'; the operetta 'Columbine'; incidental music for Oehlenschläger's 'Aladdin' and other plays, cantatas, symphonies (including one entitled 'Dante') and overtures, a violin Concerto, pianoforte pieces, songs, etc.

E. B.

**DANNREUTHER, Edward (George)** (*b.* Strasbourg, 4 Nov. 1844; *d.* Hastings, 12 Feb. 1905).

English pianist and writer on music of German descent. When five years of age he was taken to Cincinnati, U.S.A., where he learned music from F. L. Ritter. In 1859 he entered the Leipzig Conservatory, where he remained till 1863, under Moscheles, Hauptmann and Richter. From Leipzig he removed to London and became one of the

<sup>1</sup> Republished in 'The English School of Lutenist Song Writers'.

most prominent musicians of the metropolis, well known as a pianoforte player and teacher, littérateur and lecturer, and a strong supporter of progress in music. He was especially known as the friend and champion of Wagner. Perhaps his greatest service to English music was the personal friendship and encouragement, as well as the actual teaching, which he gave to Parry.

Dannreuther's first public appearance in England was at the Crystal Palace, on 11 Apr. 1863, when he played Chopin's F minor Concerto (for the first time in its entirety in England). He founded the Wagner Society in 1872 and conducted its two series of concerts in 1873 and 1874. He was also a warm promoter of the Wagner Festival in 1877, translated his 'Music of the Future' (1872) and others of the prose works, such as 'On Conducting', 'Beethoven', etc., and received Wagner at his house in Orme Square, Bayswater, during his stay in London. An interesting set of papers on 'Wagner and the Reform of the Opera' in the M.M.R. of 1872 was republished in 1904. He was the first to play the concertos of Grieg in A minor, Liszt in A major and Tchaikovsky in B $\flat$  minor (Crystal Palace, 1874 and 1876). He was appointed professor of the pianoforte in the R.C.M. in 1895.

While Dannreuther was an earnest apostle of the new school, he was no less zealous for old music, as is proved by the range of the programmes of his well-known chamber concerts, given at his house from 1874 to 1893, his own able interpretations of Bach and Beethoven, his lectures on Bach, Mozart, Beethoven, Chopin, Schumann and Wagner at the Royal Institution, and his article on Beethoven in 'Macmillan's Magazine' (July 1876). His treatise on 'Musical Ornamentation' (one of Novello's primers) was long a standard work on the subject. He was a valued contributor to the earlier editions of this Dictionary and the author of Vol. VI of the O.H.M. ('The Romantic Period'), published posthumously. Dannreuther's published compositions consist of two sets of songs and one of duets.

J. A. F.-M.

**DANNSTRÖM, (Johan) Isidor** (b. Stockholm, 15 Dec. 1812; d. Stockholm, 17 Oct. 1897).

Swedish singer and composer. He studied at the Academy of Music, Stockholm, 1826-29: singing with J. E. Nordblom, pianoforte with T. Bystrom and harmony with E. Drake. He then worked as a clerk in the Customs Office until 1836 and gave guitar and flute lessons to earn money for further musical education. He resumed his studies in harmony and counterpoint with E. Drake in 1835 and became a pupil in singing of Isak Berg, 1835-37. At this time he published his first song. In

1837-38 he studied theory of music with S. V. Dehn in Berlin and took singing lessons with Formi at Bergamo and Rubini in Paris, 1840-1841. He also went to Poland and to Vienna, where he met Franz Berwald. In 1841 he made his début as a singer at the Royal Theatre, Stockholm, and he sang there during the next three years, often with Jenny Lind and J. Gunther. He went to Paris to study with Garcia, 1844-45, and on his return to Stockholm taught many singers who later won fame. In 1849 he published a song method; in 1851 he was elected a member of the Academy of Music. He was conductor of the Harmonic Society in 1847-48; music critic to 'Dagligt Allehanda' and 'Aftenposten', 1848-49, and to 'Aftenbladet', 1854-55. In 1853-54 he travelled to America where he gave concerts and took singing pupils. He founded a musical-instrument warehouse in Stockholm in 1856, at which Emil Sjogren was later to become an assistant in order to earn a livelihood in his earlier years.

Dannstrom composed a number of songs and vocal duets, most of which were published between 1840-60. Many of his best-known songs (polskas) are of a florid type, more violinistic than vocal. Almost all the others are of folksong character. One collection was awarded a prize by the Society of Musical Art. He wrote music to short comedies. 'Skomakaren och hans fru', 1847, 'Herr och Fru Tapperman', 1848, 'Doktor Tarbaglia', 1851, and 'Lordens rock', 1861. His autobiography, dated Dec. 1895, gives a good picture of Swedish musical life in the 1840s and contains interesting references to Jenny Lind and Kristina Nilsson.

K. D.

BIBL.—DANNSTRÖM, I., 'Några blad ur Isidor Dannströms minnes anteckningar' (Stockholm, 1896).

**DANON, Oskar** (b. Sarajevo, Bosnia, 1913).

Yugoslav conductor and composer. After early training in Yugoslavia he completed his musical education at the Conservatory of Prague, where he graduated and obtained a doctor's degree in musicology. Until 1941 he was conductor of the Opera and of the Philharmonic Orchestra in Sarajevo, he was also artistic manager of the Avant-Garde Theatre there.

From 1941 till the end of the second world war he fought as a partisan soldier with the national liberating army of Yugoslavia. In 1945 he became director of the Opera in Belgrade and director of the Philharmonic Orchestra there. In addition to other compositions he has, since the end of the war, written many songs for massed voices and achieved a high degree of realism in his choral work 'Kozara', which reflects national strivings and emotions of the Yugoslav people at the time of their liberation struggles.

His other compositions include a Children's Ballet; choral works, a 'Symphonic Scherzo' for full orchestra; 'Improvisation' for flute, oboe and bassoon, Scherzo for pianoforte, many songs K. T.

**DANYSZ, Kazimierz** (b. ?, 1840; d. ?, 1912).

Polish chorus master, pianist and composer. He was a pupil of E. Grell in Berlin. After his return to Poland he began organizing choral societies both at Poznań and Warsaw, and later, after the death of S. Niedzielski, he became conductor of the choral society Lutnia at Łódź (1895).

Danysz wrote several pianoforte pieces (Scherzo, Waltzes, Toccata), a violin Sonata, many solo songs and part songs, of which a ballad entitled 'Narzeczoną Iwa' ('The Lion's Betrothed'), composed in 1893, was frequently performed. C. R. H.

**DANZA, LA** (Cantata). See METASTASIO.

**DANZI.** German family of musicians of Italian origin.

(1) **Innocenz** (orig. **Innocente**) **Danzi** (b. Italy, c. 1730, d. Munich, 17 Apr. 1798), cellist. He entered the Mannheim orchestra on 29 May 1754, married a daughter of Carlo Giuseppe Toeschi and after the transfer of the electoral court from Mannheim to Munich in 1778 continued to play first cello until 1783, when he retired and his son took his place. Mozart met Danzi at Mannheim in 1777 and again at Munich in 1780, at the rehearsals of 'Idomeneo', and in his letter of 24 Nov. 1780 relates at some length the happenings at a concert of Mara's in which Danzi was used as a pawn in a game of musicians' intrigues.

(2) **Franziska Danzi** (b. Mannheim, 1756; d. Berlin, 14 May 1791), soprano singer and composer, daughter of the preceding (see LEBRUN).

(3) **Franz Danzi** (b. Mannheim, 15 May 1763, d. Carlsruhe, 13 Apr. 1826), composer, brother of the preceding. He studied with his father (1) and with Vogler. After the transfer of the electoral court from Mannheim to Munich he stayed with the small remainder of the famous orchestra at Mannheim (like Ignaz Franzl and the aged Holzbauer) and made his first successes as a composer for the new German national theatre there. He went to Munich only in 1783 to succeed his father on his retirement from the first cello desk. In 1790 he married the singer Margarete Marchand (4) and on a long leave of absence travelled with her in Germany and Italy. After their return to Munich Danzi became vice-conductor (under Winter) in 1798, but he retired from all duties after his wife's early death (1800). It was only seven years later that he took on a new appointment, as court conductor at Stuttgart, where he stayed until June 1812. His last years he spent in the same capacity at Carlsruhe.

As an opera composer Danzi is of historical importance as a forerunner of Weber and of romanticism. His comic operas 'Die Mitternachtsstunde' (1788) and 'Der Kuss' (1799) were regarded as far above the more popular *Singspiel* level, and the former at least was given in many theatres. Besides his works for the stage (listed below), Danzi wrote an oratorio, 'Abraham auf Moria' (Munich, 1811), Masses, Te Deums, Magnificats and other music for the church, much of which was published, as well as numerous songs and instrumental music. A thematic catalogue of 8 symphonies is contained in D.T.B., Vol. VII, Pt. ii (1906) and one of his chamber music (sonatas, trios, quartets, quintets, one sextet, altogether 50 works) in the same collection, Vol. XVI (1915), and a Quintet for woodwind, Op. 56 No. 2, was reprinted in Vol XV

The following is a list of his works for the stage (*Singspiele* unless otherwise indicated) :

Mannheim, 1780-82 'Der Wiederkauf', comedy with songs, not performed; 'Cleopatra', duodrama (30 Jan 1780); 'Azakia', (6 June 1780); 'Der Schiffbruch', incidental music (4 Mar 1781); 'Laura Rosetti' (15 Aug 1781); 'Die Rauber' (Schiller), incidental music (13 Jan 1782); 'Lanassa', incidental music (29 Dec. 1782).

Munich, 1785-1806 'Der Sylphe' (1785), not performed; 'Die Mitternachtsstunde' (Apr. 1788); 'Der Triumph der Treue' (Feb 1789); 'Der Quasi-Mann' (Aug. 1789); 'Der Kuss' (27 June 1799); 'El Bondonani' (1802); 'Wilhelm Tell' (Schiller), incidental music (11 Sept. 1806); 'Iphigenia in Aulis' (27 Jan 1807).

Stuttgart 'Eugen und Clara, oder Der Gartenschlüssel' (15 Mar 1812); 'Dido', melodrama (? 1817).

Carlsruhe. 'Rubezahl' (19 Apr 1813); 'Malwine' (orig called 'Die Wolfsjagd') (20 Dec 1814); 'Turandot' (based on Gozzi's play) (9 Feb. 1817); 'Die Probe' (Oct 1817); 'Abbe Lattaingant, oder Die Theaterprobe' (? new version of the preceding) (14 Sept 1820).

Of uncertain date is 'Deucalion et Pirrha', a French one-act opera, a manuscript vocal score of which is in the Paul Hirsch collection in the B.M.; it probably belongs to the period of Danzi's travels, c 1795.

(4) **Margarete Danzi** (born **Marchand**) (b. ? Frankfort o/M., 1768; d. Munich, 11 June 1800), soprano singer, wife of the preceding. She was the daughter of Theobald Marchand (1741-1800), a theatrical manager at Frankfort, Mannheim and Munich), and a pupil of Leopold Mozart, in whose house at Salzburg, together with her younger brother Heinrich Marchand (later a well-known violinist), she lived from 1781 until about 1785. She made her operatic début at Munich in the Carnival of 1787, as Ilaira in Vogler's 'Castore e Polluce', and in 1790 she married Franz Danzi. They both joined Guardasoni's opera company, travelling between Leipzig, Dresden and Prague, he as musical director and Margarete as leading soprano, and she was greatly admired in such parts as Susanna ('Nozze di Figaro') and Carolina ('Il matrimonio segreto') and particularly as Nina in Paisiello's opera of that title. Together with her husband she went to Italy, singing at Florence and Venice. After their return to Munich Margarete Danzi joined the new German company there in 1796. During those last four years of her short life she also brought out her first and only compositions, 3 sonatas, Op. 1 (thematic catalogue in D.T.B., Vol. XVI, 1915). As a girl she was a great friend of Mozart, who met her once more shortly after her marriage, during his last short stay at Munich, in Nov. 1790.

**DAQUIN (d'Aquin), Louis (Claude)** (b Paris, 4 July 1694; d Paris, 15 June 1772).

French organist and composer. He was a godson of the composer and harpsichord player Élisabeth Claude Jacquet de La Guerre, whose husband, the organist Marin de La Guerre, probably gave him lessons. He played before Louis XIV when only six years of age and was a prodigy. He studied composition with N. Bernier and organ with Louis Marchand, of whom he remained all his life a great admirer. He began his career at the age of twelve by replacing his godmother's husband at the Sainte-Chapelle and becoming organist at the chapel of the Petit Saint-Antoine (1706). In 1727 he competed successfully for the post of organist at the church of Saint-Paul with Rameau, who was rejected. He succeeded Marchand at the organ of the convent of the Cordeliers at the latter's death (1732) and became organist of the royal chapel on Dandrieu's death (13 Apr. 1739). Daquin held these two last posts until his death.

His first book of harpsichord pieces, which contain the famous 'Coucous', was published in 1735, his 'Nouveau Livre de noels pour l'orgue et le clavecin dont la plupart peuvent s'exécuter sur les violins, flûtes, hautbois . . .', 'œuvre II', is reprinted in Guilman's 'Archives des maîtres de l'orgue', Vol III (biography by A. Pirro). Most of these 12 pieces have organ-pedal parts, but these can easily be incorporated in the keyboard part. He also left a printed cantata, 'La Rose', and a large number of manuscripts: motets, organ pieces, fugues, trios, etc. It may be gathered from a contemporary opinion that Daquin's playing was remarkable for its unflinching precision and evenness.

His only son, Pierre-Louis d'Aquin de Château-Lyon (1720-96), wrote 'Lettres sur les hommes célèbres dans les sciences, la littérature et l'art sous le règne de Louis XV' (1752), 'Siècle littéraire de Louis XV, ou lettres sur les hommes célèbres' (1753).

**DARGOMIZHSKY, Alexander Sergeyevich** (b Tula, 14 Feb. 1813, d. St. Petersburg, 17 Jan. 1869)

Russian composer. He was born on a country property in the government of Tula, whither his parents had fled from their own home near Smolensk during the French invasion of 1812. It is a remarkable fact that this future master of declamation began to articulate only at five years of age. Dargomizhsky was educated in St. Petersburg. At six he received his first instruction on the pianoforte and two years later began the violin. At eleven he had already made some attempts at composition. His education completed, he entered, in 1831, the Control Department, but retired altogether from the government service four years later.

Dargomizhsky was of good family and mixed in fashionable society, where he became well known as an amateur pianist and as the composer of pleasing drawing-room songs. In 1833 a chance meeting with Glinka gave a more serious impulse to his musical talents. Dargomizhsky was nine years younger than the composer of 'A Life for the Tsar', yet for a time these two stood side by side, isolated figures in the Russian musical world. Taken together they make up the sum-total of the national character. Glinka had the versatility and spontaneity we are accustomed to associate with the Slav temperament; Dargomizhsky had not less imagination, but was more reflective. Glinka's music is idealistic and lyrical; Dargomizhsky's realistic and dramatic. Glinka was not devoid of wit, but Dargomizhsky's humour is full-flavoured and racy of the soil. Glinka lent Dargomizhsky the famous note-books containing the exercises in harmony which he had worked out with Dehn in Berlin. This was all the theoretical training Dargomizhsky ever received, but it so far strengthened his technical knowledge that he set to work on an opera, 'Esmeralda', for which he used the French libretto written by Victor Hugo on his own 'Notre-Dame de Paris' for Louise Bertin, whose setting was produced in Paris in 1836. Completed and translated into Russian in 1839, this work was not accepted by the directors of the Imperial Opera until 1847.

Although these eight years of suspense undoubtedly discouraged Dargomizhsky and retarded his development, he still had courage to devote himself entirely to music. 'Esmeralda' is light opera in the style of Auber or Halévy, but in the dramatic scenes there is already some evidence of that "language of truth and force" which he afterwards developed in his *magnum opus*, 'The Stone

Guest'. A cantata on Pushkin's dramatic poem 'The Triumph of Bacchus', begun in 1843 and transformed into a ballet-opera in 1848, was given in Moscow in 1867. Dargomizhsky's letters, highly interesting and full of thought, written during a short visit to Paris in 1844-45, show that his views of music were greatly in advance of his time, and free from the influence of popular decree.

'Russalka' ('The Watersprite'), set to Pushkin's attempt at a libretto, was a far stronger work than 'Esmeralda'. It was first performed at the Maryinsky Theatre, St. Petersburg, in 1856, but proved too novel in form and treatment to please a public infatuated with Italian opera. Besides adding the element of humour to national opera, Dargomizhsky made a special feature in 'Russalka' of melodic recitative, in which he altogether surpassed Glinka as regards emotional expression.

The comparative failure of 'Russalka' discouraged the composer from undertaking any new operatic work between 1856 and 1860; but this period was devoted chiefly to song writing, a form of art in which he excelled all his Russian predecessors. His songs are extraordinarily varied in style and contents. He left a long series of graceful and elegiac songs, and some inimitably humorous ones, in which he satirizes the follies and vanities of the *technomsk*, the Russian official. In his Oriental songs he is not content with mere local colour and tricks of style, but breathes the very spirit and passion of the East ('An Eastern Song', 'I think that thou wert born for this' and 'O Maid my Rose'). Wonderful laconic force and stirring emotion characterize his great dramatic ballads ('Knight-Errant' and 'The Old Corporal'), and it is not too much to compare them to the ballads of Schubert and Schumann. In 1864 Dargomizhsky went abroad, taking with him the scores of 'Russalka' and of three highly original orchestral fantasies: the Little Russian 'Kazachok', a Russian legend, 'Baba-Yaga', and the 'Fantasy on Finnish Themes'. In France and Germany he was unable to obtain a hearing; but in Belgium, then — as later — hospitably disposed towards the Russian school, his music was enthusiastically received. During this journey the composer spent a few days in London and was favourably impressed by the capital.

On his return to Russia Dargomizhsky became closely associated with Balakirev and his disciples, and took a leading part in the formation of a national and progressive school. Under the more liberal reign of Alexander II, the period between 1860 and 1870 was characterized by new ideals, new standards and freer modes of expression, alike in literature and in art. In Russia, at least, the desire for artistic

reform was the logical accompaniment of a similar impulse in the political and social world. The programme of the new school, which was its formal protest against an exaggerated respect for tradition, is set forth in detail in Cui's pamphlet 'La Musique en Russie'. A similar dissatisfaction with the accepted forms of opera was also being expressed by Wagner. But the Wagnerian programme was in many respects contrary to the Russian taste and temperament. The new school did not hold with the primary importance which the German master gave to the orchestra; but for them, too, there existed a special means of salvation from all that had become jejune and staled by convention: Glinka, out of the primitive elements of the folk music, had created a new and polished musical idiom which every Russian could understand. Each member of the new school endeavoured to work out the principle of reformation for himself, guided, however, by the dominant idea that the human voice should remain the interpreter of the composer's intention, while the orchestra should be regarded as a means of supplementing and enhancing the vocal music.

Guided by these principles, Dargomizhsky created his last opera, 'The Stone Guest', which has been not inaptly called "The Gospel of the New School". This work represents the final stage of his development, when he had come to use with great power and facility the realistic language of 'Russalka' and of his finest songs. But in following out his own dictum that "the sound must express, or echo, the word", he evolved a new operatic form which necessitated the abandonment of the traditional divisions. Lenz described this opera as "a recitative in three acts". It would be truer to say that the characters express themselves in that "melos" or "mezzo-recitative" which is neither song nor speech, but the connecting link between the two. Dargomizhsky's respect for "the word" and his passion for realistic expression had led him, by completely independent methods, to a reformation as radical as that of Wagner himself. The story of Don Juan, as told by Pushkin, agrees only in its broad outline with Mozart's libretto; but it gains in dramatic force in the hands of a great poet. Dargomizhsky set the text precisely as it originally stood, and although this tends to a lack of scenic variety, there is a compensating intensity of emotional interest, while the psychological delineation is subtle and profound. Dargomizhsky on his deathbed entrusted the instrumentation of his opera to Rimsky-Korsakov, who carried it out in strict accordance with his directions.

The composer had fixed 3000 rubles (about £330) as the price of his work, but an

antiquated law made it illegal for a native composer to receive more than £160 for an opera. At the suggestion of Vladimir Stassov the sum was raised by public subscription, but 'The Stone Guest' was not performed till 1872. It did not appeal to a public accustomed only to Italian *cantilena*. The ideals which it embodied have exercised considerable influence upon the subsequent development of national opera, but 'The Stone Guest' itself never became popular. In spite of its sobriquet, this "Gospel" has never been accepted in its entirety. Borodin and Mussorgsky revered it, but neither conformed strictly to its principles; while Cui, Rimsky-Korsakov, Glazunov and Liadov gradually drew away from this work, which once seemed destined to be the rallying-point of the entire Russian school. Yet faithful adherents of 'The Stone Guest' still believe that they may witness its vindication and triumph.

 2 Quartets.  
 12 Trios or Choruses (The 'Petersburg Serenades' About 90 Songs for voice & pf. accompaniment).

**DARKE, Harold (Edwin)** (b. London 29 Oct. 1888).

English organist, conductor and composer. He was educated at the R.M.C. in London, where he held a scholarship for organ under

Parratt and composition under Stanford, and won the Tagore Gold Medal. He became organist of Emmanuel Church, West Hampstead (1906) and subsequently of St James's, Paddington, while he was assistant to Walford Davies at the Temple Church.

In 1916 Darke entered upon an important and lasting phase of his career by becoming organist of St. Michael's Church, Cornhill, which he made a centre of musical activity in the City of London, both by his midday organ recitals and by the periodic choral festivals given by the St. Michael's Singers (a mixed choir of some 80 voices). Darke is regarded as one of the finest English organists. His recitals at St. Michael's have included the whole series of Bach's organ works and a very large repertory of other works in which English masters from the Elizabethans to the present day have been prominent.

The choral festivals included a wide range of music from the less-known cantatas of Bach to the works of Parry, Vaughan Williams and other modern composers. In the autumn of 1924 a four days' festival was concluded with Bach's Mass in B minor, given in the church of St. Martin's-in-the-Fields in order that a larger congregation might be accommodated. The City of London Choral Union (200 voices) was founded under Darke's direction for the purpose of giving choral music by city workers on a larger scale and in secular surroundings. Its first concert was given at the Bishopsgate Institute in Apr. 1925. Darke is a Fellow, member of the council of and examiner to the Royal College of Organists, and a member of the teaching staff of the R.C.M.

The festivals of the St. Michael's Singers were continued annually in an unbroken series until the sixteenth, after which they were interrupted by the second world war, and they have covered a wide field of choral music. In the spring of 1938 Darke made a successful recital tour as an organist in the U.S.A. and Canada. In the autumn of that year a short work for chorus and orchestra, 'An Hymn of Heavenly Beauty', was given its first performance at the Worcester Festival.

Darke's compositions, generally serious and reflective in character, exhibit a high type of musical sensitiveness. Among unpublished works are a cantata, 'The Beatitudes', a Symphony, 'Switzerland', chamber music and pianoforte works. The published compositions include:

#### CHURCH MUSIC

Te Deum, Benedictus and Jubilate, F ma.  
Magnificat and Nunc Dimittis, F ma  
Communion Service, F ma.  
Magnificat and Nunc Dimittis, A mi.

#### CHORAL WORKS

'As the leaves fall', for women's voices & orch.

'Ye watchers and ye holy ones', for women's voices & orch.  
'The Kingdom of God', for soprano, chorus & orch.  
'Ring out ye crystal spheres', for chorus & orch or organ.  
Harvest cantata 'The Sower'  
'O Lord Thou art my God' (written for Sons of the Clergy Festival, St Paul's Cathedral, 1931).  
'An Hymn of Heavenly Beauty', for chorus & orch. (1930).

#### PIANOFORTE MUSIC

'Five Miniatures'

#### ORGAN MUSIC

Rhapsody.  
3 Chorale Preludes.  
'A Fantasy.'  
Andantino (for Parry's 'Little Organ Book').  
Also songs, part songs, &c

#### DARMSTADT HOLIDAY COURSES.

See ADDENDA, Vol. IX, p. 573.

**DARNTON, (Philip) Christian** (b. Leeds, 30 Oct. 1905).

English composer. He was educated at Cambridge and received his musical training in London at the Matthay School (1922) and the R.C.M. (1927). Among his teachers were Benjamin Dale, Charles Wood, Gordon Jacob and Max Butting (Berlin). After finishing his studies in 1929 he became music teacher at Stowe School, and he was assistant editor to Edwin Evans of 'The Music Lover' from 1930 to 1934. His output of compositions, mostly commissioned, is fairly large. He has written several film scores, incidental music for a number of Old Vic. play productions, and a book 'You and Music' published in the 'Pelican' series in 1940. In addition he has worked as a lecturer on music for various educational organizations. Many of his works remain in manuscript, but nearly all have been performed in Britain or abroad. His string Quartet was done at Zurich in 1935, his 'Five Pieces for Orchestra' at the Warsaw International Festival in 1939 and his Symphony No. 3 at Glasgow in 1945. In 1951 he entered an opera, 'Fantasy Fair' (libretto by Randall Swingler) for the Arts Council award. A cantata, 'Jet Pilot', for baritone, chorus and strings has words by the same poet.

Darnton's published works are as follows: 'Five Pieces for Orchestra', 'Stalingrad' Overture, Symphony No. 3, 'Sinfonietta' for chamber orchestra; 'Cantilena' for string orchestra; pianoforte Concerto; Concerto for viola and strings; Concertino in C major for pianoforte and strings; 'Swan-song', five poems by Robert Nichols, for soprano and orchestra; 'Epic Suite' for violin and pianoforte. There are also a considerable number of unpublished chamber works. C M. (iii).

**DART, (Robert) Thurston** (b. London, 3 Sept. 1921).

English musicologist. He attended Hamp-

ton Grammar School in 1933-39, studied at the R.C.M. in London from 1938 to 1939, when he entered London University, where he took the B.A. (Mathematics) in 1942. Later, after a course under Charles van den Borren in Brussels in 1945, he became assistant lecturer in music at Cambridge in 1947 and took the M.A. there in 1948. During the second world war he was engaged in operational research with the R.A.F. in 1942-45, and he was mentioned in despatches in 1945. From that year onwards he did admirable work as a professional harpsichordist as well as in musical research, in which he has already made valuable contributions, especially by the study of old music. In 1946 he began to edit various works for the recorder, and he has been the editor of the 'Galpin Society Journal' from its inception in 1948. He is also secretary of the 'Musica Britannica' editions. Contributions of his have appeared in the 'Proceedings of the Royal Musical Association', 'Music & Letters', the 'Revue Belge de Musicologie', etc. An admirably scholarly book, 'The Interpretation of Music', appeared in 1954

E. B.

**DARWISH MUSIC.** See SUFI AND DARWISH MUSIC

**DASER, Ludwig** (b. Munich, c. 1525, d. Stuttgart, 27 Mar. 1589).

German composer. He received his education and musical training in the Bavarian vocal chapel (*Hofkantorei*). In 1552 he became court *Kapellmeister*, but was pensioned in 1559, probably on account of his Protestant faith, and was succeeded by Lassus. He continued to live at Munich for some years afterwards, until he accepted another post at the Lutheran court of Württemberg at Stuttgart, where he was appointed *Kapellmeister* on 8 Jan. 1572, a post he held until his death. But his Munich pension was not withdrawn, and in 1578 he published at Munich a setting of the Passion for 4 voices, which he dedicated to Duke Albert in gratitude, as he says, for the singular clemency shown him and for many exceptional kindnesses. A pension was still allowed by the Bavarian court to Daser's widow as late as 1601.

Most of Daser's compositions, masses, motets, etc., remained in manuscript. A 4-part Passion music (1578) and a fugue (also motets) in J. Paix's organ-book (1594) were published at Munich, and an organ piece in Woltz, 'Nova Musices . . .' (1617)

**DASH.** The sign of *staccato*, written thus (1) and placed under or over a note to indicate that the duration of the sound is to be as short as possible, the value of the note being completed by an interval of silence; for example:

A round dot (•) is also used for a similar purpose, but with the difference that notes marked with dots should be less *staccato* than those with dashes, being shortened about one-half, thus:

This distinction, which is enforced by such teachers as Clementi and Czerny, is often ignored by modern editors of classical compositions, and it is remarkable that in such valuable and conscientious editions of Beethoven's works as those of Hans von Bulow ('Instructive Ausgabe', Stuttgart), Pauer (London) and others, only one sign should have been employed for the two effects. That Beethoven himself considered the distinction of importance is proved by various corrections by his hand of the orchestral parts of the seventh Symphony, still extant, and also by a letter written in 1825 to Carl Holz, in which he expressly insists that "• • • and • • • is not a matter of indifference." See Nottebohm's "Beethoveniana", No 25, in which extracts are given from several of Beethoven's works, with the signs of *staccato* as originally marked by himself.

F. T.

**DASSOUICY, Charles d'.** See ASSOUCY, CHARLES D'.

**DAUBE, Johann Friedrich** (b ? Cassel, c. 1730; d. Augsburg, 19 Sept. 1797).

German theorist and composer. In his "Generalbass in drey Accorden" (1756) he proves himself a musician of advanced ideas, similar to Rameau. He wrote two other books on composition and composed some symphonies, sonatas and lute pieces.

E. v. d. s

**Dauberval.** See Ballet.

**DAUBLAINE & GALLINET.** French organ builders established in Paris in 1838 as Daublaine et Cie. In 1839 Louis Gallinet (b. Rouffach, Alsace, 1797), member of an old Alsatian family of organ builders and successor to the organ builder Somer, sold his house to Daublaine, becoming partner for five years. But he brought bad fortune to the house, for in 1844, in a fit of rage excited by some dispute, Gallinet destroyed all the work which he and his partners had just added to the organ at Saint-Sulpice. After this feat he retired to Cavallé's factory as a mere journeyman. Shortly before 1844 the firm was re-established as Girard et Cie, with Barker as foreman from 1842. Under him the Saint-Eustache organ, destroyed by fire in 1845, was rebuilt, and that

of Saint-Sulpice restored (1844-46). The firm became Ducroquet et Cie in 1845, the new organ built at Saint-Eustache was exhibited in London, at Hyde Park, in 1851, obtaining a Council medal and the decoration of the Legion of Honour. In 1855 Ducroquet (*d. Varennes, Somme, 19 July 1877*) was succeeded by a limited company, and that again by Merklin, Schutze et Cie from Brussels, who managed their predecessors' branches in Paris and Lyons. The business was afterwards carried on by Merklin alone until his death at Nancy, 10 July 1905, with the principal factory at Lyons and a branch in Paris. It became afterwards the Société Guttchenritter & Decoq (1899), the mark of which was sold to Fortin. The firm has ceased to exist as a factory.

**DAUNEY, William** (*b. Aberdeen, 27 Oct. 1800; d. Georgetown, Demerara, 28 July 1843*).

Scottish musical scholar. He was the son of William Dauneay of Falmouth, Jamaica. He began his education in London, at Dulwich College, and completed it at the University of Edinburgh. On 13 June 1823 he was called to the Scottish Bar. He found in the Advocates' Library at Edinburgh a manuscript collection of music, written between 1614 and 1620 and known as the Skene Manuscript. It consisted of 114 English and Scottish ballad, song and dance tunes written in tablature. This manuscript Dauneay deciphered and published in 1838 in a quarto volume under the title of 'Ancient Scottish Melodies from a Manuscript of the Reign of James VI'. He accompanied it with a long and ably written 'Dissertation Illustrative of the History of the Music of Scotland' and some interesting documents. The work is valuable as showing the (probably) earliest versions of such tunes as 'The Flowers of the Forest', 'John Anderson my jo', 'Adieu, Dundee', etc. Shortly after 1838 Dauneay left Scotland for Demerara, where he became Solicitor-General for British Guiana.

W. H. H.

**DAUPRAT, Louis François** (*b. Paris, 24 May 1781; d. Paris, 17 July 1868*).

French horn player and teacher. As a

boy he was a chorister at Notre-Dame in Paris, entering the Institut National de Musique (the immediate forerunner of the Conservatoire) in 1794 as a pupil of Kenn, principal *cor-basse* at the Opéra. When the Conservatoire opened as such three years later, Dauprat continued his studies there with Kenn, who had been appointed principal *cor-basse* professor. At the end of his first year (1798) he was awarded a *premier prix* — the first ever given for the horn. The silver-mounted horn by Raoux he received on this occasion is preserved in the museum of the Paris Conservatoire.

In 1799 he joined the band of the Consular Guard and went through the Italian campaign of 1800. Returning to Paris he obtained his discharge from the army and re-entered the Conservatoire to study harmony under Catel and composition under Gossec. Later he studied under Reicha, whose wind quintets he edited during the years of his retirement.

After two years as solo horn at the theatre of Bordeaux he returned once more to Paris to succeed Kenn at the Opéra, becoming solo horn in 1817 on the retirement of F. Duvernoy. This position he held until Véron took over the direction of the Opéra in 1830, when he refused to accept the terms of the new contract offered to him and resigned.

From 1802 until 1816, when Duvernoy retired and Dauprat succeeded him, he held the post of honorary assistant professor at the Conservatoire, becoming sole professor in 1817 when Donnich also retired. Dauprat retired in his turn in 1842.

He was one of the founders of the Société des Concerts du Conservatoire in 1828, remaining in the orchestra as principal horn until 1841; also a member of the private bands of Louis XVIII and Charles X (1816-1830), and of Louis-Philippe (1832-42). He then withdrew completely from public musical activities and went to live with a married daughter in Egypt, where he remained, except for an occasional visit to Paris, until shortly before his death in 1868.

Dauprat was of a modest and retiring disposition, and the limelight had no attraction for him. In spite of early and considerable successes at the Odéon and other concerts, he soon renounced the prominence of the soloist for the anonymity of the orchestra. Towards the latter part of his career he would take part in chamber music only when among friends. Probably no musician of his standing ever aroused less jealousy among his colleagues or was more highly esteemed by them than Dauprat, whose life from beginning to end was a model of industry and modesty.

As a teacher Dauprat was supreme, and for educational value no horn tutor has ever even approached his '*Méthode de cor-alto*

et de cor-basse', though a century and a quarter have elapsed since its publication. He tried very hard to get the terms "cor-alto" and "cor-basse" adopted in place of "premier cor" and "second cor", on the ground that though the difficulties with which the *cor-basse* had to contend were at least as great as if not greater than those of the *cor-alto*, the term "second" cor carried an implication of inferiority. In this he was unsuccessful, and logically his case was weak; most of the best "first" horns, including himself, belonged to the *cor-basse* category.

Many of Dauprat's pupils had distinguished musical careers, among them being Meifred, champion and improver of the valve horn in France; Baneux, of the Opéra-Comique and the Gymnase Musical Militaire; Gallay, the distinguished virtuoso who succeeded his master as professor at the Conservatoire; J. F. Rousselot, well known in England in the 1840s as a performer at the Philharmonic and Musical Union concerts, and later solo horn at the Paris Opéra; and Pagus, who went to London with Jullien and stayed on to become one of the outstanding orchestral players of his day and London agent for Labbaye-Raoux horns.

In addition to his 'Méthode' Dauprat published a number of excellent studies with detailed instructions as to their performance and often with a figured-bass accompaniment. He also published many horn solos and duets, while his unpublished compositions included symphonies and works for the theatre. He left a manuscript 'Cours d'harmonie et d'accompagnement de la basse chiffrée et non chiffrée de la mélodie sur la basse', and an analytical theory of music for the use of schools. A full list of his works is given by Fétis (*Biogr. Univ.*, art. Dauprat). R. M. P.

**DAUSSOIGNE-MÉHUL, Louis Joseph** (b. Givet, Ardennes, 10 June 1790; d. Liège, 10 Mar. 1875).

Netherlands composer. He was the nephew and later became the adopted son of Méhul. He was admitted to the Paris Conservatoire in 1799 and studied the pianoforte with Adam, harmony with Catel and composition with his uncle and Cherubini. In 1807 he gained a second and in 1809 a first prize for composition. He finished his studies in Italy, but returned to Paris and in 1816 was appointed professor of harmony at the Conservatoire. His first operas, 'Robert Guiscard', 'Le Faux Inquisiteur' and 'Le Testament', found no acceptance at the theatres, but at last 'Aspasie et Périclès' was produced at the Opéra on 17 July 1820. He wrote recitatives for Méhul's 'Stratonice', performed in this version on 20 Mar. 1821, and completed his unfinished 'Valentine de Milan', produced at the Théâtre Feydeau on 28 Nov. 1822. His own

last opera, 'Les Deux Salem', was produced at the Opéra on 12 July 1824. He then left Paris and became director of the Conservatory of Liège, where he spent the rest of his life, resigning his post to Étienne Soubre in 1862. César Franck was among his pupils at Liège. Apart from his operas Daussaigne wrote a choral symphony 'Une Journée de la Révolution' and a Cantata for the reception of Grétry's heart in 1823. He also contributed various articles, mainly of a pedagogic nature, to the 'Bulletins de l'Académie'.

E. v. d. s., adds.

See also Méhul (completion of 'Valentine de Milan').

**DAUVERGNE, Antoine** (b. ? Clermont-Ferrand, 3 Oct. 1713; d. Lyons, 11 Feb. 1797).

French violinist and composer. He was probably instructed by his father, Jacques Dauvergne, "player of instruments" and first violinist at the Concert de Moulins (Bourbonnais). According to La Borde ('Essai sur la musique ancienne et moderne') Antoine Dauvergne became leader of the orchestra at the Concert de Clermont-Ferrand. This is not absolutely proved, but his living there is certified. In 1739 he went to Paris, was admitted to the Musique de la Chambre the same year, and to the Opéra orchestra in 1744. From 1739 to 1752 his compositions were only instrumental: 'Divertimenti a tre', violin sonatas with a bass (Opp. 1, 2, 1739), two sets of 'Concerts de symphonies' (Opp. 3, 4, 1751). His music is deeply influenced by that of Locatelli and other Italians; it also reflects certain characteristics of the so-called school of Mannheim, then known in Paris.

As a dramatic composer Dauvergne claims our attention with 'Les Amours de Tempé', a ballet (Opéra, 1752), and a certain number of operas, of which some are arrangements of older works by Colasse, Campra, etc., and others original ones. His greatest success was unquestionably the production of 'Les Troqueurs,' interlude in 1 act, words by Jean Joseph Vadé, after La Fontaine (Opéra-Comique, July 30, 1753). The historic importance of this piece lies in the fact that it was one of the first French works conceived in the form of the Italian intermezzo, with musical recitative instead of the usual spoken dialogue. It was followed on 13 Nov. of the same year, before the court at Fontainebleau, by 'La Coquette trompée,' to a libretto by Charles Simon Favart, which was revived at the Opéra in Paris as the third act of a 4-act opera-ballet, 'Les Fêtes d'Euterpe,' on 8 Aug. 1758. Earlier that year, on 14 Feb., the same theatre had brought out 'Énée et Lavinie,' an opera in 5 acts to a libretto by Bernard de Fontenelle, which was very successful.

Dauvergne became one of the directors of

the Concert Spirituel in 1762, and he composed a series of motets, the greater part of which was performed there. Already in charge of two important posts in the royal music, he was composer to the king and master of his chamber music (1755). He became Surintendant on 25 Dec. 1764 and finally three times manager of the Opéra, between 1770 and 1790. He was the last director of the Royal Opera, where Gluck's works were revealed to the French public. M. L. P., adds.

**D'AUXCOUSTEAUX.** See AUXCOUSTEAUX.

**DAVAUX, Jean Baptiste** (b. La Côte Saint-André, Isère, c. 1737; d. Paris, 22 Feb. 1822).

French composer. He went to Paris about 1760 and composed symphonies in the new style of the Mannheim school. His numerous symphonies, concertos, quartets, duets, etc., were published in Paris, London and Amsterdam. He wrote two operas for the court at Versailles, 'Le Bonheur mattendu' and 'Les Trois Tuteurs' (both 1785), which were afterwards given in Paris as 'Théodore' in 1785 and 'Cécilia' in 1786. He invented a metronome. M. L. P. adds.

Morgan (? incid. m. for play). Reizenstein ('Voices of Night', choral work). Richard ('Salmacida spolia', masque). Siege of Rhodes (lib.).

**DAVENPORT, Francis William** (b. Wilderslowe nr. Derby, 9 Apr. 1847; d. Scarborough, 1 Apr. 1925).

English composer. He was educated at University College, Oxford. He studied music under Sir George Macfarren, whose only daughter he married; was appointed a professor at the R.A.M. in London in 1879, and subsequently examiner for the local examinations in connection therewith. In 1882 he was appointed a professor at the G.S.M. Davenport's book on harmony has been widely used. His compositions include:

Symphony No. 1, D mi. (1st Prize at Alexandra Palace Competition, 1876).

Symphony No. 2, C ma.

Overture to Shakespeare's 'Twelfth Night' (Viard-Louis concerts, 1879).

Prelude and Fugue for orch. (Crystal Palace, 1 Nov. 1879).

Trio, B♭ ma., for vn., cello & pf. (St. James's Hall, Popular Concert, 31 Jan. 1881).

6 Pieces for cello & pf.

4 Pieces for cello & pf.

Davenport's theoretical books were: 'Elements of Music' (1884), 'Elements of Harmony and Counterpoint' (1886) and 'Guide for Pianoforte Students', with Percy Baker (1891).

A. C.

**DAVEY, Henry** (b. Brighton, 29 Nov. 1853; d. Hove, Sussex, 28 Aug. 1929).

English musicologist and pianist. He acquired the first rudiments of music through the Tonic Sol-fa method and was in business for some years. He studied for three years from 1874 at the Leipzig Conservatory, principally the pianoforte and musical theory under Reinecke, Jadassohn, Richter and Weidenbach. He returned to Brighton in 1877 as a teacher and journalist, and was for many years librarian to the Brighton and Sussex Historical Society. He retired from practical music in 1903.

A scholar and the author of several books (principally on musical history), Davey did a great service to early English music by his research work in libraries. He prepared a catalogue of the R.A.M. Library about 1901, when in conjunction with J. S. Shedlock he discovered the original theatre manuscript of Purcell's 'Fairy Queen' there. He contributed many articles to the 'Dictionary of National Biography' and to the British and foreign musical press, and was the English corrector and adapter of Eitner's 'Quellenlexikon'. He was also active in many ways apart from music, e.g. in 1916 he wrote the Memoir of Shakespeare for the Stratford Town edition de luxe.

Davey's publications on music are the following:

'Student's Musical History' (London, 1891 and many subsequent editions).

'History of English Music' (London, 1895; 2nd edition, largely rewritten, enlarged and revised, 1921).

'Handel' ('Masterpieces of Music' series, London, 1912).

W. H. S. (11).

**DAVICO, Vincenzo** (b. Principality of Monaco, 14 Jan. 1889).

Italian composer. He studied first at Turin under G. Cravero and then at Leipzig with Max Reger, obtaining the final diploma at the Conservatory of that city in 1911. But, having lived for a great part of his life in Paris, the chief influence he underwent was that of the musicians surrounding Debussy. His earliest composition to make an impression was 'La principessa lontana' for orchestra, based on Edmond Rostand's 'Princesse lointaine', chosen by the committee of the Rome Augusteo in the competition of 1911. A 'Poema erotico' for orchestra was performed there two years later and another orchestral work, 'Polifemo', at Turin in 1920. The same year, on 26 Feb., his one-act opera 'La dogarressa', on a libretto by Guido M. Gatti, was produced at Monte Carlo. A Requiem

for 4-part chorus was also given there, as well as, on 15 Dec. 1921, an oratorio, 'La Tentation de Saint Antoine', based on Flaubert's story.

Other outstanding works by Davico are 'Impressioni romane' (1913), 'La principessa prigioniera' (1940) and 'Impressioni dal mio diario di viaggio' (1949) for orchestra, 'Euridice', a *poemetto* for voice and orchestra, pianoforte pieces; numerous songs for voice and pianoforte, etc.

G. M. G.

**DAVID** (b. ?; d. ?).

Second King of the Hebrews, c. 1000 B.C. He was the youngest son of Jesse of Bethlehem and a musician of great and diversified activities. His prowess as performer, musical organizer, creator, originator of instrumental combinations as well as the expansion of vocal resources, improviser, musical prophet, librettist, prototype of musicians, and one who established traditions extending into musical annals and practices even to the present day, are recorded in the biblical histories of Samuel, Kings, Chronicles, etc. Insight into the more deeply subjective aspects of David's musical life is afforded by the Psalms, the majority of which he composed.

As performer David is known first and foremost in connection with what may be regarded as the earliest account of "music therapy", when, at King Saul's behest, he was chosen, after search had been made "for a man skilful in playing on the harp", to soothe the king. As a result,

whenever the evil spirit . . . was upon Saul, David took his harp, and played with his hand, and Saul was refreshed, and was better, for the evil spirit departed from him

There are numerous later accounts of David's participation in singing, playing and dancing, in established liturgy, as well as on other occasions, when the spirit of improvisation came upon him. It is notable that the Psalms were composed for musical performance, both for David and other musicians, and that they abound in directions and dedications to the appointed musicians of the Levites.

Although David's name is usually associated with the harp and singing, even with dancing, it is recorded that before the ark of God "David and all Israel played . . . on all manner of instruments made of wood, on harp and lutes and timbrels and cornets and cymbals". This is the greatest diversity of instruments mentioned up to that time (c. 1000 B.C.), so that we may attribute this notable musical development to David's adventurous musical nature. That the outcome of this adventurous spirit was not always the same is evidenced by his wife's reproach, when David improvised dances before

the Ark of the Covenant of the Lord with joyful shouting, and with sound of trumpet, and . . . Michol, the daughter of Saul, looking out through a window, saw King David leaping and dancing before the Lord . . . and she despised him in her heart.

The biblical record of David's organization of musicians for the ordination of musico-liturgical procedures is of a systematized completeness similar to directions and specifications for the building of the Ark of the Covenant and the Temple in the Old Testament; beginning with "And David spoke to the chiefs of the Levites, to appoint some of their brethren to be singers with musical instruments, to wit, on psalteries, and harps, and cymbals, that the joyful noise might resound on high", the biblical account continues with the enumeration of those appointed, in various categories, and their specific functions.

However, David was not content to delegate musical participation solely to the duly appointed ministers and, although he was not a Levite, he was inspired to join with them, having "on him an ephod of white linen", in "singing praises to the Lord, with all kinds of musical instruments".

"When he was old and full of days and made Solomon his son king over Israel", David's precepts were for the perpetuation of music in the worship of God, in ordering that the sons of the Levites were to be numbered from twenty years old and upwards, to minister in the temple of the Lord, and that they were "to stand in the morning to give thanks, and to sing praises to the Lord, and in like manner in the evening", and to "keep the observances of the tabernacle of the covenant". The perpetuation of the tradition was ensured, not only by precept, but also by the appointment of teachers for that purpose.

Subsequent records show that David's wishes were fulfilled by Solomon in a truly worthy manner and by later rulers and prophets, including, among others, Ezechias, Josias, Asa, Amos and Nehemias; and that they, with appropriate tribute to the great musician-ruler, gave "praise and thanks according to the commandment of David".

Although David's various musical exploits, of skill and extemporization as well as ordinance, were notable, the crowning glory of his extraordinary accomplishments and versatility rests eternally on the Psalms, which Wordsworth aptly termed "a spiritual epitome of all history". Since the Psalms were primarily the work of a musician, to be sung with instrumental accompaniment, their musical importance is inescapable. That they were indissolubly linked with music in their own day, and in varying degrees since, is generally known. Their imperishable spirit not only illumines David's musical physiognomy, but they stand out as the most extraordinary literary works of any composer-librettist in historical annals.

Robert Schumann's *Davidbund*, in which the spirit of the king-prophet-musician was made manifest in the 19th century A.D., is

frequently referred to in musical annals, but generally remains inadequately understood. Students of Schumann have been more interested in his immediate literary roots than in searching farther afield for the true meaning of the *Davidbund*. Apart from the vague acceptance of the fact that Schumann's imaginary cohorts were banded together for conflict with the modern Philistines on the battlefield of aesthetics, little is grasped of the real significance of David's influence in Schumann's peculiar realm of thought and feeling. For his knowledge of David, resulting in an admiration that inflamed the very spirit of his creative life, Schumann must have gone directly to the biblical record.

For the formation of the *Davidbund* Schumann found source and inspiration in the account from 1 Samuel (otherwise called the first Book of Kings):

David therefore . . . fled [from Saul] to the cave of Obdolum.<sup>1</sup> . . . And all that were in distress and oppressed with debt, and under affliction of mind gathered themselves unto him; and he became their prince, and there were with him about four hundred men.

And, it continues:

David consulted the Lord, saying, Shall I go [with the band] and smite the Philistines? And the Lord said to David: Go, and thou shalt smite the Philistines.

From this original *Davidbund* Schumann undoubtedly derived the idea of organizing kindred souls against what he regarded as forces inimical to musical progress in his day, for a conflict as old as humanity, in which David was and remains the prototype.

But quite apart from the origin of Schumann's League of David was the revival of David's spirit of fantasy, as expressed in spontaneous improvisation. It is this "spirit of fantasy" which was, and now stands out, as the dominant characteristic of both David and Schumann. This is unquestionably a deeply "subjective" interpretation, but it is the divine inner fire of the heart and soul of the figure of David seen in the clear light of objective distance as a towering peak on the horizon of time.

A. P.

**DAVID, Félicien (César)** (*b.* Cadenet, Vaucluse, 19 Apr. 1810; *d.* Saint-Germain-en-Laye, 29 Aug. 1876).

French composer. His father was an accomplished musical amateur. When Félicien was six years of age Garnier, first oboe at the Paris Opéra, happened to hear him sing and strongly advised his mother to cultivate the child's talent. Soon afterwards the family removed to Aix-en-Provence, where David attended the *Maîtrise* (school) du Saint-Sauveur and became a chorister at the cathedral. He is said to have composed hymns, motets and other works at this early period, and a Quartet for strings, written at

the age of thirteen, is still preserved at the *Maîtrise*. In 1825 he went to the Jesuit college at Aix to complete his studies. There he continued his music and acquired some skill on the violin. He also developed an astonishing memory for music. When he left the college, at the age of eighteen, want of means compelled him to enter the office of his sister's husband, a lawyer, but he soon afterwards accepted the appointment of second conductor at the Aix theatre, which he occupied till 1829, when the post of *maître de chapelle* at Saint-Sauveur was offered to him. During the one year he occupied this place he wrote several compositions for the choir of the church; one of these, a 'Beatus vir', afterwards excited the admiration of Cherubini.

In 1830 David went to Paris to finish his musical education. Cherubini received him kindly, and under his auspices David entered the Conservatoire and studied harmony under Millot. He also took private lessons from Réber, and thus accomplished his course of harmony within six months. He then entered the class of Fétis for counterpoint and fugue. An 'Ave, verum corpus' composed at this time proves his successful advance. On the withdrawal of his allowance David had to support himself by giving lessons.

In 1831 he joined the Saint-Simonians. When, in 1833, the brotherhood was dissolved, David joined a small group of the dispersed members, who travelled south and were received with enthusiasm by their co-religionists at Lyons and Marseilles. The music fell to David's share, and several of his choruses were received with great applause.

At Marseilles David embarked for the East (22 Mar. 1833), where he stayed for over two years, in Constantinople, Smyrna, Egypt and the Holy Land. He managed wherever he went to take with him a pianoforte, the gift of an admiring manufacturer at Lyons. Soon after his return, in 1835, he published a collection of 'Mélodies orientales' for pianoforte. In spite of the melodious charm and exquisite workmanship of these pieces they met with total neglect, and the disappointed composer left Paris for several years and lived in the neighbourhood of Igny, rarely visiting the capital. Two Symphonies, 24 Quintets for strings ('Les Quatre Saisons'), 2 Nonets for wind and numerous songs (one of which latter, 'Les Hirondelles', was at one time very popular in England) belong to this period. One of his Symphonies, in F major, was in 1838 performed at the Valentino concerts, but without success.

In 1841 David settled again in Paris, and his name began to become more familiar to the public, owing to the rendering of some of his songs by Walter, the tenor. But his chief fame is founded on a work of very

<sup>1</sup> Or Adullam; Schumann's Ludlamshohle, as he called the place where the *Davidbundler* gathered.

different import and dimensions — his *ode-symphonie* 'Le Désert' (words by Auguste Colin) — in which he embodied the impressions of his life in the East, and which was produced on 8 Dec. 1844. The form of this composition is difficult to define. It consists of three parts subdivided into several vocal and orchestral movements, each introduced by some lines of descriptive recitation. The subject is the mighty desert itself, with all its gloom and grandeur. On this background is depicted a caravan in various situations, singing a hymn of fanatic devotion to Allah, battling with the simoom and resting in the evening by the fountain of the oasis. Whatever one's abstract opinion of programme music may be, one cannot help recognizing in 'Le Désert' a highly remarkable work of its kind. The vast monotony of the sandy plain, indicated by the reiterated C in the introduction, the opening prayer to Allah, the 'Danse des Almées', the chant of the Muezzin, founded on a genuine Arabic melody are all rendered with a vividness of descriptive power rarely equalled by much greater musicians.

'Le Désert' was written in three months. It was the product of spontaneous inspiration, and to this circumstance its enormous success is mainly due. None of David's subsequent works approached it in popularity. 'Le Désert' was followed (28 Mar. 1846) by 'Moïse au Sinai', at the Opéra, an oratorio written in Germany, where David had gone on a concert tour and where he met with much enthusiasm not unminged with adverse criticism. 'Moïse', originally destined for Vienna, was performed in Paris, its success, compared with that of its predecessor, being a decided anti-climax. The next work is a second descriptive symphony, 'Christophe Colomb' (7 Mar. 1847), and its success again was anything but brilliant. 'Eden, a Mystery' was first performed at the Opéra on 25 Aug. 1848, but failed to attract attention during that stormy political epoch. His *opéra-comique* 'La Perle du Brésil' was produced with success at the Théâtre-Lyrique on 22 Nov. 1851. His remaining dramatic works are: 'La Fin du monde' (in four acts, never performed), 'Herculanum' (serious opera in four acts; 4 Mar. 1859, at the Opéra<sup>1</sup>), 'Lalla-Roukh' after Thomas Moore (two acts, 12 May 1862), perhaps the most genuinely successful, and 'Le Saphir' (in three acts; 1865, both at the Opéra-Comique). Another dramatic work, 'La Captive', was in rehearsal, but was withdrawn by the composer for reasons unknown. In 1867 'Herculanum' was awarded a prize of 20,000 francs founded by

Napoleon III for "the work or discovery most fit to honour the country".

From a purely musical point of view David's work shows an irregular and hesitating manner, although it is full of melodic charm and delicate colouring. Berlioz acknowledged his science and taste, the distinction of his melodies and, above all, his picturesque orchestration. A good estimate of David was given by a contemporary, the composer Ernest Reyer, who describes him as a poet. In fact he was one by the sweetness, the tenderness and the naivety of his expression — but a poet of the East. He appears as an initiator; without him such dramatic works of Oriental characteristics as Reyer's 'La Statue', Bizet's 'Djamileh', Gounod's 'Reine de Saba', Delibes's 'Lakmé', Verdi's 'Aida', etc., might not have been what they are.

BIBL.—BRANCOUR, RENÉ, 'Félicien David' ('Musiciens célèbres' series, Paris), containing a full bibliography of works on David.

**DAVID, Ferdinand** (b Hamburg, 19 June 1810; d. Klosters, Switzerland, 19 July 1873).

German violinist and teacher. His musical talent showed itself very early, and after two years' study at Cassel in 1823 and 1824 under Spohr and Hauptmann, he made his first appearance at the Gewandhaus at Leipzig (1825), in company with his sister Louise — ultimately famous as Mme Duicken. He passed the years 1827 and 1828 as a member of the orchestra of the Königsstadt Theatre, Berlin, where he first became acquainted with Mendelssohn. In 1829 he accepted an engagement as leader of a quartet in the house of a noble and influential amateur at Dorpat, whose daughter he subsequently married. He remained there till 1835, making frequent and successful tours to St. Petersburg, Moscow, Riga, etc.

In 1836 Mendelssohn, on becoming conductor of the Gewandhaus concerts, obtained for David the post of leader of the orchestra (*Konzertmeister*), which he filled with distinction and success until his death. On the foundation of the Conservatory in 1843 he was appointed violin professor, also by Mendelssohn's influence. Of the intimate nature of their connection a good instance is afforded by the history of Mendelssohn's violin Concerto. It is first mentioned in a letter from Mendelssohn to David, dated 30 July 1838. Constant letters on the subject of the work passed between them during the process of composition; hardly a passage in it but was referred to David's taste and practical knowledge, and retouched by the two friends; and he reaped his reward by first performing it in public at the Gewandhaus concert of 13 Mar. 1845.

As a virtuoso David combined the sterling

<sup>1</sup> It is said that in 'Herculanum' a great many pieces from the 'Fin du monde' were embodied. It was originally entitled 'Le Dernier Amour' and intended for the Théâtre-Lyrique.

qualities of Spohr's style with the greater facility and piquancy of a later school; as a teacher he probably had a greater influence than that of any preceding master. His most eminent pupils were Joachim and Wilhelmj.

It is one of David's special merits that he revived the works of the eminent violinist-composers of the old Italian, German and French schools, which he edited and published with accompaniments, marks of expression, etc. He also edited much of the classical repertory of the violin for purposes of study and took a prominent part in the critical editions of the works of great masters. Among his numerous compositions those for his own instrument, five concertos, a number of variations and other concert pieces, alone had some importance, but he wrote two Symphonies, an opera, 'Hans Wacht', a Sextet and a Quartet for strings, a number of songs and concert pieces for trombone and other wind instruments. His 'Violin School' is one of the best works of the kind, and the publication of the 'Hohe Schule des Violinspiels' (a collection of standard works by old violin-composers) marks an epoch in the development of modern violin playing.

David died very suddenly, while on a mountain excursion with his children, near Klosters in the Grisons. He was buried at Leipzig, where he was highly honoured, and where a street was named after him.

BIBL.—ECKHARDT, JULIUS, 'Ferdinand David und die Familie Mendelssohn-Bartholdy' (Leipzig, 1889).

**DAVID, Johann Nepomuk** (b. Eferding, Upper Austria, 30 Nov. 1895).

Austrian composer and organist. He received his first musical education, like Bruckner, as a choir-boy at the monastery of St. Florian. Settled at Leipzig as organist and professor of composition, he composed a great deal of organ music and between the two world wars became one of the leaders of the new German organ movement. In 1945 he lost many of his manuscripts as well as almost the whole of his musical library in an air attack and went to settle at Salzburg, where he taught composition at the Mozarteum. Since 1948 he has been teaching at the Hochschule of Stuttgart. Much of his time is devoted to creative work, but the general opinion in musical circles seems to be that his compositions, which are usually on a large scale, are unsuited to frequent performance. He is the most important Austrian composer of his generation and perhaps the most significant symphonist since Bruckner, whose career his own resembles in some ways, though in others he may perhaps be regarded as the Roman Catholic Bruckner's Protestant antithesis. David's art, which is in no way romantic, is based on a polyphony akin to Bach's,

though it is modern and strongly individual. He is capable of building vast symphonic structures. His music is acrid, not to say harsh, and at points of climax it is apt to culminate in polytonal complexes. Problems of form are for him, as they were for Bruckner, a major task, and he further develops his forerunner's principle of a "formal crescendo", not only by laying stress on a disproportionately developed coda, but — as in his third and most important Symphony — by connecting his movements thematically and relating his finale to the whole by piling up references to what has gone before.

The following are among David's most important works.

#### ORCHESTRA

- Symphony No. 1, Op. 18 (1937)
- Symphony No. 2, Op. 20 (1938)
- Symphony No. 3, Op. 28 (1941)
- Symphony No. 4, Op. 38 (1949)
- Partita No. 1 (1935)
- Partita No. 2 (1940)
- Divertimento on old folksongs, Op. 24
- Variations on a theme by J. S. Bach, Op. 292 (1942)
- Symphonic Variations on a theme by Schutz, Op. 296 (1942)
- Ricercare for full orch.
- Concerto for flute & orch. (1936)
- Concerto for stgs. (1948)

#### CHORAL WORKS

- 'Stabat Mater' for unaccom. 6-part chorus.
- Motets for unaccom. chorus (1935-45).
- 'Tierlieder' for mixed chorus.

#### ORGAN, &c

- 'Choralwerk' (Preludes, Partitas, Fantases, &c.) (1932-45).
- Chaconne, Hymns, Ricercare, Fantasia, Little Preludes and Fugues, &c
- Cantata, 'Frohlich wir nun all' fangen an' for soprano, contralto, bass, oboe & organ (1941).
- Introit, Chorale and Fugue on a theme by Bruckner for organ & 9 wind insts., Op. 25.
- Songs with organ.
- 'Choralwerk', 11 vols. (1929-50)

#### CHAMBER MUSIC

- 5 stg. Trios
- 'Duo concertante' for vn. & cello, Op. 19.
- Sonata for viola d' amore & lute (1943).
- Sonata for flute & viola (1943).
- Trio for flute, vn. & viola, Op. 30
- Sonata for flute, viola & guitar, Op. 26
- Sonatas for vn., viola, cello, flute, lute, &c.
- Quartet for flute, vn., viola & cello (1950).

H. R.

**DAVID, Julius (Peter Paul)** (b. Leipzig, 4 Aug. 1840; d. Oxford, 21 Jan. 1932).

German violinist and teacher. He was the son of Ferdinand David, under whom he learnt the violin, and he studied at the Leipzig Conservatory. He was leader of the orchestra at Carlsruhe from 1862 to 1865; he then settled in England as master of the music at Uppingham School, where until 1907, when he retired to Oxford, he exerted an important influence on education. Cambridge conferred the degree of Master of Music on him in Mar. 1908.

H. C. C.

**DAVID, Karl Heinrich** (b. St. Gall, 30 Dec. 1884; d. Nervi, Italy, 17 May 1951).

Swiss conductor, critic and composer. In

1902 he entered the Cologne Conservatory and in 1904 he went to the Munich Conservatory to study under Ludwig Thuille. After working in theatres for some years he joined the staff of the Basel Conservatory in 1910 as professor of theory, *solfège* and composition, a post he held till 1914. From 1914 to 1917 he lived in Berlin and Cologne; he then settled at Zurich. In 1927 he succeeded Ernst Isler as editor of the 'Schweizerische Musikzeitung'. In 1944 he was appointed music critic of the newspaper 'Tat' and in 1948 the city of Zurich awarded him a music prize. His string Quartet (1947) and the 'Sinfonie de la Côte d'Argent' also obtained prizes.

Although he is not of the younger generation David's compositions are thoroughly modern in style and characterized by vigour and vitality. He is among the few Swiss composers who have really grasped the essentials of music for the stage. As editor he was a sturdy champion of practical issues.

The following are David's chief works.

Festival Drama with music for the Berne National Exhibition (C. A. Bernoulli) (1914).  
 'Aschenputtel', fairy play with music (1921).  
 'Der Siallaner', comic opera after Molière's 'Le Sicilien' (1924).  
 'Jugendfestspiel' (1927).  
 'Trauwandel', opera (1928).  
 'Das hohe Lied Salomons', for solo voices, chorus & orch.  
 Requiem for solo voices, chorus & orch.  
 Cantata for solo voices, chorus & insts. (1933).  
 Cantata on Munnellieder texts for soprano, tenor, chorus & orch. (1938).  
 'Roma', pictures for orch (1914).  
 Serenades for orch.  
 Partita for orch (1935).  
 'Concert drôlatique' for chamber orch. (1939).  
 'Sinfonietta' (1941).  
 Prelude and Scherzo for orch. (1941).  
 'Pezzo sinfonico' for orch (1945).  
 'Sinfonie de la Côte d'Argent' for orch. (1948).  
 Suite for wind band (1950).  
 Cello Concerto.  
 Concertino for bassoon & stgs.  
 Viola Concerto.  
 Concerto for saxophone & stgs. (1947).  
 String Sextet.  
 5 String Quartets.  
 Flute Quartet.  
 2 Quartets for saxophone, vn., cello & pf. (1934 & 1946).  
 Pf. music.  
 Songs.

**DAVID LE PÈRE.** See DAVIDE, GIACOMO.

**DAVID, Mile.** See HORN, p. 374.

**DAVIDE, Giacomo** (b. Presezzo nr. Bergamo, 1750; d. Presezzo, 31 Dec. 1830).

Italian tenor singer, better known as "David le père". Having studied composition under Sala, he was able to suit his *floriture* to the harmony of the passage he wished to embroider; but he was even more distinguished in serious and pathetic music, and that of the church, than in bravura.

In 1785 he went to Paris, sang at the Concert Spirituel, and made a great sensation in Pergolesi's 'Stabat Mater'. Returning to Italy, he sang during two seasons at the Teatro alla Scala of Milan. In 1790 he was at Naples again, and in 1791 he went to London. Lord Mount-Edgcumbe wrote:

He was undoubtedly the first tenor of his time, possessing a powerful and well-toned voice, great execution as well as knowledge of music, and an excellent style of singing. He learned to pronounce English with tolerable correctness, and one of his last performances was in Westminster Abbey, at the last of the Handel festivals.

In 1802 he was at Florence, and he returned in 1812 to Bergamo, where he was appointed to sing at the church of Santa Maria Maggiore. It is said that he sang at Lodi in 1820. He formed two pupils, one of whom was his son and the other Nozzari.

J. M.

**DAVIDE, Giovanni** (b. Naples, 15 Sept. 1790, d. St. Petersburg, c. 1851).

Italian tenor singer. He long enjoyed the reputation in Italy of a great singer, though his method of producing his voice was defective, and he frequently showed want of taste, abusing his magnificent voice, with its prodigious compass of three octaves comprised within four B's.

He made his début at Brescia in 1810 and sang with success at Venice, Naples and Milan. In this last city he was engaged at La Scala for the whole of 1814. In the autumn of that year he was first employed by Rossini in his 'Turco in Italia'. Rossini then wrote parts for him in 'Otello' (1816), 'Ricciardo e Zoraide' (1818), 'Ermione' and 'La donna del lago' (1819). In 1818 he sang in Rome, Vienna and London. He was then engaged for seven years by Barbaja, who at that time directed the operas of Naples, Milan, Bologna and Vienna.

David appeared in London in 1831, singing, among other operas, with Mrs. Wood in Pacini's 'L' ultimo giorno di Pompei', but he was *passé*. He arrived in Paris in the same year. Édouard Bertin, a French critic, said of him:

It is impossible for another singer to carry away an audience as he does, and when he will only be simple, he is admirable; he is the Rossini of song. He is a great singer; the greatest I ever heard.

He was singing in Italy from 1831 till he retired in 1841 to Naples, where he founded a school of singing. A few years later he accepted the post of manager at the Opera of St. Petersburg.

J. M.

See also Rossini (parts written for D.).

**DAVIDENKO, Alexander Alexandrovich** (b. Odessa, 1 Apr. 1899; d. Moscow, 1 May 1934).

Russian composer. He studied composition under Glière at the Moscow Conservatory. His principal works are a Sonata entitled 'Tchechensk' (1934), songs, mass songs and,

written in collaboration with Boris Shekhter, the opera '1905'. M. D. C.

**DAVIDOV, Carl Yulevich** (b. Goldingen, Courland, 15 Mar. 1838; d. Moscow, 26 Feb. 1889).

Russian violoncellist and composer. He took a mathematical degree at Moscow University in 1858. Shortly afterwards he chose the musical profession, and studied the cello under Schmidt in Moscow and Schubert in St. Petersburg. Composition he studied under Hauptmann at Leipzig. His first appearance in public was at the Gewandhaus there, on 15 Dec. 1859, after which he became leading cellist in that orchestra and professor at the Conservatory in place of Grutzmacher.

In 1862 Davidov was appointed first cello to the St. Petersburg Opera, and shortly afterwards to a professorship at the Conservatory. From 1876 to 1886 he was director of this institution, and his reign was marked by most benevolent measures in favour of poor students. The number of scholarships was greatly increased and free quarters were found for the impecunious.

He made his first appearance in London at the Philharmonic concert of 19 May 1862, in a Concerto of his own. In the first edition of this Dictionary the following criticism of his playing occurs:

His tone is expressive, his intonation certain, especially in the higher registers, his execution extraordinary, and there is great individuality in his style.

Davidov's compositions include:

'Symphonic Sketch' for orch., Op. 27.  
Suite for orch., Op. 37.  
Cello Concerto No. 1, Op. 5.  
Russian Fantasy for cello & orch., Op. 7.  
Cello Concertos Nos. 2-4, Opp. 14, 18 & 31.  
String Sextet, Op. 35.  
String Quartet, Op. 38.  
Quintet for 2 vns, viola, cello & pf., Op. 40.  
Numerous pieces for cello & pf. (incl. 'Adieu', 'Solitude' and 'Am Springbrunnen').  
Songs, Op. 26.

The cello and pianoforte pieces named above as well as the songs were exceedingly popular in their time. He also wrote an admirable cello school.

See also Arensky (ded.).

**DAVIDSBÜNDLER.** A friendly and musical association formed by Schumann in 1834 was called the Davidsbund (League of David), and its members Davidsbündler. They set out to combat the musical "Philistines"—hence the title of the finale in Schumann's 'Carnaval', Op. 9, 'Marche des Davidsbündler contre les Philistins'. His set of 18 pianoforte pieces entitled "Davidsbündlertänze", Op. 6, also alludes to the "league". E. B.

See also David (origin of the name).

**DAVIDSON, G. H.** (b. ?; d. ?).

English 19th-century music publisher. His

first address was 6 Tudor Street, New Bridge Street, London, c. 1833-44. His early introduction to the public was his collection of Charles Dibdin's songs, the first attempt towards a complete gathering up to that time. This had the music to the principal songs and was prefaced by a memoir by George Hogarth. It was issued in an octavo volume by How & Parsons in 1842. Before 1847 Davidson had turned publisher of both literary and musical works, his address being 25 Water Street, New Bridge Street, c. 1844-47. In 1847 he had published his first volume of 'The Universal Melodist', an interesting work in two volumes, the second bearing the date 1848. This had appeared in parts along with a reissue of the Dibdin collection. By the year 1848 Davidson had changed his place of business to 19 Peter's Hill, Doctors' Commons, where he did an immense business in the issue of cheap and popular music. He purchased the copyright of most of Henry Russell's songs, published sheet music under the title 'The Musical Treasury' and from 1854 issued 'Davidson's Musical Opera Books', an important series of librettos with music of the principal airs. Some of his publications were subsequently transferred and issued with the imprint "The Musical Bouquet Office", 192 High Holborn. After 1860 the business was continued as The Music Publishing Co., at 19 Peter's (or St. Peter's) Hill, 1860-66 and at 167 High Holborn, 1867-81, with additional premises at 60 Museum Street, 1867-68.

**DAVIDSON, John.** See Gurney (song).

**DAVIE, Cedric Thorpe.** See THORPE DAVIE.

**DAVIES.** English musical sisters.

(x) **Marianne Davies** (b. ? London, 1744; d. ?), singer, harpsichordist, flautist and armonica player. She first appeared in London, at Hickford's Rooms, on 30 Apr. 1751, when she played a concerto for the German flute and a concerto by Handel on the harpsichord, besides singing some songs. About 1762 she achieved much more repute for her skill on the armonica, then recently much improved by Franklin. Discussing her as a singer, Lord Mount Edgumbe<sup>1</sup> speaks of her extensive compass and finished execution, but admits that her voice lacked colour and passion. Burney speaks of her shake, which was "open, distinct, and neither sluggish like the French cadence, nor so quick as to become a flutter". He also says that "the flexibility of her throat rendered her execution of the most rapid divisions fair and articulate even beyond those of instruments in the hands of the greatest performers".

See also Armonica.

<sup>1</sup> 'Musical Reminiscences of an Old Amateur', 4th ed. (London, 1834).

(a) **Cecilia Davies** (b. ? London, c. 1750; d. London, 3 July 1836), soprano singer. She appeared at the Theatre Royal, Dublin, in Nov. 1763, and in 1764.<sup>1</sup> She seems to have made her first appearance in London on 10 Aug. 1767, at a concert in which she sang "some favourite songs from the operas of 'Artaxerxes' and 'Caractacus'".

In 1768 the sisters left England and went to Paris and Vienna. In the latter city they lodged in the same house as Hasse and soon became great favourites at court; they taught the archduchesses, Maria Theresa's daughters, to sing and act. Metastasio wrote and Hasse composed an ode, performed on 27 June 1769, which was sung by Cecilia, accompanied by Marianne on the armonica. Metastasio, in a letter dated 16 Jan. 1772, describes the beautiful tone of the instrument and the admirable manner in which Cecilia assimilated her voice to it, so as to render it difficult to distinguish the one from the other.

From Vienna the sisters went to Milan, where Cecilia appeared in 1771, with great success, in the opera of 'Ruggiero', written by Metastasio and composed by Hasse, being the first Englishwoman accepted in Italy as *prima donna*. The Italians bestowed on her the sobriquet of "L' Inglesina" and confessed her to be superior to any Italian singer but Gabrieli. She afterwards sang at Florence.

In 1773 the two returned to London, where Cecilia appeared at the Italian Opera with the greatest success. She made her début as Berenice in Sacchini's 'Lucio Vero' on 20 Nov. and subsequently appeared in his 'Perseo' (29 Jan. 1774), 'Nitteti' (19 Apr. 1774) and other parts. Horace Walpole, in a letter of 1 May of that year, wrote: "Miss Davis, the Inglesina, is more admired than anything I remember of late years in operas . . .". In the autumn of 1774 Cecilia Davies sang in 'Judas Maccabaeus' and 'Messiah' at the Three Choirs Festival, Hereford. She returned to the King's Theatre once more as *prima donna* of the season 1776-77 (instead of Anna Pozzi, who appeared in the opening opera only) and sang in Traetta's 'Germondo' (21 Jan. 1777) and 'Telemaco' (15 Mar. 1777), in a revival of Rauzzini's 'Le ali d' amore' (13 Mar. 1777, in the part which Caterina Gabrieli had created the year before) and in a revival of J. C. Bach's 'Orione' (24 May 1777). This was her last part at the Haymarket; she subsequently revisited Florence, and performed there until about 1784, when she returned to England in poor circumstances. She sang after her return from Florence at the Professional Concert on 3 Feb. 1787, and made her first London appearance in oratorio in 1791 at Drury Lane, soon after which she fell into great poverty.

<sup>1</sup> 'Dublin Journal', No. 3811.

About 1817 she published a collection of six songs by Hasse, Jommelli, Galuppi, etc. During the last years of her life she was assisted by the National Fund, the Royal Society of Musicians, etc. W. H. H., rev.

**Davies, Aneurin Telfer.** See Hughes (A, 'Dewi Sant', oratorio).

**DAVIES, Benjamin (Grey)** (known as **Ben Davies**) (b. Pontardawe nr. Swansea, 6 Jan. 1858; d. Bath, 28 Mar. 1943).

Welsh tenor singer. He was the son of an engineer. Having learnt the tonic sol-fa system, he had already as a boy become a member of a choir that competed at an Eisteddfod at Carmarthen. He kept his alto voice until he was fifteen years old, when he sang in Caradog's choir at the Crystal Palace in London; soon afterwards his voice broke, and for five years he earned his living in a store at Swansea, until he was twenty, when, having won a prize at the Swansea Eisteddfod on Good Friday 1877, he was enabled to enter the R.A.M. in London, where he remained from 1878 to 1880, studying with Fiori and getting much valuable advice from Randegger. A performance of Mendelssohn's 'Hymn of Praise' by the R.A.M. students in 1879 led to his obtaining an engagement to sing the tenor solos in the same composer's 'St. Paul' in Dublin; and at another R.A.M. performance, where he enacted the garden scene from Gounod's 'Faust', Carl Rosa offered him an engagement to sing regularly in opera. Davies's début on the stage took place at Birmingham in Balfe's 'Bohemian Girl' on 11 Oct. 1881, in which opera he appeared for the first time in London at Her Majesty's Theatre on 25 Jan. 1882. On the production of Goring Thomas's 'Esmeralda' and Mackenzie's 'Colomba' he sang small parts, and he filled a more important part in Stanford's 'Canterbury Pilgrims' in 1884, in which he appeared with Clara Perry, who became his wife in 1885, when both artists left the company. In Feb. 1887 he joined the company that was playing Cellier's 'Dorothy' at the Prince of Wales's Theatre, in which he played the part of Geoffrey Wilder for more than two years. In 1891 he appeared at the English Opera House as Ivanhoe in Sullivan's opera and as Clément Marot in Messager's 'Basoche'.

From the time of his first festival engagement (Norwich, 1890) onwards, Davies became more closely associated with the concert platform, and for many years he was in most constant request for the English festivals. His voice had a tender lyrical beauty, not without power, and his technique was impeccable. His singing of a slow Handelian aria was matchless in its pleasing and evenly sustained tone. He still sang at the Handel Festival in 1926 with all his old vigour. His

first visit to the U.S.A. in 1893, when he sang at the World's Fair at Chicago, was followed by many others, and his success in America was as great as in England.

Bibl.—Mus. T., Aug. 1899.

**DAVIES, Edward (Harold)** (b. Oswestry, 18 July 1867).

English musical scholar and educationist, brother of Sir Henry Walford Davies. He studied music with Dr. Joseph Bridge at Chester and at twenty years of age migrated to Australia. He took his musical degrees in the University of Adelaide and was in fact the first to receive a Doctor of Music degree (1902) in that University. He became professor of music there and director of music at the Elder Conservatory in 1919. He devoted his life to the furtherance of musical education throughout the Dominion and was largely responsible for the formation of the Australian Musical Examinations Board (in which the several universities co-operate). His services to musical education were acknowledged in England with the honorary diploma F.R.C.M.

Davies founded and conducted the Adelaide Bach Choir and the South Australian Orchestra, and in these and many other ways stimulated the remarkable growth of musical culture in Australian life which recent years have shown. He also found time to make important researches into the music of the aborigines, the results of which have been published in several pamphlets and in a series of gramophone records of Australian Aboriginal Melodies.

H. C. C.

**DAVIES, Fanny** (b. Guernsey, 27 June 1861; d. London, 1 Sept. 1934).

English pianist. Her keen musical instincts were developed in early years at Birmingham under Charles Flavell (pianoforte) and A. R. Gaul (harmony and counterpoint), but in 1882 she entered the Leipzig Conservatory and studied for a year under Reinecke, Oscar Paul and Jadassohn. In 1883 she removed to the Frankfurt Conservatory, and her study there for two years with Clara Schumann shaped the course of her career. She had arrived at a favourable time to profit by the tradition and ideals which Clara Schumann represented, and returned to her own country to perpetuate and extend both.

Fanny Davies made her first appearance in London on 17 Oct. 1885, playing at the Crystal Palace Beethoven's Concerto in G major, a work which always remained one of her finest interpretations. On 16 Nov. following she played for the first time at the Monday Popular Concerts (St. James's Hall), choosing as her solo Bach's Chromatic Fantasy and Fugue and taking part in Schumann's pianoforte Quartet. In this season (1885-86) she appeared with Joachim and

Piatti in six Popular Concerts, and henceforward she was particularly associated with chamber music of the highest kind. She introduced Brahms's Opp. 116 and 117, took part with Muhlfeld in the first performances in England of the clarinet Sonatas and Trio, and with Joachim in the first performance of the D minor violin Sonata. She made an appearance at the Philharmonic Society on 15 Apr. 1886, when Sterndale Bennett's Concerto in C minor was chosen for her. She played in Berlin (15 Nov. 1887) with Joachim, and after giving a recital at Leipzig at the old Gewandhaus, she made her first appearance at one of the regular Gewandhaus concerts (5 Jan. 1888), playing the Beethoven Concerto in G in the same programme as that in which Tchaikovsky conducted his fourth Symphony.

In subsequent years Fanny Davies played much on the Continent: in Rome (1890), at the Beethoven House Festival at Bonn (1893), when she contributed the Sonata Op. 110. She took part in the clarinet Trio (B♭ major) with Muhlfeld in Vienna (1894-95), where her understanding of Brahms's music was deepened by personal friendship with the composer, and at Bergamo (1897) she participated in the Donzetti Centenary Festival. She made an extensive tour in Germany with the singer Gervase Elwes (1907). From 1920 onwards she played much with the Bohemian String Quartet both in Prague and England. She collaborated with Casals in chamber concerts (1911-14) and with his orchestra at Barcelona (1923), when she played Beethoven's G major Concerto and that of Brahms in B♭ major. It is also worth noting that she constantly included music by the old English composers in many of her recital programmes, and especially the virginal music of William Byrd, many years before the modern revival of that music had taken root. She also sought out and introduced many works by modern composers, especially English, Czech and Spanish. She was the first to give a pianoforte recital in Westminster Abbey (July 1921), and this she was able to follow by other recitals in English cathedrals, notably Winchester and York. In short, she was distinguished as an artist who sought the best in music wherever it might be found, and who both in her own playing and her teaching put the ideal of serving the art before all personal considerations.

**DAVIES, FRANGCON.** See FRANGCON-DAVIES.

**DAVIES, (Sir) Henry Walford** (b. Oswestry, 6 Sept. 1869, d. Wrington, Somerset, 11 Mar. 1941).

English organist, composer and educationist. He entered the choir of St. George's Chapel, Windsor, in 1882, and under Walter Parratt,

whose pupil assistant he was (1885-90), he received a thorough grounding in the best principles of Anglican church music. During part of this time he held the post of organist at the Park Chapel, Windsor. In 1890 he won a composition scholarship at the R.C.M. and also became organist of St. Anne's, Soho, a church of musical importance in London on account of its annual performances of Bach's Passion music. Ill-health, however, compelled him to resign that post for the less arduous one of Christ Church, Hampstead (1891-98). At the R.C.M. Davies was the pupil of Parry, Stanford and Rockstro, and in 1895 he succeeded the last-named as a teacher of counterpoint in that institution.

During these years his compositions in many forms made their mark. A Symphony, regarded as a promising piece of student work, was given at the Crystal Palace under Manns. A Quartet in E $\flat$  major for strings and piano-forte was played at one of Dannreuther's private concerts (1893); 'Prospice', a setting of Browning's poem for baritone and string quartet, was sung by Bispham (1896), and a cantata, 'Hervé Riel' (Browning), was produced at the R.C.M. (1895).

The year 1898 marked the beginning of Davies's mature career. He had lately taken his doctorate at Cambridge, when he was appointed, after competition, to succeed Dr. E. J. Hopkins as organist and director of the choir of the Temple Church, and for the next twenty years the development of church music, in the special conditions which that church offered, occupied him constantly. He found there a small professional choir singing the morning and evening service according to the cathedral tradition, but singing it on Sundays only. He raised the standard so that the performance of responses, psalms, etc., came to be regarded as a model; he was allowed considerable latitude in the actual form of the services and introduced the practice of singing a cantata monthly at the afternoon service. Bach's Passions and 'Christmas Oratorio' became regular events of the year; Bach church cantatas, certain works by Parry and other living composers, were periodically given; a certain amount of the older English polyphonic music was introduced and a widely eclectic repertory was established. When Davies came to the Temple he was not regarded as a virtuoso of the organ; long before he left it he had earned a high reputation as a performer whose playing of the classics was of that kind which places the interpretation of the music first and foremost. His individual musicianship showed itself specially in his improvisation and in those accompaniments to cantatas, etc., in which he adapted an orchestral score to the style of the organ. In 1908 the fine organ of the Temple Church (originally Father

Smith) was entirely rebuilt by Rothwell under his direction.

Meantime he entered on his most prolific period of composition, and between 1902 and 1912 he contributed important works for solo voices, chorus and orchestra to a number of the provincial festivals. The first of these was an oratorio, 'The Temple' (Worcester, 1902). It was not a success; it was complained that the oratorio form (the subject was the building of Solomon's temple) was old-fashioned while the musical thought was undoubtedly modern. Its qualities, however, were sufficiently arresting to bring an invitation from the Leeds Festival Committee to compose for their next festival. Davies found a subject thoroughly congenial to his temperament in the medieval mystery play 'Everyman', and his setting for four solo voices, chorus and orchestra was produced at Leeds (1904) with a success which gave him a notable place in public estimation. After this production all doors in England were opened to him. He composed 'Lift up your Hearts', a sacred symphony, for Hereford (1906), and 'Noble Numbers', a cycle of choral songs on poems by Herrick and Herbert, for the following Hereford Festival (1909). 'Five Sayings of Jesus' (Worcester, 1911) was followed by 'The Song of St. Francis' (Birmingham, 1912), his most important festival work after 'Everyman'. Various orchestral works were produced at the Promenade Concerts (Queen's Hall), and a Symphony in G major was given by the New Queen's Hall Orchestra at a symphony concert in June 1911.

Davies had resigned (1903) his post as counterpoint teacher at the R.C.M. in order to devote his time to composition, but other interests proved an increasing distraction from this purpose. He conducted the Bach Choir (London) in 1903-7, also the annual festivals of the London Church Choirs' Association at St. Paul's Cathedral. His gifts as a lecturer were shown at the Royal Institution, and his power of getting into sympathetic touch with every kind of audience made him one of the most effective judges at popular competition festivals all over the country. Early in the first world war he was active in organizing music for soldiers, he founded a male-voice choir and arranged folksongs for camp concerts. In 1917 he was made Musical Director to the Royal Air Force with the rank of major. In 1919 he accepted the chair of music in the University of Wales, a post which carries with it a wider sphere of influence than an ordinary university professorship, since it entails the organization of elementary musical education in the schools, the training of teachers, conducting and judging at Eisteddfodau throughout the Principality. He resigned the professorship in 1926, but retained the

chairmanship of the National Council of Music in the University of Wales. He had previously resigned from the Temple in 1923, after a period in which he was described as "Honorary Organist" with G. Thalben Ball, who ultimately succeeded him, as "acting organist".

In connection with his educational work Davies produced a valuable series of gramophone records of short lectures on melody-making, and undertook a regular course of instruction by wireless with the B.B.C. His services to music procured him the honour of knighthood on the retirement of Lloyd George from office in 1922. He succeeded Sir Frederick Bridge as Gresham Professor of Music in 1924.

The measure of Walford Davies's powers as a composer is hardly to be gained from the larger works for chorus and orchestra enumerated above, though each one of these contains fine music based on a lofty conception of art. A sure instinct in setting the English language, and the power of wielding choral voices in contrapuntal and massed effects, are qualities which he inherited from his master, Parry. He never, however, got an equally sure grip on the orchestra, and such works as the sacred symphony 'Lift up your Hearts' (choral and orchestral), and the purely orchestral Symphony in G major, failed on that account. He expressed himself with greater ease, however, in the simpler forms, and when relieved of a hampering sense of responsibility, his lyrical genius shines clear, particularly in songs.

His church music, too, is important. The services and such anthems as 'God created man' and 'Grace to you and peace' were written for the church services he was directing, especially those of the Temple Church, but he never wrote a note of what may be called merely official church music. As organist, choirmaster and composer he exerted the strongest influence on the church music of his generation. He took up residence as organist of St. George's Chapel, Windsor, in Sept. 1927, and held the appointment till 1932, when he resigned. But in the former year he also accepted a regular appointment on the advisory staff of the B.B.C., which was renewed annually up to 1939. This led to an important extension of his educative work as a broadcaster. His first broadcast music lesson to schools had been given on 4 Apr. 1924. Between that date and 22 June 1934, when the series was concluded, Walford Davies's school course contained no less than 428 broadcast music lessons, 75 studio concerts, 27 published pamphlets and 60 sets of concert notes for use in conjunction with lessons and concerts. It amounted to a complete system of school musical education by wireless, and it had an incalculable but certainly very large influence

on the taste and cultivation of the rising generation.

In 1926 he began a course of instruction for adult listeners entitled 'Music and the Ordinary Listener', which became exceedingly popular, largely by reason of his exceptional gift of thinking aloud and thinking with his hearers, who thus felt drawn into confidence with him and enlightened both by his words and his apt choice of musical illustrations. These lectures resulted in the publication in 1935 of a book, 'The Pursuit of Music', which summarized their contents and carried the thought farther. A third course of broadcasts, 'Melodies of Christendom', was begun in 1934 and continued monthly on Sunday evenings for several years.

On the death of Sir Edward Elgar in 1934 King George V appointed Sir Walford Davies Master of the King's Music, and in that capacity he arranged a remarkable choral concert at the Albert Hall to celebrate the King's Jubilee in the following year. He took an active part in composing and arranging the Coronation music for King George VI, on which occasion he was made K.C.V.O. A concert similar to that of the Jubilee, in which choral singers from all over the United Kingdom and from certain of the Dominions participated, was given in 1938 in the presence of the King and Queen. BIBL.—COLLES, H. C., 'Walford Davies' (M. & L., XXII, 1941, p. 199).

'Walford Davies. a Biography' (Oxford, 1942).

## LIST OF PRINCIPAL WORKS:

### OPERETTA

'What Luck!', comic operetta for children (F. Maynard Bridge) 1 act (1931).

### CHURCH MUSIC

13 Services (1900-40).  
24 Anthems and Motets (1898-1938).  
Numerous Intros, Hymns, Chants, &c.

### CHORAL WORKS

- Op.
2. Cantata 'Hervé Riel' (Robert Browning) for baritone, chorus & orch. (1895).
4. 'Four Songs of Innocence' (Blake) for unaccomp. women's voices (1900).
11. Cantata 'The Three Jovial Huntsmen' (traditional) for chorus & orch. (1902).
14. Oratorio 'The Temple' (words from the Bible), for solo voices, chorus, orch. & organ (1902).
17. Cantata 'Everyman' (setting of the old morality play) for solo voices, chorus & orch. (1904, rev. 1934).
20. Sacred Symphony 'Lift up your Hearts' for bass, chorus & orch. (1906).
22. 'England's Pleasant Land' for unaccomp. chorus (1907).
  1. Green Fields of England (Clough).
  2. O England, model of thy inward greatness (Shakespeare).
  3. And did those feet in ancient time (Blake).
27. 'Ode on Time' (Milton) for baritone, chorus & orch. (1908, rev. 1936).
28. 'Noble Numbers' (18 poems by Herrick, Herbert & others) for solo voices, chorus, cello & orch.

<sup>1</sup> A full catalogue containing an enormous number of small works additional to those enumerated here will be found in H. C. Colles's biography (*see* Bibl.).

Op

- 35 'Five Sayings of Jesus' (words from the Bible, Thomas à Kempis & others), for tenor, chorus & orch. (1911).
- 36 'Song of St. Francis' (St. Francis of Assisi) for solo voices, chorus & orch. (1912).
- 42 Fantasy on an episode of the 'Divina commedia' (Dante) for tenor, chorus & orch (1914).
47. Cantata 'Heaven's Gate' (Blake) for mezzo-soprano, chorus & small orch. (1917).
- 51 'Men and Angels' (6 sacred poems) for tenor, chorus, orch. & organ (1925)
52. Church Cantata 'High Heaven's King' (Edmund Spenser & Gospel of St. John) for soprano, baritone, chorus & orch. (1926)
- 55 'Christ in the Universe' (Alice Meynell) for soprano, tenor, chorus, orch & pf (1929).  
Also numerous partsongs, carols, unison and children's songs, choral arrangements, &c

## ORCHESTRAL WORKS

- 21 'Holiday Tunes', suite of 6 movements (1907).
- 'Solemn Melody', for stgs. & organ (1908)
31. 'Festal Overture' in 4 movements (1910)
32. Symphony, G ma. (1911)
34. Suite<sup>1</sup> Parthenais' (1911, rev 1940)
37. Suite in C ma "after Wordsworth" (1912).
53. 'A Children's Symphony' for small orch. (1927)
- Suite 'Big Ben Looks On' (1937)<sup>2</sup>  
Also smaller pieces, marches for military and brass band, &c.

## PIANOFORTE AND ORCHESTRA

43. 'Conversations' (1914)
1. Congenial Company.
  2. A Moment in Passing.
  3. Intimate Friends.
  4. Playmates.
50. 'Memorial Suite' (1923)
- 1 Memorial Melody (comp. 1919)<sup>3</sup>
  2. Personal Memories.
  3. Arrows of Desire.
  4. Leisure.
  5. Envoy.

## VOICE AND ORCHESTRA

- 25 'The Long Journey', cycle for bass (1908).

## CHAMBER MUSIC

30. 'Peter Pan' Suite (after J M Barrie) for stg. 4tet (1909)
54. Quintet, G ma., for 2 vns., viola, cello & pf (1927, rewritten 1940).

## VOCAL CHAMBER MUSIC

- 6 'Prospice' (Robert Browning) for baritone & stg. 4tet (1894)
- 8 Psalm XXIII for tenor, stg. 4tet & harp (1900).
- 15 'Six Pastorals' for vocal 4tet, stg. 4tet & pf. (1897)
1. Morning Song with Hymn to Pan (Fletcher).
  2. The Shepherd's Wife's Song (Greene)
  3. Sweet Content (Dekker)
  4. Dialogue of Corinda and Damon (Marvell).
  5. Dialogue of Dorinda and Thyra (Marvell).
  6. Evening Song (Fletcher)
- 'Humpty Dumpty', cantata (Nursery Rhyme & scene from Lewis Carroll's 'Through the Looking-Glass') for children's voices & pf (1907).
- 'The Pied Piper of Hamelin' (Robert Browning) for bass, chorus, clar., pf & stgs *ad lib.* (1939).

## VIOLIN AND PIANOFORTE

5. Sonata No. 1, E m. (1894).
7. Sonata No. 2, D m. (1896).

## ORGAN MUSIC

- 'Jesu dulcis memoria' in memory of Parry (1924).  
Also arrangements of 'Solemn Melody' (1908) and 'Memorial Melody' (1936).

<sup>1</sup> For the Coronation concerts of the Robert Mayer Children's Concerts.

<sup>2</sup> Not to be confused with the 'Memorial Melody' in C ma. for organ & orch. written on the death of King George V in 1936.

SONGS<sup>2</sup>

Op

3. 6 Songs (1897)
1. The Farewell (Burns).
  2. Ye Jacobites by name (Burns).
  3. Hymn before Action (Kipling).
  4. Our Lady of the Snows (Kipling).
  5. A Song of Innocence (Blake)
  6. The Lowlands o' Holland (Old Ballad).
10. 'Two Love Songs' (Burns) (1900)
1. Of a' the airts.
  2. Mally.
13. 'The Clown's Songs' in Shakespeare's 'Twelfth Night' (1902)
1. O mistress mine.
  2. Come away, Death.
  3. When that I was.
- 18 6 Songs (1905)
1. Hame (Cunningham).
  2. An Uncouth Love Song (Wither).
  3. This ae nighte (anon.)
  4. I love the jocund dance (Blake).
  5. For a' that (Burns).
  6. Fear no more the heat o' the sun (Shakespeare)
- 'When childher plays' (T. E. Brown) (1907).
- 'The Cuckoo' (Wordsworth) (1909)
- 'The Bough of May' (T. E. Brown) (1909).
- 'The Old Navy' (Marryat) (1910).
- 'The Birds of Bethlehem' (R. Watson Gilder) (1910).
- 4 Songs (1915)
1. There is a lady sweet and kind (anon., 1607).
  2. Wander-Thirst (Gerald Gould)
  3. A Lift on the Way (Edwin Waugh).
  4. Night-Watch (Arthur L. Salmon)
- 'I vow to thee, my Country' (Cecil Spring-Rice) (1924).
- 21 Songs (1931)
1. Arkendale (Naomi M. Gillman).
  2. The Birds (Hilaire Belloc).
  3. A Dirge (John Webster).
  4. Follow your Saint (Thomas Campian)
  5. He hears with gladdened heart (R. L. Stevenson).
  6. I love all bounteous things (Robert Bridges).
  7. In the Highlands (Stevenson)
  8. It is not growing like a tree (Ben Jonson).
  9. My joy, my life, my crown (George Herbert).
  10. Lord, my heart's desire (Herbert).
  11. Never weather-beaten sail (Campian).
  12. Orpheus with his lute (Shakespeare or Fletcher).
  13. Our birth is but a sleep (Wordsworth).
  14. Peace waits among the hills (Arthur Symons).
  15. Requiem (Stevenson).
  16. Softly along the road (Walter de la Mare).
  17. Song of the Road (Henry Newbolt).
  18. Sweet Content (Dekker) (and setting)
  19. Tune thy music to thy heart (Campian).
  20. Up in the morning early (Burns).
  21. The Vagabond (Stevenson).
- 'The Seal's Lullaby' (Kipling).

**DAVIES, Joan** (b. Isleworth, Middlesex, 29 Apr. 1912).

English pianist. She studied under Wesley Roberts at the R.A.M. in London, where she took the highest awards in five subjects, including the Dove Prize. Later on she took a finishing course in pianoforte playing with Egon Petri. She had appeared in public at the age of five and made her first appearance as a concerto soloist with Sir Henry Wood at Queen's Hall in London when she was sixteen years of age. At the same time she came out as a recitalist at the Wigmore Hall. Her first appearance at a Promenade Concert was in 1943. She has toured extensively in the

<sup>3</sup> Many of the songs are also published in choral arrangements or with various instrumental accompaniments.

British Isles and on the Continent of Europe, both as recitalist and as soloist in concertos.

E. B.

**DAVIES, Mary** (b. London, 27 Feb. 1855; d. London, 22 June 1930).

English mezzo-soprano singer of Welsh parentage. She was taught by her father, an amateur and for over fifty years precentor at his chapel, where she made her first appearance as a singer at the age of eight. On 12 June 1873 she made her début in public at Brinley Richards's concert, Hanover Square Rooms. In the same year she gained the Welsh Choral Union Scholarship at the R.A.M., where she studied singing under Randegger, in 1876 the Parepa-Rosa Gold Medal and in 1877 the Nilsson prize. While a student, on 8 Apr. 1875, she sang with success at a public concert. On 5 Jan. 1878 she made her first appearance at the London Ballad Concerts, at which she afterwards sang for many years as principal soprano vocalist. In the autumn of the same year she appeared at the Worcester Festival. On 5 Feb. and 11 Mar. 1880 she sang with the greatest success the part of Margaret on the production in England, in its entirety, under Hallé at Manchester, of Berlioz's 'Faust', and on 21 and 22 May repeated the part under the same conductor in London, at St James's Hall, and for many years under him in London, Manchester and elsewhere. In 1881 she sang the part at the Norwich and Huddersfield Festivals, and in 1888 at the Richter Concerts. On 20 Nov. 1886 she sang with success the part of Mary on the production at the Crystal Palace of Berlioz's 'Childhood of Christ'.

Mary Davies had a mezzo-soprano voice of two octaves and a note from *b* to *c''*, of limited power but very sweet, always perfectly produced and of great charm. In 1888 she married William Cadwaladr Davies of the Inner Temple and North Wales Circuit. In 1900 she finally retired from public life. After the death of her husband in 1905 she interested herself in higher education in Wales, wherein he had been very active; also in the Welsh Folk Musical Society, of which she was president. In 1916 the University of Wales bestowed upon her the degree of Mus.D. (*honoris causa*).

A. G.

**DAVIES, Tudor** (b. Cymmer, Porth, South Wales, 12 Nov. 1892).

Welsh tenor singer. He studied music at the R.C.M., Cardiff. During the war of 1914-1918 Davies served in the Royal Navy as an engineer, and he resumed his musical career in 1919. After a tour of the U.S.A., Canada and Australia, where he sang in opera and at concerts, he joined the British National Opera Company and sang the title-part in the first public performance of Vaughan Williams's 'Hugh the Drover' at His Majesty's Theatre

in 1924, besides taking a number of the leading tenor parts in the repertory. He also sang at the Old Vic., and after the opening of Sadler's Wells he was a member of the permanent company for a number of years, singing regularly in a large number of parts, including Tamino, Florestan, Faust, Don José, the Duke in 'Rigoletto' and Don Carlos, which he sang in the first performance in English of Verdi's opera in 1938. Davies is one of the many singers recruited for the operatic stage from Wales. His voice has a true tenor quality, light rather than robust, and, though he is apt to try to force more tone from it than it naturally possesses, he proved himself a most useful and thoroughly reliable artist in a large repertory. He married the soprano Ruth Packer.

D. H. (u).

**Davies, W. H. (William Henry).** See Bliss (3 songs). Head (song cycle). Holland (T., 'P is for Pool', recitation). Naylor (B, 5 songs with orch).

**DAVIS, Colin** (b. Weybridge, Surrey, 25 Sept. 1927).

English clarinettist and conductor. After studying the clarinet with Frederick Thurston at the R.C.M. in London he became clarinet player in the Kalmars and other orchestras. His urge to conduct, especially Mozart, was stimulated when he directed the Kalmars Chamber Orchestra's first self-sponsored public appearance on 21 Nov. 1949, at Crosby Hall, Chelsea, with Mozart's 'Impresario' in the programme. Other opportunities followed, and in 1952 he became conductor of the Mozart Opera Company.

Davis's wife, April Cantelo (b. 2 Apr. 1928), a gifted and versatile soprano singer, studied under Imogen Holst at Dartington Hall, Totnes, Devon. She has sung at Glyndebourne and takes leading soprano parts for the Mozart Opera Company.

J. R.

**DAVIS, J. D. (John David)** (b. Birmingham, 22 Oct. 1867; d. Estoril, Portugal, 20 Nov. 1942).

English composer. At the age of sixteen he was sent to Frankfurt o/M to learn German, this being by way of preparation for a commercial career, and incidentally entered the Raff Conservatory of Music. The following year he went to Brussels to learn French, shortly afterwards he became a pupil at the Brussels Conservatoire, studying composition under Zarembski and the pianoforte under Leopold Wallner. He also studied under Arthur de Greef and H. F. Kufferath. In 1889 he returned to Birmingham and took up composition and teaching; in 1893 he joined the teaching-staff of the Midland Institute, but in 1904 was compelled by ill-health to resign. An opera, 'The Zaporogues', was given in 1903 at the National Flemish Theatre of Antwerp under the title of 'The Cossacks'. It had been previously produced at Birmingham.

ham on 7 May 1895. Among his orchestral works are:

- Symphonic Variations and Finale. Produced at a Charles Williams Orchestral Concert, Queen's Hall, London, in 1905, also at Promenade Concerts in Birmingham.
- 'The Cenci', a symphonic ballad, after Shelley. Produced at Birmingham, and given at Bournemouth and elsewhere.
- 'The Maid of Astolat', symphonic poem. Produced at Birmingham; subsequently performed at the Albert Hall, London, at Bournemouth and Eastbourne, and at Liverpool.
- 'Germania', a concert overture. Produced by the Birmingham Festival Choral Society.
- 'Miniatures', a suite for small orchestra. Produced by Henry Wood at a Promenade Concert, and given under Dan Godfrey at Bournemouth.
- Prelude to Maeterlinck's 'L'Intruse'.
- 'Elegy' for small orchestra. Antwerp and Birmingham.
- 'Song of Evening', for string orchestra.
- 'Coronation March' for full orchestra in G minor. A composition which received the prize of £100 offered by 'The Artist' in 1902.

Among chamber compositions are:

- 2 String Quartets, G minor and D minor.
- Variations on Suite on a Londonderry Air, written by five composers, for string quartet.
- 'Song of Evening', for string quartet or quintet.
- Two Sonatas for violin and pianoforte.
- Pianoforte Sonata, G minor.
- 6 Pieces for violin and pianoforte.
- 'Elegy' for cello and pianoforte.
- Arioso, Gavotte, and Trio for violin and pianoforte.
- Many piano pieces and songs, and three part songs.

G. S. K. B.

**DAVIS, Thomas** (b. ?; d. ?)

English 18th-century composer. He had some degree of merit and about the middle of the century worked in London for Henry Waylett, a publisher, of Exeter Change. Of his compositions Waylett issued two sets of 'VI Solos for a German Flute or Violin with Bass for the Harpsichord', 'Twenty English and Scotch Airs', and some sets of country-dance tunes, one being for the year 1751.

F. K.

**DAVISON, Archibald (Thompson)** (b. Boston, Mass., 11 Oct. 1883).

American musicologist. He was educated at Boston Latin School from 1896 to 1902 and studied at Harvard University, where he obtained the A.B. in 1906, the A.M. a year later and the Ph.D. in 1908. He was appointed assistant in the Music Department of Harvard University in 1909, and in 1910 became organist and choirmaster there. From 1912 to 1917 he was an instructor of music at Harvard and in that year he was appointed Assistant Professor of Music. In 1920 he became an Associate Professor of Music and nine years later was made a Professor of Choral Music, which post he held until 1940. Since then he has been the James Edward Tutson Professor of Music at Harvard. In 1931 he was made an F.R.C.M. and two years later an Hon. D.Mus. of Williams College. Oxford University conferred an Hon. D.Mus. on him in 1934 and Harvard University in 1948. Davison has made an especial study

of church music and published the following books:

- 'Music Education in America' (1926).
- 'Protestant Church Music in America' (1933).
- 'Choral Conducting' (1940).
- 'The Technique of Choral Compositions' (1945).
- 'Historical Anthology of Music' (with Willi Apel), Vol. I (1946), Vol. II (1950).
- 'Bach and Handel' (1951).
- 'Church Music and Reality' (1951).

M. K. W.

**DAVISON, James William** (b. London, 5 Oct. 1813; d. Margate, 24 Mar. 1885).

English critic. His mother was Mrs. Davison (Maud Rebecca Duncan), an actress and singer of Scottish ballads, in Leigh Hunt's opinion "the best lady of the comic stage". He was educated with a view to the Bar, but forsook that career for music and studied the pianoforte with W. H. Holmes and composition with G. A. Macfarren. He made the acquaintance of Mendelssohn during one of his early visits to England and deepened it in 1836, when, in company with Sterndale Bennett, he attended the production of 'St. Paul' at Dusseldorf. He gradually forsook composition for criticism. In 1842 he started 'The Musical Examiner', a weekly magazine which lasted two years, and in 1844 succeeded G. A. Macfarren, sen., as editor of 'The Musical World', which continued in his hands down to his death. Davison contributed to 'The Saturday Review' for ten years, and for long to 'The Pall Mall Gazette' and 'The Graphic'. But it was as music critic of 'The Times' for thirty-three years (1846-79) that his influence on music, always of the most conservative kind, was most widely exercised.

In 1859 Davison married Arabella Goddard, who had been his pupil, and they had two sons, Henry and Charles. The former compiled his father's memoirs, published (1912) under the title 'From Mendelssohn to Wagner'.

**DAVTZ (Davititz).** See Drvitz.

**DAVY, John** (b. Upton Helions nr. Exeter, 23 Dec. 1763; d. London, 22 Feb. 1824).

English composer. He was a pupil of William Jackson at Exeter<sup>1</sup> and went to London about 1790. He played the violin in the orchestra of Covent Garden and first appeared as a composer of 'Six Quartets for voices' (Op. 1) and 'Twelve Favourite Songs' (Op. 2), published between 1790 and 1795. His first work for the stage was 'A Pennyworth of Wit, or The Wife and the Mistress', a burletta by T. J. Dibdin, performed at Sadler's Wells on 18 Apr. 1796 (the score of which was formerly in the Collection of W. H. Cummings). There followed at the same theatre on 4 June 1798 his "grand historical ballet of action", 'Alfred the Great, or The

<sup>1</sup> An anecdotal account of his youth and early training is contained in 'The Thespian Dictionary' (1802).

Danish Invasion', and at the Haymarket, 14 Aug. 1800, the three-act comic opera 'What a Blunder!' (the score of which was published as his Op. 5).

Davy's further dramatic pieces (produced at Covent Garden unless otherwise noted) were:

- 1801 'Perouse, or The Desolate Island' (with Moorehead).
- 1802 'The Cabinet', 'The Caffres, or Buried Alive'; 'The Brazen Mask, or Alberto and Rosabella', ballet, 'Family Quarrels'; 'Harlequin's Habeas, or The Hall of Spectres' (all five in collaboration with other composers).
- 1803. 'Red Roy, or Oswyn and Helen' (often misquoted as 'Rob Roy', cf. 1818; ballet, at the Haymarket).
- 1804. 'Thirty Thousand, or Who's the Richest?' (with others); 'Harlequin Quackniver, or The Gnome and the Devil'; 'The Miller's Maid' (Haymarket).
- 1805. 'Harlequin's Magnet, or The Scandinavian Sorcerer'; 'Spanish Dollars, or The Priest of the Parish'.
- 1807. 'The Blind Boy'.
- 1812. 'The Lord of the Manor' (with others).
- 1814. 'The Farmer's Wife' (with others).
- 1818. 'Rob Roy MacGregor, or Auld Lang Syne' (with Bishop; founded on Scott's novel).
- 1819. 'The Fisherman's Hut' (with M. P. King, Drury Lane).
- 1820. 'Woman's Will a Riddle' (Op. 16, at the English Opera House, Lyceum).
- 1821. 'The Tempest' (incidental music for Frederic Reynolds's version; with others).

He also wrote songs for Mrs. Mountain's entertainment 'The Travellers at Spa' and for Incledon's entertainment 'A Voyage to India', an 'Ode for the Anniversary of Nelson's Victory and Death' (Covent Garden, 21 Nov. 1806), and published a sonata and some divertimenti for harp, a pianoforte Sonata (c. 1820) and a number of songs, of which the most famous, 'The Bay of Biscay', forms part of his 'Spanish Dollars'; others, like 'Just like love is yonder rose', were popular in their time.

See also King (M. P., 'Fisherman's Hut', collab.) Reeve (2 collabs.).

**DAVY, Richard** (b. ? c. 1467; d. ? Norfolk, c. 1516).

English organist and composer. He entered Magdalen College, Oxford, about 1483 and became organist and *informator chorum* there in 1490. A 'Libri computi' for 1491-92 at Magdalen contains a reference to a payment of 13s. 4d. to

Ricardo Davys pro stallo suo, et informacione choristarum, et pro media parte melodie organorum.<sup>1</sup>

In 1497 he was ordained priest, and in 1501 became chaplain to Sir William Boleyn, the grandfather of Anne Boleyn, who was born about that time. He was chaplain to Sir Thomas Boleyn (the son of Sir William) from 1506-16 at the family's chief residence at Blickling, Norfolk, after which there is no mention of him.

The Eton library contains the following 5-part motets (MS 178) by Davy:

'In honore summe matris', 'O Domine coeli terreque creator', 'Salve Jesu', 'Salve Regina', 'Gaude flore virginali', 'Virgo templum Trinitatis'.

<sup>1</sup> W. Barclay Squire in 'Archaeologia', Vol. LVI.

It now contains only 55 complete pieces, but the index shows that it originally contained 91. There are also portions of a 4-part Passion for Palm Sunday. The latter is interesting, since it is the second-oldest example of Passion music in England, and the utterances of the *turba* or crowd are given to the chorus. Oddly enough the dialogues between Pilate and his wife are also given to the chorus. Sir Richard Terry performed the Passion at Westminster Cathedral during Holy Week 1921 and referred to it as displaying "a high standard of contrapuntal technique" and as being "expressive, virile and dramatic". Two 3-part carols, 'Ah blessed Jhesu' and 'Ah my hart remember', are in the Fayrfax Manuscript (B.M., Add. MSS 5464). The same manuscript also contains some secular partsongs by Davy. the tenor part of 'Nowe the lawe is led' (a 2) and the score of another in 3 parts, 'Jhoone's sike' — with second section beginning "She is my litell praty on".

**DAWSON, Frederick** (b. Leeds, 16 July 1868; d. Lymm, Cheshire, Oct. 1940).

English pianist and teacher. He studied with Hallé, Dannreuther, Klindworth, Pachmann and Anton Rubinstein. He was ten years old when his ability to play the whole of Bach's 'Well-tempered Clavier' from memory brought him to the notice of Hallé. He made his mark in London at the Monday and Saturday Popular Concerts (St. James's Hall), the Crystal Palace, Philharmonic and other leading concerts, and undertook recital tours in Europe. Having studied the works of Grieg with the composer, he played the Concerto at the Grieg concert given by the Philharmonic Society in 1897, and introduced both the Brahms concertos in a programme conducted by Klindworth at St. James's Hall in 1898. His enterprise in the matter of repertory was further exemplified in the fact that he gave Mackenzie's 'Scottish Concerto' in Berlin in 1902. A pianist in the large style, he had a reputation which stood high in continental cities, especially Vienna and Berlin, though in his later years his appearances at home and abroad were comparatively few owing to ill-health.

Dawson was an admirable teacher and adjudicator at competition festivals, where he made a point at "own choice" pianoforte classes of not only criticizing all the performances in detail, but playing all the pieces by way of example. H. C. C., adds.

**DAWSON, Herbert (William)** (b London, 15 July 1890).

English organist. He was educated at the Westminster Abbey Choir School and was then articled to the Abbey organist, Sir Frederick Bridge. Further training was received at T C M. in London, of which institution he became a Licentiate in 1907, obtaining his A.R.C.O. in the same year. He held the post of choirmaster and organist at St. Andrew's, Hillingdon West, and St Michael Royal, College Hill, before going in 1929 to his present (1954) post at St. Margaret's, Westminster. As a conductor he has been in charge of the Sevenoaks Musical Society, the Ealing Choral and Orchestral Society and the Purcell Club (Westminster Abbey ex-choristers). An important office he held for some years was that of organ soloist and accompanist at meetings of the Bach Cantata Club, which were usually held at St. Margaret's, Westminster. H. G.

**DAY, Alfred** (b. London, Jan. 1810; d. London, 11 Feb. 1849)

English physician (M.D.) and writer on music. He studied medicine in London, Paris and Heidelberg, and practised in London as a homoeopathic doctor. His medical studies having prevented him from attaining such practical skill in music as he desired, he subsequently formed the idea of developing a consistent and comprehensive theory of harmony, to replace the chaos of rules and exceptions that in his day did duty for a teaching-system. As the result of some years' work he published in 1845 his 'Treatise on Harmony'. This had a far-reaching influence on the teaching of harmony in Britain, largely as a result of the endorsement of his findings by Macfarren, Professor of Music at Cambridge.

The basis of Day's system is to be found in Rameau's theory and his invention of *générateurs*.<sup>1</sup> Rameau's work had attracted the attention of the distinguished mathematician and physicist d'Alembert, whose own book<sup>2</sup> was described by Helmholtz as extremely clear. Near the end of part ii of 'Tonempfindungen' Helmholtz observed (to quote from Ellis's translation):

No one knew better than d'Alembert himself the missing links of this system. Hence in the preface to his book he especially guards himself against the expression "Demonstration of the Principle of Harmony", which Rameau had used.

Here was warning that should have been heeded by Day, and certainly by Macfarren and others who, adopting Rameau's "principles of harmony" complete with *générateurs*, engaged in the search for roots of every kind of chord. The diatonic chord of the seventh on the supertonic they called a dominant eleventh with the root and third missing while they derived the chord of the augmented sixth from two roots. This was indeed tidy classification run mad. In short, Day's work was typical of the 19th-century pseudo-science that characterized so much theorizing of that date about music.<sup>3</sup>

The most recent study of Day's work is to be found in a paper that Dr. Glen Haydon read at the International Congress of Musicology in New York in Sept. 1939, in which he offered a generous re-estimate of the contribution made by Day to the study of harmony. He had carefully examined English criticisms of Day's work, using as his later sources the 'Proceedings of the Musical Association'. The first volume of these proceedings contains a paper read by Charles Stephens 'On the Fallacies of Dr. Day's Theory of Harmony', the purpose of which had been to substitute for those fallacies new fallacies of Stephens's own invention. On that occasion William Pole, D.Mus., F.R.S., speaking from the chair as an "unbeliever", made some scholarly observations that are historically interesting as indicating the waning of Day's pseudo-scientific influence. A more pungent criticism is to be found in Vol. X (1883-84) in a paper read in two parts by Gerard F. Cobb. The final criticism of Day in these proceedings is contained in a paper read in 1888 by C. W. Pearce from which Dr. Haydon quotes:

... The one object of this paper is to show the untruth and worthlessness of Day's *physics* and to prove that when his book is stripped of its pretended and false science his psychics still remain not only uninjured by the separation, but immensely improved.

Elsewhere C. W. Pearce offers an illuminating comment:

The great truth which Day teaches us, as distinct from all other theorists of his time, is that *modern tonality* is *threefold*. The tonic key is the centre of the tonal system, having as its accessories certain characteristic features of the dominant key on one side and the subdominant key on the other side. Day lived in the 19th century, the age of science, and accordingly tried to derive his tonality from natural phenomena; had he been a pious monk or ecclesiastic of the middle ages he might, perhaps, have discovered in the same system of threefold tonality a really beautiful emblem of the Ever-blessed and Undivided Trinity.

This shrewd observation draws the true analogy between medieval thought and the pseudo-science of musical theory in the 19th century.

It was, however, musical scholarship much more than the growing realization of fallacy due to such pseudo-science, that sounded the knell of Day's theories. In his 'Musical Composition' (1911) Stanford warned us:

<sup>1</sup> See THEORY, SCIENTIFIC AND PSEUDO-SCIENTIFIC.

<sup>2</sup> 'Éléments de musique, suivant les principes de M. Rameau' (1762)

The policy of putting harmony before counterpoint is of comparatively recent growth; the growth has unfortunately over-run a great deal of low-lying land, and it is easy enough to note where it flourishes from the results of its miasma.

An example of the practical value of this warning was given by P. C. Buck in his 'Unfigured Harmony' published in the same year (1911). This textbook offered a complete contrast to the teaching of Macfarren's day or any textbook founded on Day's theories. In the preface Buck guarded against any toxic effect of Day's nomenclature by treating it as a set of mere nicknames for familiar chords that need imply no explanation of them.

It was Day's fundamental mistake that he treated chords as things existing in themselves; and as a final comment on the musical fallacy of his theories, as seen at a still later date, a passage may be quoted from Tovey's article "Harmony" in the 14th ed. of 'The Encyclopaedia Britannica' (1929):

The great classical tradition cares little for the study of chords as things in themselves, and the art of harmony perishes under a discipline that separates its details from counterpoint and its larger issues from form.

More than a century has now passed since Day's book was published, and its verdict is that his ideas have failed to express the faithful observation of the practice of the great masters known to us to-day from the 16th century onwards.

C. H. H. P., rev. & adds. LL. S. L.

**DAY, Charles Russell** (b. Horstead, Norwich, 1860; d. Paardeberg, S. Africa, 18 Feb. 1900).

English soldier and authority on Indian music. The only son of the Rev. Russell Day, rector of Horstead, he was educated at Cheam and Eton, and in 1880 joined the 3rd Royal Lancashire Militia. In 1882 he was gazetted to the first battalion of the Oxfordshire Light Infantry, and soon afterwards was ordered to India, where he became profoundly learned in Oriental music, being instructed entirely by native musicians. The result of his studies was 'The Music and Musical Instruments of Southern India and the Deccan', published in 1891. He drew up the very valuable catalogue of the musical instruments at the London Military Exhibition at Chelsea in 1890. He took an active part in founding and promoting the cause of the short-lived Wind Instrument Chamber Music Society, served on the English committee of the Musical Exhibition in Vienna (1892) and was invited to form one of a committee of advice for the Paris Exhibition of 1900. He was gazetted major in 1899. He was mortally wounded in the South African war, in the attack upon Cronje at Paardeberg, while helping a wounded man. An interesting obituary notice, by A. J. Hipkins, appeared in *Mus. T.*, Apr. 1900. His collection of Indian musical instruments (including a fine vina) and his

Indian manuscripts are now in the Victoria and Albert Museum in London.

*BIBL.*—*Mus. T.*, Mar. 1906 and Nov. 1909

**DAY, John** (b. Dunwich, Suffolk, 1522; d. Walden, Essex, 23 July 1584).

English musical typographer. He was one of the earliest to engage in music-printing, for he began about 1547, in London, a little above the Holborn Conduit. He afterwards dwelt "over Aldersgate beneath Saint Martyns" (i.e. in the upper room over the gate itself), and subsequently had a shop in St. Paul's Churchyard. On 25 Mar. 1553 he obtained a licence to print 'A Catechism in English with an A B C thereunto annexed' and also the works of John Poyntet, Bishop of Winchester, and Thomas Beacon, Professor of Divinity. He subsequently procured a patent to be granted to him and his son Richard for printing the Psalms, etc. He was the printer of Foxe's 'Acts and Monuments'. In 1582 he was Master of the Stationers' Company.

Day published a set of four part-books entitled: 'Certaine notes set forth in fowre and three parts to be song at the morning, Communion, and evening praiser, very necessarie for the Churche of Christe, to be frequented and used: & unto them added diuers godly praiers & Psalmes in the like forme to the honor & praise of God. Imprinted at London ouer Aldersgate beneath S. Martins by John Day 1560'.

This was followed by a second edition in 1565, at the end of which was an engraved portrait of Day dated 1562 "aetatis suae xxxix", surrounded with the motto "Arise for it is Day" which also appears in the design of the title-page.

This publication has a special importance in relation to the history of the time. It is generally conceded that Marbeck's 'Booke of Common Praier noted' fell into disuse before the death of Edward VI in 1553. The "noting" of that book was entirely for unison singing. The Marian reaction lasted till 1558; and with the re-establishment of the English Prayer-Book a harmonized "noting" of it immediately became "very necessarie", and Day supplied the need. In doing so he evidently had the plan of Marbeck's book in mind. Thus he produced his 'Certaine notes' with harmonized music for all the choral items of the Prayer-book, set out in the due order of the Services. The Morning Service provides for 'Venite', 'Te Deum', 'Benedictus' and Litany. The Communion office follows with 'Kyrie', Creed, an Offertory Sentence, 'Sanctus' and 'Gloria in excelsis', together with "a godly praiser". For evensong 'Magnificat' and 'Nunc dimittis' are set. Three alternative complete settings are provided. The first is for men's

voices and is entirely by Thomas Causton, though the 'Sentence' is by Whytbrooke and the "praier" is without ascription. There are two settings of the evening canticles. The second is "for children", meaning a normal choir with chorister boys. The music for Mattins and the Communion is by John Heath, with a prayer by Robert Hasyllton. The composer of the evening canticles is not named, but an alternative setting is by Thomas Knight.

The third set is by Causton and is also "for children", but the items in the Communion Office are apparently for men's voices.

After the services a number of items are added, all of which in modern usage would be called anthems, though only four are so styled by Day. The rest are described as prayers. The following list includes the pieces inserted in the Communion Office. Causton's 'Rejoice in the Lord', already printed among these, is printed again among the prayers.

## ANTHEMS

- 'I give you a new commandment', Shepherd
- 'If ye love me', Tallis
- 'Praise we the Father', Okeland.
- 'Remember not O Lord', Tallis.

## PRAYERS

- 'Lay not up for yourselves', Causton
- 'Let your light so shine', Causton
- 'Most blessed Lord Jesu', Causton
- 'Rejoice in the Lord', Causton.
- 'Shew us, O Lord', Causton.
- 'Praise we the Lord at all times', Hasyllton.
- 'I give you a new commandment', R. Johnson
- 'O eternal God almighty', R. Johnson.
- 'Relieve us, O Lord', R. Johnson
- 'Praise the Lord, O our souls', Okeland
- 'Submit yourselves', Shepherd.
- 'Hear the voice and prayer', Tallis
- 'In trouble and adversity', Taverner
- 'Let all the congregation', Anon
- 'Turn thou us, O good Lord', Anon

In the bassus book 1565 'In trouble and adversity' is correctly described as an 'In nomine of master Taverner'. In the other part-books it is assigned to Causton.<sup>1</sup> It is possible that Causton set these words to Taverner's 'In nomine', which was an instrumental piece without words.

It is curious that nothing by Christopher Tye appears in this collection. The large proportion of Causton's music suggests with great probability that Day employed him as a member of the Chapel Royal to compile and edit it. In Day's 'The whole Psalmes in foure partes' (1563) as many as 27 are by Causton

The other works printed by Day were:

- 1560 'Psalmes of David in Englishe Metre by Thomas Sternehold, and others. . .'
- 1562 'The whole booke of Psalmes collected into Englysh Meter. . .'
- 1563 'The whole psalmes in foure partes. . .'
- 1567 (or 8) 'The whole Psalter translated into English metre. . .'
- 1579 'The Psalmes of David.

See also Psalter, Metrical: English, pp. 962 ff.

<sup>1</sup> See 'Tudor Church Music', III, xxi.

**DAZA (Daça), Esteban** (b. Valladolid, ?, d. ?).

Spanish 16th-century lutenist. He published in 1576 a book in tablature entitled:

Libro de Musica en cifras para Vihuela, intitulado el Parnasso, en el qual se hallara toda diuersidad de Musica, assi Motetes, Sonetos, Villanescas, en lengua Castellana, y otras cosas, como Fantasias del Autor, hecho por Estevan Daça, vezino de la muy insigne villa de Valladolid.

Impresso por Diego Fernandez de Cordoua, impressor de su Magestad. Año de m.d.l.xxvi. en Valladolid [Bibl. Nac., Madrid.]

The book is of great interest, since it contains transcriptions for the lute of a number of Spanish madrigals and *villancicos*, the original voice parts being found, in many cases, in other printed works and manuscripts. The following composers are represented.

## RODRIGO CEVALLOS

- 5 madrigals (4 v.), original parts in Medinaceli MSS 13,230, and an alto partbook in the library of Sir Percy Wyndham, Petersfield. The words of one, 'Quan bienaventurado', are taken from Garcilaso de la Vega (Eclogue IV), one of the greatest of Spanish poets.

## FRANCISCO GUERRERO

- 2 madrigals (4 v.), originals in Medinaceli MS and Guerrero's 'Canciones y villanescas espirituales' (Venice, 1589). The beautiful 'Prado verde y florido' is attributed to Navarro in the Medinaceli MS.

## JUAN NAVARRO

- 2 madrigals (4 v.), originals in Medinaceli MS

## PEDRO ORDOÑEZ

- 2 madrigals (4 v.), original parts unknown.

## JUAN VASQUEZ

- 3 *villancicos* (2 for 4 v. and 1 for 5 v.), original parts in 'Recopilacion de sonetos y villancicos a quatro y a cinco de Juan Vasquez' (Seville, 1560), in Medinaceli Library.

## VILLALAR

- Madrigal, 'Esclarecida Juana' (4 v.), printed in Guerrero's 'Villanescas', in a parody *a lo diuino*: 'Esclarecida Madre'.

The collection also includes transcriptions of a number of anonymous *villancicos* for 3 and 4 voices, besides motets, and an unidentified setting of Garcilaso's well-known sonnet, 'Escrito está en mi alma vuestro gesto', as a madrigal for 4 voices. There are also several fantasies on the Gregorian tones. Daza shows less feeling for the possibilities of the lute, or of the solo song, than his forerunners Luis Milan and Alonso de Mudarra. His 'Parnasso' is frankly a book of transcriptions of favourite music of his day. Examples are given by Morphy, 'Les Luthistes espagnols'.

J. B. T.

**DEACON, Harry (Collings)** (b. London, 1822; d. London, 24 Feb. 1890).

English teacher of singing. He studied the pianoforte under Cipriani Potter and singing under Mazzucato. Many of the most famous singers of the day passed through his hands, notably Sims Reeves, who studied his oratorio repertory with Deacon. A serious student of

the art of singing in all its branches, Deacon contributed the majority of the articles thereon to the first edition of this Dictionary. He gave much valued help to Sir Morell Mackenzie in the production of his book 'The Hygiene of the Vocal Organs'. Deacon was an excellent pianist and often appeared as accompanist at the Monday Popular Concerts (St. James's Hall). H. G. C.

**DE AHNA, Eleonora** (b. Vienna, 8 Jan. 1838; d. Berlin, 10 May 1865).

Austrian mezzo-soprano singer. She was an artist of great promise and before her early death sang with distinction at the Berlin Court Opera. G. F. P.

**DE AHNA, Heinrich (Karl Hermann)** (b. Vienna, 22 June 1835; d. Berlin, 1 Nov. 1892).

Austrian violinist, brother of the preceding. He studied with Mayseder in Vienna and also received instruction from Muldner in Prague. Already at the age of twelve he made public appearances in Vienna, London, etc. Two years later he received the appointment of chamber virtuoso to the Duke of Saxe-Coburg-Gotha, but in 1851 he joined the Austrian army as a cadet and remained a soldier until the close of the Italian campaign in 1859, when he returned to his musical studies. In due time he became a soloist of repute and violinist in the much-frequented Trio Concerts given by him in conjunction with Barth the pianist and Hausmann the cellist; but he was chiefly known as second violin in the Joachim Quartet, a position for which he was not only fitted by refinement of style and musical knowledge, but also by his quite remarkable faculty of playing up to the leader. Among the posts held by him in Berlin were that of leader of the Royal Orchestra and professor at the High School of Music under Joachim. W. W. C.

**DE AHNA, Pauline.** *See* STRAUSS, RICHARD.

**DE BUSNE.** *See* BUSNOIS.

**DE HOND.** *See* CANIS.

**DE LLOYD, David.** *See* LLOYD.

**DEAN, Winton (Basil)** (b. Birkenhead, 18 Mar. 1916).

English writer on music. He is a son of Basil Dean, the producer, and was educated at Harrow in 1929-34 (entrance and leaving scholarship in classics) and King's College, Cambridge (foundation scholar) in 1934-38 (1st class in English Tripos, Part I). He took the B.A. in 1938 and the M.A. in 1941. Although he had no academic musical education beyond the experience normally provided by Cambridge—where he translated the choruses, etc., from 'The Frogs' of Aristophanes

for Walter Leigh's music in 1937 and Weber's 'Abu Hassan', produced at the Cambridge Arts Theatre in Feb. 1938—he made very thorough musical studies on his own account, largely with the help and advice of Philip Radcliffe, being anxious to equip himself soundly for musical research. Towards the end of the second world war (in 1944-45) he worked for Naval Intelligence. His first literary work was a volume on Bizet contributed to the 'Master Musicians' series (London, 1948), and he next embarked on a substantial book on Handel's oratorios, 'The Dramatic Handel: a Study of the Jewish Oratorios and Masques' (in progress, 1954). Both studies combine to a remarkable degree the qualities of taste and scholarship which have also distinguished Dean's work as a critic in a number of articles and reviews contributed to musical periodicals.

Other writings by Dean include:

- 'Frank' (Novello's Biographies).
- 'An Introduction to the Music of Bizet' (London, 1950).
- 'Carmen'—The Novel, the Libretto and the Music' (Folio Society).
- 'Puccini' ('The Heritage of Music', Vol. III).

E. B.

**DEANE, Thomas** (b. ?; d. ?).

English 17th-century organist and composer. He was organist at Warwick and Coventry. He composed a service and other church music, and in 1703 the instrumental music for Oldmixon's tragedy 'The Governor of Cyprus'. He is said to have been the first to perform a sonata by Corelli in England in 1709. Compositions by him for the violin are contained in 'The Division Violin'. He graduated D.Mus. at Oxford on 9 July 1731.

W. H. H.

**Dearmer, (Rev.) Percy.** *See* English Hymnal, Songs of Praise.

**DEAS, (James) Stewart** (b. Edinburgh, 19 June 1903).

Scottish pianist, conductor, organist and writer on music. He was educated at George Watson's School, Edinburgh, from 1908 to 1921 and at the University of Edinburgh in 1921-24. He obtained the M.A. in 1924 and spent the next two years studying under Tovey. He won the Bucher Scholarship for study abroad and from 1926 to 1928 studied pianoforte and conducting in Berlin, going on to Basel Conservatory the following year, where he had lessons in conducting from Weingartner. He took the B.Mus. at Edinburgh in 1929. During his student years he was organist and choir-master of various churches in Edinburgh, and from 1931 to 1933 he was conductor of the Edinburgh Opera Company, during which time he produced Tovey's 'Bride of Dionysus' and shared the conducting with the composer. He conducted the Reid Symphony Orchestra and the B.B.C. Scottish Orchestra several times, and

<sup>1</sup> A soprano singer of some promise before she married Strauss, in the production of whose 'Guntram' she appeared at Weimar in 1894. She was the daughter of General Adolf De Ahna of Munich.

in 1936-38 he was director of the South African College of Music and Professor of Music at the University of Capetown. As a pianist he has played in chamber concerts in Edinburgh, London, Sheffield, Capetown and elsewhere. He was a member of the first Council and Programme Committee of the Edinburgh Festival, and in 1948 he was appointed to the James Rossiter Hoyle Chair of Music, University of Sheffield, in succession to Frank Shera. In 1950 he founded the Sheffield Bach Society, and he is conductor of the Sheffield Bach Orchestra.

In 1934-35 Deas was music critic for the Glasgow 'Evening Times' and on his return from South Africa he became London critic for 'The Scotsman' (1939-44). During the second world war he also worked in the Foreign Office and for the B.B.C. He was music critic on the editorial staff of 'The Scotsman' in 1944-48 and he has written several articles on music for various journals since 1933, such as some concert notices for 'The Times' and 'The Observer', besides broadcasting talks on music. His book 'In Defence of Hanslick' was published in 1940.

M. K. W.

**DEATH OF NELSON, THE** (Song). See BRAHAM.

**DEBAIN, Alexandre François** (b. Paris, 1809; d. Paris, 3 Dec. 1877).

French instrument maker. He was originally a foreman in a pianoforte factory. In 1834 he established a factory of his own and distinguished himself by the invention of several musical instruments, among others the harmonium, or *orgue expressif*, patented in 1842, the Antiphonel (1846) and the Harmonicorde (1851). His death involved the disappearance of the factory, but the make of his instruments is now in the hands of the firm of Chaperon, Paris.

M. L. P.

BIBL.—PIERRE, CONSTANT, 'Les Facteurs d'instruments de musique . . .' (Paris, 1893).

See also Harmonium.

**Debenedetti, G.** See Ghedini ('Antigone', cantata).  
**DEBOŁECKI, Wojciech** (full name **Wojciech Prawdzic z Konojad Debołęcki**) (b. ? , 1585; d. ? , 1645 or 1647).

Polish composer and writer. He was a Franciscan monk and acted as chaplain in the Polish army. After a long sojourn at Venice and Rome he returned to Poland. Of all his works two only remain.

'Benedictio mensae cum gratiarum actione a quinque v. facta' (Toruń, 1616).

'Complectorium Romanum quibus vocibus decantandum una cum basso continuo pro organo, opus tertium' (Venice, Jac. Vincenti, 1618).

This Complectorium is one of the earliest Polish compositions written with a figured bass.

**DEBORA E JAELE** (Opera). See PIZZETTI.

**DEBORAH.** Oratorio by Handel, the words by Samuel Humphreys; completed

21 Feb. 1733; first performed London, King's Theatre, Haymarket, 17 May 1733; revived by the Sacred Harmonic Society, 15 Nov. 1843.

**DEBRNOV.** See SRB, JOSEF.

**DEBUSSY, (Achille) Claude** (b. Saint-Germain-en-Laye, 22 Aug. 1862; d. Paris, 25 Mar. 1918).

French composer. His family circle, of the normal bourgeois type—his father kept a china shop—was in no way specially musical, and he showed no capacity for music until he was ten years old, when his future interests, uncertain though they still were, found a first recognizer in Mme Mauté de Fleurville, the mother-in-law of Verlaine, with whose poetry he was afterwards so intimately associated. He entered the Paris Conservatoire in 1873 and remained there for eleven years, studying the piano with Marmontel and theoretical subjects with Guiraud (his chief composition master), Lavignac, Massenet and Émile Durand. He was also for a short time in Franck's class, but is said not to have pleased that master by not modulating frequently enough in improvisation. For long the routine work was distasteful to him, though from time to time he won various prizes and medals for piano, for accompaniment and for counterpoint and fugue: he finally, in 1884, obtained the highest honour in the Conservatoire's gift, the Grand Prix de Rome (for which he had been *proxime accessit* the previous year), with the cantata 'L'Enfant prodige'.

Already in 1880-81 Debussy had widened his interests by acting as tutor to the children of Tchaikovsky's patroness, Nadezhda von Meck, who took him to Switzerland and Italy the first year and to Moscow the second. He went there again in 1884 and the following year left for Rome, where a residence of considerable duration was required of the holders of the Prix de Rome; but before the prescribed course was completed he returned to Paris in 1887 and settled down to the composer's career to which (apart from occasional journalistic activities) he confined himself for the remainder of his life. Of a very retiring disposition, he never held any official appointments and rarely appeared in public, whether as conductor or as pianist.

On the other hand, though he had little to do with other musicians, he frequented the progressive artistic and literary circles and became acquainted with the poetry of Baudelaire, Mallarmé and Verlaine. In 1887 he went to Vienna, where (?) he met Brahms, and visited London in an unsuccessful attempt to get some of his work published there. The following two years he attended the Wagner performances at Bayreuth, hearing the 'Meistersinger' and 'Parsifal' in 1888 and 'Tristan' in 1889. He was fascinated, but realized the danger of being influenced by

Wagner, knowing that such an individuality as his must develop independently. But other influences came his way, notably that of Mussorgsky, and he was enchanted for a time by the Javanese music he heard at the Paris Exposition Universelle of 1889. A slightly later musical stimulus of a different kind came to him in 1891, when he met Erik Satie, who was then a café pianist, but had very much his own notions of what music should be and transmitted part of them to Debussy, though the latter was four years older.

In 1892 Debussy approached maturity as a composer by setting to work on a prelude, interlude and final paraphrase inspired by Mallarmé's eclogue, 'L'Après-midi d'un faune', of which however only the prelude was finished some two years later. He had also been much impressed by a performance of Maeterlinck's 'Pelléas et Mélisande', which he decided to set word for word as a music-drama; but this work was not finished until 1902, when its performance at the Opéra-Comique on 30 Apr created an uproar.

In 1899 Debussy married Rosalie (Lily) Texier, a dressmaker. She was a young woman of no intellectual pretensions, but devoted to her husband, and it was a disaster for her when he abandoned her in 1904 for Mme Emma Bardac, a woman of superior culture, whom he married after a divorce in 1905. Their only daughter, Claude-Emma, was the "Chouchou" to whom the piano-forte suite 'Children's Corner' was dedicated in 1908 with her father's "tender apologies".

Although reluctant to appear in public, Debussy accepted two invitations from Henry J. Wood to conduct at two Queen's Hall concerts in London. The works chosen were 'L'Après-midi d'un faune' and the symphonic impressions 'La Mer' for 1 Feb. 1908 and the three 'Nocturnes' for 27 Feb. 1909. In 1910 he conducted in Vienna and Budapest.

About that time he first began to suffer from cancer, a disease that gave him much and increasing misery during his remaining years and may account not only for the more and more retired life he led, but also for a certain irresolution in his artistic plans. He wrote a fair amount of music still, but abandoned a number of large-scale works, including operas on the subject of Tristram and Yseult, on 'As You Like It', as well as on Poe's 'The Devil in the Belfry' and 'The Fall of the House of Usher'.

Roughly speaking, we can distinguish three successive periods in Debussy's compositions: first, the period of immaturity up to about 1890, then some twenty years of mature work, and then a few final years of uncertainty mixed with decline; though, indeed, the early immaturity varies very much. The song 'Nuit

d'étoiles', Debussy's earliest surviving composition, is a vigorous bit of work for a boy of fourteen, but its commonplaces are of a curiously Teutonic tinge; 'L'Enfant prodigue', eight years later, is certainly very French, but it cannot rank as more than a dexterous eclectic exploitation of some of the obvious fashions of the moment; but half-way between we find such songs as 'Mandoline', which says a new thing with great charm, and the still more significant 'L'Ombre des arbres dans la rivière', which speaks its composer's mature idiom though it does not yet use it to any specially noteworthy end; while there is an anecdote that, some two years before the Prix de Rome was won, Debussy submitted a score (now apparently lost) based on Banville's 'Diane aux bois' to his teacher Guiraud, who, while expressing strong personal interest, discouraged revolutionary ideas as temporarily unwise. Student days being past, Debussy felt freer to follow personal inclinations, but he was still not sure of his paths. Most of the numerous piano pieces up to 1890 are only instrumental versions of the facile graces of the airs of Azael and Lia in 'L'Enfant prodigue', nor is there any advance as yet in pianistic technique; but there is no trace whatever left of the prize cantata in the two works of 1887 which, as prize-winner, he submitted to the members of the Institut. One, a setting for female voices and orchestra of portions of Rossetti's 'The Blessed Damozel', was accepted by them, though with serious qualms; but they definitely rejected as unplayable the 'Printemps' symphonic suite, less polished and still more unusual, and forecasting in many technical details the orchestral masterpieces of the succeeding years.

With the five Baudelaire songs (1890) Debussy entered on his mature period. It was not one of fixation — in some fields his development went on, in others it fell back a little; but all through there is the same masterly technique, specialized indeed, but as solidly founded as any composition technique, even of the greatest men, has ever been. The chief landmarks for the first ten years are the string Quartet in G minor, 'L'Après-midi d'un faune' prelude, the three 'Nocturnes' for orchestra and the 'Chansons de Bilitis', for the latter ten years the opera 'Pelléas et Mélisande', the orchestral suite 'La Mer', the best of the Verlaine songs and the settings, both solo and choral, of the poems of Villon and Charles, Duc d'Orléans, and such piano pieces as the 'Estampes' and 'Images' and the first set of 'Préludes'. Then come the few final years of mixed achievement, showing at times some of the old certainty and also some tentative exploration of new fields, but, in the main, evidences of a stiffening mind and failing powers.

Debussy's piano music has probably done most towards the wide extension of his fame among the generality of music-lovers; and it is indeed, in its mature forms, very typical of his genius. Technically he is the inventor (so far as any individual can claim such a title) of a new pianism: he demands from both the fingers and the feet of his interpreters (as well as from their rhythmical sense) all sorts of refinements previously unexploited, and his influence has been amazingly fertile — no composer in musical history has taught the pianist more new and permanently valuable things. The non-technical influence is less steady. Not infrequently, as for example in 'Et la lune descend sur le temple qui fut' or 'Brouillards' or 'Feux d'artifice', Debussy seems merely to brood on problems of harmony and colour in, so to speak, an intellectual vacuum, and most (though not indeed all) of the 'Études' — his latest piano works — seem musically overmuch concerned with the narrow matter in hand. But the outstanding things — 'La Soirée dans Grenade', 'Reflets dans l'eau', 'Poissons d'or', 'The Snow is Dancing', 'The Little Shepherd', 'Les fêtes sont d'exquises danseuses', 'Bruyères', and the masterpieces that form a good two-thirds of the first set of Preludes and reach their climax in the noble 'La Cathédrale engloutie' — show how versatile his imagination at its best could be. It is not indeed large-scale work for the pianist accustomed to deal with the emotional and intellectual tasks set him by the older classics; it is rather, to speak analogously, a gallery of beautiful sketches ready for him to paint with all the subtlest colours at his command. The word atmosphere is now continually on our lips in talking either of performance or of the music performed; it is to Debussy, wellnigh exclusively, that we owe the conception.

Debussy's finest other instrumental work — the orchestral 'L'Après-midi d'un faune', 'Nuages' and 'Fêtes', and the string Quartet (in its first three movements) — dates from the decade before the outstanding piano pieces and took the lead in establishing his reputation; here again he taught performers a new technique that now serves them every day, and a new outlook on very beautiful and (for the moment) very strange things. Later on he seems to have taken more lively interest in other departments — though 'Iberia' is a notably brilliant amplification of the moods of 'La Soirée dans Grenade'; and in the latest chamber music, in spite of the dignity of the first movement of the violoncello Sonata and the quiet charm of much of the Sonata for flute, viola and harp, it is often, as André Suarès says, "la douleur qui parle". In 1912

the fashion of the moment induced Debussy to write for the Russian Ballet: 'Jeux' is a lengthy work with rather larger structures than he normally employed, but musically it comes to little.

In his songs (always duets for voice and piano on level terms) Debussy is rather less of a definite innovator, conditioned as he is by the particular words and by the general literary culture always very powerful with French composers. We can see three separate stages of what may be called the very high-class sentimental song in 'Green' (1888), 'Romance' (1891) and 'Je tremble en voyant ton visage' (before 1910); only the last of these has, in every bar, the perfectly mature harmonic framework, but all — very beautiful songs in their several ways — have the same kind of emotional outlook, which they share with much other French work. The most individual of his "love songs" are probably the first two of the 'Chansons de Bilitis', the very sensitive 'La Flûte de Pan' and the passionate 'La Chevelure'; but other types of words generally produce more purely personal moods. From the Baudelaire and Verlaine songs there stand out the grave 'Recueillement', the weirdly tragic 'Colloque sentimental' and the varying humours of 'Fantoches', 'Chevaux de bois' or 'Le Faune'; the old-world poems of Charles d'Orléans (some set as solo songs and some chorally) evoke the freshest and most open-air music Debussy ever wrote, and he reached his climax as a song composer in the three splendid Villon ballades, which express the most opposite emotions with equal subtlety and power.

Debussy's important works for voices and orchestra are three, one from each of the periods. 'La Damselle élue', though its style is slight and not always quite sure of itself, is a work of singular virginal beauty, perfectly fitting the rather inadequate translation of Rossetti's poem; it seems to forecast developments that never occurred. A quarter of a century later there is the elaborate music to d'Annunzio's 'Le Martyre de Saint Sébastien', aiming at all sorts of things new and old, but, practically always, sounding like the work of a tired man. And in between comes Debussy's largest and, with all its inequalities, most completely self-revealing achievement, the lyrical drama to Maeterlinck's 'Pelléas et Mélisande'. Apart from the superbly sure and economical craftsmanship, it is one of the great landmarks in the history of opera; it is the summit of musical impressionism, catching every faint nuance of the words, always suggesting rather than saying, but always tense and direct, and full of throbbing beauty.

Debussy's harmonic innovations, though

<sup>1</sup> Supplement to 'La Revue musicale' (Dec. 1920); Suarès's lengthy essay has been separately reprinted.

considered extremely subversive when they first appeared, remained rooted in definite major, minor and modal tonalities, greatly extending their scope but not, so far as his own practice was concerned, undermining them as a basis for music. Sir Walford Davies showed this clearly in an article on "Key" published in the Supplementary Volume of the fourth edition of this Dictionary, a passage from which may here be usefully quoted:

Debussy, who at first baffled the most faithful adherents of key, is now seen only to have deepened its roots while seeming to defy and disturb the general harmonic understanding of his immediate contemporaries. Few more striking vindications of the classical key system can indeed be found than in Debussy's Preludes, nor more promise of boundless possibilities consistent with perfect clarity. If for a moment he seems to defy key, it will soon be found that by some subtle addition suggestive of a cadence he restores it. For example, any mind thoroughly used to key in its simplest implications (and indeed, only such a mind) can enjoy to the full both the chromatic scintillations and the dreamy harmonic distances with which he enriches the key of F# in No. 7 of his second book of Preludes. Those to whom the following would be a commonplace opening for such a piece in F# major.

can easily acquire the full delight of Debussy's opening subtleties:

Speaking of Debussy's work as a whole, we may say that his harmonic methods were a very individual amalgam of the new and the forgotten old. On the one hand he was greatly attracted by the combinations of the higher overtones, by chords of the ninth and their derivatives treated as primaries, and in particular by chords whose component notes are separated by whole tones; on the other hand he often threw back to the ecclesiastical modes and still further to the diaphony in parallel fourths and fifths of a thousand years before. The resulting idiom had very rich possibilities within its sphere, but, as his inferior pages show only too well, its limitations were rigidly definite. Much of his vocal writing in its technical aspect is essentially the Wagnerian melos in a French dress, and in 'Pelléas' (enormously more reticent though it is) there is much of the technique of 'Tristan' or the 'Ring' in contrapuntal texture and in the subtle use of leading motives. The Russian composers he greatly admired, but they affected his style only very indirectly<sup>1</sup>; more noteworthy is the influence, on his piano music in particular, of the cool, collected, dainty filigree work of the 18th-century French clavecinists. His was a multiple personality, liable to outbursts of a sort of posing freakishness<sup>2</sup> and curiously capable now and then<sup>3</sup> of feeling *le besoin de s'encanailler*, in elegant fashion, but in the main it was quietly voluptuous, sensitive in an altogether exceptional degree to new delicate subtle types of beauty, and caring little for other things. But, at the end, we cannot leave under the name of voluptuary the creator of 'La Cathédrale engloutie' and the scene of Méliandre's death; his world may have been small, but in it he was a great man, and sometimes he saw beyond.

Debussy's journalistic productions, though slight in texture, may be read with considerable interest; they turn phrases very happily, and there is plenty of sober good sense under their wit and irony. The words of his 'Proses

<sup>1</sup> The very Mussorgskian 'Nuages' in the orchestral 'Nocturnes' is exceptional.

<sup>2</sup> Such as, for example, the use of the English language (not always perfectly expressed, e.g. 'Serenade for the doll' merely as something *chic*; or the childish nationalism plus 18th-century typography of the title-pages of the late sonatas. <sup>3</sup> E.g. 'General Lavine—eccentric'.

lyriques' show also that he could imitate skillfully the symbolist poets of his intellectual circle.

Debussy edited for Messrs. Durand the complete piano works of Chopin and also Bach's sonatas for violin and piano; he transcribed Schumann's 'Am Springbrunnen' for piano solo, Saint-Saëns's 'Caprice sur les airs de ballet de l'Alceste' de Gluck for piano duet, Schumann's six 'Studies in Canon Form, Op. 56', Saint-Saëns's second Symphony, in A minor, ballet airs from 'Étienne Marcel' and 'Introduction and Rondo Capriccioso', and Wagner's overture to 'Der fliegende Holländer' for two pianos, and Nos. 1 and 3 of Satie's 'Gymnopédies' for orchestra.

His literary works consist of contributions (54 in all) to 'La Revue blanche' (Apr.-Dec. 1901), 'Gil Blas' (Jan.-June 1903), 'Musica' (Oct. 1902, May 1903), 'Le Mercure de France' (Jan. 1903), 'La Revue bleue' (Mar., Apr. 1904, June 1906), 'Le Figaro' (May 1908), 'Comœdia' (June 1908, Nov. 1909, Jan. 1910), 'Le Paris-Journal' (May 1910), S.I.M.<sup>2</sup> (Nov. 1912-Mar. 1914); he also wrote a preface to 'Pour la musique française' (1917). A considerable number of the articles contributed to 'La Revue blanche' and 'Gil Blas' were collected with his sanction and posthumously published under the title of 'Monsieur Croche, anti-dilettante': "Monsieur Croche" is an imaginary interlocutor invented for dramatic purposes. E. W., adds.

 Symphony No. 2, arranged for 2 pfs.  
 Satie, 'Deux Gymnopédies' arranged for orch.  
 Schumann, 'Am Springbrunnen', arranged for 2 pfs.  
 6 Studies on Canon for pedal pt., arranged for 2 pfs.

Tchaikovsky, 'The Swan Lake', arrangement of 3 dances for pf.  
 Wagner, 'The Flying Dutchman' overture, arranged for 2 pfs.

For a list of Debussy's unpublished music and literary works see Edward Lockspeiser's book in the 'Master Musicians' series, Appendix B.

See also Borwick (pf. arr. of 'Après-midi d'un faune') Criticism, pp. 527-28. Cui (parody of D.). Diamond (Ame de D., letters set to music). Dukas ('Plaunte' for pf. in memory of D.). Falla ('Homenaje' for guitar). Gamelan (attracted by). Garden (1st Mélisande). Goossens (3. 'Hommage' for pf.). Marschallaise (quotation in 'Feux d'artifice'). Opera ('Pelléas'), pp. 224-25. Ravel (orch. of 'Danse' & 'Sarabande', 'Après-midi' arr. for 2 pfs.). Roussel ('Accueil des Muses', memorial pf. piece). Schmid (E., 'Epigraphes antiques' arr. for orch.). Song, pp. 953-54. (mus. ex.), p. 951. Teyte (2nd Mélisande).

<sup>1</sup> Orchestrated by the composer.

<sup>2</sup> Also with orchestra.

<sup>3</sup> Later the composer's second wife.

<sup>4</sup> The same poem.

<sup>5</sup> Also arranged for children's chorus

**DECANI.** See CATHEDRAL MUSIC.

**DECEPTIVE CADENCE.** An American term for the interrupted cadence, clearly a literal translation of the German *Trugschluss*.

See also CADENCE.

**DECIBEL.** A measure of intensity. See SOUND.

**DECLAMATION.**

**DECLAMATORY.** } In connection with music both these words imply a condition of things in which the words are of primary, the music of secondary importance. They are used in several special senses:

(1) "Declamatory" music, whether in opera or not, is always more or less dramatic; in moments of excitement, of anger or even of rapture it is the custom to allow the voice to approach near the confines of speech as distinguished from song, and to abandon the pure vocalization which is generally associated with lyrical utterance. Thus the "declamatory" and "lyrical" styles are often opposed to each other in ordinary parlance. The contralto part in 'Elijah', for example, requires both styles, the former for the air "Woe unto them" and the scene of Jezebel, the latter for "O rest in the Lord".

(2) "Declamation" is often used as the equivalent of the German *Melodram*<sup>1</sup>

(3) "Declamation" in the sense used to describe the correct adjustment of musical and literary accent is described elsewhere.<sup>2</sup>

J. A. F.-M.

**DECRESCENDO.** See DIMINUENDO.

**DECSEY, Ernst** (b. Hamburg, 13 Apr. 1870, d. Vienna, 12 Mar. 1941).

German author and music critic. He went to school and to the University in Vienna and studied music there under Robert Fuchs, Bruckner and others. In 1899-1908 he was music critic to the 'Tagespost' at Graz and then its editor until 1920, when he returned to Vienna as critic to the 'Neues Wiener Tageblatt' and lecturer on musical history and aesthetics at the New Conservatory. He wrote novels and plays, and his musical books are biographies of Hugo Wolf (4 vols., 1903-6), Bruckner (1919), Johann Strauss (1922) and Debussy (1936).

E. B.

**DEDEKIND.** German family of composers.

(1) **Constantin Christian Dedekind** (b. prob. Reinsdorf, Anhalt-Cothen, 2 Apr. 1628; d. Dresden, 2 Sept. 1715), poet and composer. His father, Stephan Dedekind (d. 1636), was pastor of Reinsdorf. Constantin was a pupil of Christoph Bernhard (vice-Kapellmeister at Dresden, appointed cantor at Hamburg in 1664). From 1654 he was a member of the Dresden court chapel; in a 1663 list of the *Choralisten* his name appears among the basses. From 1666 to about 1676 he was *Konzert-*

*meister*, which meant at first that he was to direct the *kleine deutsche Musik* in the court church; but later on the chapel was divided, the Italian singers were placed under the *Kapellmeister*, the German singers, cantor and organist under the *Konzertmeister*. He was a member of the Elbische Schwänen-Orden, and took the pseudonym of Concord, usually written "Con Cor D" or "Con Cor Den", as in the volume of poems "1681 Jahres ausgegeben von Con Cor Den". He held the position of collector of taxes at Meissen and in the Erzgebirge.

Judged by the number of his works, Dedekind was very popular both as poet and composer at the Dresden court. He was said to be particularly successful in arranging the words for sacred musical dramas, such as 'Neue geistliche Schauspiele, bequemt zur Musik' (Dresden, 1670 and 1676, 8vo); 'Freuden- und Trauerspiel über die Geburt Jesu' (Dresden, 1670, 8vo); 'Heilige Arbeit über Freud und Leid der alten und neuen Zeit', in 'Musik bequemen Schauspielen angewendet' (Dresden, 1676, 8vo); 'Altes und neues in geistlichen Singspielen vorgestellt' (Dresden, 1681, 8vo). The letters K. g. P. and K. S. C. after his name mean "Kurfürstlicher gekronter Poet" and "Kurfürstlich Sächsischer Concertmeister"; they occur in the title-page:

'Des Durchleuchtig Hochgebohrnen Fürsten, Herrn Friedrich Wilhelm, des jüngern Herzogs zu Sachsen elfften Geburts-Tag, 1667, mit einem Singe-Spiele . . . von C. C. Dedekinden, K. g. P. und K. S. C.' (Dresden, 4to)

## LIST OF WORKS

1. 'J. Katzens Aeltern-Spiegel aus desselben Holländischem gehoochdeutschet durch C. C. D., 1634' (Dresden, 8vo). "Zusagen nach ihrer eigenen Zustimmung", with the music. In one volume with 'J. Katzens Masanissa u. Sofonisba' and 'Holländischer Ehe-Betrug' gehoochdeutschet durch C. C. D. (Later editions in 1638 and 1665.)
2. 'C. C. D. Churf. Sachs. Hofmusici Aelbianische Musen-Lust in 160 unterschiedlicher berühmter Poeten auserlesener, mit anmuthigen Melodien besetzten Lust-Ehren-Zucht- und Tugend-Laedern bestehend' (Dresden, Wolfgang Seyfert, 1657, obl. 4to). Four parts in one volume, the melodies by C. C. D. At the beginning a letter was printed from Heinrich Schütz ("Kurfürstl. Kapellmeister in Weissenfels"), to C. C. D. "gekronter Poet", stating that he considered both poetry and music well worthy of publication, dated 2 Sept. 1657. Another edition: "Darinnen 175 der besten Dicht-Meistern anmuthige Zucht- und Tugend-Lieder unter anständige Arien gelegt" (Leipzig, Georg Heinrich Froman, 1665).
3. 'Geistliche Erstlinge in einstmüthigen Concerten gesetzt' (Dresden, Seyfert, 1662)
4. 'Die doppelte Sangzelle worinnen XXIV. Davidsche Psalmsprüche in einstmüthiger Partitur nach allen Sachtmanischen und heutiger Capell-Manier enthalten' (Leipzig, Christian Kirchner, 1663, fol.)
5. 'Davidsche geheime Musik-Kammer, darinnen XXX. Psalmsprüche enthalten' (Dresden, Seyfert, 1663, fol. Another edition, Frankfurt, Caspar Wächter, 1665, fol.)
6. 'Süsser Mandel-Karnen erstes und zweites Pfund von ausgekürten Salomonischen Liebes-Worten in XV. Gesängen mit Vohr- Zwischen- und Nach-

<sup>1</sup> See MELODRAMA.

<sup>2</sup> See ACCENTUATION.

Spiele auf Violinen zubereitet' (Dresden, Seyfert, 1664, fol., 2 vols.) Another edition "Erstes und anderes Pfund süsser von Jesus Liebe, wie auch erstes und anderes Pfund bittere von Jesus Leiden handelnder Mandel-Karnen, diese mit 3 Violon, jene mit 2 Violinen und einem Fagotto, zu den auserlesenen poetischen Liedern vierstimmig gesetzt, mit vor- zwischen- und nach-Spielen" (Frankfort, Caspar Wachter, 1665, fol. and 4to [Gohler])

7. 'Aelbaniams wertester Hirtenknabe Filareto' (Dresden, 1665, fol.).
8. 'Davidisches Harfen-Spiel d. i. der ganze Psalter, in neue Lieder, nach denen evangelischen Kirchenmelodien abgefasst, und mit eigenen wohlklingenden Gesangsweisen versehen' (Frankfort, Caspar Wachter, 1665).
9. 'Belebte oder ruchbare Myrthen-Blätter das sind zweistimmig beseelte heilige Leidens-Lieder' (Dresden, Seyfert, 1666, fol., pp. 52). C. C. D. described these duets as "nicht so gahr gemeine, sondern mit Kunst-ahrigen, und Wort-mässigen Melodien versehene Lieder" ("not ordinary songs, but provided with artistic melodies suitable to the words").
10. 'Davidischer Harfenschall mit schönen Melodien gezieret' (Frankfort, B. C. Wust, 1670, 12mo).
11. 'C. C. D.'s Kuhrfürstl. Sächs. bestallten deutschen Concert-Meisters sonderbahrer Seelen-Freude, oder kleinerer geistlichen Concerten, Erster Theil' (Dresden, Seyfert, 1672, 4to, 6 partbooks Published in two parts)
12. 'C. C. D.'s Musikalischer Jahrgang und Vesper-Gesang von dreien Theilen darinnen CXX, auf Sonn- Fest- und Apostel-Tage, geschicklich auserlesene, zur Sanger-Übung, nach rechter Capell-Manier gesetzte Deutsche Concerten durchgehends mit zweien Discanten befindlich' (Dresden, Paul August Hamann, 1673, 4to, 3 partbooks) These Concertos are so arranged that "ein Componist . . . solche mit ein paar Violinen zur mehreren Anmuth, auch mit einem singenden Basso ausschmücken kann" ("a composer can give them much charm by the addition of some violins or a singing bass") Later editions "in zwei Singstimmen und der Orgel" in 1676 and 1694.
13. 'Königs Davids goldnes Kleinod, oder hundert und neunzehender Psalm, nach eigener Abtheilung, in zwei und zwanzig Stücken, mit dreien Concertirenden Singe- dreien Instrumental- und vier ausvollenden Capell-Stimmen, componiret von C. C. D. der Zeit Kurf. Sachs bestelltem deutschen Concertmeister' (Dresden, Hamann, 1674-75, 4to, 11 partbooks).
14. 'C. C. D.'s Singende Sonn- und Fest-Tags Ahndachten' (Dresden, Michael Günther, 1683, 4to).
15. 'J. Frentzel, A. et O. Jesus' Zehen andächtige Buss-Gesänge . . . nicht nur wie zuvor mit bekannten sondern auch mit Herrn Const. Christ. Dedekindens . . . neu beigefügten Melodeyen herfur gegeben' (Leipzig, 1655, 8vo.).
16. 'Geschwynder und seliger Abschied, der . . . Frauen Annen Margareth . . . Metzner am 8 Wintermonats, 1676 . . . am 15 beerdigt' (Dresden, Seyfert. 'Herr Jesu wer dir lebst', 8 strophes in 4 parts with continuo, fol.).
17. 'Gottes state Liebe . . . wegen der . . . Fru Annen Sibyllen . . . des Herrn Paul Hofmanns . . . Ehe-Liebsten . . . 1664' (Dresden, Seyfert, fol. 'Was ihr jetzt vertraut der Erden', 8 strophes in 4 parts, with continuo).

In the dedication to a book of poems "wegen allgemeiner Pest-Noth gepflogen und entworfen Buss- und Dank-Baht- und Lob-Ahndachten ausgegeben" (Dresden, Christoph Baumann, 1681, 12mo), addressed to Johann Georg III of Saxony, C. C. Dedekind says "sie werden nicht verschmahen das graue Alter des Unverdrossensten welcher die hohe Kuhr-Fürstl. Gnade nun 35 Jahre genossen" (dated 7 Sept. 1681).

(2) **Heinrich (Enricus) Dedekind** (b. Neustadt, ?; d. ? Luneburg, 1619), composer son of Friedrich Dedekind (author of 'Grobrianus', pastor of St. Michael's, Luneburg). He was a scholar at Luneburg, and later cantor of St. John's Church there about 1590.

#### LIST OF WORKS

1. 'Neue Teutsche Liedlein, aus den zwolff ersten Psalmen Davidis und andern Spruchen der Schrift genomen, und mit dreyen Stimmen gemacht durch Enricum Dedekindum Cantorem zu Luneburg zu S. Joh. Discantus. Gedruckt zu Ulsen bey Michel Kroner, 1585' (obl. 4to, B. M.).
  2. 'Antidota, adversus vitae hominum Passiones, 4 v. Ulyssae, Michel Kroner, 1589'
  3. 'Evangeliorum, quae diebus Dominicis et Festis praecipuis in Eccl. Dei quotannis usitate proponi solent, perorchae breves ab Adventu Dom. usque ad Festum Paschatis 4 et 5 vocibus compositae ab Enricio Dedekind Neostadino Scholae Luneburg ad D. Joannem Cantore' Ulyssae, 1592, 8vo (Gohler). An 'Altera pars Evangeliorum' appeared without date.
- (3) **Henning Dedekind** (b. prob. Neustadt, ?; d. ? Gebsee, Thuringia, c. 1630), composer, brother of the preceding. He was cantor at the School of Langensalz, Thuringia, in 1588, preacher there in 1614 and at Gebsee, Thuringia, in 1622.

#### LIST OF WORKS

1. 'ΔΔΔΕΚΑΤΟΝΟΝ Musicum Tricinium novis usdemque lepidissimis exemplis illustratum. Neue auserlesene Tricinia, auf trefflich lustige Texte gesetzt, aus etlichen guten, doch bisher nicht publicirten Autoribus zusammen gelesen und jetzt erstmals den Liebhabern der Music zu gefallen in den Druck verfertigt, von Henningo Dedekind, Musicae Studioso' (Erfurt, Georg Baumann, 1588, obl. 4to) In the dedication to Ernst and August, Princes of Brunswick and Luneburg, Henning Dedekind expresses gratitude both for the favour shown to him, and for that shown by their father Wilhelm to his father "Friedrico Dedekind, deren ich auch, als ein Erbe, nicht wenig genossen haben . . . datum in der Churf. Sachs. Stadt Langensalz am Sonntag Palmarum . . . anno 1588. Henningus Dedekindus, Cantor daselbe" Three partbooks, in the Berlin State Library.
2. 'Eine Kinder-Musik, für die jetzt allererst anfangenden Knaben in richtige Fragen und gründliche Antworten gebracht' (Erfurt, Georg Baumann, 1589, 8vo)
3. 'Praecursor metricus musicae artis . . . non tam in usum discipulorum quam in gratiam praeceptorum, conscriptus . . . ad mundinas Lipsicas vernas anni hujus 1590' (Erfurt, Georg Baumann, 1590, 8vo)
4. 'Studentenleben, darinn allerlei akademische Studenten-Handel mit deutsch poetischen Farben entworfen, in fünf Stimmen gesetzt von Musophilus Dedekind' (Erfurt, Joh. Burckner, 1627).
5. 'Jägerleben, darinn die Jägersgesellschaft beneben allerlei in Wald und Feld gewöhnlichen Wildjagden mit deutsch poetischen Farben entworfen und repräsentirt; mit fünf Stimmen auf allerlei Instrumente zu gebrauchen, componirt von Musophilus Dedekind' (Erfurt, Fried. Melchior Dedekind, 1628)
6. 'ΔΔΔΕΚΑΕ musicarum deliciarum Soldaten-Leben darinnen allerlei martialische Kriegshändel und der ganze Soldatenstand auch was in Feldlagern und Kriegszügen vorleufft, mit deutsch poetischen Farben eigentlich abgerissen und mit fünf Stimmen zum Gebrauch für allerlei Instrumente vorgesetzt von Musophilus Dedekind' (Erfurt, Fried. Melchior Dedekind, 1628, 4to).

Zahn gives a melody by Musophilus Dedekind, 'Gott Vater aller Gütekeit', from the 'Gothaer Cantional', II, 1648, p. 324; he

suggests that Musophilus may be Henning Dedekind. The manuscript of a Kyrie and Gloria from a 6-part Mass, 'In excelso throno', by Henning Dedekind, is in the Breslau City Library (MS 100. Six folio partbooks.) The title-page of a non-musical work by Henning Dedekind is of interest, as it includes the names of father and son:

'Metamorphosis truculenta et subita, quae accidit anno 1585, ibente Apolline descripta und publicata per Henningum Dedekindum, neostadianum Saxonem, accesserunt epigrammata tria M. Frederici Dedekindi senioris, Pastoris ad D. Michaelum, Luneburg'

C. S.

**DEEMS TAYLOR.** See TAYLOR, JOSEPH DEEMS.

**DEERING.** See DERING.

**DEFAUW, Désiré** (b. Ghent, 5 Sept 1885).

Belgian violinist and conductor. He was a pupil of Johan Smit. After numerous tours on the Continent he gave his first concerts in London in 1910 with the New Symphony Orchestra. During the war of 1914-18 he was a refugee in London and formed the Allied Quartet with Charles Woodhouse, Lionel Tertis and Emile Doeberd, and was heard in many concert-rooms, excelling in refinement of tone and style. He subsequently became professor at the Royal Conservatory at Antwerp and director of the concerts given at the Théâtre des Marais, Brussels, classed among the best given in that city. In 1926 he was appointed professor of conducting at the Brussels Conservatoire. He left for America in 1940, going first to Canada to become director of the Quebec Conservatory and in 1943 to the U.S.A. as conductor of the Philharmonic Society of Chicago. But he returned to Belgium in 1949.

W. W. C., adds.

**DEFESCH, William.** See FESCH, WILLIAM DE

**Defoe, Daniel.** See Collins (A., 'Robinson Crusoe', film). Kósa (do, attempt at opera) Offenbach (do, operetta). Rieti ('Robinson and Friday', film).

**DEFOSSEZ, René** (b. Spa, 4 Oct. 1905).

Belgian conductor and composer. He studied at first under his father at the Spa School of Music and then with Smulders and Rasse at the Liège Conservatory. In 1935 he gained the first Belgian Prix de Rome. He became professor of harmony at the Liège Conservatory and of orchestral conducting at that of Brussels, also conductor at the Théâtre de la Monnaie there.

Defossez's works include the operas 'La Conversion de Saint Hubert', 'Le Vieux Soudart' and 'Le Subterfuge'; a ballet 'Suite de danses'; 'Symphonie wallonne', 2nd Symphony, 'Fantaisie', 'Aquarium', 'Images sous-marines' and 'Le Culte sans paroles' for orch.; Variations for pf. & orch.; stg. 4tet, wind 5tet, Trio for oboe, clar. & bassoon, Duo for clar. & bassoon; inst. pieces; pf. Sonata, &c.

E. B.

**Defranceschi, Carlo Prospero.** See Saleri (3 librs.).

**DEGEN, Helmut** (b. Aglasterhausen nr. Heidelberg, 14 Jan. 1911).

German composer. He studied composition with Jarnach, Klusmann and chiefly Wilhelm Maler at Cologne, and history of music under Schiedermair at Bonn. For some years he held the post of organist at Altkirchen in the Westerwald, and from 1938 he taught composition at the Conservatory of Duisburg. He now lives in the Roehn near Frankfurt o/M.

Degen's writing is essentially contrapuntal in style, and the forms he employs are mainly those based on the principle of variations. He sees his mission as a composer in musical education of the masses and the young, and a large proportion of his work is dedicated to this purpose. Thus he wrote a number of concertos in the modern idiom for various instruments accompanied by chamber orchestra for performance by amateurs or young people. His many *Spieldmusiken* and some of his pianoforte compositions are intended to serve the same purpose. In Degen's earlier works there are still traces of the Max Reger school to which his teacher, Maler, indirectly belongs; later on Degen was much impressed and influenced by the Hindemith of the 1920s. A further characteristic of his style is a strong rhythmic element. Of his more recent compositions the 'Kammersinfonie' of 1947 and the 'Concerto sinfonico' of 1948 deserve mention; both are written under the influence of Stravinsky's latest period.

Degen's compositions include the following:

#### BALLET

'Der flandrische Narr' (1939-41)

#### CHORAL WORK

'Wenn der Bauer Hochzeit macht', cantata for orator, 4-5-part chorus and 6 insts

#### ORCHESTRAL WORKS

'Variations on a *Gaussenied*' (1937).  
Serenade for strg. (1937-38).  
'Symphonisches Konzert' (1938).  
'Capriccio' (1939-40).  
'Hymnische Festermusik' (1940-41).  
2 Symphonies (1944-46).  
2 Kammersymphonien (1947).  
'Concerto sinfonico' (1948).

#### SOLO INSTRUMENTS AND ORCHESTRA

Easy Concertos for vn., viola, cello, flute, harpsichord and organ (1940-46).

#### CHAMBER MUSIC

String Quartet (1943).  
Easy *Spieldmusiken* for a variety of chamber-music combinations

#### ONE INSTRUMENT AND PIANOFORTE

Sonata for viola & pf. (1940).  
Sonata for vn. & pf. (1942).  
'Spieldstücke' for vn. & pf.

#### SOLO VIOLIN

Sonata.

## PIANOFORTE MUSIC

'Capriccio scherzando' (1938).

'Konzertmusik' (1938-39)

Suite (1938)

Pieces for Children (1941).

4 Sonatas (publ. 1949)

## ORGAN WORKS

'Sonata a tre'  
Christmas Fantasies.

BIBL.—LAUX, KARL, 'Helmut Degen' in 'Musik und Musiker der Gegenwart', I, 57-64 (Essen, 1949).

Degeyter, Pierre. See National Anthems (Russia [Internationale])

DEGLI ANTONII, Pietro (b. Bologna, 1648; d. Bologna, 1720).

Italian composer. He was *maestro di cappella* at various churches of Bologna, president of the Accademia dei Filaschini (1676) and the Accademia dei Filarmonici (6 times, 1676-1718). In 1703 he married the famous singer Maddalena Musi, nicknamed Mignatta (1669-1751).

Degli Antoni wrote two books of masses for 2 sopranos with continuo, one of motets, one of chamber and church cantatas, 3 oratorios, 3 operas, organ pieces, church sonatas for violin with continuo, Op. 5, and two books of 'Gighe, correnti . . .', etc.

A. L.

DEGREE. The word "degree" is used to express the intervals of notes from one another on the staff. When they are on the same line or space they are in the same degree. The interval of a second is one degree, the interval of a third two degrees, and so on, irrespective of the steps being tones or semitones, so long as they represent a further line or space in the staff. Hence also notes are in the same degree when they are natural, flat or sharp of the same note, as C and C#, E and Eb; and they are in different degrees when, though the same note on an instrument of fixed intonation, they are called by different names, as F# and Gb, C and Db.

C. H. H. P.

DEGREES IN MUSIC. The University of Oxford had its earliest beginning in the first half of the 12th century, students assembling round the canons of St. Frideswide. Cambridge was scarcely recognized as a *studium generale* (i.e. a university) until the bull of John XXII in 1318. The earliest faculties in the two ancient English Universities were Grammar, Arts, Theology and Canon Law; degrees in Grammar were inferior to those in Arts, and those in Arts to those in Theology. At an early period Grammar disappeared or was absorbed by the Faculty of Arts. About 1450 a Doctorate in Medicine was instituted, to be followed a few years later by the institution of a Bachelor's degree. Thus the three senior faculties were those of Theology, Canon Law and Physic. Their graduates developed distinctive academical dress and became entitled to wear the overgown, a *supertunica*, varieties of which were the *cappa manicata*, *chimaera* or

chimere, *palium* or cloak, "sleeveless cote" or habit, a sleeveless tabard. According to Sir Charles Edward Mallet<sup>1</sup>

Degrees in Music appeared in the 15th century at Cambridge, and possibly at Oxford. But the first recorded Doctor in Music at Oxford was Robert Fairfax (Fairfax, see "D. N. B."), who took his degree in 1511, and he, it seems, was only incorporated from Cambridge [where he had taken the degree of Mus.D. in 1504], vide Boase, Register, I, 78. Bachelors in Music appear a little earlier at Oxford [in 1505], but I do not find in Boase's volume any before 1505<sup>2</sup> [I, 183].

Sir Charles Mallet (II, 326) refers to the Inceptors in Music (i.e. those just admitted to the D Mus. degree)<sup>3</sup> having "white wavy damask capes", quoting the Laudian Code of 1636, Title VII, chapter v. The point touched upon by him led the present writer to make further research in the Bodleian Library at Oxford.

Robert Fairfax or Fayrfax (always referred to as Fayrfax by his contemporaries) graduated Mus.B. at Cambridge in 1501, proceeded to the Mus.D. at Cambridge in 1504, and in 1511 was incorporated at Oxford in the degree of D Mus. (for which he duly performed an exercise), thus becoming Oxford's first Doctor in Music.

Herbert Norris brought to light an interesting case concerning Christopher Tye<sup>4</sup>: ". . . as no distinctive robes for graduates in music existed at this time, he was permitted to wear the robes of a Doctor in Physic". This was approved by the Cambridge University authorities.<sup>5</sup> Tye's old Cambridge colleague, Dr. Richard Cox, became Chancellor of the University of Oxford in 1547, and we find that in 1548 Tye was incorporated at Oxford in the degree of D.Mus. Thus another early Oxford Doctor in Music was created by incorporation from Cambridge.

When degrees in music were first instituted — at Cambridge, Mus.B. in 1501 and Mus.D. in 1504, and at Oxford, B.Mus. in 1505 and D.Mus. in 1511 — there were no robes for them and, as the youngest secular faculty, graduates in music, as we have just seen in the case of Tye, were allowed to wear the robes of the other secular faculty, Physic. Hence the earliest B.Mus. hood at Oxford was of dark blue lined with white fur, which in course of time degenerated into a dark purple. Later, by or more probably some years before the Laudian

<sup>1</sup> 'A History of the University of Oxford', 3 vols. (London, 1924-27).

<sup>2</sup> See also H. Rackdell, II, 458, and Abdy Williams, 'Degrees in Music', chap. II.

Degrees in Music were still rare, only thirteen were recorded in the last thirty years of Elizabeth's reign, amongst them John Bull, the famous organist, Nathaniel Giles [Giles], the Magdalen chorister who became Master of the Children of the Chapel Royal, and John Dowland, whose melodies delighted his age [II, 132].

<sup>3</sup> A man remains an Inceptor for twelve months after proceeding to the highest degree in his faculty; e.g. an Inceptor in Arts is an M.A. of less than twelve months' standing.

<sup>4</sup> 'Costume and Fashion' (London, 1938), Vol. III, Book 1, p. 156.

<sup>5</sup> Cambridge Grace Book A, 1545.

Statutes or Caroline Code, between 1550 and 1636, doctors in music were authorized to wear cream-coloured robes of figured silk brocade, faced with crimson or pink satin (derived from the crimson of Physic), hoods and robes (in full dress) which we know so well to-day.

The dark cherry-coloured satin which now runs through all the Cambridge music degree hoods (new Regulations of 28 Feb. 1934) represents a slight modification of the cerise silk as used for the Faculty of Medicine.

G. A. H. F.

The ordinary degrees in music in Great Britain and Ireland are those of Bachelor (B.Mus. or Mus.B.) and Doctor (D.Mus. or Mus.D.); but the University of Cambridge, under its 1893 regulations, and the Universities of Wales and London, grant three degrees — Bachelor, Master and Doctor — the "Mastership in Music" having, it would seem, been unknown since the 13th century, when some Spanish universities granted that degree. The University of Birmingham also grants those three degrees. The degree of D.Mus. *honoris causa* has been given occasionally to distinguished composers, both British and foreign, by various universities, the custom dating from 1871 at Cambridge and from 1878 at Oxford (there were, however, earlier instances at Oxford, Cambridge, Dublin and Durham). It has also been conferred, by special decree of Congregation at Oxford and by special grace of the Senate at Cambridge, to distinguished composers and teachers already connected with those Universities. Honorary Master-ships and Baccalaureates have also been conferred on occasion; e.g., in July 1946 H.R.H. Princess Elizabeth, K.G., was created B.Mus. (London) *honoris causa*, the degree being conferred by her grand-uncle the Earl of Athlone, the Chancellor.

In their ordinary forms degrees in music are unknown beyond Great Britain and Ireland, certain British colonies and the U.S.A.; but there have been a few examples of foreign honorary doctorates in music, for instance Spontini and Franz having received that distinction from the University of Halle and Andreas Romberg from the University of Kiel. Generally, however, foreign universities, when honouring composers, have conferred honorary doctorates in philosophy (upon Brahms, for instance), as in Britain the honorary D.C.L. and LL.D. are given to persons entirely unconnected with law, among whom have been several composers and conductors.

The following summary of the position of degrees in music in the principal Universities should be checked with official publications, as regulations are frequently changed in detail.

UNIVERSITY OF OXFORD.—The history of degrees in music at both the old English Universities is consistently anomalous and obscure. Their holders never seem to have been recognized as in the same category as the ordinary graduates; they were never required to reside, and the "disputation" necessary in early times for all other degrees was never, it would appear, exacted from them. Until past the middle of the 19th century no formal examinations were instituted, and very little regularity of procedure existed, though the Laudian Statutes of 1636 made certain provisions which are still in force at Oxford. Sometimes the degrees, especially the doctorate, seem to have been of a vaguely honorary character (Oxford offered Haydn the degree on his visit to England in 1791, but he actually went to Oxford, was invested with full dress robes and conducted a major work with full orchestra on 8 July 1791). And in the more ordinary cases where the candidate had to support his application by some evidence of work, it took the form of a composition or exercise of no very fixed character, which seems not infrequently to have been considered a more or less formal matter, though we hear of some applicants being rejected, and in the absence of much really definite record it is very difficult to dogmatize.

Although the first Oxford B.Mus. of whom we have knowledge was Robert Wydow (? 1499), the first Oxford D.Mus. Robert Fayrfax (1511), there is little doubt that the degrees were of considerably older standing. It seems on the whole probable that they originated in the custom of giving degrees in the single arts of the Trivium and Quadrivium, and that they were in some respects similar to the long extinct degrees in grammar, though probably of greater dignity, grammar ranking as one of the arts of the Trivium and music as one of the higher Quadrivium. The B.Mus. degree conferred at Oxford the right of reading and lecturing on the books of Boethius; the holders of the D.Mus. degree do not seem to have been in any way expected, even formally, to be teachers. As far as can be gathered, the "exercise" seems, at first at any rate, to have been regarded not so much as a test of the candidates' qualifications as an element in the music that formed part of the ceremonies at the University "Act" and on other public occasions. The "Music Act", however, existed to some extent independently of degree exercises; the most important one on record took place in 1733, when Handel was specially invited to conduct several of his oratorios, including 'Athalia', which was written for the occasion; but he refused the offer of a D.Mus. degree. When the "Acts" fell into disuse the performances of candidates' exercises continued as a mere matter of form,

independently of public ceremonies, till their abolition in recent years. The "Music Lecture" or "Speech" was a survival of the medieval custom which required all newly appointed Masters of Arts to lecture on each portion of the Quadrivium, it had no original connection with the degrees in music. It seems in very early times to have been unsatisfactory, and was very often excused; later on it came to be given once a year, at the time of the Music Act, the lecturer being, as before, a freshly created M.A., *i.e.* an Inceptor in Arts. The first regular lectureship in music was founded in 1626 by William Heather; but after the tenure of John Allibond, a Master of Arts of Magdalen, no one could be found to take it, and the stipend was given to the deliverer of the music speech at the Act. Heather, however, also founded weekly practices of music under a Choragus; the practices were soon dropped, and the Choragus (afterwards, it is uncertain when, called Professor) seems, apart perhaps from examining the candidates' exercises, to have had no particular duties to perform till 1856, when lectures were required from him. (Crotch had, however, previously given some of his own accord.) In 1848 the offices of Professor and Choragus were divided (the latter being practically nominal and still remaining so); and in 1856 a further office of Coryphaeus or Preceptor was instituted, but has since been abolished.

In 1862 the faculty was entirely reformed by Ouseley, who instituted formal examinations for both degrees and regularized the hitherto very vague "exercise". In 1870 candidates were required to matriculate and in 1877 were further required to pass Responsions or a recognized equivalent; in 1890, however, the University took a regrettable backward step in instituting a special "Preliminary Examination for Students in Music" as a "soft option" to Responsions. In 1890 the public performance of the exercise for the doctorate was abolished (that of the exercise for the lower degree having been long since excused); and at the same time Stainer instituted various lectures and courses of instruction, given by resident graduates as deputies of the professor—a custom continued by subsequent professors. In recent years the examinations have, by gradual steps, been considerably modified. Graduates in music still, however, remain members of the University only in a limited sense, the degrees being altogether anomalous among Oxford degrees in waiving the requirement of residence; but the percentages of resident candidates, and also of graduates holding an additional Arts degree, have greatly increased of late. By 1926 the regulations were as follows:

For the B Mus. degree.—Candidates (who

must be matriculated members of a college or of the non-collegiate students) must have passed Responsions or the Preliminary Examination for Students in Music or some equivalent; they must also, in order to qualify for the degree, have either (a) taken a B.A. degree or (b) passed a "Final Group" examination in Classics, French, German or English Literature, and also pursued a two years' course of study in music at Oxford or elsewhere, as approved for the purpose by the Board of Studies. (1) First examination, including four-part harmony, four-part modern counterpoint and a *viva voce* examination in general elementary musical knowledge. (2) Second examination, including five-part harmony, five-part modal and modern counterpoint, four-part fugue, original composition, instrumentation, musical history, critical knowledge of two specified works and playing at sight from full score. (3) A musical exercise, which shall be a work for chorus and orchestra, small or large, with or without solo voices, containing a substantial proportion of choral writing.

For the D.Mus. degree.—Apart from one or two qualifications to meet very exceptional cases, candidates must be either Bachelors in Music or Masters of Arts of thirty terms' standing since matriculation. (1) Musical compositions, viz. (a) extended work for voices and full orchestra; (b) symphony for full orchestra; (c) symphonic poem, concerto, variations or suite, for full orchestra; (d) overture or fantasia for full orchestra; (e) extended chamber work for not less than three instruments; (f) sonata for not less than two instruments, or song cycle; (g) extended work for unaccompanied voices in not less than five parts. Candidates must submit *either* one composition from categories (a), (b) or (c); or one composition from categories (e), (f) or (g), together with one from (d). They may also submit more, up to three in all. (2) An examination, including composition, orchestration and allied subjects, general musical history and the detailed analysis of ten compositions selected from prescribed lists. At Oxford academic residence is now a necessary qualification for a degree in music. Courses of musical study within the University are required, and much fuller provision is made for such courses than formerly. Fees (excluding college fees): for the Preliminary Examination, £1:10s.; for the B.Mus. examinations and degree, £19; for the D.Mus. examinations and degree, £40.

UNIVERSITY OF CAMBRIDGE.—In all essential respects the early history of degrees in music at Cambridge is similar to that at Oxford and requires no separate notice: the Music Lecture and Music Act were customs at both Universities, and the status of the

degrees and the general qualifications for them were the same, though the Bachelors were admitted to lecture on "*scientia musicalis*" in general, not specifically on Boethius, as at Oxford. The first Cambridge Bachelor in Music of whom we have record was Henry Habyngton (1463), the first Doctor Thomas Saintwix (1463 or earlier). The professorship dates from 1684, when Nicholas Staggin, master of the king's band, was appointed, apparently merely by court influence; no salary was, however, attached to the office till 1868. In 1857 Sterndale Bennett instituted formal examinations, and in 1875 the professor was required to lecture, a regulation subsequently expanded by the institution of a university lecturer in harmony and counterpoint and the formation of a regular board of musical studies. The public performance of the Mus.B. exercise was abolished in 1868, that of the Mus.D. exercise in 1878. In 1878 candidates were requested to pass the University "Previous Examination" and in 1881 matriculation was made compulsory—these steps being taken some years later than at Oxford and in a different order. In 1893 the University adopted the report of a Special Board of Music. The Board's report stated that

They have had under careful consideration the exceptional position of the Mus.B. degree, involved in the fact that it is conferred upon persons who are not required to reside in the University. The various changes with regard to musical degrees which the Senate has sanctioned during the last fifteen years seem all to have tended in the direction of assimilating the procedure to that which obtains in other faculties. . . . It seems advisable that candidates for degrees in Music should have enjoyed no less advantages of general education than those who graduate in other faculties. The Board are of opinion that the time has now arrived when the degree of Mus.B. should be brought completely into line with the other degrees of the University, and conferred only after residence. . . . As it is important that Bachelors in Music should have a degree to look forward to which should enable them to obtain the membership of the Senate, for which their residence and examinations shall have qualified them, the Board suggest the creation of the degree of Master in Music. . . . The Board are of opinion that the present system of conferring the Doctorate in Music is unsatisfactory, as presenting a test which goes unnecessarily far in the technical direction, and gives insufficient encouragement to originality. They purpose, therefore, to assimilate the procedure of the degree of Mus.D. to that for the degrees of Sc.D. and Litt.D.

The present regulations are as follows:

For the Mus.B. degree.—Candidates for the first examinations must be undergraduates in at least the second term of residence, who have passed the University "Previous Examination", or a recognized equivalent; nine terms of residence are necessary for the degree itself. The first examination includes: (a) acoustics; (b) three-part counterpoint and double counterpoint in the octave; (c) four-part harmony; (d) subjects for an English essay; (e) a *viva voce* examination in elementary general knowledge of musical works and their composers. The second examina-

tion includes: (a) composition, instrumental and vocal—a substitute for the old "exercise"; (b) five-part counterpoint and double counterpoint; (c) harmony; (d) two-part canon; (e) two-part fugue; (f) sonata form; (g) the pitch and quality of the stops of the organ; (h) such knowledge of orchestral instruments as is necessary for reading from score, (i) the analysis of some classical composition announced six weeks before the examination; (j) playing at sight from figured bass and from vocal and orchestral score; (k) general musical history; (l) a general knowledge of the standard classical compositions.

For the Mus.M. degree.—(1) An examination including (a) eight-part counterpoint; (b) the highest branches of harmony; (c) four-part canon; (d) four-part fugue and double fugue; (e) form in practical composition; (f) instrumentation and scoring of chamber and orchestral music; (g) the analysis of some classical composition announced six weeks before the examination; (h) the art of music historically and critically considered. (2) An exercise, with full orchestral accompaniment, containing portions for solo voices and for five-part chorus, and specimens of canon and fugue. There is also an oral examination for those whose exercises have been provisionally approved.

For the Mus.D. degree.—A candidate must be a graduate in some faculty of the University (not necessarily in music), and must be not less than thirty years of age; he must send in not more than three (printed or manuscript) works, upon which his claim to a degree is based, such works to include either an oratorio, an opera, a cantata, an orchestral symphony, a concerto or an extended piece of chamber music. Academic residence is now required as a condition for the granting of a degree in music, and courses of musical study within the University are required. Fees for the Mus.B. examinations and degree, £14.3s. (if a B.A. £10.3s.); for the Mus.M. examinations and degree, £18.6s.; for the Mus.D. examinations and degree, £30.5s.

UNIVERSITY OF DUBLIN.—Founded in 1591 as Trinity College, Dublin, but very few degrees in music (the first of which was granted in 1615 to Thomas Bateson, the madrigal composer) were conferred till recent times. No Professorship in Music existed till 1845, except in 1764–74, when Lord Mornington, father of the Duke of Wellington, held the post. In 1861 Sir Robert Stewart was elected and established a preliminary literary qualification for musical candidates, a principle peculiar to Dublin for sixteen years subsequently, but since accepted in one form or another by all British universities. Candidates for degrees in music must matriculate in Arts.

Regulations for the Mus.B. degree.—(1)

Preliminary examination: (a) harmony in four parts, (b) counterpoint in four parts, strict and free; (c) a critical knowledge of specified works; (d) musical history up to Bach and Handel, inclusive; (e) *viva voce* examination on general knowledge of music. (2) An exercise that shall be either a vocal cantata, on specified lines, or a string quartet. A practical test at pianoforte or organ may be offered in lieu of the exercise. (3) Final examination. (a) harmony in five parts; (b) counterpoint in five parts; (c) double counterpoint and canon in two parts; (d) fugue in four parts; (e) a critical knowledge of specified works; (f) musical history from C. P. E. Bach to the present time; (g) *viva voce*, principally on admitted masterpieces.

Regulations for the Mus D. degree.—(1) An exercise that shall be either a work for voices and orchestra comprising an overture, at least one eight-part chorus, at least one solo with orchestra and specimens of contrapuntal writing, or a symphony for full orchestra. (2) An examination including (a) eight-part harmony and counterpoint; (b) double and triple counterpoint; (c) canon in four parts; (d) composition; (e) orchestration; (f) critical and historical questions; (g) *viva voce*, principally on the works of the great masters. Fees: for Matriculation, £15, for the Mus.B. examinations and degree, £12 (£5 to a B.A.); for the Mus.D. examinations and degree, £23.

UNIVERSITY OF LONDON.—The first degree in music was granted in 1879; the Professorship dates from 1902. Candidates for degrees in music must, unless specially exempted, pass the Matriculation examination.

Regulations for the B.Mus. degree.—(1) Intermediate examination in four-part harmony, four-part counterpoint, form and analysis and history of music: questions on acoustics may also be included. (2) B.Mus. examination, consisting of an exercise—a work for chorus and orchestra, small or large, with or without solo voices—and an examination in composition (including five-part harmony and counterpoint, double counterpoint, canon, fugue and instrumentation), general history of music, with detailed criticism of a specified period, and form, with the critical analysis of two specified works, candidates may also offer to be examined in playing at sight from a vocal or instrumental score.

Regulations for the D.Mus. degree.—(1) An examination in eight-part harmony and counterpoint, five-part fugue and canon, composition and history of music (including a critical knowledge in some detail of the great standard compositions). (2) An exercise—an opera or oratorio or cantata, with full orchestral accompaniment, and including an overture, vocal solos, eight-part polyphony and at least one movement in good fugal style

Candidates may also offer to be examined in playing at sight from a full orchestral score and in extempore composition in regular form on a given subject. Fees: for the Intermediate and B.Mus. examinations, £12:12s.; for the D.Mus. examination, £21. Degrees are conferred on both internal and external students.

Three degrees—Bachelor in Music (B Mus.), Doctor of Philosophy (Ph.D.) and Doctor in Music (D.Mus.)—are now offered in the Faculty of Music. That of Ph.D. is regarded as a degree in one or other of the Faculties—Theology, Arts, Laws, Medicine, Music, Science, Engineering or Economics, with a definitely higher standard than the Bachelor degree in the Faculty in which the Ph.D. is taken, i.e. Ph.D. (Arts) is superior to B.A. but not to M.A. For the B.Mus. degree a course of study is prescribed at one of the schools of the University or under teachers recognized by the University. The subjects of examination for this degree as well as the D.Mus. degree remain broadly the same. External students are admitted to all the degrees of London University; a special set of regulations is published concerning them.

In Dec. 1950 the Senate agreed to establish a Mastership in Music, between Ph.D. (Mus.) and D Mus.

UNIVERSITY OF DURHAM.—Founded in 1831; but for a considerable period only honorary degrees in music were given. The Professorship dates from 1897. Candidates must (unless they have already passed an examination recognized as equivalent) pass an entrance examination qualifying for admission as a student in music.

Regulations for Mus.B. degree.—(1) First examination in four-part harmony and counterpoint. (2) *Either* an exercise, which shall be a work in four movements on specified lines ([a] five-part chorus, [b] song, [c] unaccompanied vocal quartet or intermezzo for strings and [d] five-part introduction and fugue), with accompaniments for string orchestra only; *or* an exercise consisting only of (a) and (d) as above, with a practical examination (playing specified pieces, sight-reading and extemporization) in piano, organ or stringed instrument of the violin family. (3) Final examination in five-part harmony and counterpoint, double counterpoint and four-part fugue and canon, form, history of music and a *viva voce* examination on certain specified works and on general musical matters.

Regulations for the Mus.D. degree.—(1) An exercise consisting of a vocal composition, preceded by an instrumental overture, and containing eight-part harmony and good fugal counterpoint, with an accompaniment for full orchestra. (2) An examination in eight-part harmony and counterpoint, imitation, canon

and fugue, form, instrumentation, history of music, elementary acoustics and knowledge of the scores of the standard works of the great composers. Fees: for the entrance examination, £2; for the Mus.B. examinations and degree, £17:10s. or £18:10s.; for the Mus.D. examinations and degree, £24. Residence is not required.

UNIVERSITY OF EDINBURGH.—The Reid Professorship of Music dates from 1839, but owing to various causes no regulations for degrees in music were made before 1893. Matriculation and (unless candidates are otherwise exempted) the passing of a preliminary examination in Arts or Science are required.

Regulations for the Mus.B. degree.—Candidates must attend courses of instruction during a whole winter session. (1) The "First Professional Examination" includes (a) ear tests and singing or performing on some instrument; (b) reading at sight, (c) elements of music; (d) four-part harmony; (e) elementary counterpoint; (f) form; (g) outlines of the history of music. (2) The "Second Professional Examination" includes (a) five-part harmony; (b) advanced counterpoint; (c) two-part canon and four-part imitation and fugue; (d) form (more advanced); (e) elements of instrumentation, (f) critical knowledge of certain prescribed scores; (g) playing at sight from easy vocal and instrumental scores and from figured bass; (h) history of music; (i) acoustics and physiology of the vocal organs. Each candidate will also be required to submit the following exercises: (a) a solo song with pianoforte accompaniment; (b) a four-part vocal composition; (c) an instrumental composition (other than a dance) for pianoforte or organ, or other instrument with accompaniment.

Regulations for the Mus.D. degree.—The degree is granted in three departments: all candidates must be not less than twenty-five years of age. (1) Candidates as *Composers* must submit a prescribed number of vocal and instrumental compositions in the larger forms, and will be examined in (a) advanced counterpoint and fugue; (b) instrumentation; (c) the works of the great composers from Palestrina onwards. (2) Candidates as *Executants* will be required to perform solo and ensemble works in different styles, selected partly by themselves and partly by the examiners; they will be examined in sight-reading, playing from orchestral score, modulating, the history and literature of their special instrument, and the method of teaching it. (3) Candidates as *Theorists or Historians* must submit one or more treatises, the result of research and original thought, and will be examined in both the theory and the history of music, the examination being on a higher standard in the subject which the candidate selects as his speci-

alty. Fees: for the Preliminary Examination, £1:1s.; for the Mus.B. examinations, £15:15s.; for the Mus.D. examination, £15:15s.

There are now two degrees of Bachelor in Music, Ordinary and Honours. For either of the Mus.B. degrees candidates must attend courses of instruction in the University during three academic years. For the Ordinary degree there are two examinations which give a wide range of musical subjects, and the candidate is required to present an exercise, that is a composition, vocal or instrumental, on prescribed lines. For the degree with Honours there are also two examinations of a more searching standard, and the Honours obtainable are in two grades—first and second class. A candidate who fails may not sit again, but may, on the recommendation of the examiners, be admitted to the Ordinary degree.

UNIVERSITY OF BIRMINGHAM.—Founded in 1899: the Professorship dates from 1905.

Regulations for the Mus.B degree (which ranks as an Honours degree).—Candidates must have passed the Matriculation examination or one of the examinations accepted in lieu of it; they must also satisfy the Professor of Music that they have (a) a sufficient knowledge of the theory of music, (b) an adequate power of performance on some musical instrument. (1) First examination, comprising (a) subjects mentioned in the syllabus of the first year's course (the early development of counterpoint and of harmony, the rise of English church music, folksongs and national songs, chamber music, the early English madrigal, the 'Fitzwilliam Virginal Book', the development of the art-song, bells, carillons and chimes); (b) acoustics, (c) four-part harmony and counterpoint; (d) another degree course in the Faculty of Arts. (2) Second examination, comprising (a) the second year's subjects (the modern development of harmony and counterpoint—lectures and classes—musical forms and the analysis of fugue, orchestration, the pianoforte works of Chopin, the organ works of Bach, the evolution of the orchestra); (b), (c) two Arts courses. (3) Third examination, comprising (a) the third year's subjects (Bach's Mass in B minor and Wagner's 'Die Meistersinger', choral music, the opera, the symphony), (b) the composition of an unaccompanied choral work, and also of either a symphonic work for full orchestra, or a vocal work (solos and choruses) with orchestral accompaniment, or a piece of chamber-music for at least three instruments: as an alternative to composition candidates may submit either a literary thesis on an important musical work, an historical period of music or the theoretical development of music, or research work in transcrib-

ing, editing and rendering available for public use important manuscripts in an English or foreign library.

Regulations for the Mus.M. degree.—Candidates are required to carry out a course of study for one year under the Professor's direction and to submit original musical works (composed after taking the Mus.B. degree), and also a dissertation embodying critical or historical research on some musical subject. Fees: for the Mus.B. examinations and degree, £12:2s.; for the Mus.M. examination and degree, £8:7s.

Three degrees are now offered at Birmingham—Bachelor in Music (Mus.B.), Master in Music (Mus.M.) and Doctor in Music (Mus.D.). Courses in music are provided for internal students who are preparing for the Honours degree of Mus.B., or for the degree of B.A. The first examination for Mus.B. takes place at the end of the first year of study. The final examination, which includes six papers, covers the whole course after the first year. The Mus.M. requires, besides the examination, an exercise which may be either three original compositions for different musical combinations, or a thesis, or some other literary work upon a musical subject. The candidate for the Mus.D. may sit either as composer or as a scholar; the lines of the examination are similar to those of the same category at Edinburgh.

UNIVERSITY OF MANCHESTER.—The first degrees in music were conferred in 1894. Candidates must have passed the Matriculation examination and (unless graduates in another faculty) must also at some time attend a class in one of the non-musical subjects for the Intermediate B.A. examination.

Regulations for the Mus.B. degree.—(1) First examination in four-part harmony, history of music and elementary theory of acoustics. (2) Second examination, including five-part harmony, four-part counterpoint, ancient and modern, a specified period of musical history, musical form, and a practical test (excused to candidates possessing certain qualifications) involving sight-reading and the playing of a previously approved prepared piece. (3) Third examination, including five-part counterpoint and fugue, composition in various forms, orchestration, an oral examination including analysis of selected scores; candidates must also submit *either* a thesis on an important musical work or a period of musical history *or* a composition with portions for solo voice and for five-part chorus, with specimens of canon and fugue (but at the same time showing acquaintance with the resources of modern harmony and counterpoint), and with accompaniment for strings, woodwind and optional organ.

Regulations for the Mus.D. degree.—(1)

*Either* an exercise containing (a) the first movement of a symphony for full orchestra, (b) an unaccompanied octet, (c) a song, (d) a recitative, (e) an eight-part choral fugue; *or* any one of the following: a symphony, a symphonic poem or suite for orchestra, a concerto for solo instrument and orchestra, a cantata or choral ballad with orchestral accompaniment. (2) An examination in eight-part counterpoint, and in composition for full orchestra, and for various combinations. Fees: for Matriculation, £2; for the Mus.B. examinations and degree, £17:17s.; for the Mus.D. examinations and degree, £23:2s.

The old regulations were finally superseded in June 1939. Under the new ones three degrees are offered: the ordinary degree of Mus.B., the degree of Mus.B. with honours and that of Mus.D.

For the ordinary Mus.B., the examination is divided into two parts, called "first" and "final". The first covers a wide range of subjects and must be completed at least one academic year before the candidate can enter for the final.

For the final all candidates are required to pass certain preliminaries, and are then examined in one of four special subjects: (a) Composition; (b) Performance; (c) Performance-with-conducting; (d) History and Criticism.

The same first examination is taken for honours, but a higher standard is required. For the final the candidate must enter in either two of the special subjects above, or submit such exercise or thesis in addition to what is required by the ordinary degree as the Board of the Faculty may determine.

The degree of Mus.D. is conferred on those who are held to have achieved work of high musical distinction and scholarship in one of the four branches: (a) Composition, (b) Performance, (c) Performance-with-conducting, (d) History and Criticism.

In addition candidates are required to satisfy the examiners aurally and otherwise in subjects prescribed under the regulations.

NATIONAL UNIVERSITY OF IRELAND.—Constituted in 1908 (as successor to the Royal University founded in 1880). There are Professors of Music at two of the constituent colleges (Dublin and Cork) and also, at the former, a "Dublin Corporation Professor of Irish Music". All candidates must have passed the Matriculation examination.

Regulations for the Mus.B. degree at University College, Dublin.—(1) First examination, including elementary acoustics, four-part harmony, three-part strict counterpoint, the elements of musical form, musical history to Bach and Handel inclusive, history and practice of Irish music, and a practical ex-

amination on organ, pianoforte or (together with piano) violin, cello or harp, comprising sight-reading and the performance of two works of different types selected by the candidate. (2) Final Examination, including five-part harmony and counterpoint, three-part fugue, canon and double counterpoint, form, musical history from C. P. E. Bach to the present time, critical analysis of selected scores, further history and practice of Irish Music, and *either* more advanced practical tests, or composition, vocal and instrumental.

Regulations for the Mus.B. degree at University College, Cork.—(1) First examination, including harmony, counterpoint, history of music, ear-training, acoustics, form, physiology of the vocal organs, practical examination in (a) pianoforte or organ, and (b) singing, violin, viola, violoncello, flute, oboe, clarinet, bassoon or horn. (2) Final examination, including harmony, counterpoint, canon and fugue, history of music, ear-training, form, instrumentation, methods of teaching, critical knowledge of a specified score, and a further practical examination on the same lines. Two Arts examinations in languages are also compulsory.

General Regulations for the Mus.D. degree.—An original composition and theoretical and practical examinations; details are not given in the syllabus. Fees: for the Mus.B. examinations and degree, £6; for the Mus.D. examinations and degree, £7.

UNIVERSITY OF WALES.—Constituted in 1894. There are Professors of Music at two of the constituent colleges (Aberystwyth and Cardiff). Candidates must have passed the Matriculation examination or an equivalent.

Regulations for the Mus.B. degree.—For the pass degree there are College examinations in the history and theory of music and in composition (together with two scientific or linguistic subjects), and a University examination in theory of music and composition, with the presentation of an exercise for strings or for voices or for both. For the honours degree there is a further university examination in *either* advanced study in harmony, counterpoint, fugue, form and composition, with a critical study of one or more periods or works, *or* an exercise in advanced musical composition, with a dissertation embodying the results of some scheme of musical research. Holders of the B.A. degree who subsequently proceed to the Mus.B. are permitted certain modifications.

Regulations for the Mus.M. degree.—(1) An exercise for chorus, solo or solos and full orchestra, including an overture, a chorus in eight-part harmony, and specimens of canon and fugue. (2) An examination in eight-part harmony and counterpoint, double, triple, and quadruple counterpoint, six-part fugue, instrumentation and scoring of chamber and

orchestral music, form in composition considered historically, and the general history of music.

Regulations for the Mus.D. degree.—Original compositions, including specimens of both choral and instrumental writing, one of which must be an oratorio, opera, cantata or symphony. Candidates who fail to reach the required standard may be granted the Mus.M. degree. Fees: for the Mus.B. examinations, £6: 15s.; for the Mus.M. examinations, £10, for the Mus.D. examination, £20.

UNIVERSITY COLLEGE OF WALES.—The degree of Bachelor in Music (Mus.B.) can be taken either as an Ordinary degree or an Honours degree. Appropriate courses of study are laid down for each student. There are advanced composition courses for candidates preparing for the degrees of Mus.M. and Mus.D.

UNIVERSITY OF SHEFFIELD.—The Chair of Music at Sheffield was founded by James Rossiter Hoyle in 1927. The degree of Mus.B. was instituted in 1931. There are two examinations for it following the intermediate examination for the Arts degree. The degree of Mus.D. was instituted in 1933. For this candidates are required to submit either compositions or a thesis, and to pass an examination in strict contrapuntal, fugal and canonic writing; orchestration; and general musical history. In 1934 music became one of the subjects to be offered for the general degree of B.A. In 1943 the Honours School of Music and Language (leading to the degree of B.A.) was instituted.

UNIVERSITY OF GLASGOW.—A Chair of Music was founded in 1928 by Sir F. C. Gardiner and W. G. Gardiner, shipowners of Glasgow, who presented the University with the sum of £20,000 for its foundation. Under the first professor, W. G. Whittaker, degree courses were mapped out and courses of education for them were arranged in conjunction with the Scottish National Academy of Music (formerly the Glasgow Athenaeum), of which the Professor of Music to the University for the time being is Principal.

Two degrees — Bachelor in Music (Mus.B.) and Doctor in Music (Mus.D.) — are offered. The examinations for the degree of Mus.B. are in accordance with the prescribed scheme of instructional courses. Bachelors in Music of the University who have taken Honours, either before or after graduation, may offer themselves for the degree of Mus.D. after the expiry of five years from the date of their graduation. Bachelors in Music of other recognized Universities are allowed similarly to offer themselves.

Candidates may enter for the Doctorate as (i) Composers, (ii) Executants, (iii) Theorists or Historians.

GENERAL CONDITIONS—All candidates for the Doctorate must already hold the Mus.B. or B.Mus. of the same university, except at the Universities of Oxford, Cambridge, Manchester and Wales, where exemptions of different kinds are granted. *Ad eundem* degrees are, however, occasionally conferred, especially between Oxford, Cambridge and Trinity College, Dublin, and some universities in the Dominions (e.g. Toronto). Some other British universities than those above mentioned have the power to grant degrees in music, but have not yet issued any regulations on the subject, the University of St Andrews has granted honorary degrees. Albert Schweitzer was created Mus.D (Edin.) *honoris causa* and also hon. D.D. Edin. and hon. LL.D. St. Andrews.

The Archbishop of Canterbury possesses and occasionally exercises the privilege of creating Bachelors and Doctors in Music (as well as Doctors in other faculties, and, after specified examinations [only in Archbishop Tat's time, not since], Masters of Arts). All the doctorates are conferred at the archbishop's discretion, and no rules are laid down with regard to them; but in all cases the archbishop takes skilled advice as to the nominee's qualifications. The D.Mus. fees are not mentioned in the regulations, but they have been estimated at £63; and the fees for the M.A. degree, which may be taken as a general guide, "must not be expected to be less than £55". This is a vestige of the ancient rights of the occupant of the See as legate of the pope—rights which have, however, been, at various times from the 13th century downwards, strongly contested by representatives of the regular universities, it is highly probable that sooner or later this relic of antiquity will be quietly allowed to lapse. At the Oxford and Cambridge Conference in 1924 it was decided that the Universities would no longer grant the degree of D.D., *honoris causa*, by decree or by diploma merely on consecration as a bishop; and it was further agreed that whenever the University concerned did not offer the D.D. degree the Archbishop of Canterbury would offer the Lambeth degree to all diocesan bishops. This is now the standard practice. The power to confer degrees was vested in the pope, and the Archbishop of Canterbury, who was often his papal legate, conferred degrees on his behalf. This power was taken over by Henry VIII. Henry VIII's Act decreed that all awards (Peter's Pence), benefits, etc. which carried a tax to Rome of £4 or more must be confirmed under the Great Seal of the Realm. The tax to Rome on a degree was £4, and hence every Lambeth degree must be confirmed by the King's Letters-Patent and be enrolled in the Crown Office in the House of Lords. The D.D., D.C.L., D.M., D.Mus., B.D., are con-

firmed by Letters-Patent; the M.A. is merely endorsed and enrolled.

THE UNION OF GRADUATES IN MUSIC.—A body including the holders, male and female, of the above-mentioned degrees, both ordinary and honorary. It was founded in 1893, principally by the efforts of Stainer, "for the protection of the value and dignity of the degrees in music regularly conferred in Great Britain and Ireland", the immediate cause of its existence being an attempt made by a colonial university to grant degrees *in absentia* through an English agency. It publishes an annual 'Roll and Kalendar' containing particulars of its members' careers and qualifications and other matter of interest, and holds an annual general meeting, followed by a dinner. In recent years there have also been summer conferences in different university towns, when papers are read and discussed and special musical performances given. A chief part of its official work hitherto has consisted in the detection and exposure of those who have traded, in ways not altogether irreproachable, on the strange passion for ornamental letters which consumes a large section of the British public; but it has also dealt with other matters, such as the registration of teachers.

Apart from the degrees in music, the studies for the degree of B.A. in the Universities of Oxford, Cambridge, Durham, London, Birmingham, Wales and the National University of Ireland include music, and also in the Universities of Leeds and Belfast. The University of London also confers the degree of Ph.D. in the Faculty of Music. Each of the British Universities which grants degrees in music publishes periodically a pamphlet setting forth the regulations which govern the several degrees, and this pamphlet may be obtained from the Registrar of the University. This should be the first step taken by a prospective candidate.

E. W., rev. G. A. H. F.

AMERICAN UNIVERSITIES.—Before a comprehensive or an accurate account of degrees in music can be made, some preliminary observations are desirable concerning the several types of musical degrees and the latitude of practice in conferring them. Any degree is the symbol of high attainment in science, arts or literature, conferred by some educational institution of authoritative position. The award is made either for the fulfilment of definite requirements or as an official compliment (*honoris causa*), the donor often being as much honoured as the recipient. The specifically musical degrees in the U.S.A. are the Bachelor in Music and the Doctor in Music. The usual collegiate degrees, however, of A.B., A.M. or even Ph.D. sometimes imply considerable attainment in music, since the recipient may have won the degree by special emphasis on

musical studies. The variety of meaning implied in the above degrees is much increased as soon as music is involved, for the following reasons: (1) Music is such a peculiar subject, and attainment in it depends so largely upon natural aptitude—or, in the case of the highest achievements, upon genius—that it is very difficult to be appraised in accordance with ordinary academic standards. (2) The U.S.A. is a large and young country in which music has been taught in colleges and universities for a comparatively short time; hence no uniform practice has as yet been worked out: during less than a century only has music been taught in institutions of higher learning.

Some institutions confer musical degrees for distinct ability on the executive side of the art, that is, for proficiency in playing upon some instrument (pianoforte, organ, violin) or in singing. Other institutions emphasize scholarship (musicology), critical ability and research, while for the highest degrees creative ability is often required. The matter is further complicated by attempts to apply the somewhat arbitrary classification of "vocational" and "cultural" studies. It is taken for granted that a young student wishing to teach any subject, such as science, languages, history, etc., will be recognized as a master of his subject by the winning of a degree of some kind from an accredited seat of learning. In the above subjects standards are so definite that rational estimates can be made. When a student with musical aptitude attempts to follow along the same line, difficulties arise, because there is as yet no definition as to just what, from the academic point of view, a musician is. The highest type of musician is undoubtedly one who has creative fancy, deep emotions and a technique in expressing what he has to say. To a man of this kind, as in the case of a poet, it is a matter of comparative indifference whether he has a degree or not. When we begin to consider less gifted musicians, who, nevertheless, may be able men in scholarship, in pedagogic ability or as executants, it is evident that careful classification is necessary, and that the requirements for a degree in music be so planned that they show clearly just what kind of attainment the student has reached. Until recently in the U.S.A. there has been an erroneous opinion that any one endowed with a love for music, if he studied sufficiently, especially in methods of teaching, could become a musician and be able to teach music. As it was necessary in order to secure a good teaching-post to have some degree, many colleges and universities have conferred degrees in music on rather elastic terms. The fact is gradually being faced that to be a really efficient teacher of music one must be a thorough musician, and, furthermore, that inborn aptitude is by far the most important

factor in the whole question. No one not born with a keen and accurate ear, a sensitive feeling for rhythm and a certain amount of creative and emotional power can ever acquire these qualities merely through courses of study. Recognition is spreading, moreover, that a student with innate ability in music should, for this very reason, secure a general education if he wishes to become a broadly equipped musician. The better nourished a man's intellect and imagination, the more will he have to express and the more efficient will he be as a teacher of others. The day has gone by when one may be a musician and nothing else. For the dominant note in the music of our time is its close relationship with the other arts and the fact that it touches life on every side. Hence, in American universities a strong tendency is setting in to let musical degrees imply not merely attainment in music itself, but a knowledge as well of modern languages, the fine arts, history and science—everything, in fact, the education of a well-rounded man comprises. To show the actual manner in which these principles are applied, a tabulation is made of the requirements in five American institutions where music has been taught for a considerable time: *i.e.* Oberlin College, North-Western University, the University of Iowa, Yale University and Harvard University.

**OBERLIN COLLEGE.**—This possesses a flourishing Conservatory of Music, that is, a professional school, which has affiliations with the College itself. The degree of Bachelor in Music is given by the Conservatory to candidates who show a high attainment in a four-year course, the studies of which are entirely of a musical nature, *e.g.* harmony, counterpoint, orchestration, composition and the history of music. The candidates must also show technical ability on some instrument, such as the pianoforte, violin, organ, clarinet or even the cornet. The degree of Master in Music is open to students who take advanced work for a year in the above courses. Students wishing for a broader education may combine the requirements for either of these Conservatory degrees with courses in the College, under a plan of study completed in six years. Before entering Oberlin Conservatory or College every student is required to pass an examination, which comprises such general subjects as English, mathematics, modern languages, history and science.

**NORTH-WESTERN UNIVERSITY.**—Only one degree is offered, that of Bachelor in Music, and the terms of qualifying for this degree and the courses studied are practically identical with those at Oberlin.

**UNIVERSITY OF IOWA.**—This has been most progressive in working out a definite correlation between the requirements of a general

education and specialization in music, and at this University there are offered the following five degrees, towards the winning of which music may be offered as a principal subject or an elective.

(1) The degree of Bachelor of Arts requires a four-year course, which prescribes study in languages, literature, science and philosophy, together with logical development throughout the course of a principal subject and a due proportion of free electives. This principal subject is to occupy from a third to a quarter of the student's time. Music, if a student selects this as his principal subject, has exactly the same privileges as are connected with any other subject in the University.

(2) The degree of Bachelor of Arts in Music. This degree is identical with the above degree, except that the student must devote a full third of his time specifically to music.

(3) The degree of Bachelor in Music requires a four-year course with the same requirements in general studies as the Bachelor of Arts degree, but one-half of the student's time is to be devoted to musical subjects.

(4) The degree of Master of Arts requires two years of advanced study in a principal subject, together with a group of related subjects. Here again the candidate for the degree may elect music or any other subject in the University as his principal subject.

(5) The degree of Doctor of Philosophy requires two years of study following the Master's degree. If music be chosen for the chief part of the work, the study of the subject must occupy two-thirds of the candidate's time, and in addition a thesis must be presented which embodies some original contribution to knowledge.

**YALE UNIVERSITY.**—For many years there has been a flourishing School of Music, but there has not been until recently a close affiliation between the courses in the University and those in the School of Music. All students in Yale College may now take courses in music towards the regular academic degree of Bachelor of Arts. In addition, the degree of Bachelor in Music is conferred by Yale University, on the recommendation of the School of Music, upon candidates who have completed satisfactorily a five-year course in the theoretical study of music. The candidates for this degree must not only pass prescribed courses but also show a mastery in at least one of the following branches: original composition in one of the larger musical forms, technical efficiency on some instrument or special aptitude for musical criticism and research. A thesis is also required showing original ability in investigation and musical criticism.

**HARVARD UNIVERSITY.**—This may fairly claim to have followed from the outset a con-

sistent course in regard to the relationship which specific technical training in music should bear to a broad general education. At Harvard no purely musical degrees are offered, but the three customary academic degrees of A.B., A.M. and Ph.D. may be won, and often are, by students who devote a chief part of their time and efforts to courses in the grammar of music, in musical composition, orchestration, history, biography and aesthetics. No credit is given for ability on the executive side of the art, that is, for playing upon an instrument or for singing. It was considered from the first that the place for such degrees should be a technical school, that is, a Conservatory of Music. No matter how thoroughly a student may specialize in music, he must secure a good education in languages, history, literature and science. That this policy has had a distinct influence upon the development of music in the U.S.A. is shown by the fact that a large number of the prominent composers and teachers in the country are graduates of Harvard. It may also be noted that many of the leading critics in America are college graduates who began their musical studies in connection with the work of an academic career.

The requirements at Harvard for the three degrees offered are as follows:

A candidate for the A.B. degree, who is to specialize in music, must pass with distinction courses in harmony, counterpoint, fugue, orchestration, history and musical appreciation; he must also demonstrate ability to read French, Italian and German, must take certain courses in English literature and then may elect his other courses from the fields of history, mathematics or science.

For the A.M. degree a candidate is required to spend from one to two years in residence in the University and must do advanced work in musical theory and in composition. Whatever he may have to say in music he must show the ability to express grammatically and logically. For candidates lacking in creative power who may have aptitude for criticism or historical investigation a thesis on some original subject may be substituted.

The degree of Ph.D. is meant to be the highest award for innate musical qualities and thorough scholarship which the University can confer, and that the standard is rigorous is shown by the fact that this degree has been very rarely bestowed (only three times within twenty-five years, when there were at least a dozen candidates).

The candidate for the degree of Ph.D. in music must do original work in musical aesthetics or history, and his thesis must embody some special contribution to the subject. He must present instrumental compositions correct in grammar and in style, or in place of

this may substitute one or more orchestral arrangements of short compositions to be selected by the Division of Music. The candidate will be given an oral and a written examination, the former to test his general knowledge and his acquaintance with musical history, aesthetics and allied fields; the latter to determine his knowledge of harmony and of contrapuntal and fugal writing.

RECENT DEVELOPMENTS.—Since about 1930 some progress has been made towards establishing criteria for advanced degrees in music in American universities. In general, standards have been raised for both the undergraduate baccalaureate degree and the master's and doctor's degrees, but with nearly five hundred colleges giving credit for courses in music, there is still a wide variety of requirements. Besides the 150 institutions which grant the degree of Bachelor in Music and the small number which give a Bachelor in Music Education or in Public School Music, many others allow specialization in music, a so-called music major, in the courses leading to the degrees of Bachelor of Arts, of Science, of Philosophy, of Education or of Fine Arts.

Specialization in music for the Master's degree results generally in the degree of Master of Arts, although the Master in Music degree is becoming more popular and the Master in Music Education is also granted. Some colleges confer a Master of Science, of Fine Arts or of Science of Education, for work in music. For the most advanced work the degree Doctor of Philosophy only is given and that sparingly. The degree of Master in Music Education does not command the same respect as the Ph.D. With the master's degree there is a tendency towards giving the Master in Music for courses emphasizing composition or performance (practical music) and restricting the Master of Arts degree to work in musicology. A similar and logical distinction between the degrees of Doctor in Music and Doctor of Philosophy is looked upon with less favour because the former degree is traditionally given only *honoris causa* in the U.S.A.

A Committee on Graduate Study in Music sponsored by the National Association of Schools of Music and the Music Teachers' National Association considered the problem of degrees in music over a period of five years and published a report in July 1938; as Bulletin No. 9 of the first-named organization. The committee consisted of the following well-known musicians and professors. Howard Hanson (Rochester), Karl W. Gehrkens (Oberlin), Otto Kinkeldey (Cornell), Earl V. Moore (Michigan), Oliver Strunk (Princeton) and Philip G. Clapp (Iowa).

The recommendation of the committee with respect to the Master's degree suggests a minimum preparation for admission to gradu-

ate standing to include completion of a four-year curriculum in a recognized college, a knowledge of harmony, counterpoint and history of music, and proficiency in sight-singing and sight-reading at the pianoforte. Further, for specialization in musicology, the candidate would be required to have completed courses in English composition and literature and to be able to read at sight one foreign language, besides having adequate preparation for the field, historical, philosophical or scientific, in which he expects to work. For the field of composition the student would further have to submit two original works, one in chamber music and one in a smaller orchestral form, to qualify for admission, and to have studied orchestration and applied music, both pianoforte and orchestral instruments, during his undergraduate course. The additional requirements for admission in the field of Music Education would involve about one-quarter of the undergraduate programme in that field, plus ability to play the pianoforte, to sing and to play one instrument in each of the three chief sections of the orchestra. The requirements for specialization in performance of vocal or instrumental music are too extensive to set down here.

For graduation with the degree of Master of Arts in the field of musicology the committee recommends that approximately two-thirds of the total requirement should be in some department of musicology, such as music history, aesthetics, psychology or acoustics, with study in cognate fields if desirable, to culminate in an extended thesis showing definite ability in research. The other third of the work would be in minor subjects in the humanities or sciences. For the degree of Master in Music in the same field the minor subjects would be divided equally between theoretical studies (counterpoint, orchestration and composition) and applied music.

Graduation in composition, with the degree of Master in Music, would require composition in the larger forms as major subject, involving the submission of an original work such as a cantata, Mass, a piece of chamber music or one in symphonic form. One half of the work would be in minor subjects, including advanced counterpoint (canon and fugue) and orchestration, and continued work in applied music. For the degree of Master of Arts in the same field courses in the humanities or sciences would be substituted for the work in practical music.

The Master's degree in Music Education would require one fourth of the work to be in some large project of music education to be carried out both practically and theoretically, and to culminate in a thesis. The remaining three-quarters of the student's work would be divided between applied music,

theory or musicology, and any other field for which the student is prepared, the proportion of time in these three fields to be determined by the institution with a view to the needs and interests of the individual student.

For the Master's degree in instrumental music between one-half and two-thirds of the programme would be devoted to applied music. A recital takes the place of a thesis. The student must also choose two minors; one in either theory or musicology, and the other in any field for which he is prepared. For the field of vocal music only one-third of the time is to be devoted to practical music leading to a recital. Another third is to be devoted to pianoforte study, and the remaining third to be divided between theory or musicology and the acquiring of a reading knowledge of two modern foreign languages and satisfactory pronunciation in a third.

The committee's recommendations for requirements for admission to candidature for the degree of Doctor of Philosophy are essentially the same as for the various Master's degrees, since it is not necessary to obtain a master's degree in order to begin work for the Ph D., which presupposes at least three years of study beyond the baccalaureate degree. The recommendations do, however, include for all fields the work in English and the reading ability in one foreign language required in the case of the Master's degree only for students in musicology. No detailed suggestions are offered for requirements for the completion of the doctorate, at the present time these are safeguarded by the Graduate Schools of the various universities which confer the Doctor's degree. The fields of concentration are limited by the committee to musicology, composition and music education, and the thesis may be either a dissertation based upon independent research or an original musical composition in one of the larger forms. A sight-reading knowledge of German is required and of one other foreign language, preferably French or Italian. Students in musicology are further required to satisfy this requirement at least two years before taking the degree, and are urged to have a knowledge of Latin and of a third modern language. It should be borne in mind that these are minimum requirements. Many of the older American universities have much more rigorous standards

**DIPLOMAS IN MUSIC.**—In Britain, apart from the universities, the last hundred years have seen the rise of a number of colleges of music, situated generally in London. These confer diplomas, after courses of study covering all the principal branches of music, although not always involving residence.

Some of these colleges are now recognized

by the Ministry of Education, both as teaching-institutions and as examining bodies. The diplomas are usually in three grades. Associate, Licentiate and Fellow. Honorary Memberships and Fellowships are awarded from time to time. The principal colleges recognized by the Ministry of Education are the Royal Academy of Music, Royal College of Music, Guildhall School of Music, Royal Manchester College of Music, Trinity College of Music, London College of Music and Royal College of Organists.

The Royal College of Organists confers diplomas of Associate and Fellow, and there is a supplementary diploma in chormaster-ship, F.R.C.O. (Ch.M.). Holders of this diploma, after further study, may enter for the Archbishop's Diploma in Church Music (A.D.C.M.). There is also the Incorporated Guild of Church Musicians, which confers a Fellowship.

**DEHN, Siegfried (Wilhelm)** (b. Altona, 25 Feb. 1799, d. Berlin, 12 Apr. 1858).

German theorist, editor and teacher. He made diligent researches on various subjects connected with music both in Germany and Italy, which he utilized in Marx's 'Berliner Musikzeitung' and other periodicals. In 1842, on the recommendation of Meyerbeer, he was appointed librarian of the musical portion of the Royal Library in Berlin. He was given the title of Royal Professor in 1849. He catalogued the entire musical library and added to it a number of valuable works scattered throughout Prussia, especially Pölchau's collection, containing, besides many interesting theoretical and historical works, an invaluable series of original manuscripts of the Bach family.

Dehn scored no fewer than 500 motets by Lassus and copied for the press an enormous number of works by J. S. Bach. He it was who first published Bach's 6 concertos for various

instruments (Peters, 1850), the concertos for 1, 2 and 3 claviers and the 2 comic cantatas. He also published a collection of vocal compositions in 4, 5, 6, 8 and 10 parts, called 'Sammlung alterer Musik aus dem XVI. und XVII. Jahrhundert'.

Dehn succeeded Gottfried Weber in the editorship of the musical periodical 'Caecilia' (1842-48). He had re-edited Marpurg's treatise on fugue (Leipzig, 1858), had translated Delmotte's work on Lassus, under the title 'Biographische Notiz über Roland de Lattre', and was preparing a larger work on the same subject, from valuable materials collected with great labour, when he died. Among his many distinguished pupils were Glinka, Kullak, A. Rubinstein and P. Cornelius. Among his friends were Kiesewetter and Fétis, for the latter of whom he collected materials equal to two volumes of his 'Biographie universelle'. His theoretical works were 'Theoretisch-praktische Harmonielehre' (Berlin, 1840; 2nd edition Leipzig, 1858), 'Analyse dreier Fugen . . . J. S. Bach's . . . und Bononcini's . . .' (Leipzig, 1858), and 'Lehre vom Kontrapunkt' (Schneider, 1859). The latter, published after his death by his pupil Scholz (2nd edition, 1883), contains examples and analyses of canon and fugue by Lassus, Marcello, Palestrina, etc. Dehn was a good practical musician and cellist. M. C. C.

**DEIDAMIA** (Opera). See HANDEL.

**Deinhardtstein, Johann Ludwig**. See Lortzing ('Hans Sachs', opera). Schubert (Emperor Cantata, 1 song).

**DEISS, Michael** (b. ?; d. ?).

Austrian or German 16th-century composer. He was musician to the Emperor Ferdinand I, for whose obsequies in 1564 he composed a motet for 4 voices and eight other pieces, published by Joannelli in his 'Thesaurus musicus'. Other motets of his are contained in Schade's 'Promptuarium musicum'.

M. C. C.

**DEITERS, Hermann** (b. Bonn, 27 June 1833; d. Coblenz, 11 May 1907).

German writer on music. He studied law and philology at first, taking the degree of doctor in both faculties in 1858. He held various scholastic appointments, successively at Bonn, Duren, Konitz, Posen and Coblenz, and had a place in the Cultusministerium in Berlin. After some early contributions to Bagge's 'Deutsche Musikzeitung' and other musical papers, he wrote various important articles in the A.M.Z., such as 'Beethovens dramatische Compositionen', 'R. Schumann als Schriftsteller', 'Max Bruchs Odysseus', etc. He published the first authoritative biography of Brahms in 1880 (English translation by Rosa Newmarch, 1888), completed after the master's death by a new edition (1898).

Deiters's most important work was the

revising and editing of A. W. Thayer's monumental life of Beethoven. The German translation from Thayer's original English manuscript in the three volumes published during the author's lifetime (in 1866, 1872 and 1879) was his work. After Thayer's death Deiters undertook to revise and complete the work; Vol. I of the new edition appeared in 1901, the fourth volume appearing before his death.

**DE KOVEN, (Henry Louis) Reginald**

(b. Middletown, Connecticut, 3 Apr. 1859; d. Chicago, 16 Jan. 1920).

American composer. He studied at Oxford, where he took his degree in 1879, and then devoted himself to music successively at Stuttgart, Frankfurt a/M., Florence, Vienna and Paris. He composed many light operas, beginning with 'The Begum' in 1887. By far the most successful of them was 'Robin Hood', first heard at Chicago on 9 June 1890, and for many seasons thereafter in America, and given in London as 'Maid Marian'.<sup>1</sup> His 'Rob Roy' (1894) also gained considerable success. A sequel to 'Robin Hood', actually called 'Maid Marian', was produced at Philadelphia on 4 Nov. 1901.

In 1902 De Koven formed the Philharmonic Orchestra at Washington, D.C., which he conducted for two seasons. On 8 Mar. 1917 his grand opera 'The Canterbury Pilgrims', after Chaucer, was produced at the Metropolitan Opera House in New York; a second grand opera, 'Rip Van Winkle', after Washington Irving, was produced at Chicago and in New York by the Chicago Opera Company on 2 Jan. and 30 Jan. 1920 respectively.

De Koven was also a fertile writer of songs, of about 400 which he composed some have gained a remarkable popularity. He had a gift for facile melody and, to a certain extent, for characterization in comedy. But his powers did not extend to the successful creation of operas in the larger forms. His two "grand operas", comedies on a larger scale, show fundamental weaknesses.

**DELABORDE, Élie (Miriam)** (b. Paris, 7 Feb. 1839; d. Paris, 9 Dec. 1913).

French pianist and composer. He was a pupil of Alkan and Moscheles. On completing

<sup>1</sup> Camden Town, Park Hall, 20 Sept. 1890, and Prince of Wales Theatre, 5 Feb. 1891.

his studies he made successful tours in England, Germany and Russia. The war of 1870 drove him to London for a time with his 121 parrots and cockatoos. At the Hanover Square Rooms he gave a concert at which he played on a pedal-board fitted to his pianoforte. In 1873 he was appointed professor at the Paris Conservatoire, where he devoted himself to teaching with the greatest success. He wrote an *opéra-comique*, 'La Reine dort'; an overture, 'Attila', 12 Preludes, studies and fantasies for pianoforte, a Quintet for strings and pianoforte, and songs. G. F.

**Delacroix, Eugène.** See Chopin (acquaintance with)

**DELAGE, Maurice (Charles)** (b. Paris, 13 Nov. 1879).

French composer. He did not embark on a musical career until fairly late in life. He studied with Maurice Ravel, who had a great affection for him and whose ardent admirer he was. His first work, a symphonic poem entitled 'Conté par la mer' (based on a story by M. G. Morrow), was followed by three songs — 'Intermezzo', 'Améthystes', 'Au livre de Monelle' — and by a series of 'Poèmes hindous'. The outbreak of war in 1914 interrupted the composition of a ballet, 'Les Bâisseurs de ponts' (based on a story by Kipling), and the overture alone survives. Kipling's 'Jungle Book' provided words for two vocal works.

Delage's other works include 'Ballade', 'Rose d'octobre' and 'L'Alouette' to poems by Rémy de Gourmont and François Villon, seven 'Hau-Kais' based on Japanese lyrics, three orchestral pieces, 'Nuit de Noël', 'Hommage à Manuel de Falla' and 'Danse'; a pianoforte piece entitled 'Schumann'; a string Quartet (1949) and some songs, 'Chansons de ma mie', 'Sobre las olas', 'Les Colombes', 'Hommage à Ronsard' and 'Hommage à Albert Roussel'. Delage, a scrupulous and careful writer, was always his own most severe critic. He never produced anything hurried or mediocre and won for himself an assured place in the esteem of his contemporaries. G. S., rev.

**Delaney, Patrick.** See Carolan (friendship). Cibber (S. M., remark on).

**DELANEY, Robert Mills** (b. Baltimore, Maryland, 24 July 1903).

American composer. His serious musical studies, begun at the University of Southern

California in 1921, were continued in France, from 1922 to 1927 with Nadia Boulanger at the École Normale de Musique. He also studied with Capet and Honegger in Paris.

Delaney has won a number of awards and prizes. In 1929 he was awarded a Guggenheim Fellowship, in 1933 a Pulitzer Prize (for his setting of Stephen Vincent Benet's 'John Brown's Body'), and he has been awarded Boston Music Fund scholarships no less than six times. He has been on the teaching-staffs of the Santa Barbara School in California, the School of Music at Concord, Mass., and of Northwestern University at Evanston, Ill. His works, both chamber and orchestral music, have been widely performed in California, at Boston, New York, Rochester and in Europe.

The following are Delaney's principal works:

#### CHORAL WORKS

'John Brown's Song', choral symphony (1931).

'Blake Cycle' for chorus & orch

'Night' (William Blake) for chorus, stg orch & pf (1934)

Choralia No. 1, 6 arrangements for women's voices (1936)

Choralia No. 2 (1937)

'My Soul, there is a Country' (Vaughan), for chorus & orch. (1937).

'Western Star', for 5-part chorus & orch (1944)

#### ORCHESTRAL WORKS

'The Constant Couple', suite (1926).

Don Quixote Symphony, after Cervantes (1927).

'Pastoral Movement', tone-poem (1930).

Symphonic Piece No. 1 (1935)

Symphonic Piece No. 2 (1937).

'Work 22' overture (1939).

'Going to Town', suite (1941).

Symphony No. 1 (1942)

#### VIOLIN AND ORCHESTRA

Adagio for vn & stg. orch (1935).

#### CHAMBER MUSIC

String Quartet No. 2 (1930)

String Quartet No. 3 (1930).

P. G.-H.

**DELANGE, Herman-François** (b. Liège, 1717; d. Liège, 27 Oct. 1781).

Walloon violinist and composer. He learnt music at one of the Liège churches and obtained a money prize in 1736. He was then sent to Rome, where he worked at fugue under G. B. Costanzi. After a further stay at Naples he returned home in 1742, becoming first violin at the Collegiate church of St. Paul at Liège. He composed 11 masses, a Magnificat and other church music, symphonies, overtures and sonatas, compiled a book of songs, 'Le Rossignol', for voice and continuo, and two pieces for the stage, both performed at Liège: 'Le Riche malheureux' (23 Aug. 1763) and 'Nicette, ou L'École de la vertu' (Jan. 1776). He was also the inventor of a musical toy, 'Le Toton harmonique', a teetotum

par lequel toutes personnes pourront composer une infinité d'airs et de marches en trio, en faisant tourner un totot, et cela sans savoir la composition, ni même la musique. Ces airs et marches pourront se jouer sur toutes sortes d'instruments à cordes et à vent

E. B.

**DELANNOY, Marcel** (b. La Ferté-Alais, 9 July 1898)

French composer. He studied architecture and painting at the École des Beaux-Arts in Paris and is practically self-taught in music, which he did not take up till his twentieth year. After some guidance from Honegger he made a sensational début at the Opéra-Comique with his 'Le Poirier de misère', which won the approval of Ravel and definitely established him as a composer of great talent with an original style of his own. A countryman by origin, Delannoy writes music in which "folk" and even "popular" elements are blended, but without affectation, his style being, in general, vigorous and robust. His Symphony and his string Quartet have both been highly praised, but his best-known works have been composed for the theatre, both operas and ballets. These reveal a wide range of literary inspiration, ranging from Boccaccio ('Ginevra', opera in 3 acts) and Shakespeare ('Puck', described as an *opéra féerique*) to the story of Cinderella ('La Pantoufle de vair', ballet) and the lightest of *opéra-bouffe* librettos, such as 'Philippe', which had its *première* at the Paris Exhibition in 1937. Delannoy is an interesting example of a composer who has made a place for himself in contemporary music without having had any official training or having passed through any of the national conservatories.

## CATALOGUE OF WORKS

### OPERAS

- \* 'Le Poirier de misère', *opéra-comique* (1927).
- \* 'Philippe', *opéra-comique*.
- \* 'Ginevra', *opéra-comique* (after Boccaccio) (1942).
- \* 'Puck', *opéra féerique* (after Shakespeare's 'Midsummer Night's Dream') (1946).

### BALLETS

- \* 'L'Éventail de Jeanne' (choreography by Alice Bourgat), with Auric, Ferrand, Ibert, Milhaud, Poulenc, Ravel, Roland-Manuel, Roussel & Schmitt, 'Bourrée' by D (1927).
- \* 'La Pantoufle de vair' (after Perrault) (1935).
- \* 'Les Noces fantastiques' (1943).
- \* 'Le Fou de la dame', *chanson de geste* in 1 act.

### ORCHESTRAL WORKS

- Suite from 'Le Marchand de lunettes'.
- Suite from 'La Pantoufle de vair'.
- Symphony
- \* 'Intermezzo'.
- \* 'Sérénade concertante'.
- \* 'Esquisse symphonique'.
- \* 'L'Homme danse'.
- \* 'Figures sonores' for chamber orch.

### VOICE AND ORCHESTRA

- \* 'Etat de veille', poems (1943-45).

### CHAMBER MUSIC

- String Quartet, E ma.
- Rhapsody for pf. and small inst. ensemble.

R. H. M.

**DE LARA, (Lottie) Adelina** (real name, Tilbury) (b. Carlisle, 23 Jan. 1872).

English pianist and composer. Her father's

name was Tilbury; De Lara was the maiden name of her mother, a sister of Mrs. Henry Russell, mother of Landon Ronald. She began to appear at the age of six and gave recitals as a child prodigy throughout Great Britain and Ireland until 1884. She then went to the Hoch Conservatory at Frankfurt o/M for six years, Iwan Knorr being among her teachers for theoretical subjects, and for the pianoforte she became a pupil of Clara Schumann. On her return to England she made her first appearance as a finished artist in 1891, appearing in London at the Monday and Saturday "Pops" at St. James's Hall and at the Crystal Palace, also with the Hallé Orchestra at Manchester and on extensive tours. Later she gave recitals in Australia, U.S.A., in South Africa during the Boer War and elsewhere. As a broadcaster she was active from the first years of the B.B.C., particularly as an exponent of the Clara Schumann tradition, of which she remained one of the last upholders. As a teacher she trained many distinguished pianists from 1891 until 1938, when she gave up giving lessons but still continued to play, especially on the wireless. Her compositions include 2 pianoforte concertos, a suite 'In the Forest' for string orchestra, an Idyll for tenor and orch., 2 song cycles and numerous ballads for voice and pianoforte.

E. B.

**DE LARA, Isidore** (actually Cohen) (b. London, 9 Aug. 1858; d. Paris, 2 Aug. 1935).

English singer and composer. At the age of fifteen he entered the Milan Conservatory, obtaining the gold medal for composition, which he studied with Mazzucato. He also studied singing under Lamperti. He then went to Paris and continued to work at composition under Lalo. On his return to England De Lara was at first known as a singer and song-writer, but he also turned his attention to the stage, producing 'Wrong Notes' (privately performed), 'The Royal Word' (Gaiety Theatre, 1889) and 'Minna, or The Fall from the Cliff' (Crystal Palace, 1886). On the suggestion of Victor Maurel he transformed his cantata 'The Light of Asia' into an opera and secured its production at Covent Garden in 1892. The following year his 'Amy Robsart' was given in French at the same theatre and a year later at Monte Carlo. De Lara then settled for a time at Monte Carlo, and it was there, under the protection of the Princess of Monaco, that he mainly made his success, producing 'Moina' in 1897 and 'Messaline' in 1899, the last-named being heard at Covent Garden in the same year. 'Soléa' was produced, in German, at the Cologne Opera in 1907, 'Sanga' at Nice in 1906 and 'Nail' at the Théâtre de la Gaîté, Paris, in 1912, and Covent Garden during the summer season of 1919. 'Les

Trois Masques' was first given at Marseilles in French in 1912 and later in English at Glasgow, 'The Three Musketeers' at Cannes in 1921, and by the Carl Rosa Company at Newcastle, 2 May 1924, and subsequently in London. Later operas are 'Prince Marcocana' (Aix-les-Bains, Sept. 1927) and 'A fehér vilorlász' ('Le Voilier blanc') (Budapest, 24 May 1933). De Lara worked on the French model of Massenet; his music shows a sure instinct for vocal and instrumental effect, but suffers from superficiality and lack of character. He was a Chevalier of the Legion of Honour and a Commander of the Crown of Italy.

During the war of 1914-18 De Lara gave in London many orchestral and chamber concerts of British music, at which numerous works were heard for the first time. He worked hard to promote the establishment of a permanent opera in London, but without success.

N. C. G., adds.

**DELARUE, Gervais** (b. Caen, June 1751; d. Caen, 1833)

French priest and writer on music. He was an abbé and fled to England from the Revolution in 1793, returning to France in 1798. He became a member of the London Society of Antiquaries and wrote 'Essais historiques sur les bardes, les jongleurs et les trouvères normands et anglo-normands', 3 vols.

E. v. d. s.

**DELÂTRE<sup>1</sup>, Jean Petit Claude** (b. ? Liège, ?; d. Utrecht, Aug. ? 1589<sup>2</sup>).

Walloon composer. He was probably educated musically at Liège Cathedral. He appears, under the name of Johannes Passi, alias Petit-Jean, in the account of Notre-Dame collegiate church of 's Hertogenbosch in 1522, and he remained there until 1530, receiving a sum of money from the chapter to join the Emperor Charles V, with whom he travelled. His name appeared frequently after that date in the collections of Phalèse and Susato. In 1554-55 he was chapel master to the Prince-Bishop of Liège and in 1556 his name appeared in the Latin form of Joann Laetrius as that of the musical collaborator in the preface to Grégoire de Hologne's tragedy 'Sainte Catherine'. Later he became chapel-master at Verdun, and in 1576 he obtained the first prize at the Puy de Musique of Évreux with the 5-part chanson 'Ce riz plus doux'. His works include motets and chansons. E. B.

**Delâtre, Louis.** See Bizet ('Vasco de Gama', symph. ode).

**Delavigne, Casimir.** See Auber (3 lib.). Bizet (song). Clapisson ('Mystères d'Udolphe', lib.). Halévy ('Charles VI', lib.). Kurpiński ('Warszawianka', song).

<sup>1</sup> Also de Latere, de Latre, de Lattre, Passi, Passy and Petit-Jean.

<sup>2</sup> His death was said to have occurred twenty years earlier, according to the tombstone, "Obut Ult. aug. 1569", but since we have biographical details of as late as 1576, that date is impossible. It was probably a misreading on a defective stone for 1589.

**Delavigne, Germain.** See Gounod ('Nonne sanglante', lib.). Halévy ('Charles VI', lib.). Muette de Portici (Auber, lib.).

**DELCROIX, Léon** (b. Brussels, 15 Sept. 1880; d. Brussels, 14 Nov. 1938).

Belgian conductor and composer. A pupil of Józef Wieniawski, Vincent d'Indy and others, he became conductor at various Belgian theatres. For the stage he wrote a ballet, 'La Bacchante' (Ghent, 1912), and incidental music for J. F. Elslander's 'Le Petit Poucet' (Brussels, Théâtre de la Gaîté, 9 Oct. 1913). Further works are a Symphonic Suite, Op. 18; Symphony, Op. 19; several symphonic poems ('Le Roi Harald', Op. 26; 'Rapsodie languedocienne', Op. 27, etc.). His chamber music includes a pianoforte Quartet, Op. 1 (1903); Trio, Op. 4; Quintet, Op. 23; violin Sonatas, Opp. 34 & 68; string Quartet, Op. 35; clarinet Quartet, Op. 67, cello Sonata, Op. 69. A. L.

**DELDEVEZ, Édouard (Marie Ernest)** (b. Paris, 31 May 1817; d. Paris, 5 Nov. 1897).

French violinist, conductor and composer. He entered the Paris Conservatoire in 1825, becoming a pupil of Habeneck, Halévy and Berton. In 1833 he obtained the first prize for fugue and in 1837 the second, and in 1838 the second Prix de Rome with the cantata 'La vendetta', which he later revised and printed as Op. 16. As violinist he played in various orchestras, at the Théâtre-Italien, Opéra and Société des Concerts du Conservatoire. He became second conductor of that society (1860), then first conductor there (1872) and at the Opéra (1873) after G. Hainl, leaving it in 1877. He directed the orchestral class at the Conservatoire, 1873-85.

The list of his compositions is to be found in 'Mes Mémoires' (1890): they consist of chamber music, 3 symphonies, "ouvertures de concert", etc.; also dramatic works, ballets performed at the Opéra, 'Lady Henriette' (on the subject on which Flotow's 'Martha' was later based), 'Eucharis', 'Mazarina', 'Yanko le bandit', etc. He was a learned musician and a pedagogue. He published an anthology of violinists (4 vols.) and theoretical works: 'Des Principes de la formation des intervalles et des accords' (1868); 'Curiosités musicales' (1873); 'L'Art du chef d'orchestre' (1878), etc.

See also Flotow (collab. in 'Lady Henriette'). Martha (do) Minkus (collab. in 'Paquita' ballet).

**Dellico, Melchiorre.** See Caricature (Verdi), p. 65 & PLATE 8.

**DELGADILLO, Luis** (b. Managua, 26 Aug. 1887).

Nicaraguan composer. He studied at the Conservatory of Milan and on his return home undertook extensive travels in Central and South America for the purpose of collecting

folk music. Later he was appointed director of the National Conservatory of Panama. His works are mainly based on the folk elements with which he became familiar during his exploratory tours. The following are all for orchestra 'Escenas pastoriles', Mexican suite 'Teotihuacan', 'Sinfonía incaica', 'Sinfonía serrana', 'Fantasía tropical panameña'. A sacred work, 'Las siete palabras de Cristo' is for chorus and orchestra. E. B.

**DELIBES, (Clément Philibert) Léo** (b. Saint-Germain du Val, Sarthe, 21 Feb 1836; d. Paris, 16 Jan 1891).

French composer. He went to Paris in 1848 and was admitted into the solfège class at the Conservatoire, at the same time singing in the choirs of the Madeleine and other churches.

Having obtained a first prize for solfège in 1850, he studied pianoforte, organ, harmony and advanced composition under Le Couppey, Benoist, Bazin and Adolphe Adam. Through the influence of the last-named he became accompanist at the Théâtre-Lyrique in 1853, and also organist in the church of Saint-Pierre de Chaillot, and elsewhere, before his final appointment at Saint-Jean-Saint-François, which he held from 1862 to 1871. He devoted himself from an early period to dramatic composition, and after his first essay, 'Deux Sous de charbon' (Folies-Nouvelles, 1855), wrote several short comic operas for the Théâtre-Lyrique — 'Maître Griffard' (1857), 'Le Jardinier et son seigneur' (1863), and a number of operettas for the Folies-Nouvelles, the Bouffes-Parisiens and the Variétés, of which some were very successful — 'Deux Vieilles Gardes' (1856), 'L'Omelette à la Follembüche' (1859), 'Le Serpent à plumes' (1864), 'L'Écossais de Chatou' (1869), etc. He also wrote a number of choruses for male voices, a Mass and some choruses for the school children of Saint-Denis and Sceaux, where he was inspector.

In 1863 Delibes became accompanist at the Opéra and in 1865 second chorus-master (under Victor Massé): he kept this appointment until 1872, when he gave it up on the occasion of his marriage with the daughter of Mlle Denain, a former actress at the Comédie-Française. In 1865 a cantata, 'Alger', was

performed. By his appointment at the Opéra a new career was opened out to him. Having been commissioned to compose the ballet of 'La Source' (produced 12 Nov. 1866) in collaboration with the Polish musician Minkus, he displayed such a wealth of melody as a composer of ballet music, and so completely eclipsed the composer with whom he had as a favour been associated, that he was at once asked to write a *début* called 'Le Pas de fleurs' to be introduced into the ballet of his old master, Adam, 'Le Corsaire', for its revival (21 Oct. 1867). He was finally entrusted with the setting of an entire ballet, on the pretty comedy 'Coppélia' (25 May 1870), which is rightly considered his most charming production. In 1872 he published a collection of charming songs, 'Myrto', 'Les Filles de Cadix', 'Bonjour, Suzon', etc., and on 24 May 1873 he produced at the Opéra-Comique a work in 3 acts, 'Le Roi l'a dit'. After this Delibes returned to the Opéra, where he produced a grand mythological ballet, 'Sylvia' (14 June 1876), which confirmed his superiority in dance music.

In spite of this fresh success Delibes was still anxious to write a serious vocal work and produced a grand scena, 'La Mort d'Orphée', at the Trocadéro concerts in 1878. He then composed two dramatic works for the Opéra-Comique, 'Jean de Nivelle' (8 Mar. 1880) and 'Lakmé' (14 Apr. 1883). A 5-act opera, 'Kassya' (completed by Massenet after the composer's death), was given at the Opéra-Comique, 24 Mar. 1893. Some other dramatic pieces ('Le Don Juan suisse' and 'La Princesse Ravigotte') remain in manuscript. In addition to the above works he composed incidental music for Victor Hugo's 'Le Roi s'amuse', on its revival at the Comédie-Française, 22 Nov. 1882, and published several songs, almost all intended for performances at the last-named theatre. In 1877 Delibes was made Chevalier of the Legion of Honour; in Jan. 1881 he succeeded Réber, who had just died, as professor of advanced composition at the Conservatoire; and in Dec. 1884 he was elected a member of the Institut in the place of Victor Massé. A. J.

The following are Delibes's works for the stage:

#### OPERAS

Title	Libretto	Production
'Monsieur Griffard', 1 act	Mestéps & Adolphe Jaime.	Paris, Théâtre-Lyrique, 3 Oct 1857
'Le Jardinier et son seigneur', 1 act.	Barrière	Paris, Théâtre-Lyrique, 1 May 1863
'Le Roi l'a dit', 3 acts.	Edmond Gondinet.	Paris, Opéra-Comique, 24 May 1873
'Jean de Nivelle', 3 acts.	Gondinet & Philippe Gille.	Paris, Opéra-Comique, 8 Mar. 1880
'Lakmé', 3 acts.	Gondinet & Gille.	Paris, Opéra-Comique, 14 Apr. 1883
'Kassya', 4 acts (unfinished; scoring completed and recitatives added by Massenet)	Henri Meilhac & Gille, on L. von Sacher-Masoch's story 'Frisko Balaban'.	Paris, Opéra-Comique (posth.), 24 Mar. 1893
'Le Roi des montagnes', 3 acts (sketches only).	?	—

## OPERETTAS

<i>Title</i>	<i>Libretto</i>	<i>Production</i>
'Deux Sous de charbon', 1 act.		Paris, Théâtre des Folies-Nouvelles, 1855.
'Les Deux Vieilles Gardes', 1 act	Villeneuve & Pierre Lema-noir	Paris, Théâtre des Bouffes-Parisiens, 8 Aug 1856
'Dix Demoiselles à marier', 1 act	Jaime & Chollet.	Paris, Bouffes-Parisiens, 12 Nov 1856.
'L'Omelette à la Follembûche', 1 act	Marc Michel & Eugène Labiche.	Paris, Bouffes-Parisiens, 8 June 1859.
'Monsieur de Bonne-Étoile', 1 act	Gille & Jaime.	Paris, Bouffes-Parisiens, 4 Feb. 1860.
'Les Musiciens de l'orchestre', 2 acts (with C Erlanger & Hignard).		Paris, Bouffes-Parisiens, 25 Jan 1861
'Mon Ami Pierrot', 1 act.		
'Les Eaux d'Em's', 1 act.		Ems, Kursaal, July 1862.
'La Tradition', prologue for the re-opening of the Bouffes-Parisiens.		Paris, Bouffes-Parisiens, 5 Jan. 1864.
'Le Serpent à plumes', 1 act.	Gille.	Paris, Bouffes-Parisiens, 16 Dec. 1864.
'Le Bœuf Apis', 1 act.		Paris, Bouffes-Parisiens, 25 Apr. 1865
'Malbrouk s'en va-t en guerre', 4 acts (with Bizet, Jonas & Legoux; 4th act by Delibes)	Paul Siraudin & William Busnach.	Paris, Théâtre de l'Athénée, 13 Dec. 1867.
'L'Ecoussas de Chatau', 1 act	Jaime & Gille	Paris, Bouffes-Parisiens, 16 Jan. 1869
'La Cour du Roi Pétaud', 3 acts	Gille & Jaime	Paris, Théâtre des Variétés, 24 Apr 1869.

<sup>1</sup> Published in 'Le Journal des Demoiselles', never produced.

<sup>2</sup> These two works were announced for production by the Théâtre de l'Athénée, but no trace of them remains, they may never have been written.

**DÉLIÈRE, LE** (Opera). See BERTON.

**DELIUS, Frederick** (b Bradford, 29 Jan. 1862; d. Grez-sur-Loing, 10 June 1934)

English composer of mixed continental extraction. His musical temperament developed early, and as a boy he became tolerably proficient on the violin; but his parents destined him for a mercantile career and refused to allow him to devote himself to music. His distaste for a business life, however, was so profound that in his twentieth year he left home and established himself as an orange-planter in Florida. In this remote seclusion he devoted his leisure time to the study of music. He had at first no means of instruction save books on the theory and history of music and the scores of the great masters, but before long the friendship of an American organist, Thomas F. Ward, helped him considerably in the pursuit of his studies. After a sojourn of several years in Florida he returned to Europe and entered the Conservatory at Leipzig, where he studied under Jadassohn and Rei-

necke, from whose instruction he said that he profited little; but he set much store by the influence of Grieg, who was at that time residing at Leipzig. From 1890 Delius lived principally in France, first mainly in Paris, but later in the country town of Grez-sur-Loing (Seine-et-Marne), where after his marriage to the painter Jelka Rosen he made a home that remained his to the end of his life.

Delius's first published work, a 'Légende' for violin solo with orchestral accompaniment, dates from 1892. It was first performed at a concert of Delius's works given in London in 1899. This was followed by a fantasy-ouverture 'Over the Hills and Far Away' (1893), first performed under Haym at Elberfeld in 1897, and a pianoforte Concerto in C minor (1897), now known in a version revised by Tivadar Szántó. The latter was first played at Elberfeld in 1904 by Julius Butts, under the conductorship of Haym, and repeated at Dusseldorf. In its remodelled form it was played by Szántó at a Promenade Concert in London in Oct. 1907. In 1897 Delius was invited by the Norwegian dramatist Gunnar Heiberg to write incidental music for his political play 'Folkeraadet', which was produced during the same year at Christiania amid stormy scenes of protest and disapproval. Delius's satirical use of the Norwegian national anthem was ill taken by critics and public alike, and popular feeling was roused to such a point that at one performance a member of the audience actually fired several revolver shots at the composer, who was surveying the house from the proscenium curtain, happily without any result save that of terrifying a portion of the audience into hysterics. An orchestral suite drawn from the 'Folkeraadet' music was performed at the above-mentioned London concert in 1899. Meanwhile Delius was engaged on an opera, 'Koanga' (1896-97), the libretto of which was drawn by C. F. Keary from G. W. Cable's novel 'The Grandissimes'. This was produced at the Elberfeld municipal theatre in 1904 under Fritz Cassirer. His next works were two symphonic poems: 'Life's Dance' (1898), first performed at Dusseldorf in 1904 under Butts, and 'Paris: the Song of a Great City' (1899-1900), produced by Haym at Elberfeld in the latter year, and first given in London under Thomas Beecham in 1908. From 1900 to 1902 Delius was engaged upon two operas, one in German, the other in French, 'Romeo und Julia auf dem Dorfe' and 'Margot la Rouge'. The first of these, which is in a prologue and three acts, was produced at the Berlin Komische Oper in 1907 and was given in English as 'A Village Romeo

and Juliet', with moderate success, during Beecham's season at Covent Garden, 22 Feb. 1910. It was revived at Covent Garden in 1920 with greater success owing partly to the fact that by that time Delius's outlook and musical style was much more familiar to English audiences, and partly to the greater care expended on its stage production. The second, in one act, has not been performed, but a remarkable fact connected with it is that Ravel, as a young man, made the vocal score of it. To these stage works succeeded 'Appalachia', a tone-poem for orchestra and chorus (1903), produced at the Lower Rhine Festival under Butts in 1905, and first performed in London by Cassirer in 1907, 'Sea-Drift' (1904), a setting of Walt Whitman for baritone solo, chorus and orchestra, produced at the Tonkünstlerfest at Essen in 1906 and first performed in England at the Sheffield Festival of 1908 under Henry J. Wood; and 'A Mass of Life' (1905), an adaptation of selected passages from Nietzsche's 'Also sprach Zarathustra', for soloists, chorus and orchestra, first given in its entirety in London under Thomas Beecham in 1909. Other productions of the same period were 'Brigg Fair', first given in London under Beecham in 1908, 'In a Summer Garden', which was conducted by the composer at a Philharmonic concert in the same year, and 'A Dance Rhapsody', which the composer conducted at the Hereford Festival of 1909. At this period Delius was engaged on the composition of another opera, 'Fennimore and Gerda', based on J. P. Jacobsen's novel 'Niels Lyhne', which was not, however, performed until 1919, when it was given at Frankfurt o/M. on 21 Oct.

By 1910 the efforts of the conductors, both German and English, above mentioned had produced a wide recognition of the distinctive voice of Delius, yet it is noticeable that many of his important works have had to wait several years for their first performances. Particularly may be mentioned 'A Song of the High Hills' for choir (without words) and orchestra written in 1911-12, but unheard until 1920, when the Royal Philharmonic Society of London with the Philharmonic Choir produced it under Albert Coates. The 'Requiem', rationalistic in its outlook, written during the first world war (1914-18) was first given by the same organization on 23 Mar. 1922. German enterprise in the production of Delius's music, always due to only a handful of enthusiasts, now began to decline and the composer came into his own in the country of his birth, where his greatest exponent and most enthusiastic champion, Sir Thomas Beecham, worked indefatigably on his behalf.

Delius never composed for special occasions and his works, written as the spirit moved

<sup>1</sup> Heseltine says, p. 38: "One outraged patriot even went so far as to fire off a blank cartridge at the conductor of the orchestra".

him, appeared in no order, nor does the list of them indicate any special absorption in one type of music at a given time. It is exceptional to find that two concertos, that for violin and violoncello and that for violin, were completed at about the same time (1916). Even the incidental music to James Elroy Flecker's play 'Hassan', produced at His Majesty's Theatre, London (Sept. 1923), was written as long before its performance as 1920.

Delius is a solitary figure in music. It is impossible to range him in the ranks of any given school. By reason of the circumstances of his birth and upbringing he stands apart from the main currents of musical influence, and he owes but little to any of the men who did most to guide the onward course of modern music. Although his methods are fully as advanced with regard to harmony and form as those of any of his contemporaries, he appears to have moulded them for himself. From the later developments of Wagnerism, as represented in the works of Strauss, he is as remote as from the "atmospheric" experiments of Debussy and his fellows. One can detect traces of the influence of Grieg in some of his earlier compositions, but it is only in the most general sense that his maturer works can be said to owe anything to the initiative of other men. But if Delius, as regards his manner, is to a great extent "orbed in isolation", as regards his matter, he has proved himself susceptible to the most varied and diverse influences. Much of his music is confessedly pictorial, but it is something much more as well. It is less a painting of nature itself than a study of the influence of nature upon the human soul. Delius views nature, not with that "innocence of eye" which was one of the catchwords of the early impressionistic painters, but in the light of his own temperament, and it is the blending of the psychological with the pictorial element that gives to his music its peculiarly characteristic quality.

A musician so keenly alive to external influences was naturally profoundly affected by the varied scenes in which his life was passed. His early fantasia-overture 'Over the Hills and Far Away' was obviously inspired by the moorland scenery of his native Yorkshire. His experience of the tropical luxuriance of Florida is reflected in his opera, 'Koanga', a work in which the Negro element plays an important part, and to a certain extent in 'Appalachia', that remarkable work in which the virgin forests and mighty waters of America seem to speak. 'Paris' is a musical picture of the composer's impressions of the great city by night. It is no mere exercise in musical realism, though it displays a keen sense of pictorial effect. Rather is it a personal record of the feelings engendered by the contemplation of the sleeping city. It is a study of effects

rather than of causes, and is thus a peculiarly characteristic example of Delius's attitude towards music, and of his employment of its resources.

His attitude towards questions of pure musical form is best studied through the concertos. The early pianoforte Concerto (in the form in which it is now known) shows him adopting more or less the standpoint of Liszt — a standpoint relying on contrasts, though the contrasts are drawn more nearly together than in the classical concerto form of separated movements. In the three later concertos, *i.e.* the double Concerto, the violin and the violoncello Concerto, contrasts are less essential to the design; indeed in the violin Concerto, the finest of the three, the whole design seems to grow out of an expansion of the initial idea. Though the features of traditional form are discoverable by analysis, the hearer gains an impression of continuous evolution in which direct contrast is little considered.

Delius is happier with the orchestra than with the human voice, which in some of his works he is apt to treat in what may be called too instrumental a fashion. 'A Mass of Life', his most ambitious choral work, suffers from a disconnected libretto; its author, Fritz Cassirer, seems to have abandoned as impossible the idea of reducing Nietzsche's 'Zarathustra' into manageable limits and to have contented himself with choosing those passages that seemed to lend themselves most readily to musical treatment without paying much attention to philosophical development. 'A Mass of Life' contains much striking and impressive music, but the general effect of the work, at any rate at a first hearing, is somewhat indefinite. In 'Sea-Drift', on the other hand, Delius is at his best and strongest. The same may be said of the 'Song of the High Hills', in which the wordless choir is treated as a second and more spiritualized orchestra. The voices, as it were, carry the development of the melodic material up above the snow line.

The symptoms of the disease which clouded Delius's career began to appear in 1924. The paralysis and blindness advanced rapidly and he soon became a helpless invalid tended devotedly by his wife in their retreat at Grez. His brain was unclouded. He could enjoy the visits of his friends, enter with his old avidity into discussion of whatever interested him, appreciate and deprecate music according to his own standards and relish performances, particularly those of his own works, heard by wireless or on gramophone records. But his own creative output seemed entirely at an end.

It was in these circumstances that in 1928 Eric Fenby, a young Yorkshire musician unknown to Delius, offered his services as amanuensis. The offer was accepted; Fenby arrived at Grez in Oct. and remained there until the

end. The first task given to Fenby was to make a transcription for two pianos of 'A Poem of Life and Love' in order that Delius might hear it played when Balfour Gardiner, one of his most constant friends, paid him a visit. It may be noted that the 'Poem' had been listed in Heseltine's book as a lost manuscript. Presently Fenby began the laborious task of devising a method by which Delius could dictate new music to him. Despite what seemed at first to be insuperable difficulties a remarkable amount of composition was achieved in this way. The whole method is described in detail in Fenby's 'Delius as I knew Him'. The works so dictated are:

- A Song of Summer (orch.).
- Fantastic Dance (orch.).
- 'Irmelin' prelude (orch.).
- Caprice and Elegy (cello & chamber orch.).
- Sonata No. 3 (vn. & pf.).
- 'Songs of Farewell' (double choir & orch.).
- 'Idyll' (sop., bar. & orch.).

The most important of these, the 'Songs of Farewell' (words selected by Jelka Delius from Whitman), was given its first performance in London, on 22 Mar. 1932, at a Courtauld-Sargent concert under the direction of Malcolm Sargent.

During these years of illness Delius's friends, foremost among them Sir Thomas Beecham, had redoubled their efforts to secure a fuller appreciation of, and wider sympathy with, his music. Perhaps the fact that the personal detachment from the public which the composer had preserved by choice during his active life was now enforced by circumstance helped the campaign. Undoubtedly a sentiment of personal sympathy went out to him from his native country. The bestowal by King George V of the Companionship of Honour in 1929 gave expression to that sentiment as a well-timed recognition of his eminence as an artist. Beecham's advocacy reached its climax in the autumn of the same year when he conducted at Queen's Hall a six-day festival of Delius's music (between 12 Oct. and 1 Nov.). This gave a comprehensive survey of all his major works except the operas. Delius came to London to attend it, sat in his bath-chair in the front of the grand circle throughout and was even able to speak a few words of thanks at the end. It was his last visit to England. His portrait painted by H. James Gunn at that time was shown at the Royal Academy in the

following year. A similar festival was given by Beecham in Oct.-Dec. 1946, with the object of collecting funds for an authoritative edition of Delius's works, which, more than those of perhaps any other major composer, stand much in need of careful editing.

Since Delius's death two of his operas have been given in London under the direction of Beecham, who in June 1934 undertook, on the invitation of Sir Hugh Allen, a production of 'A Village Romeo and Juliet' in the Parry Theatre at the R.C.M. This was a performance by students but, given in intimate conditions and with the most scrupulous care bestowed on every detail, it created an impression of delicate beauty which had not been attainable in the previous performances at Covent Garden. 'Koanga' at last received its public performance, on 23 Sept. 1935, at an autumn season given by Beecham at Covent Garden, and was then included in the repertory of the company which toured in the provinces.

On his death Delius was buried without ceremony of any sort in the graveyard at Grez. He had wished to be buried in the garden of his own house, but as this was known to be impossible he had "said that he would like to rest in a country churchyard somewhere in the South of England". A year after his death, therefore, the remains were transferred to Limsfield, Surrey, and given Christian burial there.

Mrs. Delius did not long survive her husband. She died on 28 May 1935.

## SONGS

<i>Title</i>	<i>Words</i>	<i>Composed</i>
'Two Brown Eyes'	Hans Andersen.	1885.
5 Songs from the Norwegian (Ded to Nina Grieg)	Bjørnstjerne Bjørnson.	1888.
1. Slumber Song	J. S. C. Welhaven	
2. The Nightingale.	Johus Paulsen	
3 Summer Eve	Theodor Kjerulf.	
4 Longing.	A. Munck.	
5 Sunset		
7 Songs from the Norwegian (Ded to Nina Grieg)	Henrik Ibsen	1889-90.
1 Cradle Song	Aasmund Olafsen Vinje	
2 The Homeward Journey	Bjørnson.	
3. Twilight Fancies (or Evening Voices).	Bjørnson.	
4 Venevil	Ibsen.	
5 Minstrels.	Bjørnson	
6. Secret Love	Ibsen	
7. The Bird's Story	Tennyson	1891
Song cycle from 'Maud'		
1. Come into the garden.		
2 Go not, happy day		
3 I was walking a mile.		
4 Birds in the high-hall garden.		
5. Rivulet crossing my ground.		
'Three Shelley Lyrics'	Percy Bysshe Shelley.	1891.
1 Indian Love Song		
2 Love's Philosophy		
3 To the Queen of my Heart		
'Three Verlaine Songs'	Paul Verlaine.	1895.
1 Il pleure dans mon cœur.		
2 Le ciel est par-dessus le toit		
3. Plus vite, mon cheval (withdrawn).		
7 Songs from the Danish	Jens Peter Jacobsen.	1897.
1 Let springtime come	Jacobsen.	
2. Irmelin Rose	Jacobsen.	
3. In the Seraglio Garden	Jacobsen.	
4. Silken Shoes	Jacobsen.	
5 Wine Roses	Jacobsen.	
6 Through the long, long years.	Holger Drachmann.	
7. On the Seashore	Friedrich Nietzsche.	1898.
4 Nietzsche Songs		
1 Der Wanderer und sein Schatten.		
2. Der Einsame		
3 Der Wanderer		
4. Nach neuen Meeren.		
'With joy we journey laughing'	Drachmann	1898.
2 Songs from the Danish		1900
1. The Violet.		
2. Autumn	Ludvig Holstein	
'Black Roses'	Jacobsen.	1901.
'The nightingale has a lyre of gold.'	Jacobsen.	1908.
'La Lune blanche'	W E Henley.	1910.
'Hy-Brazil'	Verlaine	1913
2 Songs for a Children's Album	Fiona Macleod.	1913.
4 Old English Lyrics		1915.
1. It was a lover and his lass.	Shakespeare	1916.
2. Spring, the sweet spring.	Thomas Nashe.	
3 Daffodils.	Herrick.	
4. So sweet is she.	Ben Jonson	
'Avant que tu ne t'en ailles'	Verlaine.	1919.

**DELL' AIOLLE, Francesco.** See LAYOLLE.

**DELLA BELLA, Domenico** (b. ?; d. ?). Italian 17th-18th-century violoncellist and composer. He was *maestro di cappella* at the cathedral of Treviso. He composed 12 'Sonate da chiesa a tre' (2 violins, cello *obbligato* and continuo), Op. 1 (1704); a Sonata for cello and continuo; masses, psalms, a 'Te Deum' and other church music.

E. v. d. s., adds.

**DELLA CASA, Lisa** (b. Burgdorf, Canton Berne, 1919).

Swiss soprano singer. She studied with Frau Dr. Häser at Zurich and began a remarkable operatic career with an appearance at the Salzburg Festival of 1947, where she sang the part of Zdenka in Strauss's 'Arabella' under Karl Böhm. The following year she was the Marcellina in 'Fidelio' there under Furtwängler and in 1950, again with Böhm, she appeared as the Countess in the first Salzburg performance of Strauss's 'Capriccio'. Various visiting engagements took her to Zurich, Vienna, Paris, Munich, Turin and Milan. Her principal parts are Pamina, Countess Almaviva, Donna Anna, Butterfly, Mimì, Sophie ('Rosenkavalier') and Ariadne. In 1951 she had a great success at Glyndebourne as the Countess in 'Figaro'.

Lisa Della Casa has also done good work on behalf of modern Swiss music: Schoeck, Burkhard (production of 'Die schwarze Spinne'), etc. Apart from her stage career she has made herself known as an interpreter of the great parts in sacred works by Handel, Haydn, Verdi, Brahms and Bruckner.

K. v. F.

**DELLA CIAIA, Azzolino Bernardino** (b. Siena, 21 Mar 1671; d. Pisa, Jan. 1755).

Italian organist, composer and amateur organ builder. Besides his published works — 'Salmi concertati' (Bologna, 1700), 'Cantate da camera' (Lucca, 1701; Bologna, 1702), 'Sonate per cembalo' (Rome, 1727) — he left in manuscript 4 masses and several cantatas and motets; but it is by his instrumental compositions that he is now known, and his treatment of the sonata form is held to be of some importance in the history of the art.<sup>2</sup> In 1733, as a Knight of St. Stephen, he presented a magnificent organ to the church of that order at Pisa, formerly one of the finest in Italy, containing 3 manuals and 100 stops. He not only superintended its construction, but personally assisted the workmen.

<sup>2</sup> See Adolf Sandberger, 'Zur älteren italienischen Klaviermusik'.

**DELLA CORTE, Andrea** (b. Naples, 5 Apr. 1883).

Italian musicologist. He is professor of musical history in the Conservatorio G. Verdi and the University of Turin as well as music critic of the daily 'La Stampa' there. His strong inclination towards historical studies led him to give close attention to the Italian opera of the 18th century, and the baroque opera of the preceding century is also carefully appraised in his writings. Every aspect of the various problems, including the instrumental, is ably presented, revealing the writer's rare literary distinction and acumen. Even his contributions to the daily press abound in comparisons, researches and analogies between the immediate subject and the music produced between 1600 and 1900.

Among Della Corte's published works are the following.

- 'Paisiello e l'estetica musicale del Metastasio' (1922)
- 'Saggi di critica musicale' (1922).
- 'L'opera comica italiana nel 1700', 2 vols. (1923).
- 'Le opere di Verdi':
  - 'Aida' (1923)
  - 'Otello' (1924).
  - 'Falstaff' (1925).
- 'Piccola antologia settecentesca' (1925)
- 'Dizionario di musica', in collaboration with Guido M. Gatti (1st ed., 1926).
- 'Niccolò Paganini' (1928).
- 'Vincenzo Bellini', in collaboration with Guido Pannain (1936).
- 'Storia della musica', with Pannain, 3 vols. (1st ed., 1935).
- 'Tre secoli di opera italiana' (1938).
- 'Arturo Toscanini' (1946).
- 'Satire e grotteschi di musiche e musicisti d'ogni tempo' (1946).
- 'C. W. Gluck' (1948).
- 'L'interpretazione musicale e gli interpreti' (1951).

G. M. G.

**DELLA PORTA, Francesco** (b. Monza, c. 1590; d. Milan, Jan 1666).

Italian organist and composer. The date of his birth is conjectured from his having published in 1619 a collection of 'Villanelle a 1, 2, e 3 voci, accomodate per qualsivoglia strumento' (Rome, Robletti). This fact seems to confute Fétis and Mendel, who place his birth in the beginning of the 17th century. His master was Ripalta, organist of Monza, and he became organist and *maestro di cappella* of more than one church at Milan. He published 'Salmi da cappella' (1657), motets (1645, 1648, 1651), *ricercari*, etc., and was one of the first composers to make practical use of the *basso continuo*.

F. G.

**Della Valle, Cesare.** See Rossini ('Maometto II', lib.).

**DELLA VIOLA, Alfonso** (b. Ferrara, ?; d. ? Ferrara, ?).

Italian 16th-century composer. He was *maestro di cappella* in the service of Ercole (II) d'Este, Duke of Ferrara, and appears to have been the first who accompanied dramatic action throughout with music. He may be regarded, therefore, as one of the pioneers of opera, although it was not until Cavalieri,

Peri, Caccini and Monteverdi that the *stilo rappresentativo*, the *arte nova*, provided composers with the means of individual characterization. In Della Viola's dramas the dialogue was sung by choruses in madrigal form. The first of his tragedies, 'Orbecche', words by Giambattista Giraldo Cuntio, was performed in 1541 at his own house, first in the presence of Ercole (II) d' Este, then in that of the Cardinals Ravenna and Salviati. The second work for which he composed the music was the *favola pastorale* 'Il sacrificio' (the libretto, by Agostino Beccari, published at Ferrara, F. Rossi, 1555), performed on 11 Feb. and 4 Mar. 1554 at the palace of Don Francesco d' Este in the presence of Duke Ercole. His third stage work was 'Aretusa', a pastoral by Alberto Lollio, performed at the palace of Schivanoia in 1563 for the benefit of the students, in the presence of Alfonso (II) d' Este, the later Duke of Ferrara, and his brother Cardinal Luigi d' Este. The libretto was published at Ferrara as late as 1564. A second pastoral, 'Lo sfortunato', by Agostino Argenti, a nobleman of Ferrara, set to music by Della Viola, was performed in 1568. Apart from the librettos nothing has survived of these dramas. Two books of madrigals (1539 and 1540) by Della Viola and some motets and songs in collective volumes are still in existence.

A. L.

**DELLA VIOLA, Francesco.** See DALLA VIOLA.

**DELLE SEDIE, Enrico** (b. Leghorn, 17 June 1824; d. Paris, 28 Nov. 1907).

Italian baritone singer. He was the son of a merchant of Leghorn. In the year 1848 he volunteered in the army of Charles Albert of Piedmont and fought against the Austrians in the war for Italian independence. He was taken prisoner at the battle of Curtatone, but afterwards released, and at the close of the campaign of the following year he retired from the army with the rank of lieutenant. Under the direction of his fellow-citizen, Orazio Galeffi, he then devoted himself to the study of singing and in 1851 made his début at Pistoia in Verdi's 'Nabucco'.

From 1854, when he made a great success as Rigoletto at Florence, his position was secure. He appeared with unvarying success in Rome, Milan, Vienna, Paris and London, and though possessed of so little voice as to earn the sobriquet of *il baritono senza voce*, he made up by dramatic accent and purity of style for the shortcomings of nature. In 1867, at the earnest request of Auber, he accepted a professorship at the Paris Conservatoire on the most advantageous terms hitherto offered. Under him a commission was appointed for the entire remodelling of that institution, but the death of Auber and the outbreak of the Franco-Prussian War compelled the Government to abandon their intention. In 1874 he

published a large work upon the art of singing and musical declamation, under the title of 'L'Art lyrique'. Translations of this and other vocal treatises were published in New York as 'A Complete Method of Singing'.

Delle Sedie was Cavaliere of the Order of the Crown of Italy, for his military services in the campaigns of 1848-49, Cavaliere of the Order of SS Maurizio and Lazzaro, and member of many societies and academies both of Italy and France. For some time he lived in Paris and devoted himself entirely to the teaching of his art.

J. C. G.

**DELLER, Alfred (George)** (b. Margate, 30 May 1912).

English countertenor singer. He sang with distinction as a chorister in his parish church and has since sung without a day's break. Owing to the rarity of his voice, which settled as a natural alto, he found it impossible to obtain expert tuition and consequently has had to rely on his own ability. In 1940 he was appointed a lay-clerk at Canterbury Cathedral, where he remained until he was appointed to the choir of St. Paul's Cathedral, London, in 1947. His first London concert was at Morley College in 1944, in a programme of English music arranged and conducted by Michael Tippett. He sang in the inaugural concert of the B.B.C.'s Third Programme and has made a particular mark in the singing of Purcell and Handel. In 1950 he was engaged to sing at the Edinburgh Festival.

M. K. W.

See also Countertenor.

**DELLER, Johann Florian** (b. Drosendorf, Lower Austria, end of Apr. or 1 May 1729<sup>1</sup>; d. Munich, 19 Apr. 1773).

Austrian composer. Nothing is known about his early life<sup>2</sup> and musical upbringing before he was appointed, on 12 Feb. 1751, violinist in the court orchestra at Stuttgart, where he arrived from Vienna and remained for twenty years. In 1757 he took lessons in composition from Jommelli and in 1760 wrote the ballet music for his master's opera 'Alessandro nell'Indie'. It was chiefly as a ballet composer that he became known, particularly during the period of Noverre's stay at Stuttgart (1760-68); Schubart calls him "gleichsam der Sprecher des grossen Noverre". His most famous ballet was 'Orfeo ed Euridice', first performed with Jommelli's 'Didone abbandonata' on 11 Feb. 1763. For a short time in 1769-70, after Jommelli's dismissal and before his successor Boroni took over, Deller acted as conductor at Stuttgart, but he was altogether dissatisfied with his position there, which had hardly improved since his first arrival, and in

<sup>1</sup> Baptized 5 May 1729; his name also frequently appears as Teller in contemporary accounts.

<sup>2</sup> He was certainly not a pupil of the Karlschule, as is stated in Etner, Riemann and elsewhere; that institute was only founded about the time when Deller left Stuttgart at the age of forty-eight.

June 1771 he returned to Vienna. He had some success with a comic opera, 'Il maestro di cappella', at the Burg Theatre on 31 Dec. 1771; the next year, however, he was already at Munich, where the Dowager Electress of Saxony, Maria Antonia Walpurgis, commissioned him to write a Mass for Dresden and appointed him court conductor. It was probably for Dresden that he wrote a second Italian opera, 'Le contese d' amore', since the score is (or was) preserved there; but it was never performed in the original Italian at all and had some success only many years after his death in a German version by G. F. W. Grossmann ('Eigensinn und Launen der Liebe', first at Bonn in 1782).

Deller died at Munich before he could take up his Dresden appointment. Besides the two operas and his Stuttgart ballets (four of which were published in D.D.T., Vols. XLIII-XLIV, ed. by Hermann Abert, in 1913), he wrote some symphonies, concertos and trio sonatas

A. L.

BIBL.—H. Abert's introduction to the D.D.T. vol mentioned above

**DELLO JOIO, Norman** (b. New York, 24 Jan. 1913).

American pianist, organist and composer. He was given his earliest music lessons by his father, a composer and organist, and he has been a professional musician from an early age, having held many posts as organist and choirmaster in New York churches. At the age of twenty he toured the eastern States extensively with his own jazz band. From 1941-43 he was musical director of the Dance Players, a small ballet company, and he then became teacher of composition at Sara Lawrence College, Bronxville, New York.

Among the awards received by Dello Joio were a Juilliard Graduate Scholarship, the Elizabeth Sprague Coolidge Composition Award, Guggenheim Fellowships in two successive years (1944-45) and a grant from the American Academy of Arts and Letters. He also won a Town Hall Award for his 'Magnificat' for orchestra in 1943. He has appeared as solo pianist with the New York Philharmonic and the Cleveland Orchestras, and in 1947 he made a concert tour in Poland, where he played his own works. His ballet 'On Stage!' was produced by television in London, and Martha Graham brought out his chamber ballet 'Wilderness Stair' in 1948.

Dello Joio's earliest works were somewhat influenced by Hindemith, but latterly his own more lyrical personality has emerged, together with some impressionist tendencies which show themselves in both his harmony and his orchestration. His music is fundamentally melodic in a lyrical vein, but also has considerable rhythmic tension and variety. The following are his chief compositions:

## BALLETS

- 'Prairie', with full orch. (1942).
- 'Duke of Sacramento', with 2 pfs. or orch. (1942).
- 'On Stage!', with full orch. (1945).
- 'Wilderness Stair', with chamber orch. (1948).

## CHORAL WORKS

- 'Vigil Strange', with pf. duet (1942).
- 'Mystic Trumpeter' (Whitman), with horn (1943).
- 'Western Star', for solo voices, narrator, chorus & orch. (1944).
- 'A Jubilant Song', with pf. (1948).
- 'Fable 4', unaccomp. (1948).
- 'Madrigal', unaccomp. (1948).

## ORCHESTRAL WORKS

- 'Sinfonietta' (1941).
- 'Magnificat' (1943).
- 'To a Lone Sentry' (1943).
- 'Concert Music' (1944).
- 'Variations, Chaconne and Finale' (1947).
- 'Serenade' (1948).

## SOLO INSTRUMENTS AND ORCHESTRA

- Concertino for pf & chamber-orch. (1939).
- Concertino for flute & stgs (1940).
- Concertino for harmonica & chamber orch. (1942).
- Concerto for harp & chamber orch. (1942).
- 'Ricercari' for pf. & orch. (1946).

## CHAMBER MUSIC

- Quartet for woodwind (1940).
- Trio for flute, clar. & bassoon (1942).
- Sextet for 3 recorders & stgs (1943).
- Trio for flute, cello & pf (1944).

## VIOLIN AND PIANOFORTE

- Fantasy on a Gregorian Theme (1942).
- Variations and Finale (1948).
- 'Capriccioso' (1948).

## CELLO AND PIANOFORTE

- Sonatina (1943).
- 'Duo concertato' (1943).

## PIANOFORTE SOLO

- Suite (1941).
- Sonata No. 1 (1942).
- Sonata No. 2 (1943).
- Sonata No. 3 (1947).
- Preludes (1946).
- 1. To a Young Dancer.
- 2. To a Young Musician.
- 2 Nocturnes.

## TWO PIANOFORTES

- 'Duo concertante' (1943).

## SONGS

- 5 Songs for medium voice (1948).
- 1. Mill Doors.
- 2. New Born.
- 3. A lady sweet and kind.
- 4. Lament.
- 5. The Assassination.

P. G.-H.

**DEL MAR, Norman (René)** (b. London, 31 July 1919).

English conductor. He was educated at Marlborough College and studied music at the R.C.M. in London. Showing conspicuous gifts as a conductor, he became associated with Sir Thomas Beecham as assistant conductor of the Royal Philharmonic Orchestra in 1947. But he had already in 1944 founded the Chelsea Symphony Orchestra, with which he gives concerts at Chelsea Town Hall that are a distinct enrichment of London's musical life thanks to his enterprising choice of pro-

grammes In 1947 he also became conductor of the Croydon Symphony Orchestra. Both these orchestras consist mainly of young players, not all of fully professional status, nevertheless Del Mar draws playing of considerable finish and uncommon vitality from them. He joined the English Opera Group as principal conductor in 1949 and showed an even greater range of ability when it produced Benjamin Britten's 'Let's Make an Opera', in which the conductor requires a good deal of the actor's as well as the musician's art. In 1950 Del Mar conducted an Anglo-Turkish Music Festival, and he has received numerous engagements on the Continent and in the U.S.A. as well as in the British Isles, where they have included broadcast and television performances. E. B.

**DELMAS, Jean François (Francisque)** (b. Lyons, 14 Apr 1861; d. Saint-Alban de Montheil, 29 Sept. 1933)

French bass singer. He first studied at the Conservatory of his native town, then at that of Paris under Bussine (singing) and Obin (lyrical declamation). His début at the Paris Opéra took place on 13 and 22 Sept. 1886, in Weber's 'Freischütz' and Meyerbeer's 'Les Huguenots'. Subsequently, until 1911, he sang and created some fifty parts there. In the prologue to Leoncavallo's 'Pagliacci' (1903) he was unprecedentedly successful. His Wagnerian parts, beginning with 'Lohengrin' (King), 1891, up to Gurnemann in 'Parsifal', 1914, attained a high artistic level. His creations of Wotan and Hans Sachs were very striking interpretations. He sang in Russia, England, Belgium, Holland, Portugal, etc. His voice, of exceptional compass and tone, the authority of his acting, a firm declamation and amplex of style, combined with an innate understanding of dramatic music, made him one of the most remarkable operatic singers of his day. M. L. P.

**DELMAS, Marc (Marie Jean Baptiste)** (b. Saint-Quentin, 28 Mar. 1885; d. Paris, 30 Nov. 1931).

French composer. He studied at the Paris Conservatoire, where he took the Prix de Rome in 1919. His compositions include a lyric legend, 'Anne Marie', a symphonic poem, 'Les Deux Routes', chamber music, pianoforte pieces and the following operas:

- 'Iriam' (Bordeaux, 1921).
- 'Camille' (Paris, 1921).
- 'Le Dieu sans couronne' (Beziers, 1923).
- 'Le Masque' (Nice, 1926).
- 'Cyrca' (Paris, 1927).
- 'Le Giaour' (1928).

'Cyrca' was awarded the City of Paris Prize in 1925.

Delmas was also the author of two books: 'Georges Bizet' (1930) and 'Gustave Charpentier et le lyrisme français' (1931).

M. L. P.

**Delmer, A.** See Bendl ('Mother Mif'a', lib.)

**DELMOTTE, Henri (Florent)** (b. Mons, 20 June 1798, d. Mons, 9 Mar. 1836).

Belgian musicologist. He was librarian of the public library at Mons and wrote a life of Lassus, 'Notice biographique sur Roland de Lattre . . .' (Valenciennes, 1836). This work was translated into German by Dehn. The authenticity of the chronicler Vinchant, from whom Delmotte took the chief part of his facts, has been contested since his death. At the time of his death Delmotte was collecting materials for the life of Philippe de Monte.

M. C. C.

**DEL PANE, Domenico** (b. Rome, ?; d. ?)

Italian 17th-century male soprano singer and composer. He describes himself as having been a pupil of Antonio Maria Abbati. In 1650 he became soprano singer in the imperial chapel in Vienna under Ferdinand III, but in 1654 was received into the papal chapel in Rome, where also in 1669 he became choir-master. When he had completed his jubilee of service in the papal chapel, and his voice began to fail, not wishing, as he says, to be idle, he composed and published in 1687 a volume of masses for four to eight voices, based on favourite motets by Palestrina: 2 a 4, 'O doctor bonus', 'Domine quando veneris'; 3 a 5, 'Stella quam viderant', 'O beatum virum', 'Jubilate Deo'; 1 a 6, 'Canite tuba'; 1 a 8, 'Frates ego enim'. This was his Op. 5. Previous works published were 'Motetti' a 2-5, Op. 2 (Rome, 1675); 'Sagri concerti' a 2-6, Op. 3 (1675); two books of madrigals a 5. In 1677 he edited Abbati's antiphons for twelve bass and twelve tenor voices. A few other works remain in manuscript in the archives of the Sistine Chapel.

J. R. M.

**DEL PUENTE, Giuseppe** (b. Naples, ?; d. New York, 1894 or 1895).

Italian baritone singer. He was the Escamillo when, in 1878 at the rebuilt Her Majesty's Theatre in London, Bizet's 'Carmen' was heard for the first time in England. According to Mapleson, Del Puente was no better pleased with his part before the rehearsals than Campanini was with that of Don José, but when the eventful night came both singers triumphed.

Del Puente enjoyed at that time a well-established reputation in London. Under Mapleson's management at Drury Lane Theatre he made a most successful first appearance as Rigoletto in 1873, and in 1874 he was a member of the brilliant cast that strove to put life into Balfé's 'Il talismano'. He was again at Drury Lane—in Harris's season—in 1887, singing, among other parts, Valentine to Jean de Reszke's Faust. Late in his career he sang in America with Gilmore's orchestra.

S. H. P.

**DELUNE, Louis** (b. Charleroi, 15 Mar. 1876; d. Paris, 5 Jan. 1940).

Belgian pianist, conductor and composer. He studied at the Brussels Conservatoire, where Tincl was among his masters. He took the Prix de l'Académie for a pianoforte Concerto in 1900 and the Belgian Prix de Rome in 1905 with the cantata 'La Mort du roi Reynaud'. This enabled him to make a tour abroad, during which he appeared as pianist with the violinist César Thomson. He settled in Paris for a time, but returned to Belgium before the first world war, during which he took refuge in London. After his return he appeared as conductor in Brussels and Charleroi.

Delune's works include the operas 'Tania' and 'Comme va le ruisseau'; a ballet, 'Le Fruit défendu'; 'Symphonie chevaleresque'; 'Le Diable galant' and 'Mezrail' for orch.; pf. concertos, string Quartet; sonatas for vn. and for cello, etc. E. B.

**DELVINCOURT, Claude** (b. Paris, 12 Jan 1888, d. Orbetello nr. Grosseto, 5 Apr. 1954).

French composer. He studied counterpoint and fugue under Georges Caussade, and composition under Widor at the Paris Conservatoire. In 1913 he was awarded the Prix de Rome for his cantata 'Faust et Hélène', being bracketed equal with Lili Boulanger, whose premature death in 1918 was a serious loss to French music. He was badly wounded in the 1914-18 war and incapacitated for eight years after it. In 1932 he was appointed head of the Conservatory at Versailles and in 1941 succeeded Henri Rabaud as Director of the Paris Conservatoire, where in the second world war he did valuable work in protecting the interests of French music and musicians during the German occupation. The students' orchestra which he founded and conducts, L'Orchestre des Cadets, dates from this period. He died after a road accident in Italy.

Delvincourt was one of the most enlightened composers of the modern French school, with a particular feeling for comedy in music. His most important work was a "mystery" entitled 'Lucifer', based on Byron's 'Cain'. This is conceived on a grandiose scale, marking a somewhat new departure in the composer's evolution, and was produced, with choreography by Sergey Lifar, at the Paris Opéra in 1949.

The following are Delvincourt's outstanding compositions:

#### STAGE WORKS

'La Femme à barbe', *comédie musicale*.

'Lucifer', *mystère en 3 épisodes*.

Music for 'Automne', pageant at Paris Exhibition, 1937.

#### CHORAL WORK

'Œdipe Roi' (after Sophocles) for chorus & orch.

#### ORCHESTRAL WORKS

'Boccaceries' (inspired by the 'Decameron').

'Prélude chorégraphique'.

'Bal vénitien'.

Suite 'Pamir'.

'Film d'Asie'.

'Typhaon'.

'L'Offrande à Siva'.

'Radio-Sérénade'.

#### VOICE AND ORCHESTRA

'Ce Monde de rosee'.

#### CHAMBER MUSIC

Trio for oboe, clar. & bassoon.

Sonata for vn. & pf.

#### PIANOFORTE MUSIC

'Heures juvéniles'.

'Images pour les contes du temps passé' for pf. duet.

Also numerous songs.

R. H. M.

BIBL.—LANDOWSKI, W. L. 'L'Œuvre de Claude Delvincourt' (Paris, 1948).

**DEMACHI, Giuseppe** (b. Alessandria della Paglia, Piedmont, ?; d. ?).

Italian 18th-century violinist and composer. He was violinist in the court chapel at Turin about 1740 and at Geneva in 1771. On his manuscript Symphony in E $\flat$  major he calls himself *maître de concert* of the Princess of Nassau-Weilburg. He wrote numerous instrumental works. E. v. d. s.

**DEMANTIUS, Johann Christoph** (b. Reichenberg, 15 Dec 1567, d. Freiberg, Saxony, 20 Apr. 1643).

German composer. He was an instructor at the St. Lorenz Academy in 1592, was living at Leipzig from 1594 to 1595 and was cantor at Zittau in 1597, until in 1604 he was engaged in a similar capacity at Freiberg. He was a prolific composer and the author of several treatises on music and singing. Publications of his compositions between 1595 and 1650, besides the usual sets of motets, Magnificats, Te Deums, Introits, Psalms, etc., include a 6-part St. John Passion, several sets of Polish and German dances and galliards, with and without words, arranged for 4 and 5 voices—but some also for instruments, a set of German madrigals and canzonets with a 6-part Villanelle, funeral songs and epithalamia, and a 'Tympanum militare' (a collection of 21 songs of triumph and battle for 5, 6, 8 and 10 voices). J. M. (ii).

**DÉMAR, Johann Sebastian** (b. Gauschach, Bavaria, 29 June 1763; d. Orléans, c. 1832).

German organist and composer. He was a pupil of F. X. Richter at Strasbourg and became organist at Weissenburg. He visited Vienna, went to Italy, to Paris about 1788 and then to Orleans, where about 1806 he became director of the Grand Concert d'Amateurs and music publisher. He composed concertos for various instruments, quartets, trios, duets, sonatas, etc., as well as tutors for sundry instruments. E. v. d. s.

**DEMARQUEZ, Suzanne** (b. Paris, 5 July 1899).

French critic and composer. She studied at the Paris Conservatoire, where she took first prizes for the history of music and score-reading (1921-22). Her compositions, which include a 'Sonatine pour orchestre', a string Quartet, 'Variations, interlude et tarantelle' for quintet, a 'Rapsodie lyrique' for violin and pianoforte (also orchestrated), 2 pianoforte Sonatinas and songs (to words by Saint-Amand, Nerval, Toulet and Gérard d'Houville) are remarkable for their distinctive, crisp and somewhat acidulated charm. Her writings include studies of Purcell, on modern British music, on Roussel and Villa-Lobos, and on the 18th-century traveller and dilettante, the Président de Brosses.

F. E. G.

**DEMBIŃSKI, Bolesław** (b. ? , 1833; d. ? , 1914)

Polish composer. For many years he was director of music at Poznań Cathedral. He composed many masses, among them one for three women's voices, and religious songs. He also wrote an opera, 'Cyganka' ('The Gypsy Girl'), performed at Poznań in 1874. His only cantata, 'Pieśń o ziemi naszej' ('The Song about Our Land'), to words by Wincenty Pol, written for men's chorus, enjoyed great popularity in Poland.

**DEMI TREMBLEMENT** (Fr. = half shake). See ORNAMENTS, B (iii).

**DEMMLER, Johann Michael** (b. Gross-Altingen nr. Augsburg, 1748; d. Augsburg, 1785).

German composer. He was a pupil of the Italian *Kapellmeister* (since 1755) of Augsburg Cathedral, Giovanni Andrea Giuseppe Giuliani, and organist at that church from 1775 until his early death. He was also a competent violinist and an excellent pianist, and at the performance of Mozart's so-called Lodron Concerto for 3 pianos at the Augsburg Fugger-Saal on 22 Oct. 1777 Demmler played the first instrument (Mozart himself and Johann Andreas Stein playing the second and

third). A year later Mozart recommended Demmler to his father for the post of organist at Salzburg (vacant after the death of Adlgasser):

He is very talented, and an appointment in Salzburg might be extremely useful in promoting his further success, for all he needs is a good guide to music, it would be really a pity if he were to leave the right path.

Demmler, however, remained at Augsburg. He wrote a cantata, 'Deukalion und Pyrrha' (Augsburg, 1774), incidental music for several plays performed by the pupils of the Jesuit school of St. Saviour; also symphonies, concertos, a Mass (at Einsiedeln) and other church music (destroyed in air attacks on Augsburg). The librettos of some of his school *Singspiele* are in the Washington Library of Congress.

**DEMON, THE** (Opera). See RUBINSTEIN (A.).

**DÉMOPHON** (Opera). See CHERUBINI. VOGEL.

**DEMUTH, Norman** (b. London [South Croydon], 15 July 1898).

English composer and writer on music. He was educated at St. George's, Windsor, at Repton, and for a short time, until 1915, at the R.C.M. in London, where his teachers were Parratt and Dunhill. Later he also studied privately with Dunhill for a time. He joined the Army in 1915, but was invalided out in the following year, and from 1917 onwards earned his living as a church organist for many years. The first performance of an orchestral work by him was in 1925, when his 'Selsey Rhapsody' was given by the L.S.O. under Boult. For a number of years his earlier works (now discarded) were frequently played in the provinces, and he himself conducted them, and other works, at various south-coast towns. At this period he was also a regular conductor of several choral and orchestral societies in south-east England. In 1930 he was appointed professor of composition at the R.A.M., a post he has occupied ever since, except during the second world war, when he again served in the Army. He was one of the founders of the R.A.M. New Music Society and was its secretary from 1936 to 1939. In 1950 he was nominated an Officier d'Académie by the French Government and in 1951 he was invited to sit on a jury at the annual *Concours* of the Paris Conservatoire.

As a composer in the larger forms Demuth is mainly self-taught. In his early years he received a good deal of encouragement from Sir Dan Godfrey, but he has since destroyed nearly all his works written before 1937. His natural sympathies lie mainly with French composers, from Franck to Roussel, and in general style his music stands apart from all

other English music, even that similarly written under French influences, for although Demuth has devoted a good deal of study to modern French composers, his music avoids the more fashionable "Gallic" characteristics. Its somewhat austere melodic world, in which definable tunes have little part, and its complex but subtle harmonic structure, display a more general affinity with d'Indy or Roussel. His harmonic awareness is keen, and his sympathies are in this respect broad. Certain works, such as the 'Threnody' for string orchestra, are almost Franckian in their intense chromaticism and romantic harmonic atmosphere. Others, such as the 'Overture for a Joyful Occasion', have a Stravinskian brightness. In his most recent works his harmonies are rather hard and severe, with more bare fourths and fifths than thirds, and more major than minor seconds. Naturally he does not avoid familiar chromatic dissonances (nor consonances), but these lose their familiar effect owing to the individual tonal organization. In matters of form Demuth is greatly attracted to cyclic methods and is fond of building complete major works from one or two short motives.

C. M. (iii).

## CATALOGUE OF WORKS<sup>1</sup>

### OPERAS

- 'Conte vénitien' (libretto by Joseph Weterings) (1947).
- 'Le Flambeau' (lib. by Weterings) (1948)
- 'Volpone' (lib. by Frank Hauser, after Ben Jonson) (1949)
- 'The Oresteia' (lib. by David Clarke, after Aeschylus) (1950).

### BALLETS

- 'The Temptation of St. Anthony', choreographic symphony (1937)
- 'Planetomania' (1940).
- 'Complainte' (1946)
- 'Bal des fantômes' (1949).
- 'La Débutante' (1949).

### INCIDENTAL MUSIC

- 'The Degradation of Guatemozin' (George Barker) (1947).
- 'The Flies' (Jean Paul Sartre) (1947).
- 'The River' (Goddard) (1947).
- 'Médée' (Jean Anouilh) (1948)
- 'Prometheus Bound' (Aeschylus, trans Warner) (1948).
- 'Prometheus Unbound' (Shelley) (1948).
- 'Macbeth' (Shakespeare) (1949).
- 'Le Misanthrope' (Molière) (1950).
- 'Hippolytus' (Aeschylus) (1950).

### FILM MUSIC

- 'Pink String and Sealing Wax' (1945), 'The Secret Tunnel', 'Fabrics of the Future', documentary (1946) and many others.

### CHORAL WORKS

- 'Pan's Anniversary' (Ben Jonson) for chorus & orch
  - Sonnet (John Donne) for baritone, chorus & orch.
  - 'Humanity' for double chorus.
- Also numerous part songs.

### ORCHESTRAL WORKS

- 'Cortège' (1931).
- Introduction and Allegro (1936).
- Partita (1939).

<sup>1</sup> Nearly all the works written before 1937 are destroyed.

- 'Valse graves et gaies' (1940).
- Fantasy and Fugue (1941)
- Divertimento No. 1 for stgs (1942).
- Threnody for stgs. (1942).
- Divertimento No. 2 (1943)
- Overture for a Victory (1943)
- 'Suite champêtre' (1945)
- Overture for a Joyful Occasion (1946)
- Prelude and Fugue for stgs. (1948)
- 'Prometheus' Suite (1948).
- Suite (1948).
- 'Sinfonietta' for stgs (1946).
- Symphony (1949).
- Symphonic Study, No. 1 (1949).
- Symphonic Study No. 2 (1950)
- Symphony (1950)

### MILITARY BAND MUSIC

- Concerto for saxophone & band (1938).
- 'The Sea' (1939)
- Regimental March for the Royal Pioneer Corps (1943).

### SOLO INSTRUMENTS AND ORCHESTRA

- Vn Concerto (1937).
- 'Two War Poems' for pf. (1940).
- Concertino for flute & stgs. (1941).
- 'Elegiac Rhapsody' for viola & small orch (1942).
- Pf. Concerto (1943).
- Concertino for pf & small orch. (1947).
- Pf. Concerto for the left hand (1947).
- 'Legend' for pf, left hand (1949)

### VOICE AND ORCHESTRA

- 3 Poems by Federico García Lorca for soprano & stgs. (1941).
- 3 Poems by Stefan Zweig, with stgs. (1944).

### CHAMBER MUSIC

- Sonatina for 2 vns (1939)
- Sonatina for flute, oboe & pf. (1946)
- Trio for flute, oboe & bassoon (1949)
- Trio for vn, viola & cello, (1950)
- String Quartet (1950).

### VIOLIN AND PIANOFORTE

- Sonata No. 1 (1937).
- Sonata No. 2 (1938).
- Serenade (1938)
- 'Capriccio' (1948).
- Sonata No. 3 (1948).

### VIOLONCELLO AND PIANOFORTE

- Sonata (1939).

### FLUTE AND PIANOFORTE

- Sonata (1938).

### TWO PIANOFORTES

- Overture (1938).
- Sonata (1946).

Also numerous pianoforte pieces, songs, &c.

**DENEVE, Jules** (b. Chimay, 1814; d. ? Mons, 19 Aug. 1877).

Belgian violoncellist and composer. He entered the Brussels Conservatoire in 1833 and

<sup>2</sup> While on war service Demuth also wrote military textbooks in 1942, including 'Practical Camouflage' and 'A Manual of Street Fighting'.

<sup>3</sup> Commissioned by the War Office.

studied the cello under Platel and Demunck. Later he became professor of the cello at the École de Musique and first cellist at the theatre and at the Société des Concerts at Mons. Within a few years he became director of the music school, conductor of the Société des Concerts and founder and conductor (1841) of the Roland de Latre Choral Society.

Deneve composed 3 operas for the Mons theatre, a number of choruses for men's voices, several cantatas (one for the erection of a statue to Lassus at Mons in 1858); a Requiem and various orchestral pieces. He was a member of the Société des Beaux-Arts et de Littérature of Ghent and honorary member of the most important choral societies in Belgium and the north of France. M. C. C.

**DENGREMONT, Maurice** (b. Rio de Janeiro, 19 Mar. 1866; d. ? , Aug. 1893).

Franco-Brazilian violinist. As a youth he made public appearances in Europe with extraordinary success, but ultimately gave way to habits of dissipation. W. W. C.

**Denham, John.** See Dyson ('To the Thames', for chorus).

**DENHOF OPERA COMPANY.** This company was formed by Ernst Denhof (d. 5 Dec. 1936), a German musician settled in Edinburgh, to give a performance of Wagner's 'Ring des Nibelungen' in that city, following on its London production in English at Covent Garden under Richter in 1908. The Edinburgh performances, the first to be given in the provinces, took place in Feb.-Mar. 1910, under the direction of Michael Balling, and were sufficiently successful to warrant Denhof's giving another series in 1911 at Leeds, Manchester and Glasgow. In 1912 another tour was made — Hull, Leeds, Manchester, Liverpool and Glasgow — the operas given being Strauss's 'Elektra', first performance in English, Gluck's 'Orpheus', and Wagner's 'Flying Dutchman' and 'The Mastersingers'. The 1913 season began at Birmingham with a repertory which included Strauss's 'Rosenkavalier', Debussy's 'Pelléas et Mélisande', both given for the first time in English, and Mozart's 'Magic Flute'; but these tours had unfortunately been less and less of a financial success — it was new at that time to give opera on such lines, a large orchestra of admirable quality necessitating higher prices for seats — and the fortnight's season promised at Manchester had to be reduced to a week. At this moment Beecham came to the rescue of the company, and its personnel may be said in general to have come thenceforward under his control. N. C. G.

**DENIJS, Thomas** (b. Schagen, 3 Jan. 1877; d. The Hague, 14 Nov. 1935).

Dutch baritone singer. He was a pupil of Cornélie van Zanten. In 1901 he was appointed first baritone at the Amsterdam Opera

(Lyrische Tooneel), where he remained for some years. Later he became a professor at the Rotterdam Conservatory and then lived for three years in Berlin. After Messchaert's retirement he was undoubtedly considered Holland's first baritone. His interpretation of the part of Christ in Bach's St. Matthew Passion will not easily be forgotten. H. E. E.

**DENIS, Agnes.** See STAVENHAGEN.

**DENIS, Claude** (b. ? , c. 1680, d. Paris, c. 1752).

French theorist. He was *maître de chapelle* of Tournai Cathedral, also at Saint-Omer. He wrote 'Nouveau Système de musique pratique' (Paris, 1747). He is probably the author of a 'Nouvelle Méthode pour apprendre la musique et l'art de chanter, dédiée aux dames de Saint-Cyr' (1730). A book of violin sonatas formerly attributed to him is now known to be by Martin Denis.

E. V. d. S.

**Denishawn Dancers.** See Ballet.

**DENISON, John (Law)** (b. Reigate, 21 Jan. 1911).

English horn player and musical administrator. He was educated at Brighton College and after studying law in 1928-32 he entered the R.C.M. in London, wishing to devote himself to music. He played the horn in various orchestras between 1933 and 1939, including the B.B.C. Symphony Orchestra, the London Philharmonic and the City of Birmingham Orchestra. On the outbreak of war in 1939 he joined the Artists' Rifles as Officer Cadet and then served with the Somerset Light Infantry in 1940-45, holding various staff appointments and seeing active service in the NW European campaign. Between the Armistice and his release from service he was Staff Officer in the Theatre and Music Control Commission for Germany. He was awarded the M.B.E. and mentioned in despatches. In 1946-48 he was Assistant Director of the British Council's Music Department and in 1948 he was appointed Music Director of the Arts Council of Great Britain in succession to Sir Steuart Wilson. E. B.

**DENKMÄLER** (i.e. Monuments). Several German series of musical masterpieces of the past, published in modern editions, in the first place for library rather than performing purposes, and entrusted to various eminent musicologists. It will be noticed that neither the German nor the Austrian collections are strictly confined to Germanic masters, but contain a number of works by composers of other nationalities, especially Netherlandish, Italian and Bohemian, who worked in Germany and Austria. The collections are enumerated below.

(1) **Denkmäler der Tonkunst.** The title of a publication of ancient music, inaugurated by Chrysander with a reprint of Palestrina's

4-part motets. After five volumes the series was merged in other publications, the first volume of Corelli and Couperin being completed by a second volume of each. The contents were as follows:

- 1 Palestrina's 4-part motets, bk. 1, ed. Bellermann.
- 2 Carissimi's Oratorios ('Jefte', 'Judicium Salomonis', 'Baltasar', 'Jonas')
- 3 Corelli's works, ed. Joachim, Vol. I.
- 4 Couperin's suites, ed. Brahms, Vol. I.
- 5 Urino's 'Te Deum' (afterwards withdrawn and issued as one of the supplements to Chrysander's edition of Handel)

## (2) Denkmäler deutscher Tonkunst.

In May 1892 a committee of musicians, including Brahms, Joachim, Chrysander, Herzogenberg, Spitta and Helmholtz, undertook the publication of a series of musical reprints under this title, and with financial help or subsidy from the German Government. After the first two volumes a long interval elapsed, during which the Austrian musicians had followed the good example and had started their own set of "monuments" with Government support, under the general editorship of Guido Adler (*see below*). 'Denkmäler der Tonkunst in Österreich'. On the resumption of the scheme in 1900 the German series was divided into two sections, one for Germany and one for Bavaria, the latter being called *Zweite Folge* (second series). The following is a list of the volumes published:

- I Samuel Scheidt's 'Tabulatura nova' for organ, &c., ed. Max Seiffert.
- II. H. L. Hassler's 'Cantiones sacrae', ed. H. Gehrmann.
- III F Tunder's solo cantatas and choral works, ed. Max Seiffert.
- IV. J. Kuhnau's clavier works, ed. K. Päsler
- V. J. R. Ahle's selected vocal works, ed. Joh. Wolf.
- VI Matthias Weckmann and Chr. Bernhard, selected vocal works, ed. M. Seiffert.
- VII. H. L. Hassler's Masses, ed. Jos. Auer.
- VIII. Ignaz Holzbauer, 'Günther von Schwarzbürg', opera in three acts, ed. J. H. Kretzschmar, pt. 1
- IX. Do., pt. II
- X. Joh. Caspar F. Fischer's 'Journal du printemps' and D. A. Schmeurer's 'Zodiacus', ed. E. von Werra
- XI. D. Buxtehude, Sonatas, vn, cello & harpsichord, ed. C. Stehl.
- XII. Heinrich Albert's 'Arien', pt. 1, ed. Eduard Bernoulli
- XIII. Heinrich Albert's 'Arien', pt. II, ed. E. Bernoulli
- XIV. Dietrich Buxtehude's 'Abendmusiken' and church cantatas, ed. Max Seiffert
- XV. C. H. Graun's 'Montezuma', ed. Albert Mayer-Remach.
- XVI. Selected instrumental compositions by Melchior Franck and Valentin Haussmann, ed. Franz Bosche
- XVII. Passion settings by J. Sebastiani and J. Theile, ed. Friedrich Zelle.
- XVIII. Johann Rosenmüller's 'Sonate da camera', ed. Karl Nef.
- XIX. Adam Krieger's 'Arien', ed. Alfred Heuss
- XX. J. A. Hasse's 'Conversione di Sant' Agostino', ed. Arnold Schering.
- XXI and XXII. Selected compositions by F. W. Zachau, ed. M. Seiffert.
- XXIII. Selected compositions by Hieronymus Praetorius, ed. H. Leichtentritt.
- XXIV and XXV. H. Leo Hassler's 'Sacri concentus', ed. Joseph Auer.
- XXVI and XXVII. J. G. Walther's complete organ works, ed. H. Leichtentritt
- XXVIII. G. P. Telemann's 'Tag des Gerichts' and 'Ino' (K. W. Ramler), ed. M. Schneider.

- XXIX and XXX. Instrumental concertos by various German masters, ed. A. Schering.
- XXXI. Philippus Dulichius's 'Centuria' (1607), ed. Rudolf Schwartz.
- XXXII and XXXIII. N. Jommelli's 'Fetonte', ed. H. Abert
- XXXIV. 'Neue deutsche geistliche Gesänge' (1544), ed. Joh. Wolf.
- XXXV and XXXVI. Sperontes's 'Singende Muse an der Pleisse', ed. E. Buhli
- XXXVII and XXXVIII. Keiser's 'Krosus' and selection from 'L' inganno felice', ed. Schneider
- XXXIX. Selected works by Johann Schobert, ed. H. Riemann
- XL. Selected works by A. Hammerschmidt, ed. Leichtentritt.
- XLI. Dulichius's 'Centuria' (*see* XXXI), ed. Schwartz.
- XLII. Songs by Ernst Bach and Valentin Herbing, ed. Kretzschmar.
- XLIII and XLIV. Ballets by F. Deller and J. J. Rudolph, ed. Abert
- XLV. Elmenhorst's 'Geistliche Lieder', composed by J. W. Franck, Böhm, Wockenhus, ed. Kromolicki and Krabbe.
- XLVI and XLVII. Erlebach's 'Harmonische Freude', ed. Kinkeldey
- XLVIII. Johann Ernst Bach's 'Passion', ed. Kromolicki
- XLIX and L. Thuringian Motets of 1st half of 18th century, ed. Seiffert.
- LI and LII. North German symphonies (Vol. I), ed. Schneider and Engelke
- LIII and LIV. Selected church compositions by Krieger, ed. Seiffert
- LV. Pallavicino's 'Gerusalemme liberata', ed. Abert
- LVI. J. C. F. Bach's 'Kindheit Jesu' and 'Auferweckung des Lazarus', ed. Schunemann
- LVII. Odes and songs by Telemann and Gerner, ed. Krabbe
- LVIII and LIX. Church cantatas by Leipzig masters before Bach (Knüpfer), ed. A. Schering
- LX. Antonio Lotti, Masses, ed. Hermann Müller
- LXI and LXII. Georg Philipp Telemann, 'Tafelmusik', ed. Max Seiffert.
- LXIII. Johann Pezel, 'Turmmusiken', ed. Arnold Schering.
- LXIV. Georg Benda, 'Der Jahrmarkt', ed. Th. W. Werner.
- LXV. Thomas Stoltzer, Latin Hymns and Psalms, ed. Hans Albrecht and Otto Gombosi

## SECOND SERIES (BAVARIA)

### 'Denkmäler der Tonkunst in Bayern'

- I. E. F. Dall' Abaco, selected works, pt. 1, ed. A. Sandberger
- II. (i) Joh. and W. H. Pachelbel's clavier works, ed. M. Seiffert. (ii) J. K. Kerll's selected works, pt. 1, ed. A. Sandberger.
- III. (i) Symphonies of the Mannheim School (J. Stamitz, F. K. Richter and A. Filtz), ed. H. Riemann (ii) 1903, L. Senfl's works, Vol. I, ed. Th. Kroyer
- IV. (i) Organ works by Joh. Pachelbel, with some by Hieronymus Pachelbel, ed. M. Seiffert (ii) Selected works by Christian Erbach (i) and compositions by H. Leo Hassler (i) ed. von Werra.
- V. (Two vols.) Works by H. Leo Hassler (ii) and annotations, etc., by A. Sandberger.
- VI. (i) 'Geistliche Konzerte' and church cantatas by Nuremberg masters of the 17th century, ed. Max Seiffert (ii) Selected compositions by Agostino Steffani, ed. A. Einstein and A. Sandberger
- VII. (i) Selected works by J. Staden, ed. E. Schmitz (ii) Symphonies of the Mannheim School, (i) ed. H. Riemann
- VIII. (i) Selected works by J. Staden, ed. E. Schmitz (ii) Symphonies of the Mannheim School, (ii) ed. H. Riemann
- IX. (i) Selected works by E. F. Dall' Abaco, pt. II, ed. A. Sandberger. (ii) Leopold Mozart's selected works, ed. M. Seiffert.
- X. (i) Selected works by G. Aichinger, ed. Kroyer (ii) Selected works by A. Gumpeltzhaimer, ed. Mayer
- XI. (i) Hassler's works (pt. 3), ed. Schwartz. (ii) Steffani's opera 'Alarico' and bibliography of operas, ed. Riemann.
- XII. (i) Selected operas by Steffani, ed. Riemann. (ii) Symphonies by Rossler (Rosetti), ed. Kaul.

XIII Selected works by J. E. Kindermann, ed. Schneider

XIV (i) Selected works by Traetta, ed. Goldschmidt (ii) Gluck's 'Nozze d' Ercole e d' Ebe', ed. Albert.

XV and XVI. Chamber music of Mannheim, 18th century, ed. Ruemann

XVII Selected works by Traetta, ed. Goldschmidt.

XVIII Selected works by J. Krieger, Murschhauser, J. P. Krieger, ed. Seiffert.

XIX and XX. Selected works by P. Torri, ed. Junker

XXI to XXIV. Selected works by Johannes Erasmus Kindermann, pt. II, ed. F. Schreiber

XXV. Selected works by Anton Rosetti, pt. II. Orchester- und Kammermusik, ed. O. Kaul

XXVI. Selected works by Jakobus de Kerle, pt. I. 'Preces speciales für das Konzil zu Trient', ed. Otto Ursprung

XXVII and XXVIII Selected works by Johann Christoph Pez, ed. B. A. Wallner

XXIX and XXX. Andreas Raselius, 'Cantiones sacrae', ed. Ludwig Roselius.

### (3) Denkmäler der Tonkunst in Österreich.<sup>1</sup>

I 1, J. J. Fux's Masses, ed. J. E. Habert and G. A. Glossner. 2, Georg Muffat's 'Florilegium primum' for strings, ed. H. Rietsch.

II 3, J. J. Fux's Motets, pt. I, ed. J. E. Habert 4, Muffat's 'Florilegium secundum', ed. Rietsch.

III 5, Joh. Stadlmayer's Hymns, ed. J. E. Habert 6, Marcantonio Cesti's 'Pomo d' oro', pt. I, ed. Guido Adler 7, Gottlieb Muffat's 'Componimenti musicali', ed. Guido Adler

IV 8, J. J. Froberger's clavier works, pt. I, ed. Guido Adler 9, Cesti's 'Pomo d' oro', pt. II, ed. Guido Adler

V 10, Heinrich Isaac's 'Choralis Constantinus', bk. I, ed. E. Bezecny and W. Rabl. 11, Heinrich Biber's violin sonatas, ed. Guido Adler

VI 12, Jacob Handl's (Gallus) 'Opus musicum', motets, pt. I, ed. E. Bezecny and J. Mantuan 13, Froberger's clavier works, pt. II, ed. Guido Adler

VII 14 and 15, Six Trent Codices, MSS of vocal works of the 15th century, ed. Guido Adler and O. Koller

VIII 16, And Hammerschmidt's 'Dialogi', pt. I, ed. A. W. Schmidt. 17, Joh. Pachelbel's 94 compositions for organ, ed. H. Botscher and M. Seiffert.

IX 18, O. von Wolkenstein's Lieder, ed. J. Schatz and O. Koller. 19, J. J. Fux's Church sonatas and overtures (instrument music, pt. I), ed. Guido Adler

X 20, Orazio Benevoli's 'Festmesse' and 'Hymnus', ed. Guido Adler 21, J. J. Froberger's organ and clavier works, pt. III, ed. Guido Adler

XI 22, Six Trent Codices, 15th-century compositions, ed. Guido Adler and O. Koller. 23, Georg Muffat's 'Auserlesene . . . Instrumental Musik' (1701), ed. Erwin Luntz

XII 24, Jacob Handl, 'Opus musicum', pt. II, ed. E. Bezecny and J. Mantuan. 25, H. F. Biber's sixteen violin sonatas, ed. E. Luntz.

XIII 26, Caldara's church compositions, ed. E. Mandyczewski 27, Viennese clavier and organ compositions (2nd half of 17th century), ed. H. Botscher

XIV 28, Heinrich Isaac's secular compositions, ed. J. Wolf 29, Michael Haydn's instrumental works, ed. L. H. Perger.

XV 30, Jacob Handl's 'Opus musicum', pt. III, ed. E. Bezecny and J. Mantuan. 31, Viennese instrumental music, about 1750, ed. K. Horwitz and K. Riedel.

XVI 32, Heinrich Isaac's 'Choralis Constantinus', bk. II, ed. J. Wolf 33, Albrechtsberger's instrumental works, ed. O. Kapp.

XVII 34 and 35, Fux's Opera 'Costanza e fortezza', ed. E. Wellesz

XVIII 36, Umlauf's 'Die Bergknappen', ed. R. Haas 37, Austrian lute music of 18th century.

XIX 38, Trent Codices of 15th century, ed. Adler and others 39, Viennese instrumental music before 1750, ed. W. Fischer

XX 40, Jacob Handl's 'Opus musicum', pt. IV 41, Minnesinger manuscripts, ed. Rietsch.

XXI 42, 43 and 44, F. L. Gassmann's 'La contessina', ed. R. Haas. 44a, Gluck's 'Orfeo e Euridice'.

XXII 45, Masses of Michael Haydn, ed. A. M. Klafsky

XXIII 46, A. Draghi, church music (masses; sequence, hymns) 47, J. J. Fux, Concentus musicoinstrumentalis, ed. Rietsch

XXIV 48, 'Opus musicum', pt. V

XXV 49, Masses of Biber, Schmeltzer and Kerl. 50, Lute music (see XVIII, 37).

XXVI 51 and 52, 'Opus musicum', pt. VI

XXVII 53, Trent Codices of 15th century 54, The Viennese song from 1778-91

XXVIII 55, Eberlin, 'Der blutschwitzende Jesus', ed. Haas 56, Viennese dance music of second half of the 17th century, ed. Paul Netti

XXIX 57, Monteverdi, 'Il ritorno d' Ulisse in patria', ed. R. Haas 58, Gottlieb Muffat, Zwölf Toccaten and 72 Versetti

XXX 59, Requiem by Christoph Straus, Franz Heinrich Biber and Johann Caspar Kerl 60, Gluck, 'Don Juan' (pantomime ballet), ed. R. Haas.

XXXI 61, Seven Trent Codices, MSS of vocal works of the 15th century (v), ed. R. v. Ficker.

XXXII 62, M. Haydn, Church compositions, ed. A. M. Klafsky 63, J. Strauss (junior), Three Waltzes, ed. H. Gal.

XXXIII 64, German Arias from Comedies (1754-1758) (I), ed. R. Haas. 65, J. Lanner, Ländler and Waltzes, ed. A. Orel.

XXXIV 66, J. Schenk, 'Der Dorfbarbier', ed. R. Haas

XXXV 67, E. A. Forster, Chamber music, ed. K. Weigl. 68, J. Strauss (senior), Waltzes, ed. H. Gal

XXXVI 69, St. Bernard, Church music, ed. K. A. Rosenthal 70, P. Feuril and J. Pöschel, instrumental and vocal compositions, ed. K. Geiringer.

XXXVII 71, Neidhart von Reuenthal's Lieder, ed. W. Schmieder, E. Wiesner. 72, The German 'Gesellschaftslied' in Austria, 1480-1550, ed. L. Nowak, A. Koczur, A. Pfalz.

XXXVIII 73, B. Amon, Church music (I), ed. P. C. Huigens. 74, Josef Strauss, Three Waltzes, ed. H. Botscher.

XXXIX 75, A. Caldara, Chamber music, ed. E. Mandyczewski.

XL 76, Seven Trent Codices, MSS of vocal works of the 14th and 15th centuries (v), ed. R. v. Ficker.

XLI 77, Italian musicians, 1567-1625. Works dedicated to and written for the imperial court, ed. A. Einstein.

XLII 78, J. Gallus, Six Masses, ed. P. A. Pisk 79, The Wiener Lied 1792-1815, ed. H. Maschek, H. Kraus.

XLIII 80, Salzburg church composers. C. Biber, M. S. Biechteler, J. E. Eberlin, A. C. Adlgasser, ed. K. A. Rosenthal, C. Schneider 81, Ditters v. Dittersdorf's instrumental works. V. Luthien.

XLIV 82, Gluck, 'L'innocenza giustificata', festa teatrale, ed. A. Einstein

XLV 83, F. G. Gassmann, Church music, ed. F. Kosch

1942 84, Wiener Lautenmusik im 18. Jahrhundert, ed. A. Koczur.

1947 85, Johann Joseph Fux, 1660-1741, Werke für Tasteninstrumente, ed. E. Schenk.

1949 86, Tiroler Instrumentalmusik im 18. Jahrhundert, G. P. Falk, J. E. de Sylva, F. S. Hamdl, N. Madseder, S. Paluselli, ed. W. Senn.

1950 87, Nicholas Zangus, 'Geistliche und weltliche Gesänge', ed. Hans Sachs and Anton Pfalz

Attention may here be drawn to certain volumes of special value in this series. First and foremost are the volumes containing transcriptions from the seven Trent Codices.

For the study of Baroque music in Austria the full scores of operas either performed in Vienna or written for performances at the imperial court are of special importance. Such are Monteverdi's 'Ritorno d' Ulisse', Cesti's 'Pomo d' oro' and J. J. Fux's 'Costanza e fortezza', written for the coronation of

<sup>1</sup> Roman numerals indicate the years, arabic the volumes

\* (Band) Volume 84 was issued as Vol. I of 'Das Erbe Deutscher Musik, Zweite Reihe: Landschaftsdenkmale: Alpen- und Donau-Reichsgaue'.

Charles VI in Prague, also two operas by Gluck - 'L' innocenza giustificata' and the original Viennese version of 'Orfeo e Euridice'.

Works by forerunners of Haydn are edited in the volumes containing Viennese instrumental music of about 1750. The editors maintain that Haydn was not influenced by Stamitz and other composers of the Mannheim school but essentially by Monn, whose cello Concerto has been edited by Arnold Schoenberg.

(4) **Publikationen älterer Musik.** To supplement the above Collections Breitkopf & Hartel of Leipzig brought out from 1926 onwards this new series under the general editorship of Theodor Kroyer. It comprises for the most part works by non-German composers that would not fit into the D.D.T. The following volumes have been issued.

I 1, G de Machaut, Musical Works, Vol. I, Ballades, Rondeaux and Virelais (F Ludwig) 2, J. Okeghem, Complete Works, Vol. I, Masses I-VIII (D Plamenac)

II 1, L. Milan, 'Libro de musica de vihuela de mano' (L. Schrade)

III 1, G de Machaut, Musical Works, Vol. II, Introduction to Vol. I, Motets, Mass and Laus 2, 'Sixtus Dietrich Ein Beitrag zur Musik und Musikanschauung im Zeitalter der Reformation' (with musical supplement) (H. Zenck)

IV 1, L. Marenzio, Complete Works, Vol. I, 5-part Madrigals, bks. 1-III (A. Einstein) 2, G. de Machaut, Musical Works, Vol. III, Motets (F Ludwig)

V, 'Das Graduale der St. Thomaskirche zu Leipzig als Zeuge deutscher Choralüberlieferung' 14th century pt. 1, from Advent to Ascension.

VII 'Das Graduale der St. Thomaskirche zu Leipzig als Zeuge deutscher Choralüberlieferung.' 14th century, pt. II, from Ascension to Advent (P. Wagner)

VI 1, L. Marenzio, Complete Works, Vol. II, 5-part Madrigals, bks. IV-VI (A. Einstein)

VIII, O. Petrucci, Frottole, bks. 1 & IV According to the earliest prints of 1504 and 1505 (?) (R. Schwarz)

IX, A. Willaert, Complete Works, Vol. I, 4-part motets, bks. 1 & II, 1539 and 1545 (H. Zenck).

(5) **Das Erbe deutscher Musik.** The reorganization of all the cultural institutions in Germany after 1933 brought about changes in the 'Denkmäler'. They were given this new name and are now published by commission of the State Institute for German Musical Research through the agency of a group of important German publishing firms. The new collection was opened in 1935 with two volumes described elsewhere.<sup>1</sup> It again consists of two series. The first, the 'Reichsdenkmäler', includes compositions of general interest, while the second series, entitled 'Landschaftsdenkmäler' and grouped according to provinces, presents works of mainly local importance. The collection up to 1939 comprises the following works:

#### FIRST SERIES 'Reichsdenkmäler'

I, II, 'Altbackisches Archiv' (Max Schneider).  
III, Johann Christian Bach, 6 Quintets, Op. 11 (Rudolf Steglich)  
IV, VIII 'Das Glogauer Liederbuch' (Heribert Ringmann)

<sup>1</sup> See ALTBACKISCHES ARCHIV.

V Ludwig Senfl, 7 Masses (Edwin Lohrer and Otto Ursprung)

VI, G. P. Telemann, 'Pimpoune' (T. W. Werner)

VII, 'Trompeteranfängen, Sonaten und Feldstücke' (Georg Schunemann)

IX, 'Orgelchorale um J. S. Bach' (Gotthold Frotscher)

X Ludwig Senfl, German Songs, pt. 1 (A. Geering)

XI Gruppenkonzerte der Bach period G. P. Telemann, J. D. Heinichen, J. F. Fasch (K. M. Komma).

XII, Lute Music of the 17th to 18th centuries, Selected by Esaias Reusner and Silvius Leopold Weiss (Hans Neemann)

XIII Ludwig Senfl, Motets and Masses, pt. II, Motets, Occasional motets and settings of the Psalms (W. Gerstenberg)

XIV, German Music for Wind Instruments from the Baroque to the Classical Period (Helmut Schultz)

XV Ludwig Senfl, German Songs; pt. II: Songs from Hans Ott's first 'Liederbuch', 1534 (Arnold Geering)

XVI, Caspar Othmayer, Selected Works, pt. 1 'Symbola' (Hans Albrecht)

XVII Johann Jakob Walther, 'Scherzi da violino solo con il basso continuo', 1676 (Gustav Beckmann)

XVIII C. P. E. Bach, 4 Symphonies for orchestra with 12 obbligato parts (Rudolf Steglich)

XIX (a), 'Ohrenvergnügendes und gemüthergötzendes Tafelconcert' (H. J. Moser), (b), Senfl, Motets, pt. 1 (Gerstenberg)

Niedersachsen, Vol. II, Andrias Crappius, Selected Works (T. W. Werner)

Ostpreussen und Danzig, Vol. I, 'Preussische Festlieder', a selection (Josef Müller-Blattau).

Schleswig-Holstein und Hansestädte, Vol. II, N. Bruhns, Collected Works, Vol. II, Vol. IV, Mathias Weckmann, Collected Works (Gerhard Ilger).

Südostland, Böhmen und Mähren, Vol. I, Christoph Demantius, 'Neue teutsche Weltliche Lieder', 1595, 'Convivialium Conventum Farrago 1609' (Kurt Stangl).

K. G., adds. K. D.

DENNER, Johann Christoph (b. Leipzig, 13 Aug. 1655; d. Nuremberg, 20 Apr. 1707).

German musical-instrument maker. He was the son of Heinrich Denner, a horn turner

who specialized in making bird and animal calls. At the age of eight he migrated with his family from Leipzig to Nuremberg, where he learnt his father's trade and applied himself to music, gaining considerable proficiency in playing, making and improving woodwind instruments. The correctness of intonation he imparted to his *flûtes-à- bec* in particular gained him celebrity outside his own country, and, according to the flautist A. B. Furstenau, his sons travelled with cases of his instruments to the farthest parts of Europe and to Constantinople. Missionaries were said to have taken them even to China.

More than fifty specimens of Denner's and of his sons' workmanship survive, including, in addition to fipple and transverse flutes, oboes, bassoons, a rackett — an instrument he tried to reintroduce — and some clarinets. His invention of the last-named is his principal claim to fame. His contemporary, J. G. Doppelmayr, writing of him in 1730, places this invention "zu Anfang dieses lauffenden Seculi". Many modern writers, ignoring contemporary evidence, have placed it some ten years earlier, *i.e.* 1690.<sup>1</sup>

Denner's business was continued and his fame extended by his two sons. Little is known of them beyond the fact that they too were skilled players and ingenious workmen. One of them, no doubt, was Jacob Denner, "Stadtmusikus und Flötenmacher", who died at Nuremberg in Aug. 1735. Hawkins's statement in his *History of Music* that Balthasar Denner, the well-known Nuremberg portrait painter, was related to this family would seem to be erroneous. F. G. R.

**Dennis, John.** See Eccles (2, 'Rinaldo and Armida', *incid. m.*). Lenton ('Liberty Asserted', *do.*). Leveridge ('Plot and No Plot', *songs*).

**DENSS, Adrian** (*b* ?; *d* ? Cologne, ?).

German 16th-17th-century music printer. He lived at Cologne at the end of the 16th century and published there, in 1594, a collection of lute music by famous masters under the title of 'Florilegium omnis rere generis cantionum . . .'. E. v. d. s.

**DENT, Edward J. (Joseph)** (*b.* Ribston, Yorkshire, 16 July 1876).

English musicologist, teacher and composer. He was educated at Eton, where he was a pupil for music of C. H. Lloyd, and Cambridge, where he studied with Charles Wood and Stanford. He was elected a Fellow of King's College at Cambridge in 1902, began lecturing on the history of music that year, also teaching harmony, counterpoint and composition, and became Professor of Music there in 1926, when he was elected to a Fellowship at King's a second time. He occupied the chair of music for fifteen years and exercised

a great influence on younger generations of musicians at Cambridge. He completely reorganized the system of lectures for the Mus.B. degree and introduced the system of teaching composition for Part II individually. He saw that the Mus.B. degree would no longer be confined mainly to church organists, as hitherto, but that Cambridge musical education should prepare students for other branches of the musical profession — music masters and mistresses at public schools, composers, critics, professors and lecturers at universities, B.B.C. workers, etc., and aimed consistently at giving the Cambridge musical curriculum greater breadth as a sound foundation, stressing especially the study of musical history and encouraging the performance of historical music.

Dent also devoted himself to musical research, more particularly with regard to 17th- and 18th-century Italian opera, and the fruits of his study appeared in articles contributed to the 'Encyclopaedia Britannica', the second edition of this Dictionary and periodicals, including 'The Musical Antiquary' and the 'Riemann - Festschrift' (1909). More important, however, are two books, 'Alessandro Scarlatti: his Life and Works' (1905) and 'Mozart's Operas' (1913, German trans. 1922, new English ed. 1947), both of which showed that the writer possessed in a rare degree the power to form keen critical estimates on the results of close and accurate research. His lectures on music at Cambridge brought together a strong body of musical students, and many of the younger generation of English composers, performers and research scholars owe their ideals as well as their success to his teaching and example. His translations of 'Die Zauberflöte', 'Figaro' and 'Don Giovanni' set a new standard in English translation of opera. The first of these was produced at Cambridge on 1 Dec. 1911 by members of the University. It and the others have been brought into general use at the Old Vic. and Sadler's Wells theatres in London, where translations of a number of other than Mozart operas followed, all of them done with great resource and, where that is appropriate, with a keen wit; but above all the virtue of Dent's operatic translations is that they avoid words and constructions which, though possibly looking well on paper, become unintelligible in performance.

Dent took an active part as arranger and producer of several old English operatic works, especially Purcell, at Cambridge, the Old Vic. and Glastonbury. He edited Purcell's 'Dido and Aeneas' for a concert performance at Hom-burg in 1924 and took part in stage productions of the work at Munster (1926) and Stuttgart (1927). In 1919 he became music critic to 'The Athenaeum' later 'Nation and Athenaeum',

<sup>1</sup> The relation of the clarinet to the *chalumeau*, an instrument Denner is also stated to have improved, is considered more fully under CLARINET.

and he was active in the formation of the British Music Society. But the special task he set himself was the restoration of artistic intercourse between the late combatant nations of the first world war. With this purpose he spent much time on the Continent writing about English music in continental papers, and on continental music in the English press. It was largely due to him that the chamber music festival held at Salzburg in 1922 developed into a permanent organization in the new International Society for Contemporary Music, and Dent was elected its first president. He retained the presidency till 1938, attending all the festivals in various European centres and always contriving to settle any disputes with unflinching tact and with the aid of an uncommon linguistic versatility. He also served on the Board of Directors of the reopened Sadler's Wells, of which he became a governor. His operatic translations in use at that theatre and elsewhere amount to about 30, and some 15 have been published by O.U.P. Since 1946 they have also been in use at Covent Garden, where he is one of the directors of the Opera Trust. He contributed a chapter on modern English music to Adler's 'Handbuch der Musikgeschichte' and an essay on 'Social Aspects of Medieval Music' to the O.H.M. (1929). He is also a member of the editorial board of the N.O.H.M. and an honorary Doctor of Music of Oxford (1932), Harvard (1936) and Cambridge (1947).

Dent's pen has been active in articles, in encyclopaedias, forewords to books, programme notes (Royal Philharmonic Society and Cambridge), all scholarly and written with charm and authority. Among several recent books the most important are 'Foundations of English Opera' (1928) and 'Ferruccio Busoni: a Biography' (1933).

Dent's work as a composer has of necessity been kept in the background by his many other occupations, but such specimens of it as have reached the public, such as his remarkable polyphonic motets, have great distinction, and his version of 'The Beggar's Opera', full of all kinds of contrapuntal devices, is fascinating.

**DENTE, Joseph Gottlieb** (b. Stockholm, 23 Jan. 1838; d. Stockholm, 24 July 1905).

Swedish violinist and composer. He studied violin with Edward d'Aubert in Stockholm and Hubert Léonard in Brussels, and played at concerts in Germany, France and Scandinavia. He also studied harmony with

Per Winge and composition with F. Berwald. He was violinist in the Swedish Royal Orchestra in 1853, coach at the Royal Opera, leader of the orchestra, 1861, assistant conductor, 1872, and conductor, 1879–85. From 1890 to 1891 he conducted the symphony concerts at the Royal Opera and from 1882 to 1903 taught composition and instrumentation at the Conservatory. Among his pupils were G. W. Hagg, W. Stenhammar, E. Ellberg, P. Vretblad, O. E. Olsson and O. Morales.

His works include:

Operetta, 'I Marocko', produced at the Dramatic Theatre, Stockholm, 1866  
Symphony in D m., awarded a prize in Berlin and performed in Stockholm, 1888  
Concert Overture, 1885  
Vn. Concerto  
Pieces for vn. & pf. &c  
Orchestration of Grétry's 'Les Méprises par ressemblance'.

**DENTICE.** Italian 16th–17th-century family of musicians.

(1) **Fabrizio Dentice** (b. Naples, ?; d. ?), lutenist and composer. He lived for some time in Rome, then at Parma. He composed 'Lamentationi a 5 voci', with appendix of 'Benedictus', 'Miserere', etc., published at Milan in 1593, church compositions, madrigals, motets, etc., and lute pieces.

(2) **Scipione Dentice** (b. Naples, c. 1559; d. Naples, 1635), composer, nephew of the preceding. He entered the Order of the Oratory and was in Rome in 1593. He composed 5 books of madrigals for 5 voices, one book of motets for 5 voices and, according to Riemann, one book of 'Madrigali spirituali' for 5 voices.

(3) **Luigi Dentice** (b. Naples, ?, d. ?), composer, brother of the preceding. He wrote 'Due dialoghi della musica' (1553). A 'Miserere' of his is said to be one of the finest written for the Papal Chapel. E. v. d. s.

**DENZA, Luigi** (b. Castellamare di Stabia, 24 Feb. 1846; d. London, 26 Jan. 1922).

Italian composer and teacher. He entered the Naples Conservatory at the age of sixteen and studied composition under Mercadante and Serrao. Although on 13 May 1876 an opera from his pen, 'Wallenstein' (based on Schiller's dramatic trilogy), was produced at Naples, his activity as a composer was almost entirely limited to songs, of which he wrote over 500 to Italian, French and English words. Residing in London from 1879, he published a series of drawing-room successes, but he will always be best known as the composer of the Neapolitan ditty 'Funiculi funiculà' (1880), of which considerably more than half a million copies were sold and translated versions issued in almost every civilized language. An un-

conscious compliment was paid to it by Richard Strauss, who, under the impression that it was a genuine folksong, quoted it in his orchestral suite 'Aus Italien'. Denza was one of the directors of the London Academy of Music. From 1898 he was professor of singing at the R.A.M.

E. E.

See also Rimsky-Korsakov (orch. arr. of 'Funiculi'). Strauss (R., use of do in 'Aus Italien')

**DENZLER, Robert** (b. Zurich, 19 Mar. 1892).

Swiss conductor and composer. He was a pupil of Volkmar Andreae at Zurich and received further musical education at Cologne and Bayreuth, where in 1911 he became musical assistant. After a brief period as coach at the Cologne Municipal Theatre he spent three years (1912-15) as municipal music director at Lucerne (Konzertverein and men's choir). In the latter year began his official association with his native town as conductor-in-chief at the Zurich Municipal Theatre. He was first conductor at the Municipal Opera of Berlin in 1927-32, but returned to his former post at Zurich in 1934, retaining it until 1947, when he devoted himself to the career of a visiting conductor of opera and concerts both in Switzerland and abroad, and turned again to composition (string Quartet), which he had neglected since his early years.

Denzler occupies a prominent position among Swiss conductors. Besides possessing a knowledge of the general classical repertory, he made a name for himself more especially as a conductor of Wagner and of modern works. He was in charge of the production of Hindemith's 'Mathis der Maler', entrusted to Zurich when the composer had made himself unacceptable by Nazi Germany, and he gave first performances at Zurich of such works as Berg's 'Lulu', Strauss's 'Schweigsame Frau' and Shostakovich's 'Lady Macbeth of Mtsensk'. He thus took a great share in ensuring an international reputation to the Zurich Opera.

Denzler's creative works, dating from his earlier years, when he had time to spare for composition, include the following: Symphony for solo voices, men's and boys' chorus, organ and orchestra, choral works for men's voices; Symphonic Fantasy and Overture for orchestra; pianoforte Concerto; 'Die Richmodis', symphonic poem for organ and orchestra; Suite for 2 violins; songs with orchestra and with pianoforte, etc.

**DÉPART, CHANT DU.** See CHANT DU DÉPART.

**DEPPE, Ludwig** (b. Alverdisen, Lippe, 7 Nov. 1828; d. Bad Pyrmont, 5 Sept. 1890).

German pianist, teacher and conductor. He studied with Marxsen at Hamburg, subsequently with Lobe at Leipzig, and settled at Hamburg in 1857, where he founded a musical

society and was its conductor till 1868. From 1874 to 1886 he was *Hofkapellmeister* in Berlin, and in 1876 he conducted the Silesian Musical Festival founded by Count Hochberg. The special object of his system of pianoforte technique, a minute description of which is given in Amy Fay's 'Music Study in Germany' (Chicago, 1880; London, 1886), was the acquirement of an absolutely even touch by the adoption of a very soft tone and a slow pace in practising, a seat much lower than most teachers recommend and minute attention to the details of muscular movement. Emil Sauer and Donald F. Tovey were among the most distinguished of the advocates of the Deppe system.

**DERING (Deering), Richard** (b. ?, c. 1580; d. London, [buried 22] Mar. 1630).

English organist and composer. According to a pedigree in the B.M. (Add. MS 5534) he was the son of Henry Dering of Liss, near Petworth. (His mother may have been the sister of the Earl of Kent, but this cannot be substantiated.) It is probable that his early musical training was received in England. When he supplicated for the degree of B.Mus. from Christ Church, Oxford, in 1610, he stated that he had been studying music for ten years. In 1612 a Mr. Deering was in Italy in the service of Sir John Harrington<sup>1</sup>, and this may have been the composer. It seems that he was converted to Catholicism at about this time; like many other contemporary Catholic musicians he decided to live abroad, and in 1617 (if not before) he was organist of the convent of English nuns in Brussels. He was still there in 1620. In 1625 he was appointed organist to Queen Henrietta Maria upon her marriage to Charles I, and in the same year his name appears as that of a "musician for the lute and voice" to the king. Further records of him are found in court accounts of 1626 and 1628. His burial was entered in the registers of St. Mary-le-Strand on 22 Mar. 1630, and his will (Somerset House, Scroope 34) was proved by his nearest blood relation, Edward Bold. It would seem therefore that the musical Dr. Richard Dering of Hamburg mentioned in a letter by Huygens may not have been related to the composer, despite his similar name.

All Dering's published works are vocal, with

<sup>1</sup> See a letter in the Public Record Office, SP 99, X, 62.

a *basso continuo*. A list of his publications follows:

- 'Cantiones sacrae sex (? quinque) vocum cum basso continuo ad organum' (Antwerp, 1597). No copy of this book is known to exist, and there seems little doubt that it is a mere fiction, derived from a misreading of the title-page of the 1617 collection.
  - 'Cantiones sacrae' a 5 (Antwerp, 1617, reprinted 1634)
  - 'Cantica sacra' a 6 (Antwerp, 1618)
  - 'Cantiones sacrae' a 5 (Antwerp, 1619). Probably either a fiction, or a ghost of the 1617 collection. No copy is known.
  - 'Canzonette' a 4 and 'Canzonette' a 3 (Antwerp, 1620).
  - 'Cantica sacra' a 2 and 3 (London, 1662).
  - 'Cantica sacra' a 2 (London, 1674). This also contains music by Christopher Gibbons, Rogers, Locke and others; in the preface Playford admits that he is not certain whether the Dering works are genuine.
- MS vocal works by Dering are in the libraries of Durham, Peterhouse, York, Oxford (Ch. Ch. and Music School), London (B.M. and R.C.M.)

Like Weelkes and Gibbons, Dering experimented with the composition, for an ensemble of voices and instruments, of pieces based on city and country cries. A 'London Cries' was entered on the Stationers' Register in 1599, but this is no proof that the work was in fact published, and certainly no copy is known to-day, though it exists in manuscript. A similar 'Country Crie' is found in no less than four sets of manuscripts at the B.M. Some fine works for viols were probably written before he went to Italy. In addition to the 11 fantasies listed by Meyer, 6 more are contained in Egerton MS 3665.<sup>1</sup> All are good music, and one or two are outstanding. It is curious to note that more than two-thirds of Dering's fancies are in A minor. Several pavans and almans for viols, with and without continuo, are in manuscripts at Oxford, Cambridge and London. Some English verse anthems, a madrigal and an elegy exist in manuscripts in libraries at Durham, York, Tenbury, London and Oxford.

Contemporary references to Dering's music are very favourable. Peacham (1622) and Mace (1676) include him in their lists of excellent composers, and the Dutch composer Bannius speaks well of him. Anthony à Wood records a remark of Benjamin Rogers that Cromwell "was much taken with" Dering's Latin motets. Burney is much less enthusiastic. The wide dissemination of Dering's music in print, the comparatively large number of surviving copies, and experience of hearing the works performed suggests that his true worth lies somewhere between these extremes of judgment.

**D'ERLANGER, Frédéric.** See ERLANGER.  
**DERMOTA, Anton** (b. Kropa, Slovenia, 4 June 1910).

Yugoslav tenor singer. He studied singing, pianoforte, organ and composition in his own country, where at a very early age he became organist and choirmaster. After passing the state examination at the Conservatory of Ljubljana, he studied singing with Marie Rado in Vienna. There he was engaged by Bruno Walter for the State Opera in 1934, in which year he also made his first appearance at the Salzburg Festival under Toscanini, making a success particularly with Don Ottavio in 'Don Giovanni'. He achieves much, in that part as in many others, by laying stress especially on emotional expression. His repertory includes the chief lyric tenor parts in the operas of Mozart, Verdi, Puccini and Richard Strauss (including 'Salome' and 'Capriccio'), as well as Offenbach ('Tales of Hoffmann'), Smetana ('Bartered Bride'), Tchaikovsky ('Eugene Onegin'), Borodin ('Prince Igor'), etc. He is appreciated also as an oratorio singer and recitalist. H. R.

**DE ROGATIS, Pascual.** See ROGATIS.  
**Derouède, Paul.** See Massenet (incid. m. for 2 plays).

**DERRICK, ?** (b. ?, d. ?).

English 17th-century composer. Some of his music still exists in manuscript. There is a Short Service by him, including Te Deum, Benedictus, Kyrie and Creed, in the Cathedral Library at Durham; also a Jubilate, Kyrie and Creed, and a Latin Benedictus at Peterhouse, Cambridge.

J. M. (11)

**DERUYTS, Jean Jacques** (b. Liège, 1790; d. Liège, 11 Apr. 1871).

Belgian composer. He was *maître de chapelle* at several Liège churches and wrote great quantities of church music. He was one of César Franck's early teachers. His works include a 'Te Deum' with orchestra, masses, motets, offertories, etc. E. v. d. s., adds.

**DERVISH MUSIC.** See ŞURÎ AND DARWÎSH MUSIC.

**Derzhavin, Gabriel Romanovich.** See Carr (H., 'Ode to the Dety').

**DESAIDES, Nicolas.** See DEZÈDE.

**DESARGUS, François (Xavier)** (b. Amiens, c. 1768, d. Paris, ?).

French harpist and composer. He began by cultivating his voice, was a chorister in Amiens Cathedral and, after the Revolution, chorister at the Opéra in Paris. He had undertaken, in the interval, the study of the harp, in which he succeeded brilliantly. In a few years he became one of the most reputed professors for this instrument. He composed about 25 works for harp alone, harp and pianoforte, and songs with harp accompaniment — all of but slight value. He also wrote

a good 'Méthode de harpe' (Paris, 1809), revised in 1816 under the title of 'Cours complet de harpe'. He died after 1832 M. P.

**DESARGUS, Xavier** (b. ? , d. ?).

French 19th-century harpist, son of the preceding. He appears at the end of 1822 in the orchestra of the King of Prussia in Berlin, after which he is found again in Paris in 1832 and then in Brussels. He abandoned his musical career about 1848 M. P.

**DESAUGIERS, Marc Antoine** (b. Fréjus, Provence, 1742; d. Paris, 10 Sept. 1793).

French composer. He went to Paris in 1774 and published there a translation of Giovanni Battista Mancini's 'Pensieri e riflessioni pratiche sopra il canto figurato', as 'Réflexions sur l'art du chant figuré', in 1776. His first opera, 'Mirzelle' (1777), was not performed; but he achieved success with the music for the witty parody 'Le Petit Œdipe' at the Comédie-Italienne on 22 May 1779, and the year after saw his pastoral opera 'Erxène, ou L'Amour enfant' produced at the Académie Royale de Musique. Ten more operas of his appeared at different theatres between 1780 and 1792, 'Les Deux Sylphes' (Comédie-Italienne, 18 Oct. 1781) was published in full score.<sup>1</sup>

Desaugiers also wrote a cantata in honour of Buffon (1784), a Requiem for Sacchini (1786) and a sort of revolutionary oratorio, 'La Prise de la Bastille', called a *hérodrame tiré des livres saints*, which was sung, apparently in Latin, at the Cirque du Palais-Royal on 8 Nov. 1789 and at Notre-Dame on 13 July 1790. His son Marc Antoine Madeleine Desaugiers (1772-1827) adapted Molière's 'Le Médecin malgré lui' as an opera libretto for his father (Théâtre Feydeau, 26 Jan. 1792) and wrote a large number of vaudevilles and other plays, also some other opera librettos (for Gaveaux and Alexandre Piccini); another son of the composer, Auguste Félix, was responsible for the revised versions of Salieri's 'Danaïdes' (1817) and 'Tarare' (1819), and wrote the libretto for Berton's 'Virginie' (1823). **DESCANT.** (1) From the 12th century onwards the term *discantus* might be used to denote any kind of polyphony. "Est autem discantus diversus consonus cantus."<sup>2</sup>

(2) Before long the term "descant" was restricted to any polyphonic composition mensurable in every part, as distinct from *organum purum*, where the plainsong tenor is not measured. Franco<sup>3</sup>, whose definition is repeated with slight variations by nearly every

theorist of the 13th and 14th centuries, says "Descant is the simultaneous sounding of different melodies, fitted together proportionately by using notes of corresponding length".

(3) The word is also applied to the part, or the highest of the parts, added to the *canto fermo* or tenor; "this tenor is the first of the parts to be constructed" — or more often borrowed — "and the descant is the second melody written above it and in harmony with it"<sup>4</sup>

(4) A special form of descant noticed in the 'Quatuor Principalia'<sup>5</sup> deserves mention. It is described as "quaedam ars in qua plures homines discantare apparent, cum in rei veritate unus tantum discantabit" ("a device by which several singers appear to be descanting, when in fact only one is doing so"). Two or three voices double the *canto fermo* at the fifth, eighth and twelfth, disguising the bare diaphony "frangendo et florendo notas, prout magis decet", while a single skilled descantier completes the deception by filling in thirds and sixths, and avoiding concords. This is probably the "pure descant" referred to in the 'Discantus positio vulgaris', and by Master Lambert, who wrote under the pseudonym of Aristotle.<sup>6</sup> Some of the simpler forms, e.g. that known as Faburden (or "English descant" as it is styled by some writers) were often sung at sight, the only written music before the singers being the plainsong which served as tenor. This method was known as *discantus supra librum*, and it lasted for as much as four centuries, into Elizabethan days.

(5) In modern times there has been a successful revival of descant in connection with English hymn-singing and other forms of church music, well-known congregational melodies being treated with a superimposed counterpoint sung by the trebles of the choir. This is of course the actual arrangement of Tallis's 'Festal Responses', but in practice congregations as a rule sing the treble descant of these responses instead of the tenor melody. This new method of treatment has also been applied to secular songs. A. H.

**DESCARTES, René** (b. La Haye-Descartes, Indre-et-Loire, 31 Mar. 1596; d. Stockholm, 11 Feb. 1650).

French philosopher. His 'Compendium musicae' (1650) is one of the most remarkable books on music of its time. It was translated into English by Lord Wm. Brouncker and published anonymously in 1653. A French edition by Poisson appeared in 1668; many passages in Descartes's letters deal with music.

**DESCLIN STRING QUARTET.** This quartet was founded in 1926, as the Brussels String Quartet, by Henry Desclin (b. Écausines d'Enghien, 13 Feb. 1900), with Théo Delvenne, F. van Schepdael and F. Quinet. The last retired four years later and was replaced by Léon Roy. After a début in 1927 they were heard in Paris for the first time in 1930, where they played works by Florent Schmitt, Honegger and other modern composers. They also played in London and in many other European towns. At the First International Festival held at Trenzianské-Teplce they represented western chamber music. They have specialized in Beethoven's quartets, but their repertory also includes a number of modern works, many of which are dedicated to them.

The Brussels String Quartet gave the first performance of works by Absil, Delannoy, Poot, Quinet, etc., of the Quintet by Koechlin (with Paul Collaer) and the 'Concerto pour quatuor et clavier' by Tibor Harsányi (with the composer).

In 1938 the group was reconstituted and renamed the Desclin String Quartet. Its members then were Desclin, Frédéric Ghigo, Gérard Ruymen and Léon Roy. Its present members (1954) are Desclin, Léon Fouya, Henri Langhewouters and Désiré Derissen.

**DÉSERTEUR, LE** (Opera). See MONSIGNY.

**Desfontaines, François Guillaume.** See Dalayrac (4 lbs.).

**DESHAYES, Prosper (Didier)** (b. ?; d. Paris, c. 1820).

French composer. His first work appears to be the oratorio 'Les Macchabées', sung at the Concert Spirituel in Mar. 1780; a second oratorio, 'Le Sacrifice de Jephthé', followed on 15 Aug. 1786, and some lyric scenes, 'Défaite du serpent Python par Apollon', 'La Chute de Phaëton', etc., appeared at the Concert de la Société des Enfants d'Apollon

from 1785 to 1789. For the stage Deshayes wrote a considerable number of operas, from 1785 ('Le Faux Serment', score published) until 1804 ('Henri de Bavière'). His 'Zélie' (Paris, Théâtre Louvois, 29 Oct. 1791) deserves mention as an operatic version of Goethe's "play for lovers" 'Stella'; the libretto was by P. U. Dubuisson, and the opera was fairly successful, as is shown by several revivals, by the fact that the score was printed and by the appearance, first of 'La Suite de Zélie' at the same theatre (25 Feb. 1792) and secondly of a counterpart, 'Bella, ou La Femme à deux maris' (*ibid.*, 16 Feb. 1795). The libretto of the latter was by Alexandre Duval, who published it first in Vol. II of his collected works in 1822, and in the preface to it pays tribute to the composer, then dead. Duval calls him a fellow-member of the National Guard, but apart from this no biographical details of Deshayes are known, which is astonishing, since so many of his works were performed in Paris over a period of more than twenty years.

A. L.

**DESMARETS, Henri** (b. Paris, c. 1662; d. Lunéville, 7 Sept. 1741).

French composer. He was brought up at the court of Louis XIV. His first compositions were sacred and were made public under the name of Goupillier. His first opera, 'Didon', in 5 acts, was performed on 11 Sept. 1693. It was followed by 'Circé' (1694), 'Théagène et Chariclée' and 'Les Amours de Momus' (both 1695). More lasting was 'Vénus et Adonis', a 5-act opera with a prologue to a libretto by Jean Baptiste Rousseau, produced at the Paris Opéra on 17 Mar. 1697 and revived as late as the same date of 1717, for its twentieth anniversary, also given in French at Hamburg in Apr. 1725, with a German comic prologue. In 1698 came 'Les Fêtes galantes', and it is perhaps due to the similarity of the titles that the additions to Campra's opera-ballet 'L'Europe galante' were ascribed to Desmarets; they are now known to have been by Destouches.

About this time Desmarets got into trouble on account of a secret marriage with the daughter of a dignitary at Senlis. He had to escape to Spain, where he became superintendent of the music to Philip V in 1700. But on 6 May 1704 the opera 'Iphigénie en Tauride', written by him in collaboration with Campra, was produced at the Paris Opéra. The libretto, by Joseph Duché and Antoine Danchet, was the first of the many operatic treatments of the tragedy by Euripides.

In 1708 Desmarets settled in Lorraine as director of Duke Leopold's music. At Nancy and Lunéville some of his *divertissements* were performed, notably 'Le Temple d'Astrée' in 1709. For the marriage of Princess Elisabeth

Thérèse with the King of Sardinia (Mar. 1737) he composed a motet and a 'Te Deum'. His own marriage was sanctioned by Parliament in 1722. In 1720 his 'Renaud, ou la Suite d'Armide' was performed in Paris.

J. A. F.-M., rev.

**DESMOND, Astra** (b. Torquay, 10 Apr 1898).

English contralto singer. She studied singing privately in London and Berlin. Although she had operatic experience both with the Carl Rosa Company and at Covent Garden, she made her name principally as a concert and oratorio singer. To a rich and even voice she adds rare qualities of restraint and intelligence, and no recent singer has excelled her in the part of the Angel in Elgar's 'Dream of Gerontius'. Her excellence in this and the classic oratorios is largely due to the fact that she has kept her voice supple and flexible, without allowing it to develop that boom which is the characteristic vice of the English oratorio contralto of her generation. The same quality makes her singing of songs unusually enjoyable, and British music-lovers owe her a special debt of gratitude for her serious study of Scandinavian song. She was the first to introduce the songs of Kilpinen to English audiences, and she has given recitals of Grieg's songs in the original Norwegian, besides making new translations of about fifty of his songs for the sake of English audiences. In addition to her regular appearances in London and at the great provincial festivals, she has sung in various continental cities as well as in the U.S.A.

D. S.-T.

**Dessos, Robert.** See Milhaud ('4 Éléments', voice & orch.).

**DESORMIÈRE, Roger** (b. Vichy, 13 Sept 1898).

French conductor. He studied at the Paris Conservatoire and also with Charles Koechlin. In 1922 he was awarded the Prix Blumenthal for composition, given by the Fondation Américaine pour la Pensée et l'Art Français. In 1924 he took part in the *sourdes* held by Count Étienne de Beaumont in Paris and in the performances of the Swedish Ballet directed by Rolf de Maré and Jean Borlin. From 1925 to 1930 he was attached to Diaghilev's Russian Ballet as conductor and with it appeared at Covent Garden Theatre in London and the Teatro alla Scala at Milan as well as at the opera-houses of Paris, Dresden, Vienna, Prague and Brussels. He then toured Europe, conducting in Paris, London (Debussy's 'Pelléas et Mélisande' at Covent Garden), Brussels, Munich, Budapest, Leningrad and Moscow. He has taken part in most of the I.S.C.M.'s annual festivals. In 1949 he was invited to the Edinburgh Festival as conductor of the Paris Radio Orchestra.

In Paris Desormière was one of the first to champion the cause of modern composers, of whose works he has shown himself to be an authoritative interpreter. On the other hand he is an expert in Renaissance and other pre-classical music; as director of the Société de la Musique d'Autrefois (from 1930) he studied, scored and performed many half-forgotten works. Not a few of his editions have been published and recorded, including 'Danceries de la Renaissance' and works by Claude Le Jeune, Campra, Lalande, Montéclair, Rameau, Couperin and others. He is also a composer and has written music for a great many films in collaboration with Auric, Milhaud and Wiéner, and supervised its recording.

As one of the conductors of the Paris Opéra-Comique since 1937, Desormière was appointed director of that theatre in 1944. He was also *directeur-adjoint* in charge of the ballet at the Opéra in 1945-46, and he is a member of the Conseil Supérieur du Conservatoire. In 1946 he ceased to be permanently in charge of any official conducting-post, and he appears frequently as guest conductor at opera-houses, concert-halls, broadcasting stations and recording studios all over Europe.

Desormière orchestrated two works by Erik Satie: 'Geneviève de Brabant' and 'Morceaux en forme de poire'. F. E. G.

**Desportes, Philippe.** See Desportes (Y., vocal works). La Grotte (chansons).

**DESSPORTES, Yvonne (Berthe Melitta)** (b. Coburg, Saxony, 18 July 1907).

French composer. She was awarded the Prix de Rome after having studied under Jean and Noël Gallon, Paul Dukas and Marcel Dupré at the Paris Conservatoire, where she was appointed *professeur de solfège* in 1943. Her work includes 3 operas, 2 ballets, a Requiem for chorus and orchestra (or organ), several symphonic poems, 'Symphonic Variations' for pianoforte and orchestra, chamber music and vocal works. Some of the last are set to words by her ancestor, the 16th-century poet Philippe Desportes. F. E. G.

**DES PRÉS}** See JOSQUIN.

**DES PREZ}**

**DESQUESNES, Jean** (b. Mons or Saint-Ghilaen, ?; d. ?).

Netherlands 16th-17th-century composer. He became prebendary of Tournai on 31 June 1581. He is mentioned (1630) in the accounts of Duke Ernest, Governor of the Netherlands. Two books of madrigals by him, for 5 voices, were published in 1594 and 1603.

E. v. d. s.

**DESSAUER, Josef** (b. Prague, 28 May 1798; d. Modling nr. Vienna, 8 July 1876).

Bohemian composer. He was a pupil of

Tomašek and Dionys Weber in Prague, and became a prolific and successful writer of songs, string quartets, pianoforte pieces, etc. He also composed the opera 'Ludwina' (1896), 'Ein Besuch in Saint-Cyr', his most successful work, libretto by Eduard von Bauernfeld (produced Dresden, 6 May 1898), 'Paquita' (1851), 'Domingo' (1860) and 'Oberon' (not performed). His song 'Lockung' was for many years a favourite in England. A. L.

**DESSOFF, Felix (Otto)** (b. Leipzig, 14 Jan. 1835; d. Frankfurt o/M., 28 Oct. 1892).

German conductor and composer. He was a student at the Leipzig Conservatory under Moscheles, Hauptmann and Rietz. Between 1854 and 1860 he was conductor at various small towns, but in the latter year he was appointed conductor of the Court Opera in Vienna. He also held a post there in the Conservatory of the Gesellschaft der Musikfreunde and as director of the Philharmonic concerts. In 1875 he became conductor at Carlsruhe, being succeeded in Vienna by Hans Richter, and in 1881 he was appointed first conductor of the Opera at Frankfurt o/M.

Desoff published some chamber music and other works. His correspondence with Brahms was published in Vol XVI of the 'Ausgabe der deutschen Brahms-Gesellschaft'.

J. A. F.-M., adds.

**DESSUS** (Fr., noun=top). A bowed string instrument of the violin family, used in the 17th century and now obsolete, with the lowest string tuned to c'.

**DESSUS DE VIOLE** (Fr., top of the viols). Any instrument of the viol family taking the highest part in a consort.

**DESTINN, Emmy (Ema Destinnová)**<sup>1</sup> (b. Prague, 26 Feb. 1878; d. České Budějovice, 28 Jan. 1930).

Czech soprano singer. She studied the violin under Lachner and singing under Marie Loewe-Destinn in Prague, adopting the latter's name from gratitude for her artistic progress. On 19 July 1898 she made her début, with great success, at the New Royal Opera-House, Berlin (formerly Kroll's), as Santuzza, and sang there in the 400th performance of 'Tannhauser'. In Sept. she made her débuts at the Royal Opera as Santuzza, Valentine and Mignon. She became a great favourite in Berlin and remained there until 1908. In 1901, and again in 1906, she was very successful as Diemut in 'Feuersnot' and as the heroine in 'Salome' on the production of Richard Strauss's operas in Berlin. In 1901, on leave of absence, she sang at the Colonne Concerts in Paris and as Senta at Bayreuth. On 2 May 1904 she made her London début at Covent Garden, with remarkable success, as Donna Anna, and sang the same season as Nedda in

'Pagliacci', Elsa, etc. She became very popular and returned every season until 1914. She sang in the first productions in England of 'Madama Butterfly', 10 July 1905, and d'Erlanger's 'Tess', 14 July 1909. On 7 May 1907 she sang as Salome at the Théâtre du Châtelet in Paris under the composer's direction. From 1908 to 1916 she sang in the U.S.A. and created there (Metropolitan Opera, New York, 10 Dec. 1910) the part of Minnie in the production of Puccini's 'La fanciulla del West', which she also sang in London, at the first Covent Garden performance, on 29 May 1911.

During the first world war she lived and worked in Bohemia, the Austrian government having refused her a passport to carry out her patriotic activities abroad. With these she was unable to persevere to a great extent after the war, her powers having by that time begun to decline slightly. She sang in London, however, in May and June 1919 at the Czechoslovak Festival in Queen's Hall and later for a few nights at Covent Garden in Verdi's 'Un ballo in maschera' and 'Aida', after which she returned to Prague. Her last years were spent in southern Bohemia, at the castle of Stráž nad Nežárkou, which she had bought in 1914. There she married in 1923 a young captain of the Czechoslovak air force.

Destinn wrote a drama, 'Rahel', as well as poems and novels, and she also attempted composition. She was one of the greatest artists of her generation, being equally gifted as a singer and as an actress. A. C., adds. G. Č.

Bibl.—MARTÍNKOVÁ, M., 'Stražská černá paní' ('The Black Lady of Stráž', (Plzeň, 1940; 2nd ed. 1946). 'Život Emmy Destinnové' (Plzeň, 1946). REKTOREK, A., 'Ema Destinnová' (Prague, 1936).

**DESTOUCHES, André (Cardinal)** (b. Paris, Apr. 1672; d. Paris, 3 Feb. 1749).

French composer. He was a pupil at the Jesuit school in Paris and as a boy accompanied Father Gui Tachard on his voyage to Siam. From 1692 to 1696 he was one of the "mousquetaires du Roi" and during that time began to compose songs. When he left the service he took lessons from Campora and contributed 3 airs to his teacher's 'L'Europe galante'.<sup>2</sup> His own first opera, the pastorate 'Issé', was first produced in 1697 and at once made him famous; it was followed by 9 other operas (see list below), several of which were very successful and kept the stage for a long time. In 1713 Destouches became Inspector General of the Opéra and from 1728 to 1731 he was Director, succeeding Francine; he also held the post of Superintendent of the King's Music from 1728 until his death.

Apart from his works for the stage, Destouches wrote very little: two cantatas, 'Enone' (1716) and 'Sémélé' (1719), two

<sup>1</sup> She adopted a Czech form of her stage name during the first world war.

<sup>2</sup> Often misattributed to Desmarests.

motets and a 'Te Deum', sung before the queen on 24 June 1732, which was his last new work.<sup>1</sup> Shortly before his death he made a second journey to Siam.

The following is a list of Destouches's operas 'Issé' (lib. by Hondar de La Motte), Fontainebleau, 7 Oct. 1697, Paris, Opera, 30 Dec. 1697. Revived until 1773.

'Amadis de Grèce' (La Motte), Paris, 25 Mar. 1699. Revived until 1751.

'Marthèse, première reine des Amazones' (La Motte), Fontainebleau, 11 Oct. 1699; Paris, 29 Nov. 1699. Revived until 1746.

'Omphale' (La Motte), Paris, 10 Nov. 1700. Revived until 1752.

'Le Carnaval et la folie' (La Motte), Fontainebleau, 14 Oct. 1703; Paris, 3 Jan. 1704. Revived until 1756.

'Callirhoé' (Pierre Charles Roy), Paris, 27 Dec. 1712. Revived until 1773 and once more in 1875.

'Télémaque' (Simon Joseph de Pellegrin), Paris, 29 Nov. 1714.

'Sémiramis' (Roy), Paris, 4 Dec. 1718.

'Les Éléments' (Roy), Paris, Tuileries, 31 Dec. 1721, and Opéra, 29 May 1724. Parts of the music by Lalande. Revived until 1754, single acts until 1780.

'Les Stratagèmes de l'amour' (Roy), Paris, 28 Mar. 1726.

Vocal scores of 'Issé', 'Omphale' and 'Les Éléments' were published in the collection of

'Chefs-d'œuvre classiques de l'opéra français' in 1883, edited by Vincent d'Indy, who also conducted a revival of 'Issé' at a Schola

Cantorum concert on 27 Nov. 1908. More recently 'Le Feu' (the third *entrée* in 'Les Éléments') was revived by the Paris Ars

Musica society (16 June 1929).

Destouches's melody is concise and elegant, and in some of his works there are passages of considerable dignity and beauty. His style is altogether of a *galant* and pastoral kind, and his music contains qualities which make his work akin to Rameau's, though his recitative does not differ from that of Lully.

See also Linley (1, interlude for opera adapt.).

**DESTOUCHES, Franz Seraph von** (b. Munich, 21 Jan. 1772; d. Munich, 9 Dec. 1844).

German composer. In 1787 he had some lessons from Haydn in Vienna. His first opera, 'Die Thomasnacht', was produced at Munich on 31 Aug. 1792 (score preserved at Darmstadt). In 1797 Destouches was appointed music director at Erlangen, and shortly afterwards he joined the orchestra of the Weimar theatre—then under Goethe's direction—as second leader. There he wrote the incidental music for Schiller's version of Gozzi's 'Turandot' (1802, score published), for his 'Die Braut von Messina', 'Die Jungfrau von Orléans' (both 1803) and 'Wilhelm Tell' (1804)<sup>2</sup>, also for Kotzebue's 'Die Hussiten vor

<sup>1</sup> The German works attributed to him by Eitner belong, of course, to Franz Seraph von Destouches.

<sup>2</sup> The music for Schiller's 'Wallensteins Lager' (1798) and for his version of 'Macbeth' (1800) has also been attributed to Destouches; the former, however, was chiefly by Kranz, the latter by Reichardt.

Naumburg' (1804) and for Zacharias Werner's 'Wanda, Königin der Sarmaten' (1808). A second opera of his, 'Das Missverständnis', was given at Weimar on 27 Apr. 1805, a third, 'Der Teufel und der Schneider', was not performed.

Destouches succeeded J. F. Kranz as first leader in 1804, but left Weimar in 1810 to become professor of music at Landshut; from 1826 to 1842 he was conductor at Homburg in Hesse and then retired to his native town. Besides his works for the stage he wrote some pianoforte sonatas and other pieces, a pianoforte Concerto, a clarinet Concerto, etc., also a Mass and an oratorio, 'Die Anbetung am Grabe Christi'.

A. L.

**DESTRANGES, Louis (Augustin Étienne Rouillé)** (b. Nantes, 29 Mar. 1863; d. Nantes, 31 May 1915).

French critic. He edited (1890) 'L'Ouest-Artiste', an important French musical review. He was a contributor to the 'Guide musical' and to the 'Monde artiste', in the latter of which he gave an account of an interview with Verdi at Genoa in 1890, when that composer expressed his opinions of certain French musicians in a way that made a sensation in French musical circles. Destranges lived out of Paris and devoted himself to an effort to make his native town a musical centre. He also did much for the advancement of Wagner's cause in France and for the development of the modern French school. He wrote an interesting study on 'Le Théâtre à Nantes depuis ses origines'. His chief critical works are:

'Les Interprètes musicaux du "Faust" de Goethe.'

'Les Œuvres lyriques de César Franck.'

'L'Œuvre théâtrale de Meyerbeer.'

'Fervaa' de d'Indy.'

'Les Femmes de Wagner.'

'Tannhäuser.'

'Le Réve' de Bruneau' (and studies of other works by the same composer).

'Samson et Dalila' de Saint-Saëns.'

'Souvenirs de Bayreuth.'

'Consonances et dissonances'.

G. F.

**D'ESTRÉES.** See ESTRÉES.

**DESWERT.** See SWERT.

**DESZCZYŃSKI, Józef** (b. Wilno, 1781; d. Warsaw, 1844).

Polish composer. He wrote many successful chamber works. His string Quartet (Op. 39) was published by Hofmeister at Leipzig. It is worth emphasizing that Deszczyński in this Quartet introduced a polonaise in place of the customary minuet or scherzo. He also wrote a Sextet for strings, songs and several pieces for violin and pianoforte.

C. R. H.

**DESZNER (Teschner), Salomea** (b. Białystok, 1759; d. Grodno, 1809).

Polish actress and singer. She was educated in Warsaw and began her career there, afterwards touring Poland with an opera company

which gave performances at Lwów, Grodno, Wilno, Dubno, etc. In 1794 she organized an opera company in which she acted as impresario, director and singer. The same year she established a permanent opera theatre at Grodno, where she remained with her theatre till her death. C. R. H.

**DÉTACHÉ** (x). See BOWING.

**DÉTACHÉ** (z) (Fr. = curtailed note). See ORNAMENTS, C (v) (b)

**DETROIT.** The largest city of Michigan, U.S.A., has several important musical establishments.

(1) **DETROIT SYMPHONY ORCHESTRA**—This was first the title of an organization of 40 players assembled in 1872 by Fritz Kalsow, giving four concerts a year. This was active until about 1910 under the following conductors: Rudolf Speil, Arthur DePew, Johann H. Beck, Ross Jungnickel, William Yunk, Hugo Kalsow. Since 1900 the Detroit Orchestral Society has sponsored a series of concerts by visiting symphony orchestras. In 1914 this association supported a revival of the Detroit Symphony Orchestra on a larger scale under Weston Gales and Ossip Gabrilovich. It was thereupon decided to enlarge the orchestra, place it on a sound financial basis and engage Gabrilovich as its permanent conductor. A new orchestral hall was built at a cost of nearly \$1,000,000, seating 2100 people. The season of 1919-20 was so successful that it was decided to increase the size of the orchestra to 100 men. The cost of this was so great, however, that in subsequent years the number was reduced to 86. After Gabrilovich's fatal illness in 1935 Victor Kolar conducted the orchestra with frequent guest conductors until 1937, when Franco Ghione was appointed principal conductor. During the 1938-39 season the orchestra gave 14 Thursday evening, 8 Friday afternoon, 10 Saturday evening popular and 12 Children's concerts. From 1925 to 1931 the orchestra gave a series of concerts each evening for six weeks during the summer in a splendid shell constructed for the purpose in the municipal park on Belle Isle in the Detroit River; these were financed by the city. Since 1936 these summer concerts have been continued under the orchestra's own budget. In the summer of 1934 the orchestra gave two concerts daily under Victor Kolar for 84 days, as part of the Ford Motor Co. exhibit at the Chicago World's Fair. From this association with the Ford Company grew the Ford Sunday Evening Hour, an hour's broadcast of symphonic music played by the orchestra assisted by many renowned artists, an activity which greatly helped the orchestra financially and which brought fine music into many homes never before reached. These concerts were conducted by Kolar in 1934-37, since then by guest conductors. Ghione

resigned in 1940. The orchestra engaged guest conductors for two seasons and then suspended concerts in 1942-43. They were resumed in the autumn of 1943 under Karl Krueger, who conducted until 1949, when the orchestra disbanded as a result of labour troubles.

(2) **CHORAL SOCIETIES.**—The oldest musical organizations were the German-American singing societies. Harmonie was organized in 1849 and had its own hall and club-rooms from 1875. It presented many orchestral and operatic programmes as well as its regular choral programmes. After 1933 it maintained a Little Symphony Orchestra.

Concordia, organized in 1865, also has its own quarters; it is devoted to light opera productions and choral works. Its directors have been: William Koop, J. Tinnette, H. Bishof, G. Freytag, F. Abel, A. C. Meurer, Joseph Schmitz, Carl Noehren, Hans Hagen, E. Ossko, Richard Fritsch, Arthur G. Heyer, William Hoffman.

From c. 1890 to 1900 Charles B. Stevens directed the Apollo Club for men and the Madrigal Club for women. Since 1912 Charles F. Morse has contributed much to the city's music through his concerts with the Orpheus Club (men) and the Madrigal Club (women).

An early oratorio society was the Detroit Musical Society, conducted from 1870 to 1888 by F. Abel, and then for a few years by Albert Stanley. Since then there have been several groups using the name Detroit Choral Society, conducted by J. D. Mehan, Charles B. Stevens and Albert M. Schulte. Since 1912 the name has been associated with a chorus of 300 voices conducted by William Howland, this has been inactive in recent years.

Since 1933 an *a cappella* choir has been directed by Arthur Luck.

(3) **THE DETROIT CIVIC OPERA COMPANY.**—This was founded in 1928 by Thaddeus Wronski, who became its stage and chorus director as well as general manager. In 1934 its activities were associated with those of the Detroit Symphony Orchestra, after which it produced the following operas at Detroit: 'Tristan', 'Susanna's Secret', 'La Tosca' (1934), 'La rondine', 'Peter Ibbetson', 'Faust' (1935); the first performance of Rocca-Simone's 'The Dybbuk', which was later repeated in New York and Chicago (1936); Verdi's Requiem (in memory of Gabrilovich), 'Madame Butterfly', 'Cavalleria rusticana', 'Pagliacci', 'Lucia' (1937). There were no productions during the second world war.

(4) **CHAMBER MUSIC.**—Between 1883 and 1900 there was a succession of three string quartets which gave concerts in and around Detroit under the name Philharmonic Quartette or Club. The first consisted of William Luderer, Louis Schultz, Theodore Rhiner and

Frederic L. Abel; later the players were William Yunk, Louis Schultz, Walter Voigtlander, Emil Schippe. The third group was William Yunk, Hermann Brueckner, Frank Rheska, Herman Heberlein.

The Detroit String Quartet was formed in 1913 by William G. King with Pasquale Briha, James Cassie, Luigi Motto. In 1915 the personnel became Ilya Scholnik, William King, Valbert Coffey, Georges Miguel. The Quartet disbanded in 1934.

(5) SCHOOLS.—The Detroit Conservatory of Music was founded in 1874 by Jacob H. Hahn. It has a staff of some 70 teachers and students numbering over 1600. Since the death of the founder the directors have been Frances L. York, 1902–28; Elizabeth Johnson, 1928–35; J. Bertram Bell since 1935.

The Institute of Musical Art was founded in 1914, and under its first president, Guy Beves Williams, with a staff of 50 teachers, quickly established its reputation. The president since 1924 has been Edward B. Mannville. In 1928 Francis L. York became dean and chairman of the Board.

The Detroit Foundation Music School was established in 1935 by Elizabeth Johnson.

Significant music schools of the past were the Michigan Conservatory of Music, maintained from 1900 to 1914 by Frederic L. Abel; the Detroit College of Music under Louise Cragg; the Detroit Institute of Music under Kate Jacobs.

Wayne University's music department under Louise Conklin began in 1917 as part of the Detroit Junior College. In 1923 it became part of the College of the City of Detroit, and since 1933 it has continued as part of Wayne University. The following music degrees are awarded: B.A. in Music, B.S. in Music Education, M.A. in Music, M.S. in Music Education.

(6) VARIOUS CONCERTS.—In addition to the concerts sponsored by the Detroit Orchestral Society, series of artists' recitals have been maintained for over fifty years by the Tuesday Musicales. Since 1930 the local chapter of Pro-Musica has maintained a series of concerts bringing programmes of a more unusual nature to the city.

(7) CONCERT-HALLS.—The concert-halls of Detroit have been: (a) The Detroit Opera House, first erected in 1869, burned on several occasions, finally closed in 1936; (b) the Light Guard Armory, erected in 1890; (c) Orchestra Hall, erected in 1919; (d) the Masonic Auditorium, erected in 1928.

**Détroit, Léonce.** See Saint-Saëns ('Henry VIII', lib.).

**DETT, Robert Nathaniel** (b. Drummondsville, Quebec, 11 Oct. 1882; d. Battle Creek, Mich., U.S.A., 2 Oct. 1943).

American pianist and composer. He

studied at Harvard, where he won the Bowdoin Literary Prize for his essay 'The Emancipation of Negro Music' and the Francis Boott Music Award. In 1927 he received a medal from the Harmon Foundation. After gaining a Master's degree at the Eastman School of Rochester, N.Y., he went to Paris to study with Nadia Boulanger. He received the honorary degree of Doctor of Music from Harvard in 1924 and from Oberlin College (Ohio) in 1926, said to have been the first Negro to have been given that distinction by the latter institution. In 1925 he gave a series of pianoforte recitals in the U.S.A. and Canada, and four years later he toured Europe as conductor of the Hampton Institute Choir. He died while directing musical activities for the U.S.A. United Service Organization during the second world war.

Dett took a prominent part in advancing the musical education of Negroes in the U.S.A., and in many of his compositions he used Negro themes and Negro idioms. His works include two compositions for chorus and orchestra, 'Chariot Jubilee' (first performed in 1921) and 'The Ordering of Moses' (1937), many works for unaccompanied chorus; pianoforte suite 'In the Bottoms' (1913); arrangements of Negro spirituals.

N. B.

**DETTINGEN TE DEUM, THE.** A setting of the 'Te Deum' written by Handel to celebrate the victory of Dettingen (26 June 1743) "Begun July 1743"; first performed, not at the thanksgiving service of 28 July, but at the Chapel Royal, St. James's, on 27 Nov. 1743. Many of the themes and passages are apparently borrowed.

G.

**DEUS MISEREATUR.** The psalm (LXVII) used in the evening service of the Anglican Church after the lessons, alternatively with the Nunc Dimittis. (See SERVICE.)

**DEUTEROMELIA.** See PAMMELIA.

**DEUTSCH, Otto Erich** (b. Vienna, 5 Sept. 1883).

British (naturalized) musical biographer and bibliographer. He studied the history of art and literature, and worked casually as a publisher and bookseller in Vienna. He developed into an expert on musical first editions and in this capacity was from 1926 to 1935 librarian of the Hoboken Collection. He specialized particularly in Schubertian biography and bibliography, and on that subject produced what is not only his own most important work, but one of the outstanding productions in Schubert literature. The publication began in German as 'Franz Schubert: die Dokumente seines Lebens und Schaffens' (1913–1914), but it remained unfinished in that form. Two parts only appeared. Vol. II, pt. i, containing the documents of Schubert's

<sup>1</sup> See URIO.

lifetime, and Vol. III, a collection of historical pictures referring to Schubert's career. In 1946 this work appeared in English, translated by Eric Blom, as 'Schubert: a Documentary Biography', amplified by the contents of the original unpublished Vol II, pt II (posthumous documents) and further augmented by a large number of documents not in the German edition and a full commentary by Deutsch on all details requiring elucidation. The volume is profusely illustrated with a selection of the most interesting pictures from the original iconographical volume.

In addition Deutsch edited for the first time several unknown works by Schubert (Polonaise for violin and orchestra, 'Deutsche Trauermesse', 'Hungarian Melody', German Dances for pianoforte, etc.). He also carried out research on other Austrian classics. In association with C. B. Oldman he wrote a study, 'Mozart-Drucke' (Z.M.W., 1931-32), which for the first time gives a general survey of Mozart's compositions printed during his lifetime and of his works published with opus numbers. Deutsch also edited, with Bernhard Paumgartner, Leopold Mozart's letters to his daughter (1936), and he is responsible for the first publication of Beethoven's 'Twelve German Dances' and several Haydn dances.

The Nazi *Anschluss* in Austria drove Deutsch to England and the second world war kept him there, settled at Cambridge, where, in addition to bringing out the English edition of his Schubert work already mentioned, he continues his research into the lives and works of the great masters, his attention being from that time on particularly concentrated on Handel. He is connected with the editing of two series of English publications: 'The Harrow Replicas', a set of facsimiles of famous books and music, and 'The World of Music', a collection of lavishly illustrated popular books ranging over a large variety of musical subjects, written by different authors. He also published a facsimile of Mozart's own manuscript catalogue of his works, and in 1951 appeared his concise but complete and admirably arranged thematic catalogue of Schubert's works.

A very important task undertaken by Deutsch in 1946 is the compilation of the 'Union Catalogue' of the music contained in all the important libraries in Great Britain, a work on a vast scale which is to be extended internationally, if other countries can be induced to collaborate. But he retired from the editorship in 1950.

**DEVELOPMENT.** A word used in two somewhat different senses; on the one hand of a whole movement, in a sense analogous to its use with reference to an organism; and on the other of a subject or phrase, with reference to the manner in which its conspicuous features of rhythm or melody are employed by reiteration, variation or any other devices which the genius or ingenuity of the composer suggests, with the object of showing the various elements of interest it contains.

The term is very apt and legitimate when used in these senses, which are in reality the complements of each other; for the development of a movement is rightly the development of the ideas contained in its subjects, otherwise, particularly in instrumental music, neither purpose nor unity of design could be perceived. It must, however, be borne in mind that the mere transposition of a subject or its statement in a transformed version is not in itself development. A thing is not necessarily developed when it is merely changed, but it is so generally when the progressive steps between the original and its final condition can be clearly followed.

The most perfect types of development are to be found in Beethoven's works, with whom not seldom the greater part of a movement is the constant unfolding and opening out of all the latent possibilities of some simple rhythmic figure. Reference may be made to the first movement of the fifth Symphony; the scherzo of the ninth Symphony; the *allegro con brio* of the Sonata in C minor, Op. 111; the last movement of the Sonata in F major, Op. 10 No. 2; and the last movement of the Sonata in A major, Op. 101.

C. H. H. F.

**DEVELOPMENT SECTION.** The portion of a movement in sonata form, also called the "working-out", between the exposition and the recapitulation, where more or less of the thematic material is normally subjected to development in the second sense outlined in the article above. There are no rules as to the mode of treatment, which may be very simple or very elaborate. Not that it is essential to such a section that any of the material should necessarily be developed at all, or even alluded to: in Mozart's sonata movements, for instance (e.g. the first movement of the Sonata for 2 pianofortes), the material may be entirely new; but only a master of sonata form may trust himself with such freedom, for he alone will be capable of making thematically disconnected material appear relevant, as older masters did in the case of the contrasting middle sections of the *da capo* aria. A different kind of mastery, which may be present in the same composer (as is shown by the first movement of Mozart's G minor Symphony, K. 550), will produce developments of very considerable complexity that keep closely to the musical argument based on the matter propounded in the exposition. Beethoven's development section usually proceeds in this way, particularly in his later pianoforte, orchestral and chamber works in sonata form; but he would sometimes restrict its functions deliberately, either by simplification or by curtailment, in order to throw the main stress of development into the coda, which in these works may amount to a second and more thorough-going development.

Development sections of a rudimentary kind appear in Domenico Scarlatti's harpsichord 'Esercizi' (now properly called "sonatas", since they make a distinct beginning in sonata form). Such sections are not always present in these one-movement structures of Scarlatti's, the second (recapitulating) halves of which often merely resume the opening bars of the first (expository) one in the key of the dominant and then work back to a conclusion in the tonic; but such new matter as this may appear:

**"EXPOSITION"**

*Presto*

**"DEVELOPMENT"**

which is non-thematic but relevant and may thus be said to derive directly from his father's

*da capo* aria. A recapitulation is then approached by a short cut to a point that had already occurred in the course of the exposition, later than the opening bars, which do not recur.

**DEVI, Nelun.** See SENA, DEVAR SURYA.

**DEVIIENNE, François** (b. Joinville, Haute-Marne, 31 Jan. 1759; d. Charenton, 5 Sept. 1803).

French composer and flute and bassoon virtuoso. He joined a regimental band as flautist at an early age and made his début as composer in Paris on 4 May 1787, when a lyric scene, with words by Voltaire, and a 'Symphonie concertante' for flute, clarinet and bassoon were heard at a concert of the Société des Enfants d'Apollon. In 1788 Devienne entered the orchestra of the Théâtre de Monsieur as bassoonist.

Besides 12 operas of which 'Le Mariage clandestin' (libretto by Ségur, Théâtre Montansier, 11 Nov. 1790) was the first and 'Le Valet de deux maîtres' (Théâtre Feydeau, 3 Nov. 1799) the last, Devienne wrote a great number of romances, several symphonies (among them 'La Bataille de Jemmapes' for 20 instruments) and overtures, 2 'Symphonies concertantes' for flutes and orchestra, many flute and bassoon concertos, and chamber music (quartets, trios, sonatas) for all sorts of combinations of strings, winds and pianoforte. His 'Méthode de flûte théorique et pratique' first appeared in 1795 and was reprinted and translated several times. He died in a lunatic asylum.

Of Devienne's operas by far the most successful was 'Les Vistandines' (libretto by Picard; the plot revolves on a convent mistaken for an inn), which was a favourite in revolutionary Paris (first performed at the Théâtre Feydeau on 7 July 1792), was translated into half a dozen foreign languages and revived in Paris as late as 1920. The music was published, as was that of 'Les Comédiens ambulants' (Théâtre Feydeau, 28 Dec. 1798, also a fair success) and 'Le Valet de deux maîtres' (see above). Much of Devienne's chamber music was reprinted by London publishers about 1800, and especially his flute compositions enjoyed a great vogue for a time.

**DEVIL'S OPERA, THE** (Opera). See MACFARREN.

**DEVIN DU VILLAGE, LE** ('The Village Soothsayer'). Operetta (*intermède*) in 1 act by Jean-Jacques Rousseau. Libretto by the composer. Produced Fontainebleau, at court, 18 Oct. 1752; 1st public perf., Paris, Opéra, 1 Mar. 1753. 1st perf. abroad, Brussels, 1753. 1st in England, London, Drury Lane Theatre (adapted by Burney as 'The Cunning Man'), 21 Nov. 1766. 1st in U.S.A., New York, 21 Oct. 1790. The parody 'Les Amours de Bastien et Bastienne', by Charles Simon Favart, Marie Justine Favart and Harny de Guerville, was produced in Paris, Comédie-Italienne, 4 Aug. 1753.

See also **BASTIEN UND BASTIENNE** (Mozart).

**DEVISENARIE** (Ger., device aria). A term the English equivalent of which here suggested might be usefully adopted. It describes a type of aria familiar in the 17th and 18th centuries in which the first word or words enter separately in the voice part, as though the singer were announcing the title of the piece. This "device" — the proper word, if it is accepted in its heraldic sense — is then repeated with a heraldic line or sentence following on, usually after a short break filled up instrumentally. "Angels, ever bright and fair" in Handel's 'Theodora' is a very well-known example. The opening "device" is followed by a rest of three slow beats in the voice part and then resumed. "Angels, ever bright and fair, take, oh take me . . .", etc.

E. B.

**DEVREESE, Godefroid** (b. Courtrai, 22 Jan. 1893).

Belgian violinist, conductor and composer. He studied at the Brussels Conservatoire under Ysaye and Thomson (violin), Gilson and Rasse (composition), became leader of the Kurhaus Orchestra, Ostend, of the French opera orchestra, The Hague, and member of the Concertgebouw Orchestra, Amsterdam. For some time he was conductor of the Lyrical Theatre, Antwerp, and in 1924 of the newly opened Park Theatre Vauxhall, Brussels. Later he was conductor and violin soloist at Monaco, and in 1930 he accepted an appointment as director of the Music School at Mechlin.

Among his compositions are a cantata 'Beatrijs' (with which he won the Prix de Rome in 1922), 'Rapsodie flamande', 'Poème héroïque' for orchestra, a 'Ballet' for orchestra, a ballet-mimodrama, 'Tombé-lène', and much chamber and pianoforte music.

**DEVRIENT, Wilhelmine.** See **SCHRODER-DEVRIENT**.

**DEZÈDE (Dezèdes, Desaidès), Nicolas** (b. ? , c. 1745; d. ? Paris, 1792).

French composer. Nothing is known about

his origin and early life before 1772, when his first opera, 'Julie', was successfully produced at the Comédie-Italienne in Paris, and astonishingly little about his further career (apart from his works), considering that he was for twenty years one of the most popular composers for the Paris stage. The various chronicles and correspondences of the time, by Bachaumont, Grimm, d'Alembert, and so on, do not reveal a single tangible biographical fact about him, beyond rumours that he was of noble birth — he was even alleged to be an illegitimate son of Frederick II of Prussia — and received a considerable allowance from some mysterious source.

Dezède (the spelling of his name varies) wrote about twenty operas from 1772 till his death; only a few of them were failures, and three (among them 'Le Véritable Figaro' mentioned by Grimm in Nov. 1784) were not performed. The most successful were 'Julie' (1772) and its sequel, 'L'Erreur d'un moment' (1773), 'Les Trois Fermiers' (1777), again with a sequel, 'Blaise et Babet' (1783), and 'Alexis et Justine' (1785). These five were published in full score (as by "M. D. Z."), and a few more are extant in manuscripts. For the Opéra he wrote 'Péronne sauvée' (1783) and 'Alcindor' (1787), and some of his later works had so little music in them that they could be performed at the Comédie-Française: 'Auguste et Théodore, ou Les Deux Pages' (1789), 'Les Trois Noces' (1790) and 'Paulin et Clairette, ou Les Deux Espiègles' (1792). After his death appeared 'La Fête de la cinquantaine', which had been ready in 1781, but was produced and published only in 1796.

Dezède died probably in Paris, and in 1792, as the 'Almanach des Spectacles' published an 'Éloge' in 1793. His portrait — a crude steel engraving, said to be after a painting by Greuze — appeared in the 'Magazin pittoresque' of 1854. Dezède's daughter Florine was the composer of a one-act comic opera, 'Lucette et Lucas' (Comédie-Italienne, 8 Nov. 1781), which was published in full score ("mise en musique par M<sup>lle</sup> D. Z.")

Dezède's operas were great favourites in their time and highly spoken of by contemporary critics. Several were translated into other languages, but none of them lasted on the stage beyond the Napoleonic era or was afterwards revived even experimentally. Mozart wrote his pianoforte variations K. 264 on the most popular air from 'Julie' ("Lison dormoit dans un bocage"), and the even better known "Ah, vous dirais-je, Maman?" has also been attributed to Dezède; Mozart wrote variations on this also (K. 265). Probably he met Dezède in Paris in 1778 (even if he does not mention his name in his letters) or at least saw some of his works on the stage of the

Comédie-Italienne (perhaps 'Zulima', which was first produced there on 9 May 1778). A. L.

**DIABELLI, Anton (Antonio)** (b. Mattsee nr Salzburg, 6 Sept. 1781, d. Vienna, 7 Apr. 1858).

Austrian music publisher and composer of Italian descent. He was first a chorister. Later he studied at the Latin School of Munich. Being intended for the priesthood he received a good general education in the monastery of Rattenhaslach and profited much from association with Michael Haydn, who superintended his musical studies. When the Bavarian monasteries were secularized in 1803 he gave up the idea of taking orders, went to Vienna and was warmly received by Joseph Haydn. His pianoforte pieces and his numerous arrangements had an immense popularity. His masses, especially the *Landmessen* (for country churches), are widely spread in Austria, being for the most part easy to sing and interesting, if not particularly solid. He also composed songs for one and more voices, and an operetta, 'Adam in der Klemme' (1809), a sequel to Schenk's 'Dorfbarbier', as well as other stage works.

He soon became a popular teacher of the pianoforte and guitar, made money enough to become partner with Peter Cappi, the music publisher, in 1818, and in 1824 the firm became Diabelli & Co. In 1852 it became C. A. Spina, and in July 1872 F. Schreiber, under which name it continued, though the business was purchased in May 1876 by A. Cranz of Hamburg. By 1880 its publications amounted to over 25,000. In Diabelli's time it acquired the publications of the extinct firms of Artaria, L. Kozeluch, Th. Weigl, Berka, Leidesdorf, Pennauer and Traeg, and in 1855 those of Carlo Mecchetti. The firm published specially for Schubert, Czerny, Strauss and Lanner; also Marburg's 'Abhandlung von der Fuge', revised by Sechter, and Reicha's 'Lehrbuch'; and, under the title 'Ecclesiasticon', a collection of church music. In 1874 a fresh catalogue of publications was issued, and a thematic catalogue of Schubert's published works, compiled with his usual exhaustive accuracy by Nottebohm. Diabelli's quiet and unassuming life made him many friends, some of whom in 1871 erected a tablet to his memory on the house at Mattsee in which he was born. Beethoven wrote his 33 Variations (Op. 120) on a waltz of Diabelli's. G. F. P.

**DIAMANTS DE LA COURONNE, LES**

('The Crown Diamonds'). Opera in 3 acts by Auber. Libretto by Eugène Scribe and Jules Henri Vernoy de Saint-Georges. Produced Paris, Opéra-Comique, 6 Mar. 1841. 1st perf abroad, Brussels, 25 Nov 1841. 1st in U.S.A., New York (in French), 14 July 1843. 1st in England, London, Princess's Theatre (trans. by T. H. Reynolds), 2 May 1844.

**DIAMOND, David (Leo)** (b. Rochester, N.Y., 9 July 1915).

American composer. He studied at the Cleveland Institute of Music in 1928-29, the Eastman School of Music, Rochester, in 1930-1934 and the New Music School (Dalcroze Institute) in New York, 1934-36. His teachers included Bernard Rogers, Paul Boepple, Nadia Boulanger and Roger Sessions. He was awarded the Elfrida Whitman Fellowship in 1935 and the Juilliard Publication Award in 1937 for 'Psalm', a work for orchestra. He held Guggenheim Fellowships in 1938 and 1941. In 1937, also, he was commissioned by the League of Composers to write his Quintet for flute, string trio and pianoforte, and in 1941 he won the award from the American Society for the Publication of American Music. In 1942 he received the American Academy in Rome Award and in 1943 the Paderewski Prize for the pianoforte Quartet. He also had a grant from the National Academy of Arts and Letters, and in 1945 a commission from the Kussevitsky Foundation.

<sup>1</sup> As 'The Crown Diamonds', but it was also known as 'Caterina' in Britain and produced under that name at Glasgow in 1874.

David Diamond has written in many forms, though his early trend toward symphonic manner and dimension has proved a persistent one, his four symphonies having won for him high tribute. His musical style has a modal sound to it, though the modality is achieved in harmonic colouring — in the vertical sense — more often than in the polyphonic one. His 'Rounds for Strings', a work that received the Critics' Circle citation, is however a more polyphonically achieved modal piece, its linear qualities being dictated both by the string instrumentation and by the use of the "round" as a form, and the closer integration of ends and means makes this one of his outstanding pieces.

Diamond's music has a notable emotional impetus, and such dissonance as there is in his style is almost continually present in his monochrome harmonic colour scheme: it is seldom used as a dynamic contrast. Structurally and stylistically Diamond's works are all very similar, from the earlier to the later pieces. His expression is personal, lyric-romantic and intense, and has not changed much, or passed through very divergent working methods, in spite of his many and varied teachers. His expressive equilibrium appears to be set and his technical command fully accomplished.

P. G.-H.

## CATALOGUE OF WORKS

### BALLETS

- 'Tom' (scenario by E. E. Cummings) for mixed chorus & full orch. (1936)
- 'The Dream of Audubon' (scen. by Glenway Westcott) (1941).

### INCIDENTAL MUSIC

- Shakespeare's 'Tempest' (1944).
- Shakespeare's 'Romeo and Juliet' (1947).

### FILM MUSIC

- 'A Place to Live', documentary for the Philadelphia Housing Association (1940).
- 'Strange Victory', documentary (1948)
- 'Calder Circus Sequence', on Hans Richter's 'Dreams that Money can Buy' (1948).

### CHORAL WORKS

- 'This is the Garden' (E. E. Cummings), unaccomp. (1935).
- 'Three Madrigals' (James Joyce), unaccomp. (1937).
- 2 Choruses (Cummings), unaccomp. women's voices (1940).
- 'Young Joseph' (Thomas Mann), women's voices & stgs., or organ (1944).

### ORCHESTRAL WORKS

- 'Hommage à Satie' for chamber orch. (1934).
- 'Psalm' (1936)
- Variations for small orch. (1937).
- Elegy in Memory of Ravel, for brass, harps (or stgs.) & perc. (1937).
- Overture (1937).
- 'Aria and Hymn' (1937)
- 'Heroic Piece' for small orch. (1938).
- Mus.c for double stg. orch., brass & drums (1938).
- Concert Piece (1939).
- Concerto for chamber orch. (1940).
- Symphony No. 1 (1940).
- Symphony No. 2 (1943).
- 'Rounds' for stgs. (1944)

- Symphony No. 3 (1945).
- Symphony No. 4 (1945).
- 'The Enormous Room' (1948)

### SOLO INSTRUMENTS AND ORCHESTRA

- Vn. Concerto No. 1 (1936).
- Cello Concerto (1938)
- Vn. Concerto No. 2 (1947)

### CHAMBER MUSIC

- Partita for oboe, bassoon & pf (1935)
- Concerto for strg. 4tet (1936)
- String Trio (1937).
- Quintet for flute, vn., viola, cello & pf (1937).
- Quartet for vn., viola, cello & pf (1938)
- String Quartet No. 1 (1940).
- String Quartet No. 2 (1943).
- String Quartet No. 3 (1946).

### VIOLIN AND PIANOFORTE

- Sonata (1946).
- 'Canticle, Perpetual Motion' (1946).

### VIOLONCELLO AND PIANOFORTE

- Sonata (1938).

### PIANOFORTE MUSIC

- Sonatina (1935).
- 8 Pieces (1935).
- Concerto for 2 pfs. (1941).
- Album for the Young (1946).
- Sonata (1947).

### SONGS

- 'Four Ladies', cycle (1935).
- 12 Songs (1941-46).
- 'L'Amé de Debussy', cycle of 9 songs on Debussy's letters (1949)

P. G.-H.

### DIAPASON (1). See INTERVALS.

**DIAPASON (2).** The diapason stops of the organ consist of the bold and dignified flue-pipe work of foundation tone and pitch which forms the basis of the tonal department of the organ or manual to which it belongs. The diapason chorus is the backbone of the English Great Organ.

Diapasons are open and stopped pipes. The Open Diapason as a Great-Organ stop consists of cylindrical open metal pipes of true-speaking-length, the CC pipe approaching 8 feet in length and being about 6 inches in diameter.

In the pedal department the pipes are of true 16-ft. speaking-length and are often made of wood, they are square, or rather rectangular, in section.

The Stopped Diapason is of wood (or of metal in the treble), and although the pitch is of 8-ft. *tone*, the pipe itself is of only half its true speaking-length, the upper end being closed by a stopper or tompion, which causes it to sound an octave below the true open speaking-length.

In the treble portion the stoppers may be pierced, which imparts a reedier quality to the tone.

The tone of stopped pipes is soft, full, smooth and mellow, blending and contrasting well with other qualities of tone. T E.

See also Organ Organ Stops.

**DIAPASON NORMAL.** See PITCH, STANDARD.

**DIAPASON, OPEN** } See ORGAN**DIAPASON, STOPPED** } STOPS.**DIAPENTE.** See INTERVALS.**DIAPHONE.** See ORGAN STOPS.**DIAPHONY.** (1) (from Lat. *diaphonia*)

Harsh discordant sound as opposed to "symp-honia" or pleasant sound.

Dissonantia et Diaphonia idem sunt: nam, ut dicit Isidorus, diaphoniae sunt voces discrepantes sive dissonae, in quibus non est jocundus sed asperus sonus.<sup>1</sup>

(2) The name is used by many early medieval writers as a synonym for Organum. By the 13th century the use of the term had generally given place to "Discantus", though John de Muris (early 14th cent.) still speaks of "diaphonia sive discantus".<sup>2</sup> A H

Spanish composer. He was attached to the Spanish court, and is recorded as assistant choir-master at the royal chapel in Madrid in 1606, and also as *maestro de capilla* at the monastery of the Encarnación. In 1611 he composed the Requiem for Doña Margarita of Austria and then relinquished his post. In 1616 he appears at Lerma, in 1621 in Granada, in 1624 at Córdoba, where he remained as *capellán* in the church of Santa Inés until 1631. In that year he was one of the judges in a competition to elect a new *maestro de capilla* at Granada, and afterwards became *maestro* at the convent of the Descalzas Reales, Madrid, a post formerly held by Victoria. He died after 1631.

Diaz's church music, mentioned in the catalogue of the library of John IV of Portugal, was lost in the Lisbon earthquake of 1755. Eight of his secular works, however, are printed in Aroca's edition of the Munich manuscript 'Cancionero de Sablonara' (Madrid, 1916); and two are found in MS 13,231 (Bibl. Medinaceli, Madrid). He was apparently a friend of the dramatist Lope de Vega, who dedicated a poem to him.

J. B. T.

**DIBDIN.** English family of musicians and dramatists.

(1) **Charles Dibdin** (b. Southampton, [bapt. 4 Mar.] 1745; d. London, 25 July

1814), composer, author and entertainer. He was the son of a parish clerk at Southampton and grandson of a merchant who had founded the village near Southampton which bears his name. Dibdin's eldest brother, who was by twenty-nine years his senior, was captain of an Indianman and father of the Rev. Dr. Thomas Frognall Dibdin (1776-1847), the well-known bibliographer.

Charles Dibdin was admitted a chorister to Winchester Cathedral in June 1756, and he remained in the choir till Nov. 1759. The records of Winchester College give no support to the statement that he was at school there. He had a good voice and quickness in learning, which induced James Kent, then organist at Winchester Cathedral, to compose anthems for him and teach him to sing them; Peter Fussell (who succeeded Kent in 1774) taught him the rudiments of music and a few common tunes. All musical knowledge beyond that he acquired for himself, studying chiefly the concertos of Corelli and the theoretical works of Rameau. The place of organist at Bishop's Waltham becoming vacant, Dibdin offered himself for it, but was rejected on account of his youth. When he was fifteen years old his eldest brother brought him to London and placed him in the music warehouse of Johnson in Cheapside, where, however, he did not remain long, a friend having advised him to try the stage. He made his début at the summer theatre at Richmond in 1762 and was engaged at Birmingham the next year. After his return to London he obtained an engagement at Covent Garden Theatre, as a singing actor. About the same time he began to write verses as well as music, encouraged by Beard, then manager of the theatre, who advised him to write something for the stage, promising to bring it out at Dibdin's benefit. He accordingly set to work and wrote and composed 'The Shepherd's Artifice', a pastoral, which was performed at his benefit on 21 May 1764 and repeated in the following season, the author-composer performing the character of Strephon. At the beginning of 1765 Arnold's opera of 'The Maid of the Mill' was about to be produced at Covent Garden, and some difficulty arising with Dunstall, who was to have played Ralph, Dibdin was requested by Beard to undertake the part. He made a decided hit and at once established himself firmly in the public favour. In 1767 he composed part of the music for 'Love in the City', and in the next year two-thirds of that of 'Lionel and Clarissa'.

In 1768 Dibdin transferred his services from Covent Garden to Drury Lane, where he signalled himself by his composition of the music of 'The Padlock' and his admirable performance of Mungo in it. In the following years he was engaged to compose for Ranelagh,

<sup>1</sup> Marchettus of Padua, in Gerbert, 'Scriptores', III, 80. <sup>2</sup> Coussemaker, 'Scriptores', II, 394.

<sup>3</sup> The Gaspar Diaz mentioned by van der Straeten as being a choir-boy in the Capilla Flamenca of Philip III in 1601 is probably a different person.

where he produced 'The Ephesian Matron', 'The Maid the Mistress' and 'The Recruiting Sergeant'. He likewise composed some of the music for the Shakespeare Jubilee at Stratford-on-Avon in 1769. In 1770 Thomas King, having become proprietor of Sadler's Wells, engaged Dibdin to write and compose some little musical pieces to be brought out there. In 1774 Dibdin produced 'The Waterman' and in 1775 'The Quaker', pieces which kept uninterrupted possession of the stage for many years. At the end of the latter season he quitted Drury Lane owing to differences that had arisen between him and Garrick, and exhibited at Exeter Change a piece called 'The Comic Mirror', in which well-known characters of the day were personated by puppets. In 1776 he took a journey into France, where he remained some time.

On his return in 1778 Dibdin was engaged as composer to Covent Garden Theatre at a salary of £10 a week, but he held the appointment for two or three seasons only. In 1782 he projected the erection of the Royal Circus (afterwards the Surrey Theatre), which was opened on 4 Nov 1782 for a few nights only and reopened for a longer season the following spring. Dibdin undertaking the general management, Hughes the equestrian department and Grimaldi (father of the afterwards famous clown) the stage direction. For this theatre the ever-active pen of Dibdin was employed in the production of numerous little musical pieces and pantomimes. The first season was remarkably successful. In the second dissensions broke out among the managers, in consequence of which he retired from the theatre. He then made an attempt to regain his position at the patent theatres and succeeded in getting his opera 'Liberty Hall' (containing the popular songs of 'Jack Ratlin', 'The High-mettled Racer' and 'The Bells of Aberdovey') brought out at Drury Lane on 8 Feb. 1785. Soon afterwards he listened to a proposal to erect a theatre at Pentonville, where he purposed representing spectacles in which hydraulic effects should be introduced. He proceeded to some extent with the building, which he intended to call 'Helicon', but his application for a licence was refused, and shortly afterwards a gale destroyed the edifice and put an end to the project.

Dibdin next meditated a visit to India and, to raise funds for the purpose, made a tour in 1787-88 through a large part of England and gave entertainments. He published an account of this tour in 1788, in a quarto volume, under the title of 'The Musical Tour of Mr. Dibdin'. In the summer of 1788 he sailed for India, but the vessel being driven to take shelter in Torbay, he finally abandoned his intention and returned to London.

Dibdin next resolved to rely on his own

unaided exertions and in 1789 produced at Hutchins's Auction Room, King Street, Covent Garden, the first of a series of "table entertainments", of which he was author, composer, narrator, singer and accompanist, under the title of 'The Whim of the Moment'. On the first evening there was an attendance of only sixteen persons. Dibdin, however, persevered; he engaged the Lyceum and brought out 'The Oddities', the success of which was at once decisive, and no wonder, for it contained, among others, the songs 'To Bachelors' Hall', 'Twas in the good ship Rover', 'The Flowing Can', 'Saturday night at sea', 'Ben Backstay', 'I sailed from the Downs in the Nancy', 'The Lamplighter' and 'Tom Bowling'; the last written on the death of his eldest brother, Captain Thomas Dibdin. And here it may be observed that nearly the whole of those sea-songs which gained for their author the appellation of "the Tyrtæus of the British Navy" were written by Dibdin for his entertainments. In 1790 'The Oddities' was revised and ran seventy-nine nights, when it was succeeded by 'The Wags', which was performed for 108 nights.

The great sale of 'Poor Jack', the copyright of which, with eleven other songs, he had sold for £60, and which in a short time had brought its purchaser a profit of £500, induced Dibdin about this time to become his own publisher. In 1791 he removed from the Lyceum to a room in the Strand, opposite Beaufort Buildings, which he opened under the name of Sans Souci and where he remained for four years. He then built for himself a small theatre on the east side of Leicester Place, which he opened under the same name in 1796. He continued to give his entertainments there until 1805, when he sold his theatre and retired from public life. In 1803 the Government had granted him a pension of £200 per annum, but this being withdrawn on a change of ministry he was led to open a music shop in the Strand as a means of subsistence. The speculation, however, failed, and he became bankrupt. A subscription for his relief was opened in 1810, with part of which an annuity of £30 was purchased for himself, his wife and daughter successively. Subsequently his pension was restored to him. He brought out his last opera, 'The Round Robin', at the Haymarket in 1811.

Towards the end of 1813 Dibdin was attacked by paralysis, and he died the following year. He was buried in the cemetery belonging to the parish of St. Martin's-in-the-Fields, in Pratt Street, Camden Town, where a monument by Roubiliac was erected to his memory. But this can no longer be traced.<sup>1</sup>

W. H. H., rev.

<sup>1</sup> Katharine Esdale, 'English Church Monuments' (London, 1946).

Besides his compositions (*see list below*) Dibdin wrote several novels, such as 'The Younger Brother' (3 vols, 1793), 'Hannah Hewit, or The Female Crusoe' (3 vols, 1796, which he later dramatized) and 'Henry Hooka' (1807) and edited (and almost wholly wrote himself) periodicals such as 'The Devil' (1786-87) and 'The Bystander' (1789-90, also containing 26 songs). Further, 'A Complete History of the English Stage' (published in monthly parts from 1797, collected in 5 vols., 1800); 'Observations on a Tour through almost the Whole of England and a Considerable Part of Scotland' (2 vols, 1801-2), 'The Professional Life of Mr. Dibdin' (4 vols., 1803; 2nd enlarged ed., 1804), poems, such as 'The Harmonic Preceptor' (1804), 'Peter Nickel, or The Devil's Darling' (1804), 'The Lion and the Water-Wagtail' (1809); pamphlets, e.g. 'Royal Circus Epitomized' (1784) and 'The Public Undeceived' (on the question of his pension, 1807). 'The Musical Tour of Mr. Dibdin' (Sheffield, 1788) is of historical interest, of his educational writings the earliest was 'A Letter on Musical Education' (1791), 'Music Epitomized' (1808) had at least 12 editions and formed the basis of James Alexander Hamilton's 'Catechism' (1838). Dibdin also published, about the same time, 'The Musical Mentor, or St. Cecilia at School' (1807-8) and 'The English Pythagoras, or Every Man his own Music Master' (1808).

Of Dibdin's songs, especially his sea-songs, there appeared very many collected editions throughout the 19th century, and single songs continue to appear in modern collections. For instruments he wrote very little: apart from the overtures to his operas there are but a few harpsichord sonatas (1785 and 1791). The following is a list of his works for the stage, with dates of first performances and names of librettists, as far as they are known; the 46 pieces marked with an asterisk were both written and composed by himself:

1764. \*'The Shepherd's Artifice' (Covent Garden, 21 May).
1766. 'The Sailor's Reception' (interlude by J. Love, Richmond, 30 Aug.).
1767. 'Love in the City' (Isaac Bickerstaffe, Covent Garden, 21 Feb.), 'The Village Wedding, or The Faithful Country Maid' (J. Love, Richmond, 18 July).
1768. 'Lionel and Clarissa' (Bickerstaffe, Covent Garden, 25 Feb.), 'The Padlock' (Bickerstaffe, Drury Lane, 3 Oct.); \*'Damon and Philida' (Drury Lane, 21 Dec.).
1769. 'Shakespeare's Garland' (Garrick, includes a cantata 'Queen Mab, or The Fairies' Jubilee', Stratford-on-Avon, Apr. and as 'The Jubilee', Drury Lane, 14 Oct., with Arne, Barthélemon and Aylward); 'The Ephesian Matron' (Bickerstaffe, Ranelagh House, 12 May), 'The Captive' (Bickerstaffe, Haymarket, 21 June); new setting of the masque in Dryden's 'Amphitryon' (Drury Lane, 23 Nov.).
1770. 'The Maid the Mistress' (Bickerstaffe, Ranelagh, 28 May; as 'He Would if He Could, or An Old Fool Worse than Any', Drury Lane, 12 Apr. 1771); 'The Recruiting Sergeant'

- (Bickerstaffe, Ranelagh, 20 July), 'The Mad Man' (Marylebone Gardens, 28 Aug.), 'Cupid's Frolic' (Sadler's Wells, 25 July, later as 'Harlequin's May Day'), 'Cupid and Damon' (Garrick, privately produced)<sup>1</sup>, 'Dr Ballard' (Bickerstaffe, after Molière, not performed).
1771. 'The Institution of the Garter' (masque by Garrick, Drury Lane, 28 Oct.), 'Amelia' (Richard Cumberland, Drury Lane, 14 Dec.).
1772. 'The Monster of the Woods' (with Hook and J. A. Fisher), 'The Palace of Mirth', 'The Brickdust Man' (Bickerstaffe), all three at Sadler's Wells in spring; 'Pigmy Revels, or Harlequin Foundling' (Drury Lane, 26 Dec.).
1773. \*'The Wedding Ring' (from Goldoni's 'Il filosofo di campagna', Drury Lane, 1 Feb.); \*'The Ladle' (12 Apr.), 'Vineyard Revels, or Harlequin Bacchanal' (3 May), \*'The Mischance' and 'The Whim-Wham, or Harlequin Captive' (both 26 July); 'The Grenadier' (10 Aug.), these 5 at Sadler's Wells, 'The Trip to Portsmouth' (G. A. Stevens, overture and dances by T. A. Arne, Haymarket, 11 Aug.), 'The Pilgrim' (Sadler's Wells, 23 Aug.), \*'The Deserter' (after Sedaine, music partly from Monsigny and Philidor, Drury Lane, 2 Nov.); 'A Christmas Tale' (Garrick, Drury Lane, 27 Dec.).
1774. 'The Bower of Flora' and 'The Cave of Enchantment' (both 4 Apr.); 'Harlequin Restor'd, or The Country Revels' (additions to an older pantomime, 27 June), 'Cross Purpose' (Aug.), these 4 at Sadler's Wells; \*'The Waterman, or The First of August' (Haymarket, 8 Aug.); \*'The Coblér, or A Wife of Ten Thousand' (Drury Lane, 9 Dec.).
1775. 'The Two Misers' (Kane O'Hara, after Fenouillet de Falbaire, Covent Garden, 21 Jan.)<sup>2</sup>, 'Harlequin Neptune', 'The Seasons', 'The Raree-Show Man' (all 3 Sadler's Wells, 17 Apr.); \*'The Quaker' (Drury Lane, 3 May), \*'The Comic Mirror' (Grand Saloon, Exeter Exchange, 24 June), 'The Novelty, with the Death of Harlequin' (additions by Dibdin and others, to an older pantomime, Sadler's Wells, 10 July).
1776. 'The Blackamoor Wash'd White' (Henry Bate, Drury Lane, 1 Feb.); 'The Sister Witches, or Mirth and Magic' (8 Apr.), 'The Impostors, or All is not Gold that Glitters' (13 May), 'The Mountebank' (29 July), these 3 at Sadler's Wells, \*'The Metamorphoses' (based on Molière's 'Le Sicilien' and 'George Dandin', Haymarket, 26 Aug.); \*'The Seraglio' (Covent Garden, 14 Nov.).
1777. 'The Razor Grinder' (21 Apr.) and 'Yo Yeah, or The Friendly Tars' (18 Aug.), both at Sadler's Wells.
1778. \*'Poor Vulcan' (Covent Garden, 4 Feb.); 'The Romp' (Bickerstaffe, altered from 'Love in the City', *see* 1767; Covent Garden, 28 Mar.); 'The Macaroni' (Patagonian Theatre, 28 Mar.), \*'She is Mad for a Husband' (Sadler's Wells, 20 Apr.), 'The Old Woman of Eghy' (Sadler's Wells, 1 June); \*'Rose and Gold' and \*'The Wives Revenged' (both after Sedaine, Covent Garden, 18 Sept.); \*'Annette and Lubin' (after Mme. Favart, Covent Garden, 2 Oct.); 'The Medley, or Harlequin At-All' (later . . . or Harlequin Everywhere, Covent Garden, 14 Oct.).
1779. \*'The Touchstone, or Harlequin Traveller' (4 Jan.), 'The Comedy of Error' (Thomas Hull, altered from Shakespeare, 29 Jan., with at least one song by Dibdin); \*'The Chelsea Pensioners' (6 May); 'Plymouth in an Up-roar' (Edward Neville, 20 Oct.); \*'The Mirror, or Harlequin Everywhere' (30 Nov.), all at Covent Garden.
1780. \*'The Shepherdess of the Alps' (after Mar-montel, Covent Garden, 18 Jan.); \*'Pasquim Budget, or A Peep at the World' (Haymarket,

<sup>1</sup> Cf. E. P. Stern, 'David Garrick, Dramatist' (New York, 1938), pp. xiv-xv.

<sup>2</sup> The arrangement of this pasticcio is usually ascribed to Dibdin, but his name is not mentioned either in the libretto or in the printed score.

- 1 Mar; contains 'The Turkish Wives, or Neighbour's Fare', 'The Reasonable Animals', and 4 other one-act entertainments; 'The Surprise' (apparently an earlier work under a new title, Sadler's Wells, 17 Apr.); 'The Islanders' (Covent Garden, 25 Nov.); 'Harlequin Freemason' (Covent Garden, 29 Dec.).
1781. 'The Marriage Act' (reduced from 'The Islanders' of 1780, Covent Garden, 17 Sept.); 'Jupiter and Alcmena' (from Dryden's 'Amphitryon', Covent Garden, 27 Oct.)
1783. All at the Royal Circus: 'The Barrier of Parnassus', 'The Land of Enchantment', 'The Temple of Confusion' (all three 21 Apr.); 'Rus in Urbe, or Jack in the Green' (2 May); 'The Passions' (14 May); 'The Quakers', 'The Talisman', 'Robin Hood' (all three 9 June); 'La Melange Universel [sic], or The Regular Confusion' (30 June); 'The Sicilian Peasants' and 'The Graces' (both 7 July); 'Pandora' (14 July); 'Sappho, or The Temple of Taste' and 'The Regions of Accomplishment' (both 12 Aug.); 'The Cestus' and 'Harlequin Phantom of a Day' (both 18 Oct.); 'The Long Odds' (13 Nov.); 'The Milkmaid' (27 Nov.); 'The Lancashire Witches, or The Distress of Harlequin' and 'A Breaking-Up' (both 27 Dec.).
1784. 'The Saloon' (Royal Circus, 2 Feb.).
1785. 'Liberty Hall, or A Test of Good Fellowship' (Drury Lane, 8 Feb.); all the following at the Royal Circus: 'The Life, Death and Renovation of Tom Thumb', 'The Olive Branch' and 'The Magic of Orosmanes, or Harlequin Slave and Sultan' (produced as 'The Talisman of Orosmanes', same as 'The Talisman' of 1783. All three 28 Mar.); 'The Statue, or The Bower of Confidence' (16 Apr.); 'The Land of Sorcery, or Harlequin Will o' the Wisp' (18 Apr.); 'Clump and Cudden, or The Review' (21 May); 'The Defeated Magician, or The Metamorphoses of Harlequin and Pierrot' (12 Sept.).
1786. 'A Match for a Widow, or The Frolics of Fancy' (Joseph Atkinson, Dublin, Smock Alley Theatre, 17 Apr.); 'The Benevolent Tar, or The Miller's Daughter' (Royal Circus, 8 June); 'The Fortune Hunters, or You may say that' (Sadler's Wells, 17 July).
1787. 'Harlequin Conjuror, or Pinetti Turn'd Pierrot' (Royal Circus, 9 Apr.); 'England against Italy' (Sadler's Wells, 30 Apr.); 'Harvest Home' (Haymarket, 16 May).
1788. All at the Royal Circus: 'The Deception, or The Shade the Substance' (13 May); 'The Maid's Disaster' (29 May); 'Lovely Nancy, or The Miller's Grist' (20 June); 'The Beau outwitted, or Vulcan triumphant' (1 Sept.).
1789. 'The What is it' (altered from John Gay's 'The What d'ye call it', with Chapman and Costello, Royal Circus, 4 May); 'The Spirit of Fancy, or I don't know what' (Royal Circus, 20 May; a selection from Dibdin's earlier pieces).
1790. 'The Austrian Peasant, or The Battle of Fock-schan' (M. Lonsdale, Sadler's Wells, 5 Apr.); 'The Cobweb' (advertised for Royal Circus, 23 Apr, apparently not performed); 'A Divertissement' (James C Cross, Covent Garden, 23 Nov.).
1791. 'Tippo Saib, or British Valour in India' (with Hook and others; Covent Garden, 6 June).
1792. 'The Recruiting Manager, or Vive la chanson' (music from Dibdin and [?] Collins, Sadler's Wells, 30 Apr.); 'The Soldier's Opera, or Life without a Mask' (Peter Ewing, lib pub.; not perf.).
1794. 'The New Divertissement' (cf. 1790, with Reeve, Covent Garden, 26 May); 'A Loyal Effusion' (Covent Garden, 4 June).
1795. 'Quaverino and Crotchetini' (Sadler's Wells, 17 Aug.).
1797. 'First Come First Served' (Sadler's Wells, 17 Apr.).
1798. 'Hannah Hewitt, or The Female Crusoe' (Drury Lane, 7 May).
1799. 'The Vanguard, or British Tars Regaling after a Battle' (Covent Garden, 3 May)

- 1800 'The Siege of Acre' (chiefly by Dibdin, Covent Garden, 7 May)
- 1806 'The Broken Gold' (Drury Lane, 8 Feb.)
1811. 'The Round Robin' (Charles Dibdin, jun., Haymarket, 21 June)

## TABLE ENTERTAINMENTS

- At the Lyceum: 'The Whim of the Moment, or Nature in Little', 23 Jan. 1789; 'The Oddities, or Dame Nature in a Frolic', 7 Dec. 1789; 'The Wags, or The Camp of Pleasure', 18 Oct. 1790
- At the Polygraphic Rooms: 'Private Theatricals, or Nature in Nubibus', 31 Oct. 1791; 'The Coalition', 4 Feb. 1792.
- At the Sanssouci, Strand: 'The Quizes, or A Trip to Elysium', 20 Oct. 1792; 'Castles in the Air', 12 Oct. 1793; 'Nature in Nubibus', 18 Mar. 1794; 'Great News, or A Trip to the Antipodes', 11 Oct. 1794; 'The Will o' the Wisp', 10 Oct. 1795; 'Christmas Gambols', 29 Dec. 1795.
- At the New Sanssouci, Leicester Place: 'The General Election', 8 Oct. 1796; 'Valentine's Day', 14 Feb. 1797; 'Datchet Mead, or The Fairy Court', 20 May 1797; 'The Sphinx', 7 Oct. 1797; 'King and Queen', 6 Jan. 1798; 'A Tour to the Land's End', 6 Oct. 1798; 'Tom Wilkins', 5 Oct. 1799; 'The Goose and Gridiron', 18 Jan. 1800; 'The Cake-House', 1 Oct. 1800; 'A Frisk', 3 Oct. 1801; 'Most Votes Carry It', 9 Oct. 1802; 'Britons Strike Home', 17 Sept. 1803; 'The Frolic' and 'A Trip to the Coast', 10 Nov. 1804; 'The Election', 4 Dec. 1804; 'New Year's Gifts', 1 Jan. 1805; 'Heads or Tails', 12 Feb. 1805.
- At the Lyceum: 'The Professional Volunteers', 1 Mar. 1806.
- At the Sans Pareil Theatre: 'Rent Day, or The Yeoman's Friend', 17 Sept. 1808; 'The Melange' (? performed)
- At Dibdin's Music Room, Strand: 'Commodore Pennant', 16 Jan. 1809.

## BALLETS

- 'The Generous Pirate, or The Union of the Cossack Tartars', 'La Noce de château', 'The Provocation', 'The Algerine Pirate', 'Bacchus and Ariadne', etc., mostly for the Royal Circus.

## DOUBTFUL PIECES

- 'The Widow of Abingdon' (lib by Thomas Hull), Sadler's Wells, 1777 (according to Dibdin's 'Musical Tour', no other evidence)
- 'The Mad Doctor', Sadler's Wells, 1777 (according to the same source)
- 'The Land of Simplicity' and 'Mandarina, or The Refusal of Harlequin' (n.d., published, according to the 'Biographia Dramatica')
- 'The Maid of the Skylight', Royal Circus, 1785, is the title of a song.

## LIBRETTOS WRITTEN FOR OTHER COMPOSERS

- 'The Gipsies', 1778, for Arnold; 'None Are So Blind As Those Who Won't See', 1782, for Arnold; 'A Pennyworth of Wit', 1796, for Davy.
- Add. MSS (B.M.) 30963-66 contain a number of librettos of comic operas, etc., which were not set to music, such as 'Concert in a Cottage', 'The Suspicious Rustic', 'A Soldier and a Sailor, or The Iron Chest besieged' and others (see Hughes-Hughes's Catalogue, II, 379-80).

(2) **Charles (Isaac Mungo) Dibdin** (*Charles Dibdin the younger*) (b. London, late 1768 or early 1769; d. London, 13 Jan. 1833), illegitimate son of the preceding. His mother was a chorus singer, Miss Pitt, and he received his Christian names from the composer, the author and the main character of 'The Padlock' (during the run of which he was born). He was a very prolific playwright and wrote, between 1798 and 1829, more than 200 pantomimes, ballets, melodramas, operatic farces and so on, chiefly for Sadler's Wells and later for the Surrey Theatre, mostly in collaboration with the composers Reeve and Whittaker. For his father he wrote the libretto of 'The Round Robin' (1811). A. L.

See also Condell (collab. in 'Farmer's Wife').

(3) **Thomas John Dibdin** (b. London, 21 Mar. 1777; d. London, 16 Sept. 1841), brother of the preceding, another illegitimate son of (1). He received a musical education in the choir of St. Paul's, but later became an actor and theatrical manager. Like his brother, he wrote more than 200 dramatic pieces, between 1795 and 1835, many of them operas of sorts, set to music by Attwood, Moorehead, Kelly, Reeve, Braham, Davy, Ware, Sanderson, Bishop, Smart and numerous other contemporary composers. One of his last productions was the "last ballad opera" (as it has been wrongly called since most of the music was newly composed by E. Loder), 'The Covenanters' (1835). Dibdin's 'Reminiscences' (2 vols., 1837) contain much valuable information of theatrical and musical interest. A. L.

See also Condell (collab. in 'Up to Town'). Davy (J, 'Pennyworth of Wit', lib.). Linley (1, 'Prospect of Peace', lib.).

(4) **Henry Edward Dibdin** (b. London, 8 Sept. 1813; d. Edinburgh, 6 May 1866), instrumentalist and composer, nephew of the preceding, son of (2). He acquired his first knowledge of music from his eldest sister, Mary Anne, afterwards Mrs. Tonna, an excellent harpist, pupil of Challoner and Bochsa. He subsequently studied the harp under Bochsa, and also became proficient on the organ and violin. He appeared as a harpist at Covent Garden on 3 Aug. 1832, at Paganini's last London appearance.

Early in 1833 Dibdin went to Edinburgh,

where he held the honorary post of organist of Trinity Chapel and established himself as a teacher. He composed a few psalm tunes, songs and many pieces for the organ, harp and pianoforte, but he is best known as the compiler of 'The Standard Psalm Tune Book' (1851), the largest and most authentic collection of psalm tunes ever published, the contents being mainly derived from ancient psalters. He also wrote or revised the harmonies in W. Reid's 'The Praise Book' (1866).

**DICKIE, Murray** (b. Bishopton, Renfrewshire, 3 Apr. 1924).

Scottish tenor singer. He was educated at Hutchesons' Grammar School, Glasgow, and studied singing under Stefan Pollmann of the State Academy in Vienna, Dino Borgioli in London and Guido Farinelli at Milan. He sang with distinction with the New London Opera Company at the Cambridge Theatre from 1946 to 1948 in such operas as 'Don Pasquale', 'Rigoletto' and 'The Barber of Seville', in which he took the part of Almaviva. In 1948 he joined the Covent Garden Opera and in 1950 he was engaged for the Barcelona and Glyndebourne Festivals, also the Edinburgh Festival in Mozart's 'Figaro' and Strauss's 'Ariadne auf Naxos'. In 1951 and 1953 he gave a capital performance as David in Wagner's 'Meistersinger' at Covent Garden, in German. In 1952 he was engaged by the Vienna State Opera, and he has also sung at Milan, Berlin and Munich.

M. K. W.

**DICKIE, William (Payne)** (b. Belfast, 7 Sept. 1914).

Scottish bass-baritone singer, brother of the preceding. He was educated at Glasgow High School and was principal bass in the choir of Paisley Abbey. He studied singing with Stefan Pollmann in Vienna and when in Italy took lessons from such famous singers as Ruffo, Giuseppe De Luca and Gino Bechi. In 1935 he became principal baritone of the Glasgow Grand Opera Society for five years. His first

appearance was as the Ghost of Hector in Berlioz's 'The Trojans', and he subsequently sang numerous other parts, including Kecal in 'The Bartered Bride' and Amonasro in 'Aida'. He served in the forces from 1940 to 1946 and in that year made guest appearances in Modena and Bari as Rigoletto and Germont in 'Traviata'. From 1947 to 1948 he was principal baritone in the New London Opera Company at the Cambridge Theatre, and he played D'Aubigny in 'The Lullaby' during 1949. He broadcasts frequently, both in studio programmes and in operatic concerts from the theatre.

M. K. W.

**DICKINSON, A. E. F. (Alan Edgar Frederic)** (b. London [Blackheath], 9 July 1899).

English musical educationist and author. He received his later education at Rugby (1913-17) and Balliol College, Oxford (1919-1921), where he took the B.A. (*Lit. Hum.*) in 1921 and the M.A. and B.Mus. in 1926. He studied music at the R.C.M. in London in 1921-23 under Vaughan Williams and R. O. Morris (composition), Arthur Alexander (piano), Boulton (conducting), Colles (criticism) and Allen (choral interpretation). In 1928 he became an Hon. A.R.C.M. He was appointed Director of Music at Campbell College, Belfast, in 1929, remained there until 1936 and then acted as music master at various public schools until his appointment as lecturer in music to Durham University in 1946 in succession to Eve Kisch. He founded and conducted the New Belfast Orchestral Society (1931-36), the Belfast Choral Festival Association (1931-33) and the Durham Colleges Choral Society (1946-50). Valuable work has been done by him as W. E. A. lecturer in the Oxford and Durham districts.

Dickinson's contributions to musical periodicals have been numerous from 1924 onwards, and after 1945 he wrote various chapters for books on musical education, on Schubert, Schumann and Tchaikovsky, and lives of composers (Morley, Gibbons, Weekes, Schumann, Holst, Vaughan Williams) for collective volumes. His own books are the following: 'The Musical Design of "The Ring" [Wagner]' (1926). 'Mozart's Last Three Symphonies' (1927). 'An Introduction to the Music of R. Vaughan Williams' (1928). 'Musical Experience — What is and what might be' (1932). 'The Art of J. S. Bach' (1936, rev. ed. 1950). 'Beethoven' (1941).

E. B.

**DICKINSON, Edward** (b. West Springfield, Mass., 10 Oct. 1853; d. Oberlin, Ohio, 25 Jan. 1946).

American musical scholar and educationist. He was educated in music at the New England Conservatory, Boston, and under Klindworth in Berlin. In 1893 he became professor in Oberlin College and Conservatory and de-

veloped a system of instruction in musical history which has had a wide influence.<sup>1</sup> He published a number of books, among which the 'Study of the History of Music' (1905, 3rd ed. 1914) is important.

H. C. C.

**Dickinson, Emily.** See Bacon (E., var. settings) Barber (S., 'Let down the bars', chorus). Carter (E., 2 choral works). Clarke (H. L., 3 canons). Copland (12 songs).

**DICKINSON, George (Sherman)** (b. St Paul, 9 Feb. 1888).

American musicologist. He studied at Oberlin College, where he obtained the A.B. in 1909, and at the Oberlin Conservatory of Music, where he graduated Mus.B. in 1910. He also studied at Harvard University and obtained the A.M. in 1912. In Berlin he studied theory and composition under Hugo Kaun and Paul Juon from 1913 to 1914. He taught at the Oberlin Conservatory of Music for a number of years. In 1910-11 he was instructor in theory and organ, and he then became associate professor of theory from 1912 to 1913, of the organ in 1915 and of the history of music in 1915-16. For the next three years he was an Assistant Professor of Music at Vassar College, becoming Associate Professor in 1919 and Professor of Music in 1922, which post he still holds. He was also acting chairman of the Department of Music at Vassar College in 1922-23 and again in 1930-31, and from 1932 to 1934 was chairman of the Department of Music. He has been music librarian since 1927.

Dickinson became an associate of the American Guild of Organists in 1910, and between the years 1902 and 1921 he was organist and choirmaster in various churches. In 1921-22 he carried on research work in London and Paris, and he also studied in Vienna and Paris in 1928 and in Munich and Paris again in 1935. His other appointments are numerous. He served on the Sponsoring Committee on College Music Study in 1932-34 and for a year in 1934-35 on the Music Commission of the Association of American Colleges. In the summer of 1935 he was a lecturer at the University of California, and he has lectured at Harvard in 1940, at the University of North Carolina in the summer of 1947 and at Columbia University in 1949. From 1933 to 1946 he was on the editorial board of the 'Columbia University Studies in Musicology' and from 1936 to 1938 he served on the executive committee of the Music Teachers' National Association, becoming vice president in 1938. He has been vice president of the American Musicological Association many times (1936, 1937, 1941, 1942 and 1946). In the two following years he was president. From 1937 to 1945 he acted as vice president of the German Junior

<sup>1</sup> See DEGREES IN MUSIC: AMERICAN UNIVERSITIES.

Year, Inc and in 1939-41 he was president of the Music Library Association. For ten years from 1940 he worked on the Committee of Musicology for the American Council of Learned Societies and in 1948-50 he was chairman. Among other appointments is one on the music committee of the Graduate Record Examination from 1946. His honours include Phi Beta Kappa and Pi Kappa Lambda.

The following are Dickinson's published works:

'Foretokens of the Tonal Principle' ('Vassar Medieval Studies', 1923)

'The Growth and Use of Harmony' (1927)

'Classification of Musical Compositions' (1938).

'The Pattern of Music' (1939)

**Dickinson, Patric.** See Lucas (L., 'Theseus and the Minotaur', radio m).

**DICKONS, Maria** (born Poole) (b. London, c. 1770; d. London, 4 May 1833).

English soprano singer. She was a pupil of Rauzzini and acted and sang in public at Oxford at the age of eleven. In 1787 she appeared at Vauxhall Gardens in London as a singer. She sang at the Concert of Ancient Music and other concerts. On 9 Oct. 1793 she made her appearance at Covent Garden Theatre as an actress, playing Ophelia in 'Hamlet' and shortly afterwards Polly in 'The Beggar's Opera'. She next sang in several of the principal towns of England, Scotland and Ireland with great success. She married in 1800 and retired for a time, but resumed her career and reappeared at Covent Garden in 1807 as Mandane in Arne's 'Artaxerxes'. She joined the Drury Lane company in 1811. She was subsequently engaged at the King's Theatre, where on 18 June 1812 she performed the Countess in Mozart's 'Nozze di Figaro' to the Susanna of Angelica Catalani. In 1816 she was engaged at the Italian opera in Paris; thence she went to Italy. On her return to England she was again engaged at Covent Garden, where she appeared on 13 Oct. 1818 as Rosina in Bishop's adaptation of Rossini's 'Barber of Seville'. Although she appeared much in opera, sacred music was her real line.

**DICTIONARIES AND ENCYCLOPEDIAS.** This article is divided as follows:

1. Terminology.
2. General Dictionaries and Encyclopedias of Music.
3. National Biographical Dictionaries and General Encyclopedias, etc. containing musical articles.
4. Biographical Dictionaries of Musicians.
  - (a) General.
  - (b) Particular Countries.
5. Dictionaries of Particular Musical Subjects.

The very large amount of material published

in modern times allows the mention of only the most important works. But of older books, issued roughly before 1850, the majority combine antiquarian interest with practical value, and this field is therefore covered in some detail. For a dictionary that has gone through more than one edition, the dates of the first and last only are generally given. Except when otherwise stated, the place of publication of English books is to be taken as London, that of French books Paris.

1. **TERMINOLOGY.**—For four and a half centuries dictionaries of musical terms have been in such steady demand that their total is probably larger than that of any other type of musical dictionary. Although many productions of the last hundred years or so are trivial in the extreme, their range is so extensive as to include even Gaelic and Esperanto.

The earliest work of musical terminology, and indeed the first of all European 'dictionaries of music (as also of any of the arts)' was written by Joannes Tinctoris and was entitled 'Terminorum musicae diffinitionum'. It is an elegant little quarto of 15 leaves, and was printed by Gerardus de Lusa at Treviso, c. 1495, and not at Naples, c. 1475, as has hitherto been generally stated. In view of the extreme rarity of Tinctoris's book, of which only four copies are recorded, it is worth mentioning that it was reprinted in Forkel's 'Allgemeine Literatur der Musik' (1792), in Chrysander's 'Jahrbuch für musikalische Wissenschaft' (I, 55 ff.) with a German translation by Heinrich Bellermann, and in J. A. Hamilton's 'Dictionary of 3500 Musical Terms' (1849 ed.). After Tinctoris no other dictionary wholly devoted to musical terms was published for over two hundred years, but during the 17th and 18th centuries articles on musical terminology appeared in the early general encyclopedias, of which some account is given in section 3 (pp. 695-96).

In 1701 T. B. Janovska, a Bohemian organist, published in Prague his 'Clavis ad thesaurum magnae artis musicae', which ran to 324 pages, and is still of much interest to scholars. Two years later there appeared in Paris Sébastien de Brossard's 'Dictionnaire de musique, contenant une explication des termes grecs, latins, italiens et français', which ran into a sixth edition by c. 1710, and was largely translated by James Grassineau as 'A Musical Dictionary—Carefully Abstracted from the Best Authors' (1740).<sup>2</sup>

Throughout the 18th century interest in musical terminology increased steadily. In 1768 came the first edition of Rousseau's

<sup>1</sup> An Arabic dictionary of musicians was compiled in the 10th century A.D. by Ali al-Isfahani Faraj.

<sup>2</sup> Earlier editions said "without specific acknowledgment", but Brossard is acknowledged in the preface and, as Mr. John Wilson pointed out in a letter to the present editor of Grove, 32 times in the body of the work.

famous 'Dictionnaire de musique', which uses some of his articles written for the 'Grande Encyclopédie'. Despite errors and shortcomings, it enjoyed prolonged success, being reprinted in Paris up to the end of the century. It was also issued in Amsterdam in 1768 and appeared in three English editions by 1770. While Rousseau himself had borrowed from Brossard, he was himself freely adapted by Meude-Monpas ('Dictionnaire de musique', 1788), by Joos Verschuere Reijnvaan ('Muzikaal konstwoorden-boek', 2 vols., A-H only, Amsterdam, 1789-91) and by C. M. Envallson ('Svensk musikaliskt Lexikon', Stockholm, 1802). These adaptations, however, have some merits of their own, and may still be profitably consulted, especially the last.

For several decades after 1800 few dictionaries of musical terms were published that marked a substantial increase in size and comprehensiveness over the works of Janovka or Rousseau. Perhaps the most useful of many small German works are H. C. Koch's 'Kurzgefasstes Handwörterbuch der Musik' (Leipzig, 1807) and J. E. Hauser's 'Musikalisches Lexikon' (Meissen, 1828, 2nd ed., 2 vols., 1833). Two other typical German compilations of the period are J. D. Andersch's 'Musikalisches Wörterbuch' (Berlin, 1829) and G. Schilling's 'Der musikalische Sprachmeister' (Tübingen, 1840). French terminological works of this period are few and unimportant. A useful English book is Thomas Busby's 'Complete Dictionary of Music' (1801, 4th ed., 1817). An Italian compilation of some value is M. Vissian's 'Dizionario della musica' (Milan, 1846), devoted to terminology in Italian-French and French-Italian.

During the second part of the 19th century the rapid expansion of a sense of historical perspective in music was reflected in lexicographical works of all kinds, not least in dictionaries of terms. (Works of this period that include mention of instruments and institutions, but still exclude biographies, are discussed with general dictionaries in Section 2.) Of books in English the following must be mentioned: John Hiles's 'Complete and Comprehensive Dictionary of 12,500 Italian, French, German, English and other Musical Terms' (7th ed., 1882); Frederick Niecks's 'Concise Dictionary of Musical Terms' (1884, 5th ed., 1900); Sir John Stainer's & William Barrett's 'Dictionary of Musical Terms' (1876, 3rd ed., 1888); Tom S. Wotton's 'Dictionary of Foreign Musical Terms' (Leipzig, 1907); Edmonstone Duncan's 'Encyclopedia of Musical Terms, defining some 20,000 Phrases in all Languages' (New York, 1913); A useful little book for a limited section of medieval music is Frederick M. Padelford's 'Old English Musical Terms' (Bonn, 1899).

But good as are the best of these English

works (especially those by Stamer & Barrett and Wotton), it is safe to say that the most comprehensive terminological dictionaries have been compiled by foreign scholars. The largest is Amerigo Barberi's 'Dizionario enciclopedico universale dei termini tecnici della musica antica e moderna dai Greci fino a noi' (3 vols., Milan, 1870-74), which was completed by G. B. Beretta and Carlo Molossi. Other valuable books are: Felipe Pedrell's 'Diccionario técnico de la música' (Barcelona, 1874); Antonio Sarda's 'Léxico tecnológico musical en varios idiomas' (Madrid, 1929); René Vannes's 'Essai de terminologie musicale. Dictionnaire universel comprenant plus de 15,000 termes de musique' (Thann, 1925).

2. GENERAL DICTIONARIES AND ENCYCLOPEDIAS.—*English*.—In Jan. 1878 Macmillans of London issued the first part of 'A Dictionary of Music and Musicians (A.D. 1450-1889)', under the editorship of George Grove. The issue in parts was completed by Sept. 1879: Grove received the honour of knighthood in 1883. An invaluable index, compiled by Mrs. E. R. Wodehouse, rounded off the work in Aug. 1890, when the whole was reissued in 4 vols., with general title-pages and a new appendix carried up to about the middle of 1889. Such, in outline, was the early progress of "Grove", which has won world-wide renown, without ever having been translated. The gifted assemblage of contributors to the early parts was gradually enlarged until it included the flower of professional and amateur musicians of Britain and Europe. The second edition, edited by J. A. Fuller-Maitland, appeared in 5 vols., 1904-10: the third, by H. C. Colles, also in 5 vols., 1927. For the fourth edition, likewise edited by Colles (1940), a sixth, supplementary volume was added, and minor corrections were introduced into Vols. I-V as far as was permitted by the need for keeping the original lay-out of the pages. The first edition contained many fine woodcut illustrations, which were subsequently replaced by separate plates, some in full colour. One feature which distinguished the original "Grove" from all earlier general dictionaries was the lists of composers' works, some, as for Beethoven, Mendelssohn and Schubert, given in elaborate detail. In successive editions various articles, deemed of diminishing interest, were dropped or compressed, so that, for the historically minded reader, the earlier editions are still indispensable.

Before "Grove" no general musical dictionary of any substance appeared in England, but the progress of its editions has been punctuated by a number of other works of which some have possessed distinctive merits or, at least, unusual qualities. Ralph Dunstan's 'Cyclopaedic Dictionary of Music' (1908,

4th ed. 1925), was the first single-volume book of note. In 1906 appeared something of a curiosity, 'The Salvation Army Dictionary of Music' by Brigadier Slater. In 1924, A. Eaglefield-Hull issued his admirable 'Dictionary of Modern Music and Musicians', which contained valuable contributions by the leading critics and scholars of Europe and America. It was translated into German, with important additions, by Alfred Einstein, as 'Das neue Musiklexikon' (Berlin, 1926).

A new style in musical lexicography was introduced in 1938 by Dr. Percy Scholes's 'Oxford Companion to Music'. Within eleven years it has gone into 8 English and 2 American editions. To the second English edition was added a useful 'List of English Books on Music' (based mainly on the author's own library), which was also issued separately. Within the 1145 pages of the latest edition it contained the most extraordinary range of musical knowledge, ingeniously "self-indexed", ever written and assembled between two covers by one man. While the biographical articles are brief and of secondary value, the large number of unusual subject-entries makes it a fascinating and invaluable book, marred only by complete lack of statement of sources and references. The number of plates, 179, far exceeds those in any past or present dictionary. Each plate bears on the average six pictures, but some are necessarily rather small in size. On more traditional lines, Eric Blom's 'Everyman's Dictionary of Music' (1946) contrives through rigorous compression and abbreviation to pack an exceptional amount of material into little more than barely 700 pages. It contains many new types of entry, including unusual definitions and generous mention of compositions known by a popular title, and also details of all settings of poetical or prose works, under the names of the authors, of every nation and period, including the Greek poets. Apart from its scholarly merits, the book, a small octavo, weighs barely 15 oz., and causes no strain on the wrist of the most assiduous user.

*Danish.*—In 1687 M. H. Schacht (1660-1700) compiled a book entitled 'Musicus Danicus eller Danske Sangmeester', which remained in manuscript in the Royal Library, Copenhagen, until it was published in 1928. It is in four parts, of which the last three are devoted to the theory and practice of music, while the first, 'Bibliotheca musica sive authorum musicorum catalogus', deserves mention here as the first European biographical dictionary of musicians. This section was used by Gerber. An 'Illustreret Musiklexikon' (Copenhagen, 1924-27), edited by Hortense Panum with the collaboration of O. M. Sandvik and William Behrend, anticipated the later popularity of dictionaries with

ample pictures, and is an accurate and informative work.

*Dutch.*—The only general dictionary of substance is H. A. Viotta's very good 'Lexicon der toonkunst' (3 vols., Amsterdam, 1881-85) in which Pierre Benoit and Frans Coenen collaborated.

*Finnish.*—A recent Finnish book, 'Musikiin Tietokirja' (Helsingfors, 1948, ed. by T. Haapanen and others), is of slight general significance, but most useful for native musicians and institutions.

*French.*—During the 19th century France failed to produce any general dictionary of music that fulfilled the new principles evolved by Schilling and Riemann. The standard generally accepted was rather based upon the older scope of Brossard and Rousseau, but so much enlarged, although still usually excluding biographical and critical entries, as to exceed the limits of pure terminology. The 'Dictionnaire de musique moderne' (2 vols., 1821, 2nd ed. 1825) of Castil-Blaze included lengthy disquisitions upon the various musical forms and upon theory, also embracing instruments, performance and the like. This is broadly the pattern followed by several later books. M. & L. Escudier, in their 'Dictionnaire de musique d'après les théoréticiens, historiens et critiques les plus célèbres' (2 vols., 1854, 5th ed. 1872) carry biography no farther than some account of instrument makers. A roughly similar aim runs through French works of the later 19th and early 20th century, up to Michel Brenet's admirable 'Dictionnaire pratique et historique de la musique' (1926). By far the most ambitious French work is the 'Encyclopédie de la musique, et dictionnaire du Conservatoire', founded by Alfred Lavignac and directed by Lionel de La Laurencie. It was issued in parts between 1922 and 1939, and is divided into two sections, 'Histoire' (5 vols.), and 'Technique, esthétique, pédagogie' (6 vols.). The Dictionnaire proper does not appear to have been published.

Mention may best be made here of a book which can scarcely be fitted into any one category within this article, but has nevertheless some of the traits of a general dictionary. It is César Gardeton's 'Bibliographie musicale de France et de l'étranger' (1822). The following quotation from the copious subtitle of this musical "omnium gatherum" will indicate the extraordinary range of its 608 closely printed pages, and their potential value:

répertoire général systématique de tous les traités et œuvres de musique vocale et instrumentale . . . suivi d'analyses des principaux ouvrages . . . de biographies d'artistes célèbres . . . de l'annonce . . . de tous les journaux de musique . . . de tous les compositeurs, professeurs, imprimeurs, graveurs . . . et marchands de musique . . . facteurs et loueurs d'instruments . . . acteurs lyriques et amateurs à Paris, dans les départements et les principales villes étrangères.

*German.*—Although Brossard had included some biography in his 'Dictionnaire' of 1703, the first work in any language to give terminology, biography and instruments in a single alphabetical order did not appear until 1732, when J. G. Walther published at Leipzig his 'Alte- und neue musikalische Bibliothek, oder musikalisches Lexikon'. This very fine book, of 659 pages, not only set the pattern for subsequent general dictionaries over the next century, but is still a mine of information for its period. (Walther, who incidentally was a kinsman of J. S. Bach, had had printed at Erfurt in 1728 a set of proof sheets of letter A only, which is sometimes, incorrectly, referred to as the first edition of the book.) Here the Teutonic genius for lexicography burst into full flower, and though other useful works followed, Walther's name remains among the very greatest in this branch of musical learning.

In 1749 there was published anonymously at Chemnitz a 'Kurzgefasstes musikalisches Lexikon' by one Barnikel, who mentioned Walther among his sources given on the last page. Though comparatively slight, this compilation is not wholly unoriginal. More substantial is H. C. Koch's 'Musikalisches Lexikon' (Frankfurt o/M., 1802, 2nd ed. by A. Dommer, Heidelberg, 1865). In 1835 there appeared August Gathy's 'Musikalisches Konversations-Lexikon' (Hamburg, 2nd ed. by August Reissmann, Berlin, 1871). While not reaching a very high level of scholarship, the book contains much curious information and some fine portraits.

That same year, 1835, saw the beginning of the publication, under the editorship of Gustav Schilling, of the monumental 'Enzyklopadie der gesamten musikalischen Wissenschaften, oder Universalexikon der Tonkunst' (Stuttgart). Schilling was then barely thirty-two, but the work was completed in 6 vols. by 1838, and a second edition, with a supplementary seventh vol., followed in 1840-42. The title indicates sufficiently the vastly enlarged approach to music which inspired Schilling and his able collaborators, and the book remained as notable an exemplar for the 19th century as Walther's had been for the 18th.

To Schilling most German lexicographers of the next few generations were indebted, not least Julius Schladebach in his 'Neues Universalexikon der Tonkunst', which he abandoned after the issue of Vol. I (Dresden, 1854), leaving its completion to Eduard Bernsdorf (Vols. II, III, 1856, 1861, with supplement 1865). The mantle of Schilling fell to some extent upon Hermann Mendel, who edited a 'Musikalisches Konversationslexikon' from 1870 onwards, up to its 7th vol. It was completed in 11 vols. by August Reissmann in 1879, and remains most useful, though diffuse

and uneven in quality. A smaller but still informative work of this period is Oskar Paul's 'Handlexikon der Tonkunst' (Leipzig, 1873).

The first edition of Hugo Riemann's 'Musik-Lexikon' was published in 1882. Its subtitle, 'Theorie und Geschichte der Musik', outlines the new principle, but gives no hint of the unprecedented range of knowledge, presented with great accuracy, liberal quotation of sources, and fortified by the advice of experts. By 1916 this dictionary had entered the eighth edition that was issued under Riemann's own editorship: the ninth (1918), tenth (1922) and eleventh (1929) were all edited by Alfred Einstein. In the last of these its size had expanded from the 1036 pages of 1882 to 2 vols. of over 1080 pages each. 'Riemann' also appears in three English editions, translated by J. S. Shedlock (1893-97, 1902, 1905), in three French editions, translated by J. Humbert (1899, 1913, 1931) and in two Russian editions, translated by Y. D. Engel (1896, 1914). These foreign editions are all important for the additional information relating to the country of translation.

The influence of Riemann extended far beyond actual translations and established a European standard in its own class. Such a work as H. V. Schytte's 'Nordisk Musik-Lexikon' (2 vols., Copenhagen, 1888-92) is largely derived from this source, though containing just enough Scandinavian material to endow the book with a personality of its own. At present the Riemann tradition seems dormant, for the twelfth edition, which began to appear in 1939 under the editorship of J. Müller-Blattau, ceased publication in 1940. Only the third section, ending with the name BRAGA had been reached—an inglorious end to a sequence of editions unsurpassed for a blend of conciseness, range and quality in the whole history of musical lexicography.

So complete was the dominance of Riemann that no really new general dictionary appeared in Germany until 1927 when an 'Illustriertes Musik-Lexikon' was published at Stuttgart under the editorship of Hermann Abert. Its 72 plates constituted an innovation. In 1935 came H. J. Moser's 'Musik-Lexikon' (2 vols., Berlin), another notable feat of compression with good bibliographies. A second edition appeared in 1942. By far the most ambitious post-war project is 'Die Musik in Geschichte und Gegenwart. Allgemeine Enzyklopadie der Musik' (Cassel, 1949- ), edited by Friedrich Blume. From the first few parts, which are finely printed with many illustrations and plates, it is clear that the standard of scholarship is very high indeed, the bibliographies elaborate, though the range of information is not so great as that of the 1929 Riemann.

*Italian.*—Only two general dictionaries of music were published in Italy during the 19th

century. The first was Pietro Gianelli's 'Dizionario della musica sacra e profana' (3 vols., Venice, 1801; 3rd ed., 7 vols., 1830); the second, Pietro Lichtenthal's 'Dizionario e bibliografia della musica' (4 vols., Milan, 1826, French translation by D. Mondo, 2 vols., 1839). The bibliography of the latter is still most useful. The most important work of recent years is Andrea Della Corte's & Guido M. Gatti's 'Dizionario di musica' (last ed., Turin, 1944).

*Swedish*.—Pride of place must be given to J. L. Højer's 'Musik-Lexicon; omfattande dan theoretiska och praktiska tonkunsten, biographier öfver fornamste musikförfattare' (Stockholm, 1864, 2 vols., with supp.), a very good compilation for its date. Apart from H. V. Schytte's adaptation of Riemann (1888, 1892) no other general dictionary of note appeared before the 'Allmant Musiklexikon' of Tobias Norlind (Stockholm, 1912-16, 2nd ed., 2 vols., 1927-28). This excellent book is still the primary source of musical information for northern Europe. The most recent work, which promises, when completed, to be more elaborate than any of its predecessors, is Gosta Morin's edition of Sohlman's 'Musiklexikon' (Stockholm, 1948- ).

*Spanish*.—Soon after the mid-19th century a sound tradition of musical lexicography was established by Spanish scholars. C. J. Melcior's 'Diccionario enciclopédico de la música' was issued at Lérida in 1859. On similar lines was cast J. Parada y Barreto's 'Diccionario técnico, histórico y biográfico de la música' (Madrid, 1868). Following the later trend towards illustrated dictionaries, A. A. Torellas and J. Pahissa published a 'Diccionario de la música ilustrado' (2 vols., Barcelona, 1930). In 1948 there began to appear a much more ambitious, though rather uneven work, on the lines of Lavignac's 'Encyclopédie', but arranged alphabetically: 'Diccionario enciclopédico de la música' (Madrid). Vol I comprises terminology, forms and instruments, Vols. II and III biography, bibliography, monographs and instruments. The articles on Spanish and Catalan composers are particularly helpful.

*American*.—The earliest general book of importance is J. W. Moore's 'Complete Encyclopedia of Music' (Boston, 1854). From this modest beginning, a great stride forward was made with the 'Cyclopaedia of Music and Musicians' (3 vols., New York, 1888-90) edited by J. D. Champlin with W. F. Althorp as critical editor. To this finely produced and comprehensive work no serious rival appeared until L. J. de Bekker edited the 'Stokes Encyclopedia of Music and Musicians' (New York, 1908; London ed., 1924, as 'Black's Dictionary of Music and Musicians'). Between 1915 and 1917, Daniel Gregory

Mason edited, for the National Society of Music, 'The Art of Music', an elaborate encyclopedia in 14 vols., with many distinguished contributors.

In 1924 appeared the 'New Encyclopedia of Music and Musicians' (New York, 1924, 2nd ed. 1929), edited by Waldo Selden Pratt, who was also responsible for the excellent American supplement to "Grove" (1920). The 'Macmillan Encyclopedia of Music and Musicians' (New York, 1938) was edited by Albert Wier. This very heavy folio volume of over 2000 pages contains many useful articles such as that on 'Periodicals', but did not reach so high a standard of scholarship as an even more ponderous folio, the 'International Cyclopaedia of Music and Musicians', edited by Oscar Thompson (New York, 1939). By 1944 three English editions had appeared and in 1949 the fifth American edition had been published, running to 2380 pages. Not only are lists of works as up-to-date and extensive as possible, but some of the critical summaries of classical composers are of penetrating excellence. The scope of articles on lesser musicians is very extensive.

The 'Harvard Dictionary of Music' (Cambridge, Mass., 1944; reissued London, 1945 & 1951) was compiled by Willi Apel, who, by excluding biography, reverted to the style of French dictionaries such as that by Michel Brenet. Apel's book is most valuable, with good bibliographies, and illuminates the full range of musical practice and theory with sympathy and penetration, but for a work in English it is too largely a dictionary of German musical terms and unfortunately insists on the new German-American musical terminology.

3. NATIONAL BIOGRAPHICAL DICTIONARIES AND GENERAL ENCYCLOPEDIAS, ETC., CONTAINING MUSICAL ARTICLES.—The literature of almost every European country is rich in works of reference which contain valuable articles on music and musicians. The information in them is often not to be found in specifically musical dictionaries. The following is a selective list, arranged by countries, in chronological order.

*Great Britain*.—'Encyclopaedia Britannica' (1st ed. 1771). The third (1797) and subsequent editions contain musical articles of varying merit. In the 11th ed., 1910-11, the general articles on music were written mainly by D. F. Tovey, and those on instruments by Kathleen Schlesinger. All these were of great value, but have been rudely curtailed or adapted in recent editions. Tovey's theoretical contributions have been reprinted in book form.

Abraham Rees, 'The Cyclopaedia, or Universal Dictionary of Art, Sciences and Literature' (1802-18). The extensive

- musical contributions were written by Burney.
- Sir Sidney Lee and Sir Leslie Stephen, 'The Dictionary of National Biography' (1885-, with supp. vols. to 1940). Many of the musical biographies in the original edition were written by W. Barclay Squire.
- Austria*.—Constantin von Wurzbach, 'Biographisches Lexicon des Kaiserthums Oesterreich' (1750-1850, 1856-91).
- Bohemia*.—G. J. Dlabacz, 'Allgemeines historisches Kunstler Lexikon für Bohmen' (1815).
- Denmark*.—C. F. Bricka, 'Dansk biografisk lexikon' (1933-44).
- J. Salmønsen, 'Konversations-Lexikon' (1915-30).
- France*.—C. F. Du Cange, 'Glossarium ad scriptores mediae et infimae Latinitatis' (1678, with supp. and later eds.).
- D. Diderot & J. R. R. d'Alembert, 'Encyclopédie ou dictionnaire raisonné des sciences, des arts, . . .' (1751-65). With extensive contributions by J.-J. Rousseau.
- 'Encyclopédie méthodique' (1782-1832).
- P. Larousse, 'Dictionnaire du XIX<sup>e</sup> siècle' (1866-90). The musical information in earlier editions is scanty.
- Germany*.—J. H. Zedler, 'Universal Lexikon' (1732-52).
- C. G. Jocher, 'Compendioses Gelehrten-Lexikon' (1750-51).
- R. von Liliencron and F. X. Wegele, 'Allgemeine Deutsche Biographie' (1875-1912).
- Holland*.—P. C. Molhuysen and P. J. Blok, 'Nieuw Nederlandsch biografisch Woordenboek' (1911-37).
- Italy*.—'Enciclopedia italiana' (1929-48). The bibliographies to musical articles are exceptionally good.
- Norway*.—J. B. Halvorsen, 'Norsk-forfattern Lexikon' (1814-80, 1885-1908).
- Russia*.—I. E. Andreyevsky, 'Entsiklopedicheski Slovar' (1890-1906).
- A. A. Polovstov, 'Russkii biograficheskii Slovar' (1896-1913).
- O. V. Schmidt, 'Volshaya sovetskaya entsiklopediya' (1926-47, 2nd ed. 1950-).
- Spain*.—J. Espasa, 'Enciclopedia universal ilustrada' (1908-34).
- Sweden*.—'Svensk Uppslagsbok' (1929-37).
4. BIOGRAPHICAL DICTIONARIES OF MUSICIANS.—(a) General.—*English*.—Apart from some trivial productions, the earliest book of any substance is both anonymous and unashamedly derivative: 'A Dictionary of Musicians, comprising the biographical contents of the works of Gerber, Choron and Fayolle, Count Orloff, Dr. Burney, Sir John Hawkins, etc.' (2 vols., 1824, 2nd ed. 1827), but is still worth consulting. Excepting Joseph Warren's slight 'Biographical Dictionary of Deceased Musicians' (1845, A-GEM only), no other production of this kind appeared for over sixty years until James D. Brown published his 'Biographical Dictionary of Musicians: with a bibliography of English Writings on Music' (Paisley, 1886). The bibliography, though scrappy, contains some little-known or forgotten material. W. H. Cummings's 'Biographical Dictionary of Musicians' (1890, rev. ed. 1934) is slight. David Baptie's 'Musicians of all Times' (1889) was equally superficial and less accurate, though its second edition (1907, ed. W. G. W. Goodworth) marked considerable improvement. Great Britain has still to produce a Gerber.
- French*.—The first biographical work in French, compiled by A. E. Choron and François Fayolle, was entitled 'Dictionnaire historique des musiciens, artistes et amateurs, morts et vivants, qui se sont illustrés en une partie quelconque de la musique et des arts qui y sont relatifs' (2 vols., 1810-11). This liberal scope has some parallel in the voluminous title of Gardeton (*cf.* p. 693, ii), and resulted in a book that is still useful, and has not been wholly superseded by the stupendous labours of F. J. Fétis, whose 'Biographie universelle des musiciens et bibliographie générale de la musique' appeared in 8 vols., between 1835 and 1844 (I-IV, Brussels; V-VIII, Malines). It was reissued in part or in whole several times before the second edition was published, also in 8 vols. (1860-65). A reissue of this (1866-68) preceded the appearance of the supplement (2 vols., 1878-80) compiled by Arthur Pougin.
- It is easy to find fault with Fétis on grounds of bias, excessive self-righteousness and inaccuracy, but these are mostly weaknesses to which any single-handed work of comparable size may be prone. He did not, apparently, take the precaution (generally observed by his modern counterparts) of having his articles scrutinized by "experts", though these were less numerous then than now. Fétis was too apt to guess at dates, and his inferences from uncertain facts were dubious in the extreme. But his range of information was astonishing, and though he shows a lordly disregard for chronological niceties his dictionary remains a thing to marvel at and use with gratitude. Many names are to be found solely in these pages and in those of Pougin's admirable supplement, and though later French lexicographers have re-used Fétis's material, he has had no true successor.
- German*.—The circumstances which led E. L. Gerber to compile his 'Historisch-biographisches Lexikon der Tonkünstler' (2 vols., Leipzig, 1790-92) are fully recorded

in the article on him in this Dictionary (III, 597) Besides amassing much new data, he actually used — according to Riemann — material and corrections collected by J. G. Walther for the possible enlargement of his own work (*cf.* p. 694, 1). Through unremitting industry Gerber procured within a generation still more information, so that his 'Neues historisch-biographisches Lexikon der Tonkünstler' (4 vols., Leipzig, 1812-14) is both a complement and a corrective to his earlier book. Accuracy, wealth of detail as to compositions, dates and publishers make Gerber truly indispensable for his period.

It is scarcely surprising, in view of the all-round excellence of general musical dictionaries published in Germany during the 19th century, that no other purely biographical work was compiled. But by the 1880s the vast labours of Robert Eitner in the field of musical bibliography were beginning to bear fruit, and in 1899 he issued the first volume of his monumental 'Biographisch-Bibliographisches Quellen-Lexikon der Musiker und Musikgelehrten der christlichen Zeitrechnung bis zur Mitte des 19. Jahrhunderts'. By 1904 it was completed in 10 vols., and was rounded off by a supplement, 'Miscellanea Musicae Bio-bibliographica' (8 Nos., Leipzig, 1912-14) edited by Hermann Springer, Max Schneider and Werner Wolffheim. This dictionary consists of brief biographical notices, each followed by a list of all the then known works of each composer, both printed (in various editions) and manuscript, together with location symbols for scores of European libraries. In spite of some inaccuracies for entries in languages other than German, and in spite of many dates inevitably corrected by later research, Eitner remains unique. To-day, after nearly half a century's additions to the older musical libraries of Europe, after the upheavals and dispersals caused by two world wars, and after the rapid growth of great collections in America, the need for a revised "Eitner" or for an entirely new world dictionary of musical sources is obvious. But it is a task that can only be undertaken by the international co-ordination of national effort, public and private.<sup>1</sup>

Here may appropriately be mentioned a work which, though scarcely a dictionary, is in a sense complementary to Eitner — the 'Universalhandbuch der Musikliteratur', (34 vols., Vienna, 1904-10). It is a list of editions of musical compositions and books on music current in the trade at the time of compilation by Franz Pazdirek and his brother J. P. Gotthard (Pazdirek). Though lacking in biographical detail, this book provides invaluable data, with opus numbers and details

of many editions, of the output of 19th-century composers, famous and obscure. Of recent German biographical dictionaries Paul Frank's 'Kurzgefasstes Tonkünstler Lexikon' (Ratisbon, 1936) is by far the most comprehensive.

*Italian.*—The outburst of lexicographical fervour that came at the end of the Napoleonic wars found expression in Italy in Giuseppe Bertini's 'Dizionario storico-critico degli scrittori di musica e de' più celebri artisti di tutte le nazioni' (Palermo, 1814-15). Though largely indebted to Choron and Fayolle, this work also contains useful articles on Italian composers. No other substantial book in this class appeared for nearly a century. Enrico Farilli's 'Il piccolo Fétis: dizionario biografico dei musicisti e dei principali fabbricanti di strumenti' (Piacenza, 1907, 2nd ed., 1925) is less wholly derivative than the first part of its title might suggest, and is distinctly useful for the names of instrument makers. One of the outstanding dictionaries of modern times, Carlo Schmidl's 'Dizionario universale dei musicisti' began to appear in parts at Milan in 1937 and was completed by a large supplement in 1938. Though rich in misspellings in the articles on non-Italian composers, it is a truly invaluable book, with a flair for the unusual, and is rounded off by short bibliographies to many articles.

*American.*—Theodore Baker's 'Biographical Dictionary of Musicians' (New York, 1900, 4th ed., 1940, supp. by Nicolas Slonimsky, 1949) remains one of the best works of its kind ever published, completely overshadowing W. J. Baltzell's 'Dictionary of Musicians' (Boston, 1911). The following are some other American compilations which are useful in that they cover a less strictly classical range of musicians than does Baker: César Saerchinger, 'Who's Who in Music, and Musical Gazetteer' (New York, 1918), Dixie Hines & Harry P. Hannaford, 'Who's Who in Music and Drama' (New York, 1914); Anon., 'Who's Who To-day in the Musical World' (New York, 1938).

(b) Particular Countries. — *Britain.* — The earliest work published in England was an anonymous one entitled 'A.B.C. Dario Musico' (Bath, 1780), which is lacking in any critical value but contains some amusing gossip. After over a century appeared James D. Brown's and Stephen S. Stratton's 'British Musical Biography' (Birmingham, 1897), a notable work and still invaluable even if its compilers leaned rather too heavily on the B.M. Catalogues in matters of dates and identifications. It covers musicians born in British colonies as well as in the British Isles. Jeffrey Pulver's 'Biographical Dictionary of Old English Music' (1927) was a pioneer work, and though superseded in some details by later research, is likely to remain indispen-

<sup>1</sup> For a British contribution to this end, see UNION CATALOGUE.

sable through the author's great knowledge of recondite sources. Russell Palmer's 'British Music: an Encyclopaedia of British Musicians' (1947) covers some unfamiliar ground, especially among performers. Of the three editions of 'Who's Who in Music' (1935-37, ed. Sir Landon Ronald; 1950, ed. L. G. Pine), the last is by far the most comprehensive. It contains, besides a wealth of general information, a section on foreign musicians. For Scotland the only book is David Baptie's 'Musical Scotland: being a Dictionary of Scottish Musicians from about 1400 to the Present Day' (Paisley, 1895).

*Belgium.*—An admirable book, though now out of date, is G. J. Grégoir's 'Biographie des artistes musiciens des XVIII<sup>e</sup> et XIX<sup>e</sup> siècles' (Antwerp, 1864). Despite its vague title René Vannes's 'Dictionnaire des musiciens' (Brussels, 1947) refers wholly to Belgium, and has as perhaps its best feature good bibliographies and references.

*Czechoslovakia.*—This country is partly covered by J. Černušák's and V. Helfert's 'Pazdirkův slovník naučný' (Brno, 1937- ), a general dictionary of music of which Vol. II is devoted wholly to biography but only reaches to the letter K.

*France.*—The sole local dictionary is J. J. Barbé's 'Dictionnaire des musiciens de la Moselle' (Metz, 1929).

*Germany and Austria.*—For these countries the number of books is relatively numerous, and though mostly not calling for separate comment, they deserve mention in the form of a list. Their quality is uneven, but they supplement the larger general dictionaries by including composers and performers of local fame. While of secondary musical importance, these names are often of antiquarian interest.

F. J. Lipowsky, 'Baierisches Musiklexikon' (Munich, 1811).

Anon., 'Biographien Salzburgerischer Tonkünstler' (Salzburg, 1845).

K. Kossmaly and — Carlo (pseud. of C. H. Herzel), 'Schlesisches Tonkünstler Lexikon', 4 vols. (Berlin, 1846-47).

K. von Ledebur, 'Tonkünstlerlexikon Berlins' (Berlin, 1860-61).

Carl Stuhl, 'Lubeckisches Tonkünstlerlexikon' (Leipzig, 1887).

W. Neumann, 'Lexikon Baltischer Tonkünstler' (Riga, 1909).

F. Jansa, 'Deutsche Tonkünstler und Musiker in Wort und Bild' (Leipzig, 1911).

E. H. Müller, 'Deutsches Musiker Lexikon' (Dresden, 1929).

T. Stengel and H. Gerigk, 'Lexikon der Juden in deutscher Musik' (Berlin, 1940).

Of these, Müller's work of 1929 is by far the most substantial, though it deals only with musicians alive at that date. The last-named book is a typical product of the Nazi régime.

*Holland.*—An excellent book is J. H. Letzer's 'Muzikaal Nederland', 1850-1910, 2 vols. (Utrecht, 1913).

*Hungary.*—There is no adequate modern work on Hungarian musicians. J. Hagh's 'Magyar zeneszeti lexicon. Encyklopediai kézikönyv' (Budapest, 1879) still holds the field.

*Italy.*—By far the most substantial work is Alberto de Angelis's 'L' Italia musicale d' oggi: dizionario dei musicisti, compositori, direttori d' orchestra' (Rome, 1918, 3rd ed. 1928). It is comprehensive and generally accurate. A book which should perhaps be mentioned here, on the analogy of Pazdirek, is Emil Vogel's 'Bibliothek der gedruckten weltlichen Vocalmusik Italiens aus den Jahren 1500-1700' (2 vols., Berlin, 1892), of which an enlarged edition, revised by Alfred Einstein, appeared serially in the journal 'Notes' (June 1945-Sept. 1948).

*Poland.*—The standard book still is Albert Sowiński's 'Les Musiciens polonais et slaves, anciens et modernes. Dictionnaire biographique des compositeurs, chanteurs, instrumentistes, luthiers, . . .' (Paris, 1857). This excellent compilation was also published in Polish as 'Słownik muzyków polskich' (Paris, 1874).

*Portugal.*—The earliest dictionary still of use is Joaquim de Vasconcellos's admirable 'Os musicos portugueses' (2 vols., Oporto, 1870). The only more recent work of any value is Ernesto Vieira's 'Diccionario biografico de musicos portugueses' (2 vols., Lisbon, 1900), which is thoroughly reliable and comprehensive.

*Russia.*—There is unfortunately no really detailed dictionary of Russian composers of all periods. A. I. Ilinsky's 'Biografi kompozitorov s IV-XX vye' (Moscow, 1904), is very selective and amateurish. An anonymous 'Illyustrirovannuy slovar' sovremen russkikh muzykal'noykh d'yeyateley' (Moscow, c. 1909) is short, but complements it to some extent by including some uncommon names. There are also two works in English: Alexandra Vodarsky-Shirayev's 'Russian Composers and Musicians' (New York, 1940) and Igor Boelza's 'Handbook of Soviet Musicians' (1943). Both are useful but scarcely authoritative or complete as to lists of works. The Russian edition of Riemann's 'Musik-Lexikon' (cf. Section 2, p. 694, ii) contains valuable biographical articles.

*Spain.*—Of Felipe Pedrell's monumental 'Diccionario biográfico y bibliográfico de músicos y escritores de música españoles, portugueses e hispano-americanos antiguos y modernos' (Barcelona, 1897) it is most regrettable that only Vol. I (A-F) and part of Vol. II (G-GAZ) were ever published. A more specialized book is 'La música a Valencia:

diccionario biográfico e crítico' (Valencia, 1904) by J. Ruiz de Lihory, Baron de Acahali (cf. also Section 5 (a), Chronology.)

*Switzerland*.—Edgar Refardt's 'Musik-Lexikon der Schweiz' (Zurich, 1928) is, in spite of its general title, devoted wholly to biography. It is indispensable, and is indeed a model dictionary. Lists of works are coupled with bibliographies and biographies that take into full account the close musical relation between Switzerland and neighbouring countries.

*America*.—For this continent surprisingly few biographical dictionaries have been published. There is the 'Bio-Bibliographical Index of Musicians in the United States of America from Colonial Times', prepared by the District of Columbia Historical 'Records Survey' (ed. by H. B. Dillard, Washington, 1941), which, as its title implies, is a guide to sources rather than a dictionary in its own right. Clare Reis's 'Composers in America' (New York, 1938, 2nd ed. 1947) has gradually assumed something of the arrangement of a dictionary, and contains useful lists of works. Undoubtedly the American supplement to 'Grove' edited by Waldo S. Pratt (New York, 1920) is the most comprehensive book, but is sadly out of date. Canada is fairly well covered in the 'Dictionnaire biographique des musiciens canadiens' (Quebec, 1922, 2nd ed. 1935) prepared by the Sisters of St. Anne.

#### 5 DICTIONARIES OF SPECIAL SUBJECTS—

(a) Chronology.—The few but generally most useful books in this class must be mentioned here because, though not dictionaries in the verbal sense, they approximate in title and arrangement to such standard works as Haydn's 'Dictionary of Dates'. The earliest of any size devoted to music appears to be Baltasar Sandoni's 'Efemérides de músicos españoles' (Madrid, 1862), which was the forerunner of the same compiler's much larger book 'Diccionario biográfico-bibliográfico de efemérides de músicos españoles' (4 vols., Madrid, 1868–81). Despite a clumsy disposition of the material, both these are packed with information. A French publication of more limited scope is Felix Boisson's 'Dix Années d'éphémérides musicales' (1895), which preceded by one year the first English production of this sort, C. Egerton Lowe's 'Chronological Cyclopaedia of Musicians and Musical Events' (1896). More extensive is Joseph Detheridge's 'Chronology of Musical Composers' (2 vols., Rowley Regis, 1936–37). For originality the palm must be handed to Nicolas Slonimsky for his 'Music since 1900' (New York, 1937, 3rd ed. 1948). This compilation combines a record of events and contemporary comment in an unusual way, without loss of accuracy.

(b) Opera.—Since Leone Allacci's 'Dramaturgia' (Rome, 1666) operatic dictionaries of sundry kinds have been fairly numerous, so that only the most important call for inclusion here, and may be confined to comparatively recent books of the late 19th and 20th centuries. Riemann's 'Opernhandbuch' (Leipzig, 1887–93, incl. 2nd supp.) is still valuable for the exceptional quantity of less notable operas which it mentions, but modern research has shown some of its dates to be faulty. It combines titles and composers in a single order. Smaller books such as Giovanni Paloschi's 'Piccolo dizionario delle opere teatrali' (4th ed., Milan, 1898), and Giuseppe Albinati's 'Piccolo dizionario di opere teatrali, oratori, cantate' (Milan, 1913) are of particular interest for Italy, as is also Carlo Dassori's 'Opere e operisti. Dizionario lirico, 1541–1902' (Genoa, 1903). For France in particular no less than for operatic history in general, the famous work by Félix Clément and Pierre Larousse, 'Dictionnaire lyrique ou histoire des opéras' (1869–81, incl. 4th supp.) set up a new standard of comprehensiveness. A fourth edition (1897, 1905) revised by A. Pougin included a supplement up to 1904. This notable work was matched, at least in range, by John Towers's 'Dictionary Catalogue of Operas and Operettas which have been performed on the Public Stage' (Morganston, 1910).

As complementary to these dictionaries there must be mentioned Oscar G. Sonneck's 'Catalogue of Opera Librettos printed before 1800' contained in the Library of Congress (2 vols., Washington, 1914). When a generation later there appeared Alfred Loewenberg's 'Annals of Opera, 1597–1940' (Cambridge, 1943), it was recognized as a masterly piece of compilation and research. Though not attempting to equal Riemann, Towers or Clément and Larousse in the total of operas included, it far exceeded them or any previous work of operatic reference in wealth of historical and theatrical detail. It stands unrivalled in its chosen field of some 4000 operas. When Loewenberg wrote the preface to his 'Annals' he was barely forty. It was tragic that his sudden death in 1949 prevented the completion of plans for even more comprehensive studies in the sources and bibliography of opera.

(c) Church Music.—The pioneer work of reference was Joseph d'Ortigue's 'Dictionnaire liturgique, historique et théorique de plainchant et musique de l'église' (1854, 2nd ed. 1860), which originally formed Vol. XIX of J. P. Migne's 'Nouvelle Encyclopédie théologique'. Next comes Otto Kornmüller's 'Lexikon der kirchlichen Tonkunst' (Brixen, 1870; 2nd ed., 2 vols., 1891–95). The standard work for the Protestant Church re-

mains S Kummerle's 'Encyclopaedie der evangelischen Kirchenmusik' (4 vols, Gutersloh, 1886-95). For the Roman Church the best and most recent book is Andreas Weissenback's 'Musica sacra' Lexikon der katholischen Kirchenmusik' (Klosterneuburg, 1937), which packs a wealth of facts and names into a small compass. As a companion to all these may be mentioned Bernhard Kothe's 'Musikalisches liturgisches Wörterbuch' (Breslau, 1890).

The merits of John Julian's famous and exhaustive 'Dictionary of Hymnology' (1892, 2nd ed. 1907) are too well known to need exposition here. An unusual work, planned on a considerable scale but never completed, is Kunakos Philoxenes' 'Λεξικὸν τῆς Ἀθηνῆς ἐκκλησιαστικῆς μουσικῆς' (Constantinople, 1868, 1869). Only A-M was actually published. A general theological reference book, which contains some valuable musical information, is the 'Kirchenlexikon' (13 vols., Freiburg i/B., 1847-60, 2nd ed., 12 vols., 1886-1901) of Heinrich J. Wetzer and Benedict Welte. It was translated into French by J. Groscher (1858-65).

(d) Miscellaneous.—On other special aspects of music books which describe themselves, with varying degrees of propriety, as dictionaries or encyclopedias, are far too numerous to be mentioned in detail here. Thus dictionaries of instrument makers and of instruments and catalogues referring to particular types of music (such as Altmann's 'Handbucher') will be found in the bibliographies appended to the relevant articles. One must, however, specify here Curt Sachs's 'Reallexikon der Musikinstrumente' (Berlin, 1913), still unsurpassed in its kind. W. W. Cobbett's 'Cyclopedic Survey of Chamber Music' (2 vols., Oxford, 1929-30) remains valuable if unequal in quality—the lists of works and publishers are sadly out of date and its editor's discursive comments add perhaps more of character than information.

A new and rapidly expanding field is "discography"—the critical, historical and analytical listing of gramophone records. Of a large number of such dictionaries Robert D. Darrell's 'Gramophone Shop Encyclopedia of Recorded Music' (1936) was the first of any importance. On an even higher plane, however, are 'The World's Encyclopedia of Recorded Music' by Francis Clough and Geoffrey Cuming (London, 1951; Supp. 1953) and the 'Record Guide' by Edward Sackville-West and Desmond Shawe-Taylor (London, 1951, in progress).

A curious book in a highly specialized field, Baron Friedrich von Driberg's 'Wörterbuch der griechischen Musik' (Berlin, 1835), deserves mention here as being frequently omitted from bibliographies. Though out of

date and bearing the stamp of a dilettante, it is unique of its kind.

**DIDEROT, Denis** (b. Langres, 5 Oct. 1713, d. Paris, 30 July 1784)

French philosopher, author and encyclopaedist. Educated at the Jesuits' College, Langres, and pledged to the church, he entered Paris in his teens and took to letters. Voltaire called him "Pantophile", which was true enough, since almost every subject was touched by his great intellect. His establishment of the famous 'Encyclopédie' (1751-72) is his everlasting monument, but in his many interests he could even take music in his stride. This showed itself in his early 'Mémoires sur différents sujets de mathématiques' (The Hague, 1748) with vignettes by an English artist, Nicholas Blakey. Three of the five memoirs concern music (1) 'Principes généraux d'acoustique', (3) 'Examen d'un principe de mécanique sur la tension des cordes' and (4) 'Projet d'un nouvel orgue'. Fétis, in his ever positive attitude, says that the 'Principes' are discussed with "much simplicity". If that opinion is intended to convey the idea of simpleness it is quite erroneous. Diderot's remarks upon the theories of two great pioneers in acoustics, Euler and Sauveur, are by no means negligible, while his criticism of the hypotheses of the English acoustician Brook Taylor is quite sound, although d'Alembert's excursus on vibrating strings probably gave him the clue. His project for a new organ was one to be adapted to the so-called German organ, or barrel-organ. He conceived the one barrel or cylinder being used for any music, not, as it then was, for only one piece of music. Fétis thought the idea "inexécutable", but it was not. The censor, to whose officious eyes the 'Mémoires' had to be submitted, reported with impudent toleration that they were "treated with much sagacity". Grimm, in his famous 'Correspondance' (1877, I, 202) thought them "extremely curious".

Diderot is next seen in the 'Encyclopédie', where he himself deals with the construction of instruments of music. They contain nothing that is outstanding, although the plates constitute a useful addition to the iconography of the subject. His influence on general aesthetics and on music criticism was more positive. With his friends d'Alembert, d'Holbach and Grimm he took part in the celebrated though trivial *Guerre des Bouffons*, which made some stir from 1753. Adolphe Julien thought that beyond Rousseau and d'Alembert, the opinions of the others in respect of music criticism were often pretty mediocre and generally unsteady. In the sense that they were variable there may be some reason for the complaint. One sees a difference in his

attitude towards the visual (*see* his article on Beauty in the 'Encyclopédie') and the aural art, and Goethe (discussing Diderot's comedy 'Le Neveu de Rameau') saw this inconsistency. Yet mediocrity cannot be justly attributed to Diderot, and proofs can be tabled with his three brochures, 'Arrêt rendu à l'ampithéâtre de l'opéra' (1753), 'Au Petit Prophète de Boehmischbroda, au Grand Prophète Monet' (1753) and 'Les Trois Chapitres, ou La Vision de la nuit du Mardi-Gras au Mercredi des cendres' (1753). These were published anonymously, but we know from Rousseau's own copies that they issued from the hand of Diderot. That he had a hand in others launched by Grimm and Holbach is not unlikely, and Assézat traces the 'Déclaration du public au sujet des contestations qui se sont élevées sur la musique' to him. Diderot was prodigal with his ideas, and all his circle profited abundantly. Grétry avowed it ('Essai sur la musique', I, 225). Others, like Rousseau, were not so frank (Assézat, *op. cit.* XII, 141-42).

Diderot, who was, as we have seen, a capable acoustician, did not claim to be more than an amateur in music *per se* ("point musicien, mais aimant la musique": Clément, 'Cinq Années littéraires'; Letter XXIX). Indeed in his early 'Mémoires' (1748) he distinctly confesses his ignorance of the art, but as the years slipped by he seems to have acquired a fair store, as we seen in Bemetzrieder's 'Leçons de clavecin et principes d'harmonie' (1771). For this work he wrote the preface ("L'Éditeur") and did the verbal editing. The book was, in fact, compiled for his daughter, whom Bemetzrieder taught. The interlocutors in that work are the "Master", the "Pupil" and the "Philosopher" (Diderot), and it can be read in a poor bowdlerized English translation by Giffard Bernard entitled 'Music Made Easy . . .' (1778). Here we see him confessing (*see also* Grimm's 'Correspondance' XI, 367) that he had studied composition under Rameau, Philidor and Blainville, but learned nothing. Likewise had he been through almost all the works on the theory and practice of music, and had still learned nothing. It was not until Bemetzrieder showed him the science of harmony under a fixed system that he was satisfied! It is amazing that this intellectual giant could have been so easily impressed by a voluble fourth-rate German music teacher's 'Leçons'. However, the real joy of this work is not in the lessons, but in the delightful philosophical interludes, all of which bear the deep impress of Diderot himself, in spite of his insistence to the contrary in the preface. Perhaps Diderot's greatest literary work was 'Le Neveu de Rameau', which had its nativity in the 1750s

and was re-written later. Morley produced a version of it that is next to worthless, while the best portions, on music, have been omitted, on the almost unbelievable grounds that no "object seemed to be served by reproducing the technical points of the musical discussion". Yet it is just these passages, some of them redolent of the 'Leçons', that have contributed to give this work a place among his *chefs-d'œuvre*. Comte was probably right when he named Diderot the greatest genius of the 18th century. H. G. F.

**DIDUR, Adam** (b. Wola Sękowa nr. Sanok, 24 Dec. 1874; d. Katowice, 7 Jan. 1946).

Polish bass singer. He received his general as well as musical education at Lwów. In 1892 he began lessons in singing under Walery Wysocki, a distinguished teacher. A wealthy music-lover, greatly interested in Didur's talent and musicality, provided him with money for the continuation of his studies in Italy. For eighteen months Didur was a pupil of Emeric at Milan. It was there that he sang the solo bass part in Beethoven's ninth Symphony under Lamoureux.

Didur's operatic career began in Brazil (Rio de Janeiro) in 1894. Afterwards he sang at the Opera of Cairo and later still for four years at the Teatro alla Scala at Milan. He returned for a few years to his native country, being engaged for opera performances in Warsaw (1899-1903). He then toured again: St. Petersburg, Moscow, London, Madrid and both Americas, remaining

abroad for nearly fifteen years. He sang with Adelina Patti, Melba, Caruso and Battistini at the New York Metropolitan Opera under the direction of Toscanini. His principal parts were Boris Godunov (Mussorgsky), Mephistopheles (Gounod), Wotan (Wagner), Don Basilio (Rossini), Figaro (Mozart), Mefistofele (Boito). He sang in Polish, Italian, French, English, German and Russian.

After his second return to Poland, Didur settled in Warsaw, acting as opera producer and giving lessons in singing. Two months before the second world war he became director of the Opera at Lwów. The outbreak of war cancelled his more ambitious plans and he again moved to Warsaw, teaching and educating the young generation of Polish singers. After the war he moved to Katowice. During a lesson given at the Conservatory he suddenly excused himself, left the class and died in an adjoining room. G. R. H.

**DIÉMER, Louis** (b. Paris, 14 Feb. 1843; d. Paris, 21 Dec. 1919).

French pianist and composer. He studied at the Paris Conservatoire under Marmontel, Bazin and Ambroise Thomas, gaining the first pianoforte prize at the age of thirteen and that for fugue three years afterwards. In 1888 he succeeded Marmontel as professor of one of the higher pianoforte classes at the same institution. At the Paris Exhibition of 1889 he won especial fame in the compositions of the harpsichord masters of the past. A consequence of this was the creation of the Société des Instruments Anciens which, with his help, appeared often in London with great success. He established also a triennial competition for those among the male pianoforte students of the Conservatoire who had obtained the first prize during the previous ten years.

Diémer published a number of compositions, of which the following are the most important: a 'Concertstück', Op. 31, and a Concerto in C minor, Op. 32, for pianoforte and orchestra, a 'Concertstück', Op. 33, for violin and orchestra; besides some interesting chamber works, songs and very numerous pianoforte solos, as well as a collected edition of 'Clavecinistes français'. G. F.

**DIEPENBROCK, Alphons** (b. Amsterdam, 2 Sept. 1862; d. Amsterdam, 5 Apr. 1921).

Dutch composer. His first studies were in classical languages, and after taking the degree of Doctor of Letters at Amsterdam University he obtained a post as teacher of philology at the High School of 's Hertogenbosch. Later he settled in Amsterdam as a private teacher of this subject, but devoted most of his time to musical pursuits. Self-taught in music, he deliberately placed himself under the influence of Wagner and subsequently of his own contemporary, Debussy. At the same time he

studied very deeply the works of Beethoven and Berlioz, and of the Netherlands and Italian composers of the 16th century. His aim in studying these latter was to get a good church style in the works which he intended writing for the Roman Catholic churches of Holland. Later in life he became a great personal friend of Mahler, whose methods of composition also had some influence upon his work. Yet he developed a style entirely his own in which supple polyphony alternates with rich harmony, some of his works being entirely homophonic. In whichever form he wrote, or in the two combined, his great choral numbers are marked by an absolute expression of the words.

This easily placed him at the head of the Dutch school of composition then rising, in which he was associated with Zweers and Wagenaar. His 'Missa in die festo' (polyphonic) for male-voice chorus and organ, his 'Stabat Mater dolorosa' (homophonic) and his 'Te Deum', both the latter for large chorus and orchestra, have served as models for the younger generation of his countrymen and still remain among the greatest monuments of modern Dutch music.

Diepenbrock's most important contribution to European music in general, however, was a series of six songs or arias for solo voice and orchestra. These were entirely new and original both in concept and execution, making what has been described as "symphonic *Lieder*". He was also one of the first in modern times to write vocal solos with chamber combinations.

Most of his orchestral works were written as incidental music to stage plays, of which the outstanding example was that to Sophocles' 'Electra'. In this he not only produced some fine studies in orchestral illustration of the moods of the plays, but also solved in an unusually successful manner the problem of combining the spoken word with orchestral accompaniment.

Diepenbrock has been blamed for an excessive chromaticism, but as this was entirely spontaneous and natural to him, and he had a complete mastery over chromatic tonality, it may be said that it was a strength rather than a weakness.

He wrote a large number of essays on musical subjects, most of which were contributed to the literary periodical 'De Nieuwe Gids', to which he also contributed on other subjects. These were eventually collected in book form shortly after his death under the title 'Ommegangen' ('Conversations').

The following is a list of Diepenbrock's most important compositions:

#### INCIDENTAL MUSIC

Choruses in Vondel's 'Gysbrecht van Amstel', Verhagen's 'Marsyas, of De betooverde Bron'.

Aristophanes' 'The Birds'.  
Goethe's 'Faust'.  
Sophocles' 'Electra'.

## CHORAL WORKS

'Stabat Mater dolorosa' for chorus & orch (1897)  
'Stabat Mater speciosa' for chorus & orch (1897)  
'Missa in die festo' for tenor, men's chorus & organ (1899).  
'Te Deum' for solo 4tet, chorus & orch. (1902).  
Choruses from Horace's 'Carmen saeculare'.

## VOICE AND ORCHESTRA

'Vondels Vaart naar Agrippina' (Thym) for baritone.  
'In grossen Schweigen' (Nietzsche) for baritone.  
'Hymnen an die Nacht' (Novalis), 1 for contralto, 2 for soprano.  
'Lydische Nacht' (Verhagen) for baritone (partly spoken).

## VIOLIN AND PIANOFORTE

'Hymn.'  
Also numerous songs and part songs.

**DIEREN, Bernard van** (b. Rotterdam, 27 Dec. 1884; d. London, 24 Apr. 1936).

Dutch composer, critic and author. He was educated with a view to a scientific career, and became assistant in a research laboratory. His youthful artistic interests were chiefly literary, though he was skilled in drawing, musical studies being confined to the violin, which he learnt to play in early youth. Having had little opportunity of hearing good music, he did not begin to compose until he was nearly twenty years of age, when he wrote a series of immature works which have not been preserved. They were followed by a period of serious study in composition as well as in musical history and literature. In 1909 van Dieren settled in London, for some years acting as correspondent to continental newspapers and periodicals, and finding it a hard struggle to make a living and at the same time to find enough leisure to write music. His earliest preserved works date mainly from 1912, which year was spent in study in various German musical centres.

Van Dieren married the Dutch pianist Frieda Kindler, a sister of the cellist Hans Kindler. She loyally shared his difficulties, which were, however, to a certain extent relieved by a small but devoted group of friends in London, who, if they could not help materially, did much to encourage his work, which they admired in defiance of general indifference or adverse criticism; and they continued more than once to organize concerts

of his music. Foremost among them were the critics and composers Philip Heseltine (Peter Warlock) and Cecil Gray, and the singer John Goss.

Among van Dieren's writings were a number of brilliant articles and two books, one on the sculptor Jacob Epstein (1920) and a volume of musical essays, 'Down among the Dead Men' (1935); also an unfinished treatise on Fugue and a sketch for a book on harmony on a polyphonic basis.

The style of van Dieren's earlier works is nearly always distinguished by great polyphonic complexity gained by the independent development of melody. Contrapuntal devices are largely employed in conjunction with a scheme of harmony that is both modern and individual, and, while allowing the composer a wide scope, demands a strictly logical treatment. In the later works the harmonic basis becomes gradually simpler, while the workmanship is concentrated in a still higher degree upon organic unity and balance of form. Emotional values, though by no means absent, are severely restrained and subordinated to technical subtleties that make great demands on the hearer's musicianship. It was therefore not unnatural, though a great vexation to him and a grief to his friends, that his work never became known outside a small circle. It still demands attention, for it represents a unique personality, with defects and difficulties not easy to accept, but worth making the effort to face.

Van Dieren set several languages to music and had a fine taste for the literature of each, but his treatment of words in any of them was somewhat tortuous and unvocal. It is in his instrumental works, particularly the chamber music, that he is most convincing, though even there never easily approachable.

## CATALOGUE OF WORKS

## OPERA

- Op.  
14. 'The Tailor', opera buffa in 3 acts with chamber orch. (libretto by Robert Nichols).

## CHORAL WORKS

2. 'Balsazar' (Heine) for chorus & orch.  
10. 3 Unaccompanied Choruses  
1. Ave Maria (4 parts).  
2. Ave Maria (3 parts).  
3. Deus meus (4 parts).  
11. Symphony for orch. with 5 solo voices & chorus (words by Chinese poets).  
15. 'Les Propos des buveurs' for chorus & orch. (on Rabelais's 'Gargantua', chap. v).

## ORCHESTRAL WORKS

1. 'Elegy' with cello obbligato.  
3. 'Beatrice Cenci', epilogue to Shelley's 'The Cenci'.  
9. Overture for chamber orch. (16 insts.).  
13. Serenade for small orch.

Op

19. Symphony in 3 movements (unfinished)

1. Ciacona.
  2. Sarabande
  3. Gaillarde
- Overture 'Anjou'

## VOICE AND ORCHESTRA

12. 'Diaphonia' on 3 Shakespeare sonnets for baritone & chamber orch
21. 'Fayre eies' (Edmund Spenser) for baritone & chamber orch

## CHAMBER MUSIC

- 6 String Quartet No. 1
- 18 String Quartet No. 2.
20. String Quartet No. 3.
22. String Quartet No. 4, for 2 vns., viola & double bass.
24. String Quartet No. 5.
- String Quartet No. 6

## VOCAL CHAMBER MUSIC

16. 2 Songs for baritone & stg. 4tet
1. Song from Shelley's 'The Cenci'.
  2. Our Three Ladies of Sorrow (De Quincey).
17. 2 Poems for recitation with stg. 4tet
1. Recueillement (Baudelaire).
  2. Ballade pour prier Notre Dame (Villon)
- 'Marginalia to "Murder as One of the Fine Arts"' (De Quincey) for baritone, male-voice 4tet & pf
- Extract from Metastasio's 'Zenobia' for voice & 8 insts.

## SOLO VIOLIN

- 5 Sonata
- 3 Studies

## VIOLIN AND PIANOFORTE

- Sonata.

## PIANOFORTE MUSIC

44. 5 Sketches.
46. Toccata.
70. 3 Studies.
76. 'Praeludium'
- 12 Variations on an Original Theme.
- 20 Netherlandish Melodies

## SONGS

80. 15 Songs (Heine & Goethe).
86. 6 Songs (Verlaine, Charles d'Orléans, Ronsard & Boileau).
23. 6 Songs (Victor Hugo).
- 12 English Songs (Shakespeare, Nashe, Beddoes, Keats, etc.).
- 8 Songs (Walter Savage Landor)
- 3 Songs (James Joyce).
- 7 Songs (Heine).
- 'La Maison du bonheur' (Villiers de l'Isle-Adam).
- 'Mädchenlied' (Otto Julius Bierbaum)
- 'Schon Rohtraut' (Eduard Morike).
- 'A Prayer' (James Joyce) (contributed to 'The Joyce Book').

**DIES, Albert (Christoph)** (b. Hanover, 1755; d. Vienna, 28 Dec. 1822).

German author. He wrote biographical notes on Haydn from the composer's own communications, entitled 'Biographische Nachrichten von Joseph Haydn', published in 1810, with portrait and musical examples.

E. v. d. s.

**DIES IRAE.** The sequence sung in masses for the dead in the Roman Catholic church. The truth of the tradition which ascribes the poetry to Thomas de Celano, the friend, disciple and biographer of St. Francis of Assisi, seems to be established beyond all controversy. It is not properly a liturgical

sequence in form, but a poem to which a tune has been adapted. It is not known when it first became so used, and many years seem to have elapsed before its use became general. It is very rarely found in early manuscript missals, either in England, France or Germany, and is wanting in many dating as late as the close of the 15th century or the beginning of the 16th. It is doubtful, indeed, whether its use was recognized in all countries, until its insertion in the Tridentine 'Missale Romanum' rendered it a matter of obligation.

The old ecclesiastical melody is a remarkably fine one, in modes I and II (mixed Dorian), ranging throughout the entire extent of the octave to the final. No record of its origin, or authorship, has been preserved; but we can scarcely doubt that, if not composed by Thomas de Celano himself, it was adapted to his verses at the time of their completion. The melody is not proper sequence melody; its structure is essentially different, since it extends only over part of the prose and is then repeated with a certain difference for the closing lines.<sup>2</sup> The idea of it is evidently taken from the verse of the respond 'Libera me Domine' used in the office of the dead, which runs thus:

Dies illa, dies irae, ca-la-mi-ta-tis et mi-ser-i-ae.

The polyphonic masters have generally in their Requiem masses left the "Dies irae" to be sung simply to its plainsong melody. It is employed, however, as the basis of the composition in not a few masses by composers of somewhat lower rank, as, for instance, in a 'Missa pro defunctis', for 4 voices, by Giovanni Matteo Asola (Venice, 1586), in one for 8 voices by Orazio Vecchi (Antwerp, 1612), in one for 4 voices by Francesco Anerio and in one for 4 voices by Pitoni.

With modern composers the "Dies irae" has always been a popular subject, and more than one great master has adapted its verses to music of a broadly imaginative, if not a distinctly dramatic character. Among the most important settings of this class we may enumerate those by Colonna and Bassani, copies of which are to be found in the library of the R.C.M.; that in Mozart's Requiem; the two great settings by Cherubini, the first in his Requiem in C minor and the second in that in D minor; the extraordinarily realistic settings in the Requiems of Berlioz, Verdi and Bruneau; a not very interesting setting in Gounod's 'Mors et vita'.

W. S. R. &amp; W. H. F.

<sup>1</sup> For further information as to the poem and its translations see Julian's 'Dictionary of Hymnology'.

<sup>2</sup> See SEQUENCE.

The opening notes of the plainsong theme have been frequently quoted in various musical works, in some way associated with the idea of death, by a number of 19th- and 20th-century composers, as for instance by Berlioz ('Fantastic Symphony'), Liszt ('Totentanz' for pianoforte and orchestra, 'Dante' Symphony), Tchaikovsky (theme and variations in Suite No. 3 for orchestra), Mussorgsky ('Trepak' in 'Songs and Dances of Death'), Saint-Saëns ('Danse macabre' for orchestra), Rakhmaninov (symphonic poem 'The Island of the Dead' and 'Rhapsody on a Theme by Paganini' for pianoforte and orchestra), Miaskovsky (symphony), Schelling ('Victory Ball' for orchestra), Bantock (witches' dance in incidental music for 'Macbeth'), Vaughan Williams ('Five Tudor Portraits' for chorus & orch. [funeral march of Philip the Sparrow]), Sorabji (pianoforte Sonata), etc.

**DIESIS.** See GREEK MUSIC (ANCIENT).

## INTERVALS.

**DIETER, Christian Ludwig** (b. Ludwigsburg, 13 June 1757; d. Stuttgart, 1822).

German composer. He studied at the Karlschule (the military academy founded by Charles Eugene, Duke of Württemberg) until 1781 and subsequently entered the duke's service as court musician, playing the violin in the Stuttgart orchestra. He remained there all his life. For the Stuttgart theatre he wrote about a dozen *Singspiele*, among them a setting of Bretzner's 'Belmont und Constanze', first produced at Stuttgart on 27 Aug. 1784 and so successful there as to bar the way to Mozart's 'Entführung' for more than ten years.<sup>1</sup> The autograph score of Dieter's opera is preserved at Schwerin, and some others of his *Singspiele* are extant at Stuttgart, Darmstadt and elsewhere.

With Poli, Gauss and Zumsteeg, Dieter collaborated in an Italian allegorical opera, 'Le feste della Tessaglia' (Stuttgart, 1782), and he also wrote a ballet, 'Inez de Castro'. Besides his works for the stage, the last of which was a setting of Kotzebue's 'Des Teufels Lustschloss' (Stuttgart, 1804), Dieter wrote a number of concertos for various wind instruments, also sonatas for solo violin, for 2 bassoons, for flute and violin, and other combinations, most of which remained in manuscript; some, however (Opp. 21-26), mostly flute pieces, were published by Breitkopf & Hartel early in the 19th century (reviewed in A.M.Z.; an incomplete copy of Op. 26 in B.M.).

A. I.

<sup>1</sup> First given at Stuttgart on 19 Sept. 1795, long after it had been performed on all other German stages.

<sup>2</sup> Composed by Schubert in 1813-14.

**DIETGER.** See THEOGERUS OF METZ.

**DIETRICH, Albert (Hermann)** (b. Golln. Meissen, 28 Aug. 1829; d. Berlin, 20 Nov. 1908).

German conductor and composer. He was educated at the "Gymnasium" at Dresden from 1842 onwards and in 1847 he went to the University of Leipzig, having previously studied music with Julius Otto. At Leipzig his musical tuition in 1847-51 was in the hands of Rietz, Hauptmann and Moscheles.

From 1851 he had the advantage of studying under Schumann at Düsseldorf until 1854. In the autumn of 1853 an incident occurred which brought Dietrich into collaboration with his master and Johannes Brahms. Joachim was coming to Düsseldorf to play at a concert on 27 Oct. and Schumann formed the plan of writing a joint violin Sonata with the other two, by way of greeting. Dietrich's share was the opening *allegro* in A minor. In 1854 his first Symphony was given at Leipzig, and a year later he was appointed conductor of the subscription concerts at Bonn, becoming town *Musikdirector* in 1859. In 1861 he became *Hofkapellmeister* at Oldenburg. On his frequent visits to Leipzig, Cologne and elsewhere he proved himself an excellent conductor and a serious musician. He retired in 1890 and settled in Berlin. He became a member of the Royal Academy of Arts there and in 1899 was given the title of Royal Professor. Among his works may be mentioned

- 'Robin Hood', opera in 3 acts, produced Frankfurt 9/M., 1879.
- 'Morgenhymnen' for chorus & orch.
- 'Rheingymnen' for chorus & orch.
- 'Altchristlicher Bittgesang' for chorus & orch.
- Symphony, D m., Op. 20.
- Concert overture, 'Normannenfahrt'.
- 'Concertstück' for horn, Op. 27.
- Horn Concerto, Op. 29.
- Violin Concerto, Op. 30.
- Cello Concerto, Op. 32.
- Trio for vn., cello & pf., Op. 9.
- Pf. Pieces, Op. 2.
- Sonata for pf. duet.
- Songs, Op. 10.

Dietrich wrote incidental music for Shakespeare's 'Cymbeline', some of which was played in London in Henry Irving's Lyceum revival in 1896. In 1899 he published an interesting series of 'Erinnerungen an J. Brahms'.

J. A. F.-M., adds.

**DIETRICH, Sixt(us)** (b. Augsburg, c. 1491; d. St. Gall, 21 Oct. 1548).

German composer. He was at Freiburg University and went in 1517 to Strasbourg, becoming a schoolmaster at Constance in 1518. About 1535 he seems to have inherited some money and to have renewed his own studies in music and other things, entering the University of Wittenberg in 1540. He returned to Constance, leaving it at the time of the attack of the Emperor Charles V, and

dying two months afterwards. He published 'Epicédion Thomae Sporeri' in 5 parts (1534); a first book of Magnificats (1535); 36 Antiphons (Wittenberg, 1541), and 'Novum opus musicum' (Wittenberg, 1545). Five of his compositions are in the 'Dodecachordon' of Glareanus E. v. d. s.

**Dietrichson, L.** See Soderman ('Karl Folkunge' incid m.).

**DIETSCH, Pierre (Louis Philippe)** (b. Dijon, 17 Mar. 1808, d. Paris, 20 Feb. 1865)

French organist, conductor and composer. He was educated by Choron and at the Paris Conservatoire, was *maître de chapelle* at the church of Saint-Eustache and in 1860 became chief conductor of the Opéra. He was dismissed by Perrin, the director, in 1863. He became organist of the Madeleine, wrote much church music and organ works (the popular 'Ave Maria', falsely attributed to Arcadelt, is said to have been by him), and acquired an unenviable notoriety in connection with the purchase of Wagner's 'Flying Dutchman' scenario, at a time when Wagner was in straitened circumstances in Paris. Dietsch's composition of the French libretto based on this, by Paul Foucher and Bénédicte Henri Révol, 'Le Vaisseau-fantôme', was produced at the Opéra on 9 Nov. 1842. Dietsch was again connected with Wagner in 1861, when it fell to his lot to conduct the disastrous production of 'Tannhäuser' at the Opéra.

J. A. F.-M., adds.

**DIETZ, Christian** (b. Emmerich o/Rh., c. 1801; d. ?).

German instrument maker. He learned his craft from his father, Johann Christian Dietz and, like him, became an inventor and maker of musical instruments. In 1819 he executed and exhibited one of his father's Clavichords at the Louvre in Paris, as described in the pamphlet 'Description du clavichord, inventé par M. Dietz et exécuté par M. Dietz fils' (Paris, 1821). The younger Dietz was himself responsible for the Polyplecton and the Phys-harmonica, and had a considerable reputation in France as a maker of upright pianofortes.

J. M. (ii).

**DIETZ, Johann Christian** (b. Darmstadt, P., d. Holland, c. 1845).

German maker and inventor of musical instruments, father of the preceding. He first established himself at Emmerich on the Rhine, but having in 1805 invented an instrument which he called Melodeon, he journeyed in the next year through Westphalia and Holland to exhibit it. This was not the instrument which bears this name to-day, but a kind of small pianoforte about 4 ft. long and 2 ft. high. He then founded an instrument factory in Holland, but later settled in Paris where

he invented the Clavichord (a harp with a mechanical action for plucking the strings)<sup>1</sup> and later (1812) the Trochleon. About 1820 Dietz went to Brussels and set up a factory to make hydraulic machines and steam engines.

**DIEUPART, Charles** (b. ?; d. ? London, c. 1740).

French violinist, harpsichordist and composer. He settled in England about 1700 and made his mark in London as a fine performer. He is first mentioned as the composer of the instrumental music for Motteux's interlude 'Britain's Happiness', performed at Drury Lane Theatre on 22 Feb. 1704.<sup>2</sup> There is no foundation for the oft-repeated statement that he was part-composer of Clayton's 'Arsinoë' (1705)<sup>3</sup>; but once more he collaborated with Motteux in one of the first operas produced at the Queen's Theatre, Haymarket, 'Love's Triumph' (26 Feb. 1708), translated from Cardinal Ottoboni's 'La pastorella'. The original music was by Scarlatti and others, and Dieupart adapted it to the English words; "it will owe not a little to Mr. Dieupart, for his share in the contrivance of the entertainments and his supplying what recitative and other music was necessary" (Motteux's preface). In 'The Spectator' of 26 Dec. 1711 and 18 Jan. 1712 (Nos. 258 and 278) there appeared letters signed by Clayton, Haym and Dieupart advertising their joint entertainments of music at York Buildings; they consisted of Clayton's 'Passion of Sappho' and 'Feast of Alexander'<sup>4</sup> and proved a failure, and Dieupart subsequently seems to have devoted himself chiefly to teaching the harpsichord and violin. He was noted as a fine performer of Corelli's violin solos. Towards the end of his life he wrote some songs for revivals of Southerne's 'Oroonoko' (1735) and Etheredges' 'The Man of Mode'.

A. L.

Dieupart's only extant major instrumental work was published by Roger of Amsterdam (n.d.).<sup>5</sup>

<sup>1</sup> See HARP.

<sup>2</sup> The vocal music was by Weldon, a rival setting by Leveridge was given at the Lincoln's Inn Fields Theatre a fortnight later.

<sup>3</sup> In the first 'Spectator' letter it is merely said that Haym and Dieupart, "according to their several opportunities promoted the introduction of 'Arsinoë'".

<sup>4</sup> See CLAYTON. The titles of the entertainments are not mentioned in 'The Spectator'.

<sup>5</sup> A copy is in the library at Wolfenbüttel. In Roger's Catalogue a second work by Dieupart is mentioned, 'Six Suites à un dessus & basse', of which no copy seems to be known.

Six Suites de clavessin, divisées en ouvertures, allemandes, courantes, sarabandes, gavottes, menuets, rondeaux, et gigue, composées et mises en concert pour un violon et flûte, avec une basse de viole et un archilut.

A reprint of a portion of the suites was published by Walsh in London as 'Select Lessons for the Harpsichord or Spinnet'. In Dannreuther's 'Musical Ornamentation', Part i, it is clearly proved that Dieupart's suites were well known to Bach, who based the prelude of his first English Suite, in A major, on the gigue from Dieupart's first Suite in the same key. In a lecture at the Royal Institution, 30 Apr. 1892, Husk suggested that the name 'Suites anglaises' may have been a term in use in Bach's family for the suites which Bach had based upon the works of a composer whose vogue was greatest in England.

BBL.—PIRRO, ANDRÉ, 'Les Clavecinistes' ('Musiciens célèbres' series) (Paris, 1925).

**DIÈZE** (Fr., from Gr. *diēōs*). The French name for the sharp, the sign ♯. The derivation is inaccurate, the original *diēsis* having been a quarter-tone.

**DIFERENCIA** (Spa. = division, variation). See ORNAMENTS, D.

**DIFERENCIAS** (Spa., lit. differences). An old Spanish term for variations or, more strictly, divisions.

**DIFFERENCE TONES.** See ACOUSTICS.

Digby, John. See ORR (C. W., song).

**DIGITORIUM.** An apparatus for exercising and strengthening the fingers, intended especially for the use of pianists, but claimed by its inventor, Myer Marks, to be of great service to all who require flexible and well-trained fingers.

It consisted of a small box about six inches square, provided with five keys<sup>1</sup>, fitted with strongly resisting springs, upon which keys five-finger exercises are to be practised. In addition, there are attached to the sides of the box certain appliances for stretching the fingers and a support for the wrist.

The question of finger gymnastics received very full consideration from E. Ward Jackson in a work entitled 'Gymnastics for the Fingers and Wrist' (London, 1874), in which he quoted opinions in favour of his system of exercises not only from musicians but from very eminent surgeons.

F. T.

**DIGNUM, Charles** (b. London [Rotherhithe], c. 1765; d. London, 29 Mar. 1827).

English tenor singer and composer of Irish descent. He was the son of a master-tailor, an Irish Roman Catholic, who placed him when a boy in the choir of the Sardinian ambassador's chapel in Duke Street, Lincoln's

Inn Fields, where his fine voice attracted the attention of Samuel Webbe, then organist there, who undertook to instruct him. He wished to be sent to Douai to be educated for the priesthood, but eventually decided on adopting the profession of music and articulated himself to Thomas Linley for seven years.

In 1784 Dignum made his first appearance at Drury Lane Theatre as Young Meadows in 'Love in a Village', and, although his figure was somewhat unsuited to the part, the beauty of his voice and his judicious singing secured him a favourable reception. He next appeared as the hero in Michael Arne's 'Clymon' and fully established himself in public favour. In 1787, on the removal of Charles Bannister to the Royalty Theatre, Dignum succeeded to a cast of characters better suited to his person and voice. In 1790 he gained much credit by his performance of Crop the miller, in Storace's 'No Song No Supper', of which he was the original representative. After singing at the theatres, at Vauxhall Gardens and at concerts for several years, he retired in easy circumstances. Dignum composed several ballads. He published in 1810 a volume of songs, duets and glees, composed and adapted by himself, to which an engraved portrait of him is prefixed.

W. H. H.

**DIKENMANN-BALMER, Lucie** (b. Berne, 21 Oct. 1902).

Swiss musicologist. Having been trained as a pianist at Chur and Hamburg, she studied musicology at Berne University under Ernst Kurth, as well as history and German literature. In 1933 she took the Ph.D. degree and in 1936 she was appointed lecturer in music by the same University, advancing in 1947 to the post of Professor Extraordinary. Apart from her activities at the University she is much in demand as a teacher of music, and she may be regarded as the chief representative of the musical conceptions of Ernst Kurth since his death in 1946. She published (under her maiden name of Lucie Balmer) 'Tonsystem und Kirchentone bei Joh. Tinctoris' (Berne, 1935) and 'Orlando di Lassos Motetten' (Berne, 1938), and (under her married name) 'Beethovens Missa Solemnis' (Zurich, 1952).

**Dilke.** See ECCLES (2, m. for 2 plays). Finger ('City Lady', act-tunes).

**DIMA, Gheorge** (b. Braşov, 10 Oct. 1847; d. Cluj, 4 June 1925).

Rumanian conductor and composer. He studied at Carlsruhe, Vienna, Graz and Leipzig, Reinecke and Jadassohn being among his masters at the last place. On returning home to Rumania he became choral conductor at Braşov and Sibiu, where he did much to use choral singing for national and cultural purposes and at the same time gained great experience in vocal composition. He was also

<sup>1</sup> Digitoriums were occasionally made of greater compass, with black and white keys, the ordinary digitorium having only white keys.

choirmaster of the Church of St. Nicholas in his birthplace and of Sibiu Cathedral. Moreover he taught music in both towns and made a considerable reputation. Many of his works were left unfinished at his death, but a collected edition was undertaken by the Rumanian Ministry of Education.

Dima's works include an oratorio, 'The Mother of Stephen the Great'; a 'Salvum fac regem' for chorus and orchestra, liturgies and other church music; cantatas for chorus and orchestra, numerous songs, etc.

E. B.

#### DIMINISHED INTERVALS. See INTERVALS.

**DIMINISHED SEVENTH.** The chord of the diminished seventh is a chord of three superimposed minor thirds which, in the 18th century, acquired a reputation as a discord with a strongly pathetic or dramatic effect, according to context. It still retains that effect for us in some 19th-century music if it is sparingly used and sounds striking in the harmonic idiom of the period; but it became stale in the course of that century, not only because later composers abused its sensational nature, but also because as a harmonic device it represents a line of least resistance, for it is the easiest of all chords from which to modulate on account of its indefinite tonality and the fact that it contains four notes belonging to widely separated keys. Samuel Butler said it was a kind of musical Clapham Junction, from which it was possible to get to any destination in the shortest possible time; but while short cuts have their advantage in travel, they soon cease to be interesting in composition, and composers learnt to avoid modulating from diminished sevenths. Verdi, for example, said that they were a pitfall for any dramatic composer because they made things too easy for him.

At the time of Weber's 'Freischütz' (1821) chords of the diminished seventh, used for their own sake rather than as modulatory pivots, were still legitimately telling, and he used them abundantly in the wolves' glen scene for a variety of ghostly and horrific effects. But they can be seen to begin wearing out in the hands of weaker followers of his such as Marschner ('The Vampire'), and Dvořák in the second act of 'The Devil and Kate' (in hell) grossly overdoes their use. Even Weber seems to have felt that he ought to do something to disguise them to the score-reader's eye (they cannot be disguised to the ear and are in fact the most easily recognized of all discords). The visual disguise is easy because the constituent notes can all be written enharmonically in different ways: the minor thirds C, E $\flat$ , G $\flat$ , B $\flat\flat$ , for instance, can be written as C, D $\sharp$ , F $\sharp$ , A, or C E $\flat$ , F $\sharp$ , A, or C, D $\sharp$ , G $\flat$ , A, with some of the intervals becoming

augmented seconds or diminished fourths in appearance, though the more they change the more they remain the same thing.

E. B.

**DIMINUENDO** (Ital. = diminishing, decreasing). A direction to lessen the intensity of tone in a musical passage, phrase or note. The sense of the word is precisely the same as that of *decrescendo*, but, being positive instead of negative, it is preferable. Abbreviations used for it are *dim.* or *dimn.*, and it can also be expressed by the "hairpin" sign .

E. B.

See also Expression (5).

**DIMINUTION.** (1) In counterpoint diminution is the repetition of a subject or figure in notes of smaller value than those of its original statement, e.g.:

It is a device almost confined to music of a contrapuntal character, such as fugues and canons, and is not of as frequent occurrence as augmentation, which is its converse. There is an example in Handel's chorus "Let all the angels of God" in 'Messiah'; in Bach's well-known Fugue in E major, No. 33 in the 'Well-tempered Clavier'; in the overture to Wagner's 'Meistersinger'; and (used in a very similar way) in Elgar's 'Cockaigne' overture.

In the final scene of Saint-Saëns's 'Samson et Dalila', where Delilah mocks the blinded Samson, the device of diminution seems to convey a suggestion of derision. C. H. H. P.

(2) For the use of the term in connection with the time signatures  $\textcircled{1}$ ,  $\textcircled{2}$ , etc., see NOTATION.

(3) The French term, which is the equivalent of the English "division", for an embellishment left to the discretion of the executant, who is expected to replace the written notes by others of less value. Thus:

Quantz gives examples of divisions in the Italian style, but none in the French style, and remarks that "the pieces in the French manner are for the most part characterized and composed with appoggiaturas and ornaments in such a way that hardly anything else can be added to the text".

**DIMITRIJ** (Opera). See DVOŘÁK.

**DIMMLER, Franz Anton** (b. Mannheim, 14 Oct. 1753, d. Munich, c. 1819).

German composer. He was a pupil of Vogler and of the horn player Joseph Ziwni, and in 1767 he joined his teacher (and two other brothers Ziwni) as horn player in the famous Mannheim orchestra. After 1778, at Munich, he changed to double bass. Dimmler wrote some operettas for the Munich theatre, 'Der Guckkasten' (1797), 'Der Schatzgraber' (1798; score extant at the Paris Conservatoire) and according to Lipovsky also 'Die Zobeljäger', incidental music for a play 'Ritterliebe' (1796) and a great many ballets. Of his instrumental music six string trios were published at Munich; a thematic catalogue of these and of two string quartets will be found in D.T.B., XVI, 2 (1915).

**DIOMEDES(,) CATO** (b. Venice, c. 1570; d. ?).

Italian lutenist and composer. It is still uncertain whether Diomedes or Cato was his surname. He went to Poland about 1589 or 1590, engaged as lutenist to the court of Stanislaw Kostka, grand treasurer of northern Poland, who fully recognized and appreciated his unusual skill and talent, and in his will, drawn up in 1601, bequeathed his lutenist a sum of 1000 zlotys (10,000 according to some authorities). This was an enormous amount of money when compared with the annual income of 300 zlotys granted to Diomedes, after Kostka's death, by the lutenist's new master King Sigismond III.

As far as Polish music is concerned the most important of Diomedes's compositions are the 8 Polish dances of a martial character. ('8 Choreae Polonicae'). All of them begin with an anacrusis and in that respect resemble the gavotte. They have no saltarello division and are written in common time, not changing to triple time in the second part. Besides he wrote religious songs set to words by Father S. Grochowski which were published at Cracow in 1606. He died some time after 1615.

Compositions by Diomedes appeared in the following publications:

- J. Rudenius, 'Flores musicae' (1600), one galliard.
- I. B. Besard, 'Thesaurus harmonicus' (1603), 4 preludes, 6 fantasies, 2 madrigals (transcribed), 3 galliards, 8 choreae polonicae.
- R. Dowland, 'Varieties of Lute-lessons' (1610), 1 fantasy.
- J. van den Hove, 'Delitiae musicae' (1612), 3 galliards.
- G. L. Fuhrmann, 'Testudo Gallo-Germanica' (1615), 1 prelude and 2 passamezzi.

Besides the published works, manuscripts of Diomedes are to be found at the B.M., London; Ch. Ch., Oxford; State Lib., Dresden; Munic. Lib., Leipzig, and at the Academy of Music, Stockholm. Some of his compositions were reprinted by Chilesotti (1886), Opieński (1911) and Jachimecki (1911); the religious songs by Surzyński and Reiss.

**DIPPEL, Johann Andreas** (b. Cassel, 30 Nov. 1866; d. Hollywood, California, 12 May 1932).

German singer. He made his début at the Bremen Municipal Theatre in 1887. In 1890 he sang at the Metropolitan Opera House in New York, and for five years he was a member of the company of the Imperial Opera in Vienna. In 1908 he became joint manager of the Metropolitan Opera House with Giulio Gatti-Casazza, a post he held for two years. He was manager of the Chicago Opera from 1910 to 1913.

R. A.

**DIRECT** (Lat. *tractulus*; Fr. *guidon*; Ital. *guida*). A mark or sign, also called guide, to be found in plainsong at the end of a stave to indicate the note with which the next stave begins:

It was also in use in staff notation up to the 19th century, at the end of a page, or even of a line, to warn the performer of the note or notes at the beginning of the next page or line, like the catchword at the foot of a page. Here it indicates that the first note of the next line will be G:

G., adds.

**DIRECT MOTION.** See SIMILAR MOTION.

**DIRGE.** A vocal piece sung at a burial or, more rarely, on some memorial occasion. The word derives from the Latin *Dirige Domine*, the opening words of an antiphon from the Office for the Dead.

**DIRUTA, Agostino** (b. Perugia, ?; d. ?).

Italian 16th-17th-century composer. He belonged to the Order of St. Augustine. From the title-page of his first work, published 1617, we gather that he was a nephew of Girolamo Diruta and a pupil of his. The reference to "D. Stephani Venetiarum organistae" might mean either that he, or that Girolamo, was the organist in question. If Girolamo, it would be before 1593, when he left Venice. In the dedication of his 'Messe concertate' (1622) Agostino says that he has been *maestro di cappella* and organist at Asolo for two years (1620-22). He was organist and *maestro di cappella* of Sant' Agostino in Rome from 1630 to 1647.

List of works (taken from Parisini's 'Catalogo della Biblioteca del Liceo musicale di Bologna', 11.66, etc.):

1. 'Sacrae Cantiones 1, 2, 3 & 4 vocibus concinendae, una cum suo Basso continuo pro organo Fratr Augustini Diruta Perusini Ordinis Eremitarum Divi Augustini, Sacrae Theologiae Cursoris, nepotis ac olim discipuli R.P.F. Hieronymi Diruta, in Ecclesia D. Stephani Venetiarum organistae, Venetis Jacobum Vincentum. 1617.' 4to. Five partbooks containing 29 concertos.
2. 'Davidis exultantis cantica.' 1 and 3 v. Op. 2. Venice, Vincenti. 1618. 4to. Four partbooks containing 25 numbers.
3. 'Messe concertate a 5 voci del P. Agost. Diruta Peruginus, maestro di capella & organista della magnifica comunità di Asolo. Con il Basso per sonar nell' organo. Novamente composte & date in luce. Venetia. Aless. Vincenti. 1622.' 4to. Six partbooks in the Bibl. Comunale of Cesena, containing 'Missa primi toni' & 'Missa secundi toni, a 5 voci, concertata'.
4. 'Sacri motetti a gloria di Gesù et ad honore di Maria a 1 & 2 voci. In musica riportati dal P. Baccelliere Frat' Agost Diruta Peruginus, Agostiniano nella Chiesa di Sancto Agostino di Roma, organista e maestro di capella. Lib. 1, opera VI. Prima parte. Venetia. Aless. Vincenti. 1630.' 4to.
5. 'Sacrae modulationes Eremitici ordinis divorum, a R. P. Fr. August Diruta Perusino, ejusdem ordinis Alumno, in Aede August. Urbis Alumnorum Musicesque Praefecto, 2, 3, 4, 5, 6, 7, 8 vocibus decantatae. Opus X. Romae. P. Masottum. 1630.' 4to. In the Bibl. Comunale of Cesena.
6. 'Messe concertate a 5 voci con il Basso continuo per l' organo in musica riportate da Rev. P. Bacc. Agost. Diruta Peruginus, maestro di capella & organista. Lib. ii. Opera XIII. Roma, J. B. Robletti. 1631.' 4to. Six partbooks.
7. 'Viridarum Marianum in quo Desparae Virginis Letaniae, et Hymni 4, 5, 6 vocibus: una cum Basso ad organum decantur. A.R.P. Bacc. F. August. Diruta Perusini in aede August. Urbis Musices et organorum praefecto dispositum Opus XV. Romae, J. B. Robletti. 1631.' 4to. (In the Santini Catalogue.)
8. 'Psalmi vespertini 3 vocibus qui in omnibus Ecclesiae Solennitatibus decantantur solent, Auctore F. Agost. Diruta Perusino, Sac. Theol. Bacc. Eremita August. & in Eccl. ejusdem ordinis in Urbe Musices praefecto. Lib. 2. Opus XVI. Romae, P. Masottum. 1633.' 4to. *Cantus secundus* in the B.M.

9. 'Poesie heroiche morali e sacre poste in musica a 1, 2, 3, 4 & 5 voci dal R.P. Agostino Diruta Peruginus, Agostiniano Bacc. in Sac. Teol. maestro di Capella in Sant' Agostino di Roma. Opera XX' (dedication dated Romae, 15 Nov. 1646), fol. pp. 111.
10. 'Il secondo libro de' Psalmi che si cantano ne' Vespri di tutto l' anno concertati a 4 voci da P. Agost. Diruta Peruginus Agost. Bacc. in Sac. Teol. e maestro di Capella nella chiesa di S. Agost di Roma, Opus XXI. Roma, Lud. Grignani, 1647.' 4to. Five partbooks containing 23 numbers.
11. 'Dionysiae modulationes et Litaniae B. Mariae Virginis 3 vocibus concinendae, una cum Basso ad organum Auctore P. August. Diruta Perusino August. Sac. Teol. Bacc. in Eccl. Div. August de Urbe Musices Praefecto. Opus XVIII. Roma, Giac. Fel. 1668.' 4to. Four partbooks. This edition was probably issued after Diruta's death, it first appeared in 1641, Venice, Vincenti 4to.

G. S.

**DIRUTA, Girolamo** (b. Deruta nr. Perugia, c. 1550, d. ?).

Italian monk, organist, theorist and composer, uncle of the preceding. His family name was Mancini. He became a member of the Frati Minori Conventuali and entered the Franciscan monastery at Correggio on 19 Jan. 1574, at the same time as Battista Capuani, who is said to have given him his first instruction in music.<sup>1</sup> That the pupil's opinion of his master's teaching was not very favourable is shown by Diruta's references<sup>2</sup> to the deficiencies in his early musical education, which led to his going to Venice for further study. He remained there from about 1582 to 1593 and was a pupil of Zarlino, then the great authority on counterpoint and theory, of Costanza Porta, then at Ravenna, and of Claudio Merulo, who was in Venice from 1557-84.<sup>3</sup> Franchini<sup>4</sup> says that among the pupils of Merulo "fu principale il Diruta". In 1597 he was organist of Chioggia Cathedral, and in 1609 and 1612 is known to have been organist of Agobbio (Gubbio) Cathedral, for it is recorded in 'Il Transilvano' (1609 and 1612), and is corroborated by Andrea Banchieri<sup>5</sup>, who refers to Agobbio Cathedral with its "organo stupendissimo suonato da Girolamo Diruta". Banchieri<sup>6</sup> leads one to suppose that although organist at Gubbio, Diruta was still living at Chioggia, for he addresses one letter to "Sig. Girolamo Diruta, organista nel Duomo d' Agobbio"<sup>7</sup> and another to "P. Girolamo Diruta, Francescano, Chioggia".<sup>8</sup> Diruta is again styled organist of Chioggia on the title-page of the 1625 edition of 'Il Transilvano', I, but it is probably merely a reproduction of the title-page in the earlier edition (1597); for Chioggia Cathedral was burnt

<sup>8</sup> Parisini, I, iv, 86.

down in Dec. 1623, and the rebuilt Cathedral was not opened till 15 Aug. 1647.<sup>1</sup> Diruta is known not only as a celebrated organ-player at a time when famous organists flourished (in 'Il Transilvano', I, 62, is related how he heard Claudio Merulo and Andrea Gabrieli play in St. Mark's "un duello di due organi" soon after he went to Venice), but as the author of a remarkable treatise on organ playing which was far in advance of any contemporary publication. It was the first attempt to treat of the organ separately as an instrument that required a method of treatment and of finger technique distinct from that used for the clavier. It was written in two parts, which were published at an interval of twelve years. The first was entitled:

Il Transilvano. Dialogo sopra il vero modo di sonar organi, & istromenti da penna. Del R.P. Girolamo Diruta, Perugino, del l'ordine de' Frati Minori Conv. di S. Francesco. Organista del Duomo di Chioggia. Nel quale facilmente, & presto s' impara di conoscere sopra la tastatura il luogo di ciascuna parte, & come nel diminuire si devono portar le mani, & il modo d' intendere la intavolatura, provando la ventà & necessità delle sue regole, con le toccate di diversi eccellenti organisti, poste nel fine del libro. Opera nuovamente ritrovata, utilissima & necessaria a professori d' organo. Al serenissimo Principe di Transilvania Con privilegio In Venetia appresso Giacomo Vincenti, 1597, folio, pp 64

This is the earliest extant edition and is very rare; two copies are known, one in the B.M., the other in the Bologna Liceo Musicale. Fétis mentions a 1593 edition; Carl Krebs, who went very thoroughly into the whole question, thought its existence, though problematical, was slightly favoured by the following facts. In his introductory letter to 'Il Transilvano' (1597) Claudio Merulo mentions his 'Canzoni alla francese' as having just been published:

Però essendomi venuta occasione di mandare alla stampa il primo libro delle mie *Canzoni alla francese* da me poste di nuovo in intavolatura.

And the Prince of Transilvania, on his travels in Italy, wishing to obtain the newest musical works, acquires

quella novella compositione delle canzoni alla francese intavolate dall' eccellentissimo Signor Claudio Merulo da Correggio

(p. 5). The only known copy of this book is in the Basel University Library and is dated 1592.<sup>2</sup> Again, in the second edition of 'Il Transilvano' (1612), the dedication, "Al Serenissimo Principe di Transilvania, il Sig. Sigismondo Bathori", is dated "Di Venetia, Apr. 10, 1593". This would seem to point to the dedication as having been simply reprinted from a 1593 edition.

Other editions besides those of 1597 and 1612, just mentioned, both printed by Gia-

como Vincenti, were published in 1615, 1625 and possibly again in 1626, all by Alessandro Vincenti of Venice. The Bologna Liceo Musicale has copies of the 1612 and 1625 editions; the contents are identical with those of the 1597 edition.

In 1609 appeared:

Seconda parte del Transilvano Dialogo diviso in quattro libri del R.P. Girolamo Diruta, Perugino, Minore Conventuale di S. Francesco Organista del Duomo d' Agobbio. Nel quale si contiene il vero modo & la vera regola d' intavolare ciascun canto, semplice & diminuito con ogni sorti di diminutioni. & nel fin dell' ultimo libro v' è la regola, la qual scopre con brevità e facilità il modo d' imparare presto a cantare. Opera nuovamente dall' istesso composto, utilissima & necessaria a professori d' organi. Con privilegio. In Venetia appresso Giacomo Vincenti, 1609, folio.

The dedication, "All' Illustrissima Signora la Signora Duchessa Leonora Ursina Sforza", is dated "Da Gubbio il dì 25 Marzo, 1610". The second edition, published at Venice by Alessandro Vincenti in 1622, reprints the same dedication, signed in the same way. Copies of both the 1609 and 1622 editions are in the Bologna Liceo Musicale and elsewhere. A 1639 edition mentioned by one authority does not appear to be known.

The contents of the two parts of 'Il Transilvano' may be briefly sketched: in 'Il Transilvano', I, the preface is written almost entirely in praise of the organ; the fine instruments in the cathedrals of Trento, Agobbio and Cagli are mentioned; and as no one has written on their characteristic qualities and the proper way to play them, rules are proposed for the right use of the fingers, necessary to be observed in organ playing. The introductory letter written by Claudio Merulo follows in which he highly commends Diruta's talent:

Ed io infinitamente mi glorio, ch' egli sia stato mia creatura, perchè in questa dottrina ha fatto a lui ed a me insieme, qual singular honore, che da persona di molto ingegno si deve aspettare

Then the instruction begins in the form of a dialogue between Transilvano and Diruta. The musical scale and the characters used in *cantus mensurabilis* are explained; the rendering of music is considered from an artistic as well as from a technical point of view. The position of the hand and fingers while playing and the distinction to be drawn between organ and clavier playing is discussed. Musical examples are given in the form of toccatas or "lessons" on the ecclesiastical tones. Those composed by Diruta are: Toccate di grado del primo tuono; di salto buono del secondo tuono; di salto cattivo del sesto tuono; del undecimo e duodecimo tuono. The other examples were contributed by Claudio Merulo, Andrea and Giovanni Gabrieli, Luzzasco Luzzaschi, Antonio Romanini, Paolo Quagliati, Vincenzo Bell' Haver and Gioseffo Guami, all well-known names in Italy at that time. The music follows the usual custom in being written on a

<sup>1</sup> C. Krebs, 'Vierteljahrsschrift', Year VIII (Leipzig, 1892).

<sup>2</sup> Canzoni d' intavolatura d' organo di Claudio Merulo da Correggio a 4 voci fatte alla francese. Nuovamente da lui date in luce e con ogni diligentia corrette. Lib. 1 Venetia. Ant. Gardano, 1592.

five-line stave for the right hand and an eight-line stave for the left hand.

'II Transilvano', II, contains four books. Bk. i explains how to write down music in two, three or four parts for the organ, with musical examples by Giovanni Gabrieli and Antonio Mortaro. How to add the five different kinds of *diminutioni* (*minuta, groppa, tremoli, accenti* and *clamazioni*) to a melody without unduly interfering with it; two musical examples by G. Gabrieli and Mortaro follow. Bk. ii teaches the rules of counterpoint and the way to compose *ricercari*; with examples by Luzzaschi, Gabriele Fatorini, Banchieri and Diruta himself (those on the 7th, 8th, 11th and 12th tones). Bk. iii gives the twelve ecclesiastical tones and the way to transpose them into different keys, with other matters which every organist ought to know. Bk. iv gives the intonations, in different keys, of hymns, masses, etc., with a discourse on using combinations of the organ registers (*i.e.* stops); and a short introduction to the learning of singing. The musical examples by Diruta are genuine organ compositions; two of them, 'Ut queant laxis (imo tuono)' and 'Magnificat (5to tuono) nelli tasti naturali', were reprinted by Ritter.<sup>2</sup>

In Zacconi's 'Prattica di musica', Part II, bk. iii, Venice, 1622, p. 240 (B.M.) are also to be found musical examples taken from 'II Transilvano', II, ii and iii. Krebs reprints three toccatas and one *ricercare*<sup>3</sup>, and mentions the two toccatas, "di salto buono" and "di salto cattivo", as being in Bernhard Schmid's 'Tabulaturnbuch'.

The following references to Diruta may also be found of interest: Bononcini of Modena mentions "li già dimostrati dodici tuoni il che si conferma ancora con l'autorità del . . . Diruta nel Transilvano"; Costanzo Antegnati of Brescia says<sup>4</sup>: "Lodo l'opera del Reverendo P. Diruta, nomata il Transilvano, che insegna a portar bene la mano nel suonare", etc.; Andrea Banchieri<sup>5</sup> says his object is not to teach organists to play brilliantly, for that is already done in 'II Transilvano' "del sufficientissimo Diruta".<sup>6</sup> Diruta's system of ornamentation is carefully analysed in Dannreuther's and Dolmetsch's treatises on ornamentation; a *ricercare* and two toccatas for the organ are in Vol. III of Torchi's 'Arte musicale in Italia'. **DIS.** The German term for D#, D $\flat$  being Des. According to a curious former Viennese custom, Dis could also stand for E $\flat$ . Beethoven's "Eroica" Symphony was announced at Clement's concert in Vienna on 7 Apr. 1805 (its first performance), and at Meier's concert, in 1808, as "in Dis". G.

**DISCANT.** See DESCANT.

**DISCANT BASSOON.** See FAGOTTINO.

**DISCANTUS SUPRA LIBRUM** (Lat., descant on the book). The substantive for "descanting from the book", *i.e.* extemporizing polyphonic vocal music, a 14th-century practice. One part alone, the tenor, was written down and therefore "sung from the book", the book being a collection of plain-song tunes. The process of descanting on this plainsong amounted to little, if anything, more than singing in intervals parallel to the tune, usually at distance of fourths or fifths, after the manner of the organum. **DISTIN & SONS.** English 19th-century firm of music and musical-instrument sellers, and publishers. They were established at 31 Cranbourn Street, Leicester Square, London, about 1845. In 1849 they were succeeded by Henry Distin, presumably one of the sons in the original firm, who turned his attention largely to the manufacture of brass instruments. About 1857 he opened additional premises at 9 Great Newport Street, Long Acre, which became the principal place of business after 1859, when 31 Cranbourn Street was given up. Adjacent premises at No. 10 Great Newport Street were acquired in 1861, and at No. 11 in 1866. The firm became Henry Distin & Co. in 1862, and in 1868 Boosey & Co. purchased the business, which they continued as Distin & Co. at Nos. 9-11 Great Newport Street until 1874.

W. C. S.

**DISTIN, John Henry.** See BALLAD HORN. KEY BUGLE.

**DISTLER, Hugo** (b. Nuremberg, 24 June 1908; d. Berlin, 1 Nov. 1942).

German organist and composer. He studied under Ramin and Grabner at the Leipzig Conservatory and at the age of twenty-three was appointed organist and cantor at the church of St. Jakobi at Lübeck. In 1933 he

became a professor at the School for Church Music in Berlin-Spandau, and in 1937 he joined the staff of the Musikhochschule at Stuttgart as a professor of church music. In 1940 he was appointed to the same post at the Musikhochschule in Berlin and in 1942 he took over the directorship of the Berlin Cathedral choir. In the same year he committed suicide, being unable to endure the terror and conflicts imposed by the Nazi régime.

The services of the church form the basis of many of Distler's work. His 'Jahrkreis', 52 two- and three-part motets for church, school or amateur choirs, shows the new music adapted to church usage. But he also wrote works of a purely artistic nature; such are his choral Passion and his 'Nativity', both for unaccompanied chorus with solo leaders, and some of his motets. Distler's affinities are with the Reformation period. In his work archaistic leanings are united with a predilection for the pentatonic scale and for free melismatic writing. His choral music has at times an impressionistic sensibility and beauty of harmony that recalls the modern French school. His choral writing, which frequently makes play with the contrast between the chanting of the soloists and the skilful polyphonic imitation of the chorus, is at once subtle and austere. Distler stands out by his complete freedom from academic tendencies as the most strongly individual personality among the younger German church composers.

He also wrote some organ works in a virtuosic style. His Concerto for harpsichord is startling in its wild, bounding vitality.

The following are Distler's chief published works:

#### SACRED CHORAL WORKS

- 'Choralmotette', Op. 2 (1930).
- 'Eine deutsche Choralmesse', Op. 3 (1931).
- 'Der Jahrkreis', 52 motets, Op. 5 (1933).
- 'Choralpassion', Op. 7 (1933).
- Christmas Legend, Op. 10 (1933).
- 'Wo Gott zu Haus', cantata for solo voices, chorus & insts., Op. 11 (1935).
- 'Geistliche Chormusik', 10 motets, Op. 12 (1934).
- 'Nun danket all', cantata for 2 solo voices, chorus, stgs. & organ.
- Sacred Concertos for high voice & organ.

#### SECULAR CHORAL WORKS

- 'An die Natur', cantata for soprano, chorus & insts., Op. 9 (1933).
- 'Das Lied von der Glocke' (Schiller), oratorio for baritone, 2 choirs, 2 ps & orch., Op. 13 (1935).
- 'Morike Chordiederbuch', 48 settings for mixed, men's & women's choirs, Op. 17 (1939).
- 'Die Weltalter', fragments of an oratorio (1942).

#### SOLO AND ORCHESTRA

- Concerto for harpsichord & stgs., Op. 14 (1935).

#### CHAMBER MUSIC

- Music for String Quartet (1942).

#### TWO PIANOFORTES

- 'Sonata concertante', Op. 1 (1930).

#### ORGAN MUSIC

- 2 Partitas, Op. 8 (1933-35).
- 30 'Spielstücke', Op. 18 No. 1.
- Sonata, Op. 18 No. 2.

#### BOOKS

- 'Funktionelle Harmonielehre' (1942)
- 'Vom Geiste der neuen evangelischen Kirchenmusik' (1935).

**DISTLER, Johann Georg** (b. Vienna, 1760; d. Vienna, 1798).

Austrian violinist and composer. With Pleyel and Neukomm he was one of Haydn's pupils and, according to Wasielewski ('Die Violine'), his favourite. In 1781 he entered, as violinist, the court chapel at Stuttgart, of which he became the leader in 1790. Soon afterwards he developed melancholia, which caused him to return, in 1796, to his parental home, where he died. His compositions consisted of 18 string quartets, 6 string quintets, a violin Concerto, a flute Concerto and several other works which have disappeared.

**DITSON, OLIVER, & CO.** The oldest music-publishing firm in the U.S.A. Its headquarters are at Boston, Mass., where its founder, Oliver Ditson, was born on 20 Oct. 1811. He died on 21 Dec. 1888.

The firm of Parker & Ditson was formed in 1832. In 1857, when John C. Haynes joined it, its style was changed to Oliver Ditson & Co. In 1867 a New York branch was established and put in charge of Ditson's eldest son, Charles. In 1875 another son, James Edward, was made the head of a Philadelphia branch, then established. Another branch has existed at Chicago since 1864, under the name of Lyon & Healy.

R. A.

Charles Ditson left by his will the sum of \$800,000 to form endowments of equal value in four leading American universities and four conservatories of music: Harvard, Yale, Columbia and Princeton Universities; the New England Conservatory (Boston), the Chicago Musical College, the College of Music (Cincinnati) and the School of Music (Ann Arbor, Michigan). These endowments, he directed, should be associated with the names of his father, Oliver Ditson, his brother, James Edward, and himself. He declared that the Ditson endowments were to be used

in establishing and maintaining a chair or chairs of music or musical history or musical aesthetics, or in establishing or maintaining scholarships or fellowships in music, or in giving public performances of the musical compositions of talented students of the said college, and if preferred of other musical composers.

**DITTERSDORF, Karl Ditters von** (orig **Karl Ditters**) (b. Vienna, 2 Nov. 1739; d. Neuhof, Pilgram, Bohemia, 24 Oct. 1799)

Austrian violinist and composer. He studied in Vienna and soon outstripped his early teachers on the violin, König and Ziegler (not Zugler, as he calls him in his autobiography). Ziegler worked his pupil in the orchestra at St. Stephen's Cathedral and also in that of the Schottenkirche. There Ditters was noticed by his chiefs, and on their recommendation he was received into the private band of the Prince von Hildburghausen, who, being a man of high cultivation, looked after the general education of his young page (a lad of eleven) and had him instructed in composition by Bonno, the court composer, in the violin by Trani, and in foreign languages, fencing, dancing and riding. When the prince dismissed his band in 1759 he procured a place for Ditters in the empress's Opera, but wishing to see the world the young musician started in 1761 with Gluck on a professional tour in Italy, where his playing was much admired. Meantime the famous Lohr had been performing in Vienna with great success, but Ditters on his return vanquished him; the general verdict was: "Each has marvellous execution, but Ditters also speaks to the heart". His intimacy with Haydn was of service to them both. "Whenever we heard", says he, "a new piece, we went through it carefully together, doing justice to all that was good, and criticizing what was bad in it."

In the early part of 1764 Ditters went with Gluck and Guadagni to Frankfurt o/M. for the election and coronation (3 Apr.) of the Archduke Joseph as King of the Romans. He played twice at court with brilliant success. On his return to Vienna the rudeness of Count Wenzel Spork, then manager of the theatre, made him gladly accept the post of *Kapellmeister* to the Bishop of Grosswardein at Pressburg, in place of Michael Haydn, who had departed to Salzburg. For his new master he composed symphonies, violin concertos, string quartets and his first oratorio, a Latin adaptation of Metastasio's 'Isacco figura del Redentore' by the bishop himself. He also started a small theatre in the castle, for which he wrote several pieces, including his first comic opera, 'Amore in musica'. But in 1769 the bishop received a rebuke from the empress on the laxity of his life and dismissed his whole band.

At Troppau Dittersdorf made the acquaintance of Count Schafgotsch, Prince Bishop of Breslau, who invited him to his estate at Johannisberg, where he was living in retirement and disgrace. The versatile musician found means to cheer his master's solitude.

He got together an orchestra, engaged singers, set up a theatre, wrote operas and oratorios and went out hunting, all with equal zest. In return for his services he was made, through the bishop's influence (in 1770), Knight of the Golden Spur (a distinction enjoyed by Gluck and Mozart), and *Amtshauptmann* of Freiwaldau (1773), and it was then that he received a title of nobility — "Ditters von Dittersdorf". The oratorio 'Davidde' and the comic opera 'Il viaggiatore americano' belong to this period, and it was while rehearsing them that he fell in love with a singer named Nicolini, whom he had engaged from Vienna, and married her.

During a visit to Vienna Dittersdorf composed 'Ester', words by the Abbé Pintos, for the concerts (19 and 21 Dec. 1773) in aid of the widows' fund of the Tonkünstler Societat. Between the parts he played a concerto of his own and so pleased the emperor that, on Gassmann's death (22 Jan. 1774) he wished to appoint him court *Kapellmeister*; but Dittersdorf was too proud to apply for the post, and the emperor was not inclined to offer it unsolicited. 'Ester' was repeated before the court in 1785, 'Isacco' was performed in Vienna (1776) and 'Giobbe', also written for the Tonkünstler Societat, on 8 and 9 Apr. 1786, one part each night, Dittersdorf himself conducting. In 1789 it was produced in Berlin with marked success. On another visit to Vienna, in 1786, he produced a symphony on Ovid's 'Metamorphoses' at the morning concerts in the Augarten, and it was on this occasion that the often-quoted conversation with the Emperor Joseph II took place.

It was as a composer not of instrumental music and of Italian oratorio so much as of German *Singspiele* that Dittersdorf chiefly made his mark. 'Doktor und Apotheker' (11 July 1786), a lively, sound, though somewhat rough operetta, which has kept the stage to the present day, 'Betrug durch Aberglauben' (3 Oct. 1786), 'Democrito corretto' (24 Jan. 1787), 'Die Liebe im Narrenhause' (12 Apr. 1787) and 'Hieronymus Knicker' (7 July 1789), all in Vienna, were brilliant successes, with the exception of 'Democrito'.

In the meantime things had changed at Johannisberg. The bishop's band, dismissed during the war, had reassembled after the Peace of Teschen in 1779. About 1790 Dittersdorf was obliged to attend to his duties at Freiwaldau, and during his absence his enemies slandered him to the bishop. Dittersdorf nursed him devotedly during his long illness, but on his death (1795) was dismissed with 500 florins, a sum soon exhausted in visiting the baths with a view to restore his health, shattered by his irregularities. His next asylum was at the house of Count von Stillfried at Rothhotta, near Neuhof in

Bohemia, and there, in spite of constant suffering, he composed operas, symphonies and innumerable pianoforte pieces, for which he in vain sought a purchaser. On his death-bed he dictated his autobiography to his son, and he died two days after it was completed.

Dittersdorf was a thoroughly popular composer. He possessed a real vein of comedy, vivacity and quick invention, bright spontaneous melody, original instrumentation and breadth in the concerted numbers and finales, qualities which, exercised on pleasing librettos, made him the darling of his contemporaries. He held the same position in Austria that Grétry did in France, though he is inferior to Grétry in delicacy, spirituality and depth of sentiment. His oratorios, much valued in their time, his symphonies, in the style of Haydn, though inferior to Haydn's, his violin concertos, string quartets, duos, divertimenti, many concertos, one with 11 instruments *obbligato*, masses, motets and songs — all contributed to his fame.

Of his symphonies, 'Six Symphonies à 8 parties', 'Trois Symphonies à 4 parties obl. . .', and 'Symphonie dans le genre de cinq nations . . .', were published in Paris in 1770. On the title-page of the first set he is called "first violin and *maître de musique* to Prince Esterházy". Three symphonies on subjects from Ovid's 'Metamorphoses' were published in 1785 by Artaria of Vienna. Six "Ovid" symphonies and other works (10 vols.) were published to commemorate the centenary of Dittersdorf's death (Leipzig, 1899). C. F. P.

**DIVERTIMENTO** (Fr. *divertissement*). A term employed for pieces of music of various kinds.

(1) In Mozart and his contemporaries — also, by adoption, in modern music — it designates a piece closely akin to a serenade or cassation. With Mozart a divertimento is usually in six or seven movements — though sometimes only four, and once as many as ten; the scoring is indifferently for trio or quartet of strings, wind alone, or wind and strings mixed. Köchel's Mozart Catalogue contains no less than twenty-two of such Divertimenti.

(2) A pot-pourri or arrangement of the airs of an opera or other work for orchestra or pianoforte. G., adds.

**DIVERTISSEMENT** (Fr. = diversion, entertainment). A kind of short ballet, such as Taglioni's 'Divertissement sülésien', sometimes mixed with songs. Also a pot-pourri or piece on given themes, such as Schubert's 'Divertissement à la Hongroise'. Also a French term for an *entr'acte* or act-tune. G.

**DIVIDED STOPS.** Organ stops arranged to draw in two portions, such as Stopped Diapason Treble and Stopped Diapason Bass, the latter having a compass of about an octave from the lowest note, which octave frequently has to do duty as the bass of another stop of short compass, as for a Dulciana down to tenor C only. T. E.

**DIVISI** (Ital., divided). An expression often met with in the string parts of orchestral scores, meaning that the body of players hitherto playing in unison is to be divided into two or more parts, the number of parts being specified if more than two, or else the parts are written on separate staves, it being obvious that the use of the term is a space-saving device. The abbreviation "unis." (for *unisono*) is often used to show where the division ceases. N. C. G.

<sup>1</sup> Composed by Cimarosa in 1781.

**DIVISIONS.** See CORNETT (mus. ex.).  
**ORNAMENTATION. ORNAMENTS, D. VARIATIONS.**

**DIVITIS, Antoine (Antoon):** (b. Louvain, c. 1475; d. ?).

Netherlands composer. He is first heard of as a singer at the cathedral of Bruges on 13 June 1501, when he was already in holy orders as a "clerk of the diocese of Liège". On 12 July 1501 he became choirmaster, but for some unknown reason he left Bruges in 1504 intending to go to Holland and to settle at Middelburg, but by Apr. he was attached as choirmaster to the church of Saint-Rombaut at Mechlin. This post too he soon left, for in Oct. 1505 he is found in the service of Philippe le Bel at Brussels. This took him to Spain in 1506, but when Philippe died on 25 Sept. he joined the court of Louis XII in Paris, where he was a colleague of Mouton and remained until the king's death in 1515. After that he reappears only once — if indeed it is he — at St. Peter's in Rome as Richardus Antonius.

The following is a list of Divitis's works at present known:

1. A 4-part mass, 'Gaude Barbara' (MS), in the library at Cambrai.
2. A 6-part 'Credo' (MS) and a 'Salve Regina' a 5 in the State Library at Munich.
3. A mass, 'Quem dicunt homines' (of which Ambros gives a description in his 'History of Music'), in MS in the Sistine Chapel, and in the 15th book of the collection by Pierre Attaignant of Paris.
4. A motet, 'Gloria laus', in the 10th book of the collection of ancient motets by Pierre Attaignant (Paris, 1530), who also, in his collection of Magnificats (Paris, 1534), included one by Divitis.
5. A motet, 'Desolatorum consolator', in 4 parts, in the 1st book of the 'Motetti della corona' (Petrucchi, Venice, 1514).
6. Many motets for 3 voices in the collection 'Trium vocum cantiones centum D' published by Petreus (Nuremberg, 1540).
7. A setting of the words 'Ista est speciosa', in the collection 'Bicina Gallica, Latina, Germanica, etc.', published by Rhaw (Wittenberg).
8. Two chansons, under the name Le Riche, in the collection 'des plus excellentes chansons' published by Nicolas Duchemin in 1551.
9. A motet and a chanson are at Bologna in a MS dated 1518.
10. A vocal work in the B.M., Add MSS 19,583.

J. R. S. B., rev.

**D'IVRY, Richard.** See IVRY.

**DIXON, (Charles) Dean** (b. New York, 10 Jan. 1915).

American Negro conductor. He entered the Institute of Musical Art of the Juilliard School of Music in 1932 as a violinist, but turned to the study of music-teaching. After his graduation in 1936 he studied conducting for three years at the Juilliard Graduate School with Albert Stoessel. In 1939 he received the M.A. degree from the Teachers' College of Columbia University. Meanwhile he had organized his first orchestra, the Dean

<sup>1</sup> Also known as Davtz (Davitz), Antoine Le Riche and Antoine de Rycke.

Dixon Symphony; one of its concerts led to his engagement to conduct at the National Broadcasting Company's summer symphony series in June 1941 and at its regular symphony series the following Jan. He also conducted the New York Philharmonic-Symphony Orchestra at its summer series in the Lewisohn Stadium in 1941 and 1942, and he is believed to be the first musician of his race to conduct a major American orchestra. His own American Youth Orchestra was active from 1944 to 1949, giving concerts throughout New York with varied and unusual programmes. In May 1948 he received Columbia University's \$1000 Alice M. Ditson annual award for distinguished service to American music and conducted at the University's American Music Festival.

Since 1949 Dixon has been conducting in Europe, with engagements in countries ranging from Finland to Italy; he also directed the Israel Philharmonic in 1950 and 1951. He has introduced many American works to European audiences and, throughout his career, has distinguished himself by his interest in and promotion of modern music as well as by his talent and authority as a conductor and orchestral organizer.

F. D. P.

**DIXON, William** (b. ? London, c. 1760; d. London, 1825).

English composer, writer, teacher and music engraver. He lived partly in London, partly at Liverpool, where he was apparently connected with All Saints' Church. He composed 'Psalmody Christiana', a collection of sacred music (1790); 'Euphonia', 62 psalm and hymn tunes in 4 parts for All Saints' Church, Liverpool; 'Moralities, or verses on music, friendship, avarice, . . .'; services, anthems, glees; also some numbers in Arnold's collection of hymn tunes. He also wrote an 'Introduction to Singing' (1795).

E. v. d. s.

**DIZI, François Joseph** (b. Namur, 14 Jan. 1780; d. Paris, c. 1840).

Belgian harpist and composer. He was the son of a music teacher, from whom he received lessons on the violin. On the harp, however, with which he gained fame, he was entirely self-taught. Desiring further tuition on this instrument he journeyed to England in 1796, but jumping overboard to save a drowning man, missed his ship, which sailed without him. His entire belongings were on board, including his harp, and he never recovered them. Arriving penniless in London, he was befriended by Sébastien Erard, who aided him to procure pupils, and before long he won so firm a reputation that for thirty years he was considered "the most renowned harpist" in London. With Bochsá he contributed to the enormous popularity of the harp in England during the first quarter of the 19th century.

At the Covent Garden oratorios under Bishop in 1821 no less than twelve harps were employed, with Dizi at their head, while at Drury Lane, under Smart, there were thirteen harps led by Bochsa.

Of an inventive turn of mind, Dizi patented some improvements for the instrument in 1813 and 1817, and wrote much music for his "Patent Harp". His most substantial contribution was his perpendicular system which always maintained the strings in a vertical line irrespective of pedalling. In 1830 (Eitner says 1835) he removed to Paris, where, in association with Pleyel, he planned an establishment for the manufacture of harps, but without success. He became teacher of the harp to the daughters of Louis-Philippe. A harp belonging to one of these, the Queen of the Belgians, and made by Dizi (Pleyel et Cie, Paris), is preserved at the Brussels Conservatoire (No. 629). H. G. F.

See also Harp.

**DJAMILEH.** Opera in 1 act by Bizet. Libretto by Louis Gallet, based on Alfred de Musset's 'Namouna'. Produced Paris, Opéra-Comique, 22 May 1872. 1st perf. abroad, Stockholm (trans. by E. G. Lundquist), 25 Feb. 1889 1st in England, Manchester (trans. by Joseph Bennett), 22 Sept. 1892.

**DLABAČ, Bohumil Jan** (b. Cerhenice, 17 July 1758; d. Prague, 4 Jan. 1820).

Bohemian musicographer. He was librarian and choirmaster of the Premonstratensian monastery of Strahov, Prague, and produced an 'Allgemeines historisches Künstlerlexikon für Böhmen . . .', 3 vols. (Prague, 1815-18), and 'Versuch eines Verzeichnisses der vorzüglichen Tonkünstler . . .', two exact and valuable works. G.

**DLUGORAJ, Adalbert (Wojciech)** (b. ?, c. 1550; d. ?).

Polish lutenist and composer. He was quite possibly a pupil of Bakfark. On 15 Sept. 1583 he became attached to the court of King Stefan Batory of Poland and was granted an annual income of 195 zlotys and full board (a very high salary in those days). He escaped from Poland in fear of the retribution of the relatives of a magnate, Samuel Zborowski, Długoraj having delivered to Count Zamoyski, then the highest official of the Polish State, letters addressed to Zborowski's brother Christopher containing plans of high treason.

Thanks to his sojourn abroad Długoraj was able to acquaint himself with the latest achievements in music and published in 1603 a 'Thesaurus Harmonicus Divini Laurencini Romani nec non praestantissimorum Musicorum . . . divisum per Joannem Baptistam Besardum Vesontinum, Coloniae'. His other works, dated 1619 and written in

lute tablature, are to be found at the Municipal Library of Leipzig. They are Italian in form (*villanelle*, *volte*, *fantasie*), although purely national Polish in character. Some of his *villanelle* were published in Tappert's collection 'Sang und Klang aus alter Zeit' (1906), Dieckmann's 'Die in deutscher Lauten-tablatur überlieferten Tänze des 16. Jahrhunderts' (1931) and Schering's 'Geschichte der Musik in Beispielen' (1931).

G. R. H.

**DLUGOSZ, József.** See AEOLIDION.

**DLUSKI, Erazm** (b. Szczuczynice, Podolia, 1857; d. Otwock nr. Warsaw, 26 Feb. 1923).

Polish composer. In 1877, after being taught privately, he entered the Conservatory of St. Petersburg and became a pupil of Soloviev and Rimsky-Korsakov. Five years later (1882) he won the first prize. He remained there till 1920, teaching theory and composition as well as singing. In 1920 he returned to Poland to take up the post of professor of the opera class at the Warsaw Conservatory, where he remained until his death. He wrote 4 operas:

'Romano', 4 acts

'Urwasi', 2 acts

'Naręczona z Koryntu' ('The Bride of Corinth')

'Madame Sans-Gêne' (after Sardou)

'Urwasi' was produced at the Opera of Lwów on 7 Feb. 1902. It was a failure owing to too many orientalisms, due to the influence of Rimsky-Korsakov; but the work was brought out in Russian in St. Petersburg in Mar. 1902 and favourably received. The other three operas were never performed. It would be wrong to assume that his music lacked originality. His two Sonatas for pianoforte were very popular and were often included in the programmes of Anton Rubinstein.

Dłuski also wrote a string Quartet, a Slavonic Rhapsody for orchestra and many songs. G. R. H.

**DO.** The syllable used in Italy (and in England for sol-fa-ing) instead of Ut. It is said by Fétis to have been the invention of G. B. Doni. It is mentioned in the 'Musico pratico' of Bononcini (1673), where it is said to be employed "per essere più resonante". G.

See also Hexachord Solmization Tonic Sol-fa.

**DOBBS, Mattiwilda** (b. Atlanta, Georgia, 11 July 1925).

American soprano singer. At seventeen after ten years of pianoforte training, she began her vocal studies with Naomi Maise and Willis James at Spelman College, Atlanta; Lotte Leonard was her teacher in New York for four years (1946 to 1950). She received the M.A. degree for Spanish studies at the Teachers' College, Columbia University. In 1947, when she was a soloist in the University of Mexico's festival of music and drama, she won a Marian Anderson scholar-

ship; opera scholarships followed in 1948 at the Mannes Music School (now College of Music) in New York and the Berkshire Music Center, Lenox, Mass. In 1950, on a \$3000 John Hay Whitney Opportunity Fellowship, she went to Paris for two years' study with Pierre Bernac. After winning a first prize in the International Music Competition at Geneva in Oct. 1951 she began her professional career with orchestral appearances and recitals during the 1951-52 season in France, Holland, Sweden and Luxemburg. She sang a leading part in Stravinsky's 'Nightingale' at the Holland Festival in 1952 and was the first Negro singer to appear at the Scala, Milan, as Elvira in Rossini's 'L' Italiana in Algeri' (4 Mar. 1953). In June 1953 she sang in England for the first time as Zerbinetta in Strauss's 'Ariadne auf Naxos' at the Glyndebourne Festival, and was engaged for three parts at Covent Garden in London in the season of 1953-54, preceding her first American concert tour. Her performance as the Queen of Shemakhan in Rimsky-Korsakov's 'Golden Weathercock' (Covent Garden, 7 Jan. 1954) was a brilliant feat.

F. D. P.

**Dobell, Sydney.** See Walker (E, 4 songs).

**DOBIÁŠ, Václav** (b. Radčice nr. Semily, 22 Sept. 1909).

Czech composer. He studied under Foerster, quarter-tone music under Alois Hába and at the Master School under Novák from 1937 to 1939. Since 1945 he has been at the head of the Music Department in the Ministry of Information. His work is founded on Czech folksong and artistic tradition; but he also makes use of the results of modern developments, particularly in Russian music. His refinement, sure technique and intelligible but slightly pompous themes are dedicated to the service of social and political reconstruction. His works include:

**Cantatas**

- 'Stalingrad' (1945).
- 'Rozkaz č. 386' ('Order No. 386') (1946).
- 'Československá Polka' (1947).
- 'Já se tam vrátím' ('I shall go back there') (1948)
- 'Symphonia' (1943).
- 'Sinfonietta' (1946).

Chamber works, marches, songs and choruses.

G. Č.

**DOBLHOF-DIER, Karl von** (b. Vienna, 13 July 1762; d. Vienna, 1836).

Austrian amateur composer. He was a pupil of Salieri. Kiesewetter inherited his library, containing his own compositions, a great part of which is now in the library of the Gesellschaft der Musikfreunde, Vienna. His compositions were printed at his own expense and never came into the market. They consisted of masses and other church music, sacred and secular songs in parts and for solo voices, etc.

C. F. P.

**DOBNEK, Johannes.** See COCHLAUS.

**DOBROVEN, Issay Alexandrovich** (b. Nizhny-Novgorod, 27 Feb. 1894; d. Oslo, 9 Dec. 1953).

Russian conductor and composer. He made his début at the age of five as pianoforte virtuoso; at nine he entered the Moscow Conservatory and studied with Taneyev, Igumnov and Yaroslavsky. There he won the gold medal for pianoforte and composition. He completed his musical studies at the Vienna Akademie der Tonkunst, in the master-class of Leopold Godowsky. At the age of twenty-three he started his brilliant career in Moscow as professor at the Music Academy and chief conductor at the Imperial Opera. In 1922 the Dresden State Opera appointed him to direct and stage the first German performance of Mussorgsky's 'Boris Godunov'. He became a pioneer of Russian music both in Europe and America.

In 1924 Dobroven became first conductor at the Grosse Volksoper, Berlin, and director of the Dresden Philharmonic Concerts, and from 1927 to 1928 he was musical director of the Bulgarian State Opera in Sofia. In 1930 he was appointed principal conductor of the Museumskonzerte at Frankfurt o/M., and in the same year he went to the U.S.A., where he was director of the San Francisco Symphony Orchestra and guest conductor of the New York Philharmonic Symphony and the Philadelphia Symphony Orchestra. He later conducted many concerts in Italy and took part in the International Music Festival at Venice. In 1936-39 he appeared regularly at the Budapest Royal Opera and with the Philharmonic Orchestra of Budapest, and as guest conductor he made annual visits to European countries and the U.S.A.

During the second world war Dobroven escaped to Sweden and was engaged by the Royal Opera in Stockholm and the Philharmonic Society of Göteborg. After the war he conducted in all the principal European cities, and in 1948 he was made a conductor of the Milan Teatro alla Scala. In all his opera engagements Dobroven was his own producer and stage director.

Among Dobroven's compositions are a Concerto for pianoforte and orchestra, in which he himself played the solo part in many countries; 3 pianoforte sonatas; 2 violin sonatas; Ballades for violin and pianoforte.

A. H. (ii), adds.

**DOBROSKI, Julian** (b. Nowe, Podlasia, 31 Dec. 1812; d. Warsaw, 2 May 1886).

Polish tenor singer. At the age of thirteen he entered the Warsaw Conservatory, where he studied until 1832. His début as Almaviva in Rossini's 'Barbiere di Siviglia' on 20 Sept. 1832 was acclaimed a great success. He possessed a lyrical voice of great range and softness, full of warmth and penetrating quality.

Being also a good actor, he created characters which afterwards became the standard for a younger generation of singers. Together with the prima donna of the Warsaw Opera, Paulina Rivoli, he sang in the first performance of Moniuszko's 'Halka' in 1858 and thus helped to establish the composer's position.

On 25 Feb. 1858 Dobrski celebrated his twenty-fifth anniversary on the operatic stage, taking part in a performance of Verdi's 'Ernani'. After the second act he received from his admirers and music-lovers of Warsaw a garland of gold, set with jewels; on its leaves were engraved the titles of operas in which he had appeared. C. R. H.

**DOBRZYŃSKI, Ignacy Feliks** (b. Romanow, Wollhynia, 25 Feb. 1807; d. Warsaw, 9 Oct. 1867).

Polish composer. He studied under Józef Elsner at the Warsaw Conservatory. His compositions include one opera, 'Monbar, or The Filibuster' (libretto by Seweryna Pruszek and Ludwik Paprocki); 'Ave Maria' and other incidental music for 'Konrad Wallenrod' (a poem by Adam Mickiewicz) and music for 'Les Burgresses' (after Victor Hugo); a Mass (Op. 5); a religious fantasy, 'The Dream of a Christian' (Op. 57); 2 Funeral Marches in homage to Chopin and Beethoven; a string Sextet, 2 string Quintets and 2 string Quartets, etc. Less than half of his output numbering 71 works was published; the rest remains in manuscript at the Library of the Musical Society in Warsaw.

In 1893 his son Bronisław published a large monograph entitled 'Ignacy Dobrzyński and his Activities for the Development of Contemporary Music'. C. R. H.

**Dobosz, Lajos.** See Erkel ('Istvan Király', opera).  
**Dobson, Austin.** See Halski (song).  
**Howells** (song).  
**Lutyens** ('Dying of Tanneguy du Bois', chamber work).  
**Parry** (H., 5 part-song).

**DOCHE, Joseph Denis** (b. Paris, 22 Aug 1766; d. Soissons, 20 July 1825)

French composer. He received his musical education as a choir-boy at Meaux Cathedral and became in 1785 chapel master at the Cathedral of Coutances, Normandy. Later he went to Paris, in 1794 he entered the orchestra of the Théâtre du Vaudeville, playing viola, cello and double bass, and in 1810 became conductor, a post he held until 1823, when he retired to Soissons.

From 1799 onwards Doche wrote new airs for a great number of vaudevilles produced at his theatre, starting with 'Le Maréchal ferrant de la ville d'Anvers' (12 May 1799), in the libretto of which two airs of his were printed. His collected vaudeville airs appeared in 1822 as 'La Musette du vaudeville' (with a supplement in 1823). Doche also wrote some comic operas ('Point de bruit, ou Le Contrat simulé', Théâtre de la Porte Saint-Martin, 25 Oct. 1802, score preserved in Brussels;

'Les Deux Sentinelles', Théâtre de la Gaîté, 27 Sept. 1803, etc.), masses, pianoforte pieces and romances of which several collections were published.

His son, Alexandre Pierre Joseph (1799–1849), was conductor at the Vaudeville theatre from 1828 to 1848 and wrote two comic operas, 'Le Veuf du Malabar' (Opéra-Comique, 27 May 1846) and 'Alux' (*ibid.*, 13 Mar. 1847). He died in Russia. A. L.

**DOCTEUR MIRACLE, LE** (Opera). See BIZET.

**DOCTOR FAUST** (Busoni). See DOKTOR FAUST.

**DOCTOR OF MUSIC.** See DEGREES IN MUSIC.

**DOCTOR UND APOTHEKER** ('Doctor and Apothecary'). Opera in 2 acts by Dittersdorf. Libretto by Gottlieb Stephanie, jun. Produced Vienna, Kärntner Theater, 11 July 1786. 1st perf. abroad, Cassel, 13 Apr. 1787. 1st in England, London, Drury Lane Theatre (trans by J. Cobb, with additional music by Stephen Storace), 25 Oct. 1788. 1st in U.S.A., Charleston, S.C., 26 Apr. 1796.

**DODD.** English family of bow makers.

(1) **Edward Dodd** (b. Sheffield, c. 1705; d. London, 1810) is said to have lived to the great age of one hundred and five. He was the first bow maker of this name working in London, and did much towards improving its design. He worked in Salisbury Court, Fleet Street, and was buried in St. Bride's Church.

(2) **John Dodd** (b. London, 1752; d. Richmond, Surrey, 1839), son of the preceding. He was the greatest of the English bow makers. He has been known as "The English Tourte". He was slightly younger than François Tourte and must have seen examples of bows made by him and by the elder Tourte, and he was the first of the English makers to adopt the fundamental modifications introduced by them. These modifications include the ferrule and the slide, and the principle upon which the stick of the bow curved inwardly towards the hair; before Tourte's time the stick was straight for a short transitional period, before which it was outcurved: the outcurved form gives, when screwed up, a peculiarly taut stick favourable to the incisive style which is most commonly required in baroque music; the incurred form gives a more elastic response, equally suited to most music of the classical and romantic periods.

Dodd used beautiful wood, and his finest bows are admirably finished. Unfortunately a large number of his violin bows are thought too short for practical use, but some of his cello bows are very highly valued. The legend that he refused £1000 for the revelation of his "secret" in bow making has no foundation

in fact. Dodd died a pauper in Richmond workhouse and was buried at Kew.

(3) **Thomas Dodd** (b. ?; d. ?), brother of the preceding. He made bows, also instruments, some of his cellos being very serviceable. He worked first in Blue Bell Alley, Southwark, then in New Street, Covent Garden, and afterwards in St. Martin's Lane. He was also a dealer in musical instruments. The instruments that bore his label were not made by him, but by some of the best workers of the period; among these were Fendt, John Lott and Tobin. He claimed to be "the only possessor of the recipe for preparing the original Cremona oil varnish". In later life he made harps and introduced some new features in their construction.

(4) **Edward Dodd** (b. ?; d. ?) and

(5) **Thomas Dodd** (b. ?; d. ?), sons of the preceding. They carried on the business in St. Martin's Lane, but Edward devoted his attention to making harps rather than violins and bows.

(6) **James Dodd** (b. ?; d. ?), uncle of the preceding, brother of (2), and

(7) **James Dodd** (b. ?; d. ?), son of the preceding, were bow makers in London.

E. H. F.

**DODECACHORDON** (original Greek title ΔΩΔΕΚΑΧΟΡΔΟΝ, from δώδεκα, twelve, and χορδή, a string). A work, published at Basel in Sept. 1547 by the famous medieval theorist now best known by his assumed name, Glareanus, though his true patronymic was Heinrich Loriz, Latinized Henricus Loritus.<sup>1</sup>

The 'Dodecachordon' owes its existence to a dispute which, at the time of its publication, involved considerations of great importance to composers of the polyphonic school; and the clearness and logical consistency of the line of argument it brings to bear upon the subject render it the most valuable treatise on the later developments of the ecclesiastical modes that has ever been given to the world.

According to the earlier medieval theory four modes only were formally acknowledged; at a later date the custom began of counting the plagal modes as distinct from the authentic, and so reckoning eight modes. At a much later date, in the polyphonic period, and when musicians were accustomed to think more continually in terms of the octave, it was natural to think theoretically of fourteen modes, and even to wish to reckon so. Some, regarding the modes which have B for their final as unsatisfactory, for want of a perfect fifth in their scale, rejected these two and maintained twelve modes; while the most conservative party, pointing out that the higher four of the twelve were, so far as melody is concerned, mere transpositions of the lower ones, still maintained the old numbering of eight modes.<sup>2</sup>

The ardent upholders of the twelve claimed Charlemagne as their authority, while the maintainers of the eight could base their contention on far more solid history. Unfortunately, however, they combated the position of the 9th to 12th modes by untenable arguments. The complete arrangement is shown in the following scheme:

- I. Dorian.
- II. Hypodorian.
- III. Phrygian.
- IV. Hypophrygian.
- V. Lydian (or Hyperphrygian).
- VI. Hypolydian.
- VII. Mixolydian (or Hyperlydian).
- VIII. Hypomixolydian.
- IX. Aolian.
- X. Hypoaolian.
- XI. Locrian (or Hyperaolian).
- XII. Hypolocrian (or Hyperphrygian).
- XIII. Ionian (or Iastian).
- XIV. Hypoionian (or Hypoastian).

Now in all essential points Glareanus follows the system of twelve modes. He describes the Ionian and Hypoionian forms as modes XI and XII, and simply mentions the rejected Locrian and Hypolocrian scales by name, without assigning them any definite numbers; but all editors of polyphonic music have not followed his example.

Proské, in his 'Musica divina', follows the first-mentioned system, describing the Ionian and Hypoionian modes as Nos. XIII and XIV; and the same plan has been uniformly adopted in the present Dictionary in dealing with the later modal systems. The want of an unvarying method of nomenclature is much to be regretted; but it in no way affects the essence of the question, for, since the publication of the 'Dodecachordon' no one has ever seriously attempted to dispute the dictum of Glareanus that for polyphonic music twelve modes are available, and twelve only, for practical purposes. These twelve have found pretty nearly equal favour among the great masters of the polyphonic school.<sup>3</sup>

The 'Dodecachordon' enters minutely into the peculiar characteristics of each of these twelve modes and gives examples of the treatment of each, selected from the works of the best masters of the early polyphonic school. The amount of information it contains is so valuable and exhaustive that it is doubtful whether a student of the present day could ever succeed in thoroughly mastering the subject without its assistance.

The text, comprised in 470 closely printed folio pages, is illustrated by 89 compositions for 2, 3 and 4 voices, with and without words, printed in separate parts and accompanied by directions for deciphering the enigmatical canons, etc., by the following composers: Antonio Brumel (4 compositions); Nicolaus Craen (1); Sixt Dietrich (5); Antoine Fevin

Sylvanus (1); Thomas Tzamen (1); Joannes Vannus (Wannemacher) (1); Vaqueras (1); Antonius à Vinea (1); Paulus Wuest (1); Anonymous (9).

The first edition of the 'ΔΩΔΕΚΑΧΟΡΑΟΝ' was printed at Basel in 1547. A second edition, entitled 'De musices divisione ac definitione', but with the same headings to the chapters, is believed to have been printed at the same place in 1549. A small volume, entitled 'Musicae epitome, sive compendium, ex Glareani Dodecachordo', by J. Wonnegger, was published at Basel in 1557 and reprinted in 1559. The original work is now very scarce and costly, though happily less so than the 'Syntagma' of Praetorius or the 'Musica getutscht und auszgezogen' of Sebastian Virdung. Copies of the edition of 1547 will be found at the B.M. and the R.C.M.; the B.M. also possesses the first edition of Wonnegger's 'Epitome'. W. H. F.

**DODECAPHONY.** Another term, for those who prefer Greek to English, for twelve-note music, artificially made up from δώδεκα (twelve) and φωνή (sound).

**DODECUPLE SCALE.** Another name for the twelve-note (chromatic) scale, introduced into English in the 1920s, but never thoroughly acclimatized.

**DODEMERE.** See WEEERBECKE.

**Dodsley, Robert.** See ARNE (1, 'King and Miller'). Oswald (J., 'Cleone', song for).

**DOEHAERD, Émile.** See DEFAUW.

**DOES, Charles van der** (b. Amsterdam, 6 Mar. 1817; d. The Hague, 30 Jan. 1878).

Dutch pianist and composer. He was a teacher at the Royal Music School at The Hague and a protégé of King William III, who showed a great interest in his operas, 'L'Esclave de Camoens', 'Lambert Simmel', 'La Vendetta' and 'Le Vieux Château'. In the middle of the 19th century these were in the repertory of the French theatre at The Hague. H. E. E.

**DOFLEIN, Elma.** See below.

**DOFLEIN, Erich** (b. Munich, 7 Aug. 1900).

German musical author and educationist. He studied at the Conservatories of Breslau and Munich, Kaminski being one of his masters, and at the Universities of Breslau, Munich and Freiburg i/B., taking his Ph.D. degree at Breslau in 1924. In 1930-37 he was

director of the Musical Seminary at Freiburg, in 1941-44 of the Landesmusikschule at Breslau, and after having been a prisoner of war in Russia in 1945-46 he became professor at the High School for Music at Freiburg. As an educationist he is interested mainly in aural training, musical theory and history, and the training of music teachers; as a musicologist he makes a study of early pedagogic treatises with a view to using them for the teaching of the performance of old music. With his wife, Elma (born Axenfeld), he has edited a 'Geigenschulwerk' in 5 volumes, containing examples of violin music of the 17th-20th centuries suited to the training of pupils in various styles, a work to which Hindemith and other living composers contributed. He has also edited separately much old keyboard, violin and recorder music. As an author he has contributed to various musical journals and as a critic to a number of newspapers during the years 1926-31. In 1933-43 he wrote regularly for the 'Frankfurter Zeitung' and in 1940-41 for the 'Freiburger Zeitung'. E. B.

**Doggett, Thomas.** See ECCLES (2, 'Country Wake', incad. m.).

**DOGNAZZI, Francesco** (b. ?; d. ?).

Italian 16th-17th-century composer. Introducing his publication of 1643, he claims to have spent forty years in the service of the Gonzaga, Dukes of Mantua, seven dukes reigning during this period. In 1614 he was only a serving musician, but in 1643 he is *maestro di cappella*. Bertolotti<sup>1</sup> is probably correct in stating that Dognazzi assumed this office in July 1619 on the death of Orlando Sante. Monteverdi seems to have had a high opinion of Dognazzi, who had worked with him at Mantua (see his letters to the younger Striggio of 8 Mar. and 21 Oct. 1620<sup>2</sup>, which also show that Dognazzi was in the habit of visiting Venice). He is an interesting composer of recitative with continuo, but in songs such as *canzonette* he shows himself to be a poor melodist. Known works by him are:

'Secondo libro di fioretti musicali' for 3 voices (1607).

'Primo libro di varii concerti' for 1 & 2 voices & continuo (1614).

'Musiche varie da camera' for 5 voices (1643).

A little sacred music in various collections.

He also issued on behalf of the young Amante Franzoni the latter's 'Fioretti musicali', bk. II (1607) and 5-part madrigals (1608).

N. F. (ii).

**DOHL.** See TONIC SOL-FA.

**DÖHLER, Theodor** (b. Naples, 20 Apr. 1814; d. Florence, 21 Feb. 1856).

Austro-Jewish pianist and composer. He was an infant phenomenon and as such the pupil of Benedict, then resident at Naples. In

<sup>1</sup> 'Musici alla corte dei Gonzaga in Mantova dal secolo XV al XVIII' (Milan, 1890).

<sup>2</sup> In H. Prunty's, 'The Life and Work of Claudio Monteverdi' (Eng. ed., London, 1926, pp. 253 & 261).

1829 he was sent to Vienna and became Czerny's pupil. From Vienna, where he remained till 1834, he went to Naples, Paris and London; later on he travelled in Holland, Denmark, Poland and Russia as a successful fashionable virtuoso. He was raised to noble rank by the influence of his patron, the Duke of Lucca, and enabled to marry a Russian princess in 1846; he gave up public playing about that time and lived successively in Moscow, Paris and (from 1848) Florence. An opera by him, 'Tancredi', was performed at Florence in 1880. His works, which included numerous drawing-room pianoforte pieces, reach as far as Op. 75.

E. D.

**Dohm, E.** See *Belle Hélène* (Offenbach).

**DOHNÁNYI, Ernő (Ernst von)**<sup>1</sup> (b. Poszony [Pressburg], 27 July 1877).

Hungarian pianist, conductor, teacher and composer. He was first taught music by his father, the professor of mathematics in the "Gymnasium" at Poszony, where he received his general education. In 1885 he began pianoforte lessons with Carl Forstner, organist of the cathedral there, and later on he studied harmony with him, remaining under his musical supervision until 1893, when he entered the Royal Hungarian Academy of Music in Budapest as a pupil of Stephan Thomán for pianoforte and of Hans Koessler for composition.

While he was still at Poszony he made several experiments in the larger forms of composition, writing a string Sextet and three string quartets, besides pianoforte sonatas, songs, etc. In Budapest a Symphony in F major was awarded the king's prize and performed in 1897. In July and Aug. of that year he had some lessons from Eugen d'Albert, being already a pianist of high attainment; on his first appearances, in Berlin on 1 Oct. 1897 and in Vienna a little later, he was recognized as an artist of the highest rank. Not only is his technical accomplishment extraordinarily complete, but the breadth of his phrasing, his command of tone-gradation and the exquisite beauty of his tone are such as to satisfy the most exacting hearer.

Dohnányi played in the principal cities of Germany, Austria and Hungary before his first appearance in England, which took place in London, at a Richter concert in Queen's Hall in Beethoven's G major Concerto, on 24 Oct. 1898. He made a rapid and permanent success within a very short time and first visited the U.S.A. in 1899. His tours there were frequent and successful. He was professor of the pianoforte at the Berlin High School for Music from 1908 until 1915, when he went to live in Budapest. In 1919 he was appointed director of the Conservatory there,

<sup>1</sup> He seems himself to have preferred the German form of his Christian name, at any rate in his earlier years, and it appears so on most of his published works

and he also became conductor of the Budapest Philharmonic Orchestra. In 1925 he visited the U.S.A. and conducted the New York State Symphony Orchestra. In 1931 he became director of the Hungarian Radio and in 1934 of the Budapest High School for Music. In 1948 he left Hungary for political reasons and went to Argentina, where he settled at Tucumán and devoted himself mainly to teaching. The following year, however, he left for the U.S.A., where he was appointed composer-in-residence at Florida State University, Miami.

As a composer Dohnányi first founded his high reputation on works for the pianoforte and concerted chamber music. His Quintet in C minor (Op. 1), given in Budapest in 1895, showed at once his feeling for classical forms, and the influence of Brahms on his manner of dealing with sonata form is evident through his early works, including the Sonata for violin and pianoforte (Op. 21). J. A. F.-M., adds.

The portion of the article substantially reprinted above added the observation that "from the first . . . there was originality, and a vivacious wit was always ready to relieve the severer forms, sonata, variations or passacaglia, in which he worked". But Dohnányi's wit can be very ponderous, as in the 'Variations on a Nursery Song' ("Ah, vous dirai-je, Maman") for pianoforte and orchestra, where the comic effect of the deliberately portentous introduction, followed by the thin, school-girlish delivery of the theme by the soloist, has no more subtlety than the mountain delivering the ridiculous mouse and wears out after one or two hearings. But he does show humour, if not wit, in some of his lighter works, and what may perhaps pass as a good enough substitute for the latter quality is his resourceful and elegant craftsmanship. His craft, however, borders upon slickness and academicism, his music is voluble rather than eloquent and there is little individuality.

Almost all Dohnányi's early works were instrumental and included no programme music or even any work that was descriptive beyond the one picturesque title of 'Winterreigen'. But soon after reaching the age of thirty he began to turn towards stage music, producing first a ballet and then three operas, the first of the latter a one-act work on a small scale. In the second, 'The Tower of the Voivod', he showed a distinct effort to assert his nationality, not by drawing extensively on national folk music, but by giving a romantic subject the kind of local atmosphere that passes easily for national art in an opera-house, where audiences are inexpert in such matters. Dohnányi never studied the genuine Hungarian folk music (as distinct from gypsy music) in the scholarly and at the same time imaginative way of Bartók and Kodály, with

whose work, indeed, he showed no sympathy. Such Hungarian flavour as is found in his work is synthetic. This is not to say that it is disagreeable, and it is in fact present in what is one of his most delightful works, the set of pianoforte pieces entitled 'Ruralia hungarica', some of which were afterwards orchestrated.

CATALOGUE OF WORKS<sup>1</sup>

## OPERAS

- 'Tante Simona' (libretto by Viktor Heindl), 1 act, prod. Dresden, 22 Jan. 1913  
 'A Vajda tornya' ('The Tower of the Voivod'), based on a Szekler folk ballad, (lib. by Viktor Lányi), 3 acts, prod. Budapest, 19 Mar. 1922  
 'A Tenor' (lib. [in German] by Ernő Goth, based on Carl Sternheim's comedy 'Burger Schappel', Hungarian trans. by Zsolt Harsányi), prod. Budapest, 9 Feb. 1929.

## BALLET

- 'Der Schleier der Pierrette', prod. Dresden, 1910.

## CHORAL WORKS

- 'Magyar Híselegy' (Hungarian Anthem) for tenor, chorus & orch (1920)  
 'Missa in Dedicatione Ecclesiae' for solo voices, chorus & orch (1930)  
 'Cantus vitae' (Imre Madách), cantata for solo voices, chorus & orch (1941)

## ORCHESTRAL WORKS

- Op.*  
 — Symphony No. 1, F ma. (1897).  
 9. Symphony No. 2, D mi.  
 19. Suite, F# ma.  
 31. 'Ünnepi Nyitány' (1923)<sup>2</sup>  
 33a. Suite 'Ruralia Hungarica' (see also Pianoforte Music).  
 36. 'Symphonic Minutes' (1933).  
 — Symphony No. 3, E ma

## SOLO INSTRUMENT AND ORCHESTRA

5. Pf. Concerto, E mi.  
 12. 'Concertstück' for cello  
 — Vn. Concerto  
 25. 'Variations on a Nursery Song' for pf

## VOICE AND ORCHESTRA

22. 3 Songs for baritone (1912)

## CHAMBER MUSIC

1. Quintet, C mi, for 2 vns, viola, cello & pf.  
 7. String Quartet No. 1, A mi.  
 10. Serenade, G ma, for vn, viola & cello.  
 15. String Quartet No. 2, D# ma.  
 26. Quintet, E# mi, for 2 vns, viola, cello & pf (1914).  
 33. String Quartet No. 3, A mi.  
 37. Sextet, G ma, for clar, horn, vn, viola, cello & pf. (1933)

## VIOLIN AND PIANOFORTE

21. Sonata, C# mi.  
 33c. 'Ruralia Hungarica', 3 pieces (1926).

## VIOLONCELLO AND PIANOFORTE

8. Sonata, B# mi

## PIANOFORTE MUSIC

2. 'Clavierstücke', 4 pieces.  
 3. Waltzes for 4 hands.  
 4. Variations, G ma.  
 6. Passacaglia.  
 11. 4 Rhapsodies.  
 13. 'Winterreigen', 10 Bagatelles.

<sup>1</sup> This list is complete only for the earlier works — no information was to be obtained concerning later ones.

<sup>2</sup> Written for the national occasion on which Bartók's 'Dance Suite' and Kodály's 'Psalmus Hungaricus' were also performed.

- Op.*  
 17. 'Humoresken' in form of a suite.  
 23. 'Clavierstücke', 3 pieces  
 24. 'Suite im alten Stil' (1913)  
 28. '6 Études de concert' (1916)  
 29. Variations on a Hungarian Theme (1916).  
 — 'Pastorale' (1921)  
 — Gavotte and Musette  
 33a. Suite 'Ruralia Hungarica' (see also Orchestral Works)

## SONGS

14. 6 Poems (Viktor Heindl).  
 16. Cycle 'Im Lebenslenz' (Wilhelm Conrad Gomoll) (1906-7)  
 — Hungarian Folksongs (1922).

## E B

PAPP, VIKTOR, 'Dohnányi Ernő' (Budapest, 1927).  
 STEINHART, ERICH, "'Der Tenor"', Oper von Ernst v. Dohnányi ('Aufakt', Vol. VII, Nos. 7-8, Prague, 1930)  
 'Zenei Szemle', Dohnányi number (Budapest, Oct.—Nov. 1927)

**DOINA** (Rum, a lament). See **FOLK MUSIC: RUMANIAN**.

**DOISI DE VELASCO, Nicolas** (b. ?, c. 1600; d. ?).

Portuguese guitar player. He was brought up in Spain and attached for a time to the suite of Philip IV. In 1640 he published at Naples a book of tablature, entitled 'Nuevo modo de cifra para tañer guitarra con variedad y perfección' (Bibl. Nac., Madrid). His real name is said to have been Diaz de Velasco.

J. B. T.

**DOKTOR FAUST**. Opera in 2 prologues, an interlude and 3 scenes by Busoni (unfinished, completed by Philipp Jarnach). Libretto by the composer, based on the Faust legend and in part on Marlowe's 'Doctor Faustus' and Goethe's 'Faust'. Produced (posthumously), Dresden, State Opera, 21 May 1925.

**DOLBY, Charlotte**. See **SANTON-DOLBY**.

**DOLCAN**. See **ORGAN STOPS**.

**DOLCE** (1) (Ital = sweet). A direction usually accompanied by *piano* = softly (abbr. *p dolce*) and implying that a sweet melodious feeling is to be put into a phrase. Exceptions are occasionally found to the connection with *piano*: Beethoven (string Quartet Op. 59 No. 1) has *mf e dolce*; Schumann begins the finale of his third Symphony, in E# major, with *f dolce*. G.

**DOLCE** (2). See **ORGAN STOPS**.

**DOLCIAN** (Ger. *Dulzian*; Ital. *dolcino*; [the Fr. *doucaine* denotes an entirely different instrument of oboe type]). The primitive bassoon as depicted and described by Praetorius (1620).

The dolcian consisted of a single piece of wood, bored with twin parallel channels connected at the foot to form a continuous conical bore. It had ten holes, of which two were covered by open-standing keys (D and F), and a small brass crook to which the double-reed was fixed.

In 18th-century Germany the bell was sometimes covered by a perforated cap or mute, when the dolcian, normally *offen*, was termed *gedackt*. A *gedackt* specimen by J. C. Denner of Nuremberg, c. 1690, is among half a dozen dolcians of various sizes preserved in the Heyer Collection, Leipzig, and Denner's instrument (No. 1360) is depicted in *PLATE 15*, Vol. II, p. 447. The dolcian had no connection with the "Alto Fagotto"<sup>1</sup> and was not necessarily an octave above the bassoon, as stated in the 4th edition of this Dictionary. On the Continent the dolcian is frequently mentioned in the late 16th and early 17th centuries, despite the indication in this quaint verse engraved around the bell of a dolcian (No. 117) in the Museum of the Gesellschaft der Musikfreunde in Vienna:

Der Dulcin bin ich genant  
Ni(ch)t einem jedem wo(h)l peka(n)t  
Der mich wil recht pfeifen  
Der mus mich wo(h)l lerne(n) greifen.

Unfortunately this dolcian bears neither maker's name nor place nor date.

L. G. L.

See also Bassoon.

**DOLCISSIMO** (Ital.). The superlative of *dolce*.

**DOLES, Johann Friedrich** (b. Steinbach, Saxe-Meiningen, 23 Apr 1715; d. Leipzig, 8 Feb. 1797).

German organist, conductor and composer. He was educated at the Schleusingen "Gymnasium", where he availed himself of instruction in singing and playing on the violin, clavier and organ. In 1739 he went to Leipzig for a course of theology at the University, and while there pursued his musical studies under J. S. Bach. His compositions, however, bear little trace of Bach's influence. Döles would seem to have been more affected by the Italian opera, with which he became familiar by constant attendance at performances given for the Saxon court at Hubertsburg. His light, pleasing and melodious compositions, together with the charm of his manners, rapidly brought him popularity at Leipzig. In 1743 the Gewandhaus Concerts were founded<sup>2</sup>; and on 9 Mar. 1744 he conducted the first performance of his festival cantata in celebration of the anniversary of their foundation. In that same year he was appointed cantor at Freiberg, where he wrote, in 1748, on the occasion of the hundredth anniversary of the Peace of Westphalia, the *Singspiel* out of which arose the famous dispute between Biedermann, Mattheson and Bach.<sup>3</sup>

In Jan. 1756 Döles succeeded Gottlob Harrer as cantor of St. Thomas's School and also as

director of the two principal churches, which posts he held until 1789, when old age and failing health compelled him to resign them. In the spring of 1789 Mozart visited Leipzig, and on 22 Apr. he played on the organ at St. Thomas's Church and made his well-known remark to Döles about Bach's music. It was probably on the same occasion that J. C. Barthel played before Mozart at Döles's house. And in the following year Döles published his cantata to Gellert's words (performed in 1789), 'Ich komme vor dein Angesicht' (Leipzig, 1790), dedicated to his friends Mozart and Naumann. Special interest attaches to this work because its preface records Döles's opinions as to the way in which sacred music should be treated, and those opinions have little in common with the traditions of J. S. Bach. It is plain, indeed, that although Döles was proud of having been Bach's pupil, he took no pains whatever, during his directorship at Leipzig, to encourage and extend the taste for his great master's works. Bach's church music was almost entirely neglected both by him and his successor, J. A. Hiller.

Döles's compositions consist principally of cantatas, motets, psalms, sacred odes and songs, and chorales, many of which have been printed, including some harpsichord sonatas. His 'Elementary Instruction in Singing' had, in its day, considerable reputation as a useful practical method. Among his many works may be mentioned three settings of the Passion, according to St. Matthew, St. Mark and St. John, two Te Deums, two Masses, a Kyrie, a Gloria, a 'Salve Regina' and a German Magnificat.

**DOLEŽÁLEK, Jan Emanuel** (b. Chotěboř, 22 May 1780; d. Vienna, 6 July 1858).

Czech musician. He began to read law in Vienna, but later changed over to music and studied under Albrechtsberger. From 1808 he was in close contact with Beethoven, and his memoirs (publ. in 1852) served as a fruitful source for A. W. Thayer's work on that master. The most important of his compositions is 'České písně v hudbu uvedené' ('Czech Poems Introduced with Music'), dating from 1812, which is one of the first examples of the new Czech art-song at the time of the Czech national awakening.

G. Č.

**DOLEŽIL, Hubert** (b. Kunčice pod Ondřejníkem, Moravia, 25 Oct. 1876; d. Prague, 10 June 1945).

Czech critic and writer. He was professor at the secondary schools of Hradec Králové, Olomouc, Brno, Plzeň, and in Prague from 1919. He had always eagerly contributed to

<sup>1</sup> For which see TENORON.

<sup>2</sup> They were then called "das grosse Concert" and were held in a private house; they were interrupted by the outbreak of the Seven Years' War.

<sup>3</sup> See Bitter's 'J. S. Bach', III, 229, and Spitta's 'J. S. Bach', III, 255 f. (Eng. trans.).

the raising of musical standards by his critical articles in the local and daily papers, particularly in Prague (from 1920) as the critic of the daily 'České slovo'. He also wrote a number of extensive studies for musical periodicals, particularly for the 'Hudební revue' and for 'Smetana' (the periodical of the group of Nejedlý), whose editor he was from 1921 to 1927. G. Č.

**DOLEŽIL, Method** (b. Kunčice pod Ondřejníkem, Moravia, 15 Oct. 1885).

Czech choir conductor and musical educationist, brother of the preceding. He studied at the Teachers' Training-College at Kroměříž, where Ferdinand Vach was one of his teachers (1900-4), and after his military service and a short public musical career he was educated professionally at the Prague Conservatory in 1909-11. In the years 1912-1922 he conducted the Pěvecké sdružení pražských učitelek (Prague Women Teachers' Choir) and in 1922 he succeeded František Špilka as conductor of the famous Pěvecké sdružení pražských učitelů (Prague Teachers' Choir), which position he still holds. From 1919 he was also professor of the Prague Conservatory and in 1946 he was appointed professor at the Akademie musicckých umění (Academy of Musical Arts). He compiled an excellent Czech manual of intonation and elementary rhythm and also did well as a composer. In 1945, on the occasion of his sixtieth birthday, the Prague Teachers' Choir published an extensive commemorative album G. Č.

(1) **Arnold Dolmetsch** (b. Le Mans, 24 Feb. 1858; d. Haslemere, 28 Feb. 1940), pioneer in the recovery of early music, especially instrumental music performed on its contemporary instruments and in its contemporary style. The product of a long line of professional musicians, he learnt pianoforte making from his father and organ building from his maternal grandfather; studied music in Brussels (including the violin under Vieuxtemps) and the R.C.M. in London (where Sir George Grove encouraged his growing devotion to the cause of early music). Being appointed violin master at Dulwich College in 1885, he evolved a system of teaching characteristic of his later methods, abandoning scales and exercises in favour of simple tunes

in parts, learnt by ear. Later he used to fret the violins to help the intonation of his young beginners (as Playford recommended in the 17th century), and taught the violin in the downwards position and with the bowing of viols, until the rudiments were learnt, when the frets were cut off one by one and the normal position acquired. From the Dulwich period date a number of compositions and editions of violin music by Corelli, Handel and Purcell, the realization of whose figured basses and the phrasing of whose string parts Dolmetsch afterwards himself called in question, as still in some degree anachronistic in the light of his subsequent discoveries.

In 1889 Dolmetsch lighted on the English chamber music for viols in the manuscripts of the B.M. This so excited him that he attacked the problems of recovering and restoring the necessary instruments, gradually solving them by the combined resources of his musicianship, his craftsmanship and his scholarship. He first played early instruments publicly in 1890. He made his first clavichord in 1894 and his first harpsichord in 1895. From 1905 to 1909 Dolmetsch worked for the firm of Chickering at Boston, U.S.A., whence many of his best harpsichords and other keyboard instruments issued, as well as lutes and viols; from 1911 to 1914, for the firm of Gaveau in Paris, where he began his most important publication: 'The Interpretation of the Music of the XVII and XVIII Centuries' (London, 1915; new ed. 1944), a work indispensable to students of early music. He resettled in England early in 1914, making his permanent home at Haslemere two years later. In teaching the children of Dunhurst school he further developed his methods of direct training, with marked success.<sup>1</sup> With his own children maturing rapidly, and pupils and apprentices gathering, when peace returned he built up a centre for the study of early music where traditions of living and authentic performance could be absorbed in a degree and purity to which there has been no parallel in modern times.

The post-war period saw the solution of an old problem, the making of completely successful modern recorders. Not for the first time Dolmetsch's work was supported by the generosity of his friends, particularly in the provision and equipment of a new workshop. In 1925 the annual Haslemere Festival was begun, a fortnight of early music from many schools, during which the signs of inevitable under-rehearsal were sometimes apparent, but the standard of interest and performance remained high in general. In 1928 the support and goodwill of Dolmetsch's many well-wishers was organized in the incorporation of the Dolmetsch Foundation, a body devoted to

<sup>1</sup> See 'Old Ways for New in Violin Training' by Gerald Hayes, Mus.T., Mar. 1926.

the spread of his influence and that of his ruling principles. It financed scholars and apprentices, and backed heavily a costly series of experiments as the result of which Dolmetsch evolved a new harpsichord action, free from the slight extraneous noise of the returning jack, but seen in retrospect to have lost a little of the traditional ringing tone of the normal instrument, besides being too delicate to keep easily in fine adjustment (a problem also attacked by a late workman of his <sup>1</sup>).

Pressing chronologically backwards, Dolmetsch scored, more convincingly than other scholars, Pérotin's four-part organa from the 13th-century school of Notre-Dame in Paris, which he performed on rebecs of his own manufacture, in the erroneous opinion that they are purely instrumental, and the Bardic harp music preserved in B.M. Add. MS 14905, a fascinating glimpse of very early harmony.<sup>2</sup> Towards the end of his life Dolmetsch, having been met so long by prejudice, increasingly lost touch with the work of other scholars and musicians who were by then becoming willing to accept his unique contribution more nearly at its true value, if he could only have learnt to lower his guard. His own scholarship fell behind the times in consequence. In his prime his critical faculty fully matched his uncanny intuition; in his last years his intuition remained more fruitful than untutored learning can ever be, but grew less sure from lack of scholarly contact. Towards the end he became a very sick man indeed, and those who heard only his last concerts can form little conception of his genius. His work was recognized in 1937 by the British Government in granting him a Civil List Pension and by the French Government in making him a Chevalier of the Legion of Honour; Durham University made him an honorary Doctor of Music in 1939. His significance lay in founding a modern tradition for the interpretation of early music from which, when every imperfection has been allowed for, there is more to be learnt than from any other comparable source. It is, in fact, the nearest equivalent to an authentic source now available and enshrines elementary principles which are not only indispensable, but have not hitherto been rediscovered elsewhere. His flair for early style and for inspired tone-production on early instruments (treble viol, violin in its early aspect, lute, harpsichord and clavichord) amounted to a unique phenomenon. His genius died with him, but his principles remain in memory; and as he once characteristically remarked: "Students should learn principles rather than pieces: then they can do their own thinking".

<sup>1</sup> See GOBLE.

<sup>2</sup> Its authenticity is disputed, but unconvincingly. See 'The Consort', 1930.

BIBL.—BUCHANAN, JEAN S., 'Arnold Dolmetsch: a Biography', in preparation  
DONNINGTON, ROBERT, 'The Work and Ideas of Arnold Dolmetsch' (Haslemere, 1932)

(2) **Mabel Dolmetsch** (b. London, 6 Aug. 1874), musician and dancer, third wife of the preceding. She is noted for her beauty of tone and expression on the viola da gamba, which she studied under Hélène Dolmetsch (3). Her important researches into the practice and theory of the court dances of the Renaissance and Baroque periods are published. The first volume, 'Dances of England and France', appeared in 1950.

(3) **Hélène Dolmetsch** (b. Nancy, 14 Apr. 1880, d. 1924), viola da gamba player and cellist, eldest daughter of (1). Her career began in her father's concerts, but continued independently. Her talent was of a brilliant order.

(4) **Rudolph Dolmetsch** (b. Cambridge, Mass., 8 Nov. 1906; d. ?, 6-7 Dec. 1942), harpsichordist, viola da gamba-player and conductor, eldest son of (1). He was endowed with great natural virtuosity and talent, and made his reputation mainly by his brilliant harpsichord playing, but he was, in addition, one of the finest modern gamba performers. For some years before his tragic death (he was presumed lost in a convoy during the second world war) his interests were, however, turning towards modern music, in which field he had made some progress both as a composer and as a conductor.

(5) **Carl Dolmetsch** (b. Fontenay-sous-Bois, 23 Aug. 1911), recorder virtuoso and maker, brother of the preceding. He is now the musical director of the Haslemere Festival and other activities of the surviving members of the family. He plays several instruments including the viol and the violin, but his reputation is particularly associated with the recorder, of which he is the most brilliant modern virtuoso, as well as an expert maker, supervising and finishing the instruments hand-made in the Dolmetsch workshops. He was created C.B.E. in 1954. R. D.

**DOLORES, Antonia.** See TREBELL, ZELIA.

**DOLOROSO** (Ital. = dolorous, painful). A direction demanding that kind of expression in a phrase or passage.

**DOLZAINA.** See SHAWM (3).

**DOLZIAN.** See BASSOON. DOLCIAN.

**DOLŻYCKI, Adam** (b. Lwów, 1886).

Polish conductor and composer. He studied at the Lwów Conservatory and continued his studies in Berlin. In 1912 he returned to Poland and became one of the conductors of the Warsaw Opera. During the first world war he lived in Russia, but when the Russian Revolution broke out in

1917 he returned to his native country. From 1919 till 1922 he acted as conductor of the Opera at Poznań. He then moved to Warsaw. He wrote an opera, 'Krzyzacy' ('The Knights of the Teutonic Order').

G. R. H.

**DOMANIEWSKI, Bolesław** (b. Gronów, 16 July 1857, d. Warsaw, 11 Sept. 1925).

Polish pianist and teacher. He studied at the Warsaw Conservatory under Lórer and Józef Wieniawski, later at the Conservatory of St. Petersburg under Soloviev, Liadov and Sacchetti. After his return to Poland he taught the pianoforte at Cracow. Later he moved to Warsaw where he became director of the Conservatory.

Domaniowski wrote many pieces for pianoforte. A book of his exercises for pianists, entitled 'Vade mecum', is still generally used in the Polish music schools.

G. R. H.

**DOMINANT.** The note in a mode or scale which, in traditional harmonic procedures, most urgently demands resolution upon the tonic. In the modal system it is not always on the same degree of the scale.<sup>1</sup> In the major and minor scales it is invariably the fifth of the scale, and thus the fifth note above the tonic or the fourth below it, the latter being the more important position, since cadences usually proceed upwards from the dominant to the tonic in the bass. In the harmonic system of tonality the dominant and the chords built on it play the principal part in defining the key: hence the name.

Tovey makes an important distinction: a passage may modulate to the key of the dominant, in which case it is *in* the dominant; but another may proceed on the dominant bass or in dominant harmony without leaving the tonic key, and should thus be described as being *on* the dominant.

E. B.

See also Cadence

**DOMINICETTI, Cesare** (b. Desenzano, Lake Garda, 12 July 1821; d. Sesto, Monza, 20 June 1888).

Italian composer. He studied music at Milan, where he first challenged the verdict of the public as composer with the opera 'I belli usi di città' (1841). This first experiment was followed by 'Due mogli in una' (1853) and 'La maschera', given the following year. He then left Italy for Bolivia, where he amassed considerable wealth. On his return to his native country he produced other operas, the most notable of which are 'Morovico' (1873), 'Il lago delle fate' (1878) and 'L' ereditiera' (1881). Appointed professor of composition at the Milan Conservatoire in 1881, he retained this place until his death.

F. B.

**Dominique, Jean.** See Poldowski (song).

**DOMINO NOIR, LE.** Opera in 3 acts by Auber. Libretto by Eugène Scribe. Pro-

duced Paris, Opéra-Comique, 2 Dec. 1837. 1st perf. abroad, London, Covent Garden Theatre (trans. by J. Kenney and J. M. Morton), 16 Feb. 1838. 1st in U.S.A., New Orleans (in French), Nov. 1839.

**Dommange, René.** See Roussel (song).

**DOMMER, Arrey von** (b. Danzig, 9 Feb. 1828; d. Treysa nr. Cassel, 18 Feb. 1905).

German writer on music. He went to live at Leipzig in 1851 and at Hamburg in 1863. In 1873 was made secretary to the Hamburg city library, a post which he held until 1889, when he retired and went to live at Marburg. In 1862 his 'Elemente der Musik' appeared; in 1865 he published an enlarged edition of H. C. Koch's 'Musikalisches Lexicon' of 1802, a sterling work. His 'Handbuch der Musikgeschichte' (1868, 2nd ed. 1878) was re-edited (3rd ed. by Arnold Schering) in 1914.

J. A. F.-M.

**DOMNICH, Heinrich** (b. Würzburg, 13 Mar. 1767, d. ?).

German horn player. The son of a horn player in the service of the Elector of Bavaria, he went to Paris in the 1780s and studied the horn under Punto. In 1785, when he was eighteen, he appeared at a Concert Spirituel, playing second to Lebrun in a *symphonie concertante* for two horns and orchestra, composed by the latter, and earned the praise of the music critic of the 'Mercure de France' for his rapid execution. He subsequently made sundry other appearances as a soloist at these concerts.

Domnich was second horn at the Paris Opéra from 1787 to 1791, a member of the band of the Garde Nationale in 1793 and second horn at the Théâtre-Lyrique de Feydeau in 1799. He was also a member of Napoléon's chapel, continuing with this band after the restoration of the monarchy until 1816.

One of the four original horn professors appointed at the Conservatoire in 1795 — the other three being Duvernoy, Buch and Kenn — he and Duvernoy remained on when the classes of Buch and Kenn were suppressed in 1802. Domnich retired in 1817, when his class was absorbed into that of Dauprat, who had succeeded Duvernoy the previous year. Two distinguished pupils of Domnich were E. C. Lewy — a private pupil — and J. P. Mengal.

Domnich's outstanding achievement was his very remarkable 'Méthode de premier et de second cor', published about 1808 and adopted as the official Conservatoire horn tutor. This showed a really amazing advance on all the horn tutors already in existence, such as the anonymous 'Compleat Tutor for the French Horn' and 'New Instructions for the French Horn', both completely valueless,

<sup>1</sup> For its history and position see *MODES*.

or those of Hampel (revised by Punto), Othon Vandenbroeck and Frédéric Duvernoy, which were mere skeletons to be filled out by professorial example and explanation. Domnich, on the contrary, explains in great detail every aspect of horn technique, and even to-day, a century and a half after its publication, only one tutor, that of Dauprat (1822), has surpassed it, no other has even equalled it. Domnich's other published works included a 'Symphonie concertante' for two horns, three horn concertos with orchestral accompaniment and two sets of songs with pianoforte.

What became of Domnich after he retired from the Conservatoire is uncertain. Mendel ('Musikalisches Conversations-Lexikon') says he retired after the 1830 Revolution and died in Paris on 19 July 1844. Official records show, however, that he was succeeded by Dauprat in the Chapelle-Musique in 1816 and at the Conservatoire in 1817, and French sources provide no record of his death. It is not improbable that, after giving up his various Paris appointments, he returned to his native land and passed the remainder of his days in retirement.

**DOMPE.** See DUMP.

**DOMRA** (Rus.). A Russian lute with a long neck, used in the 16th and 17th centuries.

**DOMVILL, Silas.** See TAYLOR, SILAS.

**DON CARLOS.** Opera in 5 acts by Verdi. Libretto by François Joseph Méry and Camille Du Locle, based on Schiller's drama. Produced Paris, Opéra, 11 Mar. 1867. 1st perf. in England, London, Covent Garden Theatre (in Italian, trans. by A. de Lauzières), 4 June 1867. 1st in Italy, Bologna, Teatro Comunale, 27 Oct. 1867. 1st in U.S.A., New York (in Italian), 12 Apr. 1877. New Italian version, 'Don Carlo', reduced to 4 acts, with the music revised, produced Milan, Teatro alla Scala, 10 Jan. 1884.

**DON CÉSAR DE BAZAN** (Opera). See MASSENET.

**DON CHISCIOTTE IN SIERRA MORENA** (Opera). See CONTI (F. B.).

**DON GIOVANNI** (Operas). See DON JUAN.

**DON GIOVANNI** (originally 'Il dissoluto punito, ossia Il D. Giovanni' = 'The Rake Punished, or Don Juan'). Opera in 2 acts by Mozart. Libretto by Lorenzo da Ponte, based on the Spanish Don Juan legend. Produced Prague, 29 Oct. 1787. 1st perf. in Austria, Vienna, Burg Theatre (in Italian, with 3 additional numbers<sup>1</sup>), 7 May 1788. 1st in England, London, Haymarket Theatre (in Italian), 12 Apr. 1817. 1st in U.S.A., New York, Park Theatre (in Italian), 23 May 1826.

<sup>1</sup> These are Ottavio's "Dalla sua pace", Elvira's "Mi tradi" and the duet "Per queste tue manine" for Zerlina and Leporello.

**DON GIOVANNI TENORIO** (Opera).

See CARNICER.

**DON GIOVANNI TENORIO, OSSIA IL CONVITATO DI PIETRA** ('Don Juan Tenorio, or The Stone Guest'). Opera in 1 act by Gazzaniga. Libretto by Giovanni Bertati, based on the Don Juan legend. Produced Venice, Teatro San Moisè, 5 Feb. 1787. 1st perf. abroad, Paris, Théâtre Feydeau (in Italian), 10 Oct. 1791 (with some music from Mozart's 'Don Giovanni'). 1st in England, London (in Italian), 1 Mar. 1794. The work has a certain historical importance as the immediate forerunner of Mozart's 'Don Giovanni', produced later in the same year.

**DON JUAN.** For works on this subject see Acciaiuoli. Albertini. Arundell (Flecker's play). Calegari (A [for G.]). Carnicer. Casavola ('Alba di Don Giovanni', pantomime). Dargomizhsky ('Stone Guest'). Don Giovanni (Mozart). Don Giovanni Tenorio (Gazzaniga). Egk ('Joan von Zarissa', ballet). Enna ('D. J. Mañara', opera). Fabrizi ('Convitato di pietra', opera). Fedencu (opera). Ferreira (m. for Zamora's play). Gardi ('Nuovo convitato', opera). Gazzaniga ('Don Giovanni Tenorio', opera). Gluck (ballet). Graener ('D. J.'s letztes Abenteuer', opera). **DON RODRIGUE** (Opera). See BIZET.

**DON SÉBASTIEN** (Opera). See DONIZETTI.

**DONALDA** (actually **Lightstone**), **Pauline** (b. Montreal, 5 Mar. 1884).

Canadian soprano singer. She studied music at the Royal Victoria College, Montreal, and singing with E. Duvernoy in Paris, where she married the baritone Paul Seveilhac.

After his death she was married to another well-known singer, the Danish tenor Mischa Léon. Her stage name was adopted out of compliment to Sir Donald Smith (Lord Strathcona), who endowed the Victoria College.

Donalda made her début in opera at Nice in 1904 as Manon, her success there being emphatically endorsed in the following year at the Brussels Monnaie and in London at Covent Garden in 1905. The rich, sympathetic quality and resonant timbre of her voice and her vivacious, artistic style won general admiration. She appeared at Covent Garden for several seasons in familiar parts such as Marguerite, Zerlina, Micaela, Gilda, Mimi, Nedda, Violetta and Carmen, besides creating the part of Ah-joe in Leon's opera 'L' oracolo' (1905) and that of Concepción in Ravel's 'L'Heure espagnole' (1919). In all of these she showed exceptional talent as an actress. She sang in 1906 under Oscar Hammerstein at the Manhattan Opera House, New York, and in 1907 she appeared at the Opéra-Comique, Paris.

H. K.

**DONATI, Ignazio** (b. Casalmaggiore nr. Cremona, c. 1585; d. Milan, 1638).

Italian composer. In 1612 he was organist of Urbino Cathedral, in 1616 and 1619 *maestro di cappella* of the Arciconfraternità e Accademia dello Spirito Santo at Ferrara, in 1622 and 1626 *maestro di cappella* of the Terra di Casalmaggiore. In Lomazzo's 'Flores praestantissimorum virorum' (Milan, 1626) Donati is termed "*maestro di cappella* of Novara Cathedral".<sup>1</sup> In 1629 and 1630 he was organist of Lodi Cathedral and from 1631 till 1638 *maestro di cappella* of Milan Cathedral.

Donati was probably organist of Pesaro Cathedral before 1612; at any rate it was there, as well as at other places, that he tried his plan of making the different voices sing at a distance from each other.<sup>2</sup>

#### LIST OF WORKS

1. 'Ignati Donati Ecclesiae Metropolitanae Urbini Musicae Praefecti sacri concipuli 1, 2, 3, 4 & 5 vocibus, una cum parte organica. Venetia. Giacomini Vincenti. 1612.' 4to. Contains 54 compositions. Five partbooks in the Breslau Town Lib.
2. 'Motetti a 5 voci in concerto con due sorti di letanie della Beata Vergine & nel fine alcuni canoni. D' Ign. D. maestro di cappella dell' Archiconfraternità & Accademia dello Spirito Santo di Ferrara. Venetia. Giac. Vincenti. 1618.' 4to "Opera completa." Six partbooks. *Tenors & quinto* in Berlin State Lib.
3. 'Concerti ecclesiastici a 2, 3, 4 & 5 voci. Con il basso per sonar nell' organo. D' Ign. D. maestro di cappella dello Spirito Santo di Ferrara. Opera IV. Venetia. Giac. Vincenti. 1618.' 4to. Contains 21 compositions. Five partbooks in Bologna Liceo Musicale
4. 'Concerti ecclesiastici a 1, 2, 3 & 4. Con il basso per l' organo. D' Ign. D. maestro di cappella dello Spirito Santo in Ferrara. Opera V. Venetia. Giac. Vincenti. 1618.' 4to. Four partbooks. Cantos I and II in Bologna Liceo Musicale.

5. 'Motetti concertati a 5 & 6 voci con dialoghi, salm e letanie della B.V. & con il basso continuo per l'organo. D' Ign. D. maestro di cappella della Archiconfraternità & Accademia dello Spirito Santo di Ferrara. Opera VI. Venetia. Giac. Vincenti. 1618.' 4to. Contains 15 compositions. Seven partbooks in Königsberg Lib.
6. 'Concerti ecclesiastici . . . Opera IV. Novamente con ogni diligenza corretta e ristampata. Venetia. Aless. Vincenti. 1619.' 4to. Six partbooks in the Brussels Bibl. Royale.
7. 'Concerti ecclesiastici . . . D' Ign. D. maestro di cappella della Terra di Casal Maggiore. Opera V. Novamente con ogni diligenza corretta e ristampata. Venetia. Aless. Vincenti. 1622.' 4to. Canto II, terza e quarta parte in Bologna Liceo Musicale.
8. 'Motetti a 5 voci in concerto . . . Novamente ristampata & con diligenza corretta. Venetia. Aless. Vincenti. 1622.' 4to. *Tenors, basso, quinto, & basso per l' org.* in Bologna Liceo Musicale.
9. 'Messe a 4, 5 & 6 voci, parte da cappella e da concerto con il basso per l' organo. D' Ign. D. maestro di cappella della Terra di Casal Maggiore. Venetia. Aless. Vincenti. 1622.' 4to. Contains 4 Masses. Seven partbooks. *Tenors, quinto & sesto* in Bologna Liceo Musicale.
10. 'Salmi boscarecci concertati a sei voci, con aggiunta, se piace, di altre sei voci, che servono per concerto, e per ripieno doppio, per cantare a più chori; con una messa similmente concertata, & con il ripieno, d' un'altra simile a sei, già stampata. & con il basso principale per sonar nell' organo. D' Ign. D. maestro di cappella nella Terra di Casal maggiore, L' Aunga nella Accademia de Filomeni. Opera IX. Venetia. Aless. Vincenti. 1623.' 4to. Contains 16 compositions. Thirteen partbooks in Ferrara Lib.
11. 'Concerti ecclesiastici . . . Opera V. Novamente in questa terza impressione con ogni . . . Venetia. A. Vincenti. 1625.' 4to. It includes one motet by A. Serra, a pupil of Donati, to whom he dedicated No. 18. Four partbooks in Bologna Liceo Musicale.
12. 'Concerti ecclesiastici . . . D' Ign. D. maestro di cappella della Terra di Casal maggiore. Opera IV. Novamente in questa terza impressione corretti & ristampati. Venetia. A. Vincenti. 1626.' 4to. Five partbooks in the Breslau Town Lib.
13. 'Motetti a 5 voci in concerto. . . Novamente in questa terza impressione ristampati e corretti. Venetia. A. Vincenti. 1626.' 4to. Six partbooks in Bologna Liceo Musicale.
14. 'Messe a 4, 5 & 6 voci. . . Novamente in questa terza impressione ristampati. Venetia. A. Vincenti. 1626.' 4to. Seven partbooks in Bologna Liceo Musicale.
15. 'Motetti concertati a 5 & 6 voci. . . Opera VI. Novamente ristampata e corretta. Venetia. A. Vincenti. 1627.' 4to. Seven partbooks in the Breslau Town Lib.
16. 'Madre de quattordici figli. Nihil difficile volenti. Il secondo libro de motetti a 5 voci in concerto. D' Ign. D. maestro di cappella del Duomo di Lodi. Fatte sopra il Basso Generale di "Perfecta sunt in te". Venetia. Aless. Vincenti. 1629.' 4to. Contains 17 motets. Six partbooks in Bologna Liceo Musicale.  
In the Dedication Donati says that he has taken the *basso continuo* of 'Perfecta sunt in te', already published in his 'Concerti a 5 voci', and has written 14 more motets on it, these making, with 'Perfecta sunt', the number 15 "consonanza perfecta". Two more motets follow, not on the same bass.
17. 'Concerti ecclesiastici. . . Opera IV. Novamente ristampata. Venetia. A. Vincenti. 1630.' Five partbooks in the Brussels Bibl.
18. 'Concerti ecclesiastici. . . D' Ign. D. maestro di cappella del Duomo di Lodi. Opera V. Novamente impressa in questa quarta impressione con ogni diligenza corretta & ristampata. Venetia. A. Vincenti. 1630.' 4to. Four partbooks in the Bologna Liceo Musicale.
19. 'Le Fanfalughe a 2, 3, 4 & 5 voci del Signor Ign. D. maestro di cappella del Duomo di Lodi. Raccolte da me Alessandro Vincenti. Venetia. Aless.

<sup>1</sup> Parisini, II, 67.

<sup>2</sup> *Ibid.*, II, 144.

- Vincenti. 1630. 4to. Contains 28 compositions Six partbooks in Breslau Town Lib.
20. 'Il secondo libro delle messe da cappella a 4 et a 5. D' Ign. D. maestro di cappella del Duomo di Milano. Opera XII. Messe 1 & 2, a quarta, messe 3 & 4, breve a quattro a voce piena, & a voce para, messa 5, a quinta, messa 6, pro defunctis a quattro, a voce piena, & a voce para con la quinta parte, si placet. Venetia. A. Vincenti. 1633. 4to. Six partbooks in the Breslau Town Lib.
21. 'Il primo libro de' motetti a voce sola di Ign. D. maestro di cappella nel Duomo di Milano. Da quali quei che desiderano imparare a portar la voce con gratia, et asquistar dispositione potranno agevolmente da se prendere la maniera di cantar gratuitamente, far scherzi, passaggi, et altri leggiadri effetti. Opera VII. Novamente corretta & ristampata. Venetia. A. Vincenti. 1634. Fol. score, pp. 35. In Bologna Liceo Musicale.
- Féus mentions an edition of 1628. This may have been the second edition. The first edition must have been before 1623.
22. 'La vecchiarie e perregrini concerti a 2, 3 & 4 voci, con una messa a 3 & a 4 concertata d' Ign. D. maestro di cappella del Duomo di Milano. Raccolta da me Aless. Vincenti. Opera XIII. Venetia. A. Vincenti. 1636. 4to. Five partbooks in Breslau Town Lib.
23. 'Il secondo libro de' motetti a voce sola d' Ign. D. maestro di cappella del Duomo di Milano. Per educatione di figliuoli et figliole dedicati a Dio. Opera XIV. Venetia. A. Vincenti. 1636. Fol. Two partbooks, "parte per cantare" and "parte per sonare", in the Bologna Liceo Musicale.
24. 'Messe a 4, 5 & 6 voci. Parte da cappella e da concerto. D' Ign. D. Maestro di cappella della Terra di Casal maggiore. Novamente in questa quarta impressione ristampata. Venetia. A. Vincenti. 1645. 4to. Seven partbooks in Breslau Town Lib. In Königsberg Lib. MSS 48, some cantones, and 69, 'Perfecta sunt in te' a 5 (both incomplete); MS 71, 'Motettu a 5 voci in concerto'.
- In printed Collections:
1619. 'Quae est ista' (a 2), 'O Maria, dilecta mea' (a 3), 'Sacræ et divinæ cantiones, 2 & 3 voc, ad organum decantandæ.' Raccolta da Zac. Zanetti. (Parsini, II, 369.)
1621. 'Benedicat nos Deus' (a 3); 'Exultant cor meum' (a 2), 'Filiae Sion exultate' (a 2); 'Gaudebunt labia mea' (a 2); 'Hodie spiritus sanctus' (a 3); 'O dulcissime Domine' (a 3), 'Quando natus es' (a 2); 'Symbolæ diversorum musicorum 2, 3, 4 and 5 voc. cantandæ. Ab admodum Rev. D. Laurentio Calvo editæ.' (Israel, Mus. Schätze, p. 3.)
1626. 'Litanie a 5, 6, 7 e 8, se piace, di Sig. D. Ignatio Donati Rosarum Litanarum B.V. raccolta di D. Lorenzo Calvo.' (Parsini, II, 171.)
1641. 'Dulcis amor Jesu' (a 5). 'Erster Theil geistlicher Concerten, durch Ambrosium Profium.' (Leipzig.)
- 'Paratum cor meum' (a 5). 'Ander Theil geistlicher Concerten.'
1646. 'Languet anima mea' (a 5). 'Vierdter u letzter Theil' (Jos. Müller.)
1653. Coloraturæ taken from Ign. D.'s 'Concerten voce sola'. 'O admirabile commercium; O Fili Dei suavissime, per canto et tenore.' 'Musica moderna prattica' J. A. Herbst. Frankfurt. (In B.M.)

—The 'Messe brevi (a 4, a voce piena et a voce para) d' Ignatio Donati' (1633) was included in 'Composizioni per canto Pubblicata della Caleografia musica sacra.' (Milan, 1891.) 8vo. (For MSS see Q.-L.)

C. S.

**DONATO (Donati), Baldassare** (b ? , c. 1530; d. Venice, 1603).

Italian organist, singer and composer. In 1550 he was *musicò e cantor* at St. Mark's, Venice, and on 14 Oct. 1562 he was appointed

*maestro di cappella piccola* with a salary of 50 ducats. This *cappella piccola* had been formed with the idea of supplying with well-trained voices the *grande cappella*, of which Willaert was *maestro*. Donato retained this post, in reality that of deputy to the *maestro di cappella*, throughout the period when Rore was *maestro* (1562–65). Zarlino (appointed 5 July 1565), however, not requiring the assistance of the *cappella piccola*, demanded and obtained its suppression, but Donato retained his former post as singer. That he felt some resentment at this treatment is indicated by his taking part in a curious demonstration against Zarlino a few years later. In 1569, on a great festival day at St. Mark's, Zarlino wished the service to be sung with double choir. He was strongly opposed by the singers (among them Donato), who urged the traditional custom of the *vespro semplice*. The result was that, to the great scandal of the congregation, those who should have sung with the *voci d' angeli* sang instead with the *voci di demoni*, creating such an uproar that a formal inquiry was held by the *procuratori*, who dealt out varying penalties, Donato escaping with a fine of twelve ducats.

On 7 Aug. 1580 he was appointed *maestro di canto* to the newly founded Seminario Gregoriano of St. Mark's. On the death of Zarlino, in 1590, Donato was nominated for the post of *maestro di cappella* at St. Mark's. He was appointed for five years and was expected to continue teaching "canto figurato, contrapunto e canto fermo" at the Seminario, and was not allowed to sing except in St. Mark's itself. His appointment was renewed on 16 Mar. 1596, but he was then no longer required to teach at the Seminario, owing to the fact that this had been moved to Castelli, some distance away from St. Mark's. He was a member of the Nuova Accademia Veneziana. On his death in 1603 he was succeeded as *maestro* by Giovanni Croce.

As a composer Donato was first made famous by the publication of his *napoletane*, which went through several editions. These follow the style of Willaert in freeing the form from specifically Neapolitan traits and giving it more universally Italian connotations. These songs show a love of brisk, syncopated rhythms and of vivid realism. His earliest madrigals, contained in the same volume, are of the kind current in the earlier part of the century, using the *misura di breve* and the homophony of the non-literary Netherlandish style. His later volumes of madrigals, however, display a lighter and more modern style, the first volume being remarkable for its three dialogues for seven voices, which tend towards dramatic music in assigning definite functions to the two choruses, each developing its own mood. His 'Secondo libro a quattro' also reveals interest in

modern developments. In this book certain numbers make use of a quasi-monodic technique, with one principal and more highly ornamented line accompanied by three voices in homophony, although there is as yet no sign of either true coloratura in the "solo" voice or of a *basso continuo*.

In the sphere of church music the volume of motets published in 1599 seems to represent the collection of a number of works composed over a long period. Some motets are in a rather old-fashioned style with strict imitative counterpoint and long pedal notes in the final cadence. Others, notably those for six and eight voices, are more specifically Venetian in technique, using double choirs and other colour effects. 'Virgo decus nemorum' for eight voices is an example of "echo" music, and is remarkable also for the introduction of rhythms more often associated with light secular music than with motets. In much of his church music Donato displays an unusual love of complex rhythms, and he often uses sectional repetition as part of the formal pattern.

A portrait of Donato as a young man, probably painted before 1547 by Giovanni Cariani, is at present in the Collection of Edward Stern, New York.

### LIST OF WORKS

1. 'Baldissara Donato musico e cantor in Santo Marco, Le Napolitane et alcune madrigali a 4 voci. Da lui novamente composte, corrette e misse in luce. Venetis apud Hieronymum Scotum. 1550.' 4to. Four partbooks in Vienna Nat. Lib.
  2. 'Di B. D. Il primo libro di canzoni villanesche alla Napolitana a 4 voci, novamente da lui composte, .. aggiuntovi anchora alcune villotte di Perissone a 4, con la canzone della Gallina a 4 voci. Venetia. Ant. Gardano. 1550.' Obl. 4to. Tenor partbook in Turin Bibl. Naz.
  3. The same. 'Novamente ristampate. Con la giunta d' alcune villotte di Perissone. . . . Obl. 4to. No date, but about 1550. Four partbooks in Bologna Liceo Musicale.
  4. The same. 'Insieme con alcune madrigali novamente ristampate. Aggiuntovi anchora alcune villotte . . . Venetis apud Hieron. Scotum. 1551.' Obl. 4to. Four partbooks in the Munich Lib.
  5. The same. 'Novamente ristampate. Aggiuntovi anchora alcune villotte. . . Venetia. Ant. Gardano. 1552.' Obl. 4to. Four partbooks in Wolfenbützel Lib.
  6. 'Di B. D. Il primo libro di madrigali a 5 e a 6 voci. Con tre dialoghi a sette. Novamente dati in luce. Venetia. Ant. Gardano. 1553.' Obl. 4to. Two of the partbooks (*Quinto, Sesto*) are in the Verona Teatro filarmonico.
  7. A new edition of No. 3. 'Venetis. Hieron. Scotum 1556.' Obl. 4to. *Basso* in Berlin State Lib.
  8. 'Il primo libro di madrigali a 5 e a 6 voci. Con tre dialoghi a sette. Di nuovo riveduti, e con somma diligentia corretti. Venetia. Plinio Pietrasanta. 1557.' Obl. 4to. Six partbooks at Modena, Bibl. Estense.
  9. A new edition of No. 5. 1558. Four partbooks (B.M.).
  10. A new edition of No. 8. 1559. An alto partbook entered in the Catalogue of the Venice Lib. is no longer to be found.
  11. The same. 'Novamente per Antonio Gardano ristampate a 5 voci. Venetia. Ant. Gardano. 1560.' Obl. 4to. Six partbooks in the Munich Lib., etc.
  12. A new edition of No. 6. 1560

1588. 'O grief, if yet my grief' ('Dolor se 'l mio dolor'), 'As in the night' ('Come la notte') Yonge's 'Musica transalpina, a 4 voci'. Nos 5 and 6, reprinted by Budd, 1859.
- 1589 'Che val essa nudrita', 'Musical essercitio di Ludovico Balbi, a 5 voci'.
- 1588-89-90. 'Chi dira mai', 'O dolce vita', 'Tu mi farai'. 'Genma musicalis. Frederici Lindner'. (Nuremberg.) 'Lib I, II, III, a 4 voci.'
- 1593 'Da quei bei crini' (a 5) 'Nuova spoglia amorosa' (Vincenuti).
1594. 'Madrigal a 4 voci' 'Florilegium omnis. Per Adr Denss'.
- 1597 'Se pur ti guardo' 'Livre VII des chansons à 4 parties.' (Antwerp.) Also in 1613, 1620 and 1636 editions.
1598. 'Ome ch' il mio languire' 'Madrigali de' diversi a 4 voci. Raccolta da G. M. Radino'.
1600. 'Più potente, e più forte' 'Vergin Dea ch' il Ciel' adora', 'Vergine dolc' e pia'. Arascone's 'Nuove laudi aniose [Rome], a 4 voci'.
- 'Veni domine' (a 6). 'Sacrarum symphoniarum continuatio div excell. authorum.' (Nuremberg.)
- 1606 'Deh Pastorale.' 'Leggiadre nimphe a 3 voci alla napoletana.' (Gardano.)
1609. 'Motetto a 5 voci.' 'Florilegium sac. cant.' (Antwerp.)
1613. 'Beati eritis cum maledixerint' (a 5). 'Promptuarii musici.' Schadaeus. Part III. Reprinted in Commer's 'Musica sacra', Vol. XXIV (c. 1860).
- 'Chi la gagliarda' from the first book of 'Canzone villanesche' has been reprinted several times in modern editions: in Burney, III, 216; Busby, II, 108, in T. Oliphant's 'Favourite Madrigals arranged from the Original Partbooks' (1837); Kiesewetter, No. 23; Reissmann, II, No. 19; Willner, No. 92; by W. B. Squire (1895); in Cornelius's 'Vier Italienische Choralieder'; Torchi, I.
- 'Canzone 'No pulice' in Einstein, I.
- 'Viva sempre' by W. B. Squire (1895) and Torchi, I.
- 'Che val peregrinar' by Torchi, I.
- 'Ahi miserile' from the first book of madrigals in Einstein, III.
- 'Dolce mio ben' from the second book of madrigals in Einstein, III.

C. S. &amp; D. M. A.

**DONEMUS.** The name of a co-operative organization in Holland for the propagation and preservation of modern Dutch music. The name is formed from the motto "Documentatie in Nederland voor Muziek". Its first committee consisted of Prof. Ed. Reeser, Chairman; J. A. Alsbach, the well-known publisher; Willem Andriessen; B. v. d. Sigtenhorst Meyer; Prof. A. A. Smijers; Dirk J. Balfoort; Eduard van Beinum; G. F. L. Landré, jun.; Henri Zagwijn and other active creative and interpretative artists. An attempt is made to include in its library, consisting largely of microfilms, all the most important unpublished works by contemporary Dutch composers. From these microfilms conducting and study scores and vocal and orchestral parts are made as demand arises. Besides these an almost complete collection of the works of Alphons Diepenbroek and many other 19th-century works from the library of J. A. Alsbach are included. The institution works in close contact with the I.S.C.M. and supplies material for many performances both in Holland and abroad.

H. A.

**DONFRIED, Johann** (b. ?, d. ?).

German 15th-16th-century musical editor. He was rector of the school of Rottenburg o/Neckar, and from 1627 director of music at St. Martin's church there. He published one of the most important collections of church compositions of older masters, 'Promptuarium musicum', in 3 volumes (Strasbourg, 1622-27); 'Viridarium Musico-Marianum' (1627), 201 songs; 'Corolla Musica Missarum 37' (1628); 'Der Tablatür für Orgel I<sup>ter</sup>, II<sup>ter</sup> Teil' (Hamburg, 1623). Walther, in 1732, was unable to trace the first part of this important organ book, and Eitner evidently never found the second part either.

E. v. d. s.

**DONI, Giovanni Battista** (b. Florence, c. 1594; d. Florence, 1 Dec. 1647).

Italian musical scholar. He studied Greek, rhetoric, poetry and philosophy at Bologna and Rome. He received the doctor's degree from the University of Pisa and was chosen to accompany Cardinal Corsini to Paris in 1621, where he became acquainted with Mersenne and other literary persons. On returning to Florence in 1622 he entered the service of Cardinal Barberini and went with him to Rome, where he became secretary to the Papal College, afterwards accompanying the cardinal to Paris, Madrid and back to Rome.

Doni made good use of the opportunities that came in his way on these journeys, to acquire an exhaustive knowledge of ancient music; among other things he invented, or reconstructed, a double lyre, which, in honour of his patron, he called Lyra Barberina, also Amphichord. After the death of his brother he returned to Florence about 1640, when he married and settled down as professor in the University there. In 1635 his valuable treatise on the ancient Greek music, 'Compendio del trattato de' generi e de' modi della musica', was published in Rome; and, as it was an abstract of a larger work, it was completed by the publication of 'Annotazioni sopra il compendio . . .' in 1640. Another book, 'De praestantia musicae veteris', appeared at Florence in 1647, and as late as 1763 his description of the Lyra Barberina was published at Florence. Some other treatises are still in existence in a manuscript in the library of Santa Cecilia in Rome, and a few fragmentary works are extant.

J. A. F.-M.

**DONINGTON, Robert** (b. Leeds, 4 May 1907).

English musical scholar, author and editor. He attended St. Paul's School in London in 1919-26 and then was senior classical scholar at Queen's College, Oxford, in 1926-29. He took the B.A. in 1930 and the B.Litt. in 1946. With some interruptions between 1926 and 1938 he studied the viol, the violin and the interpretation of old music under Arnold

Dolmetsch and worked as an apprentice in the Dolmetsch workshop at Haslemere in 1929-30. In his later years there he collaborated with the Dolmetsch family as a colleague and was secretary of the Dolmetsch Foundation in 1934-38. In 1934-36 he studied the 16th- and 17th-century English chamber music with the Leverhulme Research Fellowship and in 1935-39 he was treble violist in the English Consort of Viols. He gave a year to social service as Assistant Area Officer to the Durham Community Service Council in 1939-40. In 1948 he was appointed to the teaching staff of the T.C.M. (department of 16th-17th-century music).

Donington began his work as a writer as music critic to 'The Cherwell' at Oxford in 1927-29. Later he was editor of the Durham Council's journal 'Cooperation' and in 1940-1947 of the National Peace Council's journal 'Peace Aims'. His published works are:

#### BOOKS

- 'The Work and Ideas of Arnold Dolmetsch' (Haslemere, 1932).
- 'A Practical Method for the Recorder' (with Edgar Hunt), 2 vols. (Oxford, 1935).

- Purcell, Chaconne in G mi for 2 vns, bass & cont. (No. VI from the 2nd set of Ten Sonatas [1697]) (Paris, 1949).
- Purcell, Sonata, G mi, for vn, bass & cont. (Paris, 1949).

E. B.

**DONIZETTI, (Domenico) Gaetano (Maria)** (b. Bergamo, 29 Nov. 1797, d. Bergamo, 8 Apr. 1848).

Italian composer. The tradition that he was of Scottish descent and that his surname was formed from that of his grandfather, Donald (Don) Izett, is now discounted. Having begun his studies at the Istituto Musicale of Bergamo under Mayr, to whom he remained deeply attached for the rest of his life, he completed them at the Liceo Filarmonico of Bologna under Mattei. Towards the end of 1817 he was back at Bergamo and in the next few years wrote many string quartets for private performance there. Three early operas remained unperformed, but in 1818 'Enrico di Borgogna' was produced at Venice. The libretto was by a friend, Bartolomeo Merelli, afterwards a famous impresario. A long series of operas (*see below*) followed, given in Venice, Rome, Naples and other cities, but the first which gained the ear of all Europe was 'Anna

Bolena', given for the first time at Milan in 1830. This work, which was long regarded as its composer's masterpiece, was written for Pasta and Rubini. It was in 'Anna Bolena' too, as the impersonator of Henry VIII, that Lablache made his first great success at the King's Theatre in London. The graceful and melodious 'L' elisir d' amore' was composed for Milan in 1832. 'Lucia di Lammermoor', perhaps the most popular of all Donizetti's works, was written for Naples in 1835, the part of Edgardo having been composed expressly for Duprez, that of Lucia for Persiani. In the previous year he had been appointed professor of counterpoint and composition at the Real Collegio di Musica of Naples. The lively little operetta called 'Il campanello di notte' was produced in 1836 to save a Neapolitan manager and his company from ruin. "If you would give us something our fortune would be made", said one of the singers. Donizetti declared they should have an operetta from his pen within a week, and, recollecting a vaudeville he had seen in Paris, called 'La Sonnette de nuit', took that for his subject, rearranged the little piece in operatic form and forthwith set it to music. He seems to have possessed considerable literary facility and wrote the librettos of three of his operas, 'Le convenienze teatrali', 'Il campanello di notte' and 'Betly', taking a hand also in that of 'Don Pasquale'.

On the death of Zingarelli, in May 1837, Donizetti hoped to succeed him as director of the Collegio di Musica, but owing to various intrigues he could neither get his appointment confirmed nor his resignation accepted.

On 30 July 1837 he lost his young wife, Virginia, whom he idolized and never ceased to mourn. After the refusal of the Neapolitan censorship to allow the production of his 'Poluto', Donizetti went to Paris in 1839, bringing out many of his best works at one or other of the lyric theatres of Paris. 'Lucrezia Borgia' had been composed for Milan in 1833. On its revival in Paris in 1840 the run was cut short by Victor Hugo, who, as author of the tragedy on which the libretto is founded, forbade the performances. 'Lucrezia Borgia' became at the Italian Opera of Paris 'La riniegata' — the Italians of Alexander VI's court being changed into Turks. 'Lucrezia Borgia' may be said to mark the distance half-way between the style of Rossini, imitated by Donizetti for so many years, and that of Verdi, which he in some measure anticipated. Not only 'Poluto' (under the name of 'Les Martyrs'), but two works set to French words, 'La Fille du régiment' and 'La Favorite', were all brought out in the same year, 1840. Jenny Lind, Sontag, Patti and Albani all appeared with great success in 'La figlia del reggimento', as the Italian version of the earlier French work

was called. 'La Favorite' is based on a very dramatic subject (borrowed from a French drama, 'Le Comte de Comminges'). In London its success dates from the time at which Grisi and Mario undertook the two principal parts. The concluding act is probably the most dramatic Donizetti ever wrote. With the exception of a cavatina and the slow movement of the duet, which was added at the rehearsals, the whole of this fine act was composed in from three to four hours. Leaving Paris, Donizetti visited Rome, Milan and Vienna, at which last city he brought out 'Linda di Chamounix' and contributed a 'Miserere' and 'Ave Maria' to the Court Chapel, written in strict style and much relished by the German critics. He received the titles of *Hofcompositeur* and *Kapellmeister*. Then, coming back to Paris, he wrote (1843) 'Don Pasquale' for the Théâtre-Italien and 'Dom Sébastien' for the Opéra. The latter did not succeed; on the other hand the brilliant gaiety of 'Don Pasquale' charmed all who heard it. For many years after its first production 'Don Pasquale' was played in contemporary dress; but the singers and their audiences considering it absurd to sing opera in the clothes of everyday life it became usual, for the sake of picturesqueness in costume, to put back the action to the 18th century. It might just as well be set back into the 17th, the action being very much like a conventional plot of the *commedia dell'arte*; but nowadays a production in the fashions of its own time would be charming, particularly as operas with settings of the 1840's are extremely scarce.

During the last years of his life Donizetti was subject to fits of melancholy and abstraction bordering on insanity, which became more and more intense, until in 1845 he was attacked with general paralysis. In 1847 he was able to return to his native place, Bergamo, where he died. He was buried some little distance outside the town, but was reburied on 12 Sept. 1875 in Santa Maria Maggiore, Bergamo, where a monument by Vincenzo Vela had been erected in 1855. Donizetti was not a strong character, but he was a very amiable one. His letters reveal him as a loyal friend, extraordinarily modest about his achievements and utterly incapable of envy. In this he compares very favourably with his rival (whom he never treated as a rival) Bellini.

Donizetti's music has aged very considerably

since his death. Nor could it be otherwise, considering the conditions in which it was written. In the first place the plan favoured by him of writing as rapidly as possible is never likely to result in work of enduring quality. He wrote an opera ('Il campanello di notte') in nine days and, as mentioned above, the greater part of the last act of 'La Favorite' in a few hours. Even allowing for the thinness and conventional character of the accompaniments, it is clear that such work can be no more than successful improvisation. Moreover, Donizetti lived in an age of vocal virtuosity. His interpreters were Mario, Pasta, Rubini, Grisi, Lablache, Duprez, Persiani, and it would be difficult to determine whether he was under a heavier debt to them than they were to him. With the passing of the great virtuosos, the music written for them, the music which fed that fashion, was bound to suffer. Facile, sentimental melodies can no longer sustain the interest or be supposed to represent adequately dramatic action, and Donizetti seldom rises above that standard. He is said above to have imitated Rossini first and then anticipated Verdi. But his music never attains to anything like the brilliancy of the first or to the earnest sincerity of the second. Only his delightful comic operas, 'L'elisir d'amore' and 'Don Pasquale', are still thoroughly alive, while 'Lucia' continues to hold the stage in Italy.

H. S. E., adds. F. B. & F. W. (ii).

Salomon (K., choral suite). Stevens (B., 3 songs). Wordsworth (4 songs).

**DONNINI, Girolamo** (b. ?; d. Bonn, early 1752).

Italian composer. He entered the service of the Elector of Cologne, Joseph Clement, as court composer and director of the vocal music in or before 1719, was appointed chamber composer in 1723 and became court conductor to the new elector, Clement Augustus in 1732<sup>1</sup>, a post he retained until his death. Donnini's personality has become somewhat less shadowy than either his predecessor Trevisani's or his successor Zudoli's (who remain mere names, with salary figures attached), since some of his works have come to light which were unknown to Thayer (who unearthed the biographical facts) and Eitner. Scores of an allegorical intermezzo forming the second act of an Italian tragedy, 'Ester', and of a *divertimento pastorale*, 'Icaro', the first dated 1719<sup>2</sup>, the second undated, are extant in the Biblioteca Estense at Modena. A. L.

**DONOSTIA, José Antonio de** (b. San Sebastián, 10 Jan. 1886).

Spanish composer and folklorist of Basque nationalist group. His family name is José Gonzalo Zulaica y Arregui, but according to the custom of the Capuchin Order, to which he belongs, he took the name of the town where he was born, which in Basque is called Donostia. He entered the Franciscan-Capuchin Order in 1902. From an early age he devoted himself to the music of his native province, and his first master was Ismael Echezarra. Later he studied with Gabiola and Ezquerro, and in Paris with the neo-classic composer Eugène Cools. For many years he was organist and choirmaster of the College at Lecaroz in Navarre. He became one of the main authorities on Basque

music and folklore in the Society for Basque Studies. In 1912 he was awarded a prize for 'Euskal Eres-Sorta', a collection of 493 Basque folksongs without accompaniment. He was elected a member of the Royal Academy of Fine Arts of San Fernando and became one of the founders of the Spanish Institute for Musicology.

Among the musicologists and folklorists who have worked for Basque music, such as Gascúe, Azkue and Charles Bordes, none deserves greater praise than Father Donostia, whose Basque folksongs not only are in the repertory of every Spanish singer but have also achieved fame in foreign countries. As a composer he is really self-taught, and no influences of school or master are to be found in his Basque songs and preludes. The veteran Felipe Pedrell, in paying tribute to his early works, called him the "Knight-Errant" of folksong and described how he wandered about the Basque countryside mixing with tramps and humble pilgrims, with ear agog, ready to snatch the songs and *tonadas* that fell from the lips of the *bertularis* in the villages. Even in those early raids in search of folksong he collected as booty more than six hundred songs and *tonadas*. Pedrell, reviewing the third volume of Donostia's 'Preludios vascos', speaks of the essential originality of Basque melodic form — with its characteristic gentle melancholy, which makes Basque melodies quite unlike any other Spanish folk type, such as the Asturian, the Galician or the Catalan. Donostia in his songs conveys the subtle sense of mystery and aloofness that is to be found in the traditional songs of the mountain region of Guipúzcoa and Navarre. We have only to compare the works of the French-Basque composer Charles Bordes, such as the 'Douze Chansons amoureuses du Pays Basque', with the five compositions in the third volume of Donostia's Basque Preludes to measure the great difference between the Spanish and the French branches of this prehistoric race. Such little tone-poems as 'Romería lejana', with its evocation of singing pilgrims in the distances, 'La hilandera' — the girl singing gently to herself as she spins; the 'Cortejo de boda' or marriage-song played in villages of the valley of Baztan in Navarre for the bridal procession — all these are the counterpart of the early Basque pen-pictures ('Idilios vascos') by the celebrated novelist Pío Baroja. The same intimate spirit we find also in 'Gure Herria', a collection of 23 Basque songs for voice with pianoforte accompaniment. The Nine Basque Christmas Songs for voice with organ and the sixteen characteristic Cradle Songs with pianoforte should also be mentioned.

In addition to his researches into ancient music Father Donostia has written an

<sup>1</sup> Beethoven's grandfather entered the orchestra a year later.

<sup>2</sup> Perhaps the same 'Ester' as Thayer mentions (? from an anonymous libretto) as having been sung at Bonn as late as 1757 (? 1737).

'Itinerarium mysticum' on Gregorian themes in 3 volumes for the organ and the following religious works: Motets for 3- and 4-part mixed chorus; a Requiem for 4-part men's chorus and organ based on a Gregorian theme; Poem of the Passion for 8-part chorus. He has also written a sacred music-drama on the life of Saint Francis of Assisi (text by Henri Ghéon) for chorus and full orchestra, as well as 'The Three Pinnacles of Saint Cecilia' for chorus and small orchestra (Ghéon).

Among his musicological works should be mentioned his 'Essai de bibliographie musicale populaire basque' and other works on Basque folk music. W. S.

BIBL.—PEDRELL, F., 'Cancionero musical popular español', Vol II, Preface.

**DONOVAN, Richard Frank** (b. New Haven, Connecticut, 29 Nov. 1891).

American composer. His musical education was gained at the Yale University School of Music, at the Institute of Musical Art in New York, and later with Widor in Paris. In 1950 Donovan became a member of the faculty at Yale University School of Music. He is also conductor of the Newhaven Symphony Orchestra and of the Bach Cantata Club of Newhaven. He formerly taught at Smith College and the Institute of Musical Art.

Donovan's orchestral and choral works have been acclaimed in many parts of the U.S.A., his 'Design for Radio' won the Publication Award of Broadcast Music Inc. in 1945, his Serenade for oboe, violin, viola and cello, the Songs for soprano and string quartet, the Trio for violin, cello and pianoforte and the Suite for pianoforte are among his best works. His compositions for the organ are among the notable contributions by living American composers to the repertory of this instrument.

Donovan's numerous works further include 'Smoke and Steel', a symphonic poem for orchestra; Symphony for chamber orchestra; Suite for oboe and strings; 'Design for Radio' (for 26 players); 'Four Unaccompanied Choruses'; 'Fantasy on American Folk Ballads' for men's voices and orch.; a Sextet for wind instruments and pianoforte; four songs for soprano and string quartet, etc. P. G.-H.

**DONT, Jacob** (b. Vienna, 2 Mar. 1815; d. Vienna, 17 Nov. 1888).

Austrian violinist, teacher and composer. He was a son of Valentin Dont (b. Georgenthal, Bohemia, 15 Apr. 1776; d. Vienna, 14 Dec. 1833), a cellist well known and esteemed in his time. Jacob, thoroughly grounded at the Vienna Conservatory by Böhm (one of the teachers of Joachim and Hellmesberger, sen.), became a very capable player, though his career as a soloist does not appear to have been one of especial brilliance. He obtained

posts in the orchestra of the Burg Theatre (1831) and in the imperial chapel (1834), but was more famous as pedagogue than as performer, teaching at various Viennese institutions with great success. His best work was done at the Vienna Conservatory, though he was not appointed professor till 1873, his pupils including Auer and Gregorovich. He published some 50 works, among them 'Studies for the Violin', which rank, in the opinion of Spohr and many other authorities, among the best written for the instrument.

W. W. G.

**DONZELLI, Domenico** (b. Bergamo, 2 Feb. 1790; d. Bologna, 31 Mar. 1873).

Italian tenor singer. He studied in his native place. In 1816 he was singing at the Teatro Valle in Rome. Rossini wrote for him the male title-part in 'Torvaldo e Dorliska' (1815), in which he distinguished himself. In the Carnival of the next year he sang at the Teatro alla Scala at Milan and was engaged for two seasons. Thence he went to Venice and Naples, returning to Milan, where 'Elsa e Claudio' was written for him by Mercadante. He was very successful in Vienna in 1822 and obtained an engagement in Paris for 1824. There he remained, at the Théâtre-Italien, until the spring of 1831.

As early as 1822 efforts had been made, unsuccessfully, to get Donzelli engaged at the King's Theatre in London. At length, in 1828, he was announced; but he did not actually arrive until 1829. Lord Mount-Edgumbe thought him "a tenor with a powerful voice, which he did not modulate well". He was re-engaged in 1832 and 1833. In 1834 his place was taken by Rubini. Returning to Italy, he sang at various theatres, and in 1841 at Verona and Vienna. About the end of that year he retired to Bologna. He was an associate member of the Accademia Filarmonica at Bologna and of that of Santa Cecilia in Rome. He published a set of 'Esercizi giornalieri, basati sull' esperienza di molti anni' (Milan). J. M.

**DOOR, Anton** (b. Vienna, 20 June 1833; d. Vienna, 7 Nov. 1919).

Austrian pianist and teacher. He studied pianoforte with Czerny and theory with Sechter. He made concert tours in Europe and then taught at the Imperial Institute of Music in Moscow. Later he returned to Vienna and became pianoforte professor at the Conservatory. He belonged to the circle of Brahms's friends and introduced new works by that master to Viennese audiences. E. B.

**DOPPELFLÖTE.** See ORGAN STOPS.

**DOPPELSCHLAG** (Ger = turn). See ORNAMENTS, C (iii), D (ii).

**DOPPELTRILLER** (Ger. = trill with turn). See ORNAMENTS, B (iii).

**DOPPELVORSCHLAG** (Ger. = double appoggiatura). See ORNAMENTS, A. (ii).

**DOPPER, Cornelis** (b. Stadskanaal nr. Groningen, 7 Feb. 1870; d. Amsterdam, 18 Sept. 1939).

Dutch composer and conductor. He studied in 1887-90 at the Leipzig Conservatory and was for some years an operatic conductor in Holland and in America. In 1908 he became assistant conductor to Mengelberg at the Concertgebouw in Amsterdam. Dopper composed seven symphonies and numerous other orchestral works; especially 'Ciaccona gothica', first performed in 1920, a work which made his name known outside his own country.

Dopper was one of the most typical of Dutch composers of his day: his work showed signs of genuine Dutch nationality. Even the titles of some of his symphonies point to this: the second is called 'Rembrandt'; the sixth 'De Amsterdamsche'; the seventh 'Zuiderzee-Symphonie'. Besides his works for orchestra he wrote chamber music, pianoforte pieces and songs, also choral works and four operas, of which 'Het Eerekruijs' and 'De Blinde van het kasteel Cuillé' (based on Longfellow's poem) were produced at Amsterdam in 1894 and 1895, while 'William Ratcliff' (libretto from Heine's drama) came out at Weimar in 1909; the fourth, 'Frithjof' (based on Tegnér's epic poem) does not seem to have been performed. Dopper's masterly and individual orchestration is admirable. This is also noteworthy in various very clever arrangements of works by classical masters.

R. M. (ii), adds. A. L.

**DOPPIO** (Ital., double); *canone doppio*, "double canon"; *doppio movimento*, "double the speed of the preceding"; *doppio pedale*, "two parts in the pedals" (organ music), etc.

**DOPPIO PEDALE** (Ital., double pedal).

A term used in organ pedalling to signify the simultaneous use of both feet. It is often loosely applied to the playing of the pedals in octaves by means of registration, a device used to eke out a deficient supply of stops. It is sometimes used to make a pedal melody predominate over a full organ (as in Reger's chorale prelude 'Vom Himmel hoch'), but the free use of the two feet simultaneously is of great artistic value. It is no new device, having been used by Franz Tunder (1614-1667), a predecessor of Buxtehude at Lubeck. Both Buxtehude and J. S. Bach made great use of this device, the latter particularly in the chorale preludes 'Aus tiefer Not' and 'An Wasserflüssen Babylon'.

Unless playing very loudly, only 8-foot tone should be used. Otto Olsson (b. 1879), of Stockholm, wrote a fine study for *doppio pedale* in his 'Sestetto'. Lemmens ('Lauda Sion';

16-8-4 ft.), Guilmant (1st Sonata; 16-8-4 ft.), Viërne (3rd Symphony; 4 ft. only). Bonnet ('Rapsodie catalane'; 16-8-4 ft.) and Dupré (Prelude in G minor; swell to pedal, no pedal-stops) have secured triple-pedalling by the simultaneous use of the heel and toe of one foot, and some of the American composers have even written 4-note chords for the pedals.

A. E. H.

**DOPPLER**. Polish, later Hungarian family of musicians of German origin.

(1) **Albert Franz Doppler** (b. Lwów, 16 Oct. 1821; d. Baden nr. Vienna, 27 July 1883), flautist, conductor and composer. His first teacher was his father, who later went as oboist to Warsaw and Vienna. He made his début in Vienna and, after several concert tours with his younger brother Karl, joined the orchestra of the Pest theatre as first flute in 1841. There, in 1847, his first opera, 'Benyovszki', was given and had a considerable success. In 1856 he visited London with his brother, and his flute playing attracted much attention. In 1858 he left Pest for Vienna, where he became first flute and assistant conductor of the ballet at the Court Opera, afterwards rising to the post of chief conductor. In 1865 he was appointed professor of the flute at the Conservatory.

Doppler's works include the following.

#### OPERAS

- 'Benyovszki', prod. Pest, 29 Oct. 1847 (revived as 'Afanasia').
- 'Ilka, vagy A huszártoborzó' ('Ilka, or The Hussar Recruiting'), prod. Pest, 29 Dec. 1849.
- 'Wanda', prod. Pest, 20 Dec. 1850.
- 'Két Huszár' ('Two Hussars'), prod. Pest, 12 Mar. 1853.
- 'Erzsébet' (with Károly and Erkel), prod. Pest, 6 May 1857.
- 'Judith', prod. Vienna, 30 Dec. 1870.

#### BALLETS

- 'A jos' ('The Oracle') (with Ellenbogen), prod. Pest, 27 Dec. 1847.
- 'A szerelmes ordog' ('The Amorous Devil'), prod. Pest, 20 Sept. 1851.
- 'Apa-átok' ('Father's Curse'), prod. Pest, 4 May 1854.
- 'Toborzók' ('Recruiters'), prod. Pest, 27 June 1854.
- 'Irene', prod. Vienna, 18 Aug. 1858.
- 'Der Kaminfeiger von London', prod. Vienna, 16 Sept. 1859.
- 'Rosina', prod. Vienna, 3 May 1861.
- 'Das Waldfraulein', prod. Vienna, 8 Oct. 1864.
- 'Fiammella', prod. Vienna, 12 Mar. 1867.
- 'Ellinor', prod. Vienna, 24 Mar. 1873.
- 'Aus der Heimat', prod. Vienna, 24 Apr. 1879.
- 'Margot', prod. Vienna, 26 May 1880.
- 'Stock im Eisen', prod. Vienna, 4 Oct. 1880.
- 'Versailles', prod. Vienna, 9 Mar. 1881.
- 'Melusina', prod. Vienna, 4 Oct. 1884.

(2) **Karl Doppler** (b. Lwów, 12 Sept. 1825; d. Stuttgart, 10 Mar. 1900), flautist, conductor and composer, brother of the preceding. He early acquired a remarkable proficiency on the flute under his father and brother. While still quite young he undertook concert tours, often with his brother, and appeared with great success in Brussels, Paris and London. He then became conductor at the National

Theatre of Pest and from 1865 to 1898 he was court *Kapellmeister* at Stuttgart. He wrote the opera 'Gránátos tábor' ('The Grenadiers' Camp'), 1853; the prize-winning 'Honfidal' ('Patriotic Song'), 1857; 'Magyar Idylla zongorára' ('Hungarian Idyll' for pianoforte), 1859; songs, operatic transcriptions for pianoforte; pianoforte duets; flute music.

(3) **Árpád Doppler** (b. Pest, 5 June 1857; d. Stuttgart, 13 Aug. 1927), pianist and composer, son of the preceding. He studied at the Stuttgart Conservatory, where for some time he gave pianoforte lessons until he went to New York in 1880 to take up a teaching appointment at the Grand Conservatory. In 1883 he returned to his old post at Stuttgart and in 1889 he became chorus master at the Court Theatre there. Besides pianoforte music Doppler composed an opera on Shakespeare's 'Much Ado about Nothing', a comic opera, 'Haligula' (Stuttgart, 1891) and a 'Fest-Ouverture', a Suite in B $\flat$  major and a Theme and Variations for orchestra.

**DORATI, Antal** (b. Budapest, 9 Apr. 1906). American conductor of Hungarian birth. He studied at the Budapest Academy of Music with Kodály, Bartók and Weiner, and in 1924, at the age of eighteen, he made his début as conductor at the Budapest Royal Opera. He became Fritz Busch's assistant at the Dresden State Opera in 1928 and was musical director of the Municipal Opera at Munster from 1929 to 1932. During this period he was offered guest engagements at the opera-houses of Frankfurt o/M. and other German cities. For five seasons, beginning with 1935, he conducted the Monte Carlo Russian Ballet at Covent Garden in London and on tour in Europe, Australia and New York. He made his American début as a symphonic conductor at Washington in 1937 and became permanently resident in the U.S.A. in 1941. There he was musical director of the Monte Carlo Ballet until 1945 and the New Opera Company in New York in 1941, and also guest conductor of several prominent orchestras. In 1945 he became the conductor of the revived Dallas (Texas) Symphony Orchestra, and this he soon made one of the country's major orchestras. In 1949 he succeeded Dimitri Mitropoulos as conductor of the Minneapolis Symphony Orchestra.

As an orchestral conductor Dorati has also made guest appearances in Europe in the 1930s and the years following the second

world war, in Australia (1939 and 1940) and in Peru (1945). A talented and versatile conductor, he is distinguished for his interest in modern music. His ballet arrangements include the frequently performed 'Graduation Ball', and he has also composed orchestral and other instrumental music and songs.

E. D. P.

**DORATI DI GRANAIOLO, Niccolò** (b. Castle of Granaiole, Lucca, c. 1513; d. Lucca, 1593).

Italian trombonist and composer. He was appointed trombone player to the town chapel of Lucca on 27 Dec. 1543 and *maestro di cappella* on 9 Feb. 1557, which post he still occupied in 1579. He composed 6 books of madrigals, also motets and songs.

E. v. d. s.

**Doré, Louis Auguste Gustave.** See Caricature.

**DORÉ, Gustave** (b. Aigle, Canton Vaud, 20 Sept. 1866; d. Lausanne, 19 Apr. 1943).

Swiss conductor and composer. He studied under Joachim at the High School for Music in Berlin and under Massenet, Saint-Saëns, Marsick and Dubois in Paris. Between 1893 and 1895 he was assistant conductor of the Concerts d'Harcourt in Paris and organized a series of historical concerts, after which he became conductor of the Société Nationale de Musique and of the Opéra-Comique. In 1896 he conducted the symphony concerts at the Swiss National Exhibition in Geneva. In 1913 he was made a Chevalier of the French Legion of Honour and in 1926 he was promoted to the rank of Officier of the order. In 1936 he became a corresponding member of the Institut de France. His homes were at Lutry-Lausanne and in Paris. He received the freedom of the towns of Mézières, Lutry and Aigle, was a doctor *honoris causa* of Lausanne University and honorary member of the Schweizerischer Tonkünstlerverein.

Doré, whose work was many-sided in its scope, achieved most in the field of vocal music. He wrote both solo songs and part-songs, and many of his simple yet ingenious and charming melodies have become a national possession. He may be ranked with Émile Jaques-Dalcroze as the real founder of the French-Swiss popular song. Doré is, besides, one of the few Swiss composers who have succeeded in writing operas worthy of note. He made himself a name by his setting of René Morax's 'La Fête des vigneronns' (1905). Other operas, based on plays by Morax, 'Henriette', 'Aliénor', 'La Nuit des quatre temps', 'Tell', 'Davel', were all performed at the open-air Théâtre d'Art du Jorat, founded at Mézières by René and Jean Morax in 1903. His other works are the following:

Light opera 'En prison', 1892  
Opera 'Maedeli' (H. Cain & D. Baud-Bovy), 1901.  
Opera 'Les Armaillis' (Cain & Baud-Bovy), 1906  
Opera 'Le Nam du Hasli' (Cain & Baud-Bovy), 1912.

Opera 'La Tisseuse d'orties' (René Morax), 1927  
 Mass 'Dona nobis pacem'  
 Oratorio 'Les Sept Paroles du Christ'  
 2 Cantatas  
 2 Hymns.  
 Orchestral pieces  
 Songs with orchestra  
 Songs with pianoforte.

Doret was also an assiduous critic and writer on music, in which capacity he remained fruitfully productive down to the last years of his life. His literary works include the following:

'Musique et musiciens' (1915)  
 'Lettre à ma nièce sur la musique en Suisse' (1919).  
 'Pour notre indépendance musicale' (1920)  
 'Temps et contretemps' (1942).

See also Diabelli (for sequel).

**DÖRFEL, Alfred** (b. Waldenburg, Saxony, 24 Jan. 1821; d. Leipzig, 22 Jan. 1905).

German organist, pianist and critic. He received his first musical education from the organist Johann Trube. In 1835 he went to Leipzig, where he received instruction from Karl Kloss, G. W. Fink, C. G. Müller, Mendelssohn and Schumann. In 1837 he made a successful appearance as a pianist, and soon afterwards he attained to a high position as a music critic. In the 'Neue Zeitschrift für Musik' he wrote some reviews of Schumann's works which anticipated the verdict of posterity, although they did not correspond with contemporary opinion concerning that master's greatness. His criticism of 'Genoveva' gave the composer great pleasure.

From 1865 to 1881 Dorfel contributed to the 'Leipziger Nachrichten', and in 1860 he was appointed custodian of the musical department of the town library. In the following year he established a music lending library together with a music-selling business, in both of which he was succeeded in 1885 by his son, Balduin. This business afterwards became the basis of the lending library of the Peters firm. He undertook much work for the firm of Breitkopf & Hartel, whose critical editions of the classics, and especially that of Beethoven, were corrected chiefly by him. For Peters he edited the pianoforte works of Schumann and other compositions, and several of the Bach-Gesellschaft volumes were issued under his direction. In 1887 he edited the spurious St. Luke Passion for the first-named firm. To the literature of music he contributed an edition of Berlioz's treatise on Instrumentation, the second edition of Schumann's 'Gesammelte Schriften' and an invaluable history of the Gewandhaus concerts from

1781 to 1881 ('Festschrift zur hundertjährigen Jubelfeier . . .', Leipzig, 1884), in recognition of which the University of Leipzig conferred upon him an honorary doctorate in 1885. H. B.

**DORI, LA** (Opera). See CESTI.

**DORIAN (Doric)**. See MODES.

**DORIAN, Frederick** (b. Vienna, 1 July 1902).

American musicologist and music critic of Austrian birth. He was educated at the Arnold Schoenberg Seminary and the State Academy of Music in Vienna and at the University, where he obtained the Ph.D. in 1925. From 1929 to 1933 he was music critic of the 'Berliner Morgenpost' and then for a year the Paris music critic of the 'Frankfurter Zeitung'. Before he left Europe he wrote a valuable study of Beethoven's fugue treatment, 'Die Fugearbeit in den Werken Beethovens', published in Vol. XIV of S.M.W.

Since 1936 Dorian has been Professor of Music at the Carnegie Institute of Technology, Pittsburgh. He is chairman of the Pittsburgh chapter of the I.S.C.M. and musical director of the orchestra and chorus at the Carnegie Institute of Technology. Apart from his writings and articles as a music critic Dorian has written three books on music: 'The History of Music in Performance' (1942), 'The Musical Workshop' (1947) and 'The Workshop of the Modern Composer' (1952).

M. K. W.

**"DORIAN" FUGUE.** The familiar though inaccurate name given to Bach's Organ Fugue in D minor, preceded by the Toccata in the same key. The piece is not in the Dorian mode, but in pure D minor; the nickname is due to its being written without a key-signature. This certainly suggests the Dorian mode at first sight, but the accidentals proper to D minor (B $\flat$  and C $\sharp$ ) are inserted casually from bar to bar throughout, not to mention those called for by modulations into other keys. This procedure was not peculiar to Bach: it is found in other composers of the period, e.g. Handel, who would often write, for example, a piece in G minor with one flat in the key-signature.

**DORMAN, Elizabeth.** See YOUNG (7).

**DORN, Heinrich (Ludwig Egmont)** (b. Königsberg, 14 Nov. 1804; d. Berlin, 10 Jan. 1892).

German conductor, teacher and composer. He went through the curriculum of Königsberg University, and after visiting Dresden (where he made Weber's acquaintance) and other towns of Germany, fixed himself in Berlin in 1824 or 1825. He set seriously to work at music under Zelter, Klein and L. Berger, mixing in the abundant intellectual and musical life which at that time dis-

tinguished Berlin, when Rahel Varnhagen von Ense, Heine, Mendelssohn, Klingemann, Marx, Spontini, Devrient, Moscheles, Reissiger and many more were among the elements of society. With Spontini and Marx he was very intimate, and he lost no opportunity of defending the former with his pen.

In Berlin Dorn brought out an opera, 'Die Rolandsknappen', with success in 1826. He then became successively teacher at Frankfurt o/M. and Königsberg. In 1829 he went to Leipzig and remained there till 1832, when temporarily he filled Krebs's place at Hamburg. At Leipzig he taught counterpoint to Schumann and produced his most successful opera, 'Der Schöffe von Paris', in 1838. After leaving there, his next engagements were at the theatres of Hamburg and Riga. In the latter place he succeeded Wagner in 1839. At Riga he remained till 1843, when he was called to succeed Conradin Kreutzer at Cologne. During the five years of his residence there he was fully occupied, directing the festivals of 1844 and 1847, founding the Rheinische Musikschule (1845) and busying himself much about music, in addition to the duties of his post and much teaching. In 1849 Dorn succeeded Nicolai as conductor of the Royal Opera in Berlin, in conjunction with Taubert. This post he retained till the end of 1868, when he was pensioned off in favour of Eckert and was given the title of Royal Professor. He subsequently occupied himself in teaching and writing, in both which capacities he had a great reputation in Berlin.

Dorn was a musical conservative and a bitter opponent of Wagner. It is curiously ironical, therefore, that he should have brought out an opera on the 'Nibelungenlied' long before Wagner's 'Ring' was completed (1854). He was musical editor of the 'Post', and wrote also in the 'Gartenlaube' and the 'Hausfreund'. His account of his career, 'Aus meinem Leben' (3 vols., Berlin, 1870) and 'Ostracismus' (Berlin, 1874), are among his more valuable books. As a conductor he was one of the first of his day, with every quality of intelligence, energy, tact and industry to fill that position. His compositions include:

#### OPERAS

- 'Die Rolandsknappen' (Berlin, 1826).
- 'Die Bettlerin' (Königsberg, 1828).
- 'Abu Kara' (Leipzig, 1831).
- 'Der Schöffe von Paris' (Riga, 13 Nov. 1838).
- 'Das Banner von England' (Riga, 1841).
- 'Die Nibelungen' (Berlin, 27 Mar. 1854).
- 'Ein Tag in Russland' (Berlin, 1856).
- 'Der Botenläufer von Finn' (Mannheim, 1865).
- 'Gewitter bei Sonnenschein' (Dresden, 1865).

#### BALLET

- 'Amers Macht' (Leipzig, 1830).

Dorn also wrote a Requiem, many cantatas, symphonies and other orchestral works, among

which the most important is 'Siegesfestklänge', numerous pianoforte pieces, songs, etc.

**DORNAUS, Peter.** } See HORN, p. 374.  
**DORNAUS, Philipp.**

**DORNEL, Louis Antoine** (b. ? , c. 1685; d. Paris, 1705).

French organist and composer. In 1706 he won, in competition with Rameau, the post of organist to the Paris church of Sainte-Madeleine en la Cité; he was afterwards for many years chief organist at Sainte-Geneviève. Dornel was regarded by his contemporaries as a master of the organ and of the harpsichord. An honest executant, he left numerous compositions, religious and secular, psalms, motets, harpsichord pieces (1731), a book of 'Symphonies en trio' (1709), a book of Sonatas for violin alone, and suites for flute with bass (1711), of good technical workmanship, but no more.

**DORSET GARDEN THEATRE.** This house was erected in London upon the garden of a mansion belonging to the Earl of Dorset, on the bank of the Thames at the bottom of Salisbury Court, Fleet Street. William Davenant had obtained a patent for its construction in 1639 and another in 1662, but from various causes the building was not erected in his lifetime. His widow, however, built the theatre from the designs of Sir Christopher Wren; and the duke's company, removing from Lincoln's Inn Fields, opened it 19 Nov. 1671. It became celebrated for the production of pieces of which music and spectacle were the most prominent features, among which the most conspicuous were:

Davenant's adaptation of Shakespeare's 'Macbeth', with Locke's music, 1673; Shadwell's adaptation of Shakespeare's 'Tempest', with music by Locke, Humfrey and others, 1674; Shadwell's 'Psyche', with music by Locke and Draghi, Feb. 1675; Charles Davenant's 'Circe', with Banister's music, 1676; and Lee's 'Theodosius', with Purcell's music, in 1680.

In 1682 the king's and duke's companies were united and generally performed at Drury Lane; but operas and other pieces requiring a large space for stage effects were still occasionally brought out at Dorset Garden, among them:

Dryden's 'Albion and Albanus', with Grabu's music, 1685; 'The Fool's Preferment', with Purcell's music, 1688; 'Dioclesian', with Purcell's music, 1690; 'King Arthur', with Purcell's music, 1691; 'The Fairy Queen', with Purcell's music, 1692; 'Epsom Wells', and 'The Female Virtuoso', with Purcell's music, 1693; 'Don Quixote', parts 1 and 11, 1694, and Powell and Verbruggen's 'Brutus of Alba', with Daniel Purcell's music, in 1696.

In 1699 the house was let to William Joy, a strong Kentish man styled "The English Samson", and for exhibitions of conjuring, fencing and even prize-fighting. It was again opened for the performance of plays in 1703 and finally closed in Oct. 1706. After the demolition of the theatre the site was successively occupied as a timber yard, by the New River Company's offices and the City Gas Works. An engraving showing the river front of the theatre was prefixed to Elkanah Settle's 'Empress of Morocco' (1673), another, by Sutton Nicholls, was published in 1710 and a third in the 'Gentleman's Magazine', July 1814.

**DORUS-GRAS, Julie** (Aimée Joséphe) (real name *Steenkiste*) (*b.* Valenciennes, 7 Sept. 1805; *d.* Paris, 6 Feb. 1896).

Belgian soprano singer. Dorus was the name of her mother. She was the daughter of the leader of the orchestra at Valenciennes and educated in music by her father. At the age of fourteen she made a début at a concert with such success as to obtain a subsidy from the authorities to enable her to study at the Paris Conservatoire. There she was admitted on 21 Dec. 1821 and received instruction from Henri and Blangini. With a good voice and much facility of execution, she obtained the first prize in 1822. Paer and Bordogni then helped to finish her education. To the former she owed her appointment as chamber singer to the king. In 1825 she began her travels, going to Brussels first, where she sang with such success as to receive proposals for the Opera. She now gave six months to study for the stage, and made a brilliant début.

After the Revolution of 1830 Dorus went to the Paris Opéra and made her first appearance in Rossini's 'Comte Ory'. On the retirement of Laure Cinti-Damoreau from the Opéra in 1835, Dorus succeeded to the principal parts. In 1839 she visited London. Having married Gras (*b.* Amiens, 29 Oct. 1800, *d.* Étretat, 9 July 1876), one of the principal violins at the Opéra, on 9 Apr. 1833, Dorus for some years kept her maiden name on the stage. She retired from the Opéra in 1845, but she continued to sing occasionally in Paris and in the provinces. In 1847 she reappeared in London and renewed her former triumphs, as she did again in 1848 and 1849. In 1850-51 Dorus-Gras remained in Paris, singing at a few concerts; but after that her artistic career came to an end.

**DOS ANJOS, Diniz.** See ANJOS

**DOSSOR, Lance** (Harry Lancelot) (*b.* Weston-super-Mare, 14 May 1916).

English pianist. The son of Seymour Dossor, a tenor singer, he was educated at Seaford College and matriculated at London University. In 1932 he won an open scholar-

ship to the R.C.M. in London, where he studied pianoforte with Herbert Fryer and composition with Herbert Howells. He is the winner of two international prizes: the Franz Liszt Prize in the International Competition for Piano-Playing, held in 1936 at Vienna, and in 1937 the Sonata Prize in the Chopin Competition at Warsaw. The same year he was awarded the medal of the Worshipful Company of Musicians. His London début was made in Oct. 1937. Lance Dossor is regarded as one of the foremost English pianists and has won added recognition since the second world war.

T. W. G.

**DOSTÁL, Jiří** (*b.* Prague, 23 Apr. 1906; *d.* Prague, 26 Feb. 1952).

Czech critic and writer on music. He studied at Prague University and took the D.Sc. in 1925 and Ph.D. in 1945. He also studied musical science under Nejedlý, Zich and Hutter, and musical theory privately under Řídík. From 1933 he worked in the Central Prague Library and became the administrator of its music department — called The Library of B. Smetana — in 1939. In 1937-48 he was music critic of the daily 'Ladové Noviny'. He also wrote numerous studies and articles for musical periodicals and almanacs. Of his larger works the most important is 'Jar. Křička' (1944). He edited the 'Jan Kubelík' symposium (1942), where he gave a detailed biography and catalogue of works of the famous Czech violinist.

After the political changes in Feb. 1948 Dostál was obliged to give up his critical activity. In 1951 he also left the Prague Central Library and became a transport worker.

**DOT DE SUZETTE, LA** (Opera). See BOIELDIEU.

**DOT, LA** (Opera) See DALAYRAC.

**DOT-WAY.** An English 17th-century system of notation for recorders — in fact a tablature — with staves of a number of lines, each of which represented one of the finger-holes. Dots placed over the lines showed which of the fingers were to be held down for each note.

**DOTTED NOTES.** (i) The dot after a note has different meanings in pre-Baroque music, in Baroque music and in post-Baroque music.

(A) In Mensural Notation (13th to 16th centuries) these meanings are basically two: (a) the *punctus divisionis* (dot of division) divides groups of notes to avert rhythmic ambiguity, (b) the *punctus additionis* (dot of

addition) increases the time-value of the note after which it is set by one half.<sup>1</sup>

(B) During the late 16th century, the 17th and the greater part of the 18th the dot of division disappeared, but the dot of addition acquired a variable meaning, *i.e.* an increase in time-value either of one half, or of rather more, or of rather less. This indeterminate dot was used partly for mere convenience of notation, *e.g.* in triplet and compound ternary rhythms, to serve in place of the double dot before its invention (*see below*); to save tied notes, etc. But its flexibility was also put to deliberate advantage in order to avoid a rigid notation of certain rhythms whose exact proportioning it was preferred to leave to the performer, thereby encouraging him to vary it according to mood and context, but under the guidance of conventions then familiar. It is therefore essential for the interpretation of much Baroque music to become acquainted with these conventions.<sup>2</sup>

The use of the indeterminate dot declined during the latter part of the 18th century. It became usual to notate triplet and compound ternary rhythms exactly and to employ tied notes to the exact value intended. Neither of these usages was at all an innovation at that date; but before the mid-18th century the double-dotted note seems unknown. It was used quite tentatively and apologetically by C. P. E. Bach in his 'Versuch' of 1753<sup>3</sup>, (a) being usual notation, (b) C. P. E. Bach's interpretation, and (c) and (d) "new indications":

(C) The combination here shown of a dot with a staccato dash did not become established, no doubt because to treat a dot as a rest or silence of articulation in suitable contexts was the normal Baroque convention in any case. But the double dot became generally accepted. Leopold Mozart used it (also with an apology) in his 'Violonschule' of 1756; yet Marpurge made no mention of it in 1750. In Türk's 'Clavierschule' of 1789 it appears in its normal modern usage. Wolfgang Mozart used the triple dot in the "Haffner" Symphony. One reason for the indeterminate dot was thus removed, and its existence is not recognized in modern times, though in practice the length of the dot in sharply dotted rhythms (especially in marches and comparable music) is habitually and instinctively

increased, often partly in the form of a silence of articulation, the little note or notes immediately following being correspondingly delayed and shortened.

Apart from such largely unconscious modifications in the interests of spontaneous interpretation, it is 19th- and 20th-century practice to use the single dot to increase the time-value by one half; the double dot by half the first increase; the triple dot by half the second increase in addition; and so on if desired. This gives:

In old music a dot was sometimes placed at the beginning of a bar, having reference to the last note of the preceding bar (*see 1 below*): this method of writing was not convenient, as the dot might easily escape notice, and it is now superseded by the use of the *bind* in similar cases (*see 2*):

The older way of representing this was, however, occasionally revived by Brahms. Historically it was a relic of the early part-books in which bar lines were not used at all.

Handel and Bach, and other composers of the early part of the 18th century, were accustomed to use a convention which often misleads modern students. In 6-8 or 12-8 time, where groups of dotted quavers followed by semiquavers occur in combination with triplets, they are to be regarded as equivalent to crotchets and quavers. Thus the passage

not with the semiquaver sounded after the third note of the triplet, as it would be if the phrase occurred in more modern music.

(ii) The dot over or below a note is the normal modern sign for a moderate staccato of various kinds.<sup>4</sup> This use was familiar to C. P. E. Bach and encouraged by him; earlier writers had employed such dots under a slur to indicate separate notes taken in the same stroke of the bow (*e.g.* Marin Marais in 1701<sup>5</sup>); but the normal Baroque meaning

<sup>1</sup> See NOTATION.

<sup>2</sup> See INÉGALITÉ.

<sup>4</sup> See STACCATO.

<sup>5</sup> 'Pièces de viole' (Paris, 1701).

of such dots is not necessarily staccato, but equal in rhythm where convention would otherwise require the notes so marked, though written equally, to be performed unequally.<sup>1</sup> The normal Baroque staccato sign is not the dot but the dash, which both then and now implies a fairly extreme degree of staccato, a mild degree being taken for granted in far more contexts by Baroque than by 19th- and 20th-century composers.

**DOTZAUER, (Justus Johann) Friedrich**  
(b. Hildburghausen, 20 June 1783; d. ?, 6 Mar 1860).

German violoncellist, teacher and composer. His teachers were Heuschkel, Gleichmann and Ruttinger — a pupil of Kittl and therefore only two removes from J. S. Bach. For the cello he had Kriegck of Meiningen, a famous virtuoso and teacher. He began his career in the Meiningen court orchestra in 1801 and remained there till 1805. He then went by way of Leipzig to Berlin, where he found and profited by B. Romberg. In 1811 he entered the royal orchestra at Dresden, where he remained till his retirement in 1852; until his death he was occupied in playing, composing, editing and, above all, teaching. His principal pupils were Kummer, Drechsler, C. Schuberth, and his own son, C. Ludwig Dotzauer.

His works comprise an opera, 'Graziosa' (1840), masses, a Symphony, several overtures, 9 quartets, 12 concertos for cello and orchestra, sonatas, variations and exercises for the cello. He edited Bach's 6 sonatas for cello solo and left an excellent Method for his instrument.

E. v. d. s.

**DOUBLE** (Eng. & Fr.). (1) In French the word is the old name for "variation", especially in harpsichord music, of the kind which changes the melody by mere embellishment with ornamentation. Such variations were never accompanied by any change in the supporting harmonies. No doubt the word originally came from the practice of quickening the note-values by halving or in another sense "doubling" them, and it was thus the equivalent of the old English word "divisions"; but the ornamentation could take other forms, such as trills or turns on separate notes, etc. Examples are numerous in the works of the early 18th-century masters. Handel's variations on the so-called 'Harmonious Blacksmith' are called *doubles* in the old editions. In Couperin's 'Pièces de clavecin', Book I, No. 2, may be seen a dance, 'Les Canaries', followed by a variation entitled 'Double des Canaries', and two instances will also be found in Bach's "English" Suites, the first of which contains a 'Courante avec deux

doubles' and the sixth a Saraband with a double. The term in this sense is now entirely obsolete.

(2) In English the term is used in combination with other words to indicate a lower octave. Thus the "double bass" plays an octave lower than the bass noted in the score, so that, where cello and bass parts are one and the same in a score, the double basses automatically sound an octave below the cello. Similarly with the double bassoon. A "double stop" on the organ is a stop of the pitch known as 16-ft. pitch, an octave below the "unison" stops.

(3) In the old system of the gamut we find the following, according to Playford's 'Introduction to the Skill of Musick', p. 3: "The notes below Gam-ut [*i.e.* G on the bottom line of the bass staff] are called double Notes, as Double F, fa, ut, Double E, la, mi, and as being Eights or Diapasons to those above Gam-ut". To-day the notes in the bass octave from G, to C, (in Helmholtz pitch notation) are often spoken of by organ builders as double G, double F, etc., and they still cling to their own old pitch notation, which actually uses double lettering (CC, etc.).

(4) The word is also applied to singers who understudy a part in an opera or other vocal work, so as to replace the regular performer in case of need; and those who undertake two parts in the same work are said to "double" one with the other.

See also Regal (for "double" instruments).

**DOUBLE.** See ORGAN STOPS.

**DOUBLE** (Fr. = turn). See ORNAMENTS, C (iii).

**DOUBLE AND SINGLE.** These terms were applied in the 16th century to the smaller organs and also to the virginals, and in the 17th century to the curtall (or bassoon) and sackbut (or trombone).

A scholarly study of the subject is that of Galpin in his 'Old English Instruments of Music' (1910), App. 3. The terms as applied to keyboard instruments are peculiar to the English language, though in Germany various sizes of organ were formerly described as whole, half and quarter instruments, according to their pitch and depth of tone. Various authorities have suggested that the terms "single" and "double" referred to the number of bellows, to the number of ranks of pipes or to the number of keyboards or manuals; but Galpin has shown conclusively that these theories are untenable. The earliest occurrence of the term, "double organ", applied to a combination of a great organ and a positive (or chair) organ is in the records of Worcester Cathedral, in 1613. From that

<sup>1</sup> See INÉGALÉS.

date "single" and "double", as applied to organs and harpsichords, certainly denote a one-manual or two-manual instrument, but this does not justify the same interpretation when applied to the small portable organ in use in a previous century. Galpin offers the suggestion that the words "single" and "double" refer to the compass and pitch of the instrument. In 16th-century England the recognized musical scale, based on the Guidonian septenaries, embraced a chromatic compass from G to f". Playford (1661) states that the compass employed at the close of the Elizabethan era was confined within these limits, but adds "those below Gamut in the Bassus are called double notes. I have therefore expressed them with double letters." In Hopkins & Rimbault's 'History of the Organ' we find the same use of the word "double", in the contract for an organ for the London church of Allhallows, Barking, in 1519. The downward compass is stated to be "dowble Cc, fa, ut", or C in the pitch notation now generally used.<sup>1</sup> A single regal or a single virginal, therefore, descended only to C, or to G (Gamut), while double regals and double virginals descended to C, or to G. Galpin considers this explanation will meet all the requirements of the 16th-century keyboard instruments.

Praetorius<sup>2</sup> affords conclusive corroboration, for in his article on the *Fagott* (bassoon) he states that, in England, the type descending to G was called the "single" curtall and the type reaching C the "double" curtall. He also explains that the largest *Pommer* — a fifth below the Bass *Pommer* (C-c') — was termed *Gross Doppel Quint Pommer* (F-f), and the lowest bassoons, the *Quart-* and *Quint-Fagott* — a fourth and fifth respectively below the *Choristfagott* (C-g') — were collectively termed *Doppelfagott*. Randle Holme's manuscript of 1688<sup>3</sup> includes a drawing of a "Double Curtaile" which, from the names of the keys as given by Holme, is clearly shown to be the normal 17th-century<sup>4</sup> bassoon. Holme adds: "This is double the bignesse of the single . . . and is played eight notes deeper". In fact, the term "double" is nowadays applied to an instrument or to a series of sounds pitched an octave below a recognized standard. L. G. L.

**DOUBLE APPOGGIATURA.** See ORNAMENTS, A (ii); S (ii) (3).

<sup>1</sup> Organ builders are now almost alone in retaining the old English abbreviations. See FIFTH NOTATION

<sup>2</sup> M. Praetorius, 'Syntagma musicum' . . . Tomus Secundus, 'De Organographia' (Wolfenbüttel, 1619, facsimile, 1929); and id., 'Theatrum instrumentorum' (Wolfenbüttel, 1620, facsimile, 1929).

<sup>3</sup> B.M., MS. Harl. 2034, f. 207b.

<sup>4</sup> Scholes, 'Oxford Companion to Music', s.v. Double Bassoon, errs in giving Double Curtaile as an equivalent.

**DOUBLE BACKFALL.** See ORNAMENTS, A (iii).

**DOUBLE BARS.** Vertical lines in pairs dividing a piece or movement into main sections and, when accompanied by dots, indicating that the section on the same side as the dots is to be repeated.

Thus (1) above indicates a repeated section followed by an unrepeated one, and (2) and (3) a repeated section followed by another repeated one.

In such cases the bars are usually two uniformly thin strokes, except as a rule at the end of the exposition section of a sonata-form movement. Double bars denoting, not a division or a repeat, on the other hand, but the end of a piece or movement, are always a thin stroke followed by a thick one:

The double bar is a prominent feature in the older examples of the symphony or sonata. In the first movement it occurs at the end of the first section, which is normally repeated and then followed by the working-out, or development. In certain symphonies before Beethoven, and some of Beethoven's piano-forte sonatas (e.g. the "Appassionata"), the second section was repeated as well as the first. It may be pointed out that a double bar may be placed anywhere in the measure, without affecting its value. G., adds.

**DOUBLE BASS.** See VIOLIN FAMILY. VIOL.

**DOUBLE BASS VIOL.** See VIOL.

**DOUBLE BASSOON** (Fr. *contrebassoon*; Ger. *Kontrafagott*; Ital. *contrafagotto*). The modern double bassoon, termed "Contra" for convenience, is in all respects twice the size of the bassoon and sounds one octave lower. It has a complete chromatic compass from C, or B $\flat$ , (even A $\flat$ , on some German contras) to f or even c'. The tone in the lowest register (sounding B $\flat$ , to E $\flat$ ) in sustained notes is soft and smooth, providing six valuable notes below the range of the normal double bass. The tone is easy and flexible as far as G. On the French contra the first octave key is used for G $\sharp$  to c $\sharp$  inclusive, and the second octave key for d to g $\sharp$  inclusive. Both octave keys are used for the four extreme notes a to c' inclusive, but those above f sound rather forced and dull. Notwithstanding this, Beethoven, Brahms and Ravel have written up to a' (sounding a). Music is written in the bass clef, an octave above the sound produced. Wagner in

'Parsifal', the only score in which he employed the contra, wrote for it at its actual pitch.

The instrument has had a chequered career, and this explains how, in various countries, the contra's original lowest note, D, became successively C, B $\flat$ , and finally A, as the skill of instrument makers made possible the production of such low notes. The modern contra, whether French or German, has a wooden bell-rim when C is the lowest note required, and many players play any lower note an octave higher. An inverted metal bell, however, can be slipped on the wooden bell-joint and this, with appropriate key mechanism for the left thumb, enables B $\flat$  and B, to be produced. An even larger inverted bell, partly metal and partly wood, will give A, (the lowest note on the pianoforte and the lowest sound in the orchestra). As the tube length in this case is 19 ft. 5 ins., and is specially sensitive to variations in temperature, a tuning-slide may be fitted to the large metal crook.

The contra is made in a variety of shapes to ensure compactness and is usually held precisely like a bassoon. All finger-holes, however, are covered by keys to bring them within reach of the fingers, and such is the maker's ingenuity that the player can change from bassoon to contra with ease as regards fingering. Indeed the only radical difference in technique between the contra and the bassoon consists in the two "octave keys" employed on the former. The embouchure resulting from the much larger reed is, of course, affected. Since Forsyth's 'Orchestration' would lead one to expect the continued use of three different types of contra, it should be noted that only the third of these (and German or very rarely French system) is now in use. In the recent new edition of Prout's 'Orchestra' the obsolete type known as *Contrabassophon*, never used in the 20th century (except experimentally in London in 1948 by Mr. A. C. Baines of the L.P.O.), is described and illustrated as the only type in use! In Britain the rarity of the contra outside London is regrettable, for very many works of symphonic proportions, composed in the second quarter of the century, include a contra. The dignity, solidity and richness which it contributes to the orchestral mass deserve much fuller recognition. It may be remarked, too, that these qualities afford to the contra player a remarkable sense of satisfaction which more than compensates for the necessarily subordinate nature of the part he plays.

HISTORY.—Zacconi (1592)<sup>1</sup> first mentions the "Fagotto Chorista", adding that there were other *fagotti* "a little higher or a little deeper". The deeper *fagotti* were termed

"Doppel Fagott" by Praetorius (1619)<sup>2</sup>, being either *Quartfagott* (a fourth lower descending to G,) or *Quantfagott* (a fifth lower to F.). Praetorius (1619) gives us the first detailed account of these *Fagotte* or *Dolcianen*, all of which were 2-keyed dolcians, and explains that the *Quartfagott* was suitable for sharp keys and the *Quantfagott* for flat keys. "It is very convenient", he adds, "when one can have both these kinds in the music." At this time (1619) Hans Schreiber, *Kammermusik* of the electoral court in Berlin, was said to be making a large "Fagot Contra" to sound a fourth below the *Quantfagott*, i.e. an octave below the type-instrument, the *Choristfagott*, and descending to 16-ft. C. "Should he succeed", adds Praetorius, "it will be a splendid instrument, the like of which has never before been seen, and it will really be something to marvel at." Apparently organ builders had occasionally attempted to produce 16-ft. C and D, the lowest two notes on the trombone stop, with indifferent result, and Praetorius had doubts as to Schreiber's chances of success. Be that as it may, in 1626 a *Contrafagott* is specified in the Inventory of the Barfüsserkirche, Frankfurt o/M.<sup>3</sup> It is obvious that without special machinery the boring of wooden trunks of large size can be undertaken only with difficulty and imperfectly. In addition, without modern key mechanism, the note-holes had to be bored disproportionately small and obliquely through the tube-wall to bring them within reach of the fingers. The result was that the contra satisfied neither the performer nor the audience, and for over two centuries it presented a challenge to instrument makers.

Two well-preserved late 16th-century Italian specimens of double bassoon are among eight dolcians which survive in the Kunsthistorisches Museum, Vienna.<sup>4</sup> Both are held with right hand above left, contrary to the modern bassoon, and each is probably a *Quartfagott* a fourth below the *Choristfagott*.

A *Quartfagott* was in the orchestra which accompanied a song at a musical festival held at Nuremberg in 1643 or 1644: two *pommers*, three *fagotti* and a *quartfagott*.<sup>5</sup>

Bach's earliest use of a *Doppelfagott*<sup>6</sup> is in Cantata No. 31 (of 1715), in which the part often descends to G. The St. John Passion (of 1723) prescribes *continuo pro bassono grosso*,

but the compass C-f is merely that of the *Choristfagott*. The Heckel Museum contains a facsimile of a large 2-keyed *Doppelfagott*, 4 ft 5 ins. in height, preserved in the Heyer Collection, Leipzig. The facsimile descends to Ab.<sup>1</sup> Geiringer<sup>2</sup> depicts an Italian contra in the Museum Carolino-Augustum, Salzburg, 6 ft. in height, with a bell consisting of a dragon-head and flexible tongue, made by J. M. Anciuti of Milan, 1732.<sup>3</sup> As this instrument has nine keys, it may have been considerably altered, since the four-keyed contra was current about 1732.

The earliest record of the contra in England is in Handel's 'Hymn for the Coronation' (1727).<sup>4</sup> According to Burney, Handel asked Stanesby sen., the celebrated London woodwind maker, to make a contra 8 ft. in height for use by J. F. Lampe, Handel's bassoonist, but for want of a reed or other cause no use was made of it. On 6 Aug. 1739 the 'London Daily Post' contained an advertisement of an evening concert at Marylebone Gardens at which two double bassoons by Stanesby sen. were included, "the greatness of whose sound surpasses that of any other bass instrument whatsoever: never performed with before".

A single surviving contra of this type<sup>5</sup>, 8 ft. 4 ins. in height, stamped "Stanesby Junior, London, 1739", was shown at the Royal Military Exhibition, London, 1890, and is now in the National Museum of Ireland, Dublin. Stanesby sen. died in 1734, and it seems strange that his instruments had not been played before 1739, if the press advertisement is reliable. After Handel's use of the contra in 'L' Allegro' (1740) and in the 'Fireworks Music' (1749) no more is heard of it in England until 1784. In that year, at the first Handel Commemoration in Westminster Abbey, the orchestra of 250 included a contra which was in the hands of Ashley, then first bassoon at Covent Garden Theatre. Apparently the instrument again failed to function, and Parke, principal oboe at the festival, relates<sup>6</sup> that the contra "which had never been heard was never again seen". In this, however, he was wrong, for the contra reappeared in the fourth Handel Festival in 1787<sup>7</sup> and Ashley played it at the Three

Choirs Festival at Worcester in 1788<sup>8</sup> and Jenkinson at Worcester in 1803.<sup>9</sup> Certainly we hear no more of the contra in England for half a century until c. 1855, when J. Samme of London made an 8-keyed quart bassoon in low G (preserved in the Donaldson Collection of the R.C.M. in London).

In Austria and Germany it seems that until about 1850 the inclusion of the contra in scores depended entirely upon whether it was locally available. Vienna seems to have been able to provide the contra, which explains its use, if rarely, by Haydn and Beethoven. In Vienna in 1807 a contra player was on the pay-roll of the court orchestra<sup>10</sup>, and Beethoven in a memorandum concerning a Vienna concert in 1814 mentions having had two contras.<sup>11</sup> At a Vienna performance of Haydn's 'Creation' in 1843 four contras (one being of brass) were used.<sup>12</sup> The instrument was, however, still defective and was at first considered more suitable for military bands, in which the serpent and the ophicleide were in favour. Care must be exercised in interpreting continental references to the contra in the first half of the 19th century. Confusion occurred with the so-called Russian bassoon, a form of wooden bass-horn in bassoon shape. Berlioz in 1842<sup>13</sup> met a German player who called his instrument a double bassoon, whereas it was in reality a Russian bassoon.

It was not until 1863 that a French-made contra was heard in Paris.<sup>14</sup> Thus we hear in 1800 of four serpents being used there in a performance of 'The Creation' and two ophicleides in 1844.<sup>15</sup> Neither the serpent nor the ophicleide could play the entire contra parts at pitch. A proposal in 1794 to establish at the Paris Conservatoire a class for contra did not materialize.<sup>16</sup> In 1813 Choron edited a second edition of L. J. Francoeur's 'Traité général des voix et des instruments d'orchestre', but omits the contra "as it is no longer in use". Nevertheless Isouard's 'Aladin' (1822) included an important contra part, and by 1825 the contra was much in demand in French military bands, until the arrival of saxhorns in 1846 supplanted the other bass instruments. In 1867 Verdi included the

contra in 'Don Carlos', and his example was followed by Saint-Saëns, Ambroise Thomas, Reyer and Massenet over a period of thirty years, though it seems doubtful if the parts were played on a contra even in Paris.<sup>1</sup>

The popularity of the contra in German military music led makers to attempt the construction of a satisfactory metal contra. These attempts assumed a bewildering variety of shapes and names, the principal being:

(1) The *Sarrusophone*, a family of double-reed brass instruments invented by Sarrus, bandmaster of the French 13th Regiment, and patented in 1856 by P. L. Gautrot, the Paris maker.<sup>2</sup>

(2) Johann Stehle, the Viennese maker in the 1830s<sup>3</sup> made a brass contra, 5 ft. 6 ins. in height. All fifteen holes were covered by keys, with a compass of two octaves, and though the technique was difficult the tone was said to be three times as strong as that of the usual contra.

(3) C. W. Moritz, the Berlin maker, in 1845 designed the *Clavatur-Contrafagott*<sup>4</sup>, which was an ingenious improvement upon Stehle's model, having a keyboard of black and white touches, as on the modern piano-accordion, to operate the fifteen keys. Though the instrument was officially commended in Germany in 1845, and again in 1855, Moritz's application for a Prussian patent was not granted until 1856<sup>5</sup>, a year after his death, and no surviving specimen is known.

(4) Schollnast & Sohn of Pressburg (now Bratislava, Czechoslovakia) in 1839 patented a brass contra and named it "Tritonikon" or "Universal-Kontrabass".<sup>6</sup> The total tube-length of nearly 15 ft. was folded on itself five times and had fifteen large keys of which only the first was open, giving a chromatic compass of sixteen notes from D, to F. Simplified fingering — one key for each note — is said to have entailed imperfect intonation and reduced volume of tone.

(5) V. F. Červený of Königsgratz, Bohemia, was next to attempt an improved contra.<sup>7</sup> In 1856 he produced his "Tritonikon" in E♭ in slender tuba-shape, claiming it to be an improvement upon Stehle's model of the previous year. Next he made a "Tritonikon" in B♭ (a fourth lower than his first), and this was first exhibited at the Paris Exhibition of 1867 and again in 1889, when it was the only instrument exhibited by this renowned brass maker. The tone-production was easy and the compass two octaves, but the tone-quality was very

vibrant and had little analogy with that of the true contra.

(6) Charles Mahillon of Brussels in 1868 produced his brass contra which he named "Contrebasse-à-anche".<sup>8</sup> It closely resembled Červený's "Tritonikon" in mechanism, appearance and fingering, except that its lowest note was D, instead of B♭.<sup>9</sup> Of seventeen keys two were octave keys, and all except the first were closed. The timbre of the Mahillon model was not as good as that of Červený's and the unduly prominent vibrations seemed to be due to insufficient thickness of metal. Mahillon's model was shown at the London Royal Military Exhibition, 1890, and is depicted and described in the Catalogue. Besson of London and Albert of Brussels also made these brass contras, and Orsi of Milan offers and illustrates the "Contrabasso ad ancia" in his pre-war price-list.

These brass contras had the disadvantage of particular mechanism and were not strictly contrabassoons, since they did not reproduce the notes of the bassoon in the contra octave with the fingering of the bassoon. Hence arose the difficulty of persuading bassoon players to adopt them.

(7) In 1855 Louis Muller of Lyons patented<sup>10</sup> his "Mullerphone"<sup>11</sup>, which was coiled in parallel tubes in bassoon shape and pitched an octave lower. That the bore was cylindrical, the bell of metal and the key arrangement on a new plan is all we know of this type. No specimen survives.

(8) In 1847 H. J. Haseneier of Coblenz designed a wooden contra which he named "Contrabassophon"<sup>12</sup>, and the instrument was submitted in 1849 to various tests and highly praised. This model, which was destined to find employment in England, was closely copied by the following:

(a) Ch. Geipel, Breslau: 17 keys, H. 4 ft. 6 ins.

(b) C. Fr. Doelling & Sohn, Potsdam: 20 keys, H. 4 ft. 5 ins.

(c) Geo. Berthold & Sohne, Speyer o/Rhine: made of papiermâché, H. 4 ft. 7 ins.

(d) Alfred Morton<sup>13</sup> (1827-98), London, whose copies of Haseneier's model, made c. 1875, were played at the Crystal Palace concerts, at Richter's concerts and in the Coldstream, Grenadier and Scots (Fusilier) Guards

<sup>5</sup> Morton was born in 1827 and went to Vienna, where he was apprenticed to the well-known makers Joseph Uhlmann & Sons, concluding his apprenticeship in 1847. Returning to London he appears to have been a chandelier maker, but ultimately settled in Clapham Park Road as a maker of excellent oboes, corn anglas, bassoons and contras. He died on 2 Jan. 1898.

<sup>7</sup> Pierre, 'La Facture' . . ., p. 34.

Bands. Morton also made a semi-contra in F, of identical design, for Sullivan, said to have been for use in the Savoy Theatre (opened 1881). Efforts to trace this instrument since it was lent by Sullivan to the Royal Military Exhibition in 1890 have failed, and the writer was assured by the late Sir Henry Wood that never in his time was a contra used in the orchestra of the Savoy. Sullivan employed the contra in 'The Martyr of Antioch' (1880), 'The Golden Legend' (1886), etc., but does not indicate a transposition for a contra in F.

Haseneier's Contrabassophon attracted the attention of Dr. W. H. Stone (1830-91), an accomplished amateur performer on tenoroon, bassoon and contra, who wrote the articles on these and other instruments in the first and second editions of this Dictionary. Writing of the double bassoon he states: "It has been considerably improved by Herr Haseneier of Coblenz and subsequently improved by the writer, who has introduced it into English orchestras . . . as made on the writer's design by Haseneier". Stone indicates that the contra had gone completely out of use until the Handel Festival of 1871 at which he played the contrabassophon. The present writer had the good fortune to have for some years on loan from Mrs. Cyril Spottiswoode of London the actual contrabassophon owned and played by Dr. Stone, exhibited at the International Inventions Exhibition, 1885, and at the Royal Military Exhibition, 1890.<sup>1</sup> An original reed — 3½ ins. long and 1½ ins. broad — enabled one to assess the powerful, vibrant tone produced by this model. The tube, 16 ft. 4 ins. in length, is truly conical, enlarging from ¼ in. to 4 ins. diameter at the bell. Curved four times on itself it is 4 ft 8 ins. in height and weighs some 18 lbs., so that a broad leather strap 4 ft. long over the shoulder is needed to support the weight. The extreme compass is three octaves — C, to (middle) c', but g is recommended as the upper limit. The holes are all covered by keys which are arranged so that a bassoon player can change over without difficulty:

- C, to F is not overblown;
- F, to F is overblown at the octave to give F to f without any octave key;
- f to c' is overblown as the twelfths from B<sub>1</sub> without any harmonic keys.

The holes are of gradually increasing diameter (1½ ins. to 2½ ins.), placed in their acoustically correct positions. The large reed, the wide bore and the large lateral holes combine to produce a magnificent powerful "open" tone which, however, entirely lacks the "closeness" of bassoon tone and is difficult to subdue. The late D. J. Blaikley thus accounted for the disuse of this type as soon as the narrow-

bored German and French types became available in Britain.

(9) W. Bradka (1822-1907) of Gumpoldskirchen near Vienna made, for an exhibition in 1888, a very neat contra<sup>2</sup> on Haseneier's model. Descending to contra C, it has 22 keys with a water-key on the crook. Tube-length 14 ft. 9 ins.; diameter of bell 3.3 ins.; height, 4 ft. 5 ins.

(10) Fontaine-Besson of Paris in 1890 patented a contra<sup>3</sup> on Morton's model (i.e. Haseneier's) to meet French requirements, and it had the advantage of descending to B<sub>1</sub>..

All these, then, except the last were contras having C, as their lowest note.

In Germany J. A. Heckel was making tall contras of bassoon shape descending only to D.<sup>4</sup> In 1876 he and his son decided to transform their model in imitation of the folded shape of Haseneier's type. The first model<sup>5</sup>, descending to C<sub>1</sub>, was divided into three parallel tubes and was held at the left side of the player, the left hand lowermost (on the tenor-joint). The fingers of both hands had, however, the same functions as on the normal bassoon. This curious and confusing design, patented<sup>6</sup> in Germany by F. Stritter in 1877 (when he left the Heckel factory after six years' work under J. A. Heckel), had, however, but a short existence, for about 1879 the original form of the modern German contra was produced by Heckel. The vertical wooden bell still took the compass down only to C, and this was the type which was played to Wagner at Bayreuth in Oct. 1879, when the composer was so much impressed that he included a contra in 'Parsifal', his only subsequent composition.<sup>7</sup> During the last twenty years of the 19th century Heckel made improvements in the bore of the contra and about 1895 extended the compass first down to B<sub>1</sub>.., and about 1898 still farther to A<sub>1</sub>.., an octave below A, (to which he had earlier extended the compass of the bassoon at Wagner's suggestion). It may be noted that frequently C, is still the lowest note on contras, and one can sympathize with players who find the additional tubing heavy to transport and even heavier to support.

Before dealing with the modern French contra, mention may be made of two further Central European types, both, however, of mere historical interest.

<sup>7</sup> Catal. Royal Military Exhibition, No. 171, pp. 81-82, and Plate VIII, B.

In 1873 Červený invented a "Subkontrafagott" <sup>1</sup> in B $\flat$  — an octave below the contra-bassoon — with a compass B $\flat$ ,,, to B $\flat$ . Now B $\flat$ ,,, — 64-foot B $\flat$  — is a tone below C,,, which has only sixteen vibrations, and it is difficult to imagine the tone of this giant contra. From its pitch — B $\flat$  — and the fact that Červený was a brass maker, we may assume that this model was of brass and was for military use, doubled in the upper octave by other brass basses. Unfortunately we know of no surviving specimen.

In 1886 'Musical Opinion' <sup>2</sup> announced a new contra invented by Professor A. Brauenlich of Dresden. This contra was made exactly twice as large as the bassoon made by Meyer of Hanover, and the availability of B $\flat$ ,, and B $\flat$ ,, was claimed as a great advantage over the contras of Bradka of Vienna, Heckel of Biebrich or Haseneier of Coblenz.

Mention has been made of a French contra modelled on that of Haseneier. In 1860, however, F. Triébert, the renowned Parisian oboe maker, and A. Marzoli, first bassoonist at the Théâtre-Italien, made a contra of bassoon shape, nearly 8 ft. in height and a conspicuous feature in the orchestra of the Société des Concerts du Conservatoire in 1863.<sup>3</sup> Experiments by P. Goumas, a Paris maker, resulted in Évette & Schaeffer, his successors, producing in 1885 a similar wooden contra with 15 keys and descending to C,,, but having the same disadvantage of being 8 ft. in height. C. Pierre was not favourably impressed by this contra, which he heard at the Paris Exhibition of 1889.<sup>4</sup> On that occasion, however, Martin Thibouville sen. presented his first attempt at an improved brass contra, designed in collaboration with Lucien Jacot of the Opéra-Comique. By coiling the tube of 17 ft. 8 ins in four lengths he reduced the height to under 5 ft., and the weight was 11 lbs. All holes were covered and 19 keys and 6 plates were so arranged as to retain the fingering of the French bassoon.<sup>5</sup> Évette & Schaeffer, who acquired the old-established business and trade-mark of Buffet-Crampon et Cie, then made a similar brass contra.<sup>6</sup> The progress of the Heckel contra, however, soon led them to build a contra of wood, closely resembling the German type except that, of course, French fingering was retained. The new contra was first heard about 1906 in Richard Strauss's 'Salome' at the Paris Opéra, and it gave great satisfaction. Strauss wrote in that work a contra solo of considerable difficulty. The modern Buffet-Crampon contra, like the

German, has a wooden bell-rim for the vertical bell giving C,,, and an inverted metal bell which can be slipped on when B $\flat$ ,, is required.<sup>7</sup> A bell for A,,, is not made in France.

Pierre states that in 1890 there were in London only two contra players — one the eldest son of Alfred Morton (already mentioned as working in association with Dr. Stone); the other, either Dr. Stone himself or perhaps Davies, who for many years played a Morton contra in the Scots Guards Band. His actual instrument is now in the Donaldson Collection, London. Morton's few contras and the Haseneier original (owned by Dr. Stone) were the only contras in use in Britain until the early 1900s. Naturally the improved tone and easier manipulation of the French and German contras of Buffet and Heckel respectively quickly gained approval. At first the French type was general because bassoons on the French system were then most popular, but the taste for German bassoon tone grew and professional players, highly skilled on the French system, even changed over to the German. The adoption of German contras followed naturally, and the Heckel type or copies of it are those in use in British orchestras to-day. Radio and gramophone recordings have done much to familiarize listeners with the tone of the contra. Its normal function, to support the orchestral mass in *utti* passages, naturally allows small opportunity of hearing it alone.

Mozart employed the contra on the rarest occasions. It is heard with excellent effect in the 'Masonic Dirge' (K. 477) in G minor, which dates from 1785. C,,, the lowest note used, occurs thrice and is noticeable from the absence of bassoons in the scoring. In the Serenade No. 10, in B $\flat$  major, for 13 wind instruments (K. 361) the contrabassoon has been used instead of the double bass.

Haydn in 'The Seven Words from the Cross' (dating from 1786) includes the contra in a Largo in A minor for 12 wind instruments and in the "Terremoto", taking it down to C,. In 'The Creation' (1795-98) he takes the contra down to B $\flat$ ,, in No. 22, "Now Heaven in fullest glory shone", and again in No. 34, "Sing to the Lord, ye voices all". In 'The Seasons' (1799-1800) he reverted to C, as the downward limit, which occurs near the opening of No. 19, descriptive of the storm.

Beethoven's use of the contra is something of a problem, as he did not normally write an independent part, but merely indicated in the double-bass part *contrafagotto col basso* or *senza contrafagotto*. The result is unfortunate, for quickly repeated notes, such as occur in the finale of the fifth Symphony, are foreign to the character of the contra and apt to be in-

<sup>7</sup> Illust. of both, Lavignac, *loc. cit.*, fig. 680.

effective. Forsyth<sup>1</sup> thinks that the contra parts in the ninth Symphony, for example, may have been written under a misapprehension of the instrument's limitations — a misapprehension caused perhaps by Beethoven's deafness. The contra is also included in the Mass in D major, overtures 'King Stephen' and 'The Ruins of Athens' and in the grave-digging scene in 'Fidelio', a short passage in unison with the basses. In his military music it appears in two Marches in F major (of 1810), March in D major (of 1816) and in a Polonaise in D and Écossaise in D.

Schubert only once scored for the contra, and this was in 1813 in the short 'Trauermusik' for nine wind instruments. Mendelssohn likewise appears to have included the contra only once — in the "Reformation" Symphony (1830).

Brahms, after including the contra in his first Symphony, substituted the tuba in his second, but reverted to the contra in the third and fourth Symphonies and gave it an effective part in the St. Anthony Variations. Strauss included it in most of his works, giving it difficult solos in 'Salome' and 'Elektra' and a remarkable "glissando" downwards over a ninth (written *cb* to *D*) in 'Don Quixote'. A noteworthy contra solo occurs in Ravel's suite 'Ma Mère l'Oye'<sup>2</sup>, and a telling short phrase in Dukas's 'L'Apprenti sorcier'.

It is very strange that, despite the fact that Glinka as early as 1842 gave the contra an effective part in his overture to 'Russlan and Ludmila', Tchaikovsky never employed it. This may be attributable to the want of a satisfactory type of contra in Russia until the latter part of the 19th century, for Rimsky-Korsakov included it in 'The Golden Weathercock' (1908). The contra frequently appears in modern compositions, as for example in Holst ('The Planets'), Respighi ('Pine Trees of Rome') and in the works of Elgar, Bax, Parry, Stanford, Delius and Vaughan Williams (e.g. in 'Job' and in the fourth Symphony). Stravinsky in his 'Rite of Spring' (1913) scores for two contras.

In spite of the undoubted value of the contra, there is a regrettable tendency to dispense with it sometimes on grounds of economy; also because of the rarity of the instrument and the high cost of purchase.

A complete list of over forty double-bassoon makers will be found in the Appendix to the writer's paper 'The Double Bassoon—Its Origin and Evolution' (Proc. Mus. Ass., Session LXVIII, p. 30). Of these only three are British.

The paper also contains a detailed account

<sup>1</sup> C. Forsyth, 'Orchestration', 2nd ed. (1935), p. 249.

<sup>2</sup> In an American gramophone recording the contra-bassoon has been replaced by the bass tuba, but in the writer's opinion the tone of the tuba is too hard and aggressive for the particular passage.

of the successive stages in the evolution of the instrument, and numerous illustrations

BIBL.—See Footnotes.

**DOUBLE CADENCE.** See ORNAMENTS, C (iii); D (vi).

**DOUBLE CHANT.** See CHANT.

**DOUBLE CONCERTO.** A concerto for two solo instruments and orchestra, such as Bach's for two harpsichords, for two violins, Mozart's for two pianofortes (K. 365), Brahms's for violin and cello (Op. 102) and Delius's for the same instruments.

H. C. G.

**DOUBLE COUNTERPOINT** (or **Invertible Counterpoint**). See COUNTERPOINT.

**DOUBLE ÉCHELLE, LA** (Opera). See THOMAS (A.).

**DOUBLE ÉPREUVE, LA** (Opera). See GRÉTRY.

**DOUBLE EXPRESSION** (Harmonium). See MUSTEL.

**DOUBLE FLAT** (Fr. *double bémol*; Ger. *Doppel-B*; Ital. *doppio bemolle*) The sign is  $\flat\flat$ , and it lowers a note by two semitones. It is contradicted by the sign  $\sharp\flat$  or occasionally plain  $\flat$ . The German nomenclature for the notes is *Eses, Asas, Deses*, etc. S. T. W.

**DOUBLE FUGUE.** See FUGUE.

**DOUBLE PIPE.** See AULOS (I).

**DOUBLE RELISH.** See ORNAMENTS, D (vii).

**DOUBLE SHARP** (Fr. *double dièse*; Ger. *Doppelkreuz*; Ital. *doppio diesis*). This sign raises a note by two semitones and is denoted by a  $\times$ , probably in abbreviation of  $\sharp\sharp$ . It is contradicted by the sign  $\sharp\flat$  or occasionally plain  $\sharp$ . The Germans call the notes *Cris, Fisis, Gisis*, etc. S. T. W.

**DOUBLE STOPPING.** The simultaneous sounding of two notes on the violin or other instrument of that tribe. Such notes are termed "double stops".

Strictly speaking, the term "double stopping" ought to be applied to the simultaneous sounding of two "stopped" notes only; it is, however, indiscriminately used for any double sounds, whether produced with or without the aid of the open strings. P. D.

See also Fingering (Violin). Stopping.

**DOUBLE TONGUEING.** A method of articulation applicable to the flute as well as the cornet and some other brass instruments. The oboe, bassoon and clarinet are susceptible only of single tongueing, which signifies the starting of the reed-vibrations by a sharp touch from the tip of the tongue similar to the percussion action in harmoniums. It requires long practice to give the necessary rapidity to the tongue muscles co-operating for this end. Single tongueing is phonetically represented by a succession of the lingual letter T, as in the word "rat-tat-tat". Double tongueing aims

at alternating the linguodental explosive T with another explosive consonant produced differently, such as the linguo-palatals D or K, thus relieving the muscles by alternate instead of repeated action. The introduction of the mouthpiece into the cavity of the mouth itself prevents such an alternation in the three instruments above named, but it is possible on the flute and cornet. Any intermediate vowel sound may be employed. The words commonly recommended for double tonguing are "tucker" or "ticker". Triple tonguing is also possible; and even four blows of the tongue against the teeth and palate have been achieved and termed quadruple tonguing. Indeed the system may be farther extended by employing words such as "Tikatakataka", in which dental and palatal explosives are judiciously alternated.

The term "double tongued" is applied to certain reed stops on the organ which have two tongues instead of one. W. H. S.

**DOUBLE TOUCH.** See ORGAN.

**DOUBLEDAY, Lella.** See PIRANI.

**DOUBLES.** See CHANGE-RINGING.

**DOUBLETTE.** See ORGAN STOPS.

**DOUCEMELLE (Fr.).** A keyboard instrument of the 15th century, probably similar to the chekker and thus a forerunner of the clavichord.

**DOUEMERE.** See WEERBECKE.

**Douglas, (Lord) Alfred.** See BRIAN (Symphony No. 6, 'Wine in Summer') Swan (song).

**Douglas, Keith.** See BRADFORD. Royal Philharmonic Society.

**DOUGLAS (Dowglas), Robert** (b. ?; d. ?).

Scottish 16th-century priest and composer. He was presumably of Dunkeld, but there is no information concerning him save what is contained in the 'Antiphonarium Ecclesiae Dunkeldensis' (16th century) at the Edinburgh University Library. This bears the inscription "Robert Douglas with my hand at the pen William Fischer". The manuscript contains "anthems, chiefly in honour of the B.V.M. followed by the music of the Ordinary of the Mass (Kyrie, Gloria, Credo, Sanctus, Benedictus and Agnus Dei)". Some of his works have been scored and broadcast; one, a mass, which was heard in 1935, is of supreme importance. Another work, which had been performed (1936) by the present writer, is a motet from the 'Song of Songs', vi, 'Descendi in hortum' for 5 voices, a work of majestic character. His works are under consideration for publication by the Scottish Music Society.

H. G. F.

**BIBL.**—FARMER, HENRY G., 'History of Music in Scotland' (London, 1947), p. 114.

**DOUGLAS, (Richard) Roy** (b. Tunbridge Wells, 12 Dec. 1907).

English composer. He received his first pianoforte lessons at the age of five, but is

mainly self-taught in music. He began his professional career in a seaside orchestra, later becoming orchestral pianist for the de Basil Ballet and other companies (1933-38), and pianist-organist of the London Symphony Orchestra (1937-42). His experience in this field has given him an exceptional knowledge of orchestration, and he has given much of his energy to making orchestral and other arrangements of music by other composers. In addition to many film scores and music for radio productions, his original compositions include 'Six Dance Caricatures' for wind quintet (1939), played at the National Gallery in London in 1944, an 'Elegy' for string orchestra (1946) and a Suite for oboe and string orchestra, broadcast by Leon Goossens in 1949. There are also various unpublished chamber works for unusual combinations, no longer regarded by the composer as representative. C. M. (iii).

**DOURLEN, Victor (Charles Paul)** (b. Dunkerque, 3 Nov. 1780; d. Batignolles nr. Paris, 8 Jan. 1864).

French composer. He studied at the Paris Conservatoire where, in 1800, he was entrusted with a class for elementary singing. In 1805 he gained the Prix de Rome for composition. In 1812 he became assistant teacher of harmony, for which he obtained the full professorship in 1816 and was pensioned in 1842. He composed several *opéras-comiques* for the Théâtre Feydeau, chamber music (trios and sonatas for various instruments), a piano-forte Concerto, etc., and some books on harmony on the lines of Catel's method: 'Traité d'harmonie'; 'Traité d'accompagnement'; 'Principes d'harmonie.'

E. v. d. s.

**DOW, Daniel** (b. Perthshire, 1732; d. Edinburgh, 20 Jan. 1783).

Scottish music teacher, publisher and composer. He lived as a teacher at Edinburgh and published two important collections of ancient Scottish music (ports, salutations, pi-brochs, reels, strathspeys), as well as some books of new minuets, reels and strathspeys, including many of his own composition.

E. v. d. s.

**DOW, Dorothy** (b. Houston, Texas, 8 Oct. 1920).

American soprano singer. She was educated at Ball High School, Galveston, Texas, and at Hockaday College, Dallas. She had private lessons in singing, pianoforte and dancing, and she attended the Juilliard School of Music in New York, obtaining a diploma in 1942. During her years as a student she was a soloist in various church choirs and in 1938-40 she directed the Episcopal Junior Choir. Two years later she became directress of the Methodist Adult and Junior Choirs for

a year, and from 1943 to 1944 she directed Presbyterian adult and junior choirs. Her first operatic engagement was at Buffalo, N.Y., in 1946, when she sang Santuzza in 'Cavalleria rusticana'. Since then she has sung both in opera and concerts in the U.S.A., and she has sung as guest artist at Wiesbaden, St. Gall, Zurich, Berne, Geneva, Milan, Naples and Trieste, as well as in London and at Cardiff. She was engaged by the State Theatre of Zurich in 1948-50. In England her most striking success was her appearance at Glyndebourne as Lady Macbeth (Verdi) in 1952. Her acting did little to establish the character, but her vocal performance was solid and brilliant.

M. K. W.

**DOWDING, Emily** (b. ?; d. ?).

English organist. She was from 1796 to 1814 organist of the Temple Church in London, and probably the first woman organist in England.

E. V. D. S.

**DOWGLAS.** See DOUGLAS, ROBERT.

**DOWIAKOWSKA, Karolina** (b. Warsaw, 9 Feb. 1840; d. Warsaw, 3 Feb. 1910).

Polish soprano singer. She was a pupil of G. Quattrini in Warsaw and made her début as Leonora in Flotow's opera 'Stradella' at the Warsaw Opera on 20 Apr. 1857. In 1860, after Paulina Rivoli's retirement from that theatre, Dowiakowska became its *prima donna*. She sang for over 35 years and possessed a remarkable memory, her repertory consisting of about a hundred parts.

C. R. H.

**DOWLAND, John** (b. ? London [Westminster], 1563; d. ? London, 20-21 Jan. 1626).

English (? Irish) lutenist, singer and composer. He is said by Fuller, on hearsay evidence, to have been a native of Westminster<sup>1</sup>, but the name is not found in the parish registers before 1628, when there is an entry of the burial of a Matthew Dowland. He has been claimed as an Irishman<sup>2</sup>, mainly on the strength of the dedication of a song in his 'Pilgrimes Solace' (1612) "to my loving countryman, Mr. John Forster the younger, merchant of Dublin in Ireland"<sup>3</sup>. But the assumption that the names Dolan, Dowling, Dulling, etc., are the same as Dowland is hardly admissible. Among the accounts of Trinity College, Dublin<sup>4</sup>, there are entries for

commons and sizings of "Sr" (the designation of all Bachelors of Arts) "Dowland", dated 4 May 1605. The name does not occur in Burtchaell and Sadleir's 'Alumni Dublinenses', and no degrees in music were granted there until some years later. That Dowland was in England in the winter of 1603-4 is known from the preface to his 'Lachrymae', which was registered at Stationers' Hall on 2 Apr. 1604. In any case it is unsafe to conclude that the badly written entries in the Trinity College accounts refer to him, even if the name read as "Dowland" is correct, as to which there seems some doubt. Moreover, in the preface to his 'Pilgrimes Solace' he addresses the public as "my loving countrymen", so that the expression merely seems to distinguish Englishmen from the foreigners among whom he had lived for so long.

Dowland's birth must have taken place in 1563, for in his 'Observations belonging to Lute-playing', which appeared in his son Robert's 'Varietie of Lute-Lessons' (1610), he refers to Hans Gerle's 'Booke of Tableture', printed 1533, and adds "myselfe was borne but thirty yeares after Hans Gerles Booke was printed", while in his 'Pilgrimes Solace', which appeared in 1612, he says: "I am now entered into the fiftieth yeare of mine age". Nothing is known as to his education, but before he was twenty he was in the service of Sir Henry Cobham, who in 1579 succeeded Sir Amyas Paulet as English ambassador in Paris. In a remarkable letter<sup>5</sup> written from Nuremberg on 10 Nov. 1595 to Sir Robert Cecil, Dowland says that in 1580 he was in Paris with Sir Henry Cobham, where he fell in with a Roman Catholic priest named Smith, with Richard Verstegen, the poet and author of the 'Restitution of Decayed Intelligence', Richard or Thomas Morris or Morrice, a member of the Chapel Royal who fled to Douai in 1582 and afterwards went to Rome, and one Morgan, by whom he was persuaded to become a Roman Catholic. Sir Henry Cobham was recalled in 1583 and was succeeded as ambassador by Sir Edward Stafford. In 1584 Dowland was in his service, for a petition of that year<sup>6</sup> from some English merchants in Paris, who had been condemned to the galleys, mentions that Stafford had sent them his "favourable charity" by his servant, John Dowland. Shortly afterwards he must have returned to England and married. On 5 July 1588 he was admitted (from Christ Church, Oxford) B Mus., and some time before 1597 he received the same degree at Cambridge, though there is no record of the degree at the latter University.

<sup>1</sup> Printed in Vol. V of the 'Calendar of the Marquis of Salisbury's Papers at Hatfield', and again with elucidations in the Mus. T. for Dec. 1896 and Feb. 1897.

<sup>2</sup> 'Cal. State Papers, Foreign Series, Elizabeth, 1584', p. 216.

<sup>1</sup> The statements in Q.-L. (III, 239) as to his being a son of John Johnson, and in the service of Sir George Carey, are inaccurate, and have been made from a misreading of the articles on Dowland in Mus. T. for Dec. 1896 and Feb. 1897.

<sup>2</sup> See the preface to Fellowes's edition of Dowland's 'First Booke of Aires'.

<sup>3</sup> This John Forster was probably the son of the John Forster who was sheriff of Dublin in 1578-79 and mayor in 1589; he may be identified as the John Forster who was admitted, as the son of a freeman, to the franchise in 1592. (See J. T. Gilbert, 'Calendar of Ancient Records of Dublin', II, 106, 137, etc.)

<sup>4</sup> Partly printed in App. V of 'The Particular Book of Trinity College' (1904), p. 236.

About 1594 Dowland "became an humble suitor" for the place of one of Elizabeth I's musicians, John Johnson<sup>1</sup>, but unsuccessfully, for (as he says) "my religion was my hindrance; whereupon my mind being troubled, I desired to get beyond the seas". He was invited to Germany by the Duke of Brunswick and obtained the necessary licence to travel through the instrumentality of the Earl of Essex and Sir Robert Cecil. His wanderings may be told in his own words:

When I came to the Duke of Brunswick he used me kindly and gave me a rich chain of gold, £23 in money, with velvet and satin and gold lace to make me apparell, with promise that if I would serve him he would give me as much as any prince in the world. From thence I went to the Lantgrave of Hessen, who gave me the greatest welcome that might be for one of my quality, who sent a ring into England to my wife, valued at £20 sterling, and gave me a great standing cup with a cover gilt, full of dollars, with many great offers for my service. From thence I had great desire to see Italy and came to Venice and from thence to Florence, where I played before the Duke and got great favours.

At the court of Brunswick he became acquainted with Gregory Howett of Antwerp and at that of the landgrave with Alessandro Orologio; at Venice he made friends with Giovanni Croce. Dowland's aim in going to Italy was to study with Luca Marenzio, who wrote to him a letter dated Rome, 13 July 1595, which is printed in Dowland's 'First Booke of Songs' (1597). But the journey to Rome seems to have been interrupted at Florence, where he fell in with a number of English recusants, the chief of whom was a son of Sir John Scudamore, of Kentchurch, who was at one time in Spain in the company of Father Parsons. In spite of a promise that he "should have a large pension of the Pope, and that his Holiness and all the cardinals would make wonderful much of" him, Dowland appears to have taken alarm at finding himself in the company of men whose methods were treasonable to Elizabeth and her government. He longed to see his wife and children

and got me by myself and wept heartily to see my fortune so hard that I should become servant to the greatest enemy of my prince, country, wife, children, and friends, for want. And to make me like themselves, God knoweth I never loved treason nor treachery, nor never knew of any, nor never heard any mass in England, which I find is great abuse of the people, for, on my soul, I understand it not.

By way of Bologna and Venice Dowland returned to Nuremberg, whence he wrote (on 10 Nov. 1595) the letter to Cecil from which the above quotations are taken. In this document he gives much information as to "the villany of these most wicked priests and Jesuits" and thanks God that he has "both forsaken them and their religion, which tendeth to nothing but destruction". Whether the letter had any immediate result on Dowland's fortunes it is impossible to say. The

news he gave of the movements of the English Romanists in Italy was probably of small value, but the writer's protestations as to his religious views may have smoothed the way for his return.

In 1596 some lute pieces by him appeared in Barley's 'New Booke of Tableture', apparently without his authority, for in his 'First Booke of Songs or Ayres of Foure Partes with Tableture for the Lute', which was published by Peter Short in 1597, he alludes to "divers lute lessons of mine lately printed without my knowledge, false and unperfect". The 'First Booke of Songs' achieved immediate success, and a second edition appeared in 1600, a third in 1606, a fourth in 1608 and a fifth in 1613. In 1598 Dowland contributed some eulogistic verses to Giles Farnaby's 'Canzonets', and in the same year his fame was celebrated in Richard Barnfield's sonnet (sometimes attributed to Shakespeare) 'To his friend Master R. L., in praise of Musique and Poetrie':

If Musique and sweet Poetrie agree,  
As they must needs (the Sister and the Brother),  
Then must the Love be great, twixt thee and mee,  
Because thou lov'st the one, and I the other.  
Dowland to thee is deare, whose heavenly touch  
Upon the Lute, doeth ravish humane sense  
Spenser to mee; whose deepe Concert is such,  
As, passing all Conceit, needs no defence.  
Thou lov'st to heare the sweete melodious sound,  
That Phœbus Lute (the Queen of Musique) makes:  
And I in deepe Delight am chiefly drownd,  
When as himselfe to singing he betakes.  
One God is God of Both (as Poets fainege).  
One Knight loves Both, and Both in thee remaine.

On 11 Nov. 1598 Dowland was appointed lutenist to Christian IV of Denmark at the very large salary of 500 dalers per annum — a sum that rivalled the salaries of the high officers of the state. In 1599 a sonnet by him appeared in Richard Alison's 'Psalms'. In the following year he published his 'Second Booke of Songs or Ayres, of 2. 4. and 5. paris', dedicated to Lucy, Countess of Bedford, and with a preface dated "From Helsing-noure in Denmarke, the first of June". In the same year he received an extra payment of 600 dalers from Christian, the autograph receipt for which is preserved in the Copenhagen Archives and has been printed.<sup>2</sup> In 1601 Dowland was decorated and presented with the king's portrait, and in the same year he was on a visit to England to buy musical instruments to the value of 300 dalers.

In 1603 appeared his 'Third and Last Booke of Songs or Aires', in the dedication of which he alludes to his being still abroad. But later that year he was back in England and had a house in London, in Fetter Lane, from which he published his 'Lacrymae, or Seven Teares, figured in seven passionate Pavans' for instruments, dedicated to Anne

<sup>1</sup> For whose death see 'Audit Office Declared Accounts', Bundle 387, No. 37, quoted in the 'Musical Antiquary', II, 118.

<sup>2</sup> A. Hammerich-Elling, 'Musiken ved Christian den Fjerdes Hof' (Copenhagen, 1892)

of Denmark. This work is undated, but was entered at Stationers' Hall on 2 Apr. 1604. It appears from the preface that he had been driven back by storms on his return to Denmark and forced to winter in England; but the Danish Archives show that his conduct in Copenhagen had not been satisfactory. In spite of frequent advances of money and an attempt to help him by giving him the charge and education of one of the choristers "to teach and instruct upon the lute", he was finally dismissed from the royal service on 24 Feb. 1606, when Christian was absent at Brunswick, and at his departure there was a long account to be settled for salary, advances, etc.

In 1606 Dowland was again living in Fetter Lane, when he issued a translation of the 'Micrologus' by Andreas Ornithoparcus, dedicated to the Earl of Salisbury. In his address to the reader he promises a work on the lute, to which reference is also made by his son Robert in the preface to the latter's 'Varietie of Lute Lessons' (1610). To this work John Dowland appended a 'Short Treatise on Lute-Playing'.<sup>1</sup> In 1612 he published his last work, 'A Pilgrimes Solace. Wherein is contained Muscally Harmonie of 3. 4. and 5. parts, to be sung and plaid with the Lute and Viols', in which he is described as lutenist to Lord Walden (eldest son of the Earl of Suffolk). In the preface to this work he says:

I have been long obscured from your sight, because I received a kingly entertainment in a forraigne climate, which could not attaine to any (though never so meane) place at home.

The neglect with which he was treated in England is referred to by Henry Peacham in his 'Minerva Britannia' (1612). He compares Dowland to a nightingale sitting on a briar in the depth of winter:

So since (old friend), thy yeares have made thee white,  
And thou for others, hath consum'd thy spring,  
How few regard thee, whome thou didst delight,  
And farre, and neere, came once to heare thee sing:  
Ingratefull times, and worthles age of ours,  
That lets us pine, when it hath crop't our flowers.

But recognition came to Dowland in his old age, and on 28 Oct. 1612 he was appointed one of the King's Musicians for the Lutes, in the place of Richard Pyke, deceased, at 20d. a day for wages and £16:2:6 yearly for livery.<sup>2</sup> In 1613 the names of both John Dowland and his son Robert appear in the lists of musicians paid for performing in Chapman's masque of the Middle Temple and Lincoln's Inn at Whitehall. In 1614 John contributed two compositions to Sir William

Leighton's 'Teares' and some commendatory verses to Ravenscroft's 'Briefe Discourse'.<sup>3</sup>

Of Dowland's last years not much is known. In 1618 his name still appears in the accounts<sup>4</sup> as that of second musician for the lutes, after that of Robert Johnson, and in 1623<sup>5</sup> he is styled "Doctor Dowland", though there is no record of his having taken a doctor's degree either at Oxford or Cambridge, or in Dublin. But between these dates, from 1622 to 30 Aug. 1623, he was once more abroad, in the service of Philip Julius, Duke of Wolgast, in Pomerania. In the accounts for the year ending at Michaelmas 1624 his name precedes that of Johnson. His death must have taken place on 20 or 21 Jan. 1626, for the accounts for Michaelmas 1626<sup>6</sup> record the payment to him for "one quarter of a yeare ended at Christmas 1625 and xxvi daies in parte of other Lady Day quarter 1626", while his son Robert, "in the place of Doctor Dowland his father deceased" was paid at Michaelmas 1626 "from the death of his said father".

To the list of Dowland's printed music already given must be added some harmonized psalm tunes in East's Psalter (1592); viol pieces in Fullsack's 'Auserlesener Paduanen . . . erster Theil' (1607), T. Simpson's 'Opusculum' (1610) and 'Taffel-Consort' (1621); and lute pieces in Rude's 'Flores musicae' (1600), Besard's 'Thesaurus harmonicus' (1603), van den Hove's 'Delitiae musicae' (1612), Fuhrmann's 'Testudo Gallo-Germanica' (1615) and Besard's 'Novus partus' (1617). Many of the instrumental pieces are probably arrangements or transcriptions. Manuscript music by him is to be found in many of the large English and German libraries. His 'First Booke of Songes' was reprinted in score by the Musical Antiquarian Society in 1844 and all four books, together with the three songs in 'The Musical Banquet', have been published from the original lute tablature by Fellowes.<sup>7</sup> An autograph is preserved in the 'Album Amicorum'<sup>8</sup> of Johann Cellarius of Nuremberg (1580-1619), written towards the end of the 16th century. In this his name is spelt "Doland".

Fuller<sup>9</sup> says that John Dowland was "a cheerful person . . . passing his days in lawfull meriment", but this character may have been given him because of a well-known anagram on his name:

Iohannes Doulandus.  
Annos ludendo hausi.

<sup>1</sup> An 18th-century transcript of his two anthems from the 'Teares', but with the treble viol and lute parts of the earlier edition omitted, is contained in B.M. Add. MSS 31,418.

which Fuller attributes to one Ralph Sadler of Standon, who was in Copenhagen with Dowland, though its authorship is claimed by Henry Peacham in his 'Minerva Britannia'.

W. B. S.

**PERFORMER AND COMPOSER.**—Dowland was a great virtuoso. As a performer on the lute he was without a rival in Europe, and there can be little doubt that he was also a highly skilled singer. It was those qualities which set him on such a high pinnacle of fame in his own day, not only in England, but throughout Europe. The fame of the virtuoso is of necessity greatly impaired by the lapse of time, and few there be whose names are remembered in the later ages solely on the strength of their ability as performers. But Dowland was also a great composer. His outstanding ability was probably less conspicuous in his own day than it is now, partly owing to the fact that his singing and playing to some extent eclipsed his other gifts in the eyes of most of his contemporaries; partly because the general level of composition stood so high in England at that date that excellence was not so obvious; and partly also because the greatness of his achievement as a pioneer in the composition of the art-song can only be measured in the light of the development of that particular form during the more than three centuries that have elapsed since his death.

It is as a song writer that Dowland establishes a claim to a place among the immortals. He wrote, it is true, with great skill in other forms; but his compositions for the lute, of which few were printed in his day, although a very large number survive in manuscript, are, like many other notable instrumental compositions of the same period, of an experimental character, and in the face of the tremendous development of all forms of instrumental music since the dawn of the 17th century few of them could successfully hold a place in a modern concert programme without special explanation. But his songs show no signs of old age, and indeed some of them sound amazingly modern both as regards form and harmonic effect even in the company of 20th-century music.

Of the four volumes of songs the first three were described as books of 'Songs or Ayres', and that of 1612 as 'A Pilgrimes Solace'. Each of these books contains 21 songs, and three more published by his son Robert in 'A Musical Banquet' in 1614 make a total of 87. Dowland was the first of the great English lutenists to produce such a book, and the main scheme upon which his first book was planned was followed by the rest of these composers. One feature of these "ayres" was that the principal melodic interest lay in the top part and was not equally shared by all the parts as in a madrigal. For the purpose of accompani-

ment two alternative devices were commonly employed by the composers: three other voice parts, for alto, tenor and bass, were associated with the *cantus*, or top part, and as an alternative these three lower voice parts were adapted for performance on the lute, the *bassus* part being duplicated on a bass viol although the harmonic scheme was completely represented on the lute without the string bass being necessary to it. Dowland's first book in 1597 was the earliest publication in which these ideas were embodied, and he may justly be regarded as having originated them. Further than this it may be claimed for him that he contributed more than any other pioneer to the creation of the art-song; art-songs of a primitive kind, having a definite accompaniment forming an essential part of the composition, as distinct from folksongs, were written by Luis Milan and published in Italy as early as 1535; Byrd, too, wrote perfect examples of the art-song with string accompaniment many years before Dowland; for instance 'My little sweet darling' is at least as early as 1583. But Dowland was the first to specialize in this form and to develop it; and the art-songs or *Lieder* of Schubert, Schumann and Brahms with pianoforte accompaniment are the lineal descendants of Dowland's "ayre" with lute accompaniment.

Dowland's first book consists of songs of a fairly simple design, each musical phrase following the verbal outline with scarcely any repetition and very little contrapuntal development; but the songs are characterized by great beauty of melodic material, a singular fitness in matching the words with music and a great freedom and variety of rhythmic treatment. Some of the melodies may be founded on traditional folksongs, as is certainly the case with 'Now O now I needs must part', the melody of which was known as "the frog galliard". Perhaps the earliest known instance of transferring from the voice to the accompaniment the chief melodic interest in the course of a song is to be found in 'Can she excuse my wrongs?', where for several bars the voice is confined to a single note while the lute plays the traditional melody of the song 'Shall I go walk the woods so wild?'

The opening songs of Dowland's second book show a wonderful advance in the art of song writing; in these the conventional square-set design is almost entirely abandoned, while the independent importance of the lute accompaniment is developed in a manner that was brought to perfection two centuries later by Schubert. In this connection the accompaniment of 'Sorrow stay' is an astonishing piece of work when it is realized that nothing of the kind had previously been attempted and that the resources of the lute are limited. 'I saw my lady weep' and the famous

'Lachrymae' ("Flow, my tears") are superb songs.

These three songs have no alternative arrangement for four voices. The third and fourth books contain examples both of the simple and straightforward design of song which relies almost entirely on beauty of melody and phrasing, and also of the freer and more elaborate type with an important accompaniment. In the third book is the exquisite 'Weep you no more, sad fountains' and the scarcely less beautiful 'Flow not so fast, ye fountains'. In the fourth book there are three songs in which the accompaniment is written for a treble and bass viol in addition to the lute, the treble-viol part is wholly independent of the lute as regards melodic material. The most remarkable of these three songs is 'In silent night', in which the harmonic treatment is very daring and original.

The three songs published for him by his son Robert are of very unconventional character, and some of the harmonic effects are startling even to modern ears. Enough has been said to show that Dowland was not only the greatest composer of the English lutenist school, but that he stands, perhaps, among the first half-dozen of the world's song writers.

**DOWLAND, Robert** (b. ? London, c. 1586; d. ? London, 1641).

English lutenist and composer, son of the preceding. He was born before his father left England in 1598 to settle in Denmark. His godfather was Sir Robert Sidney. During his father's absence he was educated at the partial cost of Sir Thomas Monson, to whom he dedicated his first work, 'Varietie of Lute Lessons', which appeared in 1610. In the same year he edited

A Muscull Banquet: Furnished with varietie of delicious Ayres, collected out of the best Authors in English, French, Spanish and Italian.

This was dedicated to his godfather. On 26 Apr. 1626 he was appointed one of the lutenists to Charles I, in the place of his father, with 20d. a day for wages and £16:2:6 for livery, payment to begin "from the death of his said father". On 11 Oct. of the same year he obtained a licence to be married at St. Faith's Church to Jane Smalley; at this time he was living in London in the parish of St. Anne's, Blackfriars. His name is said to occur in a list of 'Musicians for the Waytes' in 1641, in which year he died, his place as "musician

for the lutes and voices" being filled on 1 Dec. by John Mercure.<sup>1</sup>

A lute piece by Robert Dowland was printed in Fuhrmann's 'Testudo Gallo-Germanica' (Nuremberg, 1615).

**DOWNES, (Edwin) Olin** (b. Evanston, Ill., 27 Jan. 1886).

American music critic. He studied musical history with Louis Kalterborn, pianoforte with Carl Baerman, harmony with Clifford Hellman and musical appreciation with John P. Marshall. From 1906 to 1924 he was music critic of 'The Boston Post', holding at the same time music courses at Boston University and, in 1911, at Harvard University. Since 1924 he has been the chief music critic to 'The New York Times'. From 1932 to 1934 he was commentator for the concerts of the Brooklyn Academy of Arts and Sciences, and since 1937 he has been working in the same capacity at the Berkshire Music Festival. He has given lectures to the Curtis Institute, the Metropolitan Opera Guild and many other institutions. To American radio listeners Downes is best known as the chairman of the Metropolitan Opera "Quiz", which regularly takes place during the interval at the Saturday matinées at the opera-house and discusses in the form of questions and answers all kinds of problems connected with opera.

Downes is an expert on Sibelius. In recognition of his championship for the Finnish composer he was awarded the Order of the White Rose of Finland. When Sibelius's 75th birthday was honoured by an international broadcast, Toscanini was chosen as conductor and Downes as speaker.

Downes's works include 'The Lure of Music' (1918), 'Symphonic Broadcasts' (1932) and 'Symphonic Masterpieces' (1935). He edited 'Select Songs of Russian Composers' and collaborated with Elie Siegmeister in 'A Treasury of American Song'. K. G.

**DOWNES, Ralph (William)** (b. Derby, 16 Aug. 1904).

English organist, conductor and composer. He was educated at Keble College, Oxford, where he took the B.A. and B.Mus. degrees, and studied at the R.C.M. in London. From 1928 to 1935 he lived in the U.S.A. as Director of Music at Princeton University. On his return to London he became organist at Brompton Oratory, a post he still holds. He has conducted various choral societies and broadcast with them, contributed to musical periodicals and composed organ and pianoforte music, the former including a 'Jubilato Deo' and 'O filii et filiae', the latter a 'Toccata, Sarabande and Passepied'. He is a brilliant recitalist and an authority on old organ

**DOYAGÜE, Manuel** (b. Salamanca, 1755; d. Salamanca, 1842).

Spanish church musician and composer. He was the son of a silversmith and successively a choir-boy in the Cathedral, *maestro de capilla* (1789) and professor of music at the University—the last to hold that appointment, which was suppressed after his death. In 1817 he conducted a 'Te Deum' in Madrid for the queen's confinement, and in 1831 he became *maestro honorario* at the Conservatory. His works include 3 Magnificats, 9 Lamentations, 3 Misereres, Masses and Vespers (MSS Capilla Real, Madrid, and 4 works in the Bibl. Municipal, Madrid [Sbarbi collection]). Eslava printed a Hymn to Santiago for 5 voices; the MS of a Magnificat for 8 voices was buried with him. J. B. T.

**DRAESEKE, Felix (August Bernhard)** (b. Coburg, 7 Oct. 1835; d. Dresden, 26 Feb. 1913).

German composer and writer on music. His father was court preacher at Coburg, his grandfather held a superior church appointment and his mother too came from a clerical family. She died a few days after his birth. In 1840 his father married again and five years later became rector at Rodach; but Felix was sent to school at Coburg. Although intended for the church, he decided at the age of seventeen to devote himself to music and, having overcome his father's objections, was allowed to enter the Leipzig Conservatory. After hearing 'Lohengrin' at Weimar he set to work on an opera of his own, 'König Sigurd'. In 1854, by which time he had come under the tuition of Julius Rietz for composition, he wrote overtures inspired by Shakespeare's 'Julius Caesar' and Tegnér's 'Frithjof'. At the age of twenty he continued to study with Rietz privately, the Conservatory having disapproved of his progressive tendencies. In 1856 his first Symphony (Op. 12) was performed at the Coburg theatre, and

the following year, after meeting Liszt, who approved of the opera, he settled at Dresden. In 1860 he wrote a symphonic poem on 'Julius Caesar', having destroyed the earlier overture. That year and the next he visited Liszt at Weimar, having by this time sided passionately with the "New German School", among other adherents to which were Bulow, Cornelius, Klindworth and Tausig. He met Wagner there in 1861 at the musicians' congress, where his own 'Germania Marsch' was performed; but it was much disapproved of by the audience, and the same fate befell a 'Carnival Overture' the next year, when, worse still, an overture for the name-day of Prince Constantin of Hohenzollern-Hechingen was so much disliked by that ruler that it could not be performed. The 'Frithjof' overture was destroyed in 1862 and a symphonic poem written on the subject.

The same year Draeske removed to Switzerland, settling down as a pianoforte teacher at Vevey, on Lake Geneva, and then, having found no pupils there, at Yverdon. He was rather more fortunate there, but found the small town so dull that he moved to Lausanne, where the number of his pupils increased. In 1865 he visited Munich for the production of Wagner's 'Tristan' and took the opportunity of consulting an ear specialist on account of an alarming deterioration of his hearing, which troubled him for the rest of his life. In 1870 he suffered the double tragedy of his father's death and the breaking off of his engagement to a young pupil of his, Louisa de Trey of Lausanne, whose parents forbade her marriage to him. Discouraged by the continued non-success of his works, he went through a period of stagnation and profound depression at this time, and a professorship at the Geneva Conservatory, which he had hoped to obtain by removing thither in 1875, failed to materialize. After fourteen years in Switzerland, where he could no longer afford to live owing to unsuccessful speculations, he returned to Germany in 1876 in the hope of some congenial appointment there.

Draeske settled at Dresden once more, but, having in the meantime inherited a small fortune from his godmother, he was in no hurry to tie himself to any post. It was not until 1884 that he was offered and accepted the composition professorship at the Dresden Conservatory in succession to Franz Wüllner. He did excellent work there and received the official title of "Professor" in 1892 and that of "Hofrat" in 1898. In 1884, too, his opera 'Gudrun' was produced at Hanover. A second work for the stage, 'Herrat', was produced at Dresden on 10 Mar. 1892. His other operas he did not see on the stage. 'Fischer und Kalif' (1905) was not given in his lifetime, and 'Merlin' came out at Gotha after

<sup>1</sup> For a full specification see ORGAN, pp. 334-35.

his death in 1913. 'Bertrand de Born' never reached the stage.

Among Draeseke's compositions not named above are the following: incidental music to Kleist's 'Hermannschlacht'; cantatas 'Germania an ihre Kinder' (Kleist, 1859), 'Der Schwur im Ruhl' (from Schiller's 'Wilhelm Tell', 1862-68), 'Adventlied' (Ruckert, 1871) and Easter Scene from Goethe's 'Faust', Requiem, trilogy of oratorios 'Christus'; 4 symphonies (Opp. 12, 25, 40 & E. m. [1912]), Serenade for orch., overtures 'La vida es sueño' (Calderón) and 'Penthesilea' (Kleist), 'Jubelouverture' (1898); concertos for vn., cello & pf., 3 stg. 4tets, stg. 5tet; sonatas on Goethe's 'Faust' (1863) and Schiller's 'Wilhelm Tell' (1863), 'Fantasiestücke in Walzerform' (Op. 3), 'Deux Valses de concert' (Op. 4), 'Sonata quasi una fantasia' (Op. 6, 1862-67), 'Petite Histoire', suite of pieces (1868) & other works for pf.; songs, &c.

Literary works include an elaborate analysis of Liszt's symphonic poems (in Brendel's 'Anregungen'), an essay on Peter Cornelius (in N.Z.M.), 'Anweisung zum kunstgerechten Modulieren' (1876), 'Beseitigung des Tritonus' (1878) and 'Der gebundene Styl' (1903). E. D., adds.

**DRAG.** A certain kind of stroke used on the side-drum. (See DRUM.)

**DRÄGER, Hans-Heinz** (b. Stralsund, 6 Dec. 1909).

German musicologist. He began early to study the cello and viola da gamba, and developed a special interest in instruments. In 1931-37 he studied at Berlin University, where he took the Ph.D. in the latter year. In 1938 he became assistant at the Berlin Museum of Musical Instruments, of which he was appointed director on 1 Apr. 1939, when he also became lecturer in his special subject at the High School for Music. He received distinctions from the Universities of Kiel (1946) and Greifswald (1947). His writings include:

- 'Die Entwicklung des Streichbogens und seine Anwendung in Europa' (Cassel, 1938)
- 'Kinderkrankheiten bei Musikinstrumenten' ('Deutsche Musikultur', 1938)
- 'Anschlagmöglichkeiten beim Cembalo' (A.M.W., 1941)
- 'Die elektro-akustische Orgel Jörg Magers' (A.M.W., 1941)
- 'Prinzip einer Klassifikation der Musikinstrumente' (MS).

E. B.

**DRAGHI, Antonio** (b. Rumi, 1635; d. Vienna, 16 Jan. 1700).

Italian composer. He began his musical career as a bass singer at Venice (his name appears in the cast of P. A. Ziani's 'Le fortune di Rodope e di Damira' in 1657), and in 1658 he went to Vienna, where he spent the rest of

his life. He was appointed intendant of the court theatre in 1673 and director of the imperial chapel in 1682. Draghi was probably the most prolific of all 17th-century composers, at least as far as dramatic works are concerned. Starting with 'L' Oronise' (Vienna, 9 June 1663), set to his own libretto<sup>1</sup>, he wrote in the course of 38 years about 175 operas (including serenatas and other smaller works for the stage) and more than 40 oratorios; also two masses, a 'Stabat Mater' and some hymns. Nearly all of them were performed in Vienna, and in Vienna only (although a few operas found their way to Venice). Draghi's patron, the Emperor Leopold I, wrote additional airs for about 35 of his operas, and the two Schmelzers, Johann Heinrich and Anton Andreas, in most cases provided the ballet music. (In this connection the poet Niccolò Minato, who wrote the greater part of Draghi's librettos, also ought to be mentioned.)

Of Draghi's enormous output nothing seems to have been published during his lifetime, but most of his scores are preserved in manuscript in the National Library and in that of the Gesellschaft der Musikfreunde in Vienna. Lists of his works are contained in Kochel's 'Johann Joseph Fux' (1872) and in Weilen's and Neuhaus's books (see Bibl.), but even the latter's is not quite complete. Of Draghi's smaller sacred works 2 masses, a 'Stabat Mater' and 2 hymns were published in Vol. XXIII, Pt. i of D.T.Ö. (1916).

Draghi's son Carlo (1669-1711) was court organist in Vienna from 1 Oct. 1698 until his death. He wrote some additional music for a revival of his father's 'Sulpitia' in 1697 and for one of his last operas, 'La forza dell' amor filiale', in 1698. A. L.

**DRAGHI, Giovanni Battista** (b. ?, c. 1640; d. ?).

Italian harpsichordist and composer. His early years in Italy are obscure, but it has been conjectured that he was a brother of Antonio Draghi, in which case he was probably born at Rimini. The earliest notice of him is found in Pepys's Diary, under date of 12 Feb. 1667. The diarist there mentions having heard him (at Lord Brouncker's house) sing through an act of an Italian opera which he had written and composed at the instance of Thomas Killigrew, who had an intention of occasionally introducing such entertainments at his

<sup>1</sup> Draghi wrote, between 1660 and 1669, about a dozen librettos, half of them for himself, the others for Ziani, Tricarico, Bertali and Sances.

theatre. Pepys expresses in strong terms his admiration of the composition. It is extremely doubtful whether this opera was ever produced.

In 1674 Draghi wrote the dances for Shadwell's adaptation of Shakespeare's 'The Tempest' and in the following year the instrumental music for the opera 'Psyche'. In the first instance he collaborated with Locke, Banister, Humphreys, Pietro Reggio and James Hart, in the second with Locke. While his contribution to 'The Tempest' seems to be lost, his 'Psyche' music was published, together with Locke's songs, in 1675. Draghi's name is not mentioned in the score, but Shadwell pays tribute to him in the preface to the 'Psyche' libretto: "All the Instrumental Musick (which is not mingled with the Vocal) was composed by that Great Master, Seignior Gio. Baptista Draghi, Master of the Italian Musick to the King".

On the death of Locke in 1677 Draghi succeeded him as organist to Charles II's queen, Catherine of Braganza. Later he was music-master to the daughters of James II, the Princesses (later Queens) Mary and Anne. He excelled as a player on the harpsichord, for which instrument he composed many lessons, published during his long years in England, in the course of which he completely adopted the English style of composition. His later music for the stage, so far as it is known, consists of songs contributed to the anonymous tragedy 'Romulus and Ersilia' and to Aphra Behn's comedy 'The City-Heiress' in 1682, to Nahum Tate's farce 'A Duke and No Duke' in 1684 and to Mountford's 'The Injured Lovers' in 1688. In 1687, for the celebration of St. Cecilia's Day, he set Dryden's fine ode beginning "From Harmony, from heavenly Harmony". Many songs by him are found in the collections of the period.

Particulars of Draghi's life and activities after 1690 are wanting, but there is reason to believe that he followed Catherine of Braganza (who returned to Portugal in 1692) before 1700. A song in Harris's comedy, 'The City Bride' (1696) is headed "set by Seignior Baptist"; but he was almost certainly no longer in England in 1706, when Durey's comic opera 'Wonder in the Sun, or The Kingdom of the Birds' was produced at the Queen's Theatre in the Haymarket, and the attribution to him of music for that work is due to the confusion of his name with that of Lully (a "sebel" by whom was introduced into that opera), the mistake arising from the habit of occasionally calling both Draghi and Lully by their Christian names alone—Giovanni Baptista or simply "Baptist"—in early English editions and manuscripts.

W. H. H., adds. A. L.

**DRAGON OF WANTLEY, THE** (Ballad Opera). See LAMPE.

**DRAGONETTI, Domenico** (b. Venice, 7 Apr. 1763; d. London, 16 Apr. 1846).

Italian double-bass player and composer. As a boy he showed remarkable talent for music, teaching himself the guitar and violin, which, however, he soon exchanged for his own special instrument. On this he quickly outstripped his master Berini, and he was admitted to the orchestra of the Teatro San Benedetto at the age of thirteen. In his eighteenth year he was appointed to the post in St. Mark's hitherto occupied by his master, who himself persuaded him to accept it. He had now attained to such perfection that nothing was too difficult for him; he composed sonatas, concertos and capriccios for his instrument and frequently played upon it the cello part in string quartets. At Vicenza he played in the opera orchestra, and while there was fortunate enough to discover the marvellous double bass with which he never again parted, although often tempted by large offers of money. This instrument belonged to the convent of San Pietro and was made by Gasparo di Salò, master of the Amati. Meantime his fame had spread beyond Italy, and he was offered an engagement at the Imperial Opera in St. Petersburg, upon which the Procurators of St. Mark's immediately raised his salary. Shortly after, however, he obtained a year's leave of absence, having been persuaded by Banti and Pacchierotti to accept an invitation to London, where he arrived in 1794 and was immediately engaged for the Opera and for the concerts at the King's Theatre. He made his first appearance on 20 Dec. The force and expression of his playing and his power of reading at sight excited universal astonishment and he was at once invited to take part in all the great provincial performances. Henceforth he became the inseparable companion of the cellist Lindley: for fifty-two years they played at the same desk at the Opera, the Ancient Concerts, the Philharmonic, the provincial festivals, etc. Great as was Dragonetti's power of overcoming difficulties, it was his extraordinary tone, and the taste, judgment and steadiness of his performance, that characterized him.

Soon after Dragonetti's arrival in London he met Haydn, with whom he became intimate. On his way to Italy in 1798 Dragonetti visited the great master in Vienna. In 1808 and 1809 he was again in Vienna, but from caprice would play before no one but the family of Prince Starhemberg, in whose palace he lived, and whose wife often accompanied him on the pianoforte. There he made the acquaintance of Beethoven, and also that of Sechter, whom he requested to put a pianoforte accompaniment to his concertos. With Sechter he corresponded all his life, and remembered him in his will,

In Aug. 1845, when eighty-two years old, he headed the double basses at the Beethoven Festival at Bonn; and Berlioz, in his 'Soirées de l'orchestre', writes that he had seldom heard the scherzo in the C minor Symphony played with so much vigour and finish. Thus, in his old age, he rendered homage to the great master, of whose friendship he was reminded on his deathbed. He died in his own house in Leicester Square.

His eccentricities were many and curious. He was an inveterate snuff-taker and had a perfect gallery of snuff-boxes. Among his treasures were found a quantity of curiously dressed dolls, with which he used to play like a child, taking a selection of them with him to the musical festivals. His dog Carlo always accompanied him in the orchestra. The most curious thing about him was his speech, a mixture of his native Bergamese dialect with bad French and worse English. He was a man of kindly temper and a warm friend, though in money matters very close. His portrait, 'Il patriarca dei contrabassi', was published by Thierry, after a half-length taken in crayons by Salabert of London. His instrument he bequeathed to the "Vestry of the Patriarchal Church of St. Mark at Venice".

Many solos for double bass by Dragonetti are in manuscript in the B.M., and a curious arrangement of the pedal parts of Bach's organ fugues was published by Coventry & Hollier in 1836. Three canzonets with Italian words, written during his stay in Vienna, still exist in a collection of 'XXXIV canzonette e romanze' by various composers, dedicated to the Archduke Rudolph, Beethoven's friend and pupil. He was a great collector of pictures, engravings, musical instruments and music, and left to the B.M. alone 182 volumes of scores of classical operas. Many music books, given or left by him to Vincent Novello, were presented by the latter to the Fitzwilliam Museum, Cambridge. Some which came into the hands of Ouseley are now at St. Michael's, Tenbury. G. F. P., abr.

**DRAGONI, Giovanni Andrea** (b. Mendola, c. 1540; d. Rome, 1598).

Italian composer. He was a pupil of Palestrina. From 1576 he was *maestro di cappella* at St. John Lateran in Rome. His compositions, published at Venice between 1575 and 1588, consisted of 3 books of madrigals, 5 voices, 1 book of madrigals, 4 v., 1 book of madrigals, 6 v., 1 of villanelle, 5 v., 1 book of motets, 5 v., the last published in Rome, 1600. Some church compositions are contained in collective volumes. E. v. d. s.

**DRAGONS DE VILLARS, LES** (Opera). See MAILLART.

**DRAKE, Earl Ross** (b. Aurora, Ill., 26 Nov. 1865; d. Chicago, 6 May 1916).

American violinist and conductor. He

graduated from the Cincinnati Conservatory in 1885 and after some studies in New York went to the Berlin Hochschule für Musik as a pupil of Joachim, whom he accompanied as pianist at some of his recitals. On his return to America he founded the Violinists' Guild, of which he was head, declined the posts of leader to the Chicago Symphony Orchestra under Theodore Thomas and Dean of Music at California University, preferring to tour in the U.S.A. and Canada as soloist and quartet leader. In 1912 he founded and directed the Drake School of Music at Chicago, where he taught violin and viola technique, quartet playing and conducting. An orchestra, choir and opera school were attached to the institution, which thus enabled the students to make public appearances. He contributed numerous articles on bowing, violin tone and the "Joachim method" to various American musical papers.

Drake's works include the operas 'The Mite and the Mighty' (1912) and 'The Blind Girl of Castel-Cuillé' (after Longfellow, 1913); 'Brownie Suite' (1905) and 'Dramatic Prologue' (1915) for orchestra; violin Concerto in B minor (1911); a number of violin pieces.

E. B.

**DRAKE, Erik** (b. Hagelsrums gård, Östergötland, 8 Jan. 1788; d. Stockholm, 9 June 1870).

Swedish musician and folklorist. After studying at the University of Uppsala in 1804-1808 he worked as an amanuensis at the Observatory there, 1808-10. Later he passed an examination in law and entered the government service, but soon retired and withdrew to his estate at Follingso (Östergötland), where he studied folklore with L. Raaf and folk music with J. N. Eggert and C. Schwenke. In 1822 he was elected a member of the Academy of Music, at which institution he was inspector, 1834, secretary, 1841, and librarian, 1849. He taught theory at the Conservatory, 1826-59 (professor's title, 1830). He retired in 1860 owing to failing eyesight and for the last eight years of his life was blind.

Drake arranged folk melodies in several collections including Afzelius's 'Avsked af svenska folksharpan' and Arvidsson's 'Svenska fornsånger', and he edited the music to P. A. Söndén's 'Valda skrifter af C. M. Bellman', 1836-37. Between 1839 and 1857 he wrote textbooks on harmony, counterpoint, organ and pianoforte. He also left many unpublished writings on the history of music, the manuscripts of which are preserved in the Museum of Musical History, Stockholm. Among his translations of works from the German were Seyfried's 'Beethoven's Studies in Counterpoint' (1832) and Zollner's 'Organ School' (Op. 71). Drake was important principally as a theorist and a teacher of about

2,000 pupils. His compositions include an operetta, 'Berggubben', performed at the Royal Palace, 1817 (or 1818); a 'Stabat Mater', 1833, first performed 1871, which shows the influence of the Catholic liturgy; a declamation to music: 'Sappho' (E. A. Silfverstolpe) for solo and 3-part chorus, 1813; a Ballad for voice & pf., 'Sjokvinnan' (Atterbom), 1815; 2 string Quartets; a Sonata for vn. & pf., 1816; choral works, pf. pieces, 'Rondolletto' for pf. duet and solo songs, the most notable of which are a set of '12 Blommor' ('Flowers') to words by Atterbom. Drake's melodic line is described by C.-A. Moberg as having the same superficial charm as Spohr's and Rossini's, and the texture of his music as being well constructed and fluent.

**DRAME LYRIQUE** (Fr.). A modern French term for a serious opera.

**DRAMMA GIOCOLO** (Ital., jocular, joyous or playful drama). An Italian name, current mainly in the second half of the 18th century, for a type of comic opera that was capable of including serious or even tragic episodes. The typical example, and actually called a *dramma giocoso* by the composer, is Mozart's 'Don Giovanni'.

**DRAMMA PER MUSICA** (Ital., drama for music). A 17th–18th-century Italian term for a serious opera, actually, as it implies, a play (libretto) written especially for the purpose of being set to music.

**DRANGOSCH, Ernesto** (b. Buenos Aires, 22 Jan. 1882; d. Buenos Aires, 26 July 1925).

Argentine pianist and composer. He studied in Argentina, where he obtained a national scholarship to further his studies in Germany, where he was a pupil of Barth and Ansgore for pianoforte and Bruch and Humperdinck for composition. He appeared with the Berlin Philharmonic and at Stettin before returning to Argentina, where he became the best pianist of the day, besides conducting several seasons of symphony concerts. He also wrote many orchestral and chamber-music works, besides a number of vocal and instrumental pieces. He was the first professor of the master class for pianoforte at the Conservatorio Nacional of Buenos Aires.

N. F.

**DRAPER, Charles** (b. Odcombe, Somerset, 1869, d. London, 21 Oct. 1952).

English clarinettist. He was the son of Samuel Draper, a cellist, and came early under the guardianship of his elder brother Paul, master of several bands in the vicinity of Cardiff, who taught him the clarinet. His great proficiency — he was solo clarinet at the

age of ten — gained him an open scholarship at the R.C.M. in London, which was extended from the usual three years to five. He was principal for some years in the Crystal Palace orchestra and for long a member of the Philharmonic as well as the Leeds and Three Choirs Festival orchestras. He was one of the three founders of the New Symphony Orchestra in 1905 and a member of H.M. Private Band. In June 1904 he produced Stanford's Concerto at a Philharmonic concert, and the same composer's Sonata in F major, Op. 129, is dedicated to him and to Oscar Street, a distinguished amateur.

Charles Draper's influence on English clarinettists was great and beneficial. Much impressed by the performance of Manuel Gomez, a distinguished Spanish clarinettist long resident in London, he adopted the Boehm clarinet early in his career and insisted on its use by his numerous pupils. He held professorships at the R.C.M., T.C.M. and G.S.M. Draper retired from the profession in 1939. Of his sons Paul Beaumont Draper has won distinction as a bassoonist and Charles Corrington Draper was a well-known orchestral violinist.

F. G. R.

**DRAPER, Haydn (Paul)** (b. Penarth, 21 Jan. 1889; d. London, 6 Nov. 1934).

English clarinettist, nephew of the preceding. He was the son of Paul Draper mentioned above. Trained by his father he rapidly gained extraordinary virtuosity on his instrument and had won numerous prizes and held several not unimportant professional appointments before gaining an open scholarship at the R.C.M. in 1908. There he came under the tuition of Julian Egerton and later of his uncle. In his first year at College he was appointed to the New Symphony Orchestra and a few years later he succeeded Charlesworth Fawcett as principal at the Queen's Hall under Sir Henry Wood. Other appointments included principal at the Leeds Festival and at the Opera under Beecham. He was a member of the well-known London Wind Quintet with R. Murchie (flute), L. Goossens (oboe), Aubrey Brain (horn) and F. Wood (bassoon), and solo clarinet of the B.B.C. Military Band, a particularly brilliant combination, which included among the clarinets such well-known artists as G. Anderson, the present professor at the R.A.M., R. Kell, W. Matthews and L. Booth, professor at Kneller Hall. There his virtuosity and fine musicianship was greatly appreciated.

Haydn Draper was professor at the R.A.M. in succession to E. J. Augarde from 1923 till his death. Among his pupils was R. Kell, who succeeded him in the professorship. His brother Mendelssohn Draper, the well-known orchestral clarinettist and bass clarinettist, has had long associations with the Queen's Hall,

London Symphony and Covent Garden orchestras. He, too, has been professor at the R.A.M. F. G. R.

**Draper, Paul.** See Ballet (America).

**DRÁTENÍK** (Opera). See ŠKROUP.

**DRAUD (Draudius), Georg** (b. Davernheim, Hesse, 9 Jan. 1573; d. Butzbach, 1636).

German clergyman and scholar. He fled to Butzbach to escape the horrors of war. He was preacher successively at Grosskabern, Ortenberg and Davernheim, and a famous bibliographer who published the following works, which are particularly valuable for musical bibliography: 'Bibliotheca classica' (1611 and 1625), 'Bibliotheca exotica' (1625); 'Bibliotheca librorum Germanicorum classica' (1625). Unfortunately his translation of non-Latin titles of books into Latin detracts somewhat from their value; yet for a long period they formed the chief source of information for all biographers.

**Drayton, Michael.** See Stanford (parisong)

**DRDLA, František** (b. Žďár, Moravia, 28 Nov. 1868; d. Gasten, 3 Sept. 1944).

Czech violinist and composer. He studied at the Prague (1880-82) and Vienna Conservatories (1882-88, under Joseph Hellmesberger, jun. and Bruckner) and lived and worked almost exclusively in Vienna. In 1899-1905 he made a tour throughout Europe giving violin recitals and in 1923-25 a similar tour through America. He was a prolific composer (over 250 opus numbers of effective, elegant drawing-room pieces, particularly for violin and piano, of which the best known are the Serenade in A ma., 'Souvenir', 'Love Song' and 'Romance'; of opera fantasies on 'The Bartered Bride', 'Dalibor'), etc. He also composed two operettas, a violin Concerto, a pianoforte Trio, songs and partsongs.

G. Č.

**DREAM OF GERONTIUS, THE.** Oratorio, in two parts, set to a great part of Cardinal Henry Newman's poem, by Elgar (Op. 38). Produced Birmingham Festival, 3 Oct. 1900. Translated into German by Julius Butts, and performed by him at the Lower Rhine Festival, Dusseldorf, May 1902.

**DRECHSLER, Josef** (b. Vlachovo Brezi, Bohemia, 26 May 1782; d. Vienna, 27 Feb. 1852).

Bohemian conductor, organist and composer. He received his first instruction from his father, schoolmaster in his native place. After various alternations of place and pursuit, he studied music and law in Prague. In 1807 he found himself in Vienna, but it was not till 1810 that he obtained employment as chorus master at the Court Opera. This was followed in 1812 by a place as *Kapellmeister adjunct*, then by an organist's post at the Servite Church. In 1815 he opened a music school,

and gradually won his way upwards, till in 1822 he was chief *Kapellmeister* at the theatre in the Leopoldstadt. On Gansbacher's death in 1844 he became *Kapellmeister* at St. Stephen's Cathedral, a post which he retained till his death.

Drechslers left books of instruction for the organ, harmony, thorough-bass and the art of preluding, with a new edition of Pleyel's clavier school; 16 Masses and a Requiem; 24 smaller pieces of choral music; 6 operas; 25 shorter dramatic pieces (*Singspiele*) and pantomimes, 3 cantatas; a host of airs, sonatas, fugues, quartets, etc. G.

**DRECHSLER, Karl** (b. Kamenitz, Saxony, 27 May 1800; d. Dresden, 1 Dec. 1873).

German violoncellist. He entered the court orchestra at Dessau in 1820 and in 1824 put himself under Dotzauer at Dresden. In 1826 he received a permanent appointment as leader of the orchestra at Dessau. Before then he had visited England and played with much success. He shone equally in quartets, solos and the orchestra, with a full tone, good intonation and excellent taste. Drechsler was the master of Cossmann, Grutzmacher and A. Lindner. He retired in 1871. G.

**DRĘGE-SCHIELOWA, Łucja** (b. Warsaw, 13 Feb. 1893).

Polish pianoforte teacher and composer. She has written a Suite for flute, cello and pianoforte, variations, dances and several small pieces for pianoforte as well as songs.

C. R. H.

**DREHER** (Ger.). A name given in Austria and Bavaria to a dance very similar to the *Ländler*. The word, which is descriptive of the dance, is derived from the verb *drehen*, "to twirl". Suites of *Dreher* are said to be in existence, but dance, music and name are now alike obsolete.

**DREIGROSCHENOPER, DIE** (Opera). See WEILL.

**DRESDEN.** The city which was formerly the capital of the electorate and later the kingdom of Saxony had an active musical life from the beginning of the 17th century at the latest, but it was at that time almost exclusively confined to the court and in no sense municipal, as in other German towns, such as Hamburg or Leipzig, which were not the seat of a ruler. The greatest German composer attached to the electoral court — there were several eminent Italians — was Schutz, who worked there between 1614 and the year of his death, 1672, with an interruption from 1633 to 1641 caused by the Thirty Years' War. In the 18th century too a considerable German master, Hasse, was at Dresden, but he was thoroughly Italianate as a composer and almost wholly devoted to opera.

**OPERA.**—The centre of musical life at

Dresden ever since the 18th century was not so much the court chapel as the Opera, now known as the State Opera of Saxony. Its traditions down to the early years of the 19th century were those of the Italian school. The reorganization on the lines of German opera was undertaken in 1816, when Weber was summoned from Prague to Dresden. The State Opera-House was built in 1837-41 from plans by Gottfried Semper. It was burnt down in 1869, but rebuilt on the old plans by Manfred Semper, and was reopened in 1878. This second house was destroyed in the air-raids of 1944, and performances are now taking place in the recently rebuilt Schauspielhaus. Among the directors of the Dresden Opera were Schutz, Strungk, Lotti, Hasse, Naumann, Paer, Weber, Wagner, Ernst von Schuch, Fritz Reiner, Fritz Busch and Karl Boehm. The State Opera was reconstituted and reopened almost immediately after the second world war under the direction of Karl von Appen, with Joseph Keilberth as principal conductor. He was succeeded in 1950 by Rudolf Kempe. The standard of performances — despite the difficulties encountered through post-war conditions — has lost but little of its pre-war excellence, some of Germany's best singers belonging to the opera's permanent staff, including Karén and Troetschel (sopranos), Aldenhoff (tenor) and Bohme and Pflanzl (basses). The staff of the State Orchestra, still one of Germany's finest orchestras, numbers 98.

The Dresden Opera before the second world war had a record as a pioneer in new productions. The first production of 'Rienzi' took place on 20 Oct. 1842, of 'Der fliegende Holländer' on 2 Jan. 1843 and of 'Tannhäuser' on 19 Oct. 1845. The association of Richard Strauss with the Dresden Opera lasted from 1901, when 'Feuersnot' was produced, down to 'Daphne' in 1938, works first performed including 'Salome' (9 Dec. 1905), 'Elektra' (25 Jan. 1909) and 'Der Rosenkavalier' (26 Jan. 1911). New operas which had their first performances at Dresden include:

- 1925. Busoni, 'Doktor Faust'
- 1926. Weil, 'Der Protagonist'; Hindemith, 'Cardillac'
- 1927. Schoeck, 'Penthesilea'; Graener, 'Hannele's Himmelfahrt'; Brandis-Buys, 'Traumland'
- 1928. Strauss, 'Die ägyptische Helena'
- 1929. Kaminski, 'Jung Jenatsch'
- 1930. Schoeck, 'Vom Fischer und syner Fru', 'Reinick', 'Spiel oder Ernst'; Lothar, 'Lord Spleen'
- 1932. d'Albert, 'Mr Wu'; Kusterer, 'Was ihr wollt'; Striegler, 'Dagmar'; Dressel, 'Die Zwillingesel'
- 1933. Strauss, 'Arabella'; Lothar, 'Münchhausen'
- 1935. Wagner-Régeny, 'Der Günstling'
- 1936. Strauss, 'Die schweigsame Frau' (Stefan Zweig); Heger, 'Der verlorene Sohn'
- 1937. Schoeck, 'Massimilla Doni'
- 1938. Mohaupt, 'Die Wirtin von Pinsk'; Strauss, 'Daphne'

**STATE ORCHESTRA** —The Dresdener Staatskapelle, the principal orchestra, has an unbroken history dating back to 1548, when it was founded by the Elector Moritz of Torgau. It owes its development mainly to Schuch, who directed it from 1877 to 1914. Among its instrumentalists have been Quantz, the flautist who taught Frederick the Great, the violinists Rappoldi and Henri Petri, and the harpist Alfred Kastner. Under Fritz Busch the orchestra led the way with the performance of modern music and co-operated occasionally with the I.S.C.M. After the second world war the orchestra was reconstituted under Herbert Keilberth, who was succeeded by Rudolf Kempe as principal conductor in 1950. There is a competent second symphony orchestra at Dresden, the Dresdener Philharmonie, under H. Bongartz.

**CONCERTS** —The principal chamber-music organization is the Dresdener Streichquartett. The chief of the many choral societies is the Singakademie, founded in 1848. The first such society on record was in existence in 1802, and choral concerts are an important feature in Dresden's musical life.

All the larger concert-halls at Dresden were destroyed during the 1939-45 war, and concerts are now taking place — as a temporary measure — at the Schauspielhaus, the Volksoper, the Centraltheater and the Goldene Krone.

**EDUCATION** —As a teaching-centre Dresden had an almost world-wide fame. Schumann taught there in 1844; a tablet to his memory is on the house, No. 74 Reitbahnstrasse. The oldest educational institution is the Kapellknabeninstitut für die Katholische Kirche. The Royal Conservatory of Music, now renamed Staatliche Akademie für Musik und Theater, was founded in 1856 by Trostler and later taken over by Pudor. It has an opera school and an instrumental school. Other educational institutions include the Dresdener Musikschule and the Orchesterschule of the State Orchestra.

**DRESDEN, Sem. (b. Amsterdam, 20 Apr. 1881).**

Dutch composer. He was a pupil of Bernard Zweers in Amsterdam and of Hans Pfitzner (composition) and Max Landow (piano) in Berlin. On his return to Holland he was first appointed conductor of choral societies at Tiel and Laren, and shortly afterwards professor at

the Amsterdam Conservatory. In 1914 he started a madrigal society which won a great reputation for its performances of both classical and modern works. When in 1924 he was invited to succeed Rontgen as principal of the Conservatory he gave up this work, but later resumed it with a body bearing the name of the Haarlem Motet en Madrigaalvereniging. In 1931 he was elected President of the Dutch Section of the I.S.C.M. and in 1935 became a member of the Commission for State Examinations in Music. On the retirement of Johan Wagenaar he was appointed Principal of the Royal Conservatory at The Hague, being removed from this position in 1940 by the Nazi authorities. During the occupation he was in hiding at Wassenaar and devoted most of his time to composition. On the defeat of the Nazis he was recalled to The Hague, where his considerable organizing powers soon made themselves evident in the rapidity and stability with which he re-formed the whole institution. On the nationalization of artistic matters he was in 1945 made a member of the State Commission for orchestras and opera, and in 1946 a member of the board of the Netherlands Opera. As a personal teacher and as a conductor of choirs he has made a very substantial reputation, while as a composer he is recognized as one of the leaders of the younger Dutch school. In his earlier works he was influenced largely by Debussy and other French masters, but later he acquired a stronger personal character. He has also done a certain amount of musicological writing and newspaper criticism. Among the reforms he introduced in the conservatories both of Amsterdam and The Hague was the introduction of intensive studies in Gregorian and other plainsong.
